In addition, the Internal Audit Area Division performs a review of the operation of the internal controls regarded as most critical on a half-yearly basis, on the dates of the half-year and year-end closing.

The combination of the periodic reviews and the half-yearly reviews of the most critical controls enables the Internal Audit Area Division to perform an assessment of the internal control system, as regards the design and operation thereof, and to issue an opinion on the effectiveness of the internal controls established to ensure the reliability of financial information, which it submits to the Audit and Risk Supervision Committee within the framework of their periodic meetings.

F.5.2. Whether it has a discussion procedure whereby the auditor (as provided in the Technical Auditing Standards), the internal audit function and other experts can inform senior management and the audit committee or the directors of the entity of the significant internal control weaknesses detected during the review of the annual accounts or such other reviews as may have been entrusted to them. Information shall also be provided on whether it has an action plan to seek to correct or mitigate the weaknesses found.

Generally speaking, the procedure for discussion of significant internal control weaknesses detected is based on periodic meetings of the various agents.

Thus, the Audit and Risk Supervision Committee holds meetings, both at the half-year and at the year-end closing, with the external auditors, the internal auditors and the division responsible for preparing financial information, in order to discuss any significant aspect of the preparation process and of the resulting financial information.

Specifically, pursuant to its *Regulations* (scope of authority), the Audit and Risk Supervision Committee of Iberdrola has, among other duties, the duty of reviewing, together with the auditors, the significant weaknesses of the internal control system detected in the course of the audit. To such end, the auditor appears before such Committee on an annual basis to submit recommendations in connection with the internal control weaknesses identified during the review of the accounts. Any weaknesses described by the auditor are monitored on an ongoing basis by the Committee, with the support of the Internal Audit Area Division. Furthermore, the division responsible for preparing the consolidated accounts also holds meetings with the external auditors and with the internal auditors, both at the half-year and at the year-end closing, to discuss significant issues relating to financial information.

F.6. Other significant information.

Iberdrola has an internal model or system for control over financial reporting, the purpose of which is to reasonably ensure the reliability of the financial information. It is important to note that the development of this model, which commenced in 2006, was not the product of a legal requirement, but rather derived from the firm belief of both the Board of Directors and the senior management of the Company that in a context of growth and internationalisation as the one that could already be envisaged for the Group, an explicit and auditable internal control system would contribute to maintaining and improving its control environment and the quality of financial information; it would also boost investors' trust because of its effects on the transparency, reputation, and good governance of Iberdrola and of the subsidiaries making up the Iberdrola Group.

The Internal Control over Financial Reporting Model or System (ICFRS) of the Iberdrola Group rests on two main pillars: certification and internal control proper.

Certification is a half-yearly process in which those responsible for financial information in the different areas of the Company certify that: (i) the financial information they deliver to Iberdrola for purposes of consolidation does not contain any material errors or omissions and provides a fair view of the results and the financial condition within their area of responsibility, and (ii) they are responsible for establishing the ICFRS within their area of responsibility and have found, upon evaluation, that the system is effective. The text of these certifications is inspired by the form of certification established in section 302 of the U.S. Sarbanes-Oxley Act.

The culmination of the half-yearly process is a joint certification that the chairman & chief executive officer and the director of Administration and Control submit to the Board of Directors.

The other pillar supporting this model, i.e. internal control proper, is patterned on the reference framework described in the report entitled "Internal Control Integrated Framework" of the Committee of Sponsoring Organisations of the Treadway Commission (COSO), and is primarily aimed at providing a reasonable level of security in achieving the aim of reliability of the financial information.

The methodology used by Iberdrola for the development and continuous update of internal control consists of the following stages or steps: (i) analysis and selection of significant financial information, (ii) grouping such information into cycles or large processes in which it is generated, (iii) identification, assessment, and prioritisation of risks of error in financial information within selected cycles, (iv) design and operation of controls in order to mitigate or manage selected risks, and (v) monitoring and update of the previous steps in order to continuously adapt the model to the circumstances of corporate activities.

One of the salient features of the design of this model is that it seeks to guarantee the quality of financial information during all months of the year, such that it is not limited only to the periods of year-end or half-year closings.

This feature is strengthened through the use of a specific software application developed in-house by the Group that allows for monitoring of the status of controls at all times.

Another important feature of the model is that it extends the culture of internal control to all of the organisations, both corporate and business, that significantly contribute to generating financial information, by assigning personal responsibility for the implementation and documentation of controls.

All relevant documents in connection with Iberdrola's ICFRS, both regarding the certification process and

internal control proper, are contained in the aforementioned computer application.

Those responsible for implementing the controls enter into the computer application evidence of such controls having been performed, and then evaluate the results obtained, which they rate as satisfactory or non-satisfactory. This allows for the internal control situation to be monitored in real time, and also makes it possible to act promptly on any deficiencies detected.

In addition, those responsible for control at the country subholding and head of business companies, as well as those responsible for the corporate areas, carry out an annual review of the design and operation of the SCIIF, as a systematic process for updating such model in order to adapt it to the changing circumstances of corporate activities.

The annual review is coordinated by the Internal Control Division, which is also responsible for managing the computer application and coordinating the development of the ICFRS in the various business units and corporate areas of the Group.

Moreover, the Internal Audit Area Division, which is responsible for supervising internal control as part of its duty of support of the Audit and Risk Supervision Committee, performs an independent review of the design and operation of the ICFRS, identifying deficiencies and formulating recommendations for improvement. This review is performed applying a mixed model for selecting cycles based on risk and on a minimum rotation of five years.

The Internal Audit Area Division also performs a half-yearly independent review of the effectiveness of the internal controls established to guarantee the reliability of financial information. It also reviews the process for certification of financial information on a half-yearly basis. The conclusions of such reviews are submitted to the Audit and Risk Supervision Committee, which, if appropriate, adopts such conclusions and submits them in turn to the Board of Directors.

The current scope of the ICFRS is such that, based on materiality standards, it covers the entire Iberdrola Group. At present, more than 1,200 persons within the Group use the software application, both to document evidence of the performance of more than 2,800 controls (which mitigate or manage more than 1,000 risks of error in financial information that have been prioritised) and to monitor, analyse, adjust and assess the ICFRS.

Furthermore, approximately 70 officers who participate in the process of certification of the accuracy of information under their responsibility do so by using an electronic signature directly on the computer application.

As a consequence of all of the foregoing, the final result of the certification process, which is based on the situation of internal control proper, can be reviewed by the Board of Directors of Iberdrola as one of the significant guarantees of reliability in connection with the preparation of the Group's annual and interim financial information.

F.7 External audit report

Report on:

F.7.1. Whether the information on the internal control over financial reporting system has been reviewed by the external auditor, in which case the entity should include the respective report as an exhibit. Otherwise, it should provide the reasons therefor.

The information on the internal control over financial reporting system sent to the markets has not been reviewed by the external auditor for reasons of consistency with the fact that the rest of the information set forth in the Annual Corporate Governance Report is only reviewed by the auditor in connection with the accounting information contained in said Report. It is also believed that having the information on the internal control over financial reporting system reviewed externally would in a certain manner overlap the internal control review to be performed by the external auditor, according to technical auditing standards, within the context of the audit of the accounts.

G. DEGREE TO WHICH CORPORATE GOVERNANCE RECOMMENDATIONS ARE FOLLOWED

State the company's degree of compliance with the recommendations of the Good Governance Code of Listed Companies.

If the company does not comply with any recommendation or follows it partially, there must be a detailed explanation of the reasons providing shareholders, investors, and the market in general with sufficient information to assess the company's course of action. Generalised explanations will not be acceptable.

- 1. The bylaws of listed companies should not place an upper limit on the votes that can be cast by a single shareholder, or impose other obstacles to the takeover of the company by means of share purchases on the market**

Complies ☐ Explain ☒

Article 29.2 of the By-Laws provides that "No shareholder may cast a number of votes greater than those corresponding to shares representing ten (10%) per cent of share capital, even if the number of shares held exceeds such percentage of the share capital. This limitation does not affect votes corresponding to shares with respect to which a shareholder is holding a proxy as a result of the provisions of article 23 above, provided, however, that with respect to the number of votes corresponding to the shares of each shareholder represented by proxy, the limitation set forth above shall apply".

Section 3 of such article adds: "The limitation set forth in the preceding section shall also apply to the maximum number of votes that may be collectively or individually cast by two or more shareholders that are entities or companies belonging to the same group. Such limitation shall also apply to the number of votes that may be cast collectively or individually by an individual and the shareholder entity, entities, or companies controlled by such individual. A group shall be deemed to exist under the circumstances provided by law, and also when a person controls one or more entities or companies".

Iberdrola believes that the limitation on the maximum number of votes that may be cast by a single shareholder, or by several shareholders belonging to the same group or, if applicable, acting in concert, is a measure to protect shareholders at companies with dispersed share ownership, whose investment is thus guarded from any transaction that is contrary to the corporate interest. In this regard, most shareholders, especially including but not limited to small individual investors, who represent approximately one-fourth of Iberdrola's capital, have little room to manoeuvre and respond to a potential shareholder owning a non-controlling interest and not reaching the threshold requiring a takeover bid but seeking influence over the Company and whose own interest is not totally in line with the corporate interest.

It should also be noted that such voting limitation has been in effect since 16 June 1990, the date on which the General Shareholders' Meeting was held at which it was resolved, by unanimous vote of the attendees, to bring the By-Laws of the Company (then doing business as Iberduero, S.A.) into line with the restated text of the Companies Act approved by Royal Legislative Decree 1564/1989 of 22 December. This shows the level of corporate consensus that has existed on such voting limitation from the very beginning, which has been confirmed by the fact that such limitation has remained unchanged through various by-law amendments passed by the shareholders at General Shareholders' Meetings. In turn, it reflects the will of the shareholders to increase their bargaining power in the event of hostile offers or transactions.

In any event, article 50 of the current By-Laws establishes the instances of removal of such voting limitation in the event that the Company is the target of a takeover bid that receives the required shareholder approval, in which case the provisions of section 527 of the Companies Act prevail. Pursuant to the foregoing, it cannot be deemed that the limitation on the maximum number of votes that may be cast by a shareholder constitutes an obstacle to a takeover bid.

- 2. When a dominant and subsidiary company are both listed, they should provide detailed disclosure on:**

- a) The activity they engage in and any business dealings between them, as well as between the listed subsidiary and other group companies.**
- b) The mechanisms in place to resolve possible conflicts of interest.**

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

3. During the annual general meeting the chairman of the board should verbally inform shareholders in sufficient detail of the most relevant aspects of the company's corporate governance, supplementing the written information circulated in the annual corporate governance report. In particular:

a) Changes taking place since the previous annual general meeting.

b) The specific reasons for the company not following a given Good Governance Code recommendation, and any alternative procedures followed in its stead.

Complies ☒ Complies in part ☐ Explain ☐

4. The company should draw up and implement a policy of communication and contacts with shareholders, institutional investors and proxy advisors that complies in full with market abuse regulations and accords equitable treatment to shareholders in the same position.

This policy should be disclosed on the company's website, complete with details of how it has been put into practice and the identities of the relevant interlocutors or those charged with its implementation.

Complies ☒ Complies in part ☐ Explain ☐

5. The board of directors should not make a proposal to the general meeting for the delegation of powers to issue shares or convertible securities without pre-emptive subscription rights for an amount exceeding 20% of capital at the time of such delegation.

When a board approves the issuance of shares or convertible securities without pre-emptive subscription rights, the company should immediately post a report on its website explaining the exclusion as envisaged in company legislation.

Complies ☒ Complies in part ☐ Explain ☐

6. Listed companies drawing up the following reports on a voluntary or compulsory basis should publish them on their website well in advance of the annual general meeting, even if their distribution is not obligatory.

a) Report on auditor independence.

b) Reviews of the operation of the audit committee and the nomination and remuneration committee.

c) Audit committee report on third-party transactions.

d) Report on the corporate social responsibility policy.

Complies ☒ Complies in part ☐ Explain ☐

7. The committee should broadcast its general meetings live on the corporate website.

Complies ☒ Explain ☐

8. The audit committee should strive to ensure that the board of directors can present the company's accounts to the general meeting without limitations or qualifications in the auditor's report. In the exceptional case that qualifications exist, both the chairman of the audit committee and the auditors should give a clear account to shareholders of their scope and content.

Complies ☒ Complies in part ☐ Explain ☐

9. The company should disclose its conditions and procedures for admitting share ownership, the right to attend general meetings and the exercise or delegation of voting rights, and display them permanently on its website.

Such conditions and procedures should encourage shareholders to attend and exercise their rights and be applied in a non-discriminatory manner.

Complies ☒ Complies in part ☐ Explain ☐

10. When an accredited shareholder exercises the right to supplement the agenda or submit new proposals prior to the general meeting, the company should:

- a) Immediately circulate the supplementary items and new proposals.
- b) Disclose the model of attendance card or proxy appointment or remote voting form duly modified so that new agenda items and alternative proposals can be voted on in the same terms as those submitted by the board of directors.
- c) Put all these items or alternative proposals to the vote applying the same voting rules as for those submitted by the board of directors, with particular regard to presumptions or deductions about the direction of votes.
- d) After the general meeting, disclose the breakdown of votes on such supplementary items or alternative proposals.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

11. In the event that a company plans to pay for attendance at the general meeting, it should first establish a general, long-term policy in this respect.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

12. The board of directors should perform its duties with unity of purpose and independent judgement, according the same treatment to all shareholders in the same position. It should be guided at all times by the company's best interest, understood as the creation of a profitable business that promotes its sustainable success over time, while maximising its economic value.

In pursuing the corporate interest, it should not only abide by laws and regulations and conduct itself according to principles of good faith, ethics and respect for commonly accepted customs and good practices, but also strive to reconcile its own interests with the legitimate

interests of its employees, suppliers, clients and other stakeholders, as well as with the impact of its activities on the broader community and the natural environment.

Complies ☒ Complies in part ☐ Explain ☐

13. The board of directors should have an optimal size to promote its efficient functioning and maximise participation. The recommended range is accordingly between five and fifteen members.

Complies ☒ Explain ☐

14. The board of directors should approve a director selection policy that:

- a) Is concrete and verifiable.
- b) Ensures that appointment or re-election proposals are based on a prior analysis of the board's needs.
- c) Favours a diversity of knowledge, experience and gender.

The results of the prior analysis of board needs should be written up in the nomination committee's explanatory report, to be published when the general meeting is convened that will ratify the appointment and re-election of each director.

The director selection policy should pursue the goal of having at least 30% of total board places occupied by women directors before the year 2020.

The nomination committee should run an annual check on compliance with the director selection policy and set out its findings in the annual corporate governance report.

Complies ☒ Complies in part ☐ Explain ☐

15. Proprietary and independent directors should constitute an ample majority on the board of directors, while the number of executive directors should be the minimum practical bearing in mind the complexity of the corporate group and the ownership interests they control.

Complies ☒ Complies in part ☐ Explain ☐

16. The percentage of proprietary directors out of all non-executive directors should be no greater than the proportion between the ownership stake of the shareholders they represent and the remainder of the company's capital.

This criterion can be relaxed:

- a) In large cap companies where few or no equity stakes attain the legal threshold for significant shareholdings.
- b) In companies with a plurality of shareholders represented on the board but not otherwise related.

Complies ☒ Explain ☐

17. Independent directors should be at least half of all board members.

However, when the company does not have a large market capitalisation, or when a large cap company has shareholders individually or concertedly controlling over 30 percent of capital, independent directors should occupy, at least, a third of board places.

Complies ☒ Explain ☐

18. Companies should disclose the following director particulars on their websites and keep them regularly updated:

- a) Professional profile and biographical data.
- b) Directorships held in other companies, listed or otherwise, and other paid activities they engage in, of whatever nature.
- c) Statement of the director class to which they belong, in the case of proprietary directors indicating the shareholder they represent or have links with.
- d) Dates of their first appointment as a board member and subsequent re-elections.
- e) Shares held in the company, and any options on the same.

Complies ☒ Complies in part ☐ Explain ☐

19. Following verification by the nomination committee, the annual corporate governance report should disclose the reasons for the appointment of proprietary directors at the urging of shareholders controlling less than 3 percent of capital; and explain any rejection of a formal request for a board place from shareholders whose equity stake is equal to or greater than that of others applying successfully for a proprietary directorship.

Complies ☐ Complies in part ☐ Explain ☐ Not applicable ☒

20. Proprietary directors should resign when the shareholders they represent dispose of their ownership interest in its entirety. If such shareholders reduce their stakes, thereby losing some of their entitlement to proprietary directors, the latter's number should be reduced accordingly.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

21. The board of directors should not propose the removal of independent directors before the expiry of their tenure as mandated by the bylaws, except where they find just cause, based on a proposal from the nomination committee. In particular, just cause will be presumed when directors take up new posts or responsibilities that prevent them allocating sufficient time to the work of a board member, or are in breach of their fiduciary duties or come under one of the disqualifying grounds for classification as independent enumerated in the applicable legislation.

The removal of independent directors may also be proposed when a takeover bid, merger or similar corporate transaction alters the company's capital structure, provided the changes in board membership ensue from the proportionality criterion set out in recommendation 16.

Complies ☒ Explain ☐

22. Companies should establish rules obliging directors to disclose any circumstance that might harm the organisation's name or reputation, tendering their resignation as the case may be, and, in particular, to inform the board of any criminal charges brought against them and the progress of any subsequent trial.

The moment a director is indicted or tried for any of the offences stated in company legislation, the board of directors should open an investigation and, in light of the particular circumstances, decide whether or not he or she should be called on to resign. The board should give a reasoned account of all such determinations in the annual corporate governance report.

Complies ☒ Complies in part ☐ Explain ☐

23. Directors should express their clear opposition when they feel a proposal submitted for the board's approval might damage the corporate interest. In particular, independents and other directors not subject to potential conflicts of interest should strenuously challenge any decision that could harm the interests of shareholders lacking board representation.

When the board makes material or reiterated decisions about which a director has expressed serious reservations, then he or she must draw the pertinent conclusions. Directors resigning for such causes should set out their reasons in the letter referred to in the next recommendation.

The terms of this recommendation also apply to the secretary of the board, even if he or she is not a director.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

24. Directors who give up their place before their tenure expires, through resignation or otherwise, should state their reasons in a letter to be sent to all members of the board. Whether or not such resignation is disclosed as a material event, the motivating factors should be explained in the annual corporate governance report.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

25. The nomination committee should ensure that non-executive directors have sufficient time available to discharge their responsibilities effectively.

The board of directors regulations should lay down the maximum number of company boards on which directors can serve.

Complies ☒ Complies in part ☐ Explain ☐

26. The board should meet with the necessary frequency to properly perform its functions, eight times a year at least, in accordance with a calendar and agendas set at the start of the year, to which each director may propose the addition of initially unscheduled items.

Complies ☒ Complies in part ☐ Explain ☐

27. Director absences should be kept to a strict minimum and quantified in the annual corporate governance report. In the event of absence, directors should delegate their powers of representation with the appropriate instructions.

Complies ☒ Complies in part ☐ Explain ☐

28. When directors or the secretary express concerns about some proposal or, in the case of directors, about the company's performance, and such concerns are not resolved at the meeting, they should be recorded in the minute book if the person expressing them so requests.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

29. The company should provide suitable channels for directors to obtain the advice they need to carry out their duties, extending if necessary to external assistance at the company's expense.

Complies ☒ Complies in part ☐ Explain ☐

30. Regardless of the knowledge directors must possess to carry out their duties, they should also be offered refresher programmes when circumstances so advise.

Complies ☒ Explain ☐ Not applicable ☐

31. The agendas of board meetings should clearly indicate on which points directors must arrive at a decision, so they can study the matter beforehand or gather together the material they need.

For reasons of urgency, the chairman may wish to present decisions or resolutions for board approval that were not on the meeting agenda. In such exceptional circumstances, their inclusion will require the express prior consent, duly minuted, of the majority of directors present.

Complies ☒ Complies in part ☐ Explain ☐

32. Directors should be regularly informed of movements in share ownership and of the views of major shareholders, investors and rating agencies on the company and its group.

Complies ☒ Complies in part ☐ Explain ☐

33. The chairman, as the person charged with the efficient functioning of the board of directors, in addition to the functions assigned by law and the company's bylaws, should prepare and submit to the board a schedule of meeting dates and agendas; organise and coordinate regular evaluations of the board and, where appropriate, the company's chief executive officer; exercise leadership of the board and be accountable for its proper functioning; ensure that sufficient time is given to the discussion of strategic issues, and approve and review refresher courses for each director, when circumstances so advise.

Complies ☒ Complies in part ☐ Explain ☐

34. When a lead independent director has been appointed, the bylaws or board of directors regulations should grant him or her the following powers over and above those conferred by law: chair the board of directors in the absence of the chairman or vice chairmen give voice to the concerns of non-executive directors; maintain contacts with investors and shareholders to hear their views and develop a balanced understanding of their concerns, especially those to do with the company's corporate governance; and coordinate the chairman's succession plan.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

35. The board secretary should strive to ensure that the board's actions and decisions are informed by the governance recommendations of the Good Governance Code of relevance to the company.

Complies ☒ Explain ☐

36. The board in full should conduct an annual evaluation, adopting, where necessary, an action plan to correct weakness detected in:

- a) The quality and efficiency of the board's operation.
- b) The performance and membership of its committees.
- c) The diversity of board membership and competences.
- d) The performance of the chairman of the board of directors and the company's chief executive.
- e) The performance and contribution of individual directors, with particular attention to the chairmen of board committees.

The evaluation of board committees should start from the reports they send the board of directors, while that of the board itself should start from the report of the nomination committee.

Every three years, the board of directors should engage an external facilitator to aid in the evaluation process. This facilitator's independence should be verified by the nomination committee.

Any business dealings that the facilitator or members of its corporate group maintain with the company or members of its corporate group should be detailed in the annual corporate governance report.

The process followed and areas evaluated should be detailed in the annual corporate governance report.

Complies ☒ Complies in part ☐ Explain ☐

37. When an executive committee exists, its membership mix by director class should resemble that of the board. The secretary of the board should also act as secretary to the executive committee.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

- 38. The board should be kept fully informed of the business transacted and decisions made by the executive committee. To this end, all board members should receive a copy of the committee's minutes.**

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

- 39. All members of the audit committee, particularly its chairman, should be appointed with regard to their knowledge and experience in accounting, auditing and risk management matters. A majority of committee places should be held by independent directors.**

Complies ☒ Complies in part ☐ Explain ☐

- 40. Listed companies should have a unit in charge of the internal audit function, under the supervision of the audit committee, to monitor the effectiveness of reporting and control systems. This unit should report functionally to the board's non-executive chairman or the chairman of the audit committee.**

Complies ☒ Complies in part ☐ Explain ☐

- 41. The head of the unit handling the internal audit function should present an annual work programme to the audit committee, inform it directly of any incidents arising during its implementation and submit an activities report at the end of each year.**

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

- 42. The audit committee should have the following functions over and above those legally assigned:**

1. With respect to internal control and reporting systems

- a) Monitor the preparation and the integrity of the financial information prepared on the company and, where appropriate, the group, checking for compliance with legal provisions, the accurate demarcation of the consolidation perimeter, and the correct application of accounting principles.
- b) Monitor the independence of the unit handling the internal audit function; propose the selection, appointment, re-election and removal of the head of the internal audit service; propose the service's budget; approve its priorities and work programmes, ensuring that it focuses primarily on the main risks the company is exposed to; receive regular report-backs on its activities; and verify that senior management are acting on the findings and recommendations of its reports.
- c) Establish and supervise a mechanism whereby staff can report, confidentially and, if appropriate and feasible, anonymously, any significant irregularities that they detect in the course of their duties, in particular financial or accounting irregularities.

2. With regard to the external auditor:

- a) Investigate the issues giving rise to the resignation of the external auditor, should this come about.
- b) Ensure that the remuneration of the external auditor does not compromise its quality or independence.

- c) Ensure that the company notifies any change of external auditor to the CNMV as a material event, accompanied by a statement of any disagreements arising with the outgoing auditor and the reasons for the same.
- d) Ensure that the external auditor has a yearly meeting with the board in full to inform it of the work undertaken and developments in the company's risk and accounting positions.
- e) Ensure that the company and the external auditor adhere to current regulations on the provision of non-audit services, limits on the concentration of the auditor's business and other requirements concerning auditor independence.

Complies ☒ Complies in part ☐ Explain ☐

43. The audit committee should be empowered to meet with any company employee or manager, even ordering their appearance without the presence of another senior officer.

Complies ☒ Explain ☐

44. The audit committee should be informed of any fundamental changes or corporate transactions the company is planning, so the committee can analyse the operation and report to the board beforehand on its economic conditions and accounting impact and, when applicable, the exchange ratio proposed.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

45. The risk control and management policy should identify at least:

- a) The different types of financial and non-financial risk the company is exposed to (including operational, technological, financial, legal, social, environmental, political and reputational risks), with the inclusion under financial or economic risks of contingent liabilities and other off- balance-sheet risks.
- b) The determination of the risk level the company sees as acceptable.
- c) The measures in place to mitigate the impact of identified risk events should they occur.
- d) The internal control and reporting systems to be used to control and manage the above risks, including contingent liabilities and off-balance- sheet risks.

Complies ☒ Complies in part ☐ Explain ☐

46. Companies should establish a risk control and management function in the charge of one of the company's internal department or units and under the direct supervision of the audit committee or some other dedicated board committee. This function should be expressly charged with the following responsibilities:

- a) Ensure that risk control and management systems are functioning correctly and, specifically, that major risks the company is exposed to are correctly identified, managed and quantified.
- b) Participate actively in the preparation of risk strategies and in key decisions about their management.

- c) Ensure that risk control and management systems are mitigating risks effectively in the frame of the policy drawn up by the board of directors.

Complies ☒ Complies in part ☐ Explain ☐

47. Appointees to the nomination and remuneration committee - or of the nomination committee and remuneration committee, if separately constituted - should have the right balance of knowledge, skills and experience for the functions they are called on to discharge. The majority of their members should be independent directors.

Complies ☒ Complies in part ☐ Explain ☐

48. Large cap companies should operate separately constituted nomination and remuneration committees.

Complies ☒ Complies in part ☐ Explain ☐

49. The nomination committee should consult with the company's chairman and chief executive, especially on matters relating to executive directors.

When there are vacancies on the board, any director may approach the nomination committee to propose candidates that it might consider suitable.

Complies ☒ Complies in part ☐ Explain ☐

50. The remuneration committee should operate independently and have the following functions in addition to those assigned by law:

a) Propose to the board the standard conditions for senior officer contracts.

b) Monitor compliance with the remuneration policy set by the company.

c) Periodically review the remuneration policy for directors and senior officers, including share-based remuneration systems and their application, and ensure that their individual compensation is proportionate to the amounts paid to other directors and senior officers in the company.

d) Ensure that conflicts of interest do not undermine the independence of any external advice the committee engages.

e) Verify the information on director and senior officers' pay contained in corporate documents, including the annual directors' remuneration statement.

Complies ☒ Complies in part ☐ Explain ☐

51. The remuneration committee should consult with the company's chairman and chief executive, especially on matters relating to executive directors and senior officers.

Complies ☒ Complies in part ☐ Explain ☐

52. The terms of reference of supervision and control committees should be set out in the board of directors regulations and aligned with those governing legally mandatory board committees as specified in the preceding sets of recommendations. They should include at least the following terms:

- a) Committees should be formed exclusively by non-executive directors, with a majority of independents.
- b) They should be chaired by independent directors.
- c) The board should appoint the members of such committees with regard to the knowledge, skills and experience of its directors and each committee's terms of reference; discuss their proposals and reports; and provide report-backs on their activities and work at the first board plenary following each committee meeting.
- d) They may engage external advice, when they feel it necessary for the discharge of their functions.
- e) Meeting proceedings should be minuted and a copy made available to all board members.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

53. The task of supervising compliance with corporate governance rules, internal codes of conduct and corporate social responsibility policy should be assigned to one board committee or split between several, which could be the audit committee, the nomination committee, the corporate social responsibility committee, where one exists, or a dedicated committee established *ad hoc* by the board under its powers of self-organisation, with at the least the following functions:

- a) Monitor compliance with the company's internal codes of conduct and corporate governance rules.
- b) Oversee the communication and relations strategy with shareholders and investors, including small and medium-sized shareholders.
- c) Periodically evaluate the effectiveness of the company's corporate governance system, to confirm that it is fulfilling its mission to promote the corporate interest and catering, as appropriate, to the legitimate interests of remaining stakeholders.
- d) Review the company's corporate social responsibility policy, ensuring that it is geared to value creation.
- e) Monitor corporate social responsibility strategy and practices and assess compliance in their respect.
- f) Monitor and evaluate the company's interaction with its stakeholder groups.
- g) Evaluate all aspects of the non-financial risks the company is exposed to, including operational, technological, legal, social, environmental, political and reputational risks.
- h) Coordinate non-financial and diversity reporting processes in accordance with applicable legislation and international benchmarks.

Complies ☒ Complies in part ☐ Explain ☐

54. The corporate social responsibility policy should state the principles or commitments the company will voluntarily adhere to in its dealings with stakeholder groups, specifying at least:

- a) The goals of its corporate social responsibility policy and the support instruments to be deployed.
- b) The corporate strategy with regard to sustainability, the environment and social issues.
- c) Concrete practices in matters relative to: shareholders, employees, clients, suppliers, social welfare issues, the environment, diversity, fiscal responsibility, respect for human rights and the prevention of illegal conducts.
- d) The methods or systems for monitoring the results of the practices referred to above, and identifying and managing related risks.
- e) The mechanisms for supervising non-financial risk, ethics and business conduct.
- f) Channels for stakeholder communication, participation and dialogue.
- g) Responsible communication practices that prevent the manipulation of information and protect the company's honour and integrity.

Complies ☒ Complies in part ☐ Explain ☐

55. The company should report on corporate social responsibility developments in its directors' report or in a separate document, using an internationally accepted methodology.

Complies ☒ Explain ☐

56. Director remuneration should be sufficient to attract individuals with the desired profile and compensate the commitment, abilities and responsibility that the post demands, but not so high as to compromise the independent judgement of non-executive directors.

Complies ☒ Explain ☐

57. Variable remuneration linked to the company and the director's performance, the award of shares, options or any other right to acquire shares or to be remunerated on the basis of share price movements, and membership of long-term savings schemes such as pension plans should be confined to executive directors.

The company may consider the share-based remuneration of non-executive directors provided they retain such shares until the end of their mandate. This condition, however, will not apply to shares that the director must dispose of to defray costs related to their acquisition.

Complies ☒ Complies in part ☐ Explain ☐

58. In the case of variable awards, remuneration policies should include limits and technical safeguards to ensure they reflect the professional performance of the beneficiaries and not simply the general progress of the markets or the company's sector, or circumstances of that kind.

In particular, variable remuneration items should meet the following conditions:

- a) Be subject to predetermined and measurable performance criteria that factor the risk assumed to obtain a given outcome.
- b) Promote the long-term sustainability of the company and include non-financial criteria that are relevant for the company's long-term value, such as compliance with its internal rules and procedures and its risk control and management policies.
- c) Be focused on achieving a balance between the delivery of short, medium and long-term objectives, such that performance-related pay rewards ongoing achievement, maintained over sufficient time to appreciate its contribution to long-term value creation. This will ensure that performance measurement is not based solely on one-off, occasional or extraordinary events.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

59. A major part of variable remuneration components should be deferred for a long enough period to ensure that predetermined performance criteria have effectively been met.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

60. Remuneration linked to company earnings should bear in mind any qualifications stated in the external auditor's report that reduce their amount.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

61. A major part of executive directors' variable remuneration should be linked to the award of shares or financial instruments whose value is linked to the share price.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

62. Following the award of shares, share options or other rights on shares derived from the remuneration system, directors should not be allowed to transfer a number of shares equivalent to twice their annual fixed remuneration, or to exercise the share options or other rights on shares for at least three years after their award.

The above condition will not apply to any shares that the director must dispose of to defray costs related to their acquisition.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

63. Contractual arrangements should include provisions that permit the company to reclaim variable components of remuneration when payment was out of step with the director's actual performance or based on data subsequently found to be misstated.

Complies ☒ Complies in part ☐ Explain ☐ Not applicable ☐

64. Termination payments should not exceed a fixed amount equivalent to two years of the director's total annual remuneration and should not be paid until the company confirms that he or she has met the predetermined performance criteria.

Complies ☐ Complies in part ☒ Explain ☐ Not applicable ☐

Contracts with executive directors and senior officers signed as from 2011 provide severance for contractual termination equal to a maximum of two times annual salary in the event of termination of their relationship with the Company, provided that termination of the relationship is not the result of a breach attributable thereto or solely due to a voluntary decision thereof. This is the case of the Business CEO.

The Company included guarantee clauses of up to five years in contracts with its key officers in the year 2000. Subsequently, in 2001, when the current chairman & CEO joined Iberdrola, he received the treatment in effect for such officers, in order to achieve an effective and sufficient level of loyalty. As chairman & CEO, he is currently entitled to three times his annual salary.

The Board of Directors has analysed this situation, the treatment of which is necessarily collective in nature. Any reduction in the salary multiples would carry high costs for the Company, for which reason the Board of Directors believes that it is most appropriate not to change the status quo. Any proposed reduction in the salary multiples would have a higher cost for the Company, as the amount of the contingency will gradually decrease due to the passage of time, resulting in payments far smaller than any possible reduction in the agreed severance payment, taking into account the average age of the affected group (58 years) and the low likelihood of the guarantees being enforced. In this regard, it should be pointed out that at year-end 2014, there were 62 officers with a right to severance pay greater than two years in case of termination. By year-end 2017, the number has decreased again to 34, without the enforcement of any guarantee clause.

H. OTHER INFORMATION OF INTEREST

1. If there are any significant aspects regarding corporate governance at the company or at entities of the group that is not included in the other sections of this report, but should be included in order to provide more complete and well-reasoned information regarding the corporate governance structure and practices at the entity or its group, briefly describe them.
2. In this section, you may also include any other information, clarification, or comment relating to the prior sections of this report to the extent they are relevant and not repetitive.

Specifically, state whether the company is subject to laws other than Spanish laws regarding corporate governance and, if applicable, include such information as the company is required to provide that is different from the information required in this report.

3. The company may also state whether it has voluntarily adhered to other international, industrial, or other codes of ethical principles or good practices. If so, identify the code in question and the date of adherence thereto.

SECTION A.2

The sources of the information provided are the notices sent by the shareholders to the CNMV and to the Company itself, and the information contained in their respective annual reports and press releases, and the information that the Company obtains from Iberclear.

Pursuant to the provisions of section 23.1 of Royal Decree 1362/2007 of 19 October, further developing Law 24/1988 of 28 July on the Securities Market, in connection with the transparency requirements relating to the information on issuers whose securities have been admitted to trading on an official secondary market or other regulated market in the European Union, it is deemed that significant shareholders are the holders of at least 3% of voting rights.

On 12 January 2018, Capital Research and Management Company reported that it held a 5.117% interest in the share capital of Iberdrola.

On 15 February 2018, BlackRock Inc. reported to the CNMV that its interest in the capital of Iberdrola was 5.00%.

According to available information, the approximate breakdown of the interests in the share capital by type of shareholder is as follows:

- Foreign investors	66.28%
- Domestic entities	10.17%
- Domestic retail investors	23.55%

SECTION A.3

Data at the date of approval of this Report.

For the chairman & CEO, there is a deferral of the second (510,596 shares in 2018) and third (510,596 shares in 2019) delivery of shares corresponding to the 2014-2016 Strategic Bonus approved by shareholders at the General Shareholders' Meeting. Each of the deliveries of said shares is subject to confirmation by the Board of Directors, after a report from the Remuneration Committee, on the currency of the circumstances on which the performance evaluation was based.

Furthermore, pursuant to the provisions of the 2017-2019 Strategic Bonus approved at the General Shareholders' Meeting, the chairman & CEO may receive up to a maximum of 1,900,000 shares based on the performance evaluation for the 2017-2019 period, which if awarded will be paid in three equal parts in 2020, 2021 and 2022.

For the Business CEO, there is a deferral of the second (120,931 shares in 2018) and third (120,931 shares in 2019) delivery of shares corresponding to the 2014-2016 Strategic Bonus approved by shareholders at the General Shareholders' Meeting. Each of the deliveries of said shares is subject to confirmation by the Board of Directors, after a report from the Remuneration Committee, on the currency of the circumstances on which the performance evaluation was based.

Furthermore, pursuant to the provisions of the 2017-2019 Strategic Bonus, the Business CEO may receive up to a maximum of 300,000 shares based on the performance evaluation for the 2017-2019 period, which if awarded will be paid in three equal parts in 2020, 2021 and 2022.

SECTION A.8

Iberdrola maintains in treasury 75,710,149 own shares and 6,427,771 shares accumulated through derivatives contracts pending settlement and that are recorded as treasury shares in the consolidated financial statements at 31 December 2017, representing 1.30% of the capital. It also maintains 6,000,000 shares in total return swaps with physical settlement.

Pursuant to the authorisations granted to the Board of Directors by the shareholders at the General Shareholders' Meeting, during financial year 2017 Iberdrola acquired 156,414,422 shares for 1,002,999 thousand euros, of which 72,905,834 shares were acquired through discretionary market transactions, while the remaining 83,508,588 shares were acquired through derivatives contracts.

In addition, 11,939,050 own shares were sold for 84,382 thousand euros.

Under such authorisations, Iberdrola has also retired 219,990,000 own shares.

SECTION B.4

The percentage of absentee voting (others) reflects the votes received by mail. Absentee voting is not included within voting in person.

SECTION C.1.3

The complete professional profiles of all the directors are available on the Company's corporate website (www.iberdrola.com).

SECTION C.1.29

Within the framework of the process of evaluation of the Board of Directors, the lead independent director met individually with each of the directors in order to identify possible improvements in the operation thereof.

SECTION C.1.30

Below is the data on attendance of each and every one of the directors at the meetings of the Board of Directors and its committees during financial year 2017: See Annex.

SECTION C.1.31

The Iberdrola Group has established a certification process by which those responsible for financial information in the different areas of the Company certify that: (i) the financial information they deliver to Iberdrola for purposes of consolidation does not contain any material errors or omissions and provides a fair view of the results and the financial condition within their area of responsibility, and (ii) they are responsible for establishing the ICFRS within their area of responsibility and have found, upon evaluation, that the system is effective. The text of these certifications is inspired by the form of certification established in section 302 of the U.S. Sarbanes-Oxley Act.

The culmination of the process is a joint certification that the chairman & chief executive officer and the director of Administration and Control submit to the Board of Directors.

The process is carried out by means of electronic signature in a software application which manages the areas of responsibility and time periods and which serves as a repository of all the documentation generated, allowing for periodic review by the supervision and control bodies of the Group.

SECTION D.2

Transactions by shareholders exercising a significant influence on participation in the entity's financial and operating decisions, with significant influence being understood as having a member of the Board of Directors.

Shareholders who are able to exercise the proportional representation system due to their interest in the capital of the Company are also considered to have such influence.

As of the date of this report, only Qatar Investment Authority meets this condition, for which reason the amounts reflected in the period refer to the transactions with this shareholder.

The amounts set forth as "profits and other dividends paid" correspond to the cash dividend distributed by the Company and to the free-of-charge allocation rights stemming from the two increases in share capital by means of a scrip issue approved by the shareholders at the General Shareholders' Meetings, which were sold to the Company at a guaranteed fixed price pursuant to the terms and conditions of such increases.

SECTION D.4

Transactions with subsidiaries and companies in which the Company has an interest that have not been eliminated in the process of consolidation were made in the ordinary course of business of the Company, were carried out under arm's-length conditions, and are of little significance to accurately reflect the assets, financial condition, and results of operations of the Company.

On 20 July 2010, the Company adhered to the Code of Good Tax Practices, a document approved at the full Forum of Large Businesses (*Foro de Grandes Empresas*) created by the National Tax Administration Agency (*Agencia Estatal de Administración Tributaria*) and certain large companies, and which was held on that date.

Pursuant to the provisions of section 2 of the annex of adherence to the Good Tax Practices Code and of subsection 4.a) of the Corporate Tax Policy, the Company reports that it has complied with the provisions of such Code as from the time of approval thereof.

Specifically, it is reported that, during financial year 2017, the Company's head of tax matters appeared on 22 February 2017 and 17 July 2017 before Iberdrola's Audit and Risk Supervision Committee to report on compliance with the Corporate Tax Policy, which includes the good tax practices contained in the aforementioned Code, all of which was reported to the Board of Directors.

This annual corporate governance report was approved by the Board of Directors of the company at its meeting of 20 February 2018.

State whether any directors voted against or abstained in connection with the approval of this Report.

Yes ☐ No ☒

Individual or company name of director that did not vote in favour of the approval of this report	Reasons (opposed, abstained, absent)	Explain the reasons

ANNEX – SECTION H

SECTION C.1.30

Below is the data on attendance of each and every one of the directors at the meetings of the Board of Directors and its committees during financial year 2017: Proxies granted with specific voting instructions are considered to be attendances.

Policies and commitments

The company's [Corporate Governance System](#) is made up of the [By-Laws](#), the [Mission, Vision and Values of the Iberdrola group](#), the [corporate policies](#), the [governance rules of the corporate decision-making bodies and internal committees](#) and [Compliance](#).

The commitments of Iberdrola defined in this System materialise daily in all business activities of the group, as well as in its strategy to maximise the social dividend, social responsibility and respect for Human Rights, encouraging initiatives that contribute to achieving a more healthy, equal and just society, and particularly to the achievement of the Sustainable Development Goals, especially the goals relating to universal access to electricity and the fight against climate change.

In sum, it is a search for Shared Value, i.e. the sum of all economic and social values that a company generates through its activities, within the surroundings in which it carries them out, and in the case of Iberdrola, which is expressed through the social dividend.

The Iberdrola group has a set of corporate policies for this purpose that develop the principles reflected in the Corporate Governance System and that contain the guidelines governing the actions of the company and the companies of its group, as well as those of the directors, officers and employees thereof, within the framework of the vision and values of the company.

The companies of the group assume a set of principles and values that express their commitment to corporate governance, business ethics and corporate social responsibility. The awareness, dissemination and implementation thereof serve to guide the activities of the Board of Directors and its committees and of the decision-making bodies of the company in their relations with the company's various Stakeholders.

These policies, which can be viewed in full or in summary in the [Corporate Governance](#) tab of the website, are grouped into three categories:

- Corporate Governance and Regulatory Compliance Policies.
- Risk Policies.
- Social Responsibility Policies.

Iberdrola has also assumed certain public commitments that guide the activities of the group:

- By subscribing to various initiatives relating to the environmental and social dimension of its activities, included in disclosure 102-12 of this report.
- Through its membership in certain business and social organisations, such as those described in disclosure 102-13 of this report, and which are identified by their objectives and purposes.

These policies and commitments serve to guide the company and its workforce to manage their activities, and specifically the material topics dealt with in this document.

Responsibilities

Disclosure 102-26 of this report describes the organisational model of the Iberdrola group and its responsible persons. The responsibilities of the corporate functions or business units regarding the various aspects dealt with in this report are the following:

- Aspects relating to corporate governance and that affect the legal area are the responsibility of the Office of the Secretary of the Board of Directors.
- Aspects relating to labour practices are the responsibility of the Human Resources and General Services Division, within the Finance and Resources Division.
- Aspects relating to the environment are the responsibility of the Innovation, Sustainability and Quality Division, which reports directly to the chairman & CEO.
- Aspects relating to procurement are the responsibility of the Procurement and Insurance Division, within the Finance and Resources Division if referring to general supplies, and the responsibility of the Wholesale and Retail Business, within the group's General Business Division, if referring to the procurement of fuel.
- Aspects relating to regulation and public policies are the responsibility of the Global Regulation Division of the General Business Division of the group.
- Aspects relating to the products sold, demand, customers and other related topics are the responsibility of the Wholesale and Retail Business if referring to liberalised markets like Spain or the United Kingdom, and of the Networks Business if referring to regulated markets like the United States or Brazil.
- Aspects relating to production facilities are the responsibility of the Wholesale and Retail Business or the Renewables Business, each within their scope of activity, and those relating to transmission and distribution facilities are the responsibility of the Networks Business. These three businesses are within the General Businesses Division of the group.

By way of complement:

- The Operating Committee, made up of the chairman & CEO, the Business CEO and the directors of corporate functions and business units, is an internal committee providing technical support, information and management, with respect to both the duties of supervision and monitoring as well as the strategic organisation and coordination of the group through the dissemination, implementation and monitoring of the general strategy and the basic management guidelines established by the Board of Directors, while always respecting the scope of day-to-day management and effective decision-making corresponding to the governance and management bodies of the head of business companies of each of the businesses.
- The Compliance Unit, as an internal and permanent decision-making body linked to the company's Corporate Social Responsibility Committee, responsible for proactively ensuring the effective operation of the company's Compliance System, which is made up of all of the rules, formal procedures and significant actions intended to ensure that the company conducts itself in accordance with ethical principles and applicable law and to prevent improper conduct or conduct that is contrary to ethics, the law or the Corporate Governance System that might be committed by the professionals thereof within the organisation.
- Internal Audit, which promotes the proper operation of the information technology and internal control, risk management and governance systems of the company and of the group. Its activities are governed by the provisions of the Corporate Governance System, the [*Basic Internal Audit Regulations of Iberdrola, S.A. and its group \(BIAR\)*](#) approved by the Board of Directors and the other internal rules of the company, as well as the *International Standards for the Professional*

Practice of Internal Auditing approved by the Global Institute of Internal Auditors (IIA). The BIAR is required knowledge of the professionals of the group that it affects, and describes the nature, organisation, competencies, resources, activities, powers and duties of the function and establishes the relations between the Internal Audit Area of Iberdrola, S.A. and the Internal Audit divisions of the other companies of the group.

To exercise these responsibilities, the Iberdrola model provides that they are assumed in a decentralised manner by the country subholding companies and head of business companies in each country, which are organised through their respective boards of directors. The head of business companies occupy themselves with the effective management thereof, as well as the day-to-day management and control thereof.

Goals, resources and results

Iberdrola periodically publicises its medium- and long-term goals using various formats: [Investor Day](#) is one of the most important events to externally communicate the future outlook of the company. As additional information, Iberdrola annually publishes its [Integrated Report](#), which is also available on the corporate website.

Internally, the various businesses and corporate organisations determine their annual goals in harmony with the strategic goals of the company, both financial and non-financial, directed specifically towards the activities for which they are responsible. The results obtained with respect to the established goals are used to establish the annual variable remuneration of the company's management team by means of a procedure audited by the company's Internal Audit Division.

To reach these goals, Iberdrola has an annual process for assigning resources, by establishing the corresponding income and expense budgets, which are approved by the company's Board of Directors. The achievements obtained by Iberdrola are reflected in the performance of the various quantitative indicators covered by the various aspects dealt with in this report.

By way of complement, the businesses and corporate areas have defined specific goals in the area of corporate social responsibility, which are contained in the *CSR Plan 2015-2017*.

This plan is based on goals linked to the business model and to the management of tangible and intangible assets of the company, focusing on each of them: financial, industrial, intellectual, human, natural, social and relational capital. Based on these goals, more than 150 activities were established through which each organisation of the company has contributed to the achievement of the plan, in order to consistently promote the progress of CSR in all countries, businesses and corporate areas. Approximately 98% of this plan has been achieved, with significant progress in cross-sectional topics like Stakeholder relations, the protection of human rights, and the inclusion of CSR tools in the management systems of the businesses and corporate areas in all countries in which the group does business.

These goals are monitored on a half-yearly basis by the group's Corporate Social Responsibility and Reputation Committee, and by the Corporate Social Responsibility Committee of the Board of Directors when the latter so requests.

Iberdrola is currently preparing a new plan for the entire group for the coming years, for the purpose of increasing transparency and the number of social responsibility activities in the businesses and corporate areas.

Report boundary

The information boundary of this report is described in detail in section 102-45.

Due to its significance, it should be noted that due to the merger in Brazil of all of the businesses of the company Elektro Holding into Neoenergia in August 2017, it was deemed necessary to reformulate the information for financial year 2016 applying the same standards as financial year 2017, in order for the information for both financial years to be homogenous and comparable. The reformulation involves the consideration of 100% of the socio-economic and environmental parameters of Neoenergia (thus reflecting the control position of the group) instead of the 39% that was used through the prior year. The economic/financial figures follow accounting standards.

Furthermore, the information in all the tables of this report has been limited to financial years 2017 and 2016. Maintaining the scorecards and tables with information for three financial years, as was Iberdrola's customary practice, would have involved a lack of homogeneity between the information from financial year 2015 and that from the following years. This limitation will already be corrected in the next report.

1. Organisational profile

Contribution to SDGs of the performance described by the indicators of this section
(according to SDG Compass www.sdgcompass.org)

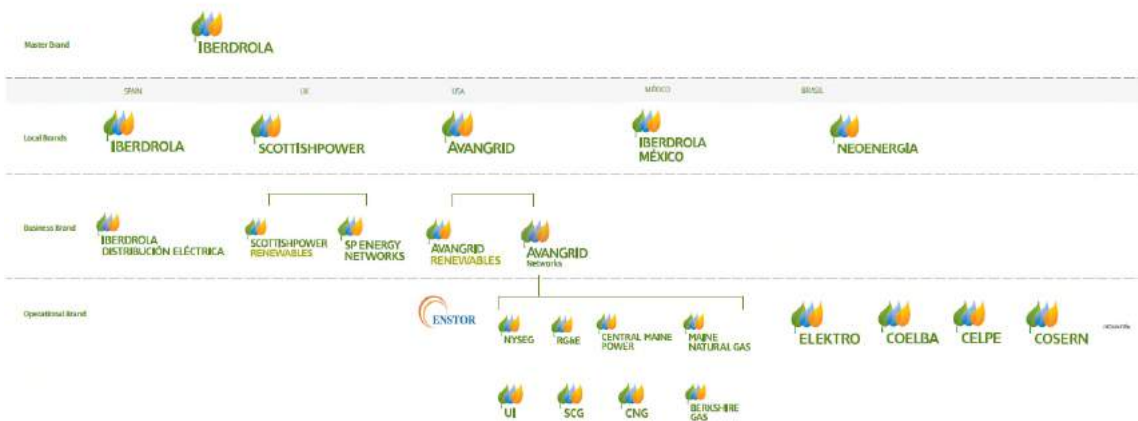

102-1 Name of the organisation

Iberdrola, S.A.

102-2 Primary activities, brands, products and services

The [“Iberdrola” brand](#) reflects the corporate mission, vision and values, is based on the company's strategy, which gives it credibility and strength, and conveys its commitment: the sustainable creation of value for all of its Stakeholders, contributing to the development of the communities in which we do business and to the well-being of people, providing a high-quality service and offering environmentally-friendly, efficient and innovative energy solutions.

Iberdrola knows how to identify and adjust to the needs of each country in which it does business. The company has used its experience in each market to strengthen its brand value, and beyond the location of the business, it has created a brand culture based on a global/local balance. Iberdrola has the brand names listed in the table below at year-end 2017:

The table above shows the most important brands having the largest operational and market presence in each country. The company has other brands at the local and business level.

The main products that Iberdrola makes available to its customers are electricity and natural gas. It also offers a broad array of products, services and solutions in the areas of:

- Improvement in the consumer's quality of life, peace of mind and safety.

- Efficiency, digitalisation and energy services.
- Protection of the environment: renewable energy and sustainable mobility.
- Quality of electricity supply and safety of facilities.
- Assembly of electricity infrastructure.
- Comprehensive management of energy facilities and supplies.

It also provides the following services through its subsidiaries: engineering and construction of electricity generation, distribution and control facilities; operation and maintenance of electricity generation facilities; land management and development; and the sale and lease of housing, offices and retail premises. More detailed information in this regard can be in the [“Group structure”](#) section of the website.

102-3 Location of headquarters

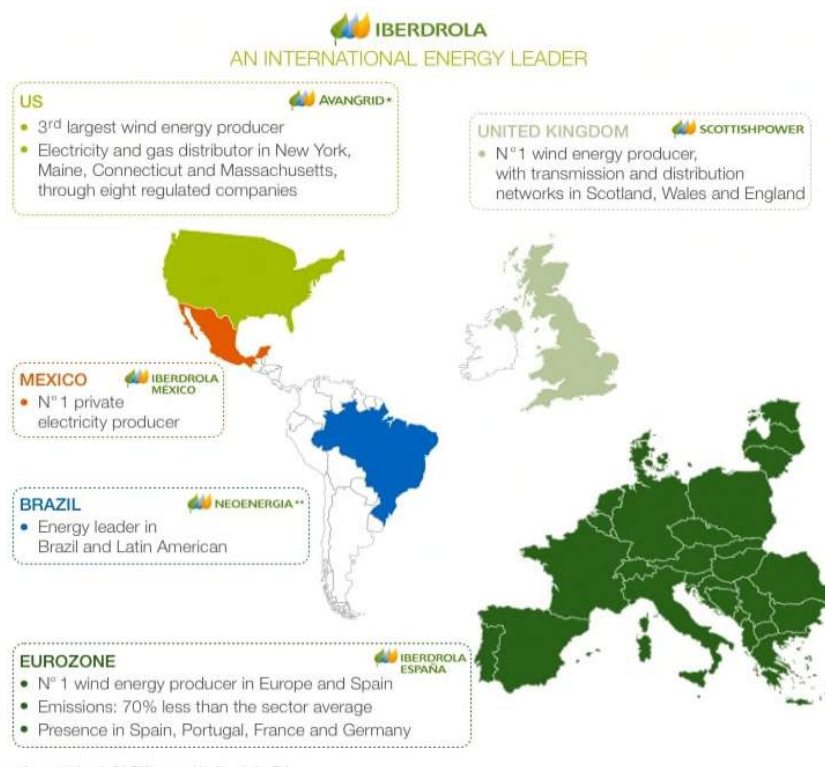

The registered office of Iberdrola is:

Plaza Euskadi número 5
48009 Bilbao, Biscay
Spain

102-4 Location of operations

Iberdrola and its subsidiaries and affiliates carry out their activities in almost twenty countries, fourteen of which are considered significant with respect to sustainability issues. However, for operational and economic/financial purposes, Iberdrola concentrates 97.5% of its business activities (measured by turnover) in five principal countries: Spain, United Kingdom, United States, Brazil and Mexico.

The following infographic shows the group's principal areas of activity. The countries in which it operates, the activities performed in each of them and the criteria used to define the significance thereof are set forth in disclosure 102-45 of this report.

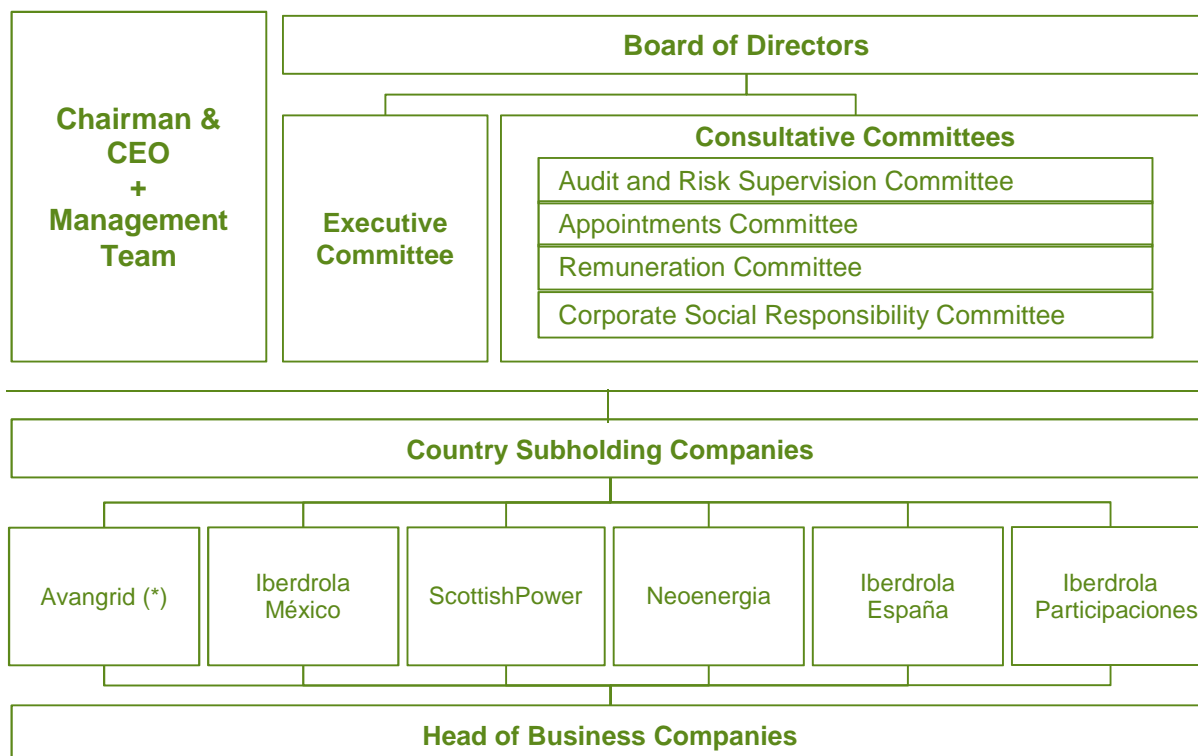

102-5 Ownership and legal form

Iberdrola is a *sociedad anónima* (public limited company) organised under Spanish law.

The corporate and governance structure of the company and of the group, which forms an essential part of the company's Corporate Governance System, is reflected in the following chart:

Corporate and governance structure of Iberdrola, S.A.

(*) Company listed on the New York Stock Exchange.

At 31 December 2017, its share capital totalled 4,738,136,250 euros, represented by 6,317,515,000 shares of the same class and series, each having a nominal value of 0.75 euro. All shares give the holders thereof the same rights. The approximate distribution of equity interests is as follows:

- Foreign entities	66.28%
- Domestic entities	10.17%
- Retail investors	23.55%

As at the date of approval of this report, the share capital of Iberdrola, S.A. totals 4,828,780,500.00 euros and is made up of 6,438,374,000 shares of the same class and series, each having a nominal value of 0.75 euro, which are totally subscribed and paid up.

102-6 Markets served

In the countries of operation, described in section 102-45, the Iberdrola group provides the products and services described in section 102-2 to many different types of customers in the residential, commercial and corporate spheres, as reflected in indicator EU3. The same types of products and services may be provided in other countries should legal, economic and social circumstances be appropriate, in line with the company's strategic approach.

102-7 Scale of the organisation

The following sections include the key figures for Iberdrola, the corporate structure of which is set forth in indicator 102-26 of this report.

Employees

Employees ¹	2017	2016
Spain	10,296	10,395
United Kingdom	6,067	6,373
United States	6,561	6,849
Brazil	10,096	9,429
Mexico	944	874
Other countries	291	162
Report boundary	34,255	34,082

Operations (centres of activity)

The Iberdrola group has identified more than 1,200 sites at which the company operates. In order to adequately manage such a large number of them from the viewpoint of the "Topics" dealt with in the GRI Standards, rationalisation criteria have been used to address them; accordingly, the number of Iberdrola's locations of operation at year-end 2017 is deemed to be 114 for purposes of this report.

¹ The figures in the table reflect the number of employees at year-end 2017, without distinguishing between full-time/part-time employees. To perform statistical analysis regarding labour costs, it is recommended to use the number of employees in terms of Full Time Equivalents (FTEs): 28,355 in financial year 2016, without including the consolidation of Neoenergia, and 33,772 in financial year 2017.

