Brookfield Renewable – Experience

Brookfield Renewable – Experience

Brookfield renewable owns a 6,000 MW development pipeline in North America, Latin America, and Europe; and intends to invest over \$500 million of equity over the next five years. Since 2003, Brookfield Renewable has built 30 hydro, wind and biomass projects, representing approximately 1,300 MW and approximately \$3 billion invested.

Below is a list of key projects in North America:

Project	Location	Resource	Installed Capacity	COD
Prince Wind Farm	ON, Canada	Wind	189 MW	2006
Gosfield Wind	ON, Canada	Wind	51 MW	2010
Comber Wind	ON, Canada	Wind	166 MW	2011
Granite Reliable	NH, USA	Wind	99 MW	2011
Coram	CA, USA	Wind	100 MW	2012
Kokish	BC, Canada	Hydro	45 MW	2014

Brookfield Renewable also has developed projects in each of its continental platforms.

- **Canada** – As mentioned in the table above, the 45 MW Kokish Hydroelectric Facility entered into commercial operation in 2014. The total costs were approximately C\$200 million, and the project was completed on scope, schedule and budget. Kokish can generate enough clean renewable energy to power 13,000 homes annually. Kokish construction commenced in 2012 and was completed in 2014. During this period, the project employed approximately 250 people, including 95 people from municipalities surrounding Port McNeill. Local subcontractors were hired to work on the site.
- **Brazil** – Since 2003, Brookfield Renewable has built 15 hydroelectric facilities and 1 biomass facility with a total capacity of 394 MW and an investment of approximately R\$2,000 million. In November 2012 and February 2013, Brookfield Renewable completed the construction of two hydroelectric facilities in Brazil. These facilities have a total installed capacity of 48 MW and total construction costs were approximately R\$400 million. The Serra dos Cavalinhos I project represents a significant achievement for the Brazil platform. Located in Rio Grande do Sul, Cavalinhos I has 25 MW of installed capacity and generates enough energy to power 50,000 homes. Brookfield Renewable is also developing two hydro projects in the state of Matto Grosso do Sul, totaling 47 MW, expected to enter commercial operation in 2017 and in the first quarter of 2018.
- **Ireland** – In 2014, Brookfield identified a unique opportunity to acquire Bord Gáis Energy's Irish wind business, a 321 MW portfolio of high-quality operating wind assets, a 300 MW development pipeline, and an experienced team with full operating development, commercial and financial expertise. The acquisition established Brookfield Renewable's first operating platform outside the Americas and provided a scalable base for further European expansion. Since completing the acquisition in June 2014, Brookfield Renewable built 5 wind assets with a total capacity of 166 MW and an investment of approximately €340 million.

Brookfield Renewable and its affiliate companies have extensive global experience in project development and can provide additional information in that regard after request by the Distribution Companies.