Detailed information on these locations and on the criteria used to define them can be found in Annex 3 Supplementary information.

Net sales (net revenue)

Net sales (€ millions)	2017	2016
Iberdrola consolidated total	31,263	29,216

Report boundary	26,229	8,026	34,255	25,925	8,157	34,082

The policies followed with subcontracted personnel are described in disclosure EU17.

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

102-9 Supply chain

Introduction

The Iberdrola group's supply chain consists of two different processes:

- The acquisition of material and equipment and the procurement of works and services, handled by the group's Procurement Division, which is within the Finance and Resources Division.

³ The total number of employees and the definitions of the boundary can be found in disclosures 102-7 and 102-45 of this report.

- The acquisition of fuel, handled by the Wholesale and Retail Business.

Both processes are guided by the same principles emanating from the [corporate policies](#) and the [Code of Ethics](#), which are approved by the company's Board of Directors. However, each of them have specific characteristics in their various phases: registration and classification of suppliers, bidding process, execution of contracts, monitoring of contractual terms, and quality control.

Acquisition of material and equipment and procurement of works and services

Iberdrola placed orders with approximately 22,000 suppliers during 2017. The following table shows the economic volume of purchases by Iberdrola for these types of supplies, as well as a geographic breakdown thereof:

General supply of equipment, materials, works and services (€ millions)	2017 ⁴	2016
Spain	1,406	1,354
United Kingdom	1,663	2,134
United States	2,467	2,146
Brazil	1,500	1,242
Mexico	902	453
Other countries	676	179
Total	8,614	7,508

These high purchase volumes are a driver of growth for those countries in which the company engages in procurement, favouring their business, industrial and social development through the creation of employment at service providers and their auxiliary industries.

Acquisition of fuel

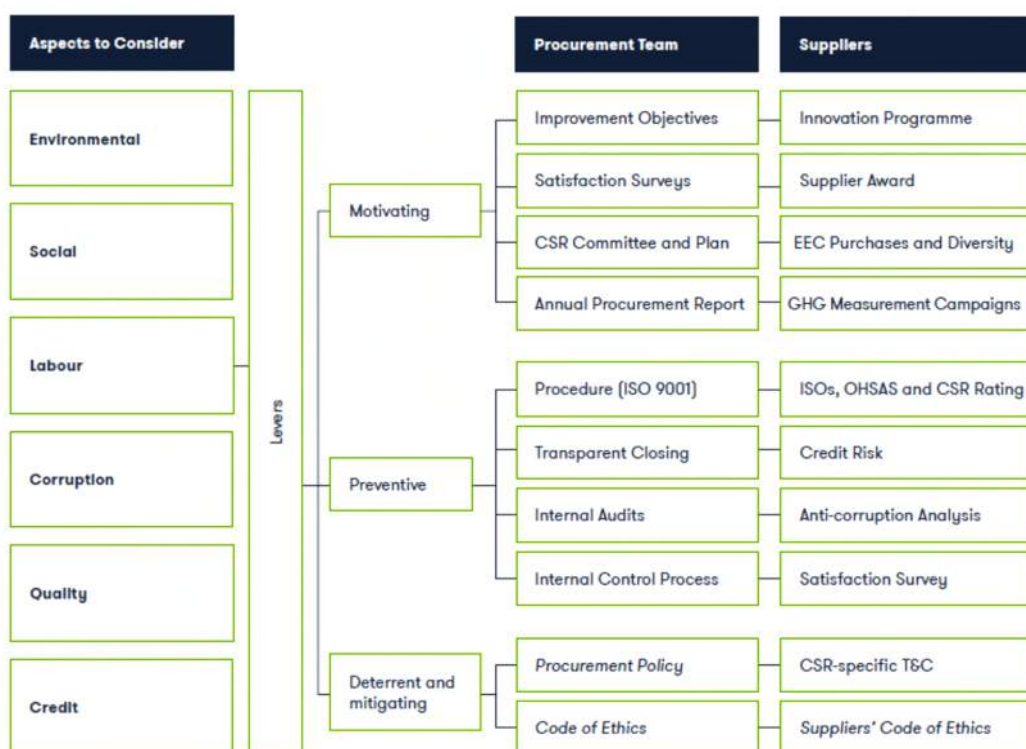

Iberdrola dedicated more than 3,400 million euros to the acquisition of coal, natural gas and uranium in 2017. Except for uranium, which is acquired in Spain exclusively through Empresa Nacional del Uranio (Enusa), acquisitions of coal and natural gas are made on the international market, mainly through long-term commercial relationships with some 16 large domestic and international suppliers and market operators (producers and traders).

Management of supply chain

In its day-to-day management, the Procurement and Insurance Division assumes and promotes the values and commitments of the group in the area of ethics and corporate social responsibility set out in the group's *Code of Ethics* and in the social responsibility policies. Therefore, mechanisms have been implemented in the procurement process designed to ensure transparent, integral and responsible management in the supply chain, which has allowed the company to confront the globalisation and internationalisation process with confidence that its values and ethical and responsibility commitments are conveyed to the suppliers, regardless of their geographic location or area of business activity.

The chart below shows the main mechanisms of the supplier management model:

⁴ Volume billed during the financial year.

Promotion of sustainability and social responsibility

The Procurement Division develops various initiatives designed to ensure sustainability in the supply chain, especially ones that impact ethical commitments, respect for human rights and the fight against corruption, taking as a starting point the principles established in the *Policy on Respect for Human Rights*, in the *Procurement Policy* and in the *Suppliers' Code of Ethics*. The most significant ones are set out below:

a) Policies and procedures.

- *Procurement Policy* and procurement procedures: these establish the global framework for the control and management of procurement processes, with particular emphasis on fulfilment of the ethical commitments of the professionals of the group and of its suppliers.
- *Suppliers' Code of Ethics*: considering that suppliers are a strategic Stakeholder, the company has established specific principles of conduct for them in their area of activity, always aligned with the principles and values of the group. This Code is communicated to all suppliers during the bidding phase and is part of the documentation both of the request for bids and of the final contract documentation with the successful bidder.

b) Specific clauses in the contracting terms of the Iberdrola group.

These contractual provisions require the parties to act within the most stringent levels of safety, occupational risk prevention, environmental protection and respect for and protection of human rights, as well as to eliminate all forms of forced and compulsory labour, prevent any form of child labour, eliminate all discriminatory practices, fight corruption, etc.

c) Register and classification.

Suppliers (both new and existing) are reviewed and classified internally within the context of the proposed purchase transaction, according to their specialisation, the criticality of supply and the total amount of the purchase, as well as the low possibility of substitution, inasmuch as the foregoing may negatively and significantly affect the achievement of the company's strategic objectives in the event of non-performance or defective performance.

In this connection, priority will be given to suppliers that have advanced management systems certified by a third party and, in particular:

- Environmental management system.
- Quality management system.
- Occupational risk prevention system.
- Action plan for corporate social responsibility and respect for human rights.

In the initial classification of the supplier, sustainability has a weight of 40% in the total score, with the other 60% being its financial situation and technical solvency.

d) Evaluation of risks of supplier corruption.

The procurement process carried out by the Procurement Division includes an evaluation of the risk of supplier corruption and the performance of due diligence reviews on suppliers considered to present the greatest risk. More than 80% of total purchases were analysed in 2017.

e) Credit risk review at suppliers.

In order to prevent the potential negative consequences for Iberdrola of suppliers failing to honour their commitments, the Procurement Division has a Credit Risk Management System for the main suppliers of the group. More than 76% of total purchases were analysed in 2017.

f) Improvement goals linked to the remuneration of the Procurement team.

The Procurement Division actively participates in the Corporate Social Responsibility Committee, as it is especially sensitive to the demands and interests of suppliers as strategic Stakeholders. For this reason and in order to achieve continued improvement with this group, annual objectives have been defined that are linked to the remuneration of the Procurement Division, focused on improvement of the supplier profile in the area of corporate social responsibility. Consequently, the supplier is motivated to improve its profile by actions promoting excellence in business management, as well as the Procurement Division being incentivized through quantifiable objectives to choose those companies showing good performance over the long term in the areas to be developed.

Fuel purchases are also subject to the general principles stemming from Iberdrola's social responsibility policies in order to foster socially responsible actions, respect for the environment and the prevention of occupational risks at supplier companies.

Iberdrola carries out an internal evaluation of its main fuel suppliers in accordance with economic, logistics, environmental and social standards. Aspects assessed are: the existence of an environmental policy, information regarding CO₂ emissions, emission reduction initiatives, energy efficiency, biodiversity conservation, occupational health and safety, equal opportunity, human rights and ethical behaviour (anti-bribery and anti-corruption practices).

When establishing supply contracts, apart from agreeing on contractual elements that respect the law applicable in the countries involved in the transaction, Iberdrola negotiates the inclusion of clauses regarding social responsibility. Currently, all contracts for imported coal and for uranium have these types of clauses. The inclusion of these clauses will be negotiated for the new natural gas contracts.

Iberdrola belongs to the international BetterCoal platform, which includes some of the leading European coal-purchasing energy companies. Its aim is to set a standard for ethical, environmental and social conduct; evaluate the conduct of producers through audits; create a database with the results of such evaluations; and improve producers' actions.

During 2017, Iberdrola received no external complaints from authorised channels with respect to the supply chain, and has not cancelled any supply contract or order upon grounds relating to human rights, corruption, labour practices or environmental practices.

102-10 Significant changes to the organisation and its supply chain

Changes in activities and/or in operations

In the course of their business, the various subsidiaries and affiliates of Iberdrola have carried out transactions that change the composition of their assets, including the following:

- 3 August 2017 saw the publication in the Official Gazette (*Boletín Oficial del Estado*) (BOE Nº 184) of *Order ETU/754/2017 of 1 August* denying renewal of the authorisation for operation of the Santa María de Garoña nuclear power plant and declaring a definitive halt to the operation thereof, without prejudice to supplementary technical instructions that the Nuclear Safety Council might issue with respect to the application thereof.
- On 25 August 2017, the CNMV was notified of the consummation of the inclusion of the businesses of Elektro Holding, S.A. within Neoenergia, S.A. After this transaction became effective, BB Banco de Investimento, S.A. and Caixa de Previdência dos Funcionários do Banco do Brasil became the owners of approximately 9.35% and 38.21%, respectively, of the capital of Neoenergia, S.A., with Iberdrola Energía, S.A. (Sociedad Unipersonal) owning the remaining 52.45% of the share capital.
- After the merger by absorption of Siemens Wind Holdco, S.L. (the wind head of business company of Siemens Aktiengesellschaft), as absorbed company, by Gamesa Corporación Tecnológica, S.A., as absorbing company, the interest of Iberdrola Participaciones, S.A. (Sociedad Unipersonal) in the resulting company, Siemens Gamesa Renewable Energy, S.A. (Gamesa), was reduced to 8.071% of its share capital.
- Start-up of 21 new facilities by the Renewables Business, of which 6 are in the United States with an installed capacity of 593.5 MW, 4 in the United Kingdom with a total of 290.5 MW, and 11 in Brazil with a total of 328.5 MW.
- In Mexico the commercial start-up of the Baja California III combined cycle plant (314 MW), the Altamira cogeneration plant (57 MW) and the Bajío cogeneration plant (50 MW).

Changes in capital structure

The shareholders acting at the General Shareholders' Meeting of Iberdrola held on 31 March 2017 approved two increases in capital by means of a scrip issue in order to once again implement the *Iberdrola Flexible Dividend* system, implementing the first increase in capital in July 2017 and the second in January 2018.

Changes in supply chain

There were no significant changes in the company's supply chain during the financial year.

102-11 Precautionary Principle or approach

The precautionary principle in environmental matters is included in Iberdrola's [Environmental Policy](#) approved by its Board of Directors. The practical application thereof is reflected in the wager on more

efficient technologies and processes that contribute to confronting climate change and other environmental challenges, with a precautionary approach that allows for greater respect towards biodiversity and a more sustainable use of natural resources.

The Iberdrola group operates its Management System under an environmental management model that includes a life cycle analysis perspective to evaluate the environmental impacts of the activities and facilities of the company through the calculation of the *Corporate Environmental Footprint*. This leads to a consideration of the impacts of all activities of the process, both its own as well as those of the upstream (suppliers) and downstream (customers) supply chain in all countries in which Iberdrola has a presence. This system identifies the environmental risks of the group and manages them with specific prevention and mitigation instruments, as well as the widespread use of environmental impact assessments as a precautionary tool used in the development of infrastructure projects. The precautionary approach also takes shape through continuous awareness and assessment of the environmental risks of production facilities, preventing such risks from occurring and, where applicable, minimising the consequences if they occur.

Based on the precautionary principle, Iberdrola commits to knowing the surroundings of its facilities in order to establish and improve the foundations for making decisions on investments in the restoration and improvement of natural capital, and in the selection of the most appropriate infrastructure. This includes the various studies performed to understand the behaviour of species in the habitats in which it operates, as well as studies focused on the assessment of eco-systemic services, like the pilot *Cumbernauld Living Landscape Pilot Project: Natural Capital Assessment* and the *Socioeconomic evaluation of eco-systemic services*.

102-12 External initiatives to which the organisation subscribes or which it endorses

The company has subscribed to or endorsed external initiatives aligned with sustainable development and encouraged its affiliated companies to adhere to them. Iberdrola supports or subscribes to:

- Iberdrola is fully aligned with the [Sustainable Development Goals \(SDGs\)](#), including them in its business strategy and its *Sustainability Policy*. In addition to meeting its goals to reduce the intensity of CO₂ emissions 50% by 2030 and being carbon-neutral by 2050, Iberdrola is actively working to contribute to the success of the SDGs and for other citizens and companies to be aware of them and contribute to the achievement thereof. Along these lines, it is working with universities (Universidad de Salamanca and Universidad Politécnica de Madrid), organising informational seminars at the Iberdrola Campus, publishing materials and participating in forums ("Youth Speak Forum", of which Iberdrola is a Gold Partner, of the AIESEC initiative). A partial summary of the organisations and initiatives with which it has collaborated more actively during the whole process is provided below:
 - o World Economic Forum (WEF) –CEO Climate Leaders–.
 - o World Business Council of Sustainable Development (WBCSD) –Low Carbon Technology Partnership Initiative–.
 - o Global Compact LEAD.
 - o The Prince of Wales's Corporate Leaders Group. Green Growth Platform.
 - o Carbon Pricing Leadership Coalition.
 - o SE4ALL.
 - o We Mean Business.
 - o The Climate Group.
 - o Bruegel.

- Items of note in the Spanish context are a very active collaboration with the Spanish Office of Climate Change and Iberdrola's participation in the Spanish Green Growth Group, of which it is vice-president.
- The *Good Tax Practices Code* of the Large Business Forum of the Spanish Tax Agency, part of the Ministry of Economy and Public Finance since 2010, which involves following a course of conduct that goes beyond respect for and strict compliance with statutes and regulations, to contribute actively and voluntarily to economic, social and environmental improvement.
- The Global Compact since 2002. Iberdrola also participates in other initiatives of the Global Compact, such as the *Global LEAD Programme*, projects regarding human rights, the fight against climate change and other activities of the Red Española del Pacto Mundial (Spanish Global Compact Network). Iberdrola's *Progress Report* reaches the maximum level, defined as *Advanced*. This report is prepared by the company annually to report the progress made in complying with and disseminating the *Principles of the Global Compact*.
- In Spain, Iberdrola also adhered to an SF6 emissions reduction initiative, within the framework of an agreement between the Spanish Electrical Industry Association (*Asociación Española de la Industria Eléctrica*) (Unesa) and the Ministry of Agriculture and Fisheries, Food and Environment.

In the United Kingdom, ScottishPower forms part of influential organisations in the energy sector like the Scottish Power Fuel Poverty Forum, and notably also collaborates with the University of Strathclyde on topics of innovation.

At ScottishPower, a team has also been created dedicated to coordinating activities with the Cancer Research association, and all joint actions carried out since it joined an initiative in 2012 in order to procure funds to investigate this illness. Since then, they have amply achieved their goals, and there have been countless initiatives by ScottishPower employees helping to raise awareness of the treatment of this illness: "Race to Life", "Stand up to Cancer" and "Help Beat Cancer".

Along these lines, within the framework of collaboration with the Spanish Cancer Association (*Asociación Española Contra el Cáncer*) (AECC), the *Together against cancer (Juntos contra el cáncer)* initiative was launched in Spain in October 2016, offering the opportunity to make small monthly donations via one's electricity bill with a commitment from Iberdrola to double the amount donated by its customers. This initiative continued in 2017, and more than 45,000 customers have already joined to collect funds.

The Agreement continues with the UN in Brazil, and Neoenergia has continued since 2007 with its participation in the Global Compact, which aims to mobilise the business community to adopt the social responsibility principles expressed through ten universal principles in different areas, like the environment and human rights.

Iberdrola has provided another year of support to the Mexican Red Cross for its 2017 national collection and has launched a campaign to promote social welfare actions under the auspices of Fundación Iberdrola México in order to collect funds to help those affected by the earthquakes in Mexico.

Finally, in the United States, Avangrid participates in *Reforming Energy Vision (REV)* to promote a more efficient use of energy and greater penetration of renewables in the country, as in the case of the *CT Grid Side Enhancement initiative*, which promotes the development of energy policies that support the integration of energy sources distributed through the grid. It is also a member of *The Partnership on Climate Resilience* of the U.S. Department of Energy to combat the effects of climate change and modernise energy infrastructures for the future.

102-13 Main membership of associations

Iberdrola is a member of numerous organisations related to its activities, the most significant of which are listed in the following table:

International	
World Association Nuclear Operator (WANO)	WindEurope
CSR Europe	Union of the Electricity Industry EURELECTRIC
World Economic Forum	European Distribution System Operators (EDSO)
United Nations Global Compact	Global Wind Energy Council (GWEC)
Scotland Europa	Nuclear Industry Association (NIA)
International Electrotechnical Commission/European Committee for Electrotechnical Standardisation (IEC/Cenelec)	International Council on Large Electric Systems (CIGRE)
Energy Institute for G9 (Offshore Wind Health and Safety Association)	World Energy Council
BetterCoal	European Utilities Telecom Council-EUTC
World Business Council for Sustainable Development (WBCSD)	International Conference on Electricity Distribution (CIRED)
The Prince of Wales's Corporate Leaders Group	Smart Life
European Round Table (ERT)	European Electric Grid Initiative (EEGI)
Association for Advancement of Cost Engineering	Caring for Climate
Prime Alliance	Institute of Electrical and Electronics Engineers
Electric Power Research Institute – EPRI	International Council on Large Electric Systems (CIGRE)
Center for Energy Efficiency and Renewable Technologies	IHS Global
Solar Power Europe	European Technology Platform Smart Grids
European Network Energy of Transmission System Operator for Electricity (ENTSOE)	International Emissions Trading Association (IETA)
Spain	
Sociedad Nuclear Española	Asociación empresarial Eólica (AEE)
Foro de la Industria Nuclear Española	Unión Española Fotovoltaica (UNEF)
Asociación Española del Gas (Sedigas)	Red Española del Pacto Mundial
Plataforma Española de Redes Eléctricas (FUTURED)	Confederación Española de Organizaciones empresariales (CEOE/Cepyme)
Asociación Española de la Industria Eléctrica (UNESA)	Círculo de empresarios
Instituto Tecnológico de la Energía (ITE)	Cámara de Comercio de España
Asociación Española de Normalización (AENOR)	Club de Excelencia en Sostenibilidad
Fundación COTEC para la Innovación	Club Español de la Energía
Asociación Española para la Promoción de la Cogeneración	Foro de Marcas Renombradas Españolas
Corporate Excellence	
United Kingdom	
The Confederation of British Industry	Aviation Investment Fund Company Limited
The Scottish Council for Development and Industry	Ynni Cymunedol Cymru Community Energy Wales
Energy UK-ECO Group	ECO Quarterly Supplier Forum Ofgem
Energy Networks Association	Industrial & Power Association Ofgem's ECO Industry Fraud Prevention and Compliance Committee
Scottish Renewables	Offshore Wind Accelerator
Energy & Utility Skills	CIGRÉ United Kingdom National Committee
Radar Working Group (Aviation Investment Fund Company Limited)	European Network of Transmission System Operators for Electricity (ENTSOE)

National Skills Academy for Power	Joint Environment Programme
Institute of Engineering & Technology	Gas Storage Operators Group
National Energy Action	Renewable UK
Scottish Windfarm Bird Steering Group	Scottish Hydrogen and Fuel Cell Association
Energy Action Scotland	Technology Innovation Centre
United States	
Business Council of New York State	American Wind Energy Association (AWEA)
Mid-Atlantic Renewable Energy Coalition (PJM States)	Rochester Business Alliance
Maine Better Transportation Assn	The Nature Conservancy-Maine (TNC)
NY State Economic Development Council	Maine Audubon Society
Greater Binghamton Chamber of Commerce	E2Tech
Maine & Company	Maine State Chamber of Commerce (MSCC)
Northeast Gas Association (NGA)	Renewable Northwest (RENEW)
Renewable Energy Northeast (RENEW)	The Wind Coalition (TWC)
Gas Technology Institute	Independent Energy Producers Association of California
Edison Electric Institute (EEI)	Wind on the Wires (WOW)
Interwest Energy Alliance	Alliance for Clean Energy - New York (ACE-NY)
Center for Energy Efficiency and Renewable Technologies (CEERT)	American Gas Association (AGA)
Northeast Underground Committee (NEUC)	New England Power Pool
National Electrical Safe Code	New England-Canada Business Council
Mid-Atlantic Renewable Energy Coalition (MAREC)	North American Transmission Owner and Operator Forum (NATF)
North American Electric Reliability Corporation (NERC)	Northeast Transmission Group (NETG)
ISO New England (ISO-NE)	Energy Council of the Northeast (ECNE)
Connecticut Energy Workforce Development Consortium (CTEWDC)	Electric Power Research Institute (EPRI)
Call Before You Dig, Connecticut	Center for Energy Workforce Development (CEWD)
American National Standards Institute (ANSI)	Association of Edison Illuminating Companies
Mexico	
Asociación Mexicana de Energía Eólica (AMDEE)	Cámara Española de Comercio, A.C. (CEE)
Asociación Mexicana de Energía, A.C	Consejo Coordinador empresarial A.C
Confederación Patronal de la República Mexicana (Coparmex)	Cámara Nacional de la Industria de Transformación Ensenada
Cámara de la Industria de Transformación de Nuevo León	Consejo Ejecutivo de empresas Globales, AC
Empre-Bask México, A.C	Consejo Consultivo del Agua A.C.
Brazil	
Associação Brasileira de Distribuidores de Energia Elétrica	Instituto Brasileiro de Executivos de Finanças
Associação Brasileira das Relações empresa Cliente	Comitê Brasileiro da Comissão de Integração Energética Regional
Instituto ABRADDEE da Energia	Associação Cultural Ecológica do Vale do Ribeira
Associação Brasileira de Energia Solar (ABSOLAR)	Câmara Americana de Comércio
Serviço Brasileiro de Apoio as Micro e Pequenas empresas	Associação Brasileira de Energia Eólica ABEEOLICA
Instituto Ethos de Responsabilidade Social	Associação Brasileira de Recursos Humanos
Conselho Municipal de Defesa do Meio Ambiente	Federação das Indústrias do Estado de São Paulo
Associação da Indústria de Cogeração de Energia	Associação Paulista das Cerâmicas de Revestimento

Consórcio Intermunicipal das Bacias dos Rios Piracicaba, Capivari e Jundiá	Associação de Educação do Homem de Amanhã de Araras
Agência de Desenvolvimento Tietê Paraná	Fundação Comitê de Gestão empresarial (COGE)
Associação Brasileira dos Contadores do Setor de Energia Elétrica (ABRACONE)	Fundação Nacional de Qualidade (FNQ)
Movimiento Pernambuco Empresarial (ABERJE)	

For more details on the company's commitment to the above, its participation within various committees, the contributions it makes or its strategic involvement, please consult public information or visit the websites of these organisations.

GRI Sector Supplement Disclosures

EU1 Installed capacity

Installed capacity by energy source (MW)	2017	2016
Renewables	29,112	27,813
Onshore wind	15,533	14,820
Offshore wind	544	194
Hydroelectric	12,513	12,378
Mini-hydro	303	302
Solar and others	219	120
Nuclear	3,177	3,410
Combined cycle	13,985	13,637
Cogeneration	1,299	1,315
Coal	874	874
Iberdrola total	48,447	47,049

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

EU2 Energy output

Net energy output by source of energy (GWh)	2017	2016
Renewables	50,745	56,443
Onshore wind	33,878	32,162
Offshore wind	821	728
Hydroelectric	15,320	22,597
Mini-hydro	394	686
Solar and others	333	270
Nuclear	23,249	24,381
Combined cycle	54,144	50,892
Cogeneration	6,853	6,947

Coal	2,642	3,803
Iberdrola total	137,632	142,466

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

EU3 Electricity users and producers

Electricity users (%)	2017	2016
Iberdrola total		
Residential	90.1	90.2
Industrial	1.0	1.0
Institutional	1.0	0.9
Commercial	5.8	5.8
Other	2.1	2.1
Users who are producers (no.)	2017	2016
Iberdrola total		
Users that are also producers of electricity	72,073	83,626

At year-end 2017, the companies of the group covered by this report, as a whole, handle a total of 30.33 million electricity supply points.

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

EU4 Transmission and distribution lines

Power lines ⁵ (Km)	2017	2016
Transmission		
Overhead	48,088	48,032
Underground	1,999	987
Iberdrola total	50,087	49,019
Distribution		
Overhead	911,474	875,140
Underground	195,050	193,285
Iberdrola total	1,106,524	1,068,425

Due to the nature of the respective electric systems, the voltage levels used for the transmission and distribution of power are not the same in all countries. In Latin America, transmission lines are deemed to be those with a nominal voltage equal to or greater than 69 kV; in the United States and in the United Kingdom, transmission lines are deemed to be those with a nominal voltage equal to or greater than 132 kV; in Spain, transmission lines are deemed to be those with a nominal voltage greater than 220 kV.

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

EU5 Allocation of CO₂ emissions allowances or equivalent

⁵ Lengths of lines are calculated by circuit, regardless of the number of circuits for each power line. A double-circuit 5-km line is considered to be 10 km.

Only the generation facilities located in Europe are subject to an emission rights trading system, for which reason this indicator does not affect the thermal generation facilities in Mexico, Brazil or the United States.

The European facilities (Spain and United Kingdom) have not received free trading rights since 2013, for which reason they have to acquire the necessary rights at auction to offset the emissions produced.

Total emissions of the European facilities in 2017 increased to 8.84 million tonnes and were covered by purchases on the market and surpluses from prior years.

24,858 emission rights of Tarragona Power were reported and reflected in the Official Gazette of Spain (*Boletín Oficial del Estado de España*) (BOE) in 2017.

After closing its last coal plant in the United Kingdom, Iberdrola also intends to close the last two coal facilities that are currently in operation.

2. Strategy

102-14 Statement from senior decision-maker

The statement of Iberdrola's chairman & CEO, Ignacio S. Galán, can be found in the corporate website (www.iberdrola.es) in the Sustainability Report section.

102-15 Key impacts, risks and opportunities

1. Strategy

Iberdrola is one of world's largest utilities, which focuses its activities on:

- Production of electricity from renewable and conventional sources.
- Purchase/sale of electricity and gas on wholesale markets.
- Transmission and distribution of electricity.
- Supply of electricity, gas and related energy services.
- Other activities, mainly linked to the energy sector.

Iberdrola carries out its activities mainly in the five countries of the Atlantic area: Spain, the United Kingdom, the United States, Brazil and Mexico.

The purpose of the business model defined by the Iberdrola group is the "supply of reliable, high-quality and environmentally-friendly energy", through a sustainable, long-term industrial enterprise. Under this consideration, and taking into account the long-term consensus energy scenarios, Iberdrola is developing a strategy with the following main characteristics:

- The organic growth of the company is focused on major investments in the five countries referred to above. The international diversification in terms of contribution to results will continue to grow in the coming years.
- The investment will preferably focus on the networks and renewables businesses, which, apart from being regulated businesses with long-term contracts, contribute decisively to the fight against climate change.
- The strategic pillars defined by the company are profitable growth, operational excellence, customer-focused operations, the optimisation of capital, and innovation.
- The company has publicly announced its commitment to decarbonisation, setting high goals for 2030 and 2050.
- Operational efficiency is a characteristic of Iberdrola, and is based on internal innovation and the rapid adoption of available technology.
- Financial stability is considered key for balanced growth. It seeks to maintain high levels of solvency and liquidity, which ensure the normal development of operations, good access to the capital markets, and a sustainable dividend policy.

- The commitment to social responsibility and sustainability is reflected by the inclusion of the concept of the Social Dividend as part of the company's strategy. It is defined as the sustainable creation of value for its Stakeholders through the performance of all of its activities.

2. Iberdrola's key impacts on sustainability

The group's commitment to sustainability takes shape in five basic principles of conduct pursuant to its *Sustainability Policy*:

- Competitiveness of the energy products supplied.
- Safety in the supply of energy products.
- Reduction in environmental impact of all of the activities performed by the companies of the group.
- Creation of value for shareholders, customers and suppliers, looking after business profits as one of the foundations for the future sustainability of the company and of the group.
- Driving the social dimension of the activities of the group.

Competitiveness

Iberdrola seeks the competitiveness of the energy products it supplies through constant improvement in all business processes (generation, transport, distribution and sale), which has led it to high levels of operational efficiency. This focus allows it to offer products at the best price possible thanks to the use of technologies with low operation and maintenance costs, and a combination of diversified generation technologies with the most competitive energy sources based on climatological and market conditions.

Safety of supply

The design of operating procedures prioritises safety in the supply of energy products, using locally produced energy sources to the extent possible, employing renewable energy resources, and ensuring the reliability and availability of generation, transport and distribution facilities.

The group also works to maintain a high quality of service that ensures the availability of energy for customers. In this regard, the requirements for investment in the transmission and distribution networks is constantly analysed in order to ensure resistance against extraordinary events; with the availability of the technical and human means needed to restore service as quickly as possible. The group also encourages the responsible use of energy, supporting energy savings and efficiency measures.

Reduction of environmental impact

The production and distribution of electricity are industrial activities that are indispensable for today's society, but they have a potential impact on the environment. A detailed description of these types of impacts can be found in "[Environment](#)". Actions to control and reduce these impacts are described in both the part of this report dedicated to the environmental dimension and in the corporate website.

The development of clean energy and respect for the environment are the foundations of the group's energy production model. Various actions are taken in order to achieve a reduction in the environmental impact of its operations, like investment in lower-emission power generation, the launch of biodiversity programmes, improvement in the efficiency of operations (entailing the sustainable use of natural resources), the prevention of pollution, and proper management of the waste generated by activities. The group also attempts to use water rationally and sustainably and to manage the risks associated with the scarcity thereof.

Creation of value

Iberdrola has a clear economic impact on the areas in which it operates, as a company driving industrial activity through its investments and the corresponding creation of jobs. It also generates a wide array of services activities in these areas and contributes economic resources to public administrations.

The group works to develop excellent management of customer relations, offering them energy products tailored to their needs, promoting efficiency, and ensuring the availability of competitive, sustainable and high-quality energy.

The group also deploys the best corporate governance systems available to it, including those of compliance and risk management, as well as codes of conduct, to ensure the transparency of information and to preserve the creation of value for shareholders.

Boosting the social dimension

The company progressively strengthens its commitment to the social dimension, with the additional goal of strengthening ethical and responsible behaviour throughout the value chain and in all of the countries in which it operates.

Iberdrola thus promotes responsible and excellent management of human resources, with teams engaged through the recognition of work performed, training appropriate to the skills of its employees, and the encouragement of equal opportunities in all of its activities.

The company also considers as essential the relations with its Stakeholders (as shown by the various chapters of this report), and more specifically with the communities in which it does business. For this reason, it promotes mechanisms of dialogue and communication, which allow for a better understanding of local Stakeholders' expectations, and thus to contribute to the economic and social development of the various territories.

3. Long-term risks and opportunities. Comprehensive risk system

The Iberdrola group is subject to various risks inherent to the different countries, industries and markets in which it does business and to the activities it carries out, which may prevent it from achieving its objectives and successfully implementing its strategies.

Aware of the significance of this issue, the Board of Directors of the company undertakes to develop all of its capabilities in order to adequately identify, measure, manage and control the significant risks to all the activities and businesses of the group, and to establish through the *General Risk Control and Management Policy* the mechanisms and basic principles for appropriate management of the risk/opportunity ratio.

All actions aimed at controlling and mitigating risks shall conform to the following main principles of conduct, among others:

- a) Segregate functions, at the operating level, between risk-taking areas and areas responsible for the analysis, control and monitoring thereof.
- b) Act at all times in compliance with the law and the company's Corporate Governance System and, specifically, with due observance of the conduct values and standards reflected in the *Code of Ethics* and the principles and good practices reflected in the *Corporate Tax Policy*, under the principle of "zero tolerance" for the commission of unlawful acts and situations of fraud set forth in the *Crime Prevention and Anti-Fraud Policy*.

The *General Risk Control and Management Policy* and the basic principles underpinning it are implemented by means of a *Comprehensive Risk Control and Management System*, supported by a Risk Committee of the group and based upon a proper definition and allocation of duties and responsibilities at the operating level and upon supporting procedures, methodologies and tools suitable for the various stages and activities within the system, including:

- a) The establishment of a structure of risk policies, guidelines, limits and indicators, as well as of the corresponding mechanisms for the approval and implementation thereof.
- b) The on-going identification and analysis of significant risks and threats (including passive liabilities and other off-balance sheet risks), both for each corporate business or function and taking into account their combined effect on the group as a whole. To the extent possible, risks will be measured following homogenous procedures and standards common to the entire group.
- c) The analysis of risks associated with new facilities, as an essential element in risk/return-based decision-making.
- d) The audit of the system by the Internal Audit Division.

The risk factors to which the group is subject are generally grouped into the following categories:

- Corporate governance
- Market
- Credit
- Business
- Regulatory and political
- Operational, technological, environmental, climatic, social and legal
- Reputational

A more detailed description can be found in the following public documents, available on the website:

- The [General Risk Control and Management Policy](#)
- Section "E" of the [Annual Corporate Governance Report](#) for financial year 2017.
- The "Principal risks and uncertainties" section of the [Consolidated Management Report](#) for financial year 2017.
- The [Integrated Report](#). February 2018.

As a whole, the group's *Comprehensive Risk Control and Management System* makes it possible to handle the risks associated with the economic, environmental and social dimensions, as well as the impact that the materialisation of any of them might have on the public perception of the company.

In relation to climate change, the group recognizes the seriousness of the threat that global warming entails, which must be faced in a collective and coordinated manner by governments, multilateral agencies, the private sector and society as a whole. Along these lines, the company undertakes to assume a position of leadership in the fight against climate change and to develop the following principles of conduct, among others: i) prevent pollution by gradually reducing the intensity of greenhouse gas emissions, ii) promote electrification, energy efficiency and smart grids, iii) support international negotiation processes and the significant participation of the private sector to achieve goals 7 and 13 of the SDGs approved by the UN and the climate goal included in the Paris Climate Conference, iv) advocate an emissions market that generates a strong and sustainable price signal, and v) support a tax system that includes the "polluting party pays" principle and that does not only include the electricity production industry.

Climate change could entail the following risks in the medium term:

- More extreme weather conditions with an impact on generation and distribution assets, such as increased operation and maintenance costs and insurance premiums.
- Changes in wind and hydraulic resources.
- Changes in levels of demand for gas and electricity (due to the effect of temperatures).
- Lower profitability than forecast for existing thermal plants (due to regulatory restrictions, CO₂ prices, operational events, etc.).
- Impact on the wholesale electricity markets due to widespread development of renewables.
- Legislative and regulatory changes.

On the other hand, although they represent an enormous challenge, climate change and the necessary transition towards decarbonisation of the energy model are also an opportunity compatible with growth and profitability for the company. Iberdrola has undergone a profound transition in this regard in the last 15 years, clearly anticipating the energy transition to face the challenges of climate change and the need for clean electricity. Today, the group is perfectly positioned to take advantage of the following opportunities, among others, thanks to its leadership in renewable energy and its commitment to the transition towards a low-carbon economy:

- **Investment opportunities and improved competitive advantage.** Legislative and regulatory changes encouraging decarbonisation through the development of renewable energy, increased electrification, smart grids, integration of renewable energy into the electricity system and backup capacity, technological innovation, etc.
- **New services and markets.** Demand for new energy services and products related to the energy transition (e.g. electric mobility, demand-side management, smart grids, energy storage, etc.), as well as the impacts of climate change (e.g., increases in energy demand associated with changes in temperature patterns).
- **Advantages in the acquisition of financing.** Growing pressure on the financial sector and capital markets, which favours those companies with an ambitious decarbonisation strategy, low exposure to assets linked to climate change and good positioning on the sustainability and transparency indexes.
- **Strengthening of corporate reputation,** resulting from a leadership position in the energy transition.
- **Sustainable creation of value and maximisation of the Social Dividend** for all Stakeholders.

3.

Ethics and integrity

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

102-16 Values, principles, standards and norms of behaviour

Ethics is a key value that inspires and guides the Iberdrola group's strategy, business model, actions and decisions. Iberdrola therefore works in order to ensure that its commitment to ethics and respect for the environment are the foundation for a sense of belonging and for the trust of all the people and the various stakeholders with whom the company interacts.

As a reflection of this business culture that is respectful of the natural and social environment, the company has formulated its [Mission, Vision and Values of the Iberdrola group](#), applicable to all the companies included therein.

The basic objectives on which the group's vision is based include its firm commitment to ethics, good corporate governance and transparency. Iberdrola thus aspires for its conduct and that of the persons related to the group, including all participants in the value chain, to conform and adhere not only to applicable law and the Corporate Governance System, but also to ethical principles and generally accepted principles of social responsibility.

Far from constituting a mere declaration of principles, the *Mission, Vision and Values of the Iberdrola group* are integrated into its day-to-day management and into all its areas of activity, and are inspired by and take shape in the *Corporate Policies*, the [Code of Ethics](#) (in existence since 2002), and the other regulations of the Corporate Governance System.

The company's *Code of Ethics* establishes a set of principles and guidelines for conduct (applicable to all professionals of the group, regardless of their rank, their geographical or functional location or the group company to which they provide their services) intended to ensure the ethical and responsible behaviour of the group's professionals in the performance of their activities.

The body charged with ensuring that the *Code of Ethics* is applied is the Compliance Unit (hereinafter, the "Unit"), which was set up by the Board of Directors in 2012, following the highest corporate ethics standards, as an internal and permanent body connected to the Corporate Social Responsibility Committee of the Board and with duties in the regulatory compliance area. The Unit's main duties include ensuring that the *Code of Ethics* is applied and the dissemination of a preventative culture based on "zero-tolerance" towards the commission of unlawful acts and fraud. The operation and main powers thereof are set forth in the [Regulations of the Compliance Unit](#).

In addition, Compliance Divisions have been established at each country subholding company and/or head of business company of the group, which are structured as internal independent areas linked to the respective Audit and Compliance Committee, with duties in the area of regulatory compliance and in the prevention and correction of unlawful or fraudulent conduct. These Compliance Divisions relate to the Unit in accordance with a coordination, collaboration and reporting protocol established to such end and in accordance with the group's Corporate Governance System.

The group also has policies, codes and procedures to govern conduct in various areas relating to these matters, including the following, among others: *Crime Prevention Policy*, *Anti-Corruption and Anti-Fraud Policy*, *Directors' Code of Ethics*, *Procedure for Conflicts of Interest and Related-Party Transactions with Senior Officers*, *Internal Regulations for Conduct in the Securities Market* and *Internal Rules for the Processing of Inside Information*.

This ethical and good governance commitment is transmitted in turn to the third parties with which the group is connected through various initiatives, which include the *Suppliers' Code of Ethics*, which sets forth the firm commitment to not allow any corrupt, fraudulent or illegal practice, or practices contrary to the policies and principles of the company in the area of corporate social responsibility in its supply chain.

102-17 Mechanisms for advice and concerns about ethics

The Iberdrola group's Compliance System

Since its inception, the Compliance Unit has established a global operating framework through the definition and monitoring of a robust and traceable Compliance System of the group, designed on the basis of the parameters set forth in best international practices on control, compliance, fraud prevention and the fight against corruption.

The Compliance System can thus be defined as a set of substantive rules, formal procedures and material actions intended to prevent, avoid and mitigate the risk of conduct that is improper or contrary to ethics or the law that may be committed by professionals of Iberdrola within the organisation, and to ensure that the conduct is in accordance with ethical principles and applicable law.

The group's reporting channels

One of the basic elements of the Compliance System is to establish detection and/or monitoring mechanisms to verify the effectiveness of the controls and prevention activities carried out at the group. Such mechanisms include the ethics mailboxes, which constitute transparent tools to report conduct that could entail an irregularity or an act contrary to the law or to the rules of conduct set forth in the *Code of Ethics* or other internal rules or procedures. In addition to potential grievances, queries are also made through these channels on matters relating to the interpretation of and compliance with the *Code of Ethics* and the other internal compliance rules of the group. All communications sent through these mailboxes are deemed confidential information, and may be anonymous in those jurisdictions in which the law so allows.

In any event, there is an express commitment of the group, reflected in the *Code of Ethics*, in the *Anti-Corruption and Anti-Fraud Policy* and in the other internal procedures and rules in this area, not to take

reprisals against those using the aforementioned mailboxes, with the logical exception of cases of bad faith.

All professionals who have reasonable indications that any irregularity or any act contrary to the law or to the rules of conduct of the *Code of Ethics* has been committed must report it through the aforementioned mailboxes.

The group also has suppliers' ethics mailboxes. Such mailboxes are communication channels to enable the suppliers of the group, as well as any companies that they hire to provide services or supplies, their respective employees and the companies that have participated in a tender for services or supplies to become suppliers, to report conduct that could entail (i) infringement by any group professional of the Corporate Governance System, the *Code of Ethics* or applicable law, or (ii) the commission by a supplier, its subcontractors or their respective employees of any act contrary to the law or to the provisions of the [*Suppliers' Code of Ethics*](#) within the framework of their business relations with the group. These [mailboxes](#) are available in the purchasing portal of the website.

The group also has a shareholders' ethics mailbox. This mailbox represents a channel of communication through which shareholders can report conduct that might involve a breach of the company's Corporate Governance System or the commission by any professional of the group of an act contrary to the law or to the rules of conduct of the *Code of Ethics*. This mailbox is available on the group's corporate website, specifically within the interactive system provided for the shareholders known as "OLS – On-Line Shareholders".

The management of the ethics mailbox for group professionals, established in the *Code of Ethics*, of the suppliers' ethics mailbox, established in the *Suppliers' Code of Ethics* and included in the *Procurement Policy*, and of the shareholders' ethics mailbox, established in the *Policy regarding Communication and Contacts with Shareholders, Institutional Investors and Proxy Advisors*, is the responsibility of the Compliance Unit and of the Compliance Divisions of the group.

Processing and investigation

As laid down in the *Regulations of the Compliance Unit*, it falls upon the Compliance Unit to handle communications made through the ethics mailboxes, except in cases where the report affects an employee of a country subholding company or head of business company that has its own Compliance Division.

The right to privacy, to a defence and to the presumption of innocence of the persons under investigation are guaranteed in all investigations.

In addition to the investigation work and the possible disciplinary action that may derive from it, the situations reported through the ethics mailboxes are analysed by the Compliance Unit and Compliance Divisions in order to identify possible corrective actions and suggest improvements in the control, prevention and mitigation systems so as to attempt to prevent a future repetition of the irregular situations detected.

Communications received during financial year 2017

As regards the communications received through the channels established in the group, a total of 1,391 communications were received in financial year 2017, of which 567 were queries and 824 were complaints. 13% of the complaints allowed to proceed arose from some type of disciplinary action taken during the financial year, upon a showing that there had been improper conduct or conduct contrary to the *Code of Ethics*.

Disciplinary action with respect to communications from prior years has also been taking during financial year 2017 regarding 4 complaints allowed to proceed in 2016 and another relating to 1 complaint allowed to proceed during 2015.

4. Governance

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

102-18 Governance structure

Board of Directors

Executive Committee

The Executive Committee has all the powers inherent to the Board of Directors, except for those powers that may not be delegated pursuant to legal or by-law restrictions.

The core activities of this Committee consist of assisting the Board of Directors in the on-going supervision of the implementation of the strategy and on compliance with objectives and the governance model and submitting proposals to the Board of Directors or making decisions in urgent cases regarding all strategic decisions, investments and divestitures that are significant for the company or its group, assessing their alignment with the budget and the strategy of the company, and analysing and monitoring business risks, taking into consideration the environmental and social aspects thereof.

102-19 Delegating authority

The Executive Committee and the chairman & CEO have all the powers of the Board of Directors, except for those powers that may not be delegated pursuant to legal or by-law restrictions. The company also has a Business CEO (*consejero director-general de negocios*). In addition, the company has a structure of executives and employees authorised to implement its strategy and basic management guidelines, with powers provided under two operating principles: (i) the principle of joint action, which governs the exercise of the powers that are of a decision-making or organisational nature; and (ii) the principle of severability, which governs the exercise of powers of mere representation.

Furthermore, the group has *Internal Rules on Powers of Attorney* which generally define the system for representational powers of the group, which is governed by the principle of separation of representatives pursuant to which each company will appoint its representatives from among its own employees rather than from the employees of another company of the group, and by the establishment of limitations on time, quantity and the substitution of powers, among others.

102-20 Executive-level positions with responsibility for economic, social and environmental topics

The company's organisation has various divisions, the responsibilities of which are as follows: the Finance and Resources, Administration and Control and Compliance divisions and the Office of the Secretary of the Board are responsible for financial and social matters, and the Office of the Chairman is mainly responsible for environmental matters.

The chairman & CEO of the Board of Directors, together with the Business CEO and the rest of the management team, assumes the duty of strategic organisation and coordination of the group through the dissemination, implementation and monitoring of the general strategy and the basic management guidelines established by the Board of Directors.

102-21 Consulting stakeholders on economic, environmental and social topics

Iberdrola has a *General Corporate Social Responsibility Policy*, which is further developed and supplemented by various social responsibility policies addressing specific needs and expectations of the Stakeholders.

In this section, it is noteworthy that in 2015 Iberdrola approved its [Shareholder Engagement Policy](#) in order to establish a permanent dialogue with its shareholders, and its [Stakeholder Relations Policy](#) in order to promote a framework of relationships that favours the inclusion of Stakeholders in the businesses and activities of the group.

Stakeholder Relations Model and CSR Committee

The company establishes channels for dialogue with its Stakeholders in order to know their needs and expectations. These channels are constantly reviewed to adjust them to the appropriate level of relations with each Stakeholder group. Apart from the corporate website, which is one of the main channels for the company's relations with its Stakeholders, it has numerous other means of dialogue, which are set out in section 5 (Stakeholder participation) of this report.

That section contains a description of Iberdrola's *Stakeholder Relations Model*, which is implemented globally and which ensures both the existence of appropriate channels of communication with each Stakeholder group as well as the detection of significant issues and the adoption of action plans to respond to such issues.

The Board of Directors has a [Corporate Social Responsibility Committee](#), the composition and duties of which are described in section 102-18. Among other things, it has the power to “*analyse the expectations of Stakeholders and endeavour to ensure that they are taken into account when formulating Social Responsibility Policies, and supervise and evaluate the application of the Stakeholder Relations Policy*”.

The [Activities Report of the Board of Directors and of the Committees thereof](#) for financial year 2017, available on the corporate website, identifies the reports prepared by this Committee and the appearances that took place during the year.

The Corporate Committee on Corporate Social Responsibility and Reputation is ultimately responsible for supervising and coordinating the development of the strategy for relations between the group companies and Stakeholders.

Shareholder relations

With specific regard to the shareholders, the General Meeting is their main channel for participation in corporate life. It is held within the framework of Shareholder Day, during which there are activities seeking to bring the company closer to the shareholders and encourage a constructive dialogue with them.

The idea is to thus allow the Board of Directors to become acquainted with the opinions and concerns of the shareholders and to keep them in mind when establishing the agenda, drawing up proposed resolutions and deciding on other aspects relating to the holding of the General Shareholders' Meeting.

The Board of Directors also actively promotes the informed participation of the shareholders at the General Meeting, facilitating access to all documentation of the [General Shareholders' Meeting](#) through the website, including a [Shareholder's Guide](#) that describes all of the facilities that the company offers to attend, grant a proxy or cast an absentee vote; and for each Meeting it approves certain *Rules of Implementation for the Management of the General Shareholders' Meeting*, which have incorporated the latest technological advances in electronic participation, always in accordance with the guarantees required by law and by the Corporate Governance System. Along these lines, with a view to the upcoming General Shareholders' Meeting, Iberdrola has developed a new application that will allow shareholders to grant their proxy and cast an absentee vote from any device with access to the internet (including mobile phones and tablets), verifying their status as shareholders in real time. Also, for the first time, individual shareholders will be able to grant their proxy or cast an absentee vote by telephone through the free phone number of the Office of the Shareholder, through which they may also request any information about the event. These electronic and telephonic channels are in addition to the traditional forms of participation, in person, by post or through the shareholder service desks, which Iberdrola will continue to offer to its shareholders in order for them to have all of the alternatives for participating in the General Meeting.

Other proactive actions are also carried out to foster the maximum possible participation of the shareholders, such as telephone information campaigns.

To promote accessibility, the understanding of information, and ultimately the engagement of the shareholders, the company has implemented several specific channels of communication for providing information to shareholders and investors, including the following:

- a) The Shareholders' Office (*Oficina del Accionista*). From the call to the General Shareholders' Meeting through the end thereof, the shareholders can rely on the support of the Shareholders' Office, which has a specific site for such purpose at the premises of the meeting in order to resolve any issues that the attendees may raise prior to the commencement of the meeting, as well as to serve and provide information to the shareholders who wish to use the floor.

Furthermore, the Shareholders' Office is in permanent contact with those shareholders who have voluntarily entered their names in its database, and provides a specific service to minority shareholders for the organisation of presentations and events prior to the General Shareholders' Meeting.

- b) The Shareholders' Club (*Club del Accionista*). This is an open and permanent participation channel between the company and the financial community and shareholders who voluntarily join such Club and are interested in monitoring the evolution of the company on an ongoing basis.
- c) The Investor Relations Office (*Oficina de Relaciones con Inversores*). This responds on a regular and personalised basis to the questions of analysts and institutional and qualified investors in equities, fixed-income securities and socially responsible investments.
- d) Interactive [OLS - On Line Shareholders system](#). The website has an interactive system that allows shareholders (who may access the system with their user name and password) to ask questions of interest either publicly or confidentially, access frequently asked questions regarding various topics, and, with respect to the General Shareholders' Meeting, request information or clarifications or ask questions regarding the items on the agenda, as well as to view the live proceedings.
- e) Relations with shareholder associations and institutional shareholders. Both shareholder associations and institutional shareholders may request meetings with representatives of the company through the Investor Relations Division. Long-term engagement plans may also be developed with those shareholders who express their intention to have a stable and continuous presence in the company's shareholder base, and appropriate mechanisms for dialogue may be established regarding the performance of the company.
- f) Last, the Corporate Governance System makes provision for the ability of the Board of Directors or its chairman & CEO to empower the lead independent director or other directors to engage in dialogue with specific shareholders on certain issues relating to the corporate governance of the company.

Iberdrola's General Shareholders' Meeting, a sustainable event

Notably, in 2016 Iberdrola was the first Ibex-35 company to certify its General Shareholders' Meeting as a [sustainable event](#), in accordance with international ISO 20121 standard. This means that all the processes of the General Shareholders' Meeting (from its planning to its subsequent holding) follow criteria of sustainability, inclusivity and accessibility, with the ultimate goal of optimising Iberdrola's contribution to the local economy, to improving the environment and to its social commitments.

The company implemented more than 70 initiatives for this purpose, including the following:

- Hiring of local suppliers.

- Hiring of persons in vulnerable situations.
- Measures aimed at improving energy efficiency.
- Advancement of sustainable transport.
- Actions to guarantee accessibility for groups with different abilities.
- Use of recyclable and reusable materials.
- Collaboration with certain local NGOs.
- Childcare service as a measure to promote work-life balance.

102-22 Composition of the highest governance body and its committees

As stated in section 102-18, the Board of Directors has fourteen members, two of whom are executive, two are assigned to the category of other external and the other ten are independent. Within this last category, five are women, one of whom, Inés Macho Stadler, is the lead independent director and chair of the Remuneration Committee, as well as a member of the Executive Committee. In addition, María Helena Antolín Raybaud, Samantha Barber and Georgina Kessel Martínez are the chairs of the Appointments Committee, the Corporate Social Responsibility Committee and the Audit and Risk Supervision Committee, respectively.

This section also breaks down the composition of the aforementioned consultative committees of the Board of Directors:

For more information regarding the composition of the Board and its committees, see the [Activities Report of the Board of Directors and of the Committees thereof](#) for financial year 2017.

102-23 State whether the chair of the highest governance body is also an executive officer and the reasons for this arrangement.

The chairman of the Board of Directors is also the chief executive of Iberdrola. He has been granted by delegation all the powers of the Board of Directors, except for those powers that may not be delegated pursuant to legal or by-law restrictions.

At the General Shareholders' Meeting held on 27 March 2015, the shareholders approved the re-election of the chairman & CEO as executive director by a large majority. Such proposal was supported by two reports: one prepared by an independent expert of recognised standing (PricewaterhouseCoopers Asesores de Negocios, S.L.) and the other by the Board of Directors itself. It was also favourably reported upon by the former Appointments and Remuneration Committee.

The initiative for such proposal was led by the lead independent director, who called the independent directors to a meeting on 15 December 2014. At such meeting, it was unanimously resolved to submit the proposal to the Board of Directors and to ask PricewaterhouseCoopers Asesores de Negocios, S.L. to prepare a report thereon. In light of the unanimous opinion of the independent directors, of the report of the Appointments and Remuneration Committee and of the content of the independent expert's report, the Board submitted the corresponding proposed resolution to the shareholders at the General Shareholders' Meeting on the basis of:

- The demonstrated capability and competence of the candidate to hold such position and the specific provisions of the Corporate Governance System of the company, whose decentralised governance model requires a leadership that necessarily entails a high level of professional commitment and a level of depth, presence and involvement in such person's work that means that whoever takes on such duties will be considered an "executive" of the company.

- The practical application of such governance model, which confirms the validity thereof, reflects a better economic and financial performance than that of comparable companies and has historically been supported by the shareholders at General Shareholders' Meetings and by the capital markets.
- The sound checks and balances system implemented by the company, which: (i) separates oversight and management duties; (ii) ensures that there is a majority of independent directors; (iii) ensures a high level of professional diversity and diversity of gender and origin on the Board of Directors; (iv) grants very significant powers to the lead independent director; (v) establishes a succession plan for the chairman; (vi) decentralises the executive duties of the group among the various country subholding and head of business companies; and (vii) makes Iberdrola, S.A. a holding company with duties that relate solely to the strategic supervision and coordination of the businesses conducted by the group.

102-24 Selection and nomination of the members of the highest governance body

The appointment, re-election and separation of directors is within the purview of the shareholders at the General Shareholders' Meeting.

Vacancies that occur may be filled by the Board of Directors on an interim basis until the next General Shareholders' Meeting, whereat the shareholders shall confirm the appointments or elect the persons who should replace directors who are not ratified, or it shall withdraw the vacant positions.

To such end, the Board of Directors has approved a [*Board of Directors Diversity and Director Candidate Selection Policy*](#), which ensures that proposals for the appointment of directors are based on a prior and objective analysis of the needs of the Board of Directors.

The Appointments Committee advises the Board of Directors regarding the most appropriate configuration of such body and of its committees as regards size and balance among the various classes of directors existing at any time and the personal requirements that the candidates must fulfil. For such purpose, the Committee will review the structure of each body on a regular basis, particularly when vacancies occur within such bodies. Furthermore, independent directors are appointed on the basis of a proposal of the Appointments Committee, while the other appointments require a report of such Committee.

In any event, the Board of Directors, and the Appointments Committee within the scope of its powers, will endeavour to ensure that the candidates submitted to the shareholders at a General Shareholders' Meeting for appointment or re-election as directors, as well as the directors appointed directly to fill vacancies in the exercise of the power of the Board of Directors to make interim appointments, are respectable and qualified persons, widely recognised for their expertise, competence, experience, qualifications, training, availability and commitment to their duties, while at the same time endeavouring to ensure gender diversity in the composition of the Board of Directors.

They must be irreproachable professionals, whose professional conduct and background is aligned with the principles set forth in the *Directors' Code of Ethics* and the corporate values contained in the *Mission, Vision and Values of the Iberdrola group*.

If the Board of Directors deviates from the proposals and reports of the Appointments Committee, it shall give reasons for so acting and shall record such reasons in the minutes.

In addition, the selection of candidates shall endeavour to ensure that a diverse and balanced composition of the Board of Directors as a whole is achieved, such that decision-making is enriched and multiple

viewpoints are contributed to the discussion of the matters within its power. To this end, the selection process shall promote a search for candidates with knowledge and experience in the main countries and sectors in which the group does or will do business. The directors must also have sufficient knowledge of the Spanish and English languages to be able to perform their duties.

In turn, the Board has entrusted to the Appointments Committee the responsibility of ensuring that when new vacancies are filled or new directors are appointed, the selection procedures are free from any implied bias entailing any kind of discrimination and, in particular, from any bias that may hinder the selection of female directors. This is expressly provided by the *Regulations of the Board of Directors* and the *Regulations of the Appointments Committee*.

102-25 Processes for the highest governance body to avoid conflicts of interest

The *Regulations of the Board of Directors* provide that having interests in any way opposed to those of the company constitutes a ground of disqualification for appointment as director and, if applicable, triggers the director's obligation to resign.

They also provide that competence to hold office is a requirement to be appointed as director of the company.

Therefore, it is expressly provided that directors must resign due to their loss of suitability (particularly when their continuance in office may jeopardise, directly, indirectly or through persons related thereto, the faithful and diligent performance of their duties in furtherance of the corporate interest, which is understood as the common interest of all shareholders of an independent company, oriented towards the creation of sustainable value through the activities included in its corporate object, taking into consideration the other Stakeholders related to its business activities and institutional reality, pursuant to the *Mission, Vision and Values of the Iberdrola group*), or when owing to supervening circumstances, they fall within any of the instances of disqualification from or prohibition against holding such office established in the law or in the Corporate Governance System.

The Board of Directors may request a director subject to any circumstance of disqualification to resign from office and, if applicable, may propose the director's removal from office to the shareholders at a General Shareholders' Meeting.

For such purposes, the aforementioned Regulations provide that it shall be deemed that a director lacks or, if applicable, has ceased to possess, the competence required to hold office when there is a structural and permanent situation of conflict between the director (or persons related thereto or, in the case of a proprietary director, the shareholder or shareholders that proposed or appointed the director or the persons directly or indirectly related thereto) and the company or the companies forming part of the group.

Independently of the foregoing, the *Regulations of the Board of Directors* also regulate the specific conflict of interest situations that might affect the directors and that involve a direct or indirect conflict of their personal interest or that of persons related thereto with that of the company or the companies within its group. As provided therein, the directors must give notice of conflicts of interest in which they are involved and must abstain during the deliberations and voting on the matter in question. Section D.6 of the *Annual Corporate Governance Report* for financial year 2017 describes the mechanisms used to detect, determine and resolve potential conflicts of interest between Iberdrola and its directors, officers and significant shareholders.

For its part, article 43 of the *Regulations of the Board of Directors* provides that “any transaction by the Company or the companies forming part of its group with directors, with shareholders that directly or indirectly own a shareholding interest that is equal to or greater than that legally regarded as significant at any time or that have proposed the appointment of any of the directors of the Company, or with the respective related persons (“Related-Party Transactions”), shall be subject to the approval of the Board of Directors, or in urgent cases, of the Executive Committee, following a report from the Appointments Committee.

In the event that authorisation has been granted by the Executive Committee due to the urgency of the matter, the Executive Committee shall give notice thereof to the Board of Directors at its next meeting in order for it to be ratified”.

Furthermore, section six of said article provides that “the Board of Directors, through the Appointments Committee, shall ensure that transactions are carried out under arm’s length conditions and with due observance of the principle of equal treatment of shareholders in the same situation. In the case of transactions to be carried out by companies of the group, the scope of authorisation of the Board of Directors, or that of the Executive Committee, if applicable, referred to in the preceding sections, shall be circumscribed to the verification of compliance with such particulars.”

102-26 Role of highest governance body in setting purpose, values and strategy

Iberdrola and its group of companies are committed to a mission, vision and values.

This mission of the group is to create value sustainably, considering the Social Dividend as a basic element for the definition of its strategy, in carrying out its activities for society, citizens, customers, employees, shareholders and other Stakeholders, as the leading multinational group in the energy sector providing a quality service through the use of environmentally-friendly energy sources, which engages in innovation, leads the process of digital transformation in its area of activity, and is committed to the fight against climate change through all of its business activities, with the generation of employment and wealth, considering its employees to be a strategic asset. Along these lines, it fosters their development, training and measures of reconciliation, favouring a good working environment and equal opportunity. All of the foregoing is within the framework of its strategy of social responsibility and compliance with tax rules.

This mission is supplemented by a vision, based on the ambition of being at the forefront of a better future, creating value sustainably with a quality service for the people and communities in which the group carries out its activities, as well as by twelve values: creation of sustainable value, observance of ethical principles, good corporate governance and transparency, development of the group’s workforce, social commitment, encouragement of a sense of belonging among the Stakeholders, safety and reliability of supply, quality, innovation, respect for the environment, customer focus and institutional loyalty.

The corporate and governance structure of the company and of the group, the layout of which is reflected in disclosure 102-5 of this chapter, is defined on the grounds described below, which duly differentiate between the duties of day-to-day administration and effective management, on the one hand, and those of supervision and control, on the other:

- a) Vesting in the company’s Board of Directors of powers regarding approval of the strategic goals of the group and the definition of its organisational model, as well as supervision of compliance therewith and development thereof.
- b) Assumption by the chairman & CEO of the Board of Directors, with the technical support of the Operating Committee, by the Business CEO, with overall responsibility for all the businesses of the

group, and by the rest of the management team of the duty of organisation and strategic coordination within the group.

- c) The function of organisation and strategic coordination is strengthened through country subholding companies in those countries where the Board of Directors of the company has so decided. Such entities group together equity stakes in the energy head of business companies carrying out their activities within the various countries in which the group operates. This structure is completed with a country subholding company that groups together certain stakes in other entities, including non-energy head of business companies, with a presence in several countries. One of the main duties of country subholding companies is to centralise the provision of services common to head of business companies, always in accordance with the provisions of applicable law and especially the legal provisions regarding the separation of regulated activities.

Country subholding companies have boards of directors that include independent directors and their own audit committees, internal audit areas and compliance units or divisions.

Country subholding companies are responsible for disseminating, implementing and supervising the general strategy and the basic management guidelines at the country level with respect to the head of business companies grouped within each of them, taking into account the characteristics and unique aspects thereof.

- d) The group's listed country subholding companies (currently Avangrid, Inc.) have a special framework with greater autonomy that extends to the regulatory, related-party transactions and management areas.

In particular, all transactions between a listed country subholding company and its subsidiaries and the other companies of the group require the approval of a committee of the Board of Directors of such country subholding company made up exclusively of directors not related to the company.

The special strengthened autonomy framework is further developed in the respective agreements executed by the company with each listed country subholding company.

- e) The head of business companies of the group assume decentralised executive responsibilities, enjoy the autonomy required for the day-to-day and effective management of each business, and are responsible for the day-to-day control thereof.

Such head of business companies are organised through their respective boards of directors, which include independent directors, where appropriate, and their own management bodies; they may also have their own audit committees, internal audit areas and compliance units or divisions.

The corporate configuration and governance principles described above make up the corporate and governance structure of the group. This structure operates jointly with the group's Business Model, which entails the global integration of the businesses and aims to maximise the operational efficiency of the various business units. It also assures the dissemination, implementation and monitoring of the general strategy and of the basic management guidelines for each of the businesses, mainly through the exchange of best practices among the various companies of the group, without reducing the decision-making autonomy of each of them.

Within the group's corporate and governance structure, the Operating Committee is an internal committee of the company, the essential function of which is to provide technical, information and management support to the chairman & CEO of the Board of Directors, in order to facilitate the development of the group's Business Model.

The organisational model is structured into the decentralised business units and the centralised corporate governance and control functions, which can be viewed in the "[Corporate structure](#)" section of the corporate website.

102-27 Collective knowledge of highest governance body

The *General Corporate Governance Policy* provides that the company has a programme to provide directors with information and updates in response to the need for professionalisation, diversification and qualification of the Board of Directors.

Furthermore, to improve the knowledge of the group and of the businesses that it carries out and the environment in which it operates, presentations are made to the directors regarding the businesses of the group, which is supplemented by articles and publications of interest made available to the directors through the directors' website, a software application that has a specific section dedicated to training.

In turn, the directors' website facilitates the performance of the directors' duties and the exercise of their right to receive information. Information deemed appropriate for the preparation of meetings of the Board of Directors and the committees thereof in accordance with the agenda, as well as the materials, presentations and expositions made to the Board of Directors, is posted on such website.

In addition, a portion of each meeting of the Board of Directors is dedicated to a presentation on financial, legal or socio-political issues of significance to the group.

During financial year 2017, the directors' website was also used to provide the directors with various training sessions deemed to be of interest for the performance of their duties:

- *Shareholder control of the remuneration of the executive directors*
- *On-site informational meeting about investments and initiatives of the Iberdrola group regarding cybersecurity*
- *Fiscal transparency*
- *Digital transformation*
- *Regulatory positioning of Iberdrola. The EU winter package*
- *The Iberdrola group's governance model with respect to cybersecurity and data protection*
- *The Iberdrola group's Compliance System*
- *Iberdrola and the evolution of corporate governance practices*
- *Corporate governance in the United States. Analysis of the U.S. model using the Spanish model as a reference*
- *Relations with Stakeholders at Iberdrola*
- *Occupational Safety and Health at Iberdrola*
- *Analysis of the climate commitments of the jurisdictions in which Iberdrola has a presence*
- *The Iberdrola group's commitment to the Sustainable Development Goals*
- *Market Abuse and its implications for the Board of Directors of Iberdrola, S.A.*

The consultative committees have developed their own training programmes, either in-person or through the publication of the corresponding article on the directors' website, which have dealt with various topics:

- *Report of the CNMV regarding supervision of the financial information of Ibex 35 companies in 2016*
- *Evolution of the remuneration of the managing board*
- *The relevance of Responsible Steel*
- *Status of the renewables business*
- *New techniques in the electricity sector*
- *Monitoring of the application of the Information Technologies Policy*
- *Best corporate governance practices*
- *Report of the CNMV regarding ACGR of Ibex 35 companies. Powers of the Appointments Committee*
- *Aspects of the Annual Corporate Governance Report of Ibex 35 companies relating to audit committees*
- *Liberalised Business*
- *Networks Business*
- *Director remuneration trends*
- *Risks in the financial sector and provisions of investment funds*
- *New accounting developments and recent changes in the regulation of the annual accounts*

102-28 Evaluating the highest governance body's performance

The *Regulations of the Board of Directors* provides that the Board shall annually evaluate: its operation and the quality of its work; the performance of duties by the chairman & CEO of the Board of Directors, based on the report submitted thereto by the Appointments Committee; and the operation of its committees, in view of the report submitted thereto by such committees. For such purpose, the chairman of the Board of Directors organises and coordinates the aforementioned evaluation process with the chair of each committee.

The *General Corporate Governance Policy* provides that the annual evaluation shall be conducted with the cooperation of an independent firm of recognised standing.

Within the framework of the evaluation process of financial year 2017, Iberdrola has decided to draw on the cooperation of PricewaterhouseCoopers Asesores de Negocios, S.L., the independence of which was verified by the Appointments Committee at its meeting of 11 October 2017.

This process is based on the review of a large number of objectively quantifiable and measurable indicators that are updated every year in accordance with the latest trends, and is supplemented by a comparison with the companies identified as having the best market practices. As a result of this process, the company develops and adopts on-going improvement plans designed to implement the specific measures that may help to further perfect corporate governance practices. The Board of Directors completed this evaluation process for financial year 2017 through the adoption of the corresponding resolution at its meeting of 20 February 2018.

102-29 Identifying and managing economic, environmental and social impacts

The Board of Directors of Iberdrola is structured as described in section 102-18 of this report, with monitoring duties being carried out by the consultative committees thereof that supervise the economic, social and environmental performance of the company. Such duties include both the supervision of the risks and opportunities generated by the group's activities and compliance with international principles, codes and standards applicable to high-responsibility tasks. The Board of Directors and its consultative committees perform periodic evaluations of the aforementioned aspects of performance, drawing for such purpose on external information of interest thereto, with the assistance of external independent advisers, and on information provided to them by the rest of the organisation itself, primarily through periodic appearances of the group's officers at committee meetings.

These appearances are described in the [Activities Report of the Board of Directors and of the Committees thereof](#) for financial year 2017, available on the corporate website.

The Corporate Social Responsibility Committee has supervised the company's conduct in the area of sustainability, corporate reputation, corporate governance and compliance. Various external advisors have also appeared before this Committee:

a) Recurring appearances:

- Compliance Unit.
- Investor Relations and Communication.

b) Particular appearances:

- Secretary of the Board of Directors.
- Energy Policies and Climate Change.
- Innovation, Sustainability and Quality.
- Human Resources.
- Iberdrola Foundation.

The issues dealt with during these appearances are described in disclosure 102-27 of this chapter.

102-30 Effectiveness of risk management processes

Generally, the group's *Comprehensive Risk Control and Management System* allows for proper *ex ante* identification of risks or sounds alarms that allow for the making of decisions tending to minimise the impact of the risks.

The pillars of the system include the on-going evaluation of the suitability and efficiency thereof, as well as best practices and recommendations in the area of risks for eventual inclusion thereof in the model.

The company's Operating Committee meets on an approximately weekly basis, while the group's Risk Committee does so monthly. This committee is supplemented with the Credit Risk and Market Risk Committee, which report to said Risk Committee, and which meet on a fortnightly and monthly basis, respectively.

On at least a quarterly basis, the Audit and Risk Supervision Committee of the Board of Directors monitors trends in the group's risks:

- It reviews the group's quarterly risk report.
- It coordinates and reviews the Risk Reports sent periodically (at least half-yearly) by the Audit and Compliance Committees of the companies of the group that have such a body.

- It prepares (at least half-yearly) a risk report for the Board of Directors.

102-31 Review of economic, environmental and social topics

This information is available in disclosure 102-29 of this chapter.

102-32 Highest governance body's role in sustainability reporting

Iberdrola's Board of Directors is the body responsible for reviewing the *Sustainability Report 2017*, which was approved on 20 February 2018 (following a report from the Corporate Social Responsibility Committee), the date of preparation of the company's annual accounts for financial year 2017.

102-33 Communicating critical concerns

102-34 Nature and total number of critical concerns

The highest-level persons in charge of the various business divisions and corporate divisions have a presence on the Operating Committee referred to in section 102-26 of this report. It is chaired by the chairman & CEO, who reports in turn to the Board of Directors.

For their part, the critical concerns considered by the Board of Directors are principally:

- Preparation of the annual accounts and proposed allocation of profits/losses.
- Approval of periodic financial information.
- Approval of budgets and definition of goals of the Iberdrola group.
- Authorisation or acknowledgement, as appropriate, of significant awards, investments and divestments of the Iberdrola group.
- Grant of powers of attorney.
- Setting of the remuneration of the Board of Directors and of the senior management of Iberdrola, S.A.
- Approval of various annual reports.
- Call to the General Shareholders' Meeting, formulation of proposed resolutions and the corresponding reports of the directors.
- On-going update of the Corporate Governance System.
- Evaluation of the Board of Directors.
- Approval of risk limits and indicators.
- Implementation of resolutions adopted by the shareholders at the General Shareholders' Meeting, and particularly increases and reductions in capital.
- Authorisation or acknowledgement, as appropriate, of financial transactions of the Iberdrola group (debt and equity).
- Authorisation or acknowledgement, as appropriate, of proposals for the appointment of directors in companies in which the Iberdrola group has an interest.
- Authorisation or acknowledgement, as appropriate, of corporate or business restructurings.

The [*Activities Report of the Board of Directors and of the Committees thereof*](#) for financial year 2017 provides a detailed description of the composition, operation and activities of the governance bodies of the company.

102-35 Remuneration policies

The [*Annual Director Remuneration Report*](#) for financial year 2017 will be submitted to a consultative vote of the shareholders at the General Shareholders' Meeting called to be held on 13 April 2018.

The [Director Remuneration Policy](#) applicable during the next three financial years will be submitted for the approval of the shareholders at the General Shareholders' Meeting called to be held on 13 April 2018. This policy implements, among other things, the structure of the remuneration of the directors for their activities as such and the structure of the executive directors' remuneration for the performance of their executive duties, based on a series of parameters that are in line with the standard remuneration of comparable companies. It also sets forth the corporate social responsibility parameters to which the variable remuneration of the chairman & CEO is linked.

The *Director Remuneration Policy* and the *Senior Officer Remuneration Policy* seek to comply with the good governance recommendations generally recognised in the international markets on remuneration issues. In particular, the remuneration structure for the executive directors and the senior officers includes a significant variable component linked mainly to the performance of the company with respect to certain specific and pre-established economic/financial, industrial and operational parameters that are quantifiable and aligned with the strategic goals of the company and the group for the purpose of retaining and motivating the executive directors and senior officers and for the creation of long-term value. Weight is also to be given to goals in the areas of corporate governance and corporate social responsibility, as well as to the individual performance of the executive directors. This is set out in the current Strategic Bonus 2017-2019 approved by shareholders at the General Shareholders' Meeting of 31 March 2017, which makes the reduction of CO₂ emissions a strategic goal.

As regards aspects relating to the company's economic, environmental and social performance, variable remuneration for the management team of the Iberdrola group takes into account variable parameters linked to financial as well as environmental and social aspects.

102-36 Process for determining remuneration

As provided in the *By-Laws* and the *Regulations of the Board of Directors* of Iberdrola, the Board of Directors, at the proposal of the Remuneration Committee, is the body with power to set the remuneration of directors within the overall limit set by the By-Laws and in accordance with law, except for such remuneration as consists of the delivery of shares of Iberdrola or of options thereon or which is indexed to the price of the shares of Iberdrola, which must be submitted to the shareholders for approval at the General Shareholders' Meeting. The Remuneration Committee is a consultative committee chaired by and made up mostly of independent directors.

The Remuneration Committee is responsible for evaluating the level of attainment of the targets to which variable annual and multi-annual remuneration is linked and for submitting it to the Board of Directors for approval. To such end, in financial year 2017 it drew on the advisory services of PricewaterhouseCoopers Asesores de Negocio, S.L. The independence thereof has been evaluated by the Appointments Committee. Section C.1.20 of the [Annual Corporate Governance Report](#) for financial year 2017 describes the business relations of the company with this advisor during the financial year.

Pursuant to the *By-Laws* and the *Director Remuneration Policy*, the limit to the amounts that Iberdrola may annually allocate to the directors each year as an expense, including, in the case of executive directors, remuneration payable for performing executive duties, as well as the funding of a reserve to meet the liabilities assumed by the company in connection with pensions, payment of life insurance premiums and payment of severance to former and current directors, is 2% of the consolidated group's profit for the financial year, after allocations to cover the legal and other mandatory reserves and after declaring a dividend to the shareholders of not less than 4% of the share capital. As stated, for the purpose of establishing such limit, the quoted price of shares or options thereon or remuneration indexed to the listing

price of the shares shall not be calculated, which remuneration shall in all cases require the separate approval of the shareholders at a General Shareholders' Meeting. Both the [Director Remuneration Policy](#) and the [Senior Officer Remuneration Policy](#) are available on the website.

102-37 Stakeholders' involvement in remuneration

The *Director Remuneration Report* for financial year 2016 was submitted to a consultative vote of the shareholders at the General Shareholders' Meeting held on 31 March 2017, which had a quorum of 77.20%, and was approved with only 3.26% of the shares represented in person and by proxy voting against.

102-38 Annual total compensation ratio

102-39 Percentage increase in annual total compensation ratio

Iberdrola's Corporate Governance Model provides for the existence of a holding company, Iberdrola S.A., and for country subholding companies in the main countries in which it does business, as shown in disclosures 102-5 and 102-26 of this report and described on the company's website.

The main countries in which the Iberdrola group does business are Spain, the United Kingdom, the United States, Brazil and Mexico, and the remuneration ratios are set forth in the table below.

Country ⁶	Highest level of remuneration	Disclosure 102-38		Disclosure 102-39	
		2017	2016	2017	2016
Spain	Director	21.08 ⁷	30.30	-1.15 ⁸	6.78
United States	Director (CEO) ⁹	22.22	16.66	4.54	N/A
United Kingdom	Director (CCO) ¹⁰	12.09	11.83	1.60	3.31
Brazil	Director/Chair	22.43 ¹¹	41.00	N/A ¹²	0.16
Mexico	Director	7.63 ¹³	7.21	1.48	-0.73 ¹⁴

⁶ Country composition:

Spain: Generation, Distribution, Retail, Renewables and Engineering .

United States: Avangrid, Inc.

United Kingdom: ScottishPower (includes Renewables and Engineering).

Brazil: Neoenergia (change in boundary compared to 2016).

Mexico: Generation, Renewables and Engineering.

⁷ Spain: the highest remunerated position changes compared to the one considered in 2016.

⁸ Spain: the result of the ratio is negative because total annual 2017 remuneration of the person with the highest remuneration is less than that of 2016.

⁹ CEO: Chief Executive Officer.

¹⁰ CCO: Chief Corporate Officer.

¹¹ Brazil: the highest remunerated position changes compared to the one considered in 2016.

¹² Brazil: result not reported due to change in boundary compared to 2016.

¹³ Mexico: the highest remunerated position changes compared to the one considered in 2016.

¹⁴ The result of the ratio is negative because total annual 2016 remuneration of the person with the highest remuneration is less than that of 2015.

5.

Stakeholder engagement

102-40 Stakeholder groups engaged by the organisation

Iberdrola's [Stakeholder Relations Policy](#) (approved by the Board of Directors in February 2015 and updated in December 2017) explicitly states that the company believes *"that its relations with those groups that may influence or that are affected by the decisions or the value of the Company and the group are significant"*. The value chain comprised of Iberdrola's businesses means that there is a large number of these groups, for which reason the company has decided to group them into eight different categories that constitute its Stakeholders:

- | | |
|--|----------------------|
| - Workforce | - Suppliers |
| - Shareholders and financial community | - Media |
| - Regulatory entities | - Society in general |
| - Customers | - Environment |

102-41 Employees covered by collective bargaining agreements

This information is available in the "Collective Bargaining Agreements" section of the Management approach of topics GRI 401 Employment and GRI 402 Labour/management relations, included in the "Social Dimension" chapter of this report.

102-42 Identifying and selecting stakeholders

The initial identification and selection of the Stakeholders of Iberdrola was carried out through processes of internal reflection conducted by the management team. Subsequently, in 2015, the *Stakeholder Relations Policy* ratified the Stakeholder categories described in disclosure 102-40.

However, for the proper management of each of the Stakeholders, the various areas and businesses identify different subgroups that they deem relevant for more specific treatment.

102-43 Approach to stakeholder engagement

Iberdrola develops a responsible and sustainable business model, which puts [Stakeholders](#) at the centre of its strategy. The company's intent is thus to build relations of confidence with the various Stakeholders, as well as to deepen their participation, engagement and sense of belonging to Iberdrola.

The [By-Laws](#) themselves include a specific article dedicated to Stakeholder relations, establishing the principles and objectives that govern these relations:

Principles:

- Two-way communication
- Transparency
- Active listening
- Equal treatment

Objectives:

- Take into consideration the legitimate interests of the Stakeholders
- Effectively disclose information regarding the activities and businesses of the group

Iberdrola has decisively driven compliance with its *Stakeholder Relations Policy* (mentioned above), which has resulted in the approval and implementation of a new *Global Stakeholder Relations Model*, based on the *AA1000 Stakeholder Engagement Standard (AA1000SES) 2015* standard and in its three requirements of inclusiveness, materiality and responsiveness¹⁵.

This Model seeks to achieve the following goals:

- To systematise Stakeholder relations throughout the Iberdrola group, in all countries and businesses.
- To create a corporate culture with respect to the significance of dialogue with the Stakeholders for more sustainable performance by Iberdrola.

The Model in itself is a process of continuous improvement structured into ten phases, which allows for: segmenting Stakeholders and prioritising the resulting Subgroups; distinguishing the various levels of relations; constantly updating relationship channels to favour engagement; identifying significant issues, with related risks and opportunities; establishing action plans to respond to significant issues; and finally, to enrich the reporting systems, as is the case of this report. The detailed process is set out in the following image:

This Model was implemented for the first time in 2017 to manage eight of Iberdrola's Stakeholder groups in the five main countries and at numerous Generation and Renewables facilities, as well as in the various geographic areas of the Networks business. To assist with this implementation, the Iberdrola Stakeholders' Hub, an internal coordination body in which the areas responsible for management of the Stakeholders at the global corporate and business level participate, was also created in 2017.

Relationship channels

As regards the relationship channels with the Stakeholders, the *By-Laws* state that the "the company's corporate website, its presence on social media, and its digital communication strategy generally are channels of communication serving the *Stakeholder Relations Policy*". Conventional channels of communication other than this media are also used (phone, electronic mailboxes, communications, meetings, etc.) and other more specific channels like those below¹⁶:

¹⁵ Iberdrola has been continuously applying Assurance Standard AA1000 for the last eleven years. In 2016 Iberdrola's Operating Committee approved a new *Global Stakeholder Relations Model* (referred to in this report), which was implemented for the first time in 2017.

¹⁶ Pursuant to its *Global Stakeholder Relations Model*, Iberdrola has a list of communication channels by Stakeholder and country, which are included in the *Management Report on Iberdrola's Relations with Stakeholders* for financial year 2017.

<p>WORKFORCE</p> <ul style="list-style-type: none"> • Mixed subcommittees and committees • Employee portal (Intranet) • Global employee office • Satisfaction surveys • Subject-specific meetings, events and conferences • Newsletters, reports, bulletins, etc. • Informational screens at offices • Ethics mailbox 	<p>SHAREHOLDERS AND FINANCIAL COMMUNITY</p> <ul style="list-style-type: none"> • General Shareholders' Meeting • Shareholder Day • Shareholders' Club and Shareholders' Office • OLS - On Line Shareholders • Opinion surveys • Investors Day • Personal contact with investors, analysts, ratings agencies and shareholders • Mobile app • Reports and bulletins • Shareholders' Ethics Mailbox
<p>REGULATORY ENTITIES</p> <ul style="list-style-type: none"> • Consultation and official formalities with various regulatory entities • Relationship through industry organisations • Meetings and direct contacts • Participation in workshops, events, debates, etc. • Preparation of informational memos 	<p>SUPPLIERS</p> <ul style="list-style-type: none"> • Supplier portal • Satisfaction surveys • Supplier of the Year Award • Supplier registration and classification processes • Supplier involvement campaigns • Participation in responsible procurement events • Suppliers' ethics mailboxes
<p>CUSTOMERS</p> <ul style="list-style-type: none"> • On-site (customer service points) and off-site channels for direct customer service • Digital channels (websites, social media, sms, mobile apps) • Customer satisfaction surveys • Relationships with consumer associations • Awareness-raising campaigns • Systems for claims and complaints • 	<p>MEDIA</p> <ul style="list-style-type: none"> • Press releases and informational notes • Direct conversations and informational meetings • Visits to company facilities • Press room on the corporate website • Blogs • Events
<p>SOCIETY</p> <ul style="list-style-type: none"> • Direct relations with State institutions and heads of the various government administrations • Active presence within business and industry organisations; academic and educational institutions; organisations related to innovation, etc. • Participation in events, conferences and working groups • Reports and summaries • Visits to facilities • Cooperation agreements 	<p>ENVIRONMENT</p> <ul style="list-style-type: none"> • Sustainability index surveys • Participation in events, conferences and roadshows • Reports and summaries • Inspections and audits • Alliances and collaboration agreements • Visits to facilities <p>Stakeholder panels are also formed, to which Stakeholder representatives are invited</p>

102-44 Key topics and concerns raised

The *Global Stakeholder Relations Model* described above contributes to identifying the issues that are most important to the different Stakeholders. An analysis thereof shows that there are many significant issues that are common to Iberdrola's five main countries, while there are others exclusive to each geographical area.¹⁷

Set out below is a summary of those global issues¹⁸ detected in 2017:

Stakeholder group	Main issues raised by each group
Workforce	<ul style="list-style-type: none"> - Quality and maintenance of employment - Career plan and development: training and internal mobility - Safety, health and occupational risk prevention - Benefits and compensation - Internal communication - CSR issues
Shareholders and financial community	<ul style="list-style-type: none"> - Long-term strategy - Financial and economic situation of the company - Plans and performance of the company - Financial strength and leveraging - Corporate governance - Industry regulation - Energy markets - Dividend policy - Share price - Sustainability and CSR
Regulatory entities	<ul style="list-style-type: none"> - Remuneration schemes (generation, storage and/or distribution) in Europe, the U.S. and Brazil. - Goals for energy efficiency, use of alternative energies and reduction of emissions in Europe and the U.S. - Internal consumption in Europe, the U.S., Mexico and Brazil - Auction of generation and transmission lines in Mexico and Brazil - Capacity mechanisms in Europe
Customers	<ul style="list-style-type: none"> - Aspects relating to billing (information, comprehension and amount) - Issues relating to the customer's overall experience (attention received, channels, claims management, etc.) - Supply quality - Services allowing for reduced consumption - Vulnerable customers
Suppliers	<ul style="list-style-type: none"> - Standards for award and contract and payment terms - Ethical behaviour and CSR - Information on Iberdrola's strategy - Industry regulatory measures - Supplier stimulus campaigns - Fostering of innovation - Stability in commercial relationships

¹⁷ Pursuant to its *Global Stakeholder Relations Model*, Iberdrola has a list of major topics by Stakeholder group and country, which are included in the *Management Report on Iberdrola's Relations with Stakeholders* for financial year 2017.

¹⁸ In the case of regulatory entities, the issues appear by country due to the high geographic component thereof.

Media	<ul style="list-style-type: none"> - Iberdrola's strategy - Economic, operational and corporate governance performance - Investment and economic impact in each of the countries and communities - Energy policy and industry regulation - Service quality - CSR plans
Society	<ul style="list-style-type: none"> - Alignment with SDGs - Transparency and improvement of the social and environmental performance of the company and its facilities - Iberdrola's investments in each of the countries - Iberdrola's contribution to the community - Encouragement of innovation, information or training on energy issues - Support of the company for most vulnerable groups through specific programmes and projects - Encouragement of activities of public and private entities in the economic/business, social and environmental areas
Environment	<ul style="list-style-type: none"> - Climate change and energy transition (participation in large initiatives, alliances, social awareness-raising, Iberdrola's position) - Environmental management - Environmental investments and innovation - Quantification of natural capital - Protection of biodiversity - Carbon footprint - Circular economy - Water management - Sustainability indexes

Iberdrola's Wholesale, Networks and Renewables facilities mainly manage three Stakeholder groups: Regulatory entities, Society and Environmental¹⁹. The most significant issues of interest refer to regulatory compliance; the economic and social impact of the facilities on local communities; and environmental impacts and the mitigation thereof.

Iberdrola's response to all of these significant issues is set out not only in the various indicators of this *Sustainability Report*, but also in the *Integrated Report*, on the corporate website, on the websites through the following [link](#), and on the websites of the businesses and the foundations, and in the various specific reports, including: *Annual Financial Report*, *Annual Corporate Governance Report*, *Shareholder Engagement Report*, *Report on Procurement Activities and Supplier Management and the Contribution thereof to the Group's Sustainability*, *Innovation Report*, *Corporate Footprint Report*, *Biodiversity Report*, and Sustainability Balance Sheet.

The methodology described in the preceding sections (102-40 to 102-44) enables the company to identify material issues through direct sources. Such review is completed with that made through indirect sources, such as the *Dow Jones Sustainability Index*, the *Carbon Disclosure Project*, the *Materiality Analysis*, etc., described in disclosures 102-46 and 102-47.

Considering all of the foregoing, Iberdrola has a complete Stakeholder Management System, which allows it to respond to the various major issues both directly through the channels of dialogue and indirectly through public information (*Sustainability Report*, *Integrated Report* and the [website](#)).²⁰

¹⁹ In the case of the cogeneration plants, the main Stakeholder group is 'Customers', for whom the most significant issue is compliance with contracts.

²⁰ Iberdrola prepares an annual *Management Report on Iberdrola's Stakeholder Relations*, which summarises issues of interest detected within the various communication channels, as well as the company's response through action plans.

6.

Reporting practice

102-45 Entities included in the consolidated financial statements and in the boundary of this report

A. Introduction

Iberdrola, with a presence in almost twenty countries, has followed the GRI recommendations in defining the boundary of this report, taking into account the entities in which it has control, those in which it has significant influence, and the activities that are significant for the group from the economic, environmental and social standpoint.

For purposes of this report, the following terms have the meanings set forth below:

- "Iberdrola" or the "company": the Spanish company Iberdrola, S.A., parent company of the Iberdrola group.
- "Iberdrola group" or the "group": Iberdrola (as parent company) and the group of subsidiaries over which Iberdrola has the power of control or joint control.
- "Affiliated companies" or "affiliates": the group of companies in which Iberdrola has a percentage interest but not the power to exercise control. At these affiliated companies Iberdrola promotes the policies approved within the group through the decision-making bodies of such companies and includes information on those considered significant in terms of sustainability.

The companies in which Iberdrola owns a direct or indirect equity interest are listed in the document *Consolidated Annual Financial Statements and Audit Report* for financial year 2017.

B. Information boundaries of this report

The presentation of the company's public information is subject to the following external factors:

- The scope and basis of presentation of financial information must comply with established statutory requirements.
- The environmental and social information is presented in accordance with the new legal requirements as to content, leaving open the reporting framework to be used. This is the reason why Iberdrola has voluntarily elected to use the GRI Standards in the preparation of this report.

To reconcile these factors, Iberdrola has established two quantitative information boundaries: global boundary and report boundary.

B.1. Global boundary (Iberdrola Total)

This includes all of the activities carried out by the group, its subsidiaries and its affiliates.

The financial information included in this *Sustainability Report 2017* is taken from the document *Financial Statements, Management Report and Audit Report* for financial year 2017.

Other non-financial information, such as operating information of the group, results from adding to the "report boundary" the information of affiliates consolidated by the equity method that are not considered significant for purposes of this report, as well as the information on the activities included in table B.2.2, which is included under the heading "Other".

B.2. Report boundary

This boundary is formed by Iberdrola, S.A., its significant subsidiaries for sustainability purposes and its fully or proportionately consolidated affiliates that are significant for sustainability purposes.

The subsidiaries or affiliates within this boundary are all those that operate in the countries listed in table B.2.1 and that carry out the activities described therein.

B.2.1 Significant countries and activities for the Iberdrola group in terms of sustainability and included in the 2017¹ reporting boundary.

	Group office	Electricity production		Transmission and/or Distribution of electricity or gas	Electricity and/or gas supply (2) (3)		Gas storage	Real estate
		Conventional	Renewable (4)		Wholesale market	Retail market		
Spain (5)	X	X	X	X	LIB	LIB		X
United Kingdom	X	X	X ⁽⁶⁾	X	LIB	LIB	X	
United States	X	X	X	X	LIB	REG	X ⁽¹²⁾	
Brazil (7)	X	X ⁽⁸⁾	X	X	LIB	REG		
Mexico	X	X	X		LIB	LIB		
Portugal (9)	X		X		LIB	LIB ⁽¹⁰⁾		
Germany	X		X ⁽¹¹⁾		LIB	LIB		
Canada	X						X ⁽¹²⁾	
Greece	X		X ⁽⁶⁾					
Hungary	X		X					
Poland	X							
Romania	X		X					
France	X				LIB	LIB		
Italy	X				LIB	LIB		

- 1) Most of the Engineering and Construction activities at year-end were included in the Wholesale and Retail Businesses (Germany, United States and Canada), Networks Business (Spain, United Kingdom, Brazil and Mexico) and Renewables Business (Spain, United Kingdom, United States, Brazil and Mexico).
- 2) Types of sales activities:
LIB: activities in liberalised markets, independent of distribution activities.
REG: activities in regulated markets, together with distribution activities. The supply to these markets has not been considered as an activity in the wholesale market.
- 3) Environmental information on supply activities in Germany, France and Italy is not included as it is not deemed relevant in terms of sustainability.
- 4) No social or environmental information is included on facilities in which the company has an interest of less than 50% in Spain, the United Kingdom or the United States.
- 5) Any reference to the 7th Collective Bargaining Agreement includes the following companies at 31 December 2017: Iberdrola, S.A., Iberdrola España, S.A.U., Iberdrola Generación, S.A.U., Iberdrola Generación España, S.A.U., Iberdrola Generación Nuclear, S.A.U., Iberdrola Clientes, S.A.U., Iberdrola Operación y Mantenimiento, S.A.U., Iberdrola Distribución Eléctrica, S.A.U. Iberdrola Infraestructuras y Servicios de Redes, S.A.U., Iberdrola Renovables Energía, S.A.U. and Iberdrola Ingeniería y Construcción, S.A.U.
- 6) Renewables activities from the Republic of Ireland are included in the United Kingdom and renewables activities from Cyprus are included in Greece.
- 7) Information corresponding to the Neoenergia group is 100% included in this report, except for financial data.
- 8) Also included in the environmental information are the Baguari and Dardanelos plants, which are not significant in labour matters, while NC Energia is not included therein as it is not significant for environmental purposes. The social information includes the Belo Monte and Baixo Iguaçu plants under construction in those indicators that are deemed significant based on their activities.
- 9) No environmental or social information is included on construction projects in Portugal.
- 10) The activities of electricity and/or gas supply in Portugal are included in Spain.
- 11) Activities relating to the 350 MW Wikingen offshore wind farm: construction of the 70 turbines and other components of the farm ended in October 2017; there was a successful connection to the national electric grid in December, and renewable energy will be supplied to approximately 350,000 German homes.

- 12) These activities are not significant from the environmental standpoint. In the case of Canada, labour information is included in the information for the United States.

At affiliate nuclear plants, the percentage interest held by Iberdrola in each of them is used to consolidate environmental performance data: Vandellós (28%), Almaraz (52.69%); Trillo (49%) and Ascó (15%). For social information, on the other hand, because of the structure of the available information systems, nuclear plants are consolidated according to the percentage interest held by Iberdrola in the economic interest grouping created for that purpose; such interest is 51.44% in the case of Trillo-Almaraz and 14.59% in the case of Ascó-Vandellós. A 50% share of the environmental and social data corresponding to the activities of Nuclenor, S.A. is applied according to consolidation by the equity method.

The subsidiaries or affiliates operating in the countries shown in table B.2.2. below are excluded from the report boundary because their activities are considered to be non-significant for the group.

B.2.2. Non-significant countries and activities in countries of the Iberdrola group in terms of sustainability, excluded from the boundary of the 2017 report.

	Group office	Electricity production	Electricity or gas supply and/or gas storage	Engineering and construction	Real estate
Belgium	X				
Italy		X			
Netherlands			X		
Germany, Bulgaria, Costa Rica and Montenegro				X	
Bulgaria and Mexico					X

Despite the fact that they are not included in the charts and tables of the boundary of the report, these activities are managed by Iberdrola in the same manner as significant activities, and the following standards are applied:

- The qualitative aspects set forth in this report, such as the principles and corporate policies that the Iberdrola group adopts and publishes, as well as business strategies, apply to all activities of the subsidiaries of the group, in all countries in which they operate, without prejudice to the effective decision-making capacity of regulated companies in accordance with laws and regulations governing the separation of activities. This includes the information on management focus, objectives and performance set forth in this report.
- In the countries and activities that are not included in the boundary of the report, the application is ensured of the same procedures and processes as those applied within the group, thus ensuring the guarantees as to work, basic rights and environmental protection that derive therefrom.

As a supplement and to the extent deemed relevant, the information on the boundary of the report may include significant events concerning specific activities included in the foregoing table B.2.2.

B.3. Summary of the information boundaries by country.

Following the GRI recommendation, the information in this report is structured by country. The table below shows the structure of information by country applied to the boundaries described above:

Structure of information by country in this report	
Report boundary = Iberdrola, S.A., subsidiaries and affiliates considered to be significant for sustainability purposes.	Spain United Kingdom United States Brazil Mexico Other countries Report boundary
Global boundary = report boundary plus the information of affiliates consolidated by the equity method that are not considered significant for purposes of this report, as well as the information on the activities included in table B.2.2.	Other Iberdrola total

C. Limitations on scope of information

Based on the standards set forth above, Iberdrola believes that this report reflects the economic, environmental and social performance of the company in a reasonable and balanced manner. Existing limitations and differences between both boundaries, described in the preceding sections, have a limited influence on aggregate overall data, which, in the opinion of Iberdrola, would not affect a reader's assessment of the company's performance.

In the future, quantitative information may be included with respect to other activities of subsidiaries or affiliates to the extent that such information contributes to an understanding of the activities carried out by Iberdrola.

102-46 Defining report content and topic boundaries

102-47 List of material topics

Iberdrola has indirectly identified its material aspects since 2003, using the *GRI Sustainability Reporting Standards* (and prior versions) as well as the *Electric Utility Sector Supplement*, both of the Global Reporting Initiative (GRI), as a model for preparing its annual sustainability report.

These guidelines are the result of a process in which various Stakeholders throughout the world have participated, with representatives from business, unions, civil society, the financial markets, auditors and specialists from various disciplines in the business area, regulators and governmental bodies from various countries.

The company, with a presence in countries on various continents, conforms to the various regional socioeconomic development models and has developed systems and processes to obtain the information needed to meet requests on matters of sustainability made both by GRI, with its recommendations, and by other areas of heightened awareness such as the Dow Jones Sustainability Index or the Carbon Disclosure Project. Iberdrola uses its *Sustainability Report* to provide an annual report on these issues, adhering to the materiality requirements, following macro-trends in corporate social responsibility and generally meeting Stakeholder expectations.

For greater precision, Iberdrola also directly identifies its own material aspects by preparing its own *Materiality Study* with the advice of an independent outside firm, with the aim of identifying the specific aspects of interest related to the company’s activity by consulting in-house and outside sources. Iberdrola uses this process to identify social, environmental and ethics issues that are significant to its focus on social responsibility.

The analysis for 2017 prioritises those matters of interest identified through the analysis in accordance with their significance both to Stakeholders as well as to the company’s strategy. In this way, 23 topics, shown in the following chart, have been identified as “material”:

The coverage of the material topics; that is, whether the topics are significant within the organisation (internal impact on the company or its employees) or outside it (impact outside the company, outside its scope of control or on outside Stakeholders) is reflected in detail in the management approaches throughout this report. In general terms, Iberdrola considers that its material topics have both internal and external coverage, since they directly affect the company as well as the different Stakeholders with which it has relationships

The various sections of this report offer a concrete response to the aspects identified, as shown in the following table:

Most significant issues	Special interest topics	Iberdrola's response
Socially responsible investment	Inclusion of ESG aspects/criteria in evaluations for making investment decisions.	
Economic performance	Economic value generated and distributed. Tax policy and strategy, cooperation with tax authority, tax contributions, etc.	102-7 and 102-15 GRI 201 Economic performance.
Ethics and integrity	Anti-corruption, free competition and fiscal responsibility.	Section 3 Ethics and integrity. GRI 205 Anti-corruption GRI 206 Anti-competitive behaviour Management approach "Fiscal responsibility". GRI 307 Environmental compliance GRI 419 Socioeconomic compliance
Responsible supply chain	Assessment of environmental, social and economic impacts of the suppliers. Strategies and KPIs for critical suppliers.	102-9 and EU18. GRI 308 Supplier environmental assessment GRI 414 Supplier social assessment
Electric and gas infrastructure	Need for efficiency improvements in transport (networks and smart meters) and for new infrastructure that improves the quality of supply. Access to electricity in developing countries.	Management approaches: "Availability and reliability" and "System efficiency", "Research and development" and "Access". EU4, EU12, EU26, EU28 and EU29.
Management of natural capital	Management of natural resources to ensure the future quality and availability of natural capital, as well as the sustainability of operations in the future. Identification of impacts on environment, communities, ecosystemic services, etc.	201-2 GRI 203 Indirect economic impacts GRI 301 Materials
Innovation and new business models	Products and services favouring efficiency and energy savings, certified energy from renewable sources, distributed generation, offshore wind energy projects, development of electric vehicles, etc.	Management approaches: "Availability and reliability", "Research and development", "System efficiency" and "Demand management". EU10 GRI 302 Energy
Integration of renewable energy within the electric system	Development of and investment in renewable energy. Work with strategic partners, startups, research centres and experts in the development of batteries and energy storage systems.	Management approaches: "Research and development", "Availability and reliability" and "System efficiency". 102-11, EU1 and EU10. GRI 305 Emissions.
Climate change	Science-based goals for reduction of emissions, emissions trading, CO ₂ storage systems, available adaptation and mitigation mechanisms, economic impacts from climate change, evaluation of risks and opportunities, etc.	Management approaches: "Research and Development". Specific management approach to the environmental dimension. 102-15, EU5 and 201-2. GRI 305 Emissions.
Management of biodiversity	Identification of principal impacts on biodiversity, mainly from the construction of new infrastructure.	GRI 304 Biodiversity.

Energy transition	Energy efficiency to reduce the industry's energy requirements. Encouragement of energy with lower CO ₂ emissions. Regulatory changes to encourage greater inclusion of renewable energies in the "mix". Improvements in the systems for inclusion of renewable production within the grid.	Management approaches: "Availability and reliability" and "System efficiency", "Demand-side management" and "Access to electricity". 102-15, EU1, EU2, EU10, EU11 and EU30. GRI 302 Energy.
Availability and management of water	Water stress. Evaluation and minimisation of impacts, especially in thermal generation.	GRI 303 Water GRI 306 Effluents and waste
Customer satisfaction	Evaluation of customer satisfaction and establishment of targets for improvement, management of information security and privacy, grievances and claims and other matters related to meter reading, billing, rates and contracts.	Management approaches: "Access to adequate information" and "Access to electricity". GRI 416 Customer health and safety. GRI 417 Marketing and labelling. GRI 418 Customer privacy.
Diversity and equal opportunity	Non-discrimination against women in the labour world and especially in management positions.	GRI 405 Diversity and equal opportunity. GRI 406 Non-discrimination.
Occupational health and safety	Employee and contractor health and safety management. Definition of health and safety policies. Prevention plans. Establishment of injury rate targets. Injury, casualty and absenteeism rates.	GRI 401 Employment. GRI 402 Labor/management relations. GRI 403 Occupational health and safety. EU18
Impact on local communities	Evaluation of the socioeconomic impact on local communities in the development of new infrastructures or on operating activities. Communication and reporting mechanisms.	GRI 203 Indirect economic impacts. GRI 413 Local communities. GRI 414 Supplier social assessment. EU22 and EU25. Management approaches: "Iberdrola's contribution to the community" and "Access to electricity".
Human rights	Definition of a formal policy. Analysis of risk of violating human rights in the principal areas of operation. Employee training. Management of related grievances. Rights of indigenous or minority communities.	GRI 406 Non-discrimination. GRI 407 Freedom of association and collective bargaining. GRI 408 Child labor. GRI 409 Forced or compulsory labor. GRI 410 Security practices. GRI 411 Rights of indigenous peoples. GRI 412 Human rights assessment. GRI 414 Supplier social assessment.
Attraction, development and retention of human capital	Employee satisfaction. Boosting reconciliation. Systems for evaluation of performance and variable remuneration tied thereto. Adjustment to needs of the new generations.	GRI 202 Market presence. GRI 401 Employment. GRI 402 Labor/management relations. GRI 404 Training and education. GRI 405 Diversity and equal opportunity.
Connectivity, digitisation and cybersecurity	Risks regarding connectivity and cybersecurity. Preparation of digital risk maps, definition of strategy and mitigation thereof.	Management approach: "Cybersecurity" and "Privacy of the personal information of Stakeholders".

In its commitment to transparency with its Stakeholders, apart from the topics of the GRI Standards identified as material in the table above, Iberdrola also reports on other topics included in such Standards, providing continuity with information for previous financial years. All topics reported are specifically identified in the GRI Content Index presented at the beginning of this report.

Together with these global processes of identification of and response to material issues, which Iberdrola strengthens in its public information, the company has launched a new *Global Stakeholder Relations Model*, based on the *AA1000 Stakeholder Engagement Standard (AA1000SES) 2015* standard and on its

three requirements of inclusiveness, materiality and responsiveness²¹, as described in section 5. "Stakeholder engagement".

102-48 Restatements of information provided in previous reports

During 2017, due to the merger in Brazil of all of the businesses of the company Elektro Holding into Neoenergia, it was deemed necessary to reformulate the information for financial year 2016 applying the same standards as in financial year 2017, in order for the information for both financial years to be homogenous and comparable. The reformulation involves the consideration of 100% of the socio-economic and environmental parameters of Neoenergia (thus reflecting the control position of the group) instead of the 39% that was used through the prior year. The economic/financial figures follow accounting standards.

Furthermore, the information in all the tables of this report has been limited to financial years 2017 and 2016. Maintaining the scorecards and tables with information for three financial years, as was Iberdrola's customary practice, would have involved a lack of homogeneity between the information from financial year 2015 and that from the following years. This limitation will already be corrected in the next report.

102-49 Significant changes in scope and topic boundaries

On 24 August 2017, all of the businesses of the company Elektro Holding were incorporated into Neoenergia. As a result of this transaction, Iberdrola increased its interest in the Neoenergia group from 39% to 52%.

The information corresponding to Neoenergia in this report is included upon the terms specified in GRI disclosure 102-45.

102-50 Reporting period

2017

102-51 Date of most recent report

2016

102-52 Reporting cycle

Annual

102-53 Contact point for questions regarding the report

General questions regarding this report may be addressed to Iberdrola's Investor Relations and External Communication Division at C/ Tomás Redondo, 1 - 28033 Madrid – Spain, or via responsabilidad_social@iberdrola.com.

²¹ Iberdrola has been continuously applying Assurance Standard AA1000 for the last eleven years. In 2016 Iberdrola's Operating Committee approved a new *Global Stakeholder Relations Model* (referred to in this report), which was implemented for the first time in 2017.

Specific questions relating to the environment may be addressed to Iberdrola's Innovation, Sustainability and Quality Division at C/ Tomás Redondo, 1 - 28033 Madrid – Spain, or via medioambiente@iberdrola.es.

The addresses and telephone numbers of the various Iberdrola centres worldwide, available channels of contact, customer service and the query mailboxes can be found in the [Contact](#) section of the website.

102-54 Claims of reporting in accordance with the GRI Standards

This report has been prepared in accordance with the GRI Standards: Comprehensive option.

102-55 GRI content index

The GRI content index is located at the beginning of this Report.

102-56 External assurance

Iberdrola obtains independent external assurance of its annual information, the annual accounts and management reports (individual and consolidated with those of its subsidiaries) by KPMG Auditores, S.L. and the *Sustainability Report* by PricewaterhouseCoopers Asesores de Negocio, S.L..

Part II.

Topic-Specific Disclosures

This section provides a description of the material aspects affecting the Iberdrola group, defined based on the standard described in GRI disclosures 102-46 and 102-47 of this report.

In each "Topic", there is a description of the company's focus to properly manage and report on the results achieved, by means of the corresponding performance indicators pursuant to the disclosures of the GRI Standards. If several of these topics are managed with a similar focus, the focus is described for one of them and a corresponding cross-reference is made in the others.

In managing the material aspects identified, there are also tools, processes and procedures that are generalised throughout the company and apply to all of them, and which are described in "General management approach" and should be taken into account in order to understand the manner in which Iberdrola carries out its activities and manages the economic, environmental and social impacts thereof.

A. ECONOMIC DIMENSION

Contents of the chapter

The topics dealt with in this chapter are the following:

A. Topics of the GRI Standards

- GRI 201 Economic performance
 - o Management approach and disclosures 201-1, 201-2, 201-3 and 201-4
- GRI 202 Market presence
 - o Management approach and disclosures 202-1 and 202-2
- GRI 203 Indirect economic impacts
 - o Management approach and disclosures 203-1 and 203-2
- GRI 204 Procurement practices
 - o Management approach and disclosures 204-1
- GRI 205 Anti-corruption
 - o Management approach and disclosures 205-1, 205-2 and 205-3
- GRI 206 Anti-competitive practices
 - o Management approach and disclosures 206-1

B. Specific topics of the electric utilities sector supplement

- Availability and reliability
 - o Management approach and indicator EU10
- System efficiency
 - o Management approach and indicators EU11 and EU12
- Demand-side management
 - o Management approach (no related indicators)
- Research and development
 - o Management approach (no related indicators)
- Nuclear plant decommissioning
 - o Management approach (no related disclosures)

C. Specific topics of the Iberdrola group

- Costs of Supply
 - o Management approach (no related disclosures)
- “Green Financing”
 - o Management approach (no related indicators)
- Fiscal responsibility
 - o Management approach (no related indicators)
- Cybersecurity
 - o Management approach (no related indicators)
- Privacy of the personal information of Stakeholders
 - o Management approach (no related indicators)

Scope of information

The information boundaries used in this chapter are defined in indicator disclosure GRI 102-45 of this report.

A. Topics of the GRI Standards

GRI 201 Economic performance

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

The electricity sector is a significant driver of the economy, to which it continuously contributes through significant investments and the creation of high-quality jobs, both direct and indirect. Its function is to provide safe, competitive and sustainable supply. Generation technologies using renewable sources are decisive in the fight against climate change, as they allow for increased electrification of the economy, thus reducing dependency on fossil fuels.

Iberdrola continues to engage in a process of growth and internationalisation that has made it one of the leading electric companies in the world. This strong position was achieved through a sound, long-term industrial plan that is both profitable and creates value, supported by a business strategy of sustainable growth and geographic diversification.

Analysts describe a global scenario for the energy sector characterised by an increase in energy demand, tied to a need to reduce CO₂ emissions. Estimates call for high growth in demand in the medium and long term in emerging countries and moderate growth in the developed world. In any event, this energy transition will require extremely large investments in renewable generation facilities, in smart grids and in efficient storage; all accompanied by greater digitisation to support efficiency and the development of new products.

Iberdrola's strategy, implemented more than a decade ago, has been based precisely on these growth vectors: investment in renewables, smart grids, efficient storage and digitisation. The strategic pillars defined by the company are profitable growth, operational excellence, customer-focused operations, the optimisation of capital, and innovation. Its current leadership position reflects the benefits of its forward vision and diversification of businesses and areas. During the 2018-2022 period, the company expects to invest approximately 32,000 million euros, of which 90% will be dedicated to regulated activities (mainly networks) or long-term contracted assets.

A summary of the Iberdrola strategy can be found in the document *Outlook 2018-2022* (or in the document superseding it in a subsequent period), which can be accessed through its corporate website in the [About US](#) section.

Iberdrola's financial results for the year are summarised in the [Results](#) section of the website. Alongside these results, the company also requires its companies to explain how they are achieved and to evaluate them in terms of sustainability, understanding that adequate disclosure of non-financial information is an essential element for the sustainability of financing activities.

Directive 2014/95/EU of the European Parliament and of the Council as regards disclosure of non-financial and diversity information by certain large undertakings and groups (the "Directive") entered into force in 2014, and was transposed into the Spanish legal system in 2017 with the approval of *Royal Decree-law 18/2017 of 24 November*.

To respond to the new legal demands, companies to which they apply must include in their management reports or in a specific separate report information regarding their management of environmental and social aspects, as well as aspects relating to the management of people, diversity, respect for human rights and the fight against corruption and bribery, describing the risks, policies and results connected to these issues.

This *Sustainability Report 2017* covers the requirements arising from the entry into force of the new legal provision, forming an integral part of the company's management report. The [Annual Reports](#), the *Integrated Report. February 2018*, the quarterly results reports and other operational and financial information of interest can also be found on the website.

201-1 Direct economic value generated and distributed

Direct economic value generated, distributed and retained (€millions)	2017	2016
Iberdrola consolidated		
Revenue (sales and other income)	⁽¹⁾ 32,714 ²²	30,706
Operating costs	20,446	18,588
Employee remuneration (excluding company social security costs)	2,517	2,260
Payments to providers of capital	2,916	2,692
Payments to government administrations	2,723	2,740
Community investments (verified according to the LBG Model)	63	36
Economic value retained	4,049	4,390

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

201-2 Financial implications and other risks and opportunities for the organisation's activities due to climate change.

²² Includes Turnover in the amount of €31,263 million and Other revenue €1,451 million.

The risks to which the group's activities are exposed differ based on the nature and dependency of the activity and of the country in which it operates. Apart from the risks detected during the operation of the facilities, Iberdrola is performing an analysis and studies of the generation, distribution and transmission businesses in order to anticipate other future risks as a result of climate change. These studies will allow for anticipatory action to adapt the business, investing in the most appropriate technologies for the planet and for Iberdrola.

The main risks arising from climate change in the medium term, as well as the principles of conduct to which the company commits and manages through its Comprehensive Risk Management System, are described in disclosure 102-15 "Key impacts, risks and opportunities" of this report. This section also describes the opportunities for the company arising from the necessary transition towards decarbonisation of the energy model, thanks to its position of leadership in renewable energy and its commitment to the transition towards a low-carbon economy.

The strong commitment and involvement of Iberdrola's senior management in the management of the group's risk is noteworthy. Their participation in the Climate Conference held in Bonn in 2017 has been equally proactive as in prior years. Iberdrola believes that the solution is in promoting clean energy, increased storage capacity and more smart grids, supporting projects of innovation and digitisation of the systems.

This commitment has allowed for the detection of a broad array of opportunities, recognising the need to deal with an ambitious scenario of decarbonisation, which means moving towards an efficient energy model, assuming that electrification is the key to facing the challenge of climate change. Along these lines, the company continues with its commitment to achieving a 50% reduction in its greenhouse gas emissions intensity by 2030 compared to 2007 levels, and to be carbon neutral by 2050.

Iberdrola commits to the transparency and communication of its climate change policies and is taking the steps needed to reduce emissions (category A within CDP Climate Change). The company has a [Policy against Climate Change](#), approved by the Board of Directors, in which the company commits to supporting international conventions to address this environmental problem, encouraging the development of efficient technologies from the standpoint of greenhouse gas emissions, boosting efficient energy use and increasing its customers' awareness of the importance of engaging in responsible energy consumption.

It has also endorsed and supports the recommendations of the Task Force on Climate-related Financial Disclosure (TCFD), created by the Financial Stability Board (FSB), the objective of which is transparency regarding risks associated with climate change. Iberdrola believes that disclosure of the financial risks relating to climate change in a consistent and improved manner will allow for the establishment of a constructive and well-informed dialogue amongst investors and companies regarding the opportunities and risks relating to their activities.

Similarly, Iberdrola has joined a number of initiatives, the most high profile of which are: Terrawatt, United Nations Climate, We mean business, CEO Climate Leaders (World Economic Forum), Un millón de Compromisos por el Clima (MAGRAMA), Comunidad por el Clima (Red Española Pacto Mundial), Carbon Pricing Leadership Coalition, World Business Council for Sustainable Development, Corporate Leaders Group, grupo Español de Crecimiento Verde, Powering Past Coal Alliance, Plataforma Nacional de Acción Climática, Asociación Española para la Economía Energética, UN Global Compact (Action Platform).

Iberdrola has a specific section on its website called [Against Climate Change](#) in order to show the company's efforts to mitigate and adapt to the consequences of climate change.

201-3 Coverage of the organisation's defined benefit plan obligations.

Spain

The companies signing the *7th Collective Bargaining Agreement* jointly sponsor a voluntary employee pension plan in which 98% of the workforce participates. The periodic contributions made under said Collective Bargaining Agreement are determined as a percentage of each employee's annual pensionable salary. Iberdrola does not have any unmet financial commitments pending with respect to this plan.

United Kingdom

98% of the workforce participate in the pension plans of the workforce in one form or another:

- The defined-benefit plan has two pension plan structures, based on company and seniority. They have been closed to new members since 1 April 2006.
- The defined-contribution plan has a pension scheme that is based on a percentage of each employee's annual pensionable salary. This scheme is optional for employees and is co-funded by the company and employees.

United States

- The Networks Business has twelve defined-benefit plans, covering union and non-union employees, for which the company makes the contribution, with benefits being based on salary and years of service. As of 1 January 2014, all defined-benefit plans were closed to new members, except for the plans of The Berkshire Gas Company Pension Plan, Connecticut Natural Gas Corporation Pension Plan and Southern Connecticut Gas Company Pension Plan for Salaried and Certain Other Employees. The Networks Business also has defined-contribution plans with distinct and separate operations covering employees who are both subject and not subject to the collective bargaining agreement. Employees can make contributions as a percentage of their pre-tax salary (generally up to 50%). Almost 100% of the workforce is eligible to join these defined-contribution plans, with some 91% having signed up.
- The Renewables Business has a corporate defined-benefit plan, with contributions assumed by the company and benefits determined based on salary and years of service. Vesting in this plan was frozen as at 30 April 2011. It also has a defined-contribution plan with three different types of company contributions. Employees can make contributions as a percentage of their pre-tax salary. 100% of the workforce are members of these defined-contribution plans.

Brazil

After the integration of all of the businesses of the company Elektro Holding into Neoenergia on 24 August 2017, the pension plan scheme is as follows:

- At Elektro, the Networks Business has a defined-benefit plan for employees who joined before 31 December 1997, and a mixed plan (70% of salary as defined benefit and 30% as defined contribution) for those who joined after 1 January 1998, which is closed to new entrants as from 31 December 2016. 84% of the workforce are members of both plans. For the companies of Elektro Holding (Elektro Redes S.A., Elektro Comercializadora de Energia LTDA, Elektro Holding S.A., Elektro Renováveis Do Brasil S.A., Enerbrasil-Energias Renováveis Do Brasil S.A., Elektro Operação and Manutenção LTDA.), as at 31 October 2016, a defined-contribution plan was implemented by means of which employees may make contributions as a percentage of their salary, with the business contributing the same amount.

- Coelba has a defined-benefit plan for employees who joined before 1 October 1998 (closed to new participants), and a defined-contribution plan for those joining after such date. 98% of the workforce are members of both plans.
- Celpe has a defined-benefit plan for employees who joined before 1 May 2006 (closed to new participants), and a defined-contribution plan for those joining after such date. 97% of the workforce are members of both plans.
- Cosem has a defined-benefit plan for employees who joined before 1 March 1999 (closed to new participants), and a defined-contribution plan for those joining after such date. 98% of the workforce are members of both plans.

Mexico

The commitments to the organised employees of Iberdrola Mexico, arising from the auctions by the Federal Electricity Commission, in which Iberdrola is required to apply a Collective Labour Agreement for organised staff, are provisioned as internal funds. A defined-contribution pension plan was implemented in 2015, with 62% of the non-organised workforce with pension plan rights signing up.

201-4 Financial assistance received from governments

Financial assistance received

Financial assistance received by the Iberdrola group is shown in the following table on a consolidated basis:

Financial assistance (€ millions)	2017	2016
Capital subsidies	10	13
Investment tax credits	30	0
Emissions rights	0	0
Assistance for other items included in the GRI Protocol	0	0
Iberdrola consolidated total	40	13

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

Government participation in shareholding structure

The Iberdrola group is not aware of government participation in the shareholding structure.

GRI 202 Market presence

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Consistent with its presence in the international market, the Iberdrola group has a global tool that allows for monitoring of the selection process, and a unique reporting system (SAP OneHR). Both elements allow for the internal and external publication of vacancies at the international level, and favour the mobility of employees through the various organisations and companies of the group. 2,223 internal vacancies were published in 2017, with the participation of more than 5,000 employees.

The global publication of external vacancies ensures the inclusion of all candidates within the company's processes on equal terms. More than 230,000 external candidates were recorded during financial year 2017.

The management approaches described in section 406 "Non-discrimination" of the "Social dimension" chapter of this report are applied to both remuneration as well as the selection of professionals.

202-1 Ratios of entry level wage to local minimum wage

The current collective bargaining agreements at the companies of the Iberdrola group ensure equality in starting wages for men and women.

Entry-level wage compared to legal minimum wage (%)	2017	2016
Spain	140.72	150.63
United Kingdom	125.52	127.32
United States	125.00	137.50
Brazil	135.18	N/A ²³
Mexico ²⁴	464.09	480.24

202-2 Senior management hired from the local community

Iberdrola's approach is to promote and favour the hiring of employees in the geographic boundaries within which it does business, also encouraging these individuals to reach executive positions in the corresponding companies. In 2017, 98.65% of executive officers at the companies of the group were local managers, defined as anyone with management responsibilities in a particular geographic area coming from the local community, therefore excluding professionals of other nationalities who are assigned there temporarily under an international mobility programme.

GRI 203 Indirect economic impacts

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

²³ Data from Brazil for prior year not provided due to change in boundary.

²⁴ In Mexico, the minimum wage is generally not used as a reference for market wages; it is applied in sanctions by the labour authority, fines and limits on tax deductibility.

Management approach

In addition to the direct economic impacts that occur as a result of the cash flows that are generated, the Iberdrola group also induces additional effects or indirect impacts such as those described in this aspect.

203-1 Development and impact of infrastructure investments and services supported

During the construction and operation of its facilities, Iberdrola carries out certain infrastructure activities that are unrelated to its facilities and without a specific commercial purpose, but rather that are intended to meet the needs of the social environment, resolving existing shortcomings in the local communities. A summary of these projects with strong social impact during 2017 is provided below:

Infrastructure

In Spain, it has cooperated on the refurbishment of various municipal infrastructures.

In Mexico, it has participated in the construction and/or improvement of various recreational, educational and health centres, as well as infrastructure improvement and expansions of potable water and sewerage networks.

In the United Kingdom, action has been taken to improve the various infrastructures as well as landscape improvements for the enjoyment of the people near the different production centres.

In Brazil, there has been a continuation of the energy efficiency programme, both at the level of awareness-raising and disclosure as well as review and adjustment of lighting, with an expected savings of 800 MWh / year.

Services

Significant service activities include support for professional formation and training in areas near Iberdrola's facilities. In 2017, more than 12,000 people visited the Energy Classrooms near the windfarms in Spain. There are also two visitor centres in the United Kingdom, located at the Cruachan hydroelectric plant and at the Whitelee windfarm, where visits are received from the general public and from school groups.

Of note is the collaboration with Hydrographic Confederations and other bodies in Spain to enable various activities near the hydroelectric reservoirs (sports events, support for reproduction of certain species, etc.), by adjusting flows at certain times, as well as specific assistance in the repopulation of species.

203-2 Significant indirect economic impacts

Indirect impacts of the businesses and facilities

From an economic standpoint, the expansion of electricity systems drives the regional economy in the region where it occurs and creates employment opportunities, contributing to economic and social enhancement.

Positive effects include:

- Facilities for the production, transmission and distribution of electrical energy are built in dispersed geographic locations. This contributes to the generation of economic activity and jobs in urban and rural environments. This can also support the revitalisation and repopulation of underpopulated rural areas.
- These same facilities create significant indirect employment in the region in the form of local contracting companies, creating demand for various lodging, security, health, mechanical, supplier services, etc.
- In local communities, professional training is promoted and skilled labour, such as services for building and maintaining wind farms, is boosted.
- Local communities are supported through sponsorship of the initiatives of social and environmental institutions and organisations.
- Due to their geographic reach, electricity activities generate fees, taxes and duties at the local, regional and national levels.

Negative effects can be considered to include the following:

- The landscape impact of the facilities, especially large ones, and the possible negative effects (during construction or operation) on traditional activities, particularly in the rural environment, such as ranching, hunting or fishing.
- Environmental risks, which may give rise to undesirable consequences for the environment, such as spills and improper emissions, or waste management; these situations might occur despite the ever more demanding operational practices developed by the group.

Indirect impacts of the supply chain

The high volumes of Iberdrola's purchases (described in disclosure 102-9) of equipment, works and services, as well as fuel, becomes an engine for growth in the countries in which the company is present.

Entrepreneurial support

Iberdrola supports the creation and strengthening of new entrepreneurial projects through a number of significant initiatives, including the following during 2017:

- In 2017 Iberdrola procured a volume equivalent to 38 million euros from companies in Spain that have been operating for less than 5 years, which is clear support for entrepreneurship.
- Inclusion of the specific category *Generation of employment and employment of youth* at the Supplier of the Year Awards in Spain: incentivising the suppliers to commit to youth and female employment and encouraging them to offer high-quality professional opportunities to youth, which will undoubtedly lead to an improvement in competitiveness and innovation at the companies and will allow them to retain talent.
- Iberdrola's venture capital program, *Iberdrola Ventures - Perseo*, funded with 70 million euros, is an opportunity for companies dedicated to innovative technologies and business models, ensuring the sustainability of the energy model.

GRI 204 Procurement practices

Contribution to SDGs of the performance described by the indicators of this section(according to SDG Compass www.sdgcompass.org)

Management approach

A description of the Iberdrola group's supply chain can be found in disclosure 102-9 of this report.

204-1 Spending on local suppliers

Iberdrola maintains a strategy of creating value in the regions in which it operates. The volume of purchases made by the company each year translates into indirect employment in auxiliary industries and at service providers.

The following table shows the percentage volume of procurement from local suppliers:

Acquisition or contracting of materials, equipment, works and services from local suppliers ²⁵ (%)	2017	2016
Spain	88	93
United Kingdom	85	69
United States	98	98
Brazil	100	100
Mexico	60	66
Other countries	76	N/A
Total	88	84

But aside from purely economic value, Iberdrola drives the market on sustainability and responsibility, encouraging suppliers to improve their environmental, ethical and social record through actions that foster excellence in their management, beyond mere technical quality, thereby helping suppliers become more competitive:

Amount awarded to suppliers with management systems (%) ²⁶	2017	2016
Amount awarded to qualified suppliers	87.2	89.0
Certified quality management system	85.0	86.6

²⁵ Based on the Tax ID or CIF assigned to the supplier, those registered in the main countries in which Iberdrola does business are considered to be local.

²⁶ Scope: Suppliers of materials, equipment, works and services with orders for amounts equal to or greater than €400,000 during the year, which represents more than 92% of the total amount contracted (information from November 2017). Does not include Neoenergia.

(ISO 9001 or equivalent)

Certified environmental management system (ISO 14001 or equivalent)	79.5	82.3
--	------	------

Certified risk prevention management system (OHSAS 18001 or equivalent)	71.4	79.4
--	------	------

GRI 205 Anti-corruption

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

The group's firm commitment to fight corruption and to establish mechanisms to ensure the existence of a culture for preventing irregularities is reflected in such documents as the group's [Code of Ethics](#), the [Crime Prevention Policy](#) and the [Anti-Corruption and Anti-Fraud Policy](#), all of which have been approved by the Board of Directors.

As an example of this commitment, at the beginning of 2017 Aenor granted Iberdrola, S.A. ISO 37001 certification, by which it is verified that the company has an effective Anti-Bribery Management System, resulting in Iberdrola being the first Spanish company and one of the first in the world to obtain this recognition. This is the international standard that sets the requirements and provides a guide to establish, implement, maintain, review and improve mechanisms to combat bribery practices at companies.

Within the framework of the Compliance System, various activities are carried out to encourage the organisation to act in accordance with the most stringent ethical standards and in accordance with applicable laws and regulations. In order to develop the *Crime Prevention Policy*, the company, through the Compliance Unit and other appropriate bodies, has implemented a specific and effective programme (the *Crime Prevention Programme*) as a set of measures focused on the prevention and detection of and reaction to possible crimes, which also extends to the prevention and control of other frauds, administrative infractions and serious irregularities, all within the framework of the process of review and adjustment to the most recent changes to the Spanish Criminal Code following the introduction of criminal liability for legal

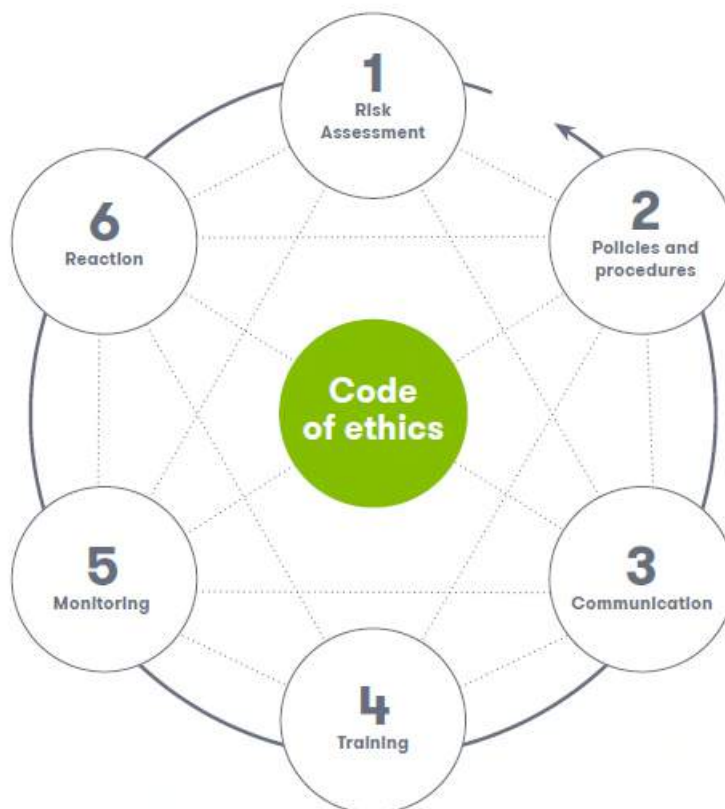

entities, without prejudice to the legal provisions applicable in any other jurisdiction in which the company does business.

Within this context, this year Aenor granted Iberdrola, S.A. UNE 19601 certification, by which it is verified that the company has an effective criminal compliance management system, resulting in Iberdrola being one of the first IBEX 35 companies to obtain it. This norm is the national standard for best practices for preventing crime, reducing risk and encouraging an ethical business culture and a culture of compliance with the law.

In 2017 the Compliance Unit also approved the *Protocol for Conduct in Professional Relations with Governments, Political Parties, Authorities and Public Officials* in order to strengthen the specific mechanisms already existing at the companies of the group to prevent any acts that might be considered corrupt or bribery in relations with said third parties.

In addition, as part of the Compliance System, the Compliance Unit promotes the development and maintenance of other initiatives for compliance with the *Code of Ethics* and legal provisions on fraud and corruption, the main goal of which is to foster a culture of corporate ethics and transparency, disseminating the principle of “zero tolerance” with respect to fraud and promoting mechanisms and actions to prevent corruption and fraud.

The *Code of Ethics* is the “cornerstone” on which the Compliance System is based and permanently functions as an element “inspiring” the other elements thereof, which are shown in the following chart:

These elements include: i) the regular assessment of risks, ii) the development and maintenance of policies, procedures and protocols on conduct of the professionals of the group describing the expected, appropriate and proper behaviour thereof, iii) the preparation of communication plans, iv) training for

employees and third parties with which we have relationships, v) permanent monitoring and review of the Compliance System through internal and external audits and control and detection methods like management of the ethics mailboxes, and vi) the establishment of response and reaction plans in case of conduct or situations that are improper or contrary to applicable legal provisions.

All activities performed by the group within this Compliance System are monitored quarterly by the Unit through the *Global Compliance Scorecard*, in which the Compliance Divisions of each country subholding and/or head of business company report quarterly, within the framework of the *General Coordination, Collaboration and Information Protocol*, the changes in a number of monitoring indicators regarding the principal elements making up the compliance programs of the respective companies.

Finally, it should be noted that in 2015 Iberdrola joined the Partnering Against Corruption Initiative (PACI), a platform through which leaders belonging to the World Economic Forum undertake to promote business conduct and practices designed to fight corruption within their organisations and to make such commitments binding on the third parties with whom they engage. Iberdrola is currently the only Spanish company to be a member of this platform.

205-1 Business units assessed for risks related to corruption.

One of the principal elements of the Compliance System of the Iberdrola group is the performance of a periodic and on-going evaluation to identify situations, factors or actions that could be exposed to improper acts or to situations of corruption or fraud.

The Compliance Unit develops a dynamic review and updating process for the risks mentioned in the preceding paragraph and establishes review mechanisms and tools to determine the perception of fraud risks by officers and professionals with key responsibilities within the group, while monitoring the potential factors of exposure to the risk of corruption on an ongoing basis.

Both the corporate divisions of the company as well as all of the businesses and countries in which the group does business participate in this process and are analysed in collaboration with the Compliance Divisions of the country subholding companies and head of business companies. All of this is done following guidelines established by the Unit, which each Compliance Division adjusts and develops at their respective companies in accordance with the specific object and activities thereof.

An evaluation process was performed in 2017 based on surveys involving professionals in charge of areas and relevant processes at each of the country subholding and/or head of business companies of the group. Specifically, the scope of the analysis was the following:

- 100% of the country subholding companies making up the group: Avangrid INC, Iberdrola España, S.A.U., Iberdrola México, S.A. de C.V., Iberdrola Participaciones, S.A.U., Neoenergia, S.A.²⁷ and Scottish Power LTD as well as the principal business thereof: i) Networks Business, ii) Wholesale and Retail Business, and iii) Renewables Business.
- Furthermore, as regards the corporate divisions of the group, those areas or divisions considered to be of higher potential risk in this area have been analysed. Specifically, the following have participated: Procurement, Human Resources and General Services, Financing and Treasury, Corporate Development, Administration and Control, Investor Relations and Communication, Innovation, Sustainability and Quality, Internal Audit and International Relations.

²⁷ As a result of the integration of Neoenergia in the middle of the year, the risk analysis at this organisation was performed using its own methodology.

To perform this evaluation, guidelines and a methodology are provided that allow the compliance directors as well as the heads of the businesses and corporate functions to identify and evaluate the risks of fraud and corruption within the group, with the latter in charge of managing such risks. Based on an analysis of the information received, each Compliance Division prepares its own risk map, identifying the main controls at the group to mitigate them, and proposes improvement actions to strengthen the effectiveness of such controls, if appropriate.

This analysis is used as a starting point to determine the most effective prevention and control measures and thus allow for the appropriate allocation of resources and efforts to those areas or factors in which a potential for improvement has been identified. Accordingly, the assessment constitutes a tool upon which various actions are based and which are included within the other elements of the Compliance System.

The group has also continued to develop and strengthen its Compliance System, particularly in the anti-corruption area, focusing on the analysis and evaluation of third parties with which Iberdrola is connected. In this context, the group has multiple internal controls that try to mitigate exposure to these types of third-party risks, including:

- a) Suppliers. The group's procurement process includes *Guidelines for analysis of the risk of corruption at suppliers*, the purpose of which is to provide guidelines for the analysis of the risk of corruption associated with suppliers of equipment, materials, works and services. The documentation attached to the supplier contracting terms also includes the *Suppliers' Code of Ethics*.
- b) Public administrations and officials. In 2017, the Compliance Unit approved a new *Protocol for Conduct in Professional Relations with Governments, Political Parties, Authorities and Public Officials*, applicable throughout the group, governing employee relationships with these Stakeholders. Apart from establishing certain principles of conduct to be observed by all of the professionals, this protocol establishes certain requirements to report to the Compliance Area prior to the formalisation of any contract, agreement or pact with officials or public administrations.
- c) Corporate transactions. The Unit also approved the *Corporate Transactions Protocol* in order to establish the steps to take regarding risks associated with compliance in the case of mergers and acquisitions and other kinds of corporate transactions contemplated in the area of application thereof. This protocol contemplates the performance of due diligence prior to any transaction to be carried out within the group.
- d) Sales agents. As to these third parties, the group has specific protocols at companies that hire sales agents. This protocol also contemplates the performance of due diligence prior to any hiring of these types of third parties.
- e) Donations, sponsorships and social welfare activities. In 2016 the Unit approved the *Protocol for Transactions with Social-Welfare Content, Donations and Sponsorships*, the object of which is to evaluate the legitimacy of the beneficiary of the contribution or sponsorship and regulate the information to be collected by the proposing unit, without prejudice to the additional specific work of research and analysis that each specific contribution may require.

Review of the provision of general supplies in countries presenting a risk of corruption

To analyse supplies in countries with a risk of corruption, the company uses the *Transparency International Corruption Perceptions Index 2016 (TI CPI 2016)* as a source to classify countries by their risk level.

Procurement volumes classified by corruption risk levels are set out in the following table:

Corruption risk ²⁸	% of 2017 general supply purchases in countries on the CPI Index 2016
Low	58
Medium	17
High	25

According to the TI CPI 2016, countries with a high risk of corruption in which purchases were made from suppliers registered are mainly Brazil and Mexico. This volume of procurement is directly related to Iberdrola's investment effort in these countries, where 25% of the group's total investments were made in 2017.

Iberdrola has not made any significant purchase of general supplies from suppliers located in tax havens.

In supplier management and during the procurement process, the measures adopted by the company to protect against this risk are based either on the *Procurement Policy* or the *Suppliers' Code of Ethics* or on the specific clauses included in the contract terms attached to the orders made.

Review of fuel supplies in countries presenting a risk of corruption

An analysis of the purchases of fuel shows the following ratios in 2017:

Corruption risk ³²	% of 2017 fuel purchases in countries on the CPI Index 2016
Low	48
Medium	0
High	52

According to the TI CPI 2016, the countries with a high risk of corruption in which purchases were made from suppliers registered there are mainly Mexico and Brazil. However, the company believes that the calculation should exclude purchase of fuel in these two countries because they are made in strongly regulated environments that require contracting with state-owned companies. Excluding both countries from the calculation, the high risk percentage would decrease to 14%.

205-2 Training and communication on anti-corruption policies and procedures

The development of effective communication and training plans is one of the key elements relied upon by Iberdrola's Compliance System to achieve its main goal of promoting a culture of corporate ethics and transparency and to prevent improper or fraudulent conduct.

Along these lines, the principal powers of the Compliance Unit include those of instituting the preparation and implementation of suitable training programmes, both in-person and online or by any other appropriate method, for the professionals of the group to receive training regarding the duties imposed, mainly by the *Code of Ethics*, the *Anti-Corruption and Anti-Fraud Policy* and the *Crime Prevention Policy*.

The initiatives included in these plans include the following activities during the course of the year:

²⁸ Low risk: country index ≥ 60 / Medium 59-50 / High risk: < 50 on a scale of 0 (perception of high corruption levels) to 100 (perception of low corruption levels).

Training for governance bodies

- As part of the training programme for the directors of Iberdrola, S.A., there was a training initiative in 2017 for all members of this body regarding the Iberdrola group's Compliance System.

The Compliance Unit also regularly reports to the Corporate Social Responsibility Committee on the most significant compliance issues for the period, having appeared before this body a total of four times in 2017. The issues reported on include the following: *Code of Ethics*, report on annual reports, incidents relating to the *Internal Regulations for Conduct in the Securities Markets*, *Crime Prevention Programme*, update of internal rules and regulations, scorecard, results of external evaluations and significant integration processes within the group, etc.

Training for employees of the group

- Training and awareness-raising regarding the *Code of Ethics* and the prevention of violations thereof. In coordination with the various country subholding companies and/or head of business companies, the Unit develops and regularly updates training programmes on the *Code of Ethics* and the other rules and regulations in this area applicable to all group professionals. Such programmes foster knowledge of the action standards required at the group and promote ethical values and the principle of "zero tolerance" towards the commission of unlawful acts and situations of corruption and fraud. Various initiatives have been developed, including:
 - o Online *Code of Ethics* course. This course was launched globally throughout the group²⁹, with a frequency of at least every two years, and a new refresher course was launched in 2017 which has been taken by a total of 21,899 employees, which is 80% of the objective.

<i>Code of Ethics</i> training	No. of employees trained	% of employees trained
Spain	8,276	80%
United Kingdom	2,954	50%
United States	6,620	99%
Brazil ³³	3,431	91%
Mexico	618	96%
Report boundary	21,899	80%

During the year, Neoenergia has had an online course regarding its *Code of Ethics* and anti-corruption issues available to all of its employees, which has been completed by 90% of its professionals, or 6,063 employees.

- o On-site training and awareness-raising sessions on the *Code of Ethics* and anti-corruption provisions given by the compliance directors of each company. During 2017 more than 2,000 employees of the Spanish companies of the group have received on-site training within this programme.
- Training on *Crime Prevention Programmes* applicable to companies domiciled in Spain. In 2016 the Compliance Unit made available to the professionals of the Spanish companies of the group an online training initiative on this topic. This online course has been available to new hires during 2017 and was taken by 269 new professionals of the Spanish companies of the group.
- Specific anti-corruption training in accordance with the legal provisions in effect in the countries in which the group operates:

²⁹ As a result of the integration of Neoenergia in the middle of the year, this company was not included in the scope of this initiative, although the company has its own specific training in this area.

- There has been a training session in Spain with the help of the law firm CMS Albiñana & Suárez de Lezo in the area of anti-corruption regulation, and more specifically regarding the *UK Bribery Act* for those employees forming part of the gas supply transactions team of Iberdrola Generación. A total of 17 employees attended this on-site training.
- In the United Kingdom, the company provides periodic online training on the UK Bribery Act and obligations under the Anti-bribery and Corruption Policy (ABC Policy) as well as on related legal provisions. The training this year has been included as an additional module in the online *Code of Ethics* course, in which more than 3,600 employees have participated. The Compliance Division of this company has also provided on-site *Code of Ethics* and anti-corruption training to intermediate management, with the participation of more than 250 professionals.
- The *Code of Ethics* training in the United States includes a short training session on anti-corruption, in which more than 6,600 employees participated. On-site training courses have also been provided to the respective Boards of Directors; specifically, a total of 14 directors of Avangrid, Inc. and 8 directors of Avangrid Networks, Inc. have received training on the U.S. Foreign Corrupt Practices Act.
- In Mexico, apart from online training on the *Code of Ethics*, which includes aspects promoting the fight against corruption, throughout 2017 the Compliance Division of this company developed on-site training meetings on key aspects of ethics and compliance. 389 professionals have participated in this training.
- Likewise in Brazil, in addition to online *Code of Ethics* training, the scope of which covered all employees of Elektro, in 2017 the Compliance Division of the company participated in a leadership event on the company's strategy to underscore the role of the executive officers in the Compliance System. A total of 200 professionals attended this event.

205-3 Incidents of corruption

The company has not been informed, either through the ethics mailboxes or through the corresponding legal channels via its Legal Services, of any court decisions relating to cases of corruption during the reporting period. There were also no incidents reported through the channels established for such purpose resulting in the cancellation of orders or of contracts with group suppliers.

During 2017, the European Investment Bank (the "EIB"), Iberdrola Ingeniería y Construcción, S.A.U. and Iberdrola S.A. (in its capacity as owner of all of the share capital of Iberdrola Ingeniería y Construcción, S.A.U. through the country subholding company Iberdrola Participaciones, S.A.U.) have signed a settlement agreement (the "Agreement") within the framework of the EIB's investigation relating to the Riga TEC-2 project to rebuild a thermal plant in Riga (Latvia), which was awarded to Iberdrola Ingeniería y Construcción, S.A.U. on 8 December 2005 and financed by this institution.

The Agreement contemplates that Iberdrola Ingeniería y Construcción, S.A.U. will not participate in projects financed by the EIB for a period of one year (which may be extended for six additional months if the company does not comply with certain conditions), and assumes the commitment to develop, finance and implement a specific sponsorship programme, consisting of an array of activities and measures in favour of the fight against corruption and fraud that will be performed for a period of four years from the signing of the Agreement.

Along these same lines, the Agreement includes an obligation to cooperate with the EIB and to extensively assist it in the investigation of conduct prohibited in the projects financed by the institution, and to exchange with the EIB its best practices in the area of compliance.

GRI 206 Anti-competitive behaviour

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Pursuant to the *Code of Ethics*, the group undertakes to compete fairly in the market and not to engage in advertising that is misleading or denigrates its competitors or third parties. Furthermore the group undertakes to obtain information lawfully, to promote free competition for the benefit of consumers and users, and to promote transparency and free market rules, as provided in the group's [General Corporate Social Responsibility Policy](#).

In relation to the foregoing, and specifically pursuant to the provisions of the *Anti-Corruption and Anti-Fraud Policy*, the companies of the group promote a transparent environment, maintaining appropriate internal channels to favour the communication of possible irregularities, including the use of the channel of communication with the Audit and Risk Supervision Committee to report financial or accounting irregularities, and the Ethics Mailboxes, which allow professionals of the group, suppliers and shareholders of the company to communicate conduct that may entail a breach of the company's Corporate Governance System or the commission by a professional of the group of an act contrary to the law or to the rules of the *Code of Ethics*.

At the country level, each of the country subholding companies endeavours to ensure strict compliance with legal provisions on separation of activities. In many countries like Spain, where a *code for the separation of activities of the companies of the Iberdrola group in Spain* applies, applicable internal rules go beyond what is required by law, significantly strengthening the measures to prevent any anti-competitive practices deriving from a lack of separation between the liberalised and regulated businesses.

The liberalised head of business companies also have specific controls to avoid any type of anti-competitive practices, particularly in areas like advertising campaigns directed towards individuals and price manipulation.

In Spain, the generation head of business company has access to Autocontrol, a private entity that works for truthful, legal, honest and trustworthy advertising, which among other activities provides a consulting service to advise on the ethical and legal adequacy of campaigns before they are launched. It has also implemented internal processes to ensure compliance with *Regulation (EU) 1227/2011 of the European Parliament and of the Council of 25 October 2011 on wholesale energy market integrity and transparency* and the legal provisions in further development thereof, which establish rules prohibiting abusive practices that affect the wholesale energy markets. In other jurisdictions, the liberalised head of business companies have equivalent internal policies and rules.

In the practical application of applicable law, the complexity thereof might give rise to interpretations that are not shared by other market players or by the regulatory authority itself, giving rise to situations such as those described in section 206-1 requiring the intervention of the competent courts.

206-1 Legal actions for anti-competitive behaviour, anti-trust and monopoly practices.

Cases related to monopoly practices or anti-competitive behaviour that have been recorded at the Iberdrola group are described below.

In Spain, in 2010 Céntrica Energía, S.L. ("Céntrica") filed a claim with Commercial Court No 1, in Bilbao, claiming 11,900,000 euros in purported damages on the basis of the penalty imposed by the CNC for alleged abuse of dominant position for having failed to allow widespread access to the points-of-supply database. Iberdrola Distribución Eléctrica, S.A.U. filed a defence opposing this claim on the grounds that the case was time-barred and, in any event, because it had strictly complied with applicable laws and regulations governing the industry and with the standards established by the National Energy Commission (*Comisión Nacional de Energía*) (CNE) on this matter since 2002. Judgement was rendered for Iberdrola Distribución Eléctrica, S.A.U. in July 2010, holding that the action was time-barred. This judgement was appealed by the opposing party to the Provincial Court of Biscay (*Audiencia Provincial de Vizcaya*), and a new judgement confirming the previous judgement was handed down in July 2011. However, Céntrica Energía filed a constitutional petition for relief with the Civil Chamber of the Supreme Court, which issued a judgement in September 2013 upholding such petition, rejecting the finding that the action was time-barred, and providing for a return of the proceedings to the Provincial Court of Biscay for a resolution on the merits. As a result of the foregoing, the Provincial Criminal and Administrative Court rendered judgement in March 2014 dismissing the complaint filed by Céntrica Energía, S.L. in its entirety and deciding on the merits of the case, holding, among other things, that the causal link between the conduct followed by the distribution company and the damages claimed has not been established. In May 2014 Céntrica filed a constitutional petition for relief (*recurso de casación*) against the aforementioned judgement with the Third Division of the Supreme Court. On 6 July 2017 the Supreme Court rendered a Decision rejecting the cassation appeal, with the imposition of costs on the appealing party. The matter is thus definitively closed.

The proceeding provided for in article 88 (2) of the *EC Treaty* by the European Commission against Spain (State Aid C3/2007) continues in connection with the possibility of the regulated electricity tariff system being considered as state aid, which is forbidden under the Treaty, the beneficiaries of which would be end consumer companies, on the one hand, and electricity distribution companies, on the other. In these proceedings, which were commenced following a complaint filed by Céntrica, P.L.C. and Céntrica Energía, S.L., written comments of both Unesa and Iberdrola Distribución Eléctrica, S.A.U. were filed, with the defence focusing on the absolutely regulated nature of electricity distribution in Spain and the absence of any advantage for distributors compared with liberalised retail electricity supply companies, and considering, in short, that there was no forbidden state aid in favour of the former. In this case, which is limited to financial year 2005, a favourable final outcome is expected with a declaration that there is no unlawful assistance as regards electricity distribution companies.

In addition to the complaints filed with the EC, Céntrica has also filed various appeals applying for the annulment of national tariff provisions recognising deficits in regulated activities, to the extent that no similar deficits are recognised for retail supply activities. Both the Supreme Court and the National High Court have resolved to postpone the dates for voting and rendering a decision on such appeals until the issuance of a European Commission resolution putting an end to the proceedings concerning State Aid C 3/2007, commenced as a result of Céntrica's complaint.

Furthermore, in 2012 notice was given of the disciplinary resolution under case file S/0213/10 of the National Competition Commission, which imposes on Iberdrola, S.A., Iberdrola Generación, S.A.U. and Iberdrola Comercialización de Último Recurso, S.A.U., jointly and severally, a penalty of 10,685,000 euros for the serious infringement of distortion of competition through anti-competitive acts consisting of the transfer of contracts from the last-resort retail supplier to the liberalised retail supplier, without securing the

express consent of the consumer required under industry regulations. In 2013 notice was provided of the decision dismissing the contentious-administrative complaint filed by the three companies against the penalty. In 2013 an appeal for relief was filed against the dismissal and on 3 February 2017 a judgement on the on the appeal was rendered pursuant to which the Supreme Court annulled the sanction decision and reduced the amount of the sanction to 5,342,500 euros due to violation of the principle of proportionality, without imposing costs for the first instance proceeding before the National High Court or the petition for relief before the Supreme Court.

In the United States, a class action suit has been filed in relation to the LDC Gas Transport Service in the Algonquin Gas Transmission (AGT). On 16 November 2017, a Class Action Complaint (Breiding et al. v. Eversource y Avangrid) was filed with the District Court of Massachusetts on behalf of New England customers against the company and Eversource, alleging that certain of their subsidiaries, which used the gas transmission service provided by Algonquin Gas Transmission (AGT), which for Avangrid would be SCG and CNG, participate in natural gas pipeline capacity scheduling practices that resulted in an artificial increase in electricity prices in New England. The plaintiffs claimed redress under the federal and state antitrust, unfair competition and consumer protection laws, and under the common law of unjust enrichment. They seek to recover damages, restitution, disgorgement, costs of suit and attorneys' fees. The company is reviewing the Complaint and will vigorously defend against such claims.

As announced by the company in the Due Diligence call and in its third quarter Form 10-Q, the Connecticut regulators commenced a proceeding to review the gas supply portfolio, asset strategies and practices of the three local distribution companies. In addition, FERC and the Massachusetts State Commission are reviewing the matter. SCG and CNG are required to provide a safe and reliable natural gas service to their customers. SCG and CNG reserve and nominate / schedule the gas pipeline schedule to protect their customers against interruptions, even during extreme and unpredictable weather conditions. These companies operate in Connecticut, where they are required to serve as the "last-resort supplier" for retail, commercial and industrial natural gas customers interconnected to the gas distribution companies. In providing service to the customers, Avangrid seeks to comply with all regulatory requirements, both state and federal.

No cases related to monopoly practices or anti-competitive behaviour have been recorded at the other companies of the Iberdrola group.

B. Electric Utilities Sector Specific Aspects

Availability and reliability System efficiency

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Spain

The planning of generation in Spain is a government function and is indicative in nature, as participants make investment decisions within a free-market environment.

Analysing the reliability of the short-term electricity supply is a task assumed by the System Operator, which regularly studies different operation scenarios to verify the robustness of the system. Iberdrola significantly contributes to increasing reliability in the operation of the system by providing great flexibility through hydroelectric generating capacity as well as with a pioneering renewable energy control centre.

The Networks Business also contributes to guaranteeing reliability, performing studies to identify the short- and long-term investments needed to meet the increase in demand and to renew older facilities by adopting more modern technologies, with a view to guaranteeing a more operational and reliable network. Of note is the major deployment of smart meters in the electric grid, with more than 10 million already installed, a modernisation of 97% of the company's meters in Spain. The investments in smart distribution grids helps to improve reliability and availability of the networks.

United Kingdom

A large part of the United Kingdom's generating facilities is reaching the end of its use life, and the government is determining an energy policy and regulations to enable renewal without endangering the safety of supply. There are auctions of capacity in which the government calculates the amount of capacity required, depending upon its system reliability target, and industry players offer their facilities until such need is met. February 2018 saw the fourth long-term T-4 auction, in which both existing plants and new projects took part. Iberdrola is developing new projects in the technologies promoted by government policy over the next decade: offshore wind and combined cycle.

Electricity transmission network activities are governed by the RIIO-T1 plan over the 2013-2021 period. Significant investments are being considered during this period, with a dual purpose: first, to increase the transmission capacity of interconnections between Scotland and England, and second, to enable the

evacuation of energy from all renewable facilities expected in the short to medium term. Both objectives will make it possible to guarantee reliable, high-quality service in the coming years.

The reliability of electricity distribution networks is ensured through studies that make it possible to identify the short- and long-term investments needed to meet new demand and to renew older facilities, all of which is managed in accordance with the RIIO-ED1 framework for the 2015-2023 period. The investments in smart distribution grids helps to improve reliability and availability of the networks.

United States

Iberdrola is among the leading producers of wind energy in this country. The construction of a new electricity transmission corridor from Canada to the United States through the State of Maine is an element that allows for the integration of growing wind production, improving grid stability and the reliability of both systems.

The group's North American companies act in accordance with the laws and regulations of the states in which they operate. In the state of New York, the companies participate in planning activities through official bodies, ensuring that they can meet short- and long-term demand under proper conditions of reliability and safety.

The System Operator (ISO) operates within the reliability margins set by the North American Electric Reliability Council, the Northeast Power Coordinating Council and the New York State Reliability Council (NYSRC). NYSRC sets the installed capacity reserve margin, as well as the required level generating capacity, such that the loss of load in the New York control region is no more than one day per ten years. In New England, ISO-NE sets installed capacity requirements (ICR) using similar criteria.

In the State of Maine, transmission and distribution companies have no authority over energy planning, and cooperate with official bodies on operational matters that may be required by such bodies. In any case, electricity distribution companies guarantee reliability, carrying out studies that make it possible to identify the short- and long-term investments needed to meet the increase in demand and to renew older facilities by adopting more modern technologies, with a view to ensuring a more operational and reliable network.

Brazil and Mexico

The group's companies in Brazil manage major electric distribution areas and electricity production plants. It works in close cooperation with the public administrations, developing systems to help them attain energy planning goals, achieving the desired balance between available resources and the quality and reliability of the electricity supply.

Iberdrola's Networks Business contributes to ensuring the reliability of electricity supply, making investments to meet the rapid increase in demand and electricity consumption in the areas in which it distributes, ensuring a more functional and reliable network. It also invests in electricity transmission projects that will encourage robustness by improving the backbone of the system.

The group's companies in these countries also participate in developing generating facilities (thermal and wind, hydroelectric, wind and photovoltaic power).

Fuel

A key element in managing the availability of electricity service is the procurement of the necessary fuel. Iberdrola ensures it has a global portfolio of gas and coal contracts that is flexible and geographically diverse. This is in addition to a stable, long-term and low-risk supply of nuclear fuel.

The risk of fuel cost is managed using financial contracts that fix the price of the fuel at a particular time, allowing for reduction of risks and ensuring a margin on forward sales. These financial contracts are primarily used to fix the costs of coal and gas under long-term contracts. Derivatives are also be used to cover fuel costs in euros, as purchases are usually made in U.S. dollars.

EU10 Planned capacity to address projected electricity demand over the long term

The companies of the Iberdrola group have no direct responsibility for long-term planning processes for the corresponding electricity systems in the countries in which they operate.

Public authorities conduct the studies needed to anticipate the long-term needs of the respective electricity system, and Iberdrola's companies act as market agents, making investment decisions that are consistent with their business plans.

EU11 Average generation efficiency of thermal plants

The efficiency of Iberdrola's thermal generating facilities is shown in the following table:

Average thermal efficiency ³⁰ at generating facilities (%)	2017	2016
Combined cycle	53.57	51.82
Conventional thermal	34.38	33.00
Cogeneration	53.81	56.14
Report boundary	52.76	51.08

Combined cycles represent 62% of the group's thermal production³¹, as derived from the information reported in disclosure EU2 of this report.

Information on thermal efficiency in the various countries is described Annex 3 Supplementary Information.

EU12 Transmission and distribution losses

Transmission and distribution network losses (%)	2017	2016
Transmission		
United Kingdom	2.12	1.13
United States	2.67	2.66
Distribution		
Spain	6.70	6.89
United Kingdom	6.32	6.22
United States	3.59	4.79
Brazil ³²	12.24	12.46

³⁰ Average of efficiencies weighted by the annual production of each thermal power plant.

³¹ Includes nuclear generation.

³² All Iberdrola group networks in Brazil are classified as distribution.

Loss reduction programmes are implemented each year in all regions to improve the reliability and availability of the supply network, which has made it possible to reduce, or at least maintain in most cases, the level of losses. The measures taken are identified in disclosure 302-4 Reduction of energy consumption.

Demand-side management

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

As part of its demand-side management programmes, Iberdrola's main objective is to improve energy efficiency and the smart use of active electrical grids to thus contribute to the more efficient use of energy by consumers, and thereby reduce CO₂ emissions and contribute to the fight against climate change. The types of actions taken include those relating to information, training and the supply of solutions and technologies that help them improve energy efficiency and reduce the environmental impact of their energy habits and consumption. Iberdrola engages in demand-side management in all of its geographic areas and for its various types of customers.

The most significant specific features of this type of programme in each market are as follows:

Spain and Portugal

Iberdrola sells a wide range of products and services that promote efficiency, energy saving and environmental protection:

- Energy efficiency: efficient air conditioning and lighting, capacitor banks, home automation systems and other solutions.
- Renewable energy facilities: solar photovoltaic energy.
- Comprehensive management of energy supplies.
- Electromobility.

In 2017 more than 800,000 customers benefited from products and services that improve energy efficiency.

Noteworthy is the launch in 2017 of the *Smart Irrigation* product, which permits the programming and more efficient control of residential sprinklers. This product supplements others launched in prior years, like smart thermostats, electricity meters capable of distinguishing consumption by the main appliances, etc.

In the industrial and commercial sectors, there are initiatives to diagnose and propose measures for energy savings and efficiency, like efficient lighting, efficient air conditioning, etc.

Iberdrola has also commenced the development of 2 energy efficiency programmes that were approved in Portugal's *Plan to promote efficiency in energy consumption* (PPEC 2017-2018), which is expected to close in 2018.

Other activities to promote energy efficiency were also carried out through the website, campaigns, customer invoices, etc.

United Kingdom

In the residential customer market, ScottishPower is participating in the *Energy Company Obligation (ECO) Programme*, sponsored by the British government, the purpose of which is to reduce CO₂ emissions and heating costs. It also provides energy consultancy and support services through a range of channels.

The company's projects in the area of commercial and industrial customers are focused on energy savings, cost reductions and CO₂ emissions. These include projects for managing connectivity at buildings and audits to identify low-cost and easily-applied energy savings measures.

In addition, there has been continued development of the Demand-Side Response (DSR) products to generate business opportunities through the management of one's own energy consumption based on network requirements.

United States

In Maine, residential demand-side management programmes are developed by the *Efficiency Maine Trust*, rather than by electricity companies directly. In addition, the New York Public Service Commission defines goals for the State of New York. In both cases, both the goals and the scope for the 2016-2018 period have been defined. It should also be noted that the Massachusetts energy efficiency programmes have reached 1st place in the American Council for an Energy-Efficient Economy ranking, for the sixth consecutive year, with *Home Energy Solutions* being most noteworthy for reducing total energy consumption of the homes within the programme.

Brazil

The companies of the Neoenergia group carry out various energy efficiency programmes for residential customers. For example, there is a programme aimed at low-income customers and focused on replacing incandescent lights with led lights, old refrigerators with more efficient ones, etc. Another programme is directed towards environmental improvement, and consists of the exchange of urban solid waste for financial credits on customers' electric bill, to help raise awareness regarding recycling and caring for the environment. There is also a programme for training in the efficient and safe use of energy for educators, students and the general population.

In the institutional segment, Neoenergia has carried out a range of projects relating to the improvement of energy efficiency, the replacement of inefficient lighting and the generation of solar energy.

Research and development

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

As part of a clear strategy, which is set out in the *Innovation Plan 2015-2017* and continues in the new *Innovation Plan 2018-2020*, innovation is Iberdrola's primary tool for ensuring the company's sustainability, efficiency and competitiveness, based on:

- Disruptive technologies, which seek efficiency, sustainability and environmental friendliness, and optimise the operation of facilities and processes.
- Digitisation and automation in all businesses and processes, to create value in the management of the life cycle of assets, optimisation and aggregation of the network, and the design of integral services for a digital customer.
- Innovation with start-ups, entrepreneurs and suppliers. The company is a pioneer in encouraging innovation by start-ups, entrepreneurs and suppliers in order to develop new disruptive business models, favour the exchange of knowledge and be a driving force among its partners.
- Culture of innovation and talent. Iberdrola promotes a culture of innovation through the transfer of knowledge, attraction of talent and promotion of the entrepreneurial spirit. This includes the *Accelerator* project, which wagers on the internal talent of its employees in order to ponder the keys to making the company the "utility of the future" and launching the *Iberdrola Universities Project*, which groups together all activities in the academic world.

Thanks to human and financial efforts (246 million euros in 2017) allocated to research, development and innovation (R&D&i), Iberdrola is in the vanguard of developing new products, services and business models that are transforming the energy sector.

Some of the innovative initiatives are set out below, classified by major category:

Renewable energy

2017 saw continued work on R&D&i projects specifically designed to develop solutions to reduce costs and improve energy efficiency, to integrate renewable energy and to develop new construction designs or processes: projects like *ROMEO*, coordinated by Iberdrola, for early detection of failures using big data techniques, the *ESS2Wind* project for the analysis of windfarm storage systems, and the *Andalusia* substation at the Wikinger wind farm, with an innovative design.

Clean generation technologies

In 2017, efforts in the generation area centred on operational flexibility and efficiency, respect for the environment and improved safety at facilities:

- **Flexibility, operational efficiency and safety of facilities:** The *Prexes* project has been successfully carried out, with the development of a model for predicting expansion in concrete hydraulic structures. As for safety of the facilities, there has been continued operation of the *Vidagen* project to design and develop a tool for the lifetime management of pressurised equipment.

In the nuclear segment, the *Filtronuc* and *OPD* projects are of note. The first, completed in 2017, developed a new filtered venting system to maximise performance without diminishing the safety of the system. The *OPD* project seeks to develop an open phase detection system in feeding the start-up of nuclear plants.

- **Environment:** Iberdrola has completed the *CO₂FORMARE* project, focused on cooling systems at plants to reduce their environmental impact, by means of which it has developed and validated a solution to the problem of macrofouling in these systems.

Retail - New projects and services

Innovation is essential in retail activities, in order to be able to offer customers the products and services best suited to their needs. Iberdrola continues to work on the development of new products and services, including the *Customer app*, with improvements in performance and a redesign of the app, launched in 2017 for Android and expected to launch in 2018 for the iPhone, and *Smart Irrigation*, which allows one to more efficiently programme and control residential water sprinklers.

Smart grids

The group's R&D&i activities in electric energy distribution focus on optimising the distribution grid, with special attention on the development of smart grids, with various projects in all of the countries in which it distributes electricity.

In Europe there has been completion of the *UpGrid* project, which enhances the group's ability to integrate active demand and distributed generation under low voltage. The *ASSURED* project has also commenced to develop solutions for fast charging of heavy-duty electric vehicles. Iberdrola also participates in the *INTENSIS44EU* project, which seeks a new focus in the area of smart grids and energy storage.

In the United Kingdom there is development of the *Fusion* and *LV Engine* projects to optimise low-voltage grids, *FITNESS* to continue developing sustainable solutions for the deployment of a new smart grid, and *Assess Late* to analyse future impacts on the distributed generation network.

In Brazil, there are innovation projects to develop smart grids, like *Bid Monitor*, which seeks to develop a support system for decision-making in electricity sales, and *Smart City* for the implementation of an urban benchmark model based on smart grids.

In the United States, there are initiatives included in the *Energy Smart Community* programme to efficiently connect consumers, community and the distributed energy resources market. Also noteworthy in the State of New York are the *Energy Marketplace* projects to facilitate transactions between suppliers of distributed energy and customers, and *Flexible Interconnect Capacity Solution*, which seeks to define less costly and more rapid methods of connecting large distributed energy resources.

Iberdrola has an R&D&i smart grid technology centre in Qatar, at which it continues to develop projects in this field.

Iberdrola Ventures - Perseo

Iberdrola Ventures - Perseo is Iberdrola's corporate venture capital programme with €70 million euros to promote the development of a dynamic ecosystem of start-ups and entrepreneurs in the energy sector. Since its creation in 2008, more than €50 million have already been invested in start-up companies developing technologies and new businesses in the energy sector worldwide. The main activities in 2017 included:

- Investment in the equity of the U.S. company *Innowatts*, focused on the development of artificial intelligence solutions for the energy sector.
- Social investment includes investment in the company *Ilumexico*, dedicated to electrification in rural areas of Mexico. This is Perseo's second investment in projects with high social impact, and is also included within Iberdrola's *Electricity for all* programme.

Further information on the R&D&i projects in which Iberdrola participates can be found in the [Innovation](#) section of the corporate website.

Nuclear plant decommissioning

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

The company Empresa Nacional de Residuos Radiactivos S.A. (hereinafter, “Enresa”) has been responsible for decommissioning nuclear power plants since 1984. This state-owned company is also in charge of managing radioactive waste and spent fuel.

Enresa prepares the *General Radioactive Waste Plan (Plan General de Residuos Radiactivos)* (PGRR), which is the basic document setting forth the strategies to be followed and activities to be carried out in Spain in the fields of decommissioning nuclear power plants and managing radioactive waste and spent fuel. The plan, which also includes a financial/economic study of such activities, is submitted for approval to the Ministry of Energy, Tourism and Digital Agenda (MINETAD) every 4 years or upon request therefrom.

A fund managed by Enresa has been set up to finance the activities contained in the PGRR. The fund includes provisions for the decommissioning of nuclear power plants.

As a company that owns part or all of 7 nuclear reactors, Iberdrola makes contributions to the nuclear plant decommissioning fund through a fee that is calculated by Enresa and approved by the government, in order to cover all management expenses for radioactive waste, spent fuel and the decommissioning of such plants.

In addition, Iberdrola allocates funds to cover the pre-decommissioning stage of its nuclear power plants. Pre-decommissioning means the period between the final shutdown of the plant and the moment when the ownership of the plant passes to Enresa for it to commence decommissioning. This is an estimated period of 3 years, during which all spent fuel - from both the reactor and the pool - must be removed, treated and stored in containers.

Nuclenor, S.A., a company 50%-owned by Iberdrola, created a provision for the pre-decommissioning of the Garoña nuclear plant, from which it has begun to pay expenses upon the cessation of the plant's commercial operation.

C.

Specific aspects of the Iberdrola group

Supply costs

Management approach

The cost of electricity supply and the energy transition are taking on a greater role in the political and social agenda. The principal challenge is to reconcile secure and environmentally friendly supply with the use of renewable energy at prices that are competitive and can be afforded by society as a whole.

The electricity sector, which by nature is a basic service for society, is broadly regulated in the various countries in which Iberdrola operates, with varying levels of liberalisation in each. The most significant issues being debated and regulatory developments currently occurring in these countries are described below:

European Union

- The Agency for the Cooperation of Energy Regulators and the European Commission, in studies on electricity prices published in 2016, confirmed that taxes and components associated with energy and environmental policies have grown the most, reaching half of the bill in countries like Spain. This increase in costs associated with energy and environmental policies is mainly due to the electricity sector being the only sector that financially supports the renewable energy development goal imposed by the European Union. A competitive electricity supply requires the elimination of cost components outside of the service itself, and paying for these costs through general taxes or taxes on all polluting energies.
- The strategy of the Energy Union that commenced in 2015 and that was specified in legislative proposals like the *Clean Energy for All Europeans* (2016) "package" responds to the need to comply with the 2030 environmental agenda (40% reduction in GHG emissions, 27% increase in renewables and 30% improvement in energy efficiency), monitoring the safety of supply and the competitiveness of the European industry, and allowing prices that are accessible for European citizens.

Spain

- The price of electricity supply in Spain is less than the European average. This is despite the fact that less than half the costs of supply are directly related to providing the service. The rest derive from the pursuit of energy policy goals (aid for renewable energy and cogeneration) and social goals (subsidies for electricity in non-mainland territories, recovery of tariff deficits from previous years, etc.).
- Iberdrola has established a *Vulnerable Customer Protection Procedure* in order to ensure energy supply to economically disadvantaged citizens. These are supplies under subsidised rates (*bono social*) due to being pensioners or to the unemployment of all members of a family unit. Since 2015 Iberdrola has also been encouraging the signing of agreements with various public institutions and NGOs, consistent with its goal of protecting customers who cannot pay their gas and electricity bills. 100% of the domestic customers of Iberdrola reside in a locality protected by an agreement.

United Kingdom

- The debate on prices has focused on higher standard variable tariffs (SVTs, which only apply to customers who have not made an explicit contract decision): reducing the number of people with SVTs and the disadvantages thereof. Iberdrola has the lowest proportion of SVTs amongst the large suppliers.
- Although the government continues to focus on minimising the costs that it controls, it has maintained capacity auctions, the minimum price of CO₂, and has announced the next auction of Contracts for Differences.

United States

- 2017 was marked by the approval of the Tax Reform: decrease in corporate tax, elimination of the Alternative Minimum Tax, etc. This reform does not include a chapter dedicated to energy, for which reason the tax credits for renewable energy (PTC/ITC) continue in force as established in 2015.
- The Department of Energy (DOE) proposes a revocation of the *Clean Power Plan* without defining its plans for future rules governing emissions.
- In 2017 a DOE report was published on the reliability of the system, the principal conclusion of which is that the reduction in installed coal and nuclear capacity is to a large extent the result of low natural gas prices and not competition from renewable technologies.
- Tariff revisions reflect pressure by regulators to limit returns on capital, while maintaining the investments required to improve the network infrastructure.
- The development of smart grids, the rapid replenishment of supplies in the face of extreme weather conditions, new EPA regulations, and the integration of new energy sources require major investments, which sometimes conflicts with the goal of reducing final tariffs.

Mexico

- Energy reforms were launched in 2014, with one of the key goals being to improve competition and lower electricity prices for end users.
- With the opening of electric power generation to private investment, renewable generation objectives and other measures, such as auctions for the purchase of clean energy certificates, the reform is encouraging competition in order to diversify the energy matrix and reduce the costs of generation
- In November 2017 the CRE published a new methodology for calculating the regulated rate for basic supply, which is now additive, reflecting the costs of the system. It will be implemented progressively during the first months of 2018, except for domestic consumption, which remains with the old methodology indefinitely.

Brazil

- 2017 was marked by a position of energy overcontracting by the distributors, caused by the reduction in consumption deriving from the economic crisis, consumer migration to the free market without distributors being able to reduce the contracts, and assignment of contracts for a higher-than-necessary amount. The regulatory bodies and government have approved a set of measures resolving this distributor risk.

As an electricity operator in these countries, Iberdrola maintains a spirit of cooperation with regulators of the electricity supply systems to help to define their growth, and will operate within the established regulations, supporting frameworks that expand free-market activities and market transparency and

encourage required investments and efficient operations, through tariff schemes that send efficient signals to consumers and do not penalise them with costs unrelated to the supply of electricity.

Green financing

Management approach

Iberdrola is the first Spanish company in the world to issue *green* bonds, in order to align with its vision and values, optimise the cost of its debt and diversify its sources of financing.

The differentiating feature of such bonds is the commitment of the issuer to use the proceeds to finance or refinance socially responsible projects like renewable energy, improving efficiencies in electricity transmission grids and researching more efficient energy sources. The issuer also commits to regularly report the return on its investments in these projects in terms of sustainability.

The company issued its first *green* bond in 2014, and since then has intensified its financing in this SRI (Socially Responsible Investing) focused market, with many more issues, in various areas: both public and private, senior and subordinate (November 2017 hybrid bond), by the corporation as well as its subsidiaries (Avangrid *green* bond in November 2017).

The validation of the projects eligible for each issue can be found in the corresponding *Second Party Opinion* prepared by VigeoEiris and available on the corporate website. It is important to note that the issue of this type of financial asset requires not only compliance with the *Green Bond Principles* at the operational level, but also the existence of a strong sustainability profile of the issuing group.

The table below summarises the environmental benefits in 2017 related to investments financed with the *green* bonds issued by Iberdrola.

Bond	Area of investment	Installed capacity attributable to the bond (MW)	2017 output attributable to the bond (GWh)	CO ₂ avoided due to the bond (Tm)
XS1057055060	Renewables*	474	944	245,471
XS1398476793	Renewables	736	1,432	401,507
XS1490726590	Renewables	403	792	278,812
XS1527758145	Renewables	539	1,070	276,091
XS1564443759	Renewables	111	221	56,926
XS1575444622	Renewables	340	220	56,712
XS1682538183	Renewables	279	301	106,082
XS1721244371	Renewables	648	916	322,544

* Among others

For more details on these issues and their sustainability returns, see the *Report on Green Bond Returns* available in Annex 2 of this report.

Fiscal responsibility

Management approach

The fiscally responsible behaviour of all companies of the Iberdrola group forms part of the [General Corporate Responsibility Policy](#) which contemplates basic principles of conduct that must be respected. The taxes that the group pays in the countries and territories in which it operates are the main contribution of the companies of the group to sustaining public expenditures, and thus one of their contributions to society.

The values that guide the corporate policies, internal rules and other internal codes and procedures include ethical principles, good corporate governance and institutional transparency and loyalty.

In 2010 the Board of Directors approved a [Corporate Tax Policy](#), which was last updated on 21 February 2017. This Policy contains the tax strategy of Iberdrola, S.A. and its commitment to the application of good tax practices, and is applicable to all companies of the group in all of the countries in which it operates.

The *Tax Policy* defines a number of principles, including:

- *"The prevention and reduction of significant tax risks, ensuring that taxes bear an appropriate relationship to the structure and location of activities, human and material resources, and the group's business risks".*
- *"The strengthening of the relationship with tax authorities based on respect for the law, fidelity, reliability, professionalism, cooperation, reciprocity, and good faith, without prejudice to the legitimate disputes that, observing the aforementioned principles and in the defence of the corporate interest, may arise with such authorities concerning the interpretation of applicable legal provisions".*
- *"Envisaging the taxes that group companies pay in the countries and territories in which they operate as the principal contribution to sustaining public expenditures, and therefore one of their contributions to society".*

And by application of these principles, the group assumes the following good tax practices, among others:

- *"Not to use artificial structures unrelated to the Company's business for the sole purpose of reducing its tax burden nor, in particular, enter into transactions with related entities solely to erode the tax basis or to transfer profits to low-tax territories".*
- *"Avoid opaque structures for tax purposes, which are understood as structures calculated to prevent knowledge by the competent tax authorities of the party ultimately responsible for the activities or of the ultimate owner of the assets or rights involved".*
- *"Not to create or acquire companies resident in tax havens, with the sole exception of those cases in which it is forced to do so because it is an indirect acquisition in which the company that is resident in a tax haven is part of a group of companies that are being acquired".*

- *"Follow the recommendations of the good tax practices codes implemented in the countries in which the companies of the Group do business, taking into account the Group's specific needs and circumstances".*

Iberdrola, S.A. has thus adhered to the *Code of Good Tax Practices* approved on 20 July 2010 by the full Forum of Large Businesses (*Foro de Grandes Empresas*), established on 10 July 2009 at the behest of the National Tax Administration Agency (*Agencia Estatal de Administración Tributaria*). Iberdrola's commitment to compliance with, further development and implementation of the Code will extend to any other good tax practices that stem from the recommendations of the Code in effect at any time, even if not expressly set forth in the *Corporate Tax Policy*.

The Iberdrola group does not include within its controlled affiliates and assets any that are resident in tax havens, pursuant to the laws in this regard (Royal Decree 1080/1991 of 5 July and respective updates thereof). With the integration of Neoenergia into the Iberdrola group at the end of August 2017, it indirectly holds an interest in a company called *Garter* (an inactive company resident in the British Virgin Islands) that is expected to be liquidated in the near future.

Furthermore, although the State of Delaware is not considered a tax haven under the above legal provisions, due to the interests involved, it is appropriate to state that various companies within the Iberdrola group were incorporated in this state. In fact, in the United States, it is customary practice to incorporate companies in the State of Delaware, due to the development of its commercial law and strong jurisprudence. This combination provides strong legal security in the commercial arena.

However, the tax domicile of the companies (which determines the tax system applicable thereto and where they should register for such purpose and pay taxes) is determined by the place where the administration and management of the businesses of the companies is concentrated, regardless of the place of incorporation. Thus, the companies of the Iberdrola group incorporated in Delaware as well as in any other state of the United States have their tax domicile and pay taxes in the states in which the centres of activity of the consolidated tax group of which they form a part are located, which does not include Delaware. In summary, the companies of the Iberdrola group are incorporated according to objective business standards and not to tax engineering structures.

Iberdrola is fully aligned with the principles and actions proposed by the OECD's "BEPS Plan". Specifically, as regards Transfer Pricing, state that the group assesses related-party transactions at arms'-length prices in line with the OECD Guidelines in this area. Furthermore, all existing related-party transactions of the group are duly documented on the terms provided by the legal provisions of the various countries. The group is also committed to the preparation and presentation in due time and form of the Country-by-Country Report upon the terms provided by the law of its parent company, Spain. In the Country-by-Country Report 2016, submitted in 2017, information regarding the activities of the group during 2016 was reported, as was information regarding all taxes paid and collected by the companies of the group in the various tax jurisdictions in which it is present.

In 2017 Iberdrola was ranked as the leading company on the tax transparency ranking of Ibex 35 companies, prepared by Fundación Compromiso y Transparencia based on 2016 information, in recognition of its good tax practices and its transparency.

The taxes paid are presented in the following table:

Tax contribution (€ millions)	2017	2016 ³³
Iberdrola consolidated		
Company contributions	2,723	2,768
Contributions due to third-party payments	4,388	4,360
Total	7,111	7,128

99% of taxes paid (total contribution) by the group occur in the five most relevant countries. A detailed breakdown by geographic area can be found in Annex 3 Supplementary Information.

“Cybersecurity”

Management approach

In order to ensure appropriate protection of the group's physical and IT assets, in April 2015 Iberdrola's Board of Directors approved the *Cybersecurity Risk Policy*, which establishes a global framework for the control and management of the cybersecurity risks applicable to all the companies of the group. In particular, it refers to the risks arising from threats to and vulnerabilities in information, information technology and communications systems, facilities and any other asset that forms part of the group's cyber-infrastructure. It also establishes the guidelines for a cybersecurity management model common to the entire group, based on the establishment of a Cybersecurity Committee and on the development of global rules and standards to be applied within all the businesses and corporate functions.

The group's Cybersecurity Committee, on which all businesses and corporate functions are represented, promotes and supervises the deployment of this policy and the cybersecurity strategic plan throughout the organisation, based on risk analysis and management, the application of technical and organisational measures for appropriate protection and resilience of assets based on the critical nature thereof, training and awareness-raising of the entire workforce, cybersecurity in the supply chain and the management of threats and incidents, including external monitoring work to defend the brand and the company's customers against potential cybernetic risks and frauds through social engineering.

Privacy of the personal information of Stakeholders

Management approach

Iberdrola has a *Personal Data Protection Policy*, approved by the company's Board of Directors in 2015 and last amended on 20 February 2018 to conform to the new European Data Protection Regulations, to ensure the privacy of the personal information of the group's Stakeholders. Its purpose is to guarantee the right to the protection of data of all individuals dealing with companies belonging to the group, ensuring respect for the right to dignity and privacy in processing of the personal data, and particularly the establishment of the common principles and guidelines to govern the group regarding the protection of personal data, guaranteeing compliance with applicable law on this topic in all countries in which the group is present.

To further develop this policy, on 20 June 2017 the Global Cybersecurity and Data Protection Committee approved a *Global Personal Data Protection Framework* of the Iberdrola group, which establishes the general standards and the global governance model on personal data protection and defines responsibilities in this area. The Legal Affairs Division and Corporate Security Division are the bodies of the

³³ For better comparability of the 2017 and 2016 information, 100% of the taxes paid by Neoenergia in Brazil during 2016 are included.

company responsible for applying these principles, with the technological support of the System Division for the processing of personal data by the group, as well as the areas using them.

The Iberdrola group has also appointed a Global Data Protection Officer, who will rely on a network of Data Protection Officers in each of the countries in which the group operates to ensure proper supervision of compliance with applicable law at the local and transnational level.

B. ENVIRONMENTAL DIMENSION

Contents of the chapter

The aspects dealt with in this chapter are the following:

A. Topics of the GRI Standards

- GRI 301 Materials
 - o Management approach and disclosures 301-1, 301-2 and 301-3
 - o Additional information required by the GRI *Sector Supplement*
- GRI 302 Energy
 - o Management approach and disclosures 302-1, 302-2, 302-3, 302-4 and 302-5
 - o Additional information required by the GRI *Sector Supplement*
- GRI 303 Water
 - o Management approach and disclosures 303-1, 303-2 and 303-3
 - o Additional information required by the GRI *Sector Supplement*
- GRI 304 Biodiversity
 - o Management approach and disclosures 304-1, 304-2, 304-3 and 304-4
 - o Additional information required by the GRI *Sector Supplement* and indicator EU13
- GRI 305 Emissions
 - o Management approach and disclosures 305-1, 305-2, 305-3, 305-4, 305-5, 305-6 and 305-7
 - o Additional information required by the GRI *Sector Supplement*
- GRI 306 Effluents and waste
 - o Management approach and disclosures 306-1, 306-2, 306-3, 306-4 and 306-5
 - o Additional information required by the GRI *Sector Supplement*
- GRI 307 Environmental compliance
 - o Management approach and disclosures 307-1
- GRI 308 Supplier environmental assessment
 - o Management approach and disclosures 308-1 and 308-2

Scope of information

The information reported in this chapter corresponds to the “report boundary”, as defined in section 102-45 of this report.

A.

Topics of the GRI Standards

Specific management approach to the environmental dimension

Protection of the environment is one of the concepts that defines Iberdrola as a company, with leadership in the development of clean energy and respect for the environment being significant aspects of its business model, a competitive element that distinguishes it in the industry as one of the leading companies worldwide.

Environmental management system

Iberdrola supports this vision in a benchmark environmental management system for all organisations of the group which is common, homogeneous and integrated. This system allows for alignment of the environmental dimension within the group's sustainability model, integrating the Sustainable Development Goals and articulating the mechanisms to measure and evaluate the group's environmental performance from the Life Cycle perspective, including in the management thereof the concept of circular economy and return on natural capital.

The system facilitates the development of an on-going, global and homogeneous diagnostic regarding the environmental behaviour of the company in each of its management levels.

The elements making up this system are:

The Environmental Management System is strengthened by a series of complementary activities, including:

- Environmental training, with more than 24,000 hours dedicated in 2017.
- Environmental tracking of suppliers.
- Communication with Stakeholders.

Organisation of environmental management duties

In order to comply with the approved policies, the company has an organisation that approaches environmental management in a decentralised manner. Thus, applying the principle of “subsidiarity”, all matters relating to the environment must be dealt with and resolved in each region by the affected business, although they must all be included in Iberdrola’s environmental management system.

The environmental function is thus distributed among all organisational and hierarchical levels of the group, from the Chairman’s Office down to each person with local power over his or her surroundings.

Based on this model, Iberdrola’s environmental organisation is structured in the following manner:

- **The Board of Directors and senior management of Iberdrola:** sets and defines the policies, strategy, environmental organisation and global objectives of the company, and provides the resources necessary to perform the environmental functions of the company.
- **The Innovation, Sustainability and Quality Division:** has the following duties relating to the environment:
 - o Define, implement and verify the Environmental Management System.
 - o Propose and ensure compliance with the environmental policies.
 - o Set the environmental guidelines.
 - o Coordinate and align all environmental activity of the company.
- **Environment in the businesses or areas:** those responsible for the environmental management of the business or area, whose principal duties are to:
 - o Prepare and update the documentation of the environmental management system of the business or area.
 - o Identify and verify compliance with legal requirements and other environmental requirements.
 - o Identify the environmental aspects and impacts that affect them.
 - o Determine the environmental risks of the business and actions to handle them.
- **Environment at facilities:** Made up of the persons with local environmental powers at the facilities who report to the Environmental Area of their business and mainly perform environmental duties at the facilities in accordance with the requirements of the Global Environmental Management System.

The corporate committee on the environment, made up of the environmental heads of the regions or businesses and the Innovation, Sustainability and Quality Division, is in charge of coordinating the group’s environmental management. The Committee meets on an ordinary basis at least once per year to present the environmental results from the prior year and future projects.

Corporate policies

Iberdrola has four specific [corporate policies](#) for environmental management, all approved by the Board of Directors:

- [Sustainability Policy](#)
- [Environmental Policy](#)
- [Policy against Climate Change](#)
- [Biodiversity Policy](#)

Corporate Environmental Footprint (CEF)

Iberdrola's environmental management includes the CEF methodology, which evaluates the effects of the company's activities on the environment from the life cycle viewpoint (ISO/TS 14072:2014 standard). The objectives of the CEF are:

- To quantify, homogenise and unify the group's environmental performance.
- To determine the effect of Iberdrola's activities in the different environmental impact categories.
- To help monitor the organisation's environmental performance and allow for tracking of the objectives of the businesses and of environmental improvements.
- To identify and assess the environmental aspects having the greatest significance for Iberdrola's activities.

For more information, see [Iberdrola's Environmental Footprint](#).

Certifications

The group's Environmental Management Model groups together all of the partial certifications of each of the businesses and processes, based on ISO 14001. 80% of the group's energy production took place under certified environmental management systems after passing follow-up or renewal audits in 2017, which production is distributed as shown in the following table:

Energy production of the group under certified systems (%)	2017	2016
Spain	97.4	98.8
United Kingdom	93.2	94.7
United States	13.9	15.2
Brazil	35.5	35.7
Mexico	98.2	96.7
Other countries	0.0	0.0
Total	80.0	82.4

A verification certificate has also been obtained yet another year for:

- The greenhouse gas emissions inventory for the entire Iberdrola group pursuant to the UNE ISO 14064-1:2006 standard.
- The *Corporate Environmental Footprint* of the Iberdrola group under the ISO TS 14072 standard.

More information is available in the [Certifications and Verifications](#) section.

Environmental Grievance Mechanisms

Iberdrola makes grievance mechanisms and tools and the management processes associated therewith available to its Stakeholders. This is fully described in the "Grievance mechanisms for impact on society" section of the "Specific management approach to the Social Dimension" of this report.

Iberdrola has an email mailbox medioambiente@iberdrola.es, which serves as a channel of communication with its Stakeholders, and which can be accessed in the [contact](#) section, offering the ability to ask questions, provide suggestions, place concerns or make complaints. The mailbox is included in the Environmental Management System of the company, and is certified under the ISO 14001 standard. 1,865

messages were received through this mailbox in 2017, of which only 2 were an environmental grievance, and which were managed with those responsible and closed during 2017.

In addition to the environment mailbox, and by way of supplement, Iberdrola can also receive messages relating to the environment through various channels that it maintains in [social media](#).

Expenses and investments

Iberdrola generally considers all expenses or investments regarding projects that have a clear environmental impact, whether direct or indirect, to be environmental expenses or investments, as classified below:

- Treatment of emissions, which includes expenses or investments relating to emissions treatment equipment or systems.
- Treatment of waste, which includes investments and expenses relating to the management and treatment of waste, both hazardous and non-hazardous.
- Reduction of environmental impact through the removal of pollution or pollutants from the environment, soil, groundwater, sediment or surface water.
- Environmental prevention, which considers investments in new renewable energy facilities.
- Environmental management, which encompasses investments and expenses relating to the management of the environment that are not included in the above categories.

All of this is aimed at emphasising environmental activities and initiatives, which are undertaken in order to move towards a more sustainable energy model.

The expenses and investments of an environmental nature made by Iberdrola during 2017 to preserve the environment of the area in which it operates are set forth in the following tables:

Environmental Investments and Expenses (€ millions)	2017	2016
Environmental investments	2,239,917	2,262,237
Environmental expenses	513,233	527,140

Social awareness-raising on climate change

The fight against climate change, and all that it entails (reduction of greenhouse gas emissions, transition to decarbonised energy model, efficient use of energy, change in consumption habits, etc.) is the work of all of us. Achieving it will require greater awareness and an increased disposition towards action by all of society's players. As part of this commitment, in 2016 Iberdrola included a *Plan to Raise Social Awareness on Climate Change* as an additional linchpin of its action for the climate, which it has since been carrying out with various activities directed towards different public audiences.

This plan consists of four main focus points for action to be implemented globally:

- 1) internal action directed towards employees,
- 2) external communication through the development of specific products, climate awareness-raising events and dissemination activities,
- 3) actions directed towards youth due to their particular importance as present and future consumers, and

- 4) establishment of alliances with the public and private sector as an accelerator and enhancer of action.

The most notable activities performed during 2017 include:

- The launch of a global online course on climate change, its causes and solutions, which in 2017 was completed by more than 8,837 employees and which will continue in 2018.
- The *Moving for Climate NOW* awareness-raising initiative, consisting of a cycling route co-organised with the Red Española del Pacto Mundial (Spanish Global Compact Network). This groups private companies, governments, multilateral institutions, universities and NGOs under a single initiative to bring to the Climate Conferences a call to urgency and climate action.
- On-site school workshops on climate change by Iberdrola volunteers, more than 300 of which were presented during the 16-17 school year, reaching approximately 9,000 students in Spain. A second edition was launched for the 17-18 school year, expanding the scope to Mexico and Brazil.
- Sponsorship of the tour of a children's theatre play on climate change in 6 Spanish cities which was seen by more than 20,000 students between 2016 and 2017.
- Technical advice in the documentary "Vigilantes del Planeta" (Guardians of the Planet) broadcast on various Spanish television channels.

GRI 301 Materials

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Electricity generation is one of the main activities carried out within the group. Iberdrola has continued to wager for years on the most efficient technologies per unit of production, with the lowest environmental impact (eco-efficiency), via:

- Proposed closure of all coal units, pursuing a business strategy of replacing conventional technologies with others offering production with lower emissions.
- Selection of products having a reduced environmental impact.
- Sustainable management and use of chemical products, oils, lubricants and coolants, always respecting the natural environmental and taking the necessary measures to reduce the risks of affecting it.

There is a residual presence of polychlorinated biphenyls (PCBs³⁴) at Iberdrola, which continues with its policy of eliminating equipment containing PCBs from its facilities.

301-1 Materials used by weight or volume

Use of materials

³⁴ PCBs: Dielectric used in transformers and capacitor banks prior to 1999.

The consumption of fuel from non-renewable sources over the last two years and the distribution thereof by country is shown below:

Use of raw materials	2017	2016
Coal (t)	1,205,609	1,746,457
Fuel (t)	48,376	45,117
Natural gas (Nm ³)	12,293,620,800	11,832,458,331
Gas-oil (m ³)	15,272	29,520
Uranium (kg) ³⁵	65,407	56,915
Waste derived fuel (WDF) (t)	2,666	1,800

The following table shows the distribution of fuel consumption (%) for 2017:

Distribution of fuel consumption (%)	Coal	Fuel-oil	Natural Gas	Gas-oil	Uranium	WDF
Spain	100.0	100.0	11.9	31.3	100.0	100.0
United Kingdom	0.0	0.0	11.7	0.0	0.0	0.0
United States	0.0	0.0	4.0	0.0	0.0	0.0
Brazil	0.0	0.0	6.0	0.0	0.0	0.0
Mexico	0.0	0.0	66.4	68.7	0.0	0.0
Other countries	0.0	0.0	0.0	0.0	0.0	0.0

The following table shows the net generation (renewable and non-renewable) for 2017 by country and by technology, with 38.9% of generation from renewable sources.

Net generation by technology and country (GWh)	Spain	United Kingdom	United States	Brazil	Mexico	Other countries
Renewables	19,587	4,880	15,738	8,195	963	1,382
Nuclear	23,249	0	0	0	0	0
Combined cycle	3,812	7,260	12	3,957	39,103	0
Cogeneration	2,607	0	2,354	91	1,800	0
Coal	2,642	0	0	0	0	0

In 2017, 94% of production was achieved using local sources of energy³⁶, as shown in the following table:

Production with local sources of energy	(%)
Spain	83%
United Kingdom	100%
United States	100%
Brazil	100%
Mexico	100%
Other countries	100%

³⁵ The reporting unit is changed compared to the 2016 report, from equivalent tonnes of petroleum to kg of uranium.

³⁶ All renewable and non-renewable sources available in the country are deemed local sources of energy. Nuclear fuel acquired from the Spanish company Enusa is considered local.

Chemical products are also consumed (to a much lesser extent) for water purification, filtering of gases, etc.; oil for lubrication, maintenance of equipment, and office paper. As to this last consumable, it should be noted that implementation of electronic billing continued during 2017, reaching 2,360,886 users, a savings of 482 t of paper compared to the prior year.

Elimination of polychlorinated biphenyls (PCBs)

There are residual PCBs at the group's facilities in Spain, the United States and Brazil. However, no pyralene transformers with more than 500 ppm of PCBs remain.

Iberdrola maintains a service for the analysis, removal and elimination of equipment containing PCBs, including the performance of a free initial diagnosis with no commitment for third parties.

174 t of oil with pyralene in Spain, 6 t in the United States and 134 t in Brazil were managed during 2017. 359 t of this substance are pending elimination in Brazil in the coming years.

301-2 Percentage of materials used that are recycled input materials

There is no substitute in the market for the principal materials used by Iberdrola, for which reason management focuses on the efficient use of energy, water and chemical products, through the best available technologies, optimising the current systems and replacing fossil fuel combustion technologies with other renewable ones.

Waste derived fuel (WDF) is included as recovered material, and 0.01% of the fuel consumed during the year is of this type.

301-3 Percentage of products sold and their packaging materials that are reclaimed by category.

This indicator is not applicable to the Iberdrola group, because electricity does not directly generate any waste upon being used.

GRI 302 Energy

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

The Iberdrola group ensures optimisation in the use of energy throughout its entire energy chain (production, transmission, distribution, supply and end use), contemplating energy efficiency from a three-fold perspective:

- As an electricity generator and distributor, it seeks to improve efficiency by introducing the most advanced technologies and equipment in the generation, transportation and distribution of energy.
- As an energy consumer, Iberdrola promotes the on-going improvement of energy efficiency across all its activities (offices and building, vehicles, water, mobility, employee awareness, etc.).

- As an electricity supplier, it wishes to contribute to a more efficient use of energy by consumers, through information, promotion and supply of solutions and technologies that help them improve their energy efficiency and reduce the environmental impact of their energy habits and consumption.

302-1 Energy consumption within the organisation

Internal energy consumption includes the consumption of energy at all of the Iberdrola group's facilities, buildings and offices.

The fuel consumption figure in terms of energy (GJ) is obtained from direct measurement of the fuel used at each facility based on its calorific value³⁷ (NCV):

$$\text{Consumption(GJ)} = \text{Fuel consumption (kg)} \times \text{PCI} \left(\frac{\text{MJ}}{\text{kg}} \right) / 1000$$

The value of the energy purchased or sold is obtained by direct measurement at the facilities, buildings and offices.

$$\text{Consumption(GJ)} = \sum \text{building/facility consumption (MWh)} \times 3.6 \text{ GJ/MWh}$$

The following table shows the evolution of Iberdrola's internal energy consumption in recent years:

Energy consumption within the organisation (GJ) ³⁸	2017	2016
Fuel consumption	760,201,810	764,386,296
Natural Gas	462,114,731	442,096,346
Uranium	262,902,924	274,800,068
Coal	33,020,919	45,338,800
Fuel-oil	1,899,317	1,919,103
Gas-oil	175,699	173,154
WDF	88,220	58,826
Energy purchased	11,664,660	13,951,277
Standby and pumping	10,886,544	13,096,768
Buildings	778,116	736,428
Energy sold (non-renewable)	312,791,322	309,683,361
Steam sold³⁹	18,527,684	26,484,009
Total	440,547,464	442,170,204

The following table shows the evolution of Iberdrola's internal energy consumption in recent years by region:

Energy consumption within the organisation (GJ)	2017	2016
Spain	228,355,590	241,428,586
United Kingdom	30,155,278	47,145,185
United States	10,547,765	11,251,751

³⁷ Net calorific value (NCV) is calculated at each centre based on the fuel used.

³⁸ Energy consumption within the organisation (GJ) = Fuel consumption + Energy purchased - Energy sold (non-renewable) - Steam sold.

³⁹ The reduction in the value of steam sold during 2017 is due to the sale of the cogeneration plants in Brazil.

Brazil	11,861,813	6,788,139
Mexico	159,609,431	135,538,671
Other countries	17,587	17,873
Total	440,547,464	442,170,204

The bulk of Iberdrola's energy consumption is the consumption of fuel for the generation of electricity, and the trend in recent years is shown in the following table:

Fuel consumption (GJ)	2017	2016
Generating plants ⁴⁰	691,154,673	693,437,227
Cogeneration	68,440,622	69,893,794
Non-generating plants ⁴¹	606,515	1,055,275
Total	760,201,810	764,386,296

302-2 Energy consumption outside of the organisation

The most significant consumption of energy outside of the organisation is consumption associated with the transport of fuel by motorway, with trips to/from work by group employees, and with business travel (planes and motorways). All of this information forms part of scope 3 of the calculation of greenhouse gas emissions. Energy consumption outside of the organisation is estimated based on the distances travelled by each means of transport and is transformed by means of conversion factors from official sources⁴². The energy consumption for these items is around 880,909 GJ.

302-3 Energy intensity

Fossil fuel consumption (tep/GWh)

The following table shows fuel consumption at the thermal generation plants over the net production of such plants.

Fossil fuel consumption (tep/GWh) ⁴³	2017	2016
Total	186	189

Internal energy consumption (GJ/MWh)

The following table shows total internal energy consumption (indicated in section 302-1) within the total net production of the group.

Intensity of internal energy consumption (GJ/MWh)	2017	2016
Total	3.20	3.10

302-4 Reduction of energy consumption

⁴⁰ Combined cycle, conventional thermal and nuclear plants.

⁴¹ "Non-generating" facilities are Daldowie (thermal drying) and Hatfield (gas storage) in the United Kingdom.

⁴² Defra: Department for Environment, Food and Rural Affairs (United Kingdom).

⁴³ Conversion factor used: 1GJ= 0.023888889 Tep.

The consumption of fossil fuels for the generation of energy was reduced by 205,934,963 GJ/year in 2017 through the generation of renewable energy and the supply of steam to industrial customers.

The reduction in energy consumption is equal to the savings of primary (non-renewable) energy generated by the production of renewable energy and cogeneration. This value of the energy saved is obtained by direct measurement at the output terminals of the facilities.

$$Consumption(GJ) = \sum generation (MWh) \times 3.6 GJ/MWh$$

Two fundamental blocks for reducing energy consumption are considered; on the one hand the energy savings from renewable energy and steam generation, and on the other those associated with efficiency, as shown in the following tables:

Areas	Energy type	Energy saved (GJ)	
		2017 ⁴⁴	2016
Renewables	Primary energy savings through the production of renewable energy	183,309,359	205,089,621
Cogeneration	Savings through the supply of heat energy (steam) within the group	15,776,528	26,484,009
Total		199,085,887	231,573,630

Areas	Item	Energy saved (GJ)	
		2017	2016
Network efficiency	Savings from network efficiency in Spain, the United Kingdom and Brazil	4,273,557	2,337,062
Efficiency in generation	Savings efficiency improvements at plants in Spain, the United Kingdom and Brazil	44,744 ⁴⁵	936
Total		4,318,301	2,337,998

Efficiency in thermal generation

As in prior years the company continues to take action to improve the efficiency of the plants, avoiding leaks, decreasing emissions, reducing internal consumption, optimising start-up time and procedure and installing recirculation systems, among other things. The savings from efficiency in generation is obtained by measuring the reduction in consumption due to the improvements made.

Efficiency of the electric grid

Energy savings from network efficiency derives from actions the company takes to control or reduce losses, including:

- Updates and modifications to reduce the length of lines through construction of new substations and increases in the power of existing substations, increases in voltage and improvement of power factor, implementation of remote management, and maintenance work.
- Improvements in contract management and supply point inspections: replacement of electromechanical meters with electronic meters, inspection of facilities and regulation of customers and clandestine connections.
- Increase in top-level reviews and strengthening of field activities with supply point inspections to

⁴⁴ The reduction is due decreased renewable generation and the sale of the cogeneration plants in Brazil.

⁴⁵ The increase in savings over 2016 is due to the placement into service of more efficient equipment at the generating plants in 2017.

reduce administrative and non-technical losses.

Efficiency at buildings

Iberdrola continues to implement energy efficiency measures at the buildings and offices of the company all over the world. Energy audits of the buildings allow it to determine the actions to take at the buildings: optimising acclimatisation (heating and air conditioning) performance, improving thermal insulation, efficiency in the lighting of buildings, and automation of the facilities associated therewith.

The savings by application of these measures compared to the prior year was 76,000 GJ.

302-5 Reductions in energy requirements of products and services

Iberdrola fosters efficiency, gradually reducing the environmental impact of activities, facilities, products and services. It also offers advice to its customers, encouraging and researching eco-efficient solutions.

In addition to electricity and gas, Iberdrola sells new products and services to encourage energy and financial savings by its customers, efficiency, and care for the environment.

Energy savings of green products and services (GJ)	2017	2016
Photovoltaic solar energy	1,899	605
Energy audits and plans	100,375	199,980
Gas maintenance service	790,441	809,507
Other savings and efficiency activities	948,554	87,459
Green energy supplied In Spain, the United States and Brazil	49,874,302	51,764,036
Total	51,715,571	52,861,587

The green products and services highlighted in this table are described below:

- Photovoltaic solar energy: *Iberdrola Smart Solar* product focused on improving management of energy consumption through the use of solar technology. The figure is obtained by multiplying the installed capacity during the year (kWp) by 1250 kWh/kWp (factor applied by the Spanish Institute for the Diversification and Saving of Energy, IDAE).
- Audits and energy plans: The potential energy saving from audits is due to Iberdrola Retail. In Spain, there have been sales campaigns promoting energy efficiency and collaboration agreements with consumer and business associations as well as with government administrations to promote energy efficiency. In Brazil, the use of solar thermal equipment is encouraged in energy efficiency projects for low-income customers.
- Gas maintenance service: The contract for this service offered by Iberdrola in Spain allows customers to cut energy consumption by annual cleaning and adjustment of gas boilers. The figure is obtained from the average savings according to a study of efficiency by the independent entity multiplied by the average consumption of gas according to the CNMC⁴⁶ and the average portfolio of customers of Iberdrola España's Gas Maintenance Service in 2017.
- Other savings, energy efficiency and environmental protection actions in the retail area are:

⁴⁶ CNMC: Comisión Nacional de los Mercados y la Competencia de España (National Markets and Competition Commission of Spain).

- Sale of products and services that promote energy saving and efficiency, as well as comprehensive energy management at buildings and facilities and other energy saving solutions.
- Electromobility: Iberdrola Customers in Spain facilitates the development of electromobility, offering recharging products and services (*Green Charge*), participating in R&D&i projects (*REMOURBAN* and *AZKARGA*) and the *CIRVE* project that permits Electromobility, and permits the Spain connection with France and Portugal.
- Value of green energy supplied In Spain, the United States and Brazil: This figure comes from the sum of the GE (green energy) and/or GO (guarantee of origin) invoices.

More information about these and other initiatives is available at the websites of [Spain](#), [Brazil](#), [United Kingdom](#), United States (through [NYSEG](#), [RG&E](#) and [CMP](#)) and [Portugal](#).

GRI 303 Water

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Water is a basic and irreplaceable natural resource in many of Iberdrola's activities. The company's awareness of this dependency and of the risks arising from water shortages has led it to set itself the objective of ensuring an increasingly rational and sustainable use of this resource.

The main actions taken by the group for a more sustainable use of water are:

- Limiting the volume of withdrawal and consumption of inland water in all technologies.
- Establishing and controlling limits on ecological flows at the hydroelectric generation reservoirs.
- Continually improving processes at facilities to reduce consumption and impact.
- Avoiding withdrawal of water in water-stressed areas.
- Reusing and recycling water at facilities.
- Conducting awareness-raising campaigns to achieve a more efficient and responsible use of sanitary water by employees at offices.

A return of 78% of the water extracted from the receptor environment was achieved in 2017.

303-1 Total water withdrawal by source

The following table breaks down the group's total water withdrawal by source:

Source of gross water withdrawal (hm ³)	2017	2016
Surface water (sea, rivers, lakes, reservoirs, wetlands)	1,962	1,839
Groundwater	2	1

Rainwater directly withdrawn and stored	0	0
Purified wastewater	15	13
Municipal water supply or supply from other water companies	5	6
Total	1,984	1,859

Total water withdrawal is the sum of the various sources, and is obtained by direct measurement (flowmeters) or by estimating the performance of the pumps.

Of the total volume of water withdrawn, 1,984 hm³ corresponds to use at generation facilities, while 0.38 hm³ corresponds to use at offices.

The group's use of water is summarised in the following table:

Water use ⁴⁷	2017	2016
Total water use (hm ³)	80	82
Water use/overall production (m ³ /GWh)	597	573
Water use/overall sales (m ³ /\$k)	2.15	2.35
Water use/overall sales (m ³ /€k)	2.56	2.79

The following shows the total intake and discharge of water at the thermal generation facilities (coal, combined cycle, nuclear and cogeneration) in 2017.

Water use (hm ³)	Total thermal generation ⁴⁸ 2017
Withdrawal	
Withdrawal for standby process and services	14
Withdrawal for cooling	1,970
Discharge	
Evaporation of water used for cooling	74
Discharge into receptor environment	1,902

The following table shows the different sources of withdrawal for cooling:

Source of withdrawal of cooling water	Gross water withdrawal (hm ³) ⁴⁹ 2017
Sea and salt water	1,298
Rivers and groundwater	265
Lakes and reservoirs	397
Purification of wastewater	10
Total	1,970

Water cycle in hydroelectric generation⁵⁰

⁴⁷ Use of water is defined as water withdrawn minus water discharged into the natural environment. The complete table is updated including the use of water in thermal generation in the United Kingdom in 2016.

⁴⁸ The total discharge figure includes the return from cooling, the return of water used in processes, and rainwater collected at some thermal facilities without an independent storm sewer system.

⁴⁹ Gross water withdrawal: total volume of gross water withdrawal for cooling.

Water used for hydroelectric generation is not considered withdrawn and thus it is analysed separately. The table below shows net water used in hydroelectric generation in Spain, the United Kingdom and Brazil, defined as turbinated water less pumped water.

Water use in hydroelectric generation (hm ³)	2017	2016
Net water use	49,824 ⁵¹	101,368
Volume of pumped water	2,807	3,623
Annual increase of reservoir water	-1,179	-1,941

Additional information, such as withdrawal locations and discharges from the thermal facilities, can be found at [Water usage](#).

303-2 Water sources significantly affected by withdrawal of water

All water withdrawal is strictly regulated by government authorities, which assign permits and determine the maximum permissible volumes of withdrawal to ensure that there are no significant impacts.

No withdrawals are made that significantly affect water resources or habitats relating to the water withdrawal points. The Iberdrola group does not have any plants located in areas considered to have water stress. As can be seen in disclosure 303-1, 66% of the water withdrawn is salt-water or brackish water.

These areas can be seen in [FAQ](#).

303-3 Water recycled and reused

At the thermal plants with closed or semi-open cooling systems, water withdrawn is reused in the cooling towers an average of approximately three to five cycles per m³ before being purged. The total volume of this reuse was approximately 2,014.31 hm³ in 2017.

The La Laguna and Monterrey plants in Mexico and the Klamath cogeneration plant in the United States use wastewater in their cooling systems, which in Mexico was 4% (10,855 hm³) and in the United States was 78% (3,242 hm³) of the total water withdrawn for each country.

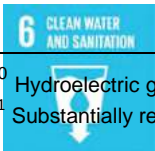

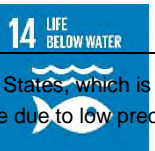

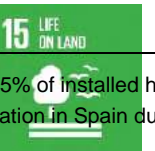

After use in cooling and other auxiliary processes, 78% of the water withdrawn at thermal generation and cogeneration facilities returns to the receptor environment in a physico-chemical condition allowing it to be utilised by other users without affecting the natural environment. The other 22% has been consumed and/or retained in the various processes, or returned to the environment in the form of steam generated in the cooling systems of the thermal power plants.

In addition, at some of ScottishPower's wind farms the control buildings have rooftop rainwater collectors and storage tanks to use the water.

GRI 304 Biodiversity

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

 <p>6 CLEAN WATER AND SANITATION</p>	 <p>8 DECENT WORK AND ECONOMIC GROWTH</p>	 <p>14 LIFE BELOW WATER</p>	 <p>15 LIFE ON LAND</p>
<p>⁵⁰ Hydroelectric generation in the United States, which is 1.15% of installed hydro capacity, is not included (information not available).</p> <p>⁵¹ Substantially reduces net water volume due to low precipitation in Spain during 2017.</p>			

Management approach

Natural capital, understood as natural resources affected in the performance of the company's activities, is one of the fundamental assets in the Iberdrola group's creation of value and a fundamental asset for all of its Stakeholders.

During their respective life cycles, generation, transmission, distribution and sales activities cause interactions with various ecosystems, landscapes and species. Therefore, these ecosystems occupy a leading role in the business strategy through four priority lines of action:

- Mediation for the protection, preservation and sustainable use of natural capital.
- Information through impact assessment and the development and application of guidelines on biodiversity for new projects.
- Relations with Stakeholders, which seeks to consider the legitimate aspirations of the Stakeholders and develop action plans in accordance therewith.
- Commitment to internal and external training, awareness-raising and communication.

Various instruments are used to carry out these lines of action, including:

- [Biodiversity Policy](#): applicable in all of the geographic areas in which the Iberdrola group does business, the basic principles of which are reflected in the lines of action.
- [Stakeholder Relations Policy](#).
- Biodiversity plans based on avoiding and/or mitigating impact, restoring natural capital, assessing impact, Stakeholder relations and awareness-raising.
- Environmental management systems certified in accordance with ISO 14001 or EMAS standards, in order to prevent and control environmental risks.
- [Corporate Environmental Footprint](#), enabling limitation of the group's impact on biodiversity.

For more information, see [Iberdrola and biodiversity](#), which sets out the management approach, strategies and progress in the activities conducted by the various businesses and regions in which Iberdrola has a presence.

304-1 Operational sites owned, leased, managed in or adjacent to, protected areas and areas of high biodiversity value outside protected areas.

The location of the group's infrastructure in protected areas or areas of great value for biodiversity, in strategic regions, is shown in the following table:

Facility	Location with respect to protected area	Affected surface area/length	Type of protection ⁵²
Spain			
Reservoirs	Inside	18,972 ha	Biosphere reserves, Ramsar wetlands, Nature 2000 Network, national parks and nature parks.

304-2 Significant impacts of activities, products and services on biodiversity.

100% of the projects that so require it are assessed for environmental impact and are submitted to public consultations; the company works with Stakeholders to ensure that the environmental impact is as low as possible. The following links show some examples in [Spain](#), [SP Networks](#), [SP Renewables](#) and [Avangrid](#).

The most significant general impacts on biodiversity are identified in order to avoid, minimise and properly correct possible impacts that might be caused by the group's activities. These impacts are identified during the various phases of the facilities' life-cycles, as shown in the following table:

Impacts in each phase of a facility's life-cycle	
Construction Phase	Entry of vehicles and machinery.
	Opening of pathways and changes in vegetation.
	Prolonged human presence (which temporarily affects the behaviour of species of fauna, and is generally reversible).
	Changes in landscape.
Operation Phase	Emissions.
	Changes in the natural system of rivers and barrier effect of hydroelectric developments (affecting the ecosystems and habitat of certain species).
	Animal mortality due to collisions and electrocution.
	Changes in vegetation to maintain power line corridors, etc.
	Discharges and spills.
Decommissioning Phase	Use of machinery and vehicles to remove and demolish existing facilities.
	Prolonged human presence (which temporarily affects the behaviour of species of fauna, and is generally reversible).

With a view to these impacts, we can single out a number of significant potential effects on biodiversity, arising from the activities, products and services of the group:

Potential impacts	
General impact	Loss of habitat.

	Greenhouse gas emissions.
	Pollution of environment.
Impact on avifauna	Electrocutions.
	Collisions.
Impact on terrestrial fauna	Electrocution, trapping, etc.
Impact on ichthyofauna	Changes in water quality.
	Discharges/spills into hydrological environment.
Impact on flora	Production and spreading of fires.
	Deterioration in the edaphic environment.

Biodiversity Plans have been drawn up to avoid or mitigate these impacts:

Biodiversity plans		
Cross-sectional plan	Sub-Plan for understanding the environment.	
	Sub-Plan for communication.	
Principal plans	Reduction of direct impacts on biodiversity	Plan for direct protection of fauna.
		Plan for direct protection of flora.
		Plan for improvement of habitats.
	Reduction of indirect impacts on biodiversity	Plan for edaphic environment management.
		Plan for hydrological environment management.

304-3 Habitats protected or restored

Based on the needs of each facility and during the life cycle thereof, Iberdrola carries out the following work on the affected areas:

- Flora and fauna monitoring (especially of protected or vulnerable species).
- Forest treatments.
- Forestry restoration with indigenous plants.
- Landscape integration and accommodation, etc.

The various activities commenced in 2017 or prior years and that have continued during this financial year are shown below:

Spain:

Project/ Technology	Actions	Objectives
Power lines	Performance of 99 environmental actions, before and during the construction of substations and power lines (restoration and accommodation of terrain, protection of vegetation, avifauna and the landscape, control of invasive species, training on fires and spills, etc.).	Reduce impact on biodiversity and ecosystem services.
	Performance of 1,058 preventive actions to protect fauna (modification and improvement of supporting services).	Reduce impact on fauna.
	Performance of 1,610 actions to improve the network to protect vegetation.	Reduce impact on flora.
	Management of 32.96 km ² of vegetation-covered surface to reduce the risk of fire at facilities.	
Hydroelectric plants	Limnological control of the most eutrophicated reservoirs in the Duero and Tajo basins (pollutant loads caused by agents unrelated to Iberdrola that travel along these rivers before they flow into the reservoirs).	Prevent potential impacts on fauna located downriver of reservoirs.
	Ensure turbined waters contain the minimum amounts of dissolved oxygen essential for aquatic life.	Avoid levels that are harmful to ichthyofauna.
	Performance of activities to prevent pollution, improve the environment and recover/restore the natural environment around the plants, including: restoring the ecological flow; environmental adjustment of canals; and environmental recovery around the town of la Rasa (dismantling of buildings and recovery of land).	Reduce impact on biodiversity and ecosystem services.
	Improvement and construction of discharge containment systems at the Trespaderne and Contreras hydroelectric plants.	Prevent potential impacts on fauna located downriver of reservoirs.
	Improvement of wastewater purification systems at the Barázar and Ullivarri hydroelectric plants.	
Thermal plants	Collaboration of the Escombreras Combined Cycle plant with the "El Valle" Wildlife Recovery Centre in recovering birds like the bittern and kestrel for treatment and return to their natural habitat after any physical or psychic problems are treated.	Reduce impact on fauna.
	Perform an evaluation study of the ecological status of the Majaceite river in the area of the Arcos de la Frontera combined cycle plant using biological, hydro-morphological and physicochemical quality indicators.	Knowledge of the surroundings for proper action regarding the habitat.

The projects of Fundación Iberdrola España include collaboration with SEO/BirdLife on the MIGRA project, which aims to study the migratory movements of bird species in Spain, funding the start-up of this programme from the 2011 season to the present.

United Kingdom:

Project/ Technology	Actions	Objectives
Thermal generation and gas storage	Implementation of Biodiversity Action Plans (BAPs) at each facility (more information is available at ScottishPower Wholesale Energy Markets / www.iberdrola.com).	Recover and promote regeneration of natural habitats and of the flora and fauna characteristic of facilities' environments.
Wind farms	50 activities in 20 areas included in the <i>Habitat Management Plan</i> , mainly consisting of the monitoring of birds and follow-up on reforested areas, and 41 management activities like restoration, removal of invasive species, management of vegetation by grazing, etc.	Recover and improve terrain affected by construction activities. Reduce impact on fauna.

United States:

Project/ Technology	Actions	Objectives
	Water treatments in collaboration with land owners in two river basins, treating runoff from impermeable areas in the basins prior to its entry into the river.	Improve water quality and improve the aquatic habitat of the riverbank.
Power lines	Conditioning of power lines.	Minimisation of the impact on the nesting and reproductive processes of the osprey.
	Acquiring wetlands in financial collaboration with the organisation Ducks Unlimited, via financial collaboration, deriving from the <i>Auburn Transmission Project</i> .	Improve quality of the aquatic habitat and stimulate species.
Wind farms	Recover natural habitats and foster their regeneration, avoid the displacement of indigenous species, monitor species, raise awareness and train local communities.	Reduce impact on flora. Raise social awareness of the area's rich biodiversity

Brazil:

Project/ Technology	Actions	Objectives
Hydroelectric plants	Reforestation of affected areas.	Ensure the success of programmes to recover and offset impact on Permanent

Continuation of environmental biodiversity conservation programmes based on the impacts of plant operation: monitoring of fauna (ichthyofauna, herpetofauna, avifauna, mammalian fauna, entomofauna, etc.); monitoring of flora in reforested areas; water quality control; monitoring of erosive processes, etc.

Conservation Areas (APPs) and degraded areas (quarries, tips).

Mexico:

Project/ Technology	Actions	Objectives
Thermal plants	Development of the <i>Garrapatas Estuary Rescue Project</i> .	Improve the habitat, fostering indigenous species, and raise social awareness of the area's rich biodiversity.
	Development of the <i>Feline Support Project in the Altamira region</i> .	
Wind farms	Follow-up of reforestation carried out during construction of the La Ventosa wind farm.	Ensure the success of reforestation work.
	Commencement of reforestation of an area covering approximately 25 ha in the area of the La Venta III power line.	Improve the habitat.
	Commencement of reforestation of an area covering approximately 19 ha in the area of the La Venta III wind farm.	Improve the habitat.

More information is available in Iberdrola's [Biodiversity Report 2014-2017](#).

304-4 Number of species broken down, based on danger of extinction, included in IUCN Red List species and national conservation list species with habitats in areas affected by operations.

The group undertakes activities in certain areas that are or may be inhabited by endangered species included in the IUCN Red List, the UK BAP, the USFW list⁵³ and other national lists such the Sao Paulo list of endangered species, without such activities entailing a negative impact or threat.

IUCN Red List Classification	No. of species
Critically endangered (CR)	41
Endangered (EN)	82
Vulnerable (VU)	162
Near threatened (NT)	49
Least concern (LC)	490

EU13 Biodiversity of offset habitats compared to the biodiversity of the affected areas.

Before a facility is built, the potential environmental impact is analysed through a forecast and assessment, with a view to avoiding placing new infrastructure in protected areas or areas with a high biodiversity value, even if they are not officially protected. If significant impacts are identified in the initial study, the project is modified to the extent possible, and the best available techniques and any measures identified as necessary are employed to correct and minimise these impacts. Where full mitigation is not possible,

⁵³ International Union for the Conservation of Nature (IUCN) (www.iucn.es), UK BAP "UK Biodiversity Action Plan" (www.ukbap.org.uk/newprioritylist.aspx), USFW "US Fish & Wildlife Services" (www.fws.gov).

remedial measures are implemented. The following table shows the principle activities in this regard during 2017:

Country	Technology	Actions	Results
United Kingdom	Beaully Denny (substation)	Continuation of Beaully Denny recovery work, exceeding 200 ha of peat bogs, in collaboration with various local Stakeholders.	Improvement of the state of wetlands, coastal grasslands and areas with forests and shrubbery. Acquisition of a carbon sink, retention of water and improvement of habitats.
	Damhead Creek (combined cycle)	Relocation of the crested newt (<i>Triturus cristatus</i>) and the Montane water vole (<i>Arvicola amphibius</i>) from an original area of 2.4 ha to another of 2.9 ha. The grasslands and ponds of this new site are evolving favourably, and establishment of the ponds has recently been inspected.	Improvement of the state of wetlands, coastal grasslands and areas with forests and shrubbery. Creation of a suitable habitat for the water vole.
	Galloway (hydroelectric)	Continued monitoring by means of the installation of antennae at the Loch Doon Vaki fishing port.	Elimination of potential obstacles to promote, among other phenomena, the migration of Atlantic salmon and other species, working together with the Ayrshire Rivers Trust on Loch Doon and Galloway Fisheries Trust.
		Study of interference with the passage of ichthyofauna using Black Water of Dee (GIS mapping, electrofishing, monitoring habitats, etc.).	
		Management of vegetation around the substation and control and elimination of the invasive <i>Fallopia japonica</i> species.	
	Cruachan (hydroelectric)	Continuation of study of habitat and of fauna via installation of photo-trap cameras. Special surveillance of the pine marten (<i>Martes martes</i>).	Discovery of the environment and spreading knowledge to the local population, collaboration with NGOs.
		Management of vegetation around the substation and control and elimination of the invasive azalea (<i>Rhododendron</i>) species.	Improvement of adjacent habitats.
	Wind farms	Continued implementation in areas around the Habitat Management Plans, managing more than 93 km ² to date, with the monitoring of species like the hen harrier (<i>Circus cyaneus</i>), blackcock (<i>tetrao tetrix</i>) and crested newt (<i>Triturus cristatus</i>).	Improvement of adjacent habitats.
United States	Power lines and substations	Continuation with the identification of habitats (under the lines) suitable for the New England cottontail (<i>Sylvilagus transitionalis</i>). Work carried out in collaboration with the US Fish and Wildlife Service.	Promotion of the recovery of species in decline.
		Development of a <i>Comprehensive vegetation management</i> programme; use of lighter vehicles in forest areas, etc.	Improvement of adjacent habitats and protection of associated fauna.

Brazil		Construction of platforms in the areas of Milford, Hamden, North Haven, Ansonia and Fairfield to encourage the nesting of the osprey, achieving the settlement and reproduction of the species.	Promotion of the recovery of species in decline.
		Continued monitoring and treatment to remove 14 species of invasive plants, under the <i>Maine Power Reliability Program</i> (MPRP) project.	Improvement of adjacent habitats and encouragement of the proliferation of indigenous species.
		Continued monitoring and treatment to remove species of invasive plants, under the Maguire Road Substation (Kennebunk) project.	Improvement of adjacent habitats and encouragement of the proliferation of indigenous species.
	Wind farms	Continued monitoring and maintenance of habitats (grasslands, meadows, wetlands, deserts, etc.) within and around the area thereof.	Improvement of adjacent habitats and protection of associated fauna.
	Baguari (hydroelectric)	Recovery of approximately 28 ha in the Legar del Faz reserve.	
	Corumbá (hydroelectric)	Reforestation with 426,496 plants of indigenous species.	Improvement of adjacent habitats, strengthening of soil absorption capacity and reduction of risk of losses due to erosion.
	Dardanelos (hydroelectric)	Strengthening of natural recovery in 5 ha and reforestation of the area around the plant.	
	Power lines	Reforestation of degraded areas with plants at various stages of growth.	

Iberdrola provides further information in the [Biodiversity](#) section of the website.

GRI 305 Emissions

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

The main source of direct emissions, which contribute to the company's Greenhouse Gases (GHGs), is the emission of CO₂ arising from combustion at the thermal plants. Iberdrola is publicly committed to maintaining its position as one of the leading European companies with the lowest CO₂ emissions per kWh produced. The company focuses its efforts on gradually reducing the intensity of GHG emissions, promoting the use of renewable technology and improving the energy efficiency of its activities and facilities.

Iberdrola has set itself an environmental goal to reduce the intensity of its CO₂ emissions to 50% below those of 2007 by 2030, and to be carbon-neutral by 2050.

Iberdrola has joined the COP23, where it showed its leadership in the fight against climate change, goal 13 of the Sustainable Development Goals (SDGs).

Once again, the company played a very important role with the *Moving for Climate NOW* initiative and with its participation in the main events and meetings of the organisations meeting in Bonn (UN Framework Convention for Climate Change, World Business Council for Sustainable Development, Carbon Pricing Leadership Coalition, UN Global Compact, etc.), energetically supporting the goals previously agreed to in Paris, which agreement entered into force in November 2016.

Iberdrola is registered with the Carbon Footprint, Carbon Offset and Carbon Dioxide Absorption Projects Register of the Ministry of Agriculture and Fisheries, Food and Environment of Spain (Mapama).

Other atmospheric emissions deriving from the combustion of fossil fuels are oxides of nitrogen (NO_x), oxides of sulphur (SO_x) and particulate matter, which are trending downward thanks to improvements in combustion processes and the company's energy mix, which includes 67% of emissions-free installed capacity. More information is available in the [climate change and emissions](#) section of the website.

Inventory of Greenhouse Gas Emissions (GHGs)

Iberdrola's inventory of emissions is calculated using the emissions set forth in disclosures 305-1, 305-2 and 305-3. In April 2017, for the seventh consecutive year, Aenor certified Iberdrola's greenhouse gas emissions inventory, covering the direct and indirect emissions from all activities, pursuant to the UNE ISO 14064-1:2006 standard, with 2016 taken as the base year⁵⁴.

Set forth below is the inventory (as of the date of publication of this report) to be submitted for verification in 2018 pursuant to the *Greenhouse Gas Protocol* of the World Business Council for Sustainable Development (WBCSD) and the World Resources Institute (WRI).

Updated information is available in the [Greenhouse Gas \(GHG\) Protocol](#) of the corporate website.

CO ₂ equivalent emissions to be verified in 2018 (t)	Spain	United Kingdom	United States	Brazil	Mexico
Scope 1: Direct emissions	5.962,832	2.960,801	999,587	1.548,252	15,334,983
Scope 2: Indirect emissions	2,269,453	806,885	1,282,555	649,881	1,790
Scope 3: Other indirect emissions ⁵⁵	1,174,512	812,550	510,930	29,075	637,303

305-1 Direct greenhouse gas emissions. Scope 1 (per GHG Protocol)

Direct emissions are those from sources of GHGs that are owned or controlled by the company. They include:

- Emissions from electric power generation facilities (fuel consumption).
- Emissions from non-generation facilities (storage of gas and sludge drying).
- Fugitive emissions of methane (CH₄) (storage and transport of natural gas).
- Fugitive emissions of sulphur hexafluoride (SF₆) in distribution networks.

⁵⁴ Base year changed from 2012 to 2016 compared to prior reports.

⁵⁵ Below the numbers reported in disclosure 305-2, due to the fact that the verification of the carbon footprint of Iberdrola does not take into account those corresponding to "Other countries", as defined in disclosure 305-3.

- Emissions from facilities that provide services to buildings (fuel consumption).
- Emissions from mobile combustion sources, associated with road transport of employees with fleet vehicles for work purposes.

The emission factors used in calculating each of these emissions are obtained from official sources. The Scope 1 emissions for the base year are: 35,476,623 t CO_{2eq}. For more information, go to the [climate change and emissions](#) section of the corporate website.

The evolution of CO₂ emissions from production facilities is shown in the following table:

CO ₂ emissions (t)	2017	2016
Thermal generating plants ⁵⁶	23,024,356	22,812,513
Cogeneration	3,671,908	3,728,577
Total	26,696,264	26,541,089

67% of the group's installed capacity is emission-free. Direct emissions other than the above emissions from production facilities are less than 1% of the total:

Other Scope 1 emissions (t CO _{2eq}) in 2017	Source of emission factors
Non-generation emissions	41,634 Defra ⁵⁷ : United Kingdom.
Fugitive emissions (CH ₄) (Gas warehousing and transport)	8,717 IPCC ⁵⁸
Fugitive emissions (SF ₆) (Electric power distribution)	19,856 IPCC
Emissions at buildings (fuel consumption)	7,965 Mapama: Spain. Defra: United Kingdom, Mexico and Brazil. EPA ⁵⁹ : United States.
Emissions from mobile combustion (fleet vehicles)	32,019 Defra: Spain and United Kingdom. EPA: United States, Mexico and Brazil.

305-2 Indirect greenhouse gas emissions. Scope 2 (per GHG Protocol).

Indirect emissions are those emissions deriving from the company's activity but generated by other entities, including emissions from the generation of electricity acquired for the company's consumption. These emissions are:

- Emissions associated with the consumption of electric energy by standby systems during shutdowns at the thermal, renewable and nuclear plants and during pumping at the hydroelectric plants.

⁵⁶ The emissions data for the thermal generating plants includes the consumption of an auxiliary group of nuclear plants, which is not included in the breakdown of Annex 3.

⁵⁷ Department for Environment, Food and Rural Affairs (United Kingdom).

⁵⁸ IPCC: Intergovernmental Panel on Climate Change.

⁵⁹ Environmental Protection Agency (United States).

- Emissions associated with the consumption of electricity in buildings.
- Emissions associated with network losses.

The emission factor of the generation mix of the respective country is used to calculate CO₂.

- Spain: Red Eléctrica de España
- United Kingdom: DEFRA
- United States: U.S. Energy Information Administration
- Mexico: SEMARNAT⁶⁰
- Brazil: Ministry of Science, Technology and Innovation for Brazil

The Scope 2 emissions for the base year are: 4,503,670 t CO_{2eq}. The Scope 2 emissions for 2017 are indicated in the following table:

Scope 2 (t CO _{2eq}) ⁶¹	2017	2016
Emissions associated with the consumption of power at offices	51,242	39,863
Emissions from consumption at standby and pumping	833,115	749,628
Emissions associated with network losses	4,126,206	3,714,179

More information is available in the [GHG Report](#), which is audited annually under the ISO 14064 standard.

305-3 Other indirect greenhouse gas emissions. Scope 3 (per GHG Protocol).

Indirect emissions are a result of the company's activities at sources that are not owned or controlled thereby:

- Emissions associated with the transport of employees for work purposes (hire vehicles and personal vehicles, planes, trains and ferries).
- Emissions associated with the transport of employees from their home to their work place.
- Emissions associated with the transport of fuel.
- Emissions from suppliers that receive and respond to GHG questionnaires.

More information is available in the [GHG Report](#), which is audited annually under the ISO 14064 standard.

The total Scope 3 emissions for the base year are 1,022,158 t CO_{2eq}.

Emissions associated with the transport of employees for work purposes

The following table shows emissions associated with the transport of employees on business trips using various means of transportation. The Defra emission factors (2017) are used to calculate the emissions.

Emissions of CO _{2eq} associated with the transport of employees for work purposes (t)	2017	2016
Air	13,983	10,395
Car	4,472	4,620

⁶⁰ Secretaría de Medio Ambiente y Recursos Naturales (Secretary of the Environment and Natural Resources) in Mexico.

⁶¹ Emissions associated with network losses are included in scope 2 to calculate 2017 emissions.

Train

278

296

There were more than 59,151 videoconferences in 2017 that avoided employee travel, entailing a reduction of approximately 22,592 t of CO_{2eq}.

Emissions associated with the transport of employees from their home to their work place

A survey is sent each year to the employees of the Iberdrola group in order to record their emissions through an emissions calculation tool.

The information obtained in the survey for 2017 performed is extrapolated to the entire Iberdrola group. The equivalent value of total emissions for this item was 76,686 t CO_{2eq}.

Emissions associated with the transport of fuel

These are from the analysis of the fuel supply chain, based on the various means of transport employed, using the Defra emission factors and calculating the emissions resulting from this activity. Fuel transport activities in 2017 only occurred in Spain⁶².

Emissions by mode of transport are shown below:

CO _{2eq} emissions (t) associated with the transport of fuel	2017	2016
Road	14,782	12,052
Train	4,474	19,905
Ship	72,903	56,786

Emissions associated with the supply chain

Iberdrola conducted the 8th *Supplier Awareness and Greenhouse Gas Measurement Campaign* during 2017, to which end surveys were sent to the group's suppliers in Spain, the United Kingdom, the United States, Mexico and Brazil.

Based on responses to the surveys sent to the suppliers, as indicated in disclosure 308-1, emissions are calculated proportionally to the volume of billing, which information is included in the emissions report as indirect emissions.

CO _{2eq} emissions associated with the supply chain (t)	2017
Spain	1,054,507
United Kingdom	795,891
United States	490,768
Brazil	211
Mexico	635,421

305-4 Greenhouse gas emissions intensity

The intensity of CO₂ emissions is calculated based on direct emissions from the production facilities (see disclosure 305-1) divided by the group's net production, including steam. The following table shows this intensity.

Intensity of CO ₂ emissions	2017	2016
--	------	------

⁶² Coal, gas-oil and uranium transport activities are considered.

Specific emissions from global mix (kg/MWh)	187	177
Specific emissions from global mix (kg/€) ⁶³	0.854	0.908

In 2017, CO₂ emissions per MWh generated remained among the lowest among domestic and international energy companies. Also noteworthy is the fact that the intensity of emissions at the group's thermal plants has dropped over the past 5 years, to 388 kg CO₂/MWh in 2017.

305-5 Reduction of GHG emissions

Initiatives to reduce emissions are undertaken through a broad range of products and services promoting energy efficiency and savings. Some examples of actions taken in 2017 are given below:

Areas	Actions and initiatives	CO ₂ avoided (t)
Renewables	Primary energy savings through the production of renewable energy.	15,129,235
Cogeneration	Savings through the supply of heat energy (steam) within the group.	1,128,403
Network efficiency	Savings from distribution network efficiency in Spain, the United Kingdom and Brazil.	117,658
Commercial	Energy savings and efficiency from green products and services.	7,062,225
Group	Use of videoconferencing.	22,592

In total, the emission of 23,460,113 t CO₂ was avoided, equal to the amount of CO₂ absorbed by 1,300 million trees over the course of a year⁶⁴.

The operating regimen of the group's production facilities led to the level of CO₂ emissions described in disclosure 305-1. Disclosures 302-4⁶⁵ and 305-2 provide additional information on this subject.

Despite its excellent position in this regard, Iberdrola has committed to reducing the intensity of its emissions to 50% below its 2007 level by 2030. The strategy to achieve this target is based on gradually reducing the intensity of GHG emissions through a commitment to close all of its coal plants and continuing to pursue electricity generation based on renewable sources and progressively introducing more efficient and less carbon-intensive technologies at existing facilities.

Iberdrola's commitment includes the development of a Sustainable Mobility Plan with the ultimate goal of contributing to a rational use of the means of transportation and which is framed within the commitment made by the company in its *Sustainability Policy*.

The inclusive nature of the programme involves employees, the business activity, customers and suppliers, covering approximately 23 specific actions in which the company seeks to strengthen its wager on sustainability.

These initiatives include Iberdrola's launch of a new edition of the *Electric Vehicle for Employees* programme in Spain and the United Kingdom and the pilot project launch in the United States, which consists of special advances and financial assistance for the purchase of electric vehicles. Thanks to this

⁶³ Direct emissions from energy generation facilities (305-1) compared to net revenue in €.

⁶⁴ The estimated amount of CO₂ absorbed by one tree in a year is 20 kg.

⁶⁵ In addition to the reductions described in 302-4, the group's nuclear production prevented emissions of 8,644,375 t CO₂, taking into account the emission mix. Source: RRE.

initiative, the local emission of 244 t CO_{2e} in employee travel to the work place in Spain and the United Kingdom was avoided in 2017.

Iberdrola's commitment to [sustainable mobility](#) was recognised in 2017 with the award received at the V Best Mobility Practices Award delivered by Renault.

305-6 Emissions of ozone-depleting substances

Ozone-depleting substances have a very limited presence within the Iberdrola group, and are located primarily in fire-extinguishing equipment (Halon) and some cooling systems (chlorofluorocarbons, CFCs). These systems and equipment are maintained in accordance with the provisions of applicable laws and regulations.

The only atmospheric emissions originating from these products would be those arising from potential losses, which are identified by the volumes used to recharge the equipment. Although Iberdrola's goal is to eliminate the presence thereof in its facilities, these substances continue to be used where their use is authorised and a better market substitute has not been found. Thus, 44 kg of CFC-11 equivalent was replaced in 2017, consisting of: 38 kg of CFC-11 equivalent in Spain and 6 kg in Mexico.

305-7 NO_x, SO_x and other significant air emissions

Emissions⁶⁶ of sulphur dioxide (SO₂), nitrogen oxides (NO_x) and particulate matter are also created by the burning of fossil fuels. These emissions are being reduced due to the company's energy generation mix, discussed in the emissions section, with the incorporation of renewable energy and the support of modern technologies for monitoring combined cycles. This management focus is supplemented with a plan to invest in improvements in the combustion process and in the dismantling of less environmentally-efficient units.

To comply with *Directive 2001/80/CE*, which limits the atmospheric emissions of SO₂, NO_x and particulates from large combustion facilities, investments have been made in combustion control systems at the thermal plants, both in Spain and the United Kingdom.

Emissions of oxides of nitrogen (NO_x)

NO _x emissions (t)	2017	2016
Generating plants	7,613	12,934
Cogeneration	8,539	8,037
Total	16,152	20,971
Intensity of NO _x emissions (kg/MWh)	2017	2016
Specific emissions from global mix	0.113	0.140

Emissions of sulphur dioxide (SO₂)

Sulphur dioxide (SO ₂) emissions (t)	2017	2016
Generating plants	4,143	6,510
Cogeneration	1,249	578

⁶⁶ These emissions are obtained either by direct measurement or through conversions of fuel consumption using emission factors from official sources.

Total	5,392	7,088
--------------	--------------	--------------

Intensity of SO ₂ emissions (kg/MWh)	2017	2016
Specific emissions from global mix	0.038	0.047

Emissions of particulates

Particulate emissions (t)	2017	2016
Generating plants	1,114	1,067
Cogeneration	158	141
Total	1,272	1,208

Intensity of particulate emissions (kg/MWh)	2017	2016
Specific emissions from global mix	0.009	0.008

Emissions of mercury (Hg) and other compounds

The emission of mercury (Hg) during 2017 was 33.23 kg.

Furthermore, 434.57 t of volatile organic compounds (VOCs) were emitted in Spain, the United Kingdom, Mexico and the United States; and 18.60 kg of hazardous air pollutants (HAPs) were emitted in the United States.

GRI 306 Effluents and waste

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Effluents

Withdrawal, use and return to the environment is the water cycle needed for the generation of power at the thermal generation plants. The quality of this returned effluent is strictly controlled and is kept below the maximum acceptable values established by the government based on the characteristics of the withdrawal and discharge point (sea, reservoir or river).

Ensuring compliance with law and seeking methods to minimise the risk of spills is applicable to all of Iberdrola's facilities, including generating plants, renewable facilities and distribution substations.

Iberdrola has treatment plants and water quality measurement systems at its facilities that allow it to ensure a return to the environment (sea, reservoir or river) in the desired condition, reducing the risk of polluting discharges through the use of preventive control tools:

- Consolidated systems for reporting anomalies and incidents in order to establish plans to minimise spillage risks, by implementing predictive, preventive and corrective actions that ensure the proper condition of the water.
- Certificates in ISO 14001 and EMAS, as tools for continuous improvement.

The company also has emergency plans and protocols to ensure proper and rapid response in the event of discharges or spills with negative effects on the surrounding environment:

Waste

Iberdrola's goal is to reduce the generation of waste for any process or activity (construction, operation, maintenance of facilities and work centres), and to prioritise recycling and the reuse thereof. Iberdrola commits to the concept of "circular economy" for all players within its activities, having joined the Circular Economy Pact of the Ministry of Agriculture and Fishing, Food and Environment (MAPAMA) in Spain.

The management of waste conforms to the following principles:

- Minimise the generation of waste at source.
- Maximise the reuse, recycling and recovery of waste.
- Promotion of awareness-raising campaigns regarding the minimisation of waste.
- Specific treatment and management of hazardous waste.

Further to its commitment to transparency of information for Stakeholders, Iberdrola provides additional information on its nuclear plants (*General Radioactive Waste Plan*, Enresa⁶⁷). The processes of reduction, reuse, segregation, recycling and recovery is applied to radioactive waste in the safe management thereof.

Iberdrola's nuclear power plants are included within the *Environmental Radiological Monitoring Programme* of the Nuclear Safety Council of Spain, the purpose of which is to monitor the dispersion in the environment of controlled discharges from facilities and to determine and monitor radiological quality throughout the country.⁶⁸

306-1 Total water discharge by quality and destination

The thermal power-generation plants treat residual water before discharging it into the natural receptor environment.

- Water from the process undergoes physicochemical treatment, which includes the separation of hydrocarbons and temperature monitoring.
- Wastewater is treated in compact treatment systems with biological aerobic processes.
- Coal plants have a treatment system for slag from the plant, and a decantation/coagulation process that prevents the entry of particulate coal or coal in suspension into the receptor water.

⁶⁷ Enresa: Empresa nacional de residuos radioactivos, S.A.

⁶⁸ For more information, see the technical report issued by the Nuclear Safety Council "Environmental radiological monitoring programmes. 2014 Results" ("Programas de vigilancia radiológica ambiental. Resultados 2014"), available at www.csn.es.

After being treated, the process water and the sanitation wastewater are diluted with the water returned from the cooling system and are discharged into the receptor environment, with continuous monitoring of various parameters (temperature, turbidity, conductivity, etc.). An accredited organisation analyses these discharges and regularly reports to the government.

The data relating to the discharge of water into the environment are:

Total water discharged (hm ³)	2017	2016
Ocean	1,289	1,171
Rivers	249	274
Lakes and reservoirs	360	326
Municipal water	6	5
Total	1,904	1,776

In Mexico, the combined cycles have separate and independent networks for industrial and sanitary water. The latter receive final treatment in biodigestors whereas industrial water is discharged into the natural environment or sent to municipal treatment plants or to the customer for treatment. The La Laguna power plant captures sanitation wastewater for all processes, for which reason the water discharged by this facility is of better quality in some parameters than the water that is collected. For more information, see the [Water Usage](#) section of the corporate website.

306-2 Total weight of waste by type and disposal method

Two types of waste are differentiated within the Iberdrola group's activities:

- Waste arising during the energy production process.
- Waste generated at facilities and offices.

The various areas and businesses of the company perform activities to minimise waste and improve waste management, within the framework of the certified environmental management systems.

Waste from the production process

1. Fly ash and slag

In the generation process at coal plants, fly ash and slag are the most typical types of waste. The following table shows the production and reuse thereof:

Production and reuse of ash at Iberdrola's thermal power plants	2017	2016
Ash produced (t)	174,523	256,399
Ash reused (t)	76,034	87,260
Percentage of product reused (%)	44	34

Reused ash was used for the production of cement as filling in infrastructure work and to produce compost.

2. Nuclear waste

Low-low level and low-medium level radioactive waste generated during 2017 is shown in the following table:

Hazardous waste generated at nuclear facilities	Net output (MWh)	Low-low level waste		Low-medium level waste	
		Produced (m ³)	Produced (m ³ / MWh)	Produced (m ³)	Produced (m ³ / MWh)
Cofrentes nuclear plant	7,064	14.4	0.002	104	0.015
Partially-owned nuclear plants	16,185	32.47	0.016	162.01	0.078

As to high level waste, 303 spent fuel assemblies were generated during 2017.

Other waste

1. Hazardous waste

Hazardous waste that is generated is regularly delivered to authorised handlers for proper processing. Not all of the waste generated is deposited or recycled immediately, as there are temporary warehouses for hazardous waste at the facilities.

Hazardous waste generation (t)	2017	2016
Produced	9,193	10,579
Deposited and/or incinerated	3,023	2,148
Recovered, recycled, reused	7,288	7,353

2. Non-hazardous waste

Non-hazardous waste generation (t)	2017	2016
Produced ⁶⁹	1,053,671	978,845
Deposited and/or incinerated	543,254	443,752
Recovered, recycled, reused	449,920	470,832

Non-hazardous waste produced includes electronic equipment, wood, metals, plastics, paper, etc. The company has minimisation, reutilisation and recycling plans as well as awareness-raising campaigns to promote good environmental practices by its employees.

To promote the reuse of waste, Iberdrola has been working for several years on the optimisation of the management and revaluation thereof, selling it to companies that put it back on the market after transforming it. During 2017, this exercise produced income of €2,449,758 from the sale of non-hazardous waste.

306-3 Significant spills

Iberdrola has an Environmental Management System, and prevention is one of its key objectives. To this end, multiple preventive measures have been implemented in all of the group's businesses. These measures are set out in organisational and technical manuals. Plans to minimise risk have been established in the group's various businesses (emergency guides and procedures, regular drills, etc.), as have reporting and environmental incident management systems; these are used to prevent and to control accidental spills and to inform the relevant authorities whenever necessary.

⁶⁹ Total value of waste produced, also includes the total value of waste managed.

One example of safety and containment measures taken to mitigate damage are those implemented in Spain, where 505 preventive actions were performed in 2017 to prevent and mitigate the impact of potential spills. These included the construction of 34 oil collection reservoirs in case of a major discharge at the substations or transformer stations, as well as waterproofing of containers.

Of all the leaks and spills recorded within the Iberdrola group in 2017, 23 incidents were significant⁷⁰, with a total spill volume of 10 m³ of dielectric liquid. All cases were resolved in a satisfactory manner thanks to the emergency response team; the contaminated area was cleaned with appropriate management of any waste. In the case of minor accidents or incidents that did not have permanent environmental impacts on the surroundings, it was not necessary to adopt corrective or compensatory measures.

306-4 Weight of transported, imported, exported or treated waste deemed hazardous under the terms of the Basel Convention Annex I, II, III and VIII, and percentage of waste shipped internationally.

Iberdrola does not directly transport, import or export hazardous waste covered by the Basel Convention in any of the countries in which it engages in its activities.

306-5 Identity, size, protected status and biodiversity value of water bodies and related habitats significantly affected by the organisation's discharges of water and runoff.

Water collection and discharges by the facilities during 2017 were within the limits indicated by the relevant comprehensive environmental permit for each facility, and no anomalies were detected that could materially affect water resources or related habitats.

The company's activities can even be beneficial for the ecosystem, as seen in the following examples:

- In Spain, above and beyond the Integrated Environmental Authorisation requirements, at times additional quality control analyses are conducted on water upstream from hydroelectric generation facilities, with a view to improving, where necessary, the quality of this water once it has passed through the plant and is returned to the environment (see disclosure 304-3).
- The discharge from the Altamira III and IV plant in Mexico has been re-directed over the Garrapatas estuary, which is allowing it to recover its salinity and thus the specific characteristics of this habitat and the species of fauna and flora adapted thereto. This estuary was losing its brackish nature due to salt-water entry being blocked after the construction of a pipeline, with the resulting desalination of the ecosystem.

GRI 307 Environmental compliance

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

⁷⁰ The term "significant spill" means a spill that causes damage to the external surroundings of the facility or a significant risk thereof and that must be reported to the governmental authorities. Small spills may occur within the facilities during the operation and maintenance thereof, which are properly handled and reported as required.

Management approach

Iberdrola has a Global Environmental Management System that encompasses all of the partial certifications of each of the businesses that make up the group, reaching 80% of the group's production. Certified environmental management systems identify the legal requirements applicable to the activities carried out by the group and establish an assessment of compliance therewith for purposes of assurance. Below in disclosure 307-1 of this report, supplemental information is provided regarding ongoing environmental legal proceedings directed at companies managed directly by Iberdrola.

307-1 Monetary value of significant fines and total number of non-monetary sanctions for non-compliance with environmental laws and regulations

Incidents relating to the environment during 2017 involved the following fines and monetary sanctions:

Fines imposed relating to the environment (€)	2017	2016
Total amount of fines imposed	3,881,246	2,375,559

Of the total amount of fines imposed during the financial year, 2,197,588 euros were in Spain, 1,582,142 euros in Brazil and 50,508 euros in the United States. In Spain, there were significant fines corresponding to sanction proceedings for the electrocution, injury and death of birds; and in Brazil they were due to non-compliance with environmental conditions, impacts on ichthyofauna and improper pruning.

Non-monetary sanctions, sanction proceedings and arbitrations (no.)	2017	2016
Non-monetary sanctions	14	2
Sanction proceedings	57	86
Cases being resolved through arbitration or similar mechanisms	0	9

GRI 308 Supplier environmental assessment

Management approach

308-1 Percentage of new suppliers that were screened using environmental criteria

308-2 Significant (actual and potential) negative environmental impacts in the supply chain and actions taken

The management approach regarding the Iberdrola group's supply practices is described in disclosure 102-9 "Description of supply chain" of this report and the environmental risks of this chain are managed through quality processes and periodic audits.

In the management of suppliers and during the procurement process, the measures adopted to promote proper environmental behaviour by suppliers are based on the *Procurement Policy*, the *Suppliers' Code of Ethics* and the specific environmental clauses in the procurement terms of the group. Subsequently, during the supply stage, the business units monitor the environmental performance of the supplier during the term of the contract.

Alignment in Procurement and Supplier Management with respect to the environment and sustainability

Internal Procurement Mechanisms		External Supplier Mechanisms	
Procurement Policy	Sets out principles on the environment that suppliers must follow and sustainable and responsible management in the Iberdrola group's supply chain	Suppliers' Code of Ethics	Includes environmental principles. Must be accepted by the Group's suppliers and is attached to orders and contracts
Supplier Registration and Classification	Having environmental certification will be weighed in the overall assessment of the supplier. Suppliers must accept Iberdrola's Environmental Policy	Specific T&Cs	Environmental clauses that suppliers must comply with during the term of the contract
Bid Process	The environmental assessment of the supplier is included during the ITEO (offer evaluation) phase and in the PA (proposed award) for purposes of the contract.	Stimulus Campaigns	As a business driver, we proactively promote the environmental certification of the suppliers, supporting them in the search for excellence and generating a multiplier effect
Annual Improvement Goals	Innovative process: annual improvement goals directly relating to the environmental improvement of suppliers established for the Procurement team and linked to variable remuneration	Carbon Footprint Measurement	Annual greenhouse gas measurement campaign for suppliers: in 2017 more than 1,000 suppliers of the group in Spain, the United Kingdom, Brazil, Mexico and the United States
Global Environmental System	The Procurement Division is part of Iberdrola's Global Environmental System Committee: monitoring of environmental guidelines, established goals and related indicators, Audits.	CSR Scoring	Includes environmental aspects. CSR evaluation of suppliers, quantifying their relative position based on their management of this area.
Reporting	Contribution to Sustainability infographic and Annual Procurement and Supplier Management Report published on the corporate website	Supplier of the Year Award	Environmental category: this promotes the environmental responsibility of suppliers and publicly recognises those who stand out in this area.

The procurement terms of the group establish certain environmental requirements to meet this commitment, and the company also performs various tracking and reporting activities on an on-going basis. At the end of 2017, procurement from suppliers with a certified environmental management system represented 79.5% of all procurement from suppliers of general supplies.

Fuel procurement is subject to the general principles of Iberdrola's social responsibility policies, which require the encouragement of suppliers to engage in activities that are socially responsible, respectful of the environment and prevent occupational risks. With respect to fuel suppliers, those with an environmental management system represented 92% of the suppliers evaluated.

100% of suppliers (both new and existing) of general supplies and significant suppliers of fuel are evaluated according to environmental and sustainability criteria.

The principal environmental risks are considered to be managed through the current management systems and the periodic audits that are performed.

No supplier with a significant negative environmental impact has been detected. Furthermore, Iberdrola does not have major suppliers located in areas with water stress.

C. SOCIAL DIMENSION

Contents of the chapter

The topics analysed and reported on in this chapter are the following:

- **Management approach to the *Social Dimension***
- **Topics of the GRI Standards**
 - GRI 401 Employment
 - Management approach and disclosures 401-1, 401-2 and 401-3
 - Additional information required by the GRI *Sector Supplement*:
 - Programmes and processes to ensure the availability of a skilled workforce
 - Policies and requirements regarding health and safety
 - Indicators EU15, EU17 and EU18
 - GRI 402 Labour/management relations
 - Management approach and disclosures 402-1
 - GRI 403 Occupational health and safety
 - Management approach and disclosures 403-1, 403-2, 403-3 and 403-4
 - Additional information required by the GRI *Sector Supplement*
 - GRI 404 Training and education
 - Management approach and disclosures 404-1, 404-2 and 404-3
 - GRI 405 Diversity and equal opportunity
 - Management approach and disclosures 405-1 and 405-2
 - GRI 406 Non-discrimination
 - Management approach and disclosures 406-1
 - GRI 407 Freedom of association and collective bargaining
 - Management approach and disclosures 407-1
 - Additional information required by the GRI *Sector Supplement*
 - GRI 408 Child labor
 - Management approach and disclosures 408-1
 - GRI 409 Forced or compulsory labor
 - Management approach and disclosures 409-1
 - GRI 410 Procurement practices
 - Management approach and disclosures 410-1
 - GRI 411 Rights of indigenous peoples
 - Management approach and disclosures 411-1
 - GRI 412 Assessment of impact on human rights
 - Management approach and disclosures 412-1, 412-2 and 412-3

- GRI 413 Local communities
 - o Management approach and disclosures 413-1 and 413-2
 - o Additional information required by the GRI *Sector Supplement*:
 - Stakeholder participation in the decision-making process
 - Management of population displacements, including disclosure EU22
- GRI 414 Supplier social assessment
 - o Management approach and disclosures 414-1 and 414-2
- GRI 415 Public policy
 - o Management approach and disclosures 415-1
- GRI 416 Customer health and safety
 - o Management approach and disclosures 416-1 and 416-2
 - o Additional information required by the GRI *Sector Supplement*:
 - Electric and magnetic fields
 - Disclosure EU25
- GRI 417 Marketing and labelling
 - o Management approach and disclosures 417-1, 417-2 and 417-3
- GRI 418 Customer privacy
 - o Management approach and disclosures 418-1
- GRI 419 Socioeconomic compliance
 - o Management approach and disclosures 419-1
- **Specific topics of the electric utilities sector supplement**
 - Disaster/emergency planning and response
 - o Management approach (no related disclosures)
 - Access to electricity
 - o Management approach and disclosures EU26, EU27, EU28, EU29 and EU30
 - Access to adequate information
 - o Management approach (no related disclosures)
- **Specific topics of the Iberdrola group**
 - Iberdrola and the Global Compact
 - o Management approach
 - Iberdrola's contribution to the community
 - o Management approach
 - Iberdrola, promoting women's sport
 - o Management approach

Scope of information

The information boundary used in this chapter is defined in disclosure 102-45 of this report.

Specific management approach to the *Social Dimension*

This management approach covers all “Topics” of the GRI Standards and the Electric Utility Sector Supplement referred to in the above contents of this chapter in the area of labour relations, the protection of human rights, the supply chain, and relations with customers and with society in general. In managing these issues, Iberdrola acts in accordance with the principles described in this section and in the “General Management Approach” section of this report.

Iberdrola establishes firm and permanent bonds with its Stakeholders, taking into consideration the needs and expectations of its workforce, shareholders and the financial community, regulatory bodies, customers, suppliers, the media, society in general and the environment. The development of plans for the company’s relationships and the maintenance of fluid channels of communication with Stakeholders are significant goals, to which Iberdrola dedicates numerous resources, as described in more detail in chapter 5 “Stakeholder Engagement” of this report.

Within the company’s explicit commitment to the creation of sustainable value and the maximisation of the social dividend, and always looking to the long-term future, Iberdrola has an impact on local development, generating employment and wealth in all of the communities in which it is present through the design and preparation of specific programmes focused on promoting education, art and culture, research, protection of the environment, protection of vulnerable groups, etc.

The policies defined for the management of human resources contain guidelines governing labour relations among the various companies of the group and serve as a reference to define the company’s employment-related goals: maintaining employment guarantees and a stable relationship with workers; strengthening of occupational health and safety and training aspects; protection of diversity and equal opportunity in access to employment; promotion of professional development; and promotion of behaviour and attitudes among its entire workforce in line with the principles described in the “Ethics and integrity” section of this report.

In relation to Iberdrola’s commitment to defend human rights, the main goal is to incorporate the management thereof into the group’s operations, thus forming an integral part of operating procedures. This focus is included in the [Policy on Respect for Human Rights](#) approved by the Board of Directors in February 2015 and revised in February 2017. To this end, the company has a set of tools that promote the protection of and respect for human rights, mitigating the risk of violation thereof. The company’s practices are in line with the *Guiding Principles on Business and Human Rights: Implementing the United Nations ‘Protect, Respect and Remedy’ Framework*, the principles of the *United Nations Global Compact*, the *OECD Guidelines for Multinational Enterprises*, the International Labour Organization’s *Social Policy* and the *Tripartite Declaration of Principles Concerning Multinational Enterprises and Social Policy*.

It should be noted that Iberdrola has designed a *Human Rights Management Model* in order to promote a culture of respect for human rights and to raise awareness in this area for all professionals, especially those who perform their activities in countries with a potentially higher risk of violation of these rights due to lax laws. The model includes the planning of activities and measurable goals to be met by the entire organisation, and this has been approved by both the Operating Committee and the Reputation and Social Responsibility Committee.

The company also has other tools approved by the Board, such as the [Code of Ethics](#), which governs the behaviour of all professionals, establishing control measures as well as disciplinary measures in the event of noncompliance, and the *Suppliers’ Code of Ethics*, which fosters compliance with applicable legal

provisions in connection with ethical, labour, environmental and health and safety matters, which must be expressly adhered to by all suppliers and is included as an annex to the respective contracts.

As regards its customers, Iberdrola operates with an organisational structure in which the Networks Business manages the activities of regulated transmission, distribution and sale of energy and any other regulated activity that the group carries out in Spain, the United Kingdom, the United States and Brazil, and the Wholesale and Retail Business manages non-regulated activities in Spain, Portugal, the United Kingdom, Mexico and continental Europe. For its part, the Renewables Business manages long-term power purchase agreements (PPAs) with large companies in the United States and Mexico.

In the retail markets, Iberdrola mainly provides its customers with two products: electricity and natural gas, trying to ensure competitive supply, operational and service excellence, continuous improvement of efficiency in operations, together with safety and respect for the environment. Although the Iberdrola group engages in other activities, due to the nature and scope thereof, these activities are insignificant in connection with customers for purposes of the information presented in this report.

As a whole, the distribution companies of the group handle a total of 34.37 million energy supply points, of which 30.33 million correspond to electric power and 4.04 million to gas supply. This information is described by type of user in indicator EU3 of this report.

Grievance mechanisms for impacts on society

As provided by Iberdrola's By-Laws, the corporate website (www.iberdrola.com) is a permanent channel of communication to serve the *Stakeholder Relations Policy*. For this reason, the website contains the main channels for responding to potential claims, as set out below:

- From the home page, one can directly access pages dedicated to customers and to the distribution networks of the countries in which Iberdrola does business, as well as those of the foundations and of the main companies of the group. There is also a prominent link on the home page to the "[Contact](#)" section, in which the following appear in an organised and accessible form:
 - o The addresses of the Iberdrola group's offices in the various countries.
 - o The specific contact channels (Corporate Communication, Investor Relations Office, Office of the Shareholder, Environment, Supplier Service Centre, Employment Channel, Corporate Social Responsibility, etc.).
 - o Customer service centres in the various countries.
 - o Subject-specific query mailboxes.
- The [Corporate Governance](#) section of website contains the group's corporate structure, with the corresponding links to all the companies.

The company's Stakeholders have the channels described above, which are handled in the various countries, businesses and corporate areas, to make their complaints and suggestions regarding business activities with a specific impact on the environment, labour relations, human rights, local communities, competition or market power, and such complaints will be attended to following established internal procedures.

There are various specific mechanisms for dealing with unethical behaviour or behaviour that might lead to situations of fraud or corruption in any form: the ethics mailbox, the shareholders' ethics mailbox, the suppliers' ethics mailbox and the communication channel with the Audit and Risk Supervision Committee,

through which employees, shareholders and suppliers can report grievances, questions or complaints with the assurances of resolution and confidentiality that such channels require to be effective.

The court claims of which Iberdrola is aware are set forth in disclosures 307-1 and 419-1 of this report.

Disclosure 406-1 sets forth incidents relating to discrimination in the labour area in 2017.

Finally, Iberdrola has not received any complaint during the year regarding other aspects relating to human rights through the channels established for this purpose.

In the United States, there were two complaints to the Maine Human Rights Commission (MHRC) in 2016 alleging discrimination for the imposition of a rate for voluntary exclusion from the use of the new smart meters, where the rejection was due to health reasons. Both complaints were resolved in favour of the company in 2017.

The company has no evidence of any court claims brought in addition to the ones mentioned above that might have a specific social impact.

GRI 401 Employment GRI 402 Labor/management relations

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Policies and commitments

To supplement the general approaches described above, Iberdrola has a [Human Resources Framework Policy](#) to define, design and disseminate a group human resources management model, which is set forth in the following specific policies:

- [Recruitment and Selection Policy](#)
- [Knowledge Management Policy](#)
- [Equal Opportunity and Reconciliation Policy](#)
- [Occupational Safety and Health Policy](#)

supplemented by a [Senior Officer Remuneration Policy](#) and a [Code of Ethics](#) that together establish the principles for managing these areas.

Collective bargaining agreements

To properly frame labour relations, the companies of the Iberdrola group have collective bargaining agreements or specific equivalent agreements to govern aspects relating to the management of people.

Generally speaking, the collective bargaining agreements of the Iberdrola group apply to all employees working under an employment relationship and for the account of the companies of the group, regardless of the type of contract entered into, the professional group to which they are assigned, their occupation or the job performed.

However, issues relating to the corporate organisation, the law of each country or even usage and custom in each country lead to certain groups being expressly excluded from the scope of collective bargaining agreements (for example, executives in Spain are not covered by the agreement). This is why there is not 100% coverage, as indicated in the table below:

Employees covered by a collective bargaining agreement	2017	2016
Number of employees	26,643	27,010
Percentage of employees	77.78	79.25

In the companies of the group there are two collective bargaining agreements in Spain, four in the United Kingdom, eleven in the United States, eleven in Brazil and three in Mexico. A breakdown by geographic area is available in Annex 3 Supplementary Information.

These agreements have specific monitoring mechanisms, such as the committees and sub-committees of the Collective Bargaining Agreement in Spain, the *ScottishPower Company Consultative and Negotiating Machinery Constitution* in the United Kingdom, *The Open Items Forum*, Update Meetings, Business Committees, Strategic Safety Panels and the *Joint Union Management Partnership Committee* in the United States, and the Safety Committee in Brazil, which serve to regulate labour, safety and health, and pension issues and consult with employees and with representatives on social matters within the company, as well as to ensure compliance with commitments made.

Objectives

Iberdrola has identified especially significant issues with respect to its employees, including:

- Define terms and conditions of employment.
- Regulate work rules, shift categories, working hours, etc.
- Define salary structure, supplementary pay, other expenses and form of payment.
- Specify benefits offered and conditions for obtaining them.
- Establish general principles in connection with the Equality Plan.
- Recognise the right to reconciliation of personal, family and working life.

Specific actions during the financial year

The Iberdrola group's global mobility programmes form part of the set of human resources tools that contribute to the development of talent, transmitting and strengthening the culture of the group and offering opportunities for professional growth in an international environment that attracts, motivates and retains the professionals who will ensure the sustainability of the business. This includes the launch of the *Job Swap Opportunity Program* initiative in 2017, which is intended to facilitate development opportunities for the group's professionals, allowing them to face new professional challenges and responsibilities, thus increasing their global view and knowledge of the business, as well as generating more versatile profiles and strengthening mobility and networking. Through this programme, two employees have the opportunity to temporarily swap their positions for a period of 9-12 months, whether within the same organisation, within the same business, between business and corporate area or between different countries. 15 employees participated in this initiative at the global level during 2017.

During the year, 330 employees participated in the group's international mobility programmes in their various forms.

In addition, with a view to favouring opportunities for internal promotion and international mobility, the group has commenced operating a single employment channel, where more than 27,000 workers can access and apply for internal job vacancies that match their profile.

Under the new homogeneity objectives in the Human Resources model, the management team of Iberdrola and its subsidiaries totals 840 people at year-end 2017, with a voluntary turnover rate of 2.02%.

Labour practices grievance mechanisms

Using the standard that class actions on the same matter are deemed to be a single grievance, the companies of the group received 253 grievances about labour practices in 2017⁷¹; of these, 13 were resolved in that same year. In addition, 247 other grievances pending from previous years have been resolved.

Programmes and processes to ensure the availability of a skilled workforce

Iberdrola needs to have a qualified workforce in keeping with the specific needs of the electric industry, the industry in which it focuses its operations, with the technical competencies necessary to carry out the specialised work required by these types of activities in terms of both technical aspects and safety. Disclosures 404-2 and 404-3 of this chapter provide information in connection with the skills and training management programmes that foster the employability of workers at the company, as well as its performance evaluation processes.

401-1 New employee hires and employee turnover

At Iberdrola, talent management is a key factor to ensure the success of the organisation. It is for this reason that Iberdrola works in various critical phases to attract and hire professionals with the skills, knowledge and abilities aligned with the current and future needs of the company: attraction of talent, recruitment and selection, as well as the welcoming and integration of new professionals.

As a global company, it has specific policies approved by the Board of Directors that regulate the selection activity (like the *Recruitment and Selection Policy* and the *Equal Opportunity and Reconciliation Policy*), as well as a master recruitment and selection process that applies at the global level. It also relies on local practices with activities particular to each specific geography and legal system in order to ensure that the best talent is attracted and selected.

Iberdrola's activities to ensure that it has the best and most diverse pool of talent in its various geographical areas include the following:

- Activities to promote training in the STEM (Science, Technology, Engineering and Mathematics) areas among young people and adolescents, as well as among women to equalise the presence of both genders in the sector (for example, visiting high schools and institutes and holding events to explain the industry and the activities of the company).
- Agreements with prestigious universities at the global and local level like:

⁷¹ The grievances received correspond to Spain, the United Kingdom, the United States, Brazil and Mexico. No grievances of this nature have been received in the other countries in which the group operates. In Spain, the United Kingdom, Brazil and Mexico, this includes the grievances that reach the courts, while in the United States grievances include those filed with the various state and/or federal commissions on human rights and equality.

- Universidad Pontificia de Comillas
 - Universidad de Salamanca
 - Massachusetts Institute of Technology
 - University of Strathclyde
 - Tecnológico de Monterrey
- Visiting employment forums and holding meetings with students to bring them closer to our company and to support their innovative ability. A total of 107 activities were attended at various prestigious universities in all of the countries where Iberdrola has a presence.
- Training programmes at the company directed towards vocational students, as well as university students, in order to complete their education within the professional environment. In total, 526 vocational students and 955 university students throughout the world have had the opportunity to engage in training at Iberdrola Spain, ScottishPower, Avangrid, Neoenergia and Iberdrola Mexico.
- International scholarship programmes for master's studies, with which students obtain financial support to complete their studies. In 2017, Iberdrola's Foundations granted 91 scholarships for Master's studies, investing €3,747,000, with students from Brazil, Spain, Mexico, the United Kingdom and the United States having had the opportunity to study in Spain, the United Kingdom and the United States.
- Mentoring programmes for university students, with which they can not only develop skills and abilities relevant to the professional area but also work towards their career goals. Specifically, a total of 18 people have been awarded scholarships by the foundation in Spain and have gone through a mentoring programme. All are engaged in training at various offices of Iberdrola Spain.
- Mainstreaming programmes for junior professionals. A project was launched at the global level in 2017 which incorporated 45 recent graduates into various areas of the company in Mexico, Spain, the United Kingdom and the United States, with a specific development programme for each of them.
- Definition of the global reception and integration programme, which allows for the sharing of local practices while at the same time defining common lines of activity within different geographical areas, in order to provide common knowledge about the company and facilitate integration into companies and jobs.

Number of employees that returned to work after parental leave ended that were still employed 12 months after their return to work ⁷³	328	411	N/Av.	N/Av.
Return to work rate	105.22	79.32	N/Av.	N/Av.

402-1 Minimum notice period(s) regarding operational changes, including whether these are specified in collective agreements.

The different organisational changes and significant events that occur are officially reported in compliance with the various legal provisions that apply at both the global and the local level within the labour relations of our companies. These notifications are made via the various channels and forums enabled for the purpose, such as monitoring committees formed by management and employee representatives, intranet, notices to interested parties, unions, etc.

- In Spain, organisational changes are governed by both the *Workers Statute* and by the collective bargaining agreements, and generally provide for a period of at least 15 days.
- In the United Kingdom, when a significant event occurs, interested parties are notified within a period of 4 to 12 weeks, as provided by law as well as the collective bargaining agreements.
- In the United States, notice requirements are governed both by collective bargaining agreement and labour laws. When organisational change or significant events occur that may impact union employees, union leaders are routinely provided with advance notice.
- In Brazil, organisational changes at Elektro are governed by the collective bargaining agreement, which provides guidelines on how these changes should occur, always with prior notice to the union institutions.
- In Mexico, significant operations are reflected in the collective bargaining agreements and notice is provided an average of two to three months in advance.

A breakdown by professional category and region can be found in Annex 3 Supplementary Information.

EU17 Days worked by contractor and subcontractor employees involved in construction, operation and maintenance activities.

To perform those activities that the company deems necessary to carry out at its facilities using subcontracted personnel, Iberdrola follows a procedure of executing services agreements defining the type of activities to be performed, and contractors are responsible for allocating and managing the resources required for the proper performance thereof.

To ensure that the subcontracted activities are performed in alignment with the values of the group, the subcontracted companies:

- Must be approved in accordance with the process described in disclosure 102-9 "Description of Supply Chain" of this report, which takes into account both their technical performance and their labour, environmental and social practices.
- Must meet the requirements set forth in the [contracting terms of the group](#), which take into account financial and quality aspects as well as environmental, labour, health and safety, and social responsibility performance.

Under these terms and conditions, subcontractors, with a total of 12,533,391.7 days worked, manage their technical and human resources and Iberdrola supervises the subcontracted activities performed, and does not deem it necessary to keep statistics regarding subcontracted personnel, except as regards health and safety given the importance of these issues in the social area and because they are considered material topics. Accordingly, this document does not include all the information on subcontracted personnel required by the GRI Standards in disclosures 102-8 and 102-41.

EU18 Contractor and subcontractor employees that have undergone relevant health and safety training.

Subcontractors of the group must meet all requirements established in the Iberdrola group's contracting terms, which can be found in the [contracting terms of the group](#). For that reason, the company believes that 100% of the employees of such companies, regardless of their category, have received appropriate safety and health training.

GRI 403 Occupational health and safety

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Policies and commitments

The [Occupational Safety and Health Policy](#) approved by the Board of Directors describes the principles that should guide the behaviour of the group's companies in this area.

With a view to achieving zero accidents and the best workplace safety conditions, apart from this policy, Iberdrola also has a Global Occupational Safety and Health System, which is aligned with corporate policy and the strictest of international standards and incorporates the group's best practices from all of the countries where it has a presence.

This Global Occupational Safety and Health System is the group's tool for continual improvement, whereby the lessons learned from all events that occur are used to create a global knowledge base to prevent them from being repeated in any part of the Iberdrola group. Furthermore, the System is based on the principle that the group's contractors are its collaborators, and Iberdrola involves them in its occupational safety culture.

In alignment with such Global System, group companies are equipped with specific procedures making up the respective local safety and health systems, which are implemented within each company and externally audited. These systems develop the principles that the company has adopted to ensure compliance with legal requirements and to comply with expectations for the ongoing improvement of activities in this area.

Certifications

In the area of occupational risk prevention, the group has the following evaluation and monitoring mechanisms, which go beyond the legal requirements in each of the countries in which the group has a presence.

- The occupational health and safety management systems of the group's companies in Spain, the United Kingdom, Brazil⁷⁴, Mexico, Portugal, Greece, Hungary and Romania have OHSAS 18001 certification.
- In the United States, the networks businesses in the states of Maine and New York have achieved OHSAS 18001 certification; operations in the states of Connecticut and Massachusetts are expected to be included in the certification in 2018. The Renewables Business successfully completed phase 1 of OHSAS 18001 certification in 2017 and is expected to complete the certification in 2018. Also, within the Renewables Business, the Klamath thermal plant has achieved the highest certification available in that country, the OSHA VPP Star by the OSHA of the State of Oregon.

Objectives

For financial year 2017, safety and health goals have been established at the group level based on the improvement of accident rates, for both its own and contracted personnel, a continuation of annual planning, and the evaluation and implementation of improvements in management systems.

Particular goals have also been established for the businesses, such as obtaining or maintaining OHSAS 18001 certification, the creation of safe behaviour improvement plans, as well as the quantification of risk detection and of monitoring measures implemented.

Responsibilities

⁷⁴ Neoenergia has a Safety and Health Management System that defines work procedures and instructions, which is available on its intranet. The Brazilian subsidiary Elektro obtained OHSAS 18001 certification for more than 50% of its employees. The certification for Termopernambuco and the Teles Pires hydroelectric plant is expected at the beginning of 2018. There is a plan for certification of the companies not yet certified for 2019.

The main responsibility for taking preventive action lies with the company, and therefore, with its organisational hierarchy, which is required to introduce prevention standards, guidelines and policies into all of its activities and decisions, and across all levels of the organisation with executive or decision-making abilities.

In order to assist the company in achieving this end, there is a health and safety organisational structure made up of an Iberdrola Prevention Area within the Human Resources Division in most countries.

In accordance with the principle of integration of occupational risk prevention, the hierarchical/functional organisation of each company is entrusted with giving effect thereto and is responsible for complying with and enforcing health and safety rules within its area of activity.

The companies of the group have occupational safety and health committees, under different names, to establish channels for consultation and participation with the employee representatives in this area, to monitor indicators, and to plan and take measures to correct deficiencies and to improve the Safety and Health System.

Policies and Requirements regarding Health and Safety of Employees and Employees of Contractors and Subcontractors

The health and safety requirements established for the workforce are set forth in the collective bargaining agreement of each company (when applicable), in the procedures making up the Occupational Risk Prevention Management System, and in the internal regulations of each of the group's companies.

As regards contractors and subcontractors, the group's contracting terms, which can be found in the [contracting terms of the group](#) section of the website, specify the requirements to be met by firms wishing to participate in an award process. In addition, the particular conditions regarding occupational risk prevention are set forth in documents of specific requirements in each country, which are also contractual documents.

By way of example, the following are some of the safety and health requirements specified in the contracting terms:

- Subcontracted employees who have specific duties to monitor and control occupational risk prevention must provide evidence of having received the training established for such purpose under the law applicable thereto.
- Subcontracted employees shall have the necessary training to deal with the risks of the facilities and of the work to be performed.
- In submitting an offer, contractors must provide a report on their accident rate for the last three years, specifying the accident rate of the contractor's group or section engaged in the work bid for or in similar work.
- During the performance of the work or service, the contractor must adopt such measures as are necessary to comply with its obligations and those of the companies to which the contractor has subcontracted such work or services.
- The contractor shall be responsible for safety conditions during the period of execution of the works or performance of the service, as well as for any supplementary measures that are required for the proper performance of the subject matter of the contract.

403-1 Employees represented on formal health and safety committees (management/employees).

Spain

In Spain, the companies that are signatories of the *7th Collective Bargaining Agreement* have a central committee that coordinates the activities of the thirty-seven local safety and health committees to which all work centres and administrative units are assigned. These committees regularly consult with the workers' representatives on all safety and health issues that affect them.

United Kingdom

At ScottishPower, a Health and Safety Governance Committee is responsible for the overall strategy and guidelines and governance in this area. It is made up of members of the management team and by the safety and health director. It is supported by the Safety and Health Boards, which meet every six months, and which are made up of representatives of the workers elected from all of the businesses, unions and directors of occupational safety and health.

United States

At Avangrid, in the Networks Business, the Executive Safety Committee and the Strategic Safety Board, along with expert panels and employee safety teams, review work that involves risk-related activities and safety activities that have been undertaken. Unions and executives are also involved through their participation in the committees and regular safety meetings. In the Renewables Business, there are regular meetings of the local executive health and safety committees and of the Central Committee to review health status and the achievement of safety objectives in all regions.

Brazil

At Neoenergia, there is a Safety Committee for each distribution company within the Networks Business. There are also safety and health committees at the Generation and Renewables Businesses of the group, made up of members of the management team and by the businesses' occupational safety and health directors and specialists. These committees report to a Central Committee made up of the group's management team to accompany strategic safety and health actions.

Mexico

Iberdrola Mexico has a mixed safety and health committee at each facility, governed by the Mexican NOM-029-STPS standard and by the collective bargaining agreement. There is also a Safety Committee (COSE) made up of the heads of safety and environment at each facility and coordinated by the Generation Division.

In-house staff represented on health and safety committees (%)	2017	2016
Report boundary	97.14	93.61

46% of the staff of contractors are represented on safety and health committees in Spain and the United States. This analysis will be expanded to the United Kingdom, Brazil, Mexico and Other Countries in the coming years.

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

403-2 Type of injury and rates of injury, occupational diseases, lost days, absenteeism and total number of work-related fatalities, by region and by gender.

Injury rate among group personnel ⁷⁵	2017	2016
Number of accidents	455	472
Men	376	407
Women	79	65
With fatality	0	0
Men	0	0
Women	0	0
With leave	104	108
Men	101	96
Women	3	12
Without leave	341	364
Men	265	311
Women	76	53
Number of fatalities	0	0
Men	0	0
Women	0	0
Number of lost days	4,374	2,877
Men	4,318	2,534
Women	56	343
Injury with leave rate (IR)	0.36	0.36
Men	0.45	0.42
Women	0.05	0.17
Occupational disease rate (ODR)	0.02	0.01
Men	0.03	0.00
Women	0.00	0.03
Lost day rate (LDR)	14.96	9.66
Men	19.01	12.70
Women	0.86	40.33

⁷⁵ Methodology for calculating the indicators (per GRI standard):

- Injury rate (IR) = (number of injuries with missed (absentee) days*200,000)/hours worked
- Occupational disease rate (ODR) = (number of occupational disease cases/hours worked)*200,000
- Lost day rate (LDR) = (calendar days lost per accident, as from first day of leave/hours worked)*200,000
- Absenteeism rate (AR) = (missed (absentee) working days, as from first day of leave/days worked)*200,000

Absenteeism among group personnel ⁷⁹	2017	2016
Number of missed days per year	11,447	15,734
Men	7,420	10,217
Women	4,027	5,517
Number of lost days	189,025	199,665
Men	125,955	130,461
Women	63,070	69,204
Number of person equivalents	517.88	547.03
Men	345.09	357.43
Women	172.79	189.60
Absenteeism rate (AR)	5,171.71	5,508.74

In addition to the indicators mentioned above, the following indicators are considered to be relevant in Spain: frequency rate, severity rate and incidence rate. Information is provided by geographic area and the information from these indexes in Spain is provided in Annex 3 Supplementary Information.

The table below shows the accident and absenteeism rates of subcontracted employees:

Injuries and absenteeism among subcontracted personnel	2017	2016
Number of accidents	631	438
Men	614	N/Av.
Women	17	N/Av.
With fatality	13	4
Men	13	N/Av.
Women	0	N/Av.
With leave	309	268
Men	307	N/Av.
Women	2	N/Av.
Without leave	309	166⁷⁶
Men	294	N/Av.
Women	15	N/Av.
Number of fatalities	13	4
Men	13	N/Av.
Women	0	N/Av.
Number of lost days	11,927	10,194
Injury with leave rate (IR)	0.643	0.543

Despite the gradual reduction in the number of injuries among contracted personnel achieved through 2016, there was an unusual increase in fatal injuries with contracted personnel in 2017 (mainly in Brazil, where there were 10 deaths among contracted personnel of Neoenrgia, a company recently integrated into the group). The company has established an action plan to reduce them with actions in the short, medium

⁷⁶ Does not contain information from Neoenrgia.

and long term. These measures include improvements in the classification and monitoring of contractor performance, training, operating processes, and in some cases, contracting of internal staff in order to improve control over the performance of key tasks. This plan is already rendering its first results in the form of a reduced injury rate.

Management of health and safety is organised in accordance with the guidelines set out in the OHSAS 18001 standard, as described in the management approach for this section, ensuring that the group has monitoring and evaluation mechanisms in all operations that go beyond legal requirements.

403-3 Workers with high incidence or high risk of diseases related to their occupation

The Iberdrola group's companies monitor the health of their employees for prevention purposes, using in-house or outsourced medical services that are responsible for monitoring the health of employees through regular medical check-ups.

In general terms, the group considers that employees are not exposed to specific occupational or work-related diseases in the course of their work that may be considered to have a high level of incidence or to carry a high risk.

403-4 Health and safety topics covered in formal agreements with trade unions

All work centres and administrative units of the companies that are signatories of the *7th Collective Bargaining Agreement* in Spain are assigned to local safety and health committees. Overall, there are thirty-seven committees, which coordinate their activities through a Central Committee. All were created in accordance with the Occupational Risk Prevention Act and are formed with equal representation between the company and the workers. In 2017, the committees met on a quarterly basis and were the most important consultation, participation and control bodies of the Occupational Risk Prevention Management System, as well as the forum where formal agreements on the matter were reached with the trade unions. The bodies responsible for coordinating and monitoring the implementation of preventive standards and procedures are the Prevention Coordinating Committees, working closely with the Joint Prevention Service.

At ScottishPower, an *Occupational Health and Safety Policy* sets forth the company's principles to ensure compliance with statutory requirements and to comply with the expected on-going improvement in this matter. At these ScottishPower companies, where unions are formally recognised, the health and safety issues or agreements are specified through the general constitution of the company's Consultative and Negotiating Council. This document is agreed between the company and the union representatives. This document has a specific section dedicated to forming the terms of reference for the Health & Safety Council, which meets every six months.

At Avangrid, the Networks Business and trade unions have signed various collective bargaining agreements that cover personal protective equipment, and worker participation in inspections, audits, incident investigations, training and grievance mechanisms. Within the Renewables Business, the process to develop both occupational safety and health regulations and training is carried out by a committee made up of executive officers, health and safety personnel and field personnel.

Neoenergia has a Safety and Health Management System that defines work procedures and instructions, which is available on its intranet. The companies within Iberdrola's domain that have not implemented such a system have developed a certification plan for 2019. The company also has a Safety Committee that ensures the effectiveness of activities and communication on risk prevention actions as a value that informs all of its activities and is part of the company's culture. The company also has 62 internal accident

prevention committees. The committees are made up 50% of company representatives and 50% of worker representatives.

At Iberdrola Mexico, organised workers have a collective bargaining agreement that deals with safety issues like EPIs, safety organisation, worker representation, handling of accidents and professional diseases, application of health and safety law, etc.

In other countries the Renewables Business has safety management systems duly certified under OHSAS 18.001:2007, there are committees with the participation of the company and employees that deal with occurrences in the area of health and safety at the end of each month and reporting on noteworthy activities and plans for future actions.

GRI 404 Training and education

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Policies and commitments

Iberdrola recognises the importance of intellectual capital to the company in its [Knowledge Management Policy](#). In implementing this policy, which is intended to disseminate and share the knowledge existing within the company by fostering ongoing learning and cultural exchange, Iberdrola reaffirms that the company's intellectual capital depends on its people, its operational and organisational structures, and its internal and external relationships with all Stakeholder groups. At Iberdrola, learning is thus permanent, ongoing and aligned with the strategy of the group.

At Iberdrola, training and development are considered to be a key factor to the success of the organisation. This understanding is embodied in the design of specific programmes to equip Iberdrola's professionals with the qualifications needed to perform their roles, and to foster a culture of development, value creation and ongoing improvement that allows them to assume new responsibilities in the future. These plans are validated by the heads of the businesses and by the Human Resources Division.

The commitments assumed with the start-up of these plans and programmes are summarised below:

- Alignment with the strategic goals of the company.
- Professional improvement for job performance.
- Better professional development, fostering personal advancement and employability.
- Adjustment of human resources to technological and organisational changes.
- Adaptation of new employees to the company.
- Ease of access to an international job framework.

Specific Goals and Activities

The following significant training and development activities were carried out during 2017:

- The Iberdrola Campus has become the company's leading training centre in Spain. These facilities house training and development activities across all knowledge areas and for all Iberdrola groups. In 2017, it hosted numerous courses, development programmes and corporate events, and construction has begun on the second phase of the project.
- There has been an expansion of the catalogue of development resources, available at the global level, within the framework of the Personal Development Plans (PDPs), making new online courses available to the employees in English and Spanish. A new cycle of the process of preparing PDPs in Spain, the United Kingdom, the United States, Brazil and Mexico has also begun.
- Strengthening of professional development resources aimed at persons with management potential.
- As a result of the overall work of reviewing the portfolio of training and development activities, work has continued on defining the *Development Roadmap*, with the design of a global programme for those professionals in their preliminary management stages in order to strengthen the abilities and skills needed for the management of teams. This programme will be implemented locally, adapting to the needs of each country. Spain saw the launch of a pilot edition under the name DINAMO, with a modular skills structure. The other countries (the United Kingdom, the United States, Brazil and Mexico) are working on review and design to adjust it to the global model, and will implement it during 2018.
- There is a continuation of the language programme (Pangea), which combines the various features of the three languages of the company (Spanish, English and Portuguese) based on a new website that can be accessed by all Iberdrola's employees in Spain.
- A new development programme has been launched for a group of junior professionals who recently joined the company in Spain, the United Kingdom, the United States and Mexico. This programme is intended not only to facilitate their welcome and inclusion into the company, but also to strengthen their professional development. It consists of global activities, including a Mentoring programme in which they are given the opportunity to be tutored by long-time managers of the company, as well as local activities, including training programmes made up of technical and skills-based modules, rotational programmes, visits to company facilities and headquarters, and assignment to a technical tutor.
- The evaluation of the leadership skills and identification of employee potential through a homogeneous global process has continued. After this first analysis, development meetings continue to be held with employees identified as having potential in Spain, the United States, the United Kingdom, Brazil and Mexico. This has provided significant information at the individual and global level and has served to design a Global Development Programme for professionals identified as having executive potential, which is made up of: global and local training programmes, participation in mentoring programmes as mentors or mentees, participation in coaching programmes, internal mobility programmes, participation in individual projects, and participation in events with Senior Management to increase their visibility. As a result of this programme, a large group of the identified persons have already engaged in some of these activities during 2017.
- In the area of talent management, there have been development meetings with professionals in the various countries in which Iberdrola has a presence in order to improve knowledge about their skills, interests, professional aspirations and development needs.
- There is a new edition of the mentoring programme designed for the participants in the *Early Career Global Program (ECGP)*, which is intended to help with the adjustment and integration of junior professionals from the United States, Mexico, Brazil and the United Kingdom to their new responsibilities in Spain, as well as to strengthen their professional development with the support of an internal mentor from the company.

- There is a new programme focused on increasing internal mobility through Job Swaps, as a lever for professional development, between the employees of Spain and the United Kingdom.
- The global initiatives related to virtual training include the launch of the following courses for all employees: “*Procurement Policy* awareness-raising”, “Introduction to Climate Change”, “*Code of Ethics*” and “Corporate Social Responsibility”; and the course “La energía que mueve el mundo” (The energy that moves the world) has been made available to Spanish-speaking employees. These courses fit within the line of strengthening the values of the company.

404-1 Hours of training

Employees and hours of training by professional category and gender	2017		2016	
	Men	Women	Men	Women
Hours of training	21,477	5,225	19,734	4,766
Management team				
Middle managers and skilled technicians	355,838	132,073	440,544	129,480
Skilled workers and support personnel				
	895,808	96,690	649,260	121,210
Average hours of training per employee	18.06	28.09	33.62	35.83
Management team				
Middle managers and skilled technicians	33.55	26.96	40.46	33.22
Skilled workers and support personnel				
	56.16	30.16	51.92	55.40

The differences between men and women are a result of the different specific training for the various professional categories of the workforce, and are not due to a policy of discrimination.

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

404-2 Programmes for skills management and lifelong learning

The Iberdrola group believes that professional development contributes to achievement of the company's results and improving the efficiency of the organisation, by equipping employees with the skills and competencies they need to perform their work efficiently today and preparing them to undertake greater responsibilities and challenges in the future.

In addition to the specific activities and goals described in the “Management approach”, various development and training programmes have been carried out in 2017.

Iberdrola has various programmes aimed towards those who have been identified as professionals with the potential for management development, including the two-and-a-half year *MBA in the Global Energy Industry* offered by Universidad Pontificia de Comillas in Madrid and the Strathclyde University Business School in Glasgow. This is a global programme with participating professionals from Spain, the United States, the United Kingdom, Brazil and Mexico. The second edition of this programme concluded successfully in 2017 and the third edition has commenced.

For technicians and middle managers, Iberdrola has a global skills-based development model implemented through a process that permits the formation of personal development plans for these professionals. Through various development resources such as on-site activities, workshops, online resources or jobsite actions, the programme allows employees to work in annual periods on the development of their

professional skills. In Spain, this process takes the form of the SAVIA programme, which, after a one-year extension, finalised its third cycle in 2016, and has thus commenced a new biannual cycle in 2017 (4th Edition).

In addition to the resources available in the skills-based development model, Iberdrola continued offering specific skills development programmes in 2017 to ensure that employees not only have the necessary training to perform their tasks efficiently but are prepared to assume new responsibilities in the future. These activities are provided locally and are adapted to the particular culture and characteristics of each country.

Iberdrola also continued offering its Welcome Plans (*Planes de acogida*) for new employees in 2017. These plans afford an overall vision of the company and familiarisation with its culture and values. In addition to these onsite plans, all Iberdrola employees can access the virtual global welcome module, available in English, Spanish and Portuguese.

In line with the 70/20/10 model, a model of learning and development supported by the theory that 70% of a professional's learning comes from experience and on-the-job practice (learning by doing), 20% is acquired through conversations and feedback with other people, and only 10% comes from structured courses and programmes, the company also has mentoring programmes that serve not only to develop the skills of our professionals but also as a knowledge management tool, including the one described in the Management Approach directed towards participants in the international mobility programme called *Early Career Global Program*.

2017 saw the continuation of various working sessions, mainly with ScottishPower, Avangrid, Neoenergia and Iberdrola Mexico, primarily in order to exchange knowledge, information and experience in the training and development areas. Along these lines, the Annual Development Meeting of the Executives and Talent area was held in Scotland in 2017.

Specific Training for Executives

The Executive Management and Talent Unit worked during 2017 on coordinating and supervising the global talent management process in the various countries; it also attends to all management training and development needs through the Management School, with the following noteworthy programmes conducted in 2017:

- *Energising Leadership Programme*, taught by ESADE Business School. Geared towards management trainees with high potential and/or executives who are beginning their careers.
- *Leading in a Volatile, Uncertain, Complex and Ambiguous world (VUCA world)*. This programme analyses the challenges that executives face in their daily activities as a result of this new environment.
- *Global Leadership Programme*, taught by IMD Business School. Programme directed towards executives with experience and a background within the organisation. The main goal is to help them develop their leadership abilities in a global environment, working on personal skills and provoking a process of individual transformation.
- *Driving Leadership Transformation Programme*, jointly taught by IESE and IMD Business School. This new programme is directed towards established executives who have a track record with the group and who have already taken the Global Leadership Programme. The main goal is to complete and strengthen previously-acquired knowledge.
- In Spain, the *Lead by Communicating* and the *Personal Productivity* improvement programmes (Getting Things Done methodology) are still being provided, and there has been a strengthening of

the programmes *Conversaciones poderosas* (Powerful conversations), *Cómo hacer CRECER a tu equipo* (How to make your team BELIEVE), *Taller de mindfulness ¡Transforma tus límites en posibilidades!* (Mindfulness workshop - Transform your limits into possibilities!) and *Coaching ejecutivo* (Executive coaching), as part of the training offering for the management team in Spain.

- Various executives from Neoenergia, Avangrid and ScottishPower participated in their respective local coaching programmes.
- ScottishPower continued with the *Leadership Excellence* programme based on the elements of Iberdrola's leadership model.
- Avangrid has continued to successfully offer its programme *Working Successfully Across Cultures*, focused on learning about and understanding cultural differences. Avangrid also began a process of redesigning its training and development offer for its management team in 2017.

Other activities with the management team in 2017 included the holding of conferences, workshops, meetings, etc., as well as continued access to e-Leaders, the Management School's virtual space, in both its web and mobile versions.

404-3 Employees receiving regular performance and career development reviews

At the Iberdrola group, employees are included in formal performance review processes, which vary based on the internal level of the employees and their corresponding responsibility, as well as the country in which they are located. These processes have an impact on variable remuneration and the annual salary review.

Employees can be reviewed through two types of processes, based on the level of responsibility relating to their position.

Executive officers:

- Goals review ("What"): measurable, quantifiable and specific goals to be achieved over the course of the review period, relating to the goals of the company. This process affects variable remuneration.
- Performance review ("How"): review of conduct during the achievement of the goals. This has an impact both on the employee's annual review and on their personal development plan for the future.

Other employees:

- Performance review ("How"): in this case, the performance review is used for the calculation of the annual salary increase and for the calculation of variable remuneration. Employees are reviewed on the basis of a number of personal competencies.

A tool has been developed for these processes with the support of SAP that allows management of the Human Resources processes relating to review, development and remuneration, amongst other things. In this way, all users involved in such processes (employee, evaluator and Human Resources team) can work in real time and globally. However, the main advantage of this tool is that it allows for the global handling of all participants, thereby unifying the focus and standards of application to help ensure that a single global policy applies to all employees.

As regards the multidimensional review process, a 360° review is applied at only one of the companies of the group, which includes approximately 14% of the group's employees. This type of review is performed every two years, alternating with a standard performance review.

Performance and development reviews	2017	2016
Number of employees	34,255	34,082
Men	26,229	25,925
Management team	736	693
Middle managers and skilled technicians	10,005	11,720
Skilled workers and support personnel	15,488	13,512
Women	8,026	8,157

Skilled workers and support personnel	3,163	3,127
Employees with performance reviews (%)	84.15	85.38
Men (%)	83.58	85.13
Management team	94.57	97.11
Middle managers and skilled technicians	96.20	98.23
Skilled workers and support personnel	74.91	73.13
Women (%)	86.00	86.18
Management team	90.10	98.14
Middle managers and skilled technicians	95.23	94.31
Skilled workers and support personnel	72.15	72.95

A breakdown by geographic area can be found in Annex 3 Supplementary Information.

GRI 405 Diversity and equal opportunity

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Policies and commitments

The development of labour relations based on equal opportunity, non-discrimination and respect for diversity are key goals in the company's *Human Resources Framework Policy*.

The policies applied by Iberdrola in the area of labour relations are identified in the introduction to this chapter, and include the [Equal Opportunity and Reconciliation Policy](#), which promotes the commitments of equal treatment between men and women and support for workers with diverse abilities, promoting their effective employment.

The group's companies, in the various countries in which they operate, promote equal opportunity and respect diversity, effective equality between men and women in access to employment, training, promotion and working conditions, and provide support to workers with diverse abilities, facilitating their integration into the workplace.

To put the principle of diversity and equal opportunities into effect, in Spain the *7th Collective Bargaining Agreement* includes an Equality Plan within the framework of labour relations (hiring, training, promotion, remuneration, etc.), which guarantees such principle. Within the Equality Plan, an Equal Opportunity Committee has been created with the main mission of engaging in an appropriate review of the measures implemented to ensure equal opportunities and non-discrimination, and to encourage the inclusion of new activities in this area. A number of appropriate measures are also established for workers with disabilities in order for them to adjust to and access the work position, based on the requirements and characteristics thereof and on the needs in each specific situation, which facilitates their integration. In turn, Iberdrola continues collaboration with the Diversity Charter, of which it has been a signatory since 2009, and has the category of patron member; as such, it respects prevailing legal provisions in terms of equal opportunity and non-discrimination, and puts diversity policies into practice.

In the United Kingdom, ScottishPower is committed to policies that promote diversity in order to create an innovative and integrative work environment, for which reason it has a Diversity and Inclusion Governance Committee. The British subsidiary guarantees equal opportunity in selection processes for persons with disabilities, and for this reason received the Disability Confident Standard award and also holds one of the highest positions in the Carers Scotland ranking.

In the United States, Avangrid has a four diversity policies: equal opportunity in access to employment, support for disabled persons or disabled veterans, promotion of a non-discriminatory work environment and combating sexual harassment in the workplace.

In Brazil, Neoenergia's most important goals include the hiring of disabled persons, and specifically, its subsidiary Elektro has designed a training course to facilitate access by these persons to work positions within the company. There has also been an analysis of the suitability of the work positions for each of the people with various disabilities in order to relocate them into more appropriate positions if required.

Two companies of Neoenergia have been recognised by the consultant Great Place to Work: Elektro as the best company to work for in Latin America, and Cosern as one of the most valued companies to work for.

Iberdrola Mexico complies with the group's policies to generate an inclusive labour environment.

Objectives

The main goals in this area during 2017 have focused on:

- The encouragement of reconciliation between employees' work and family life, which includes measures to ensure compatibility between a positive experience of parenthood and a successful professional career.
- The development of labour relations based on equal opportunity, non-discrimination and respect for diversity.

- The fostering of diversity and the social inclusion of vulnerable groups through the corporate volunteer programme, which affords our employees an opportunity to participate in various community support initiatives to raise awareness of this group and to improve the quality of their life.

Specific activities

- Iberdrola has been included in Bloomberg's 2018 GEI (Gender Equality Index) as one of the best companies recognised for its policies in favour of gender equality and its best practices in the area of work/life balance.
- In recognition of the company's work in the area of reconciliation, in 2017 Iberdrola was also awarded the Vocento Business Award for Work/Life Balance (*Premio Empresarial Vocento a la Conciliación*) for its commitment to the quality of life of its employees as well as for reconciling work with family. In Spain, Iberdrola was the first Ibex 35 company to apply the shortened uninterrupted workday (*jornada continuada*), a pioneering measure, among a set of more than 70 practices included in the company's *Reconciliation Policies Manual*.
- In Spain, there are various options for employees on non-school days, and educational courses for children. There has also been a continuation of the "Iberdrola Parents' School", which offers employees the opportunity to participate with their children in various programmes. And as is the case every year, there have been summer camps for the children of employees, especially taking into account those with different abilities.

In addition, in order to comply with the principle of non-discrimination for reasons of diverse abilities, arrangements were made to obtain disability certificates for those employees who applied for them. 80 families have also benefited from the Family Plan, which is intended to facilitate the social and workplace integration of family members with a disability who are the dependent of an employee. Finally, donations have been made to entities or foundations whose purpose is professional training, entry into the job market or the creation of employment for persons with disabilities; and contracts have been signed with special employment centres, in excess of the amount required by law for investment in alternative measures, thus promoting protected employment.

- As regards diversity, the group has held the *Hello/Hola* and *My Guest (Mi invitado)* cultural exchange programs for the children of employees in Spain, the United Kingdom and the United States.
- In the United States, Avangrid has continued its collaboration with various initiatives supporting diversity, like *Troops to Energy* jobs to foster the inclusion of veterans in the workforce; and it forms part of the consortium, along with other services companies, to discuss good practices to achieve this goal.
- In the United Kingdom, ScottishPower continued during 2017 with its commitment to well-known entities such as the Business Disability Forum, Employers Network for Equality & Inclusion, Equate, Working Families, ENABLE, POWERful Women and Stonewall, and has maintained the certification granted by Tommy's Healthy Pregnancy Charity. It is also a member of the Women's Engineering Society, the goal of which is to help women with engineering training and motivate girls to study careers in engineering as a professional option. During 2017 ScottishPower sponsored The Topgraph 50 and the Women in Engineering Campaign and supported the International Women In Engineering Day. The British subsidiary has also engaged in e-learning and training activities on diversity to increase the awareness of its workforce in this area, and was one of the main sponsors of the first national conference on diversity, which brought together employers, representatives of the education

sector and third sector (civil society) organisations in order to share information and positive experiences to promote diversity among their workforces.

405-1 Composition of governance bodies and employees

It is presented at the country level given the occupational idiosyncrasies of each jurisdiction and its applicable laws.

GRI 406 Non-discrimination

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Iberdrola has appropriate procedures in place to prevent any discrimination for reasons of race, colour, gender, language, religion, political opinion, national origin, social status, status as a member of an indigenous community, disability, health, marital status, pregnancy, sexual orientation or other personal condition that is unrelated to job-performance requirements.

The principles of non-discrimination and equal opportunity applied at the Iberdrola group are contained in both the *Code of Ethics* and in the global policies and procedures that have been approved and implemented (*Recruitment and Selection Policy*, *Equal Opportunity and Reconciliation Policy*, etc.) and in local collective bargaining agreements and policies such as:

- Equality and Reconciliation Plan and Anti-Harassment Action Plan for companies of the *7th Collective Bargaining Agreement* in Spain.
- Policies on equal opportunity and reconciliation, anti-age discrimination, people with disabilities, equal pay, harassment and flexible working policies, as applied in the United Kingdom.
- Equal remuneration policy at Elektro, subsidiary of Neoenergia, in Brazil.

⁷⁸ Index under 100 indicates a negative salary breach, i.e. average salary received by women above the average salary received by men for the category.

⁷⁹ Data from Brazil for prior year not provided due to change in boundary.

The application of all these instruments ensure that selection processes are based on the candidate's merits, enabling non-discriminatory participation in these processes.

Iberdrola believes that non-discrimination in the work place is a concept that is managed in a coordinated fashion with the concepts of diversity and equal opportunity. Therefore, the management of non-discrimination is described in detail in the preceding section, GRI 405 "Diversity and equal opportunity".

406-1 Incidents of discrimination

Reported incidents of discrimination (no.)	2017	2016
Report boundary	12	7

During 2017, the group received a total of 12 reports regarding aspects of labour discrimination and equal opportunity through the various channels provided to its professionals. 8 of the 12 cases recorded are still open. Of the cases that have already been closed (4), one of them was resolved with a written notice, another with a verbal notice, and the rest were closed without specifying action to be taken by the relevant company.

GRI 407 Freedom of association and collective bargaining GRI 408 Child labour GRI 409 Forced or compulsory labour

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

The group has a firm commitment to the human and labour rights recognised in domestic and international law and to the principles on which the United Nations Global Compact is based, the Guiding Principles on Business and Human Rights. Along these lines, Iberdrola adopts the measures it believes are necessary to ensure that workers can exercise their rights to freedom of association and collective bargaining in all the countries in which it operates. It also has the necessary measures in place to prevent child labour, forced or compulsory labour or the assignment of hazardous work to young people.

407-1 Operations and suppliers identified in which the right to exercise freedom of association and collective bargaining may be violated or at significant risk

408-1 Operations and suppliers identified as having significant risk for incidents of child labour

409-1 Operations and suppliers identified as having significant risk for incidents of forced or compulsory labour

Information regarding locations of operations analysed for human rights issues can be found in disclosure 412-1, and information regarding suppliers can be found in section GRI 414 "Supplier social assessment", both in this chapter.

GRI 410 Security practices

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

The Corporate [Corporate Security Policy](#) approved by Iberdrola's Board of Directors and the procedures adopted by the Corporate Security Division are compatible with international human rights provisions and with the laws of the countries in which the company is present.

With the certification granted by Aenor and IQNet since 1999 and recently renewed based on the new ISO 9001:2015 standard, the action protocols are defined and implemented in all activities and services provided.

The hiring of suppliers in the security area is carried out through the Procurement Division pursuant to contracting procedures in force at the corporate level. The Corporate Security Division is responsible for setting the requirements and standards to be met by such suppliers in order to be hired, both in terms of physical security as well as cybersecurity, and for the evaluation thereof during the performance of their contract. Evaluations of suppliers are carried out periodically and are intended to identify points for improvement, which are dealt with by the suppliers themselves.

Both employees as well as subcontracted personnel are qualified in their duties and reinforce their knowledge with a rigorous Training Plan that involves an evaluation and ongoing monitoring thereof. Internal and external audits conducted for such purpose provide information on the status of security and personnel involvement at each work centre, detecting strong points and strengthening weaker ones. In addition, in order to have an objective viewpoint, a satisfaction survey is carried out each year to help determine perception of the security status.

Security-related actions at Iberdrola relate to the provision of both preventive and reactive services, which seek to ensure the protection of its assets and the normal conduct of the company's activities, without interfering with the mission of government authorities. Security personnel working at Iberdrola, whether Iberdrola's own employees or subcontracted personnel, avoid the use of force, employing it only and exclusively where strictly necessary and always in proportion to the threat received, in order to protect life.

By implementing specific security procedures for each situation, Iberdrola's *Security Policy* facilitates adjustment to the realities and characteristics of the countries in which it operates, exercising direct responsibility in those cases where it is a majority equity holder, as well as in those where management has been entrusted to it.

Iberdrola's Security Management System is continuously reviewed and updated in order to comply with international human rights provisions in each new activity that it plans to undertake.

410-1 Percentage of security personnel trained in human rights policies or procedures that are relevant to operations

Persons carrying out security activities (no.)	2017	2016
Company personnel	140	130
Subcontracted personnel	1,483	1,242

At the end of financial year 2017, Iberdrola had 140 persons in its workforce to carry out security activities, of which practically 100% have received human rights training, a total of 139 people. It also draws on the services of specialised firms, which are responsible for providing the specific training required by their professionals to carry out the work entrusted to them. In financial year 2017, 1,483 subcontracted persons did this type of work, of which 1,240 (84%) have received human rights training.

This includes Iberdrola's effort to improve the training of its personnel in this area, as can be seen in the considerable increase in trained personnel over financial year 2016, with respect to both in-house staff (+15%) and subcontracted personnel (+17%).

GRI 411 Rights of indigenous peoples

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

In applying the *Code of Ethics* and its corporate policies (especially the *Policy on Respect for Human Rights*), Iberdrola and its employees undertake to respect both ethnic minorities and the internationally recognised rights of indigenous peoples, in accordance with applicable law and the obligations set out in Convention 169 of the International Labour Organization (ILO).

The company wants business activities to be carried out with respect for different cultural identities, traditions and environmental wealth, as many times these communities depend on natural resources for their subsistence. Therefore, it establishes pathways of dialogue with the participation of the State and of various organisations representing these communities, in order to report with due transparency and integrity. Ultimately, it is the promotion of ethical practices with the goal of preventing conflicts, being competitive and generating mutual benefit, which in the long term is the base social value.

411-1 Total number of incidents of violations involving rights of indigenous people

Iberdrola has a presence in 3 countries in which there are indigenous communities: Brazil, Mexico and the United States. There may be direct or indirect incidents involving these types of communities at some of the company's facilities, for which appropriate solutions are always sought. Specifically, there were 4 incidents with indigenous communities in Brazil in 2017.

In August 2017, after the integration of Elektro (100% owned by IBE) into Neoenergia (39% owned by IBE) in Brazil, Iberdrola became the majority shareholder, with 52.45% of Neoenergia, S.A., a company which in turn holds 10% of Norte Energía, S.A.

Norte Energía, S.A. is the company responsible for the construction and operation of the Belo Monte hydroelectric plant, where there have been impacts on the indigenous communities occupying the region of Medio Río Xingu, in the state of Pará. Specifically, a total of 9 ethnicities (around 3,857 indigenous persons) were affected. In order to mitigate, compensate or prevent such impacts, Norte Energía prepared an ethnological study, and based on that study prepared a Basic Environmental Plan for the Indigenous Component (*Plan Básico Ambiental para el Componente Indígena*) (PBA-CI).

This basic plan is made up of nine programmes: i) Environmental Supervision Programme; Indigenous Territory Management Programme; ii) Works and Infrastructure Programme; iii) Productive Activities Programme; iv) Integrated Indigenous Health Programme; v) Indigenous School Education Programme; vi) Institutional Strengthening Programme; vii) Tangible and Intangible Cultural Heritage Protection Programme; viii) Relocation and Resettlement Programme; and ix) Indigenous and Non-Indigenous Communication Programme. The company also prepared the Medio Xingu Territorial Protection Programme (*Programa de Protección Territorial del Medio Xingu*) (PPTMX) based on the relocation of populations called “riparians” (*riberieños*). Approximately 300 families have been relocated to date, seeking the re-establishment of the traditional life style with the preparation of sites on the edges of the dam (a total of 121), always taking into account applicable environmental law as well as environmental sustainability.

The PBA-CI will be developed during the period of the concession, i.e. 35 years. The plan is to be reviewed every 5 years in order to update it and thus ensure that indigenous rights are respected.

Neoenergia, S.A. also holds 50.1% of Companhia Hidrelétrica Teles Pires, responsible for the construction and operation of the Teles Pires hydroelectric plant, located on the border of the states of Pará and Mato Grosso, on the Teles Pires river, an affluent of the Tapajós river, next to the municipalities of Jacareacanga and Paranaíta.

In its relations with the indigenous communities, Companhia Hidrelétrica Teles Pires has established a joint dialogue with the National Indigenous Foundation (*Fundación Nacional del Indio* - FUNAI), the Federal Public Ministry and indigenous leaders of each ethnicity affected by the project in order to respond to the demands and wishes of each community. The Basic Environmental Plan for the Indigenous Component (PBA-CI) was jointly prepared and approved along with 19 socio-environmental programmes to mitigate and sustainably encourage the cultural, social and economic activities of the ethnicities of the area.

This plan is currently being implemented by Companhia Hidrelétrica Teles Pires and the works approved for the Kayabi have already been completed, the works for the Munduruku are in the final process, and the works for the Apiaká have started. The approved timetable is being met and the plan is revised based on any difficulties in implementation or delay in activities, which are timely adjusted when necessary.

Grid construction activities in the country are carried out under the principle of the *Clean Production* technique, which seeks to lower the local environmental impact of the operations, with reduced suppression of native vegetation, prioritising the plotting of lines through areas that are already transformed by human activity or on existing motorways, as well as the use of protected cables for better co-existence with existing forestation.

The indigenous and quilombola communities without access to the supply grid benefit from the installation of photovoltaic systems made up of solar panels, charge controllers, voltage inverters and batteries. In

order to implement any service in the indigenous communities, the company first contacts FUNAI, and this process was adopted for the Tapi-i and Takuary-Ty communities located in the municipality of Cananéia (Sao Paulo) and in five other indigenous villages, as well as the indigenous community of Aldea Boa Vista, in Ubatuba (Sao Paulo), which were instructed on the operation of the technology and also on the related risks. The quilombola community located in Eldorado (Sao Paulo) also participated in the social project *Meninos Ecológicos*, by means of which young people from 16 to 18 years old carry out activities such as gathering seeds and producing cuttings in tree nurseries for reforestation.

In Mexico, none of the activities have produced any type of negative impact on indigenous communities.

In the United States, in the State of California, during the construction of the Tule Wind Project, a community near Boulevard, California and the Tribes of the Kumeyaay Nation were affected by the project, as various new cultural resources were found, but no incident arose with these communities because each of the impacts was timely handled by the company, which formally consulted with tribal representatives and the Bureau of Land Management (BLM). The representatives of each group met various times during 2017 to better understand the tribal concerns, analyse alternatives and agree on mitigation measures. Some of the protection measures included halting construction until appropriate mitigation was agreed upon, moving the locations of the turbines when line of sight concerns arose due to religious beliefs and practices, and moving some project infrastructure like roads, posts for collector lines and others to avoid impacting the cultural resources. Other mitigation measures include fencing off sensitive areas and offering to install interpretative signage to describe the history of the area and the Kumeyaay Nation. From the beginning of this project it was agreed to donate almost 180,000 euros to the Imperial Valley Desert Museum to catalogue and store any cultural artefact found during the construction, and the donation was made in June 2017.

GRI 412 Human rights assessment

Management approach

In its [Policy on Respect for Human Rights](#), Iberdrola has acquired the following commitments, among others:

- Respect the human and labour rights recognised by domestic and international law, as well as adhere to international standards in those countries in which human rights law has been sufficiently developed.
- Reject child labour and forced or compulsory labour, and to respect freedom of association and collective bargaining as well as non-discrimination, the right to freedom of movement within each country, and the rights of ethnic minorities and of indigenous peoples in the places in which it carries out its activities.
- Promote a culture of respect for human rights and awareness among its professionals in this field at all of the group companies and, in particular, at those in which there may be a higher risk of violation of such rights.

To progress with the implementation of these commitments, it has designed a *Human Rights Management Model*, in which cross-cutting activities and goals have been planned for the entire organisation. In parallel, it is working to review human rights due diligence, which focuses on people, specifically on the relations of the company with affected parties, and it is therefore imperative to obtain a first-hand understanding of the needs of the Stakeholders. Iberdrola has developed a new *Stakeholder Relations Model*, which ensures the existence of appropriate channels of communication for each of them, which helps to better identify

significant issues and will allow for the prevention and mitigation of and response to the main risks and impacts with appropriate agility.

412-1 Total number and percentage of operations that have been subject to human rights reviews or impact assessments

In developing the human rights due diligence process, Iberdrola has updated its risk map by country and business in order to identify the actual and potential impacts of its activities on these rights. To do this, it has used an internal methodology which makes assessments based on the countries ratifying or joining the following international conventions and treaties:

- Forced Labour (C029, C105), Right to Organise and Collective Bargaining (C087, C098), Child Labour (C138, C182) and Non-discrimination (C100, C111).
- Convention C169 on Indigenous and Tribal Peoples.
- The 2017 report of the International Labour Organisation (ILO) entitled *Report of the Committee of Experts on the Application of Conventions and Recommendations*.
- International Covenant on Civil and Political Rights.
- International Covenant on Economic, Social and Cultural Rights.
- American Convention on Human Rights signed at the Inter-American Specialized Conference on Human Rights (Treaty B-32).
- European Social Charter (Turin, 18 October 1961).

The position of countries on the following indexes and studies has also been taken into account:

- UNDP Human Development Index (2015 data, the latest available during the study).
- Transparency International (Corruption Risk, 2016 data, the latest available during the study).
- Countries involved in armed conflict (*Report on Conflicts, Human Rights and Peace Processes. 2016 Alert*. School for a Culture of Peace).

Once the risk map was updated, the data were cross-checked against the analysis identifying the significant locations of operation, in order to know what percentage thereof might have a risk of violating these rights.

Of the 114 significant locations of operation (detailed information in disclosure GRI 102-7) covered by analysis or impact evaluations in the area of human rights (100% of the significant locations), 29 of them (25% of the group total) are in Brazil and Mexico, countries considered to be at risk for violation of these rights.

As a result of this analysis, the United States and Canada could also be considered countries at risk, as they have not yet ratified or joined several of such labour conventions. However, given the socio-political characteristics of these two countries and taking into account the internal procedures defined for the U.S. subsidiary Avangrid, Iberdrola does not believe there is a risk of violation of these rights for the group's workers.

Once possible actual or potential risks of the company's activities are detected, there is an internal review at the corporate level of the framework of policies, processes, persons responsible and current resources to detect any breach in the due diligence process. This analysis will be completed during 2018 with the help

of independent experts and will be completed at the country level during 2019, in which period a new Action Plan will be prepared to review policies, management procedures and grievance and complaint mechanisms, and actions to be implemented in the short, medium and long term will be proposed, all in order to prevent, mitigate and/or repair impacts considered to be priority after the analysis at both the corporate and country level.

412-2 Employee training on human rights

Due to the importance that the company attaches to respect for human rights, various training initiatives have been undertaken in this field over the years for the prevention of violations of both labour and social rights, thus complying with the company's commitment to continuous improvement. Various courses have been provided, such as respect for human rights, security personnel, code of ethics, anti-harassment, equality and non-discrimination, diversity and inclusion, health and safety, legal hiring and performance, climate change, keys for the protection of information, practical advice on cyber-security, etc.

The goal of these courses is to inform the entire organisation of the social and labour rights affecting the activities of the company and to train all employees on the prevention of risks in the operations of the company and on the mitigation and remediation of possible impacts that might occur in the event of any violation of human rights.

During 2017 Iberdrola drove awareness of the human rights of employees throughout the group with more than 200,000 hours of training in this area, as it believes that all employees must become involved in compliance activities and in the dissemination and reporting of any violation in connection with this aspect, and that the entire team is responsible for ensuring that respect for human rights is a reality.

Iberdrola is also aware that merely internal awareness-raising is not sufficient and has therefore set the goal of translating its business culture to the supply chain, acting as a lever to raise awareness on these issues.

412-3 Investment agreements and contracts that include human rights clauses

The policies, codes and procedures governing the operation of the company are applied in all of Iberdrola's activities, including investments. Specifically, the *Procurement Policy*, which contains the general contracting terms of the Iberdrola group, includes a specific section on respect for human rights. For that reason, Iberdrola is confident that investments are made in accordance with strict standards of respect for human rights, and has received no evidence through the channels established for such purpose of any kind of activity, whether internal or external, that is contrary to the protection of these rights.

Currently, by application of the Modern Slavery Act approved in 2015, significant human rights clauses relating to said law are included in all contracts only in the case of the United Kingdom.

There were 10 projects with significant investments in financial year 2017⁸⁰:

- Spain, 2 projects: work has continued on the Madrid Plan, for reducing the size of substations and dismantling high-voltage overhead lines, with an investment by Iberdrola of 178.3 million euros by year-end 2017; and on the STAR project for installing smart grids. This project consolidates compliance with the legal obligation to develop remote management with a significant additional investment to improve the service provided and incorporating numerous innovations into the

⁸⁰ Significant investment means one that requires more than 100 million euros or one that is considered to be significant for the company even though it requires a smaller investment due to the size or strategic importance thereof.

electric grid. Approximately 1.4 million meters were installed in 2017, with an investment of 195 million euros, meaning that there are already more than 10.2 million meters installed, most of which are transmitting data.

- United Kingdom, 2 projects: during the first quarter of the year, the East Anglia One offshore wind project (signed in 2016) was completed with 2 additional contracts: a new supply contract with the company Navantia and an installation and logistics contract with Van Oord, both with a value of 302 million euros.
- United States, 4 projects: the acquisition of turbines for the Karankawa windfarm in Texas and Montague windfarm in Oregon, the acquisition of the Gala solar project in Oregon, and an engineering, procurement and construction management project for the Wy'East solar project, which contracts have exceeded 350 million euros.
- Mexico, 2 projects: El Carmen, the combined cycle plant located in the state of Nuevo León, which represents an investment of approximately 400 million euros, and Topolobampo III, a combined cycle plant located in the municipality of Ahome, in the state of Sinaloa, with an investment of approximately 350 million euros.

GRI 413 Local communities

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Iberdrola maintains a policy of strong involvement in the communities in which it operates, making a contribution to society linked to its own business activities: the supply of an essential product like energy, significant investments in basic infrastructure, promotion of local supplier networks, creation of qualified job positions, etc., with the intention of being a long-term investor in the regions in which it has a presence, in order to generate sustainable economic and social value.

Iberdrola's commitment to the local communities of the countries in which it operates takes shape through social activities in cooperation with governments, institutions and civil society organisations, as well as through sponsorships and patronage. The programmes of activity focused on social and economic development of the surroundings are especially significant.

These programmes and activities are implemented in various complementary ways:

- Directly by Iberdrola, through the Institutional Relations Division.
- Directly by subsidiaries or affiliates (i.e. investee companies, i.e. those in which the company has an equity interest), in their respective areas of activity.
- Sponsorship and patronage activities, primarily through Fundación Iberdrola in Spain, ScottishPower Foundation in the United Kingdom, Avangrid Foundation in the United States, Instituto Neoenergia in Brazil and Fundación Iberdrola in Mexico.

- There are also two other organisations in the United Kingdom with a philanthropic purpose: The ScottishPower Energy People Trust and The ScottishPower Green Energy Trust, which carry out activities in their specific areas of competence.

413-1 Local community engagement, impact assessments and development programmes.

413-2 Significant negative impacts on local communities

In each of the countries in which the group operates, environmental impact assessment studies are performed at Iberdrola's centres of operation in accordance with applicable law prior to the construction of facilities. Activities addressing its Stakeholders are also performed, including social development programmes and participation in local communities. Almost 100% of the company's locations of operation are subject to these types of activities, focused on meeting the needs of its Stakeholders, especially in local communities, and engaging in the most appropriate activities in all those areas that most directly affect them. The principal activities are described in greater detail below:

a) Impact assessments

Iberdrola believes that the impacts of the start-up of electric power generation plants are especially significant. In the countries in which the company develops these types of facilities, applicable laws require the performance of studies assessing the impact on the environment and the community, and such studies must be approved by the competent public authorities. Iberdrola believes that these studies and assessments are appropriate to safeguard the rights of communities, as they include the most significant issues for the affected areas.

These studies include an evaluation of the environment providing a review of environmental impacts such as emissions, effluent, waste, changes in land use, changes in landscape aesthetics and quality, etc. They also include an evaluation of the socio-economic environment, which reviews demographic aspects such as changes in population in neighbouring municipalities, economic sectors that are present in the region, basic infrastructure such as railway and road networks, and historic and cultural heritage, along with the growth in job demand in certain sectors, which is seen as a positive impact.

The impacts of the various types of facilities developed by Iberdrola are similar at the various sites at which they are implemented, and none of them are noteworthy for significant negative impacts. Consultation with and participation of both the affected government administrations and interested parties are usually guaranteed during the performance of these studies, and part of the documentation of the project is subject to public review for a period of time that varies according to the law applicable in each country. The viewpoints of the Stakeholders consulted are thus taken into account in defining the future project.

These studies also contemplate the preventive and corrective measures required to mitigate the impacts identified, and if necessary, the appropriate budgetary allocations to comply with the commitments assumed are included.

To conclude the process, programmes are implemented to monitor the various aspects identified. The effectiveness of the programmes is reviewed by means of internal and external audits, as well as by the management team. For example, in the case of nuclear plants, an Environmental Radiological Monitoring Plan is prepared to control and monitor the impacts of the facility during the operation thereof.

Most facilities have an integrated quality and environmental management system, the principal goal of which is to foster continual improvement in the results of the organisation's activities with respect to the environment, in addition to compliance with environmental laws.

Iberdrola prepares information and plans for the closure and decommissioning of facilities in accordance with applicable law and informs the workers' representatives thereof.

b) Development programmes for local communities

Iberdrola takes various types of actions to minimise, mitigate and offset unfavourable socioeconomic impacts that might be caused by its facilities. Local communities benefit from these measures, which are usually established and agreed on with local authorities. They include: improvements in communication infrastructure, water supply or roadways; public lighting; creation of direct and indirect employment; professional training courses; activities to support entrepreneurs; opening of communication processes with various Stakeholders; protection of biodiversity; and the restoration of areas, among other measures.

One noteworthy example is the creation of Energy Classrooms to foster an understanding of renewable production technologies, which involve not only visits to facilities but the development of an educational programme to acquire knowledge about energy, especially about renewable energy sources, and to promote an active attitude for the efficient use of energy and thus to contribute to energy saving.

Actions to support municipalities are also planned during the construction of the group's hydroelectric plants in Brazil, such as rural relocations at Baixo Iguaçu and its hydroelectric plant, where the population has been served by various programmes and there has been socio-economic monitoring of the population with a commitment to entrepreneurship.

A more detailed description of these activities can be found in section GRI 203 "Indirect Economic Impacts" of the "Economic Dimension" chapter of this report, as well as in the last section of this "Iberdrola's Contribution to the Community" chapter.

c) Advisory committees and processes and participation of local communities

The participation of local communities during the project planning and construction phases is described below in the section "Stakeholder participation in the decision-making process" of this chapter.

During the operation phase for facilities, Iberdrola engages in different processes of participation with the various Stakeholders that it relates to and that are described in detail in section "5.-Stakeholder engagement" (disclosures 102-40 to 102-44) of this report.

Additional information required by the GRI Sector Supplement for the "Local Communities" Topic

Management approach

Stakeholder participation in the decision-making process

Within Iberdrola's field of activity, energy planning (energy sources, technology and long-term needs) is carried out by governmental authorities; this is the institutional area in which the various Stakeholders can participate in accordance with the mechanisms established in each country. Iberdrola plays an active role in these processes, expressing its points of view and making its knowledge and experience available to governments.

Once the most appropriate infrastructure is selected, the viewpoints of the affected communities are taken into account through consultation processes, which vary depending on the country and the type of facility. All these processes, which are included in the facilities' impact assessment studies, are regulated, and they are determining factors in order to secure the construction and operating permits for the power plants; in

addition, they are frequently completed with processes voluntarily performed by the company. Along these lines, it should be noted that methods have been incorporated into the Environmental Management System so that Stakeholders can send their concerns, complaints, requests for information or any other kind of request to minimise impacts in the area.

During the planning and development of assets, prior consultations are also held and an active dialogue is maintained with the affected communities and interested parties in order to identify and address any concerns or areas of interest. In every project, relations are established with local authorities, communities and any other groups that may be relevant to the project. Information concerning the planned development is presented through newsletters, exhibitions, presentations, meetings, the group's websites, etc. There are also e-mail addresses to allow local communities to communicate with the company during the process and, in some cases, public information days are held for such purpose.

Set out below are some of the activities conducted by Iberdrola in this field for projects currently under development:

- In the Wholesale and Retail Business, since the commencement of the Tâmega River hydroelectric project in Portugal, there has been an impact assessment process with the participation of Stakeholders through public consultations in the affected municipalities. In December 2017, a seventh meeting was held with the Environmental Monitoring Commission (*Comissão de Acompanhamento Ambiental*) (CAA), made up of Iberdrola and various local and national entities, the objective of which is to supervise environmental aspects and socioeconomic impact, which is completed with visits to the works. The agreements with the municipal chambers of the influence zone were also renewed in 2017. In the United Kingdom, communication strategies have been designed for the development of the new Damhead Creek gas combined cycle plant, which include various information channels like bulletins, presentations, on-site meetings and additional information at www.scottishpower.com, as well as the consulting processes applied for the modernisation of the lines in Scotland. In Mexico, there have been studies of the social impact of the projects currently under construction for the Topolobampo (in Ahome, Sinaloa) and Noreste and Escobedo II (in El Carmen, Nuevo León) combined cycle plants. And in Brazil, there has been a *Social Dialogue Programme* with the Salto de Divisa and Itapebi communities, which includes an Environmental Education Programme and social communication in four municipalities within the area of influence.
- In the Networks Business in the United Kingdom, there has been a change towards an organisational model in which the key project decisions are made by local teams of the company to ensure consideration of local community interests: there was a strengthening of the local grid between Oswestry and Wem in North Shropshire in 2017, where multiple responses have been received, taking into account the comments received in the process. There have also been a large number of queries at Dumfries and Galloway; as regards the definition of the new transmission line, and a new Community Liaison Group has been established making changes to the destination route in order to address the considerations of the Stakeholders, and it has also participated in the reinforcement of the Kendoon to Tongland line.
- In the Renewables Business, during the development of both onshore and offshore windfarms in the United Kingdom, there have been regular informational meetings and even individual visits to groups that may be particularly affected. Additionally, a project summary document has been prepared and circulated among the Stakeholders, and a procedure has been devised for receiving complaints and suggestions, with all communications registered, investigated and answered. In the United States, there are social evaluations regarding community development during the planning and construction phases. There were various consultations with communities around potential

project areas in Illinois, New York, South Dakota and Texas in 2017. In Mexico, in the construction expanding the La Ventosa plant, the affected area is being restored. Finally, in Brazil, work is taking place at the Serra de Santana windfarm complex (under construction) on a preliminary proposal for economic activation of family farming in accordance with the nature of the region, through the sustainable cycle of the manioc (cassava). Neoenergia's new facilities go through a process of analysis through *quimbolas* and indigenous groups. These Stakeholders, along with NGOs and participating entities, are invited to participate in the consulting and impact analysis processes.

Management of population displacements

As a prevention measure, during the planning phase for new projects, Iberdrola evaluates the land that will potentially be occupied, choosing that which involves lesser displacement of people who either reside in the immediate area or whose economic activities are affected. In this ultimately occurs, Iberdrola and the relevant government authorities review the economic, environmental and social consequences of such projects, and jointly adopt suitable corrective measures. The company believes that such processes ensure the protection of general interests in the countries where these impacts occur. The measures adopted in projects of this nature currently being developed by Iberdrola are described in indicator EU22 below.

EU22 People physically or economically displaced and compensation

Iberdrola is currently developing various plants in Portugal and Brazil that involve displacements of population:

- In the construction of the Tâmega hydroelectric complex, in Portugal, it is expected that there will be displacement of some families as well as the occupation of pathways and farmland, pursuant to the process of Declaration of Public Interest by the Portuguese government. In the socio-economic and cultural action plan for the project, which actions are currently being developed and coordinated with the government administration and municipal legislatures, the affected or potentially affected families and small population centres are taken into account. During 2017, after agreement with the affected families, there was a displacement of 3 homes affected by the construction.
- In Brazil, some of the new projects, both for hydroelectric development and for windfarms, may cause population displacements or interfere with their economic activities. Prior to the approval of the projects, this social and environmental impact is evaluated in environmental impact assessments, which propose compensatory measures that are then presented to the interested parties and negotiated with them.

At the Belo Monte power station, there is continued monitoring of the social impacts pursuant to the *Project for social monitoring of the surroundings of the work and host communities*. There were 6 displacements in Brazil in 2017. The processes of relocation to new neighbourhoods, with health, education, entertainment and social assistance teams, respect family and neighbourhood ties, and the option of a related move is made available. Furthermore, vulnerable families are offered social, psychological and training services to facilitate the generation of employment. As regards commercial activities, 1,000 businesses were compensated; they were monitored at the new locations and training and guidance actions were provided. In these processes, the owners received support through training and guidance activities, and their redress process was monitored quarterly for a period of one year, consistent with the redress parameters established by applicable law.

Likewise, at the Baixo Iguaçu plant, there were relocations of 123 families after agreement on compensation, self-resettlement or rural group resettlement. These families are being helped by the

Consortio Emprendedor Baixo Iguaçu (CEBI) in the different programmes, with economic monitoring of the population and the promotion of entrepreneurship.

GRI 414 Supplier social assessment

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

414-1 New suppliers that were screened using social criteria

414-2 Negative social impacts in the supply chain and actions taken

The management approach regarding the Iberdrola group's supply practices is described in disclosure 102-9 "Description of supply chain" of this report.

100% of the suppliers of general supplies (both new and existing) and major suppliers of fuel (the majority under long-term contracts that are still in effect) are evaluated following such management approach, and their significant risks for labour practices and human rights in relation to their impacts on society are managed through the quality processes that have been implemented and through regular audits.

The [contracting terms of the group](#) for procuring equipment, material, works and services, as well as the coal contracts, include specific supplier corporate social responsibility clauses based on the UN *Universal Declaration of Human Rights*, the conventions of the International Labour Organisation, the principles of the Global Compact and compliance with the *Suppliers' Code of Ethics*. In the case of other fuels, the company's goal is to include such clauses as new contracts are signed.

Suppliers thus commit to the principles of social responsibility and respect for human rights. During the term of the contract, the supplier must allow Iberdrola to review the level of compliance with the principles established in the contracts, and if noncompliance is detected and corrective plans are not adopted, the company reserves the right to cancel the contracts.

Alignment in Procurement and in Supplier Management using Human Rights standards

In supplier management and during the procurement process, the measures adopted by the company to protect against/manage these rights are based on:

Internal Mechanisms		External Supplier Mechanisms	
Procurement Policy	Promote strict compliance by suppliers with contractual terms and conditions..., with special attention on the principles established in the Policy on Respect for Human Rights	Suppliers' Code of Ethics	LABOUR PRACTICES: to ensure the protection of internationally recognised basic human and workers' rights within their sphere of influence (forced labour, child labour, etc.)
Supplier Registration and Classification	Acceptance of Suppliers' Code of Ethics Weighting of status regarding CSR, labour practices and respect for human rights	Specific T&Cs	Specific contract clauses relating to supplier social responsibility based on the UN Universal Declaration of Human Rights, the ILO Conventions and the principles of the Global Compact
Sanction List Screening	Blocking and remediation plan if a supplier has been sanctioned or there are indications of human rights violations in their activities	Stimulus Campaigns	As a business driver, suppliers are stimulated in areas of common interest as a vehicle to ensure reliable and responsible conduct throughout the supply chain
Annual Improvement Goals	Innovative aspect: annual improvement goals directly relating to supplier CSR improvement established for the Procurement team and linked to variable remuneration	Modern Slavery Act (United Kingdom)	Classification protocols and audit of suppliers in accordance with law "Ethical Procurement: a workshop for buyers" training sessions for the entire procurement team in the UK Contractual clauses in major contracts
CSR Committee and Plan	The Procurement Division is part of the group's CSR Committee: guidelines, established goals and related indicators	CSR Scoring	Leadership, Dialogue, Management, Communication 4 blocks to evaluate the supplier's CSR performance and Human Rights standards
Transparency & Reporting	Procurement indicator in at-risk countries Contribution to sustainability infographic Annual Procurement and Supplier Management Report published on the corporate website	Supplier of the Year Award	CSR, diversity and equality categories: this promotes supplier commitment and improvement in this area and publicly recognises those who stand out

Approximately 25% of general procurement has been made in countries in which there might be a risk of human rights violations, according to the sources consulted. The 8% increase over 2016 is due to the inclusion of Neoenergia in Brazil. The percentage with respect to fuel procurement has decreased from 56% in 2016 to 52% during the period covered by the report. In addition, as described in disclosure 205-1, the company believes that the calculation should exclude purchase of fuel in Mexico and Brazil because they are made in strongly regulated environments that require contracting with state-owned companies. Excluding both countries from the calculation, the percentage of fuel procurement in at-risk countries would decrease to 14%. The standards used to identify countries at risk are the same as those described in disclosure 412-1 of this report.

There was no identification in 2017 of any contracting with suppliers that has generated incidents relating to freedom of association, collective bargaining, use of child or forced or compulsory labour, nor is there evidence of receiving complaints on these grounds. Nor have suppliers been detected with a material negative social impact, or incidents reported through the channels established for such purpose, resulting in the cancellation of orders or of contracts with group suppliers due to negative social impacts.

Transparency in the general procurement process

In applying the company's policies, the Procurement Division, within its area of responsibility, encourages equality of opportunity, applying standards of objectivity and impartiality in supplier relations, promoting publicity of and participation in selection processes, within management efficiency criteria.

The procurement process is periodically audited both internally and by external entities, with no "non-conformities" having been identified during the financial year. Recommendations and opportunities for improvement that arise during these reviews are analysed and put into place in order to maintain continuous improvement in the processes.

Dialogue with suppliers

As an indication of its efforts to encourage dialogue with its Stakeholders, and to know the satisfaction and expectations of its interested parties, the Procurement Division periodically surveys the suppliers of the group in all countries in which these processes are carried out.

The results of the surveys are as follows:

Supplier satisfaction survey	5th Survey (2016)	4th Survey (2014)	3rd Survey (2012)	2nd Survey (2009)	1st Survey (2007)
Rating (out of 10)	8.06	8.00	7.74	7.57	7.56

Suppliers value very positively the professional respect of their contacts within Procurement during the bidding phase, as well as transparency and honesty.

The overall perception of the Iberdrola group rates the company's reputation highly, with a score of 8.8, as well as the brand and the confidence it inspires, with a score of 8.6.

The results of the survey also showed some aspects that could be improved, such as the financing possibilities offered.

Main initiatives with suppliers of materials, equipment, works and services during 2017

• Supplier of the Year Award: Promoting and rewarding supplier excellence

Iberdrola uses prizes and [supplier awards](#) to encourage, promote and recognise excellence, quality, internationalisation, innovation, corporate social responsibility, entrepreneurship, occupational risk prevention, the creation of employment and wealth, diversity and equality. Moreover, the award is conceived as a tool and mechanism to thank suppliers for their contribution to the achievement of the group's goals.

Iberdrola works, and wishes to continue to work, with outstanding and sustainable suppliers, and to that end it establishes clear awareness-raising and measuring mechanisms, devoting specific resources within the Procurement Division to such task and establishing personal goals for the management team linked to the ongoing improvement of suppliers' sustainability ratios.

• Iberdrola extends its commitment to reconciliation of work and personal life to its suppliers.

Iberdrola has decided to extend to its suppliers its good practices on reconciliation between the work and personal life of its employees. For this reason, the company has revised and amended the text of the *Suppliers' Code of Ethics* to include a title on reconciliation in the *Labour Practices* section.

Iberdrola states therein that the supplier should “*assess the implementation of measures that promote respect for the personal and family life of its professionals and facilitate the achievement of an optimal balance between the latter and the work responsibilities of women and men*”.

• Supplier sustainability evaluation model: CSR Scoring

Iberdrola has a *CSR Scoring* model to evaluate its suppliers with respect to social responsibility, quantifying their relative position based on the suppliers' management in terms of social responsibility, so that there is a standard to differentiate them in tenders or contracting. The evaluation provides added value to suppliers,

allowing them to know the areas for improvement in order to focus their efforts in the area of social responsibility.

The CSR scoring data regarding the volume of purchases analysed (85% of the group's total procurement) are shown below:

Supplier CSR Scoring Model	
Classification levels	% amount awarded
A+	78.2
A	20.7
B	1.1
Total	100

Establishing improvement goals throughout the Procurement Division team relating to the increase in procurement with analysed suppliers and the increase in the percentage of procurement from A+ suppliers.

For those suppliers scoring B and A, a notice is sent and specific traction applied to their situation so that they try to improve to A+.

During the financial year, there were 76 social audits of suppliers with an order during the year. Suppliers with "non-conformities" in the process have a specific period within which to rectify the deficiencies found.

• **Supplier diversity**

Avangrid has a *Supplier Diversity Program*, which establishes a commitment to include the following within the supplier network and increase procurement therefrom:

- Minority-Owned Business Enterprises (MBE)
- Women-Owned Business Enterprises (WBE)
- Lesbian, Gay, Bisexual and/or Transgender-Owned Business Enterprises (LGBTBE)
- Veteran-Owned Business Enterprises (VBE)
- Service-Disabled Veteran-Owned Business Enterprises (SDVET)
- Small Disadvantaged Businesses (SDB)
- Historically Underutilized Business Zone Enterprises (HUBZone)

There was approximately 33 million euros of contracting volume with these groups in 2017.

During 2017, the contracting volume with Special Employment Centres in Spain (in order to assist and work with persons with disabilities) totalled 3.2 million euros.

• **Transparency and reporting**

Further information on Iberdrola's relations with and management of its suppliers can be found in the [Periodic Report on Procurement and Supplier Management](#) and in the [Contribution to Sustainability](#) section of the corporate website.

GRI 415 Public policy

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Iberdrola has two kinds of relationships with regulatory entities:

- Relationships geared towards contributing to the enactment of efficient regulatory provisions allowing for the development of a competitive market in activities that are not subject to a natural monopoly, and sufficient remuneration for regulated businesses. To that end, there is a continuous and constructive dialogue where information, knowledge and positions are exchanged. Iberdrola is thus acquainted with the concerns and proposals of regulatory entities and provides them with its own positions in the legitimate defence of its interests and those of its shareholders and customers. The company also actively participates in “public hearings” held by regulatory entities in order to ascertain the opinions of the players involved in the processes prior to the revision of regulations or the determination of domestic and European energy policies. It also participates in the official processes of enactment of the laws and regulations and the monitoring of the application thereof.

As a general rule, Iberdrola defends the principles of good regulation: proportionality, effectiveness and efficiency, responsibility and independence, consistency and credibility, and finally, transparency and clarity. As regards specific matters of energy regulation, it champions, among other things:

- o A Sustainable Energy Model, giving priority to lower-emission energy in a manner consistent with market principles.
- o Achievement of competitive supply, which requires an appropriate environmental cost allocation among all energies, following the “polluter pays” principle. Climate actions need to be financed by all polluters.
- o Decarbonisation is now the new challenge. In 2050, the system will be completely different, with significant penetration of renewables and very low use of thermal plants, a trend that is already starting to be seen. The key to this low-emission future is investment, but the design of the current market cannot provide the long-term signals for such investment to occur. Therefore, the current energy market is migrating towards two different markets: the Investment Market on the one hand, related to installed capacity and thus guaranteed supply; and the Operations Market on the other. The Investment Market consists of auctions of long-term capacity and renewables. The Operations Market consists of the delivery of energy and complementary services.
- o Smart grids offer consumers a wide array of possibilities, and must therefore be appropriately promoted and remunerated.
- o All customers, whether self-consumers or not, must receive transparent bills and contribute equitably both to network costs and to the costs of environmental policies.
- o Reasonable profits and sufficient rates for regulated activities.

- Clean electricity rates of costs not related to supply (additional non-mainland costs, annual rate shortfall payments, subsidies for domestic coal, premiums for renewable energy, etc.).
 - Full liberalisation of activities relating to generation and end supply, including the elimination of regulated end rates.
 - Introduction of measures to protect vulnerable customers and elimination of all kinds of cross subsidies among energy customers.
 - Creation of the European single market.
 - A CO₂ price that provides a signal encouraging investments in both low-emission generation and in energy efficiency measures, which will allow for progress in the decarbonisation of the European economy.
- Provision of all information required by regulatory entities, whether in connection with the normal conduct of its business or as a result of any transitory issue.

In addition to its direct relationships with regulatory entities, Iberdrola and the companies in its group participate in the regulatory process through the domestic and international trade associations of which they are members.

As regards lobbying activities, Iberdrola is registered with the Transparency Register created by European institutions to provide adequate transparency to the relations of such institutions with companies, NGOs, citizens' associations, think tanks, etc. The register was created by the European Parliament and the European Commission, and the Council of the European Union supports the initiative. [Iberdrola's record](#) in such register can be found on the EU's website. In its activities to influence public policies, Avangrid has made the financial contributions shown in the [US register](#). And finally, a project for the dissemination of regulatory positions has been developed as part of Iberdrola's transparency policy. Therefore, the company has made publicly available a compilation of [Global Regulatory Positions](#), valid for all countries and businesses. The goal is for the regulatory positions advanced by Iberdrola to be transparent and well-known.

415-1 Contributions to political parties or to related institutions

Iberdrola has a neutral position from a political standpoint. In financial year 2017, none of the group's companies, except in the United Kingdom and the United States, contributed to the financing of political parties or to organisations controlled by them.

Contributions to political parties (€)	2017	2016
United Kingdom	26,266	26,889
United States	14,997	129,543
National level	0	0
State level	14,997	129,543
Other countries	0	0
Total	41,263	156,432

In the United Kingdom, ScottishPower contributed a total of 26,266 euros, distributed among various parties across the political spectrum, to sponsor lectures and events, pursuant to the *Political Parties, Elections and Referendums Act (2000)*. These occasions are an important opportunity for the group to present its viewpoints to representatives of all political options on a non-partisan basis. The contribution does not involve supporting any particular party.

In the United States, the Networks Business of Avangrid contributed a total of 14,997 euros to candidates and political parties, and reported such contributions in accordance with applicable law. The contributions are those made by the company and do not include additional voluntary contributions made by employees.

GRI 416 Customer health and safety

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Customer health and safety

For Iberdrola, the safety of the users of the network is of the utmost importance. For this reason, it makes information and training available to the various emergency services in order to explain possible conflicts and how to act in situations involving electricity risks.

All stages of the life cycles of electricity and gas are highly regulated because they are basic products for the development of a country's economy and entail an improvement in the quality of life of citizens.

Therefore, in the *planning* stage for the facilities, the community participates through its social and political representatives in broad discussions concerning the energy model to be adopted in the country. During the *approval* stage, citizens can participate during public information periods, taking into consideration economic, environmental and health and safety aspects, as well as the reliability of supply, generating public policies that lay the groundwork for the companies within the Iberdrola group to adopt investment strategies that are consistent therewith.

In the countries in which Iberdrola engages in electric power production activities, there are extensive environmental and labour regulations aimed at ensuring that existing risks to human health and safety remain within the limits established thereby. The companies thus provide the information required to verify that the operating conditions established in the regulations and in the technical specifications for generation plants are observed in their construction, operation and maintenance.

Likewise, the electricity and gas transmission and distribution stages are subject to extensive regulations governing the construction, operation and maintenance of these facilities, and therefore the companies provide the human, physical and financial resources needed to minimise electricity risks and those associated with the handling of natural gas.

During the *retail* stage, the company also believes that the most effective way of protecting public health and safety in the use of power and gas is the provision of training and information to customers. There are also gas maintenance operating procedures to ensure safety in Spain. In the United Kingdom, devices have been developed to improve the safety of customers, such as carbon dioxide alarms, fire alarms and devices preventing hypothermia. In the United States, the evaluation and control of electrical risks for customers is thoroughly regulated at the state level.

As a complement to the foregoing, the Iberdrola group voluntarily adopts various measures to improve aspects relating to product safety. Specific internal regulations have been developed at distribution networks in this regard and there are also training seminars for third parties so that they understand electricity-related risks (fire brigade, Guardia Civil, Civil Protection, Military Emergency Unit, students, etc.).

Finally, Iberdrola has various means to inform and train the public through actions and programs that are explained in more detail under the "Access to adequate information" section in this chapter. There are also direct channels of communication with customers, as shown in disclosure 102-43 of this report.

Electric and magnetic fields

The possible influence of electric and magnetic fields on the health of human beings has historically been a topic of certain public debate. However, the different studies performed in this regard show that there has been no identification of detrimental effects on human health with respect to the maximum emission figures established by applicable law. Iberdrola, inspired by the precautionary principle, applies the rules in this regard and is willing to work with the public authorities in adopting such preventive or mitigating measures as may be deemed appropriate to avoid risks or harm to health.

There are differences in the practices relating to this issue in the various countries in which the company does business:

In Spain, two reports are prepared regarding electric and magnetic fields at facilities, which are audited by Aenor: *Emissions of electric and magnetic fields at Distribution facilities 2017* and *Radioelectrical emissions of relay stations 2017*. Both reports show that the emissions of electric and magnetic fields meet legal requirements and that all facilities are below the levels set by law.

In the United Kingdom and the United States, the facilities comply with applicable regulations and measurements are not taken at the facilities unless requested by the customer. During 2017, the company received 45 such requests in the United Kingdom, with 29 field surveys verifying emissions and the provision of the information to the customer, and no pending action for breach of maximum levels was detected. In the United Kingdom, there is also monitoring of applicable legislation, changes therein and research through working groups within the Energy Networks Association.

In Brazil, there are measurements of electromagnetic fields to check compliance with the benchmark figures under current law, and no nonconformity was detected in 2017.

416-1 Products and services for which health and safety impacts are assessed

All processes required for the supply of electricity and gas at all stages, described in the above management approach, ensure that such products arrive at the consumer with an appropriate level of assurance for their health and safety. The impacts on health and safety of 100% of the categories of major products and services are evaluated in order to make improvements.

416-2 Incidents of non-compliance concerning the health and safety impacts of products and services.

The table below sets forth incidents regarding the impacts of products and services on the health and safety of customers during 2017, 6 of which resulted in a fine in the United States and 2 relating to voluntary codes in Brazil.

These incidents are mainly due to violations relating to the cutoffs of gas services. They may also be due to failures in the qualification of a contractor, where the company has participated in the Operator Qualification Programme; and to not complying with construction rules relating to the instalment of piping, with the company reviewing the locations at which the contractor has worked.

Incidents stemming from non-compliance with regulations or voluntary codes (no.)	2017	2016
Resulting in a fine	6	1
Resulting in a warning	0	0
Relating to voluntary codes	2	0
Total incidents	8	1

EU25 Injuries and fatalities to the public involving company assets.

In order to facilitate citizens' access to an essential service such as electricity, the construction, operation and maintenance of various infrastructure is required, which entails certain risks, which may at times give rise to incidents affecting people outside of the company. In most of the cases detected the incidents relate to improper construction activities and, to a lesser extent, to unauthorised entry into the company's facilities.

The following table shows the accidents of this kind that occurred during 2017. 6 of the persons who suffered accidents were in Spain, 55 in the United Kingdom, 23 in the United States and 249 in Brazil. Of the accidents that have occurred, 3 involved a fatality in Spain, 1 in the United Kingdom, 1 in the United States and 45 in Brazil.

Accidents of persons not belonging to the company (no.)	2017	2016
Accident victims	333	261
Fatalities	50	45

The claims listed in the table below have been filed against companies of the group on these and other similar grounds not resulting in injuries and are following the relevant legal procedures applicable in each jurisdiction. Legal proceedings finished and pending by year-end 2017 amounted to 110 in Spain, 70 in the United States and 228 in Brazil.

Legal proceedings (no.)	2017	2016
Settled and pending, stemming from those accidents	408	258

GRI 417 Marketing and labelling

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Marketing communications

Iberdrola observes the laws and abides by the regulations governing its advertising and marketing communications, and adopts mechanisms and voluntary codes that cause such communications to be transparent and truthful, and the *Code of Ethics* also applies in this area for all employees regardless of their area of responsibility.

In Spain, Iberdrola is a member of the Association for Commercial Self-Regulation (*Asociación para la Autorregulación Comercial*) (Autocontrol), the Spanish Electronic Commerce and Relational Marketing Association (*Asociación Española de Comercio Electrónico y Marketing Relacional*) (AECCEM), the Spanish Advertisers' Association (*Asociación Española de Anunciantes*) (AEA) and the Marketing Association of Spain (*Asociación de Marketing de España*) (MKT), and has subscribed to their respective codes of ethical conduct, which entails the assumption of a commitment to offer responsible advertising to society that complies with the codes of conduct, and accepts the decisions of an Advertising Jury (*Jurado de la Publicidad*) regarding complaints that may be filed by consumers or competitors with such body.

ScottishPower in the United Kingdom complies with all the laws applicable to it on these terms, follows a structured internal procedure for all of its actions, and complies with conditions SLC 25 and SLC 7B of the supply licence, which require clarity, simplicity and justice for customers. It also complies with the codes of advertising practice of the Advertising Standards Authority, ensuring that each advertisement published is approved by teams that verify compliance with good practices.

Elektro, one of the subsidiaries of the Neoenergia group in Brazil, has a formal communication procedure called P-CT-001, which covers all internal and external communication activities, consistent with the ethical values and principles governing Iberdrola. The other companies of the group, in addition to having internal rules for the preparation of marketing communications and advertising activities, follow the principles of responsible advertising of the National Council on Advertising Self-Regulation (*Consejo Nacional de Autorregulación Publicitaria*) (Conar Statute).

Information on and labelling of electricity sold

As regards labelling, in Spain Iberdrola informs its customers about the source of the energy sold by the retail supplier and the associated environmental impact thereof by means of a label included in the electricity bills and in advertising to customers. This information is presented using model images and labels established by the National Markets and Competition Commission (*Comisión Nacional de los Mercados y la Competencia*) (CNMC). The CNMC has launched a System for Guarantees of Origin of

energy produced in order to create the labels and images. This information is also available in the [electricity labelling](#) section of the retail website.

In the United Kingdom, ScottishPower reports the origin of its energy each year and the environmental impact thereof. New customers receive this information as part of their Welcome Cycle communications, and existing customers receive this information in the *Important Information* section of each invoice or notice, in accordance with the guarantees of origin rules established by Ofgem. All information about the label is also available in the [Where you get your energy](#) section of the website.

There is no obligation to label electricity in the United States or Brazil. Gas is not currently labelled in the countries in which the company sells this product.

Finally, such additional information as may be of help for consumers to make a more rational, efficient and safe use of these products is set forth at the end of this chapter in the "Access to adequate information" section.

Customer satisfaction

Iberdrola has various mechanisms to measure customer satisfaction levels and to gather the opinions of its customers, as well as to verify compliance with its quality standards within the customer service and sales channels. The most significant studies by country are:

- In Spain, most of the studies use the Net Promoter Score (NPS) Index, involving telephone interviews by various research institutes, increasing from 26% in 2016 to 27% in 2017. These studies include the *Customer Voice Study (Estudio de la Voz del Cliente)* in order to know consumer ratings. This survey offers detailed information regarding attributes like agility, treatment within the service channels, clarity of the invoice, management and claims regarding complaints, and others, like quality of supply, price competitiveness and electronic billing, whether for large customers, companies, small businesses or residential customers. Overall satisfaction in 2017 exceeded 7 out of 10 for the third consecutive time. There is also a *Gas Maintenance Service Satisfaction Survey*, conducted on a yearly basis, maintaining a high level of satisfaction with respect to both the service and the professionalism of the technicians, as well as a study of satisfaction with the *Electrical Emergencies* service. There are two types of surveys at the Networks Business, showing the satisfaction of those requesting new supplies and expansions of capacity, with a grade of 3.4 out of 5 in 2017.
- In the United Kingdom, customer satisfaction is measured by a series of internal and external studies within the *Customer Insight* department, including satisfaction surveys that vary in frequency, from monthly to annually, by a customer research panel (*Your Energy People*).

There is also a series of external comparative studies measuring the satisfaction of ScottishPower's customers as compared to its competitors, such as those conducted by USwitch, Which?, Nunwood, NCSI in the United Kingdom and UK-CSI, which is published twice per year. The latest results are based on the UK-CSI study and show that ScottishPower has improved 1.6 points over the prior year, from 68.5% to 70.1% in 2017.
- In the United States, the Avangrid subsidiaries CMP, NYSEG and RGE take two kinds of measurements:
 - o customer satisfaction in recent contracts, the results of which are compared to the regulator's objectives and with the results of other companies in the industry. NYSEG and RGE reached general satisfaction results of 87% and 85%, respectively.

- consumers' perception of the performance of the companies CMP, NYSEG and RGE, which is conducted on an annual basis, through 600 telephone interviews for each company. The results show that in 2017 they are among the 5 leading companies in the Northeast in the 3 leading indexes: customer satisfaction, energy delivery and customer interaction.
- In Brazil, Abradee (*Associação Brasileira de Distribuidores de Energia Elétrica*, or Brazilian Association of Electric Power Distributors), in association with Fundación Instituto de Investigaciones Económicas (FIPE), is responsible for classifying and giving awards to companies based on an evaluation of performance in the following areas: operational excellence, economic/financial management, customer assessment, social responsibility and management quality. The ISQP (*Índice de Satisfacción de la Calidad Percibido*, or Perceived Quality Satisfaction Index) of the services is obtained through evaluations by the customer via surveys performed by Instituto Innovare, which is responsible for customer surveys. The established methodology analyses up to 46 attributes distributed among areas such as customer services, image and price, among others. In 2017 the quality perception grade of low-voltage customers for companies of the Neoenergia group obtained an average rating of 78 points, while the quality of service for high-voltage customers of Elektro was rated at 77.8%. Aneel (*Agencia Nacional de Energia Elétrica*, or National Electric Energy Agency) also performs satisfaction surveys of the customers of the distributors based on 40 attributes. The companies of the Neoenergia group obtained an average rating of 62.05 in this survey.

417-1 Product and service information and labelling required by procedures in force and by regulations.

The data on information and labelling of products and services required by this GRI disclosure is reflected in the above Management Approach to the management of marketing and labelling of this report.

417-2 Incidents of non-compliance with regulations and voluntary codes concerning product and service information and labelling.

The following table sets forth the incidents related to information and labelling that occurred during financial year 2017, which have resulted in 2 fines in Spain.

Incidents relating to information and labelling (no.)	2017	2016
Resulting in a fine	2	8
Resulting in a warning	0	0
Relating to voluntary codes	0	0
Total incidents	2	8

417-3 Incidents of non-compliance with regulations and voluntary codes concerning marketing communications.

The following table sets forth the incidents that occurred due to non-compliance regarding marketing, advertising, promotion and sponsorship during financial year 2017, when none occurred.

Incidents of non-compliance concerning marketing, advertising, promotion and sponsorship (no.)	2017	2016
Resulting in a fine	0	2
Resulting in a warning	0	0
Relating to voluntary codes	0	0
Total incidents	0	2

GRI 418 Customer privacy

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Iberdrola ensures the privacy of the personal information of the group's customers as set out in the Management Approach "Privacy of the personal information of Stakeholders" included at the end of the "Economic Dimension" chapter of this report.

418-1 Substantiated complaints regarding breaches of customer privacy and losses of customer data.

Incidents relating to privacy (no.)	2017	2016
From regulatory entities	163	175
From other sources, substantiated ⁸¹	29	14
Total substantiated complaints	192	189

Of the incidents arising from regulatory entities, 8 occurred in Spain and 155 in the United Kingdom and of those from other sources, 28 occurred in the United Kingdom and 1 in Brazil.

During 2017 there were also 151 cases of loss of or damage to customer data, all in the United Kingdom.

GRI 419 Socioeconomic compliance

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

⁸¹ The 2016 data has been revised because claims were being included in Brazil due to errors in the data unrelated to violations of privacy or the loss of information.

Management approach

As laid down in its By-Laws, Iberdrola aspires for its conduct and that of the persons connected therewith to conform and adhere not only to applicable law and its Corporate Governance System, but also to ethical principles and generally accepted principles of social responsibility. In this connection, the *Code of Ethics* of the Iberdrola group provides that:

- Group professionals shall comply strictly with the laws in force in the jurisdiction of their workplace, heeding both the spirit and the purpose of such legal provisions, and shall observe the provisions of the *Code of Ethics*, the rules of the Corporate Governance System, and the basic procedures governing the activities of the group and of the company in which they provide their services. They shall also fully observe all obligations and commitments assumed by the group in its contractual relations with third parties, as well as the usage and good practice of the countries in which they carry out their activities.
- The officers of the group shall have particular knowledge of the laws and regulations, including internal ones, affecting their respective areas of activity, and must ensure that the professionals reporting to them receive the required information and training to enable such professionals to understand and fulfil the legal and regulatory obligations, including internal ones, applicable to their position.
- The group shall respect and abide by all court and/or governmental decisions or resolutions that may be issued, but reserves the right to file such appeals as may be appropriate against any such decisions or resolutions when it believes that they do not conform to the law.

419-1 Non-compliance with laws and regulations in the social and economic area

The following table shows violations of laws and regulations in the social and economic area, i.e. all violations of any kind (whether labour, tax, competition, related to distribution or retail sale of energy and gas, etc.) of the Iberdrola group, other than violations of environmental regulations, which are set out in disclosure 307-1.

Significant fines and non-monetary sanctions in the social and economic area ⁸²	2017	2016
Fines imposed (€)	58,891,707	208,758,953
Non-monetary sanctions (no.)	1	3
Cases being resolved through arbitration or similar mechanisms (no.)	465	575

Of the total amount, fines in the amount of 58,005,333 euros have been imposed in Brazil, mainly corresponding to three fines on the Networks Business of the Neoenergia group: 15,011,504 euros for a violation relating to the tax on own equity interests, payment of premium and deduction of regulatory fine

⁸² Arbitration mechanisms are not included in the labour area.

and collection of contribution relating to occupational environmental risks; 14,266,488 euros for commencement of Violation Order issued by the Brazilian tax authority collecting the tax on payment of the premium in the acquisition of Elektro in 2011; and 12,330,153 euros for violation in the deduction of regulatory fines from the calculation base for income tax. Of the remainder, 14,102,922 euros correspond to other fines against the Networks Business, 2,198,913 euros to the Wholesale Business and 2,294,265 euros correspond to the Renewables Business for various penalties imposed for different reasons.

In Spain, fines totalling 609,165 euros were imposed, of which 417,606 euros were for digging trenches without a works permit and for the construction of unauthorised facilities, all of which have been appealed. The remaining 217,908 euros corresponds to penalties for violations of personal data protection and customer information regulations, as well as other penalties in the consumer and labour areas.

In the United States, fines have been imposed in the amount of 220,295 euros, of which 155,512 euros correspond to fines mainly due to failures in the inspection systems and proceedings regarding abandonment and deactivation of gas services and violations of pipe installation requirements. The remaining 64,783 euros mainly corresponds to violations of safety regulations during the "Dig Safe" excavations.

In the United Kingdom, ScottishPower has received a fine in the amount of 3,988 euros for delay in the payment of the tax relating to the management of easements in the East Anglia One project.

No fines were imposed during 2017 in the other countries in which the company operates.

Finally, in Brazil, Neoenergia received a non-monetary penalty for labour reasons.

Electric Utilities Sector Specific Aspects

Disaster/emergency planning and response

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

As in any industrial activity, situations of risk to the facilities or the public at large may occur at power generation plants and in electricity grids, either because of an accident or due to loss of electricity supply.

Where this occurs, the subsidiaries of the Iberdrola group and the companies in which the company has an interest have put plans, procedures and other mechanisms in place in order to try to minimise the consequences. Such measures include preventive measures that have been jointly established with local authorities, as well as training both for its own and subcontracted staff and ongoing education, and regular safety drills with on-site audits.

The Wholesale and Retail Business has various documented emergency management procedures in place at its facilities: for example, in Spain and Mexico there is an *Emergency Response Organisation* (*Organización de respuesta ante emergencias*) (*ORE*) procedure, which involves personnel of all levels and is put into operation in the event of emergencies that jeopardise the assets of the company or its employees. In the United Kingdom, there is a Business Continuity Management System for the management and minimisation of emergency situations, which is externally audited and ISO 22301 certified. In the United States and Canada, each facility has a Prevention, Control and Countermeasures Plan, which includes preventive and reactive actions, and also has an Emergency Response Plan. There are also emergency plans at the generation plants in Brazil.

In addition, there may be specific plans based on each technology; for example, hydroelectric generation facilities also have an internal process to monitor a Reservoir Emergency Plan implemented at all of the Cuenca Units.

Thermal generation plants have established general procedures to identify and respond to potential accidents and emergency situations, as well as to prevent and reduce environmental impacts, serious accidents and possible injuries to employees.

Nuclear power plants have specific emergency plans in order to ensure that emergency systems are operational and to guarantee the safety of employees and the public, which include both an External Emergency Plan (*Plan de emergencia exterior*) (PEN), for which the governmental authorities are responsible (called the Nuclear Emergency Plan of the Province in which each plant is located), and an Internal Emergency Plan (*Plan de emergencia interior*) (PEI), compliance with which is the responsibility of the companies that own the power plant. The PEI is known by the public authorities and municipalities of the region, which participate in its adoption and verify its effectiveness through annual emergency drills supervised by the Nuclear Safety Council (*Consejo de Seguridad Nuclear*) (CSN), as well as tests and internal exercises performed at the facility itself.

Another example of emergency management is the cooperation of the company with the authorities responsible for the operation of the national electricity grids and of connections with other countries in order to deal with the possibility of a global supply failure. System operators are responsible for guaranteeing the reliable and safe operation thereof and for restoring service following severe incidents in a controlled manner and within the shortest possible time. To that end, they draw up detailed plans and procedures that determine the responsibilities and guidelines for action by geographic areas. Concurrently therewith, Iberdrola conducts tests at its facilities to ensure that the main generation centres can resume production in the event of a power grid failure.

The Networks Business also has various management plans and procedures to deal with these situations, such as the electric emergency plans of the distribution subsidiaries of Avangrid in the United States, where CMP also has a Service Restoration Plan, and for which drills are performed every year. Also noteworthy are the operations centres of the distributors in Brazil, which standardise safety in operations and the procedures to restore supply and for the maintenance of the electricity system. ScottishPower actively communicates with vulnerable groups during power outages to ensure that they are provided the assistance that may be required. The company has its own fleet of generators, as well as a portfolio of suppliers to support consumers during long-lasting emergencies if necessary.

Access to electricity

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Access to electricity for vulnerable customers

In February 2016 the Board of Directors approved a change to the *General Corporate Social Responsibility Policy*, which makes it a principle of conduct to pay attention to customers who are financially disadvantaged or in any other situation of vulnerability, establishing specific protection and collaboration procedures to facilitate continued access to electricity and gas supply in accordance with the policies established by the competent government administrations.

Among the programmes to facilitate access to energy by people who are at risk of exclusion or in a situation of vulnerability, the company and its subsidiaries and affiliates have procedures to protect customers in vulnerable situations to facilitate access for the most disadvantaged groups, including the following:

- In Spain, this commitment takes form through the application of a *Vulnerable Customer Protection Procedure*, which is focused on increasing collection periods, making payment terms more flexible, and providing personalised advice. Iberdrola has also prompted the signing of agreements with various public entities and other organisations, establishing mechanisms to prevent the suspension of electric and/or gas supply due to non-payment of the invoice by economically disadvantaged citizens, and to ensure the immediate restoration of service if already suspended. The company also has a free exclusive telephone service line for customers in vulnerable situations: 900 100 752.

The [agreements signed](#) by the company until the end of 2017 protect 100% of Iberdrola's residential customers in Spain that might be in situations of vulnerability.

There are also subsidised electricity rates (known as *Bono social*) which allow lower electricity prices to be applied to electricity consumers considered to be vulnerable on the basis of certain determined social, consumption and purchasing power characteristics. In 2017, the Government regulated and defined the figure of vulnerable customer, subsidised rates (*bono social*) and other measures of protection for energy consumers through Royal Decree 897/2017, and also expanded the coverage to special groups (family units with disabled members, victims of gender violence or terrorism), among other measures. At the end of 2017, Iberdrola had 855,000 customers with subsidised rates.

- In the United Kingdom, ScottishPower has signed the *Energy UK Safety Net for Vulnerable Customers* agreement, which includes a commitment to never disconnect those customers who have been declared vulnerable due to reasons of age, health, disability or other serious reasons, and to reconnect them, if applicable, on a priority basis. A *Warm Home Discount* scheme for households at risk of poverty is also still in operation.
- In the United States, agreements have been signed with the government to help customers at risk of exclusion and vulnerable customers, and there are energy assistance programmes for these groups at the federal level, such as the *Home Energy Assistance Program (HEAP)*, *CMP's Electricity Lifeline Program (ELP)* (with credits to pay bills based on income and consumption) and the *Energy Assistance Program (EAP)*, to cancel debts for delayed payment. CMP has

implemented an *Arrears Management Program (AMP)*, which offers assistance to low-income customers and also guarantees a connection for people with limited resources who depend on an oxygen tank.

- In Brazil, the group's subsidiaries have a special different rate for low-income customers (TSEE) and advantageous prices and special terms for persons in difficulty. During 2017, Aneel (*Agencia Nacional de Energía Eléctrica*, or National Electric Energy Agency) continued with an update of the registry, selecting beneficiaries therefrom who meet the low-rent criteria of the consumer units determined by the Brazilian regulator.

Access to electricity for off-grid customers

For populations in Brazil with difficulties accessing the network, such as indigenous populations or *quilombolas*, Elektro provides various assistance programmes and the installation of off-grid photovoltaic systems. Other subsidiaries of Neoenergia also have programmes to ensure universal access to the distribution network.

Iberdrola has an *Electricity for all* programme to extend universal access to modern forms of energy that are more environmentally, socially and economically sustainable, as described in the "Iberdrola's contribution to the community" section of this chapter.

EU26 Population unserved in distribution areas

For the companies of the Iberdrola group in Spain, the United Kingdom and the United States, the electrification level covers practically the entire population. In Brazil, in the Neoenergia distribution area (around 835,000 km², with a resident population of slightly more than 34.3 million people), approximately 204,779 persons do not have electricity, representing around 0.6% of the total population within the area of the Neoenergia group companies.

EU27 Residential disconnections for non-payment

A detailed description of the set of procedures implemented in various countries to minimise the effect of supply outages and to provide access to the supply of electric power and gas is contained in the management approach to this "Topic" in the section called "Access to electricity for vulnerable customers".

Information regarding disconnection for non-payment and subsequent reconnections in accordance with the *Electric Utilities Sector Supplement* of the Global Reporting Initiative (GRI) is shown in the following table:

Residential disconnections for non-payment (no.)	2017	2016
Paid up to 48 h after disconnection	1,304,986	1,182,466
Paid between 48 h and one week after disconnection	236,436	237,576
Paid between one week and one month after disconnection	226,654	214,745
Paid between one month and one year	181,141	188,504
Paid after more than one year	7	0
Outstanding and unclassified	0	48,606
Iberdrola total	1,949,224	1,871,897

Residential reconnections following payment of unpaid bills (no.)	2017	2016
Less than 24 h after payment	1,612,578	1,561,202
Between 24 h and one week after payment	184,780	191,332
More than one week after payment	116,395	102,068
Unclassified	0	14,634
Iberdrola total	1,913,753	1,869,236

Information on disconnections and reconnections in the various countries is described in Annex 3 Supplementary Information of this report.

EU28 Power outage frequency

Iberdrola supplies electricity and monitors service quality in various countries. However, the measures in each company are taken according to different rules, following the respective legal requirements or customs, for which reason the company does not currently have a homogeneous measure of service quality in the various countries in which it operates. The figures are as follows:

- Installed Capacity Equivalent Interrupt Number (Spanish acronym "NIEPI") is used in Spain.

NIEPI	2017	2016
Spain	1.14	1.04

- Customer interruptions per 100 connected customers ("CI") is used in the United Kingdom.

CI	2017	2016
United Kingdom	36.0	42.7

- System average interruptions frequency index ("SAIFI") is used in the United States.

SAIFI	2017	2016
United States	1.15	1.15

- Equivalent duration of interruption by consumer unit (Portuguese acronym "FEC") is used in Brazil.

FEC	2017	2016
Brazil	7.15	7.44

The "Research and Development" section of the "Economic Dimension" chapter of this report provides additional information regarding the development of smart grids to improve the quality of electric supply, among other things.

EU29 Average power outage duration

Similarly to the preceding section, the figures are as follows:

- Installed Capacity Equivalent Interrupt Time (Spanish acronym "TIEPI") is used in Spain.

TIEPI	2017	2016
Spain	52.7 min	54.0 min

- Customer minutes lost per connected customers ("CML") is used in the United Kingdom.

CML	2017	2016
United Kingdom	31.0 min	33.8 min

- Customer average interruption duration index ("CAIDI") is used in the United States.

CAIDI	2017	2016
United States	1.91 h	1.84 h

- Equivalent duration of interruption by consumer unit (Portuguese acronym "DEC") is used in Brazil.

DEC	2017	2016
Brazil	15.96 h	17.14 h

EU30 Average plant availability

The following table shows the average availability of the company's various production technologies during financial year 2017:

Average availability factor (%)	2017	2016
Combined cycle	90.94	89.94
Conventional thermal	93.94	85.54
Cogeneration	82.75	91.00
Nuclear	89.29	85.98
Hydroelectric	86.02	86.96
Wind	94.36	96.84
Total	90.53	91.03

Information on the availability factors in the various countries is described in Annex 3 Supplementary Information.

Access to adequate information

Contribution to SDGs of the performance described by the indicators of this section

(according to SDG Compass www.sdgcompass.org)

Management approach

Apart from commercial information, the safety of users of the electricity grid or the promotion of the efficient use of energy is an on-going concern at the companies of the group. To progress in all these areas, information and training plans, programmes and activities are developed in each geographic area.

Accessibility of information

The Iberdrola group's distribution and supply companies develop various initiatives to make communication with customers having specific difficulties, whether idiomatic or sensory, simpler and more agile. With these

services, Iberdrola puts into practice its policy to guarantee equality of opportunity, non-discrimination and universal accessibility, within the framework of its focus on social responsibility, especially with respect to disadvantaged groups. This initiative is also due to the company's commitment to offer individualised services covering the needs of all customers.

For the last 5 years, Iberdrola has been the only company in the energy industry in Spain that has offered sign language video-interpreting in its customer service area. And Iberdrola continues to offer this service to its customers thanks to the collaboration initiative with Fundación CNSE that began in 2012, and that was renewed in 2017. In this way, persons who are deaf or hard of hearing can contact the company through sign language interpreters, the application of which is available on the customer website and is also included in a tool for the exchange of written messages. Furthermore, the website and the Virtual Office of the customer are available in Spanish, Basque (Euskera) and English. Invoices are currently issued in ten languages: Spanish, English, Italian, German, French and Portuguese and the regional languages Valencian, Basque (Euskera), Gallego and Catalan.

The Accessibility Certificate issued by Ilunion Tecnología y Accessibilidad was renewed for the corporate website in 2017, proof of its commitment and of the work of auditing, consulting and certification of both the corporate and customer websites, and is available at [Accessibility Certificate](#). It thus complies with the Web Content Accessibility Guidelines 2.0 of the W3C (World Wide Web Consortium), as well as the requirements to satisfy the UNE 139803:2012 Standard governing the degree of accessibility applicable to the websites of public utilities. Audits are performed on a half-yearly basis to ensure that the website meets the relevant requirements. Ilunion has also given Iberdrola an additional award for its efforts in the area of universal accessibility and service to disabled persons ([see Accessibility diploma](#)).

Finally, Iberdrola promotes information and training campaigns regarding safety and energy saving measures amongst disabled groups and underprivileged groups or those at risk of social exclusion, in order to contribute to the equality of these persons, removing barriers to communication.

In the United Kingdom, ScottishPower provides the necessary mechanisms to communicate effectively with customers who choose Welsh as the language in which they wish to receive service. There is a translation service to facilitate communications in cases where customers find it difficult to make themselves understood in English. In addition, the *Carefree Scheme* offers a variety of additional services to customers who are visually or hearing impaired, suffer from chronic illness or are over sixty years old. This service includes the provision of bills in Braille, large print, compact disc and audio cassette format. ScottishPower offers multiple alternatives so that customers with hearing or speech difficulties can communicate without needing to call: changing account details through the website, chat function on the website itself, Facebook Messenger for private communications, e-mail, etc. With the new *Next Generation Text Services (NGTS)* initiative, the company also offers a range of tools and services that can help customers with difficulties to call using a smart phone, tablet or computer.

In the United States, the companies CMP and NYSEG have a special communication service for hearing-impaired people called *Telecommunication Device for the Deaf (TDD/TYY)*, to facilitate communication through written messages and *Telecommunication Relay Service for Hearing Impaired-711* through which users can make 711 calls from any telephone in each state of the United States, without needing to remember area codes. NYSEG also provides special printed invoices for visually-impaired customers, as well as the ability to designate a third person at NYSEG to receive important notices, called *Third Party Notification*. There is also a service to help people with special needs and advise them on choosing services that might be useful. CMP and RG&E also make interpreters available for persons who request information in a language other than English.

In Brazil, Neoenergia develops improvements in physical accessibility at customer service locations and preferential treatment for persons with different abilities. They also implement programmes to provide service, information and access to billing to persons with visual and hearing impairments, which include: accessible websites, bills in Braille, a dedicated phone line for service to those with hearing or speech problems, special documentation and signage, and the availability of employees trained in sign language.

Education in the safe use of electricity

Through the group's websites, Iberdrola makes available to consumers recommendations and information available to consumers regarding the [safe use of electricity and gas](#), as well as guidelines to follow in case of an electrical accident. They also publish informational booklets regarding the potential risks of electricity affecting the proper use thereof.

In Spain, Iberdrola promotes informational and educational campaigns on safety measures and energy saving directed towards the general public. It also offers its customers products and services that provide additional safety in the home or business. It also collaborates with consumer associations and special groups in order to contribute to communication on matters relating to safety, training and education. Iberdrola also spreads information messages regarding safety and energy savings via its customer profile on Twitter (@Tulberdrola).

Two new services were launched in Spain during 2017: *Air-Conditioning Protection* and *Home Electrical Protection Plus*. Also noteworthy is the entry into the Italian residential market, with the launch of two services for the home: *Electricity Maintenance Service* and *Gas Maintenance Service*, focused on emergency breakdown assistance within three hours and the performance of small electricity or gas jobs, respectively.

In the United Kingdom, ScottishPower has maintained its [PowerWise](#) program regarding electrical safety for parents, teachers and students, with 25,708 visits in 2017. It has also continued with extensive campaigns to promote electrical safety, with programmes such as children's visits to *DangerPoint* in Northern Wales and *The Risk Factory* in Edinburgh, with a total of 16,435 visits. Further, 9,768 children also attended the *Crucial Crew* event, 190,028 attended the *Royal Highland Show*, 80,000 attended the *Cheshire Show* and 55,000 the *Anglesey Show*, especially dedicated to farm workers and their families. ScottishPower also has the *Stayenergysafe* service in order to inform the public about energy-related crime and the risks it involves.

In the United States, information and recommendations are provided regarding how to act in an emergency, such as adverse weather conditions, poisoning or health risks, as well as [safety advice](#) in case of storms or outages causing lines or equipment to fall. In addition, CMP has launched an *Outreach Campaign* targeting at-risk groups such as school children, safety personnel, contractors and emergency personnel.

In Brazil, the companies of the Neoenergia group provide this information on the bill, in customer service areas, through conferences on the proper use of electricity and building safety, messages on the website, on social media, and while on hold with the call centre, so as to reach all consumers, in addition to awareness-raising campaigns. In 2017 the *Ecoteca* project was rolled out in inland cities, with safety-related games.

Specific topics of the Iberdrola group

Iberdrola and the Global Compact

Management approach

Iberdrola has been a member of the Global Compact since 2002, undertaking to support, promote and disseminate its ten principles regarding human rights, labour practices, the environment and the fight against corruption, both internally and within its area of influence. During these years, the company has continued to further develop the policies and practices proposed by the Compact, which it has made public through its annual *Sustainability Report* and its corporate website.

Since 2004, as a founding member, the company has belonged to the Asociación Española del Pacto Mundial (Spanish Global Compact Association) (Asepam), now re-named the Red Española del Pacto Mundial (Spanish Global Compact Network) and has prepared progress reports on compliance with the principles of the Compact, which are publicly available both on the website of the Red Española del Pacto Mundial and on the Global Compact website

During 2017, Iberdrola took in the following actions in connection with the Global Compact:

- Submission of the Progress Report 2016 on compliance with the principles of the Compact, rated at the highest level for this type of report ("GC Advanced").
- Attendance at the 2017 General Assembly of the Red Española.
- Iberdrola and the Red Española del Pacto Mundial have developed the *Moving for Climate NOW* initiative, within the framework of the COP23 Climate Summit held in Bonn in November 2017. The goal of the initiative is to transmit to society the urgency of fighting climate change, the need to join forces from all areas, and the requirement for ambitious and immediate action. The event, which was included in the official programme of the COP23 Summit, consisted of an almost 800 kilometre bicycle route between Paris and Bonn.
- Iberdrola participated with the Global Compact on numerous initiatives to promote and develop the Sustainable Development Goals, including topic support for the preparation of the book *SDGs Year 2: Analysis, trends and business leadership*.

As mentioned above, Iberdrola has linked the SDGs to its business strategy, and actively works with the Global Compact for the achievement thereof within its scope of activities.

In 2018, Iberdrola plans to actively participate in the activities of the Red Española del Pacto Mundial in a manner similar to the past year.

Iberdrola's contribution to the community

Social actions, in cooperation with governmental and civil society organisations, constitute a significant part of Iberdrola's commitment to the community. Detailed information on such actions can be obtained both from the published reports and from the corporate websites of Iberdrola's subsidiaries in Spain, the United Kingdom, the United States, Mexico and Brazil.

Rural electrification programmes in Brazil are also particularly worthy of note. The Brazilian companies of the group have continued to develop such programmes, undertaken jointly with government entities, with the goal of extending the electricity infrastructures in order to facilitate economic and social development and minimise inequalities among the various regions and between rural and urban areas. These programmes represent a fundamental component for development of the most disadvantaged sectors of Brazil's population.

1.- Dedicated resources

Iberdrola has selected the *London Benchmarking Group* (LBG) model to measure and assess business contributions to the community due to its wide international recognition. It is regarded as the most highly-valued standard for measuring the results and impacts of social programmes, both for the company and for the community.

A detailed description of the LBG model can be found at the www.lbg.es.

Iberdrola has used the LBG model to report its contributions to society in this *Sustainability Report* for financial year 2017.

Contribution to the community in 2017		(€ thousands)
By category		
- Specific contributions		9,346
- Community investment		43,460
➤ Socioeconomic development of the community		
➤ Energy sustainability		
➤ Art and culture		
➤ Education and training		
➤ Cooperation and community service		
- Commercial initiatives in the community		7,329
- Management costs		2,835
By type of contribution		
- Cash contributions		58,954
- Staff time		214
- In-kind contributions		967
- Management costs		2,835
By Sustainable Development Goals (SDGs)⁸³		

⁸³ The breakdown of contributions to the community by SDG covers 95% of the figure reported, as it is not in all cases possible to establish a link between the initiatives and their contribution to an SDG.

- 1. End poverty	2,323
- 2. Zero hunger	16
- 3. Good health and well-being	6,379
- 4. Quality education	10,700
- 5. Gender equality	18
- 6. Clean water and sanitation	11
- 7. Affordable and clean energy	4,795
- 8. Decent work and economic growth	1,374
- 9. Industry, innovation and infrastructure	665
- 10. Reduced inequalities	2,573
- 11. Sustainable cities and communities	27,253
- 12. Responsible consumption and production	79
- 13. Climate action	710
- 14. Life below water	84
- 15. Life on land	634
- 16. Peace, justice and strong institutions	27
- 17. Partnerships for the goals	2,228
Report boundary	62,970

In addition, the aggregate funds allocated to rural electrification programmes in Brazil represented a total of 278.2 million euros on a consolidated basis for the group.

Electrification programmes 2017	(€ thousands)
Neoenergia	278,148

2.- Outputs and impacts

Benefits for society

Iberdrola has been measuring the results achieved by its community support programmes using various parameters. Iberdrola's foundations are applying a methodology adapted from LBG to measure outputs and impacts for its most important programmes and projects.

In 2017, Iberdrola's foundations extended the application of this methodology to a total of 510 projects in Spain, the United Kingdom, the United States, Brazil and Mexico, resulting in a total investment of 13.5 million euros, with more than 220,000 direct beneficiaries as well as more than 5 million indirect beneficiaries. Other notable achievements have been funding the award of 176 scholarships and research grants.

The programmes are divided into the principal areas of activity of Iberdrola's Foundations:

- **Training and Research:** the main goals include contributing to the training of a new generation of professionals able to drive transformation toward a sustainable energy model, with more than 6.4 million euros of investment.
- **Biodiversity:** supporting conservation programmes for endangered species and the restoration of protected habitats, with more than 600,000 euros of investment.
- **Art and Culture:** promoting culture, with particular attention to the care and maintenance of diversity, uniqueness and cultural and artistic wealth, with 1.3 million euros of investment.
- **Cooperation and Community Service:** actively contributing to the improvement of the quality of life of the most vulnerable people and groups, and to social and labour inclusion, with 3.8 million euros of investment.

The charts below show the results and achievements globally and by country during 2017:

Foundations of the companies of the Iberdrola group – Results in areas of activity in 2017 (€)

The results and achievements by country is available in Annex 3 Supplementary Information.

Benefits for the company

Iberdrola believes that the main benefits that it obtains from its commitment to society are:

- Building and reinforcing relationships of trust with communities, through the support of social organisations and national, regional and local governments, which has a favourable impact on relations with all of the Stakeholders.
- Achieving higher brand recognition and improving its corporate reputation.
- Improving employee satisfaction, by their belonging to a socially valued and recognised company, which favours the attraction and retention of talent.

3.- Corporate volunteering programme

The Iberdrola group offers its workforce various volunteering opportunities within the framework of its Corporate Volunteering Programme. This Programme, which was launched in 2006, is a global and international project aligned with the values of the group and its *Sustainability Policy*, which is intended to channel the community service spirit of employees and motivate them to participate in social projects aimed at the integration of vulnerable groups, improving the environment and sustainable development.

The Programme is aligned with the Sustainable Development Goals, defined by the United Nations for the 2015-2030 horizon, and especially focused on goals 3 (good health and well-being), 4 (quality education), 7 (affordable and clean energy), 10 (reduced inequalities) and 13 (climate action). It should be noted that

Iberdrola has joined IMPACT 2030, an initiative launched by the private sector in collaboration with the United Nations, civil society, the academic world and other Stakeholders to strategically mobilise corporate volunteerism towards the SDGs.

Some of the more noteworthy [corporate volunteering](#) initiatives carried out in 2017 were the following:

- The sixth edition of the global INVOLVE (International Volunteering for Education) project, which offers training in new technologies to youths at risk of social exclusion, with a two-week stay of a team of volunteers from Spain, the United Kingdom, the United States, Brazil and Mexico. This year INVOLVE has been recognised by CEMEFI (*Centro Mexicano para la Filantropía*, or Mexican Philanthropy Centre) as one of the best Business Social Responsibility practices, being a finalist in the Corporate Volunteerism category.
- National and international volunteerism days were organised, among which particularly worth noting is the “International Volunteerism Day” held simultaneously in Spain, the United Kingdom, the United States, Mexico, Brazil and Mexico, and this year has had more than 1,300 simultaneous participants in the more than 60 simultaneous activities. “Volunteerism Days” were also held in Spain, with games and sports days to encourage the normalisation and integration of persons with functional diversity.
- Cooperation initiatives for development in African countries, within the framework of the *Electricity for All* programme, and its public-private cooperation project to improve electric power supply at several refugee camps in Ethiopia. Added to this was the *Know your Laws* programme for the integration of immigrants by means of courses offered by employees of the company who are experts in law, and “Lights... and Action!” together with Fundación Tomillo to provide energy efficiency training and develop the employability of youths from disadvantaged environments, which this year is international in nature with the inclusion of volunteers from ScottishPower.
- Launch in Spain and Mexico of the volunteer project *Fight against Climate Change*, to raise awareness regarding this problem among 9,830 children at 101 centres. This activity was supplemented with the donation of the bicycles accompanying the expeditions to the latest climate conferences held in Paris and Marrakesh, which were delivered to the Ciudad Escuela Muchachos (CEMU) and to the entity Entraide Nationale. Not to mention the continuation of environmental activities like the 10th Tree Day for the creation of the “Iberdrola Forest”, reforestation workshops in several countries and several popular races or competitions for different social and environmental purposes.
- The Iberdrola “Operation Kilo” campaign allowed for the collection of 4,700 kg of basic foodstuffs and children’s products at work centres in Spain, with the cooperation of social organisations. The activity has been supplemented with volunteer activities at charity canteens and the delivery of food to homeless persons, for the goal of Zero Hunger. At the same time, Iberdrola cooperated with several entities such as Unicef, Aldeas Infantiles and Federación Española de Bancos de Alimentos. The *Smile for Christmas* campaign was also held to deliver Epiphany presents to children in situations of vulnerability.
- Launch of the *Solidarity Recycling* project at various corporate offices combining solidarity and environmental ends, by giving new life to unused household objects.
- Volunteer support for the Spanish Cancer Association in organising its marches against cancer.
- The volunteer activity of the “Iberdrola with Refugees” programme has continued, contributing to the opening of four Integration Schools in which approximately 140 refugees have been able to benefit from digital tools workshops, as well as training in the Spanish language and adaptation to their surroundings, among other aspects.
- In the context of International Women’s Day, volunteer activities have been carried out with inmates in the women’s wing of the Alcalá-Meco prison and with women with intellectual disabilities.

- For the first time, Iberdrola's Volunteering Programme joined the Give & Gain initiative, International Corporate Volunteering Week, with various activities to raise visibility and encourage the role of corporate volunteerism as an agent for social change. The company also participates in the main volunteerism working groups and international associations such as Even, Voluntare, IAVE, IMPACT 2030, etc.
- To provide support regarding the natural disasters that occurred during 2017, the company's has helped with financial and material resources for various social entities to alleviate the damage caused by the hurricanes Harvey, Irma and Maria, which strongly hit the states of Texas and Florida and the island of Puerto Rico, as well as the damage suffered from the September earthquakes in Mexico. Volunteers from Mexico City organised healthcare supplies to provide first aid to those affected by the earthquakes through the Mexican Red Cross, and the company's volunteers in Oaxaca participated in that region by delivering water bottles and dispensers.
- The company also sent to Puerto Rico a group of a volunteer employees from Avangrid who are grid experts in order to re-establish electricity supply, which was seriously affected by Hurricane Maria, as part of an initiative sponsored by the New York Power Authority.
- The *Volunteer Portal* continues to be the meeting point for all professionals of the group interested in social and community service actions, using a global and trilingual website. The *Volunteerism Newsletter* has provided weekly information on activities.

4.- Iberdrola Foundations

[ScottishPower Foundation](#), [Avangrid Foundation](#), [Fundación Iberdrola México](#), Instituto Neoenergia and [Fundación Iberdrola España](#) represent Iberdrola's commitment to the economic and social development of the countries in which it does business. The Foundations of Iberdrola, working with well-known social organisations and institutions, support social, cultural and environmental initiatives intended to contribute to social progress and improve the quality of life of the most vulnerable.

a) Training and research area

Fundación Iberdrola's *Scholarship and Research Aid Programme in Energy and Environmental Research* grants Master's scholarships each year in energy and environmental research in Spain, the United Kingdom, the United States, Mexico and Brazil, as well as research grants in Spain. This programme seeks to achieve excellence in applied higher training, in order to train high-level professionals capable of contributing to meeting the energy demands of the population and the protection of the environment, with a complete and global concept of sustainability. A total of 146 scholarships for master's degrees in energy and environment, preservation and restoration, research grants, and Fulbright and Fundación Carolina scholarships were awarded in 2017. In December 2017 the *Presentation of Diplomas* took place at the company's offices in Madrid, and the students and the chairman & CEO of Iberdrola, Ignacio S. Galán, were then received at the La Zarzuela Palace by H. M. the King of Spain.

Another initiative of the Foundation in Spain is the *English Language Training Programme* through immersion courses for students with limited financial resources and professors using the available facilities of the company to the extent possible during holiday periods. In 2017 there were courses in four Autonomous Communities with the participation of 140 students and 32 professors.

At the foundations in the United Kingdom and the United States, there were programmes of collaboration with local universities for the professional training of technicians and youth, as well as support for innovation projects and educational programmes of research and training centres for vulnerable groups.

Fundación Iberdrola México has a programme of collaboration with the Tecnológico de Monterrey university at its Altamira campus for the education of low-income youth in bachelor's and engineering degrees.

b) Biodiversity area

Fundación Iberdrola España collaborated on the *Bird Migration Scheme (Programa de migración de las aves)* (MIGRA), with the tagging of 83 new specimens with GPS transmitters. All information regarding 809 birds of 28 species can be found at www.migraciondeaves.org. The first case study on the migrations of the booted eagle was published in 2017; this is a scientific document prepared based on data provided by the Scheme. The Foundation in Spain also collaborates on a project for the preservation and improvement of habitats in the Tagus International Nature Reserve to encourage the conservation of steppeland birds. In the area of awareness-raising and the fight against climate change, there have been a number of conferences in collaboration with the AISEC Association entitled *What's happening with the climate?* (*¿Que sucede con el clima?*) and informational workshops of the G2020 Association.

In the United Kingdom, collaboration has continued through ScottishPower Foundation with the Young Scots Climate 2050 programme to train future environmental leaders. 129 youth have developed leadership skills in areas like climate change and sustainability.

In the United States, various collaborations have been carried out through the Avangrid Foundation with environmental institutions, scientific museums and centres, including projects dedicated to the efficient use of energy, promotion of electrical vehicles and smart communities, efficient and sustainable construction and projects to improve marine and river habitats and for the conservation of birds. These include special collaborations with the leading research institute the Peabody Museum and the Museum of Natural History at Yale.

Instituto Neoenergia of Brazil has continued to work with the Flyways projects, involving census work relating to wading birds at risk of extinction. Together with IPEMA (*Instituto de Permacultura y Ecoaldeas de la Mata Atlántica*, or Atlantic Forest Permaculture and Ecovillage Institute), there has also been work on the project *Eco Citizen: building a sustainable future*, with free courses for the training of professionals in sustainable construction through the use of new technologies. 2017 also marked the end of the *Cuida Colmena* (Beehive Care) project, dedicated to the conservation of bees and to encouraging productive projects for a hundred children at risk of social exclusion.

In Mexico, support activities have continued for the *Let's clean the world (Limpiemos el mundo)* campaign in the municipality of La Laguna, and there has been promotion of a new project called *Felino* to protect animals in danger of extinction.

c) Art and culture area

Iberdrola's commitment to the promotion of art focuses on the area of preservation and restoration of cultural heritage, including specific activities in order for these projects to drive local development and sustainable tourism.

The Iberdrola Restoration Programme in Spain supports the workshops of the Prado and Bilbao Fine Arts Museums. In the case of the Prado Museum, in 2017 there was a study and restoration of 276 works, including the painting *Philip II offering the Infante don Ferdinand to Victory* by Tiziano and the *Demetrio Poliorcetes monumental Hellenistic bronze*. The Workshop of the Bilbao Fine Arts Museum took on the restoration of a total of 13 works, with the most complex project being Chillida's *Meeting Place IV* sculpture. Restoration activities are rounded out with the preservation project of the Library of the Monastery of San

Millán de la Cogolla and the conclusion of participation in the last two Flemish tapestries from the collection of the Chapel of the College of the Patriarch (Valencia).

The *Atlantic Romanesque Plan* (www.romanicoatlantico.org) continued activities to improve Romanesque churches in the provinces of Salamanca and Zamora, as well as locations in Portugal. The most noteworthy interventions in Spain during 2017 were: Muga de Alba Church in Zamora and Church of San Martín and the Hermitage of Yecla de Yeltes, both in Salamanca. The Portuguese area has seen intervention in the Boticas and Guimaraes churches.

In 2017, within the framework of the *Exhibitions Programme*, the Foundation in Spain has worked with other museums like the Reina Sofía Museum in the exhibition of the *80th Anniversary of Picasso's Guernica* and the Sorolla Museum with *Sorolla in Paris*. Iberdrola joined in the celebration of the XX Anniversary of the Guggenheim Museum in Bilbao with the exhibition *Bill Viola: retrospective*, dedicated to the New York artist, a pioneer in the development of video art.

The goal of the Illumination Programme in Spain is to emphasise the value of historical and artistic heritage and promote local development, including new LED technology in lighting. 6 projects were completed in 2017, including: the renovation of the illumination of the Chapel of the Holy Chalice of the Cathedral of Valencia, a new exterior illumination of the Municipality of Irún, the 2nd Phase of the renovation of the rooms of the Museum of the Royal Academy of Fine Arts of San Fernando and the major "Lighting the Prado" project in the rooms of the Prado Museum. Work continues on another 5 projects that will be inaugurated in 2018.

In the United Kingdom, financed by the ScottishPower Foundation, 2017 saw a special collaboration to celebrate the 70th anniversary of the Llangollen International Musical Eisteddfod, with a project in which four choral and dance groups made up of vulnerable persons participated. The groups reflected the diversity of society in order to promote tolerance and plural coexistence through art and culture. The foundation also supports the National Museum of Scotland and the ScottishPower Pipe band.

In 2017, the ScottishPower Foundation received the Wales Arts & Business Award of the year for its continued support and promotion of art and culture.

The focus on art and culture as a driver of sustainable communities is a priority of the Avangrid Foundation in the United States, which continues to support restoration projects like the Eastman School of Music theatre in Rochester and other historic community theatres like the Augusta's Colonial Theater in Maine and the Convoy Theatre in Ohio. The goal is to help revitalise urban centres in a sustainable manner, while also contributing art and culture to communities in difficulty. Avangrid worked with multiple cultural institutions in 2017, including: Abyssinian Meeting House, Binghamton Philharmonic, Eastman Theatre, Maine Irish Heritage Center, Maine State Ballet, Memorial Art Gallery, Portland Museum of Art, Rochester International Jazz festival, Tompkins Country Library, Tri-cities Opera, etc. Other collaborative work includes support for the International Festival of Arts and Ideas and the Rochester Jazz Festival, among others.

In Brazil, the cultural activities of the foundations focused on continuing the project for the exterior illumination of the Fort of Five Points in Pernambuco, the inauguration of which is expected in 2018. Work is also proceeding on a project for the exterior illumination of the Barra Grande Fort, in Guarujá, on the Sao Paulo coast. The fort is the only Spanish building on the Brazilian coast, and hopes to be designated as a cultural heritage site by UNESCO.

Work in Mexico includes the Illumination Project of the National Art Museum (Munal) of Mexico City, which is intended to promote energy efficiency and contribute to the preservation of the works of this museum.

d) Cooperation and community service area

The Foundation in Spain has a *Social Programme* and a line of work in international cooperation. The *Social Programme* is intended to contribute to the improvement of the quality of life of the most vulnerable groups, with special attention on infants, youth and women. The programme works with non-profit entities that contribute to eradicating child poverty, promoting education as a useful tool for youth, encouraging the social inclusion of disabled persons and improving the quality of life of persons with serious illnesses and their families. 32 projects in various regions of Spain were supported in 2017, with an investment of more than one million euros, a positive impact on 45,000 beneficiaries, and the creation of one hundred direct jobs. The line of international cooperation supports projects that allow access to electricity and potable water in areas of extreme poverty or humanitarian emergency. In 2017 the Foundation joined the SHIRE Alliance, promoted by Universidad Politécnica de Madrid and made up of ACNUR and the EU, among others. This initiative is intended to provide electricity to common areas and schools in refugee camps during 2018.

The ScottishPower Foundation has promoted a dozen collaborations with social projects in the United Kingdom, prioritising programmes for persons with illnesses and their families. The music in the *Singing Together* programme was intended to reduce the isolation and loneliness experienced by hospitalised persons. Other noteworthy social projects would include the implementation of palliative care at leading hospitals, a rural transport service to help isolated communities access health services, and a mental health project for pregnant women and support for autism, among others.

The annual ScottishPower Foundation Awards were given in Glasgow on 7 November, awarding six well-known social and cultural institutions.

In the United States, the Avangrid Foundation worked with more than 60 social organisations during 2017, including: assistance funds for electricity supply and efficiency (*American Red Cross SHARE Heating Fund*, *Broome Country Habitat for Humanity*, *Working cities*, *Lifespan*, etc.), assistance in the fight against diseases such as heart cancer, heart disease, fibrosis and leukaemia, and social collaborations like *United Ways*, *Bike Coalition*, *Habitat for Humanity*, *Food processing*, *Kids First Center*, *Maine General Hospital*, etc.

In Mexico, there is an educational infrastructure project, which during 2017 engaged in social support activities at 9 school and old-age centres, improving the facilities. In addition, the company collaborated with other social entities like: Civil Protection, the Fire Brigade, the Red Cross and the Down Syndrome Foundation, among others. After the earthquake suffered in various areas of the country, the Foundation in Mexico mobilised the donation of funds for this humanitarian emergency. The funds were used to obtain medicine for the affected victims, removal of rubble, paving, reconstruction and expansion of the sewerage network, expansion and reconstruction of the potable water network, and construction of roofs for social infrastructure, etc.

During 2017, Fundación Iberdrola México and España collaborated together in the project for electrification and potable water in the rural community of Catecas Altas in the State of Oaxaca (Mexico). This initiative, included in Iberdrola's *Electricity for all* programme, was developed by Energía sin Fronteras and Save the Children. The first phase consisted of identifying needs, a feasibility study and a participative process with the affected communities. Work has since been performed on the project and the various activities thereof in the area of electrification, improvement of electrical infrastructure, and provision of water in basic community centres.

Instituto Neoenergia in Brazil supported social projects in the areas around the facilities. In addition to promoting the social development of the communities, there were also activities to protect the environment. Another significant social initiative is the collaboration on the “*Brilliant Minds*” project, which consists of supporting the most vulnerable students of the public teaching network of three cities. These students are highly qualified, and the activities are focused on guidance and counselling.

e) Institutional cooperation and new *Master Plan*

Finally, the Foundations collaborate with other cultural institutions in all countries on specific social, scientific and cooperation projects.

In December 2017 the Foundations Committee approved a new *Master Plan* for the 2018-2021 period. This is a guideline for all the foundations that commits to helping reach the specific SDGs and strengthen the transformative focus of social action by foundations, which is representative for Iberdrola’s Stakeholders and relevant for society in general.

5.- *Electricity for All* programme

The Sustainable Development Goals (SDGs) 2015-2030, to which Iberdrola has linked its business strategy, define universal access to energy as essential and frame sustainable energy as an opportunity that transforms life, the economy and the planet. To meet the challenges and opportunities currently faced by the world, energy has a central role, whether to foment employment, safety, climate change, food production or to increase income.

A lack of access to the supply of energy is an obstacle to human and economic development. The [*Electricity for All*](#) programme is Iberdrola’s response to the call of the international community to ensure universal access to energy services that are accessible, reliable and modern, focused on sustainable electrification activities, linking the purpose thereof to SDG 7.1.

The company has set itself the goal of reaching four million beneficiaries of the *Electricity for All* programme by 2020. Iberdrola announced this goal at the UN SE4ALL Forum held in New York in May 2015. There are 3.9 million beneficiaries of the *Electricity for All* 2014-2017 programme with 3 areas of activity:

- Financing of projects through capital investment, using the PERSEO investment fund. This includes the investment in September 2017 in the Mexican company Ilum México, which promotes solar projects in disadvantaged areas. Ilum México, created in 2009, carries out programmes of illumination and electrification of homes, schools and clinics, and training in rural areas of the country. To date, 9,700 solar systems have already been installed, with more than 40,000 users, avoiding the emission of 5,000 tonnes of CO₂.
- Activities with a social impact: investments promoted by businesses in the countries in which Iberdrola has a presence. This is the case with the *Light for All* Programme of the distribution companies in north-eastern Brazil.
- It develops projects with a high social component, through NGOs and corporate volunteers.

Iberdrola, promoting women's sports in Spain

During 2017 Iberdrola continued to support the [Women, health and sport](#) initiative, the principal goals of which consist of driving the success and practice of women's sport, promoting gender equality and fostering healthy habits from a young age. The company has thus become the main driver behind the "Universal Woman" programme of the Higher Council for Sport (*Consejo Superior de Deportes*) (CSD), placing it in the vanguard of backing for women's sport. Iberdrola was the first company in Spain to make a global commitment to promoting the participation of women in all areas of sport.

Within this context, Iberdrola has recently renewed its commitment to support the various national federations, including:

- By promoting and increasing female participation in all areas of sport.
- By the existence of programmes to promote sport at the grassroots level and other social projects.
- By its extraordinary level of success achieved and high participation rate.

During 2017 Iberdrola continued to support rhythmic gymnastics, triathlon, swimming, rugby, canoeing, badminton, football, handball, volleyball, athletics, boxing, ice sports, hockey, karate, table tennis and water polo. Together with each of the federations, Iberdrola also supports activities to promote women's sport like educational campaigns at high schools and national competitions.

Moreover, in 2017 there were seven more stages of the *Women, energy and sport tour* consisting of a tour around various Spanish cities, which will continue during 2018 with the aim of promoting women's sport and transmitting the concepts of effort and improvement via the practice and exhibition of various disciplines.

In short, through the *Women, health and sport* initiative, Iberdrola reinforces its commitment to the promotion of talent, effective equality and social development, which form part of the company's key pillars. Its support for values such as teamwork and overcoming challenges materialises through various projects with the aim of reinforcing the social and cultural dimension of sport and activating support for women's sport.

Annexes

Annex 1: Content Index in Relation to the Principles of the Global Compact

Annex 2: Report on *green* financing returns

Annex 3: Information Supplementary to the Sustainability Report

Annex 1:

Content index in relation to the Principles of the Global Compact

The table below shows the GRI indicators of this report that offer more relevant information on compliance with the 10 Principles of the Global Compact, as well as the content of the management approaches to each GRI aspect. Using the table's index, each Stakeholder can assess the level of Iberdrola's advancement with respect to each of such principles:

Issue	Global Compact Principles	Most relevant GRI Standards Indicators	Related SDGs
Human Rights	Principle 1. Businesses should support and respect the protection of internationally proclaimed human rights.	410-1 to 412-1, 412-2, 413-1, 413-2	 
			 
			 
	Principle 2. Businesses should make sure they are not complicit in human rights abuses.	412-3, 414-1, 414-2	 
			 
			 
Labour Rules	Principle 3. Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining.	102-41, 407-1, 402-1	 
	Principle 4. Businesses should uphold the elimination of all forms of forced and compulsory labour.	409-1	 
	Principle 5. Businesses should uphold the effective abolition of child labour.	408-1	 
	Principle 6. Businesses should uphold the elimination of discrimination in respect of employment and occupation.	102-8, 202-1, 202-2, 401-1, 401-3, 404-1, 404-3, 405-2, 406-1	 
Environment	Principle 7. Businesses should support a precautionary approach to environmental challenges.	201-2, 301-1, 302-1, 303-1, 305-1 to 305-3, 305-6, 305-7	 
	Principle 8. Businesses should undertake initiatives to promote greater environmental responsibility.	301-1 to 308-2	 
	Principle 9. Businesses should encourage the development and diffusion of environmentally friendly technologies.	302-4, 302-5, 305-5	 

Anti-corruption

Principle 10. Businesses should work against corruption in all its forms, including extortion and bribery.

102-16, 102-17
205-1 to 205-3, 415-1

Annex 2:

Report on *green* financing returns

Iberdrola has issued a total of 8 *green* bonds. The issue dates, as well as the principal characteristics thereof, are as follows:

Green bonds							
ISIN	Issue date	Issuer	Public / Private	Senior / Subordinate	Face value (€ millions)	Maturity	Coupon
XS1057055060	24-Apr-14	Iberdrola International	Public	Senior	750	Oct-22	2.50%
XS1398476793	21 Apr-16	Iberdrola International	Public	Senior	1,000	Apr-26	1.13%
XS1490726590	15-Sep-16	Iberdrola International	Public	Senior	700	Sep-25	0.38%

XS1721244371	22-Nov-17	Iberdrola International	Public	Subordinate	1,000	Perpetual	1.875%

In November 2017 Iberdrola also issued a *green bond* in the U.S. market through its subsidiary Avangrid in the amount of 600 million U.S. dollars, with a coupon of 3.15%. Information on the projects receiving the proceeds of this bond, as well as the environmental benefits achieved therefrom, are described in Avangrid's [Sustainability Report 2017](#).

The proceeds of all of these transactions have been used to fund the refinancing of investments in projects that met certain environmental and social responsibility criteria validated both by Iberdrola and subsequently by VigeoEiris (an independent entity). These projects are mainly within the area of renewable energy

Iberdrola used VigeoEiris as an independent expert in validating the “green” nature of its bonds. VigeoEiris issues its rating of the issuer not only with respect to the management of the selected projects, but also regarding its general environmental commitments and the social responsibility that it implements in the ordinary course of its business.

The methodology followed for the assignment of the various projects to different transactions is described in the document [Iberdrola Framework for green financing](#) (the “**Framework**”), which has been verified by PriceWaterhouseCoopers Auditores, who also verify this *Sustainability Report*. The principal sections contemplated in the *Framework* are described below.

1. Use of funds

The proceeds from the various *green* financing instruments are used to finance or refinance *Eligible Green Projects*.

Consistent with the *Green Bond Principles*, Iberdrola considers *Eligible Green Projects* to be those that meet the Eligibility Standards described in the Framework.

2. Evaluation and selection of the project

The Green Financing Committee selects and evaluates projects that are susceptible to (re)financing by *green* instruments. This selection and evaluation process is performed in 5 phases described in the Framework.

3. Management of funds

The proceeds from the *green* financing instruments will be managed based on the phase of development and expense incurred in the selected assets or projects. Therefore, Iberdrola distinguishes between two types: refinancing of projects in operation and (re)financing of projects under development.

4. Reporting

Iberdrola commits to report annually until the maturity date of each of the *green* bonds or *green* financing instruments.

5. External assurance

The *green* financing issued by Iberdrola is supported by three external reviews, depending on the type of instrument.

In the first bond, issued in 2014, the eligible projects were reviewed by VigeoEiris using an analysis of a sample that covered approximately 50% of the nominal value of the financing obtained. In subsequent bonds, the complete inventory of assigned assets was provided for review. On all occasions, VigeoEiris also performed an analysis classifying Iberdrola's sustainability policies and practices, finding that the required standards were met with a level of security that was more than satisfactory.

The conclusions of VigeoEiris, including the controversies identified in the issue of *green* bonds, together with the eligibility standards, are described in the *Second Party Opinion* corresponding to each *green* bond. This information is available in the [Green Bonds](#) section of the corporate website.

Report on returns

The structure of this report on returns is grouped by benefits and indicators for each issue, so that investors can know the impact of the projects financed by each of them.

Smart meters installed (%)	1.44	4.16
Transformer centres adapted for remote management (no.)	583	2,692
Transformer centres adapted for remote management (%)	0.88	4.01

▪ **Sustainability indicators in the area of renewable energy⁸⁶**

Installed capacity attributable to the bond (MW)	2017 output attributable to the bond (GWh)	CO ₂ avoided due to the bond (Tm) ⁸⁷
474	944	245,471

⁸⁵ Takes data from 2011 and 2012 in order to allow for identification of profits from investments made.

⁸⁶ Emissions avoided take into account the percentage of production of each facility that corresponds to the percentage of the amount invested and installed capacity allocated to each *green* bond issue.

⁸⁷ Emissions avoided, reported throughout this Annex 2: *Report on green financing returns*, have been calculated as a product of 2017 production attributable to the bond and the emission factor for the country in which the assets are geographically located. Sources: REE for Spain (January 2018, 2017 mainland data), DEFRA for United Kingdom (September 2017) and World Energy Outlook EU for Portugal (November 2017).

GRI 102 GENERAL STANDARD DISCLOSURES

102-7 Scale of the organisation

Locations of operation of the Iberdrola group

The group of companies that belong to the Iberdrola group carry out various activities in a large number of countries, and more than 1,200 sites or facilities have been identified at which employees of the group carry out activities for which it is responsible.

For purposes of reporting under the *GRI Sustainability Reporting Standards*, in order to deal with such a large number of facilities, only those considered to be principal locations of operation have been identified, by business and by country, adopting as a basic standard the number of persons performing their activities at a facility, and based thereon:

- In the countries deemed to be at low risk for the violation of human rights, the most important facilities are identified as principal locations of operation, assuming that the personnel at the smaller facilities are part of a functional or hierarchical reporting structure that assures their rights through the tools and procedures established at the organisation.
- In countries with a higher risk the standard is more restrictive: if there are several facilities of different sizes dedicated to similar activities, the largest facilities are included as principal locations of operation, with the smaller ones deemed to be dependent centres with the same basic guarantees; if the number of facilities is low or it is deemed that the risk is higher, such facilities are included as principal locations of operation, regardless of the number of persons working therein.

According to these standards, the principal locations of operation identified in 2017, by business and by country, are reflected in the following tables:

Significant locations of operation 2017 by business	
Corporate	17
Wholesale and Retail Business	45
Networks Business	36
Renewables Business	16
Iberdrola total	114

Significant locations of operation 2017 by country	
Spain	33
United Kingdom	26
United States	25
Brazil	27
Mexico	2
Other countries	1
Iberdrola total	114

Based on this data, the company has performed a study to identify the significant locations of operation at which there might be some risk of violation of human rights, which is described in detail in disclosure 412-1 of this report.

Cogeneration	0.00	69.07	50.06	58.31	53.81	56.14

⁹¹ Average of efficiencies weighted by the annual production of each thermal power plant.

⁹² Does not include the Puertollano thermo solar plant.

GRI 300 SERIES ENVIRONMENTAL DIMENSION

GRI 302 Energy

302-1 Energy consumption within the organization

Energy consumption in buildings (GJ)	2017	2016
Spain	157,264	165,637
United Kingdom	106,882	121,327
United States	346,014	401,236
Brazil	166,256	46,099
Mexico	554	911
Other countries ⁹³	1,146	1,218
Total	778,116	736,428

GRI 303 Water

303-1 Total water withdrawal by source

Water use in thermal generation

The following shows the withdrawal of water at the thermal generation facilities (coal, combined cycle, nuclear and cogeneration) in 2017.

Water use (hm ³)	Withdrawal			Discharge	
	Total withdrawal	Withdrawal process and standby services	Withdrawal for cooling	Evaporation of water used for cooling	Discharge into receptor environment
Spain	1,500.01	4.39	1,495.75	53.56	1,451.57
United Kingdom ⁹⁴	202.81	0.39	202.42	0.01	202.20
United States	4.18	3.67	0.64	1.78	1.54
Brazil	0.22	0.22	0.00	0.00	0.09
Mexico	277.45	5.34	271.52	19.14	246.24
Total⁹⁵	1,984.67	14.01	1,970.33	74.49	1,901.74

⁹³ Other countries: Greece, Romania and Hungary.

⁹⁴ The cooling systems in the United Kingdom are open circuits or air condensers, and therefore it is estimated that the volume of evaporated water is practically zero, except for steam from cogeneration. The data include the Daldowie thermal drying facility and the Hatfield gas storage facility.

⁹⁵ The total discharge figure includes the return from cooling, the return of water used in processes, and rainwater collected at some thermal facilities without an independent storm sewer system.

Water consumption at offices and control facilities

Water consumption at offices and facilities ⁹⁶ (m ³)	2017	2016
Spain	94,239	84,693

¹⁰⁴ Methodology for calculating the indicators (per GRI standard):

- Injury rate (IR) = (number of injuries with missed (absentee) days*200,000)/hours worked
- Occupational disease rate (ODR) = (number of occupational disease cases/hours worked)*200,000
- Lost day rate (LDR) = (calendar days lost per accident, as from first day of leave/hours worked)*200,000
- Absenteeism rate (AR) = (missed (absentee) days, as from first day of leave/days worked)*200,000

GRI Electric Utilities Sector Supplement Specific Disclosures

EU30 Average plant availability

The availability of a plant (during a particular period) is the percentage of time within such period that the plant is able to produce energy. It is calculated using normalising indicators, for which reason, knowing the availability of each facility and the net installed capacity thereof yields the average availability factors of the group, as presented in the following table:

	Average availability factor (%)							
	Spain		United Kingdom		United States		Brazil

Integrated Report február / 2017

- Comfort for homes
- Sustainability for the future
- Competitiveness for companies
- Innovation for infrastructure

Our goal is to offer a reliable, high-quality, and environmentally-friendly energy supply, in order to:

- Improve the well-being of people.
- Drive the economic and social development of the communities in which we are present.
- Create sustainable value for our shareholders, employees, customers, suppliers, and society in general.

Mission

We create value in a sustainable way and we are committed to social dividend.

Vision

We want to be a global energy leader and create a better future for people with the support of our human team.

Values

The twelve values inspire and guide the Group's strategy and all of its actions.

- €M: millions of euros; \$M: millions of dollars.

Letter from the Chairman & CEO

Ignacio S. Galán
Chairman & CEO of Iberdrola
© Adrián Ruiz

“In the coming years, Iberdrola will intensify its wager on the solutions required by the energy transition and which have made the company the utility of the future”.

I am pleased to present to you Iberdrola's Integrated Report, in which you can find extensive and detailed information regarding the Group's performance, the strategic foundations on which the company addresses its future, and the most significant aspects of its performance.

In the energy scenario within which Iberdrola will be acting in the coming years, notable progress has been made towards the achievement of a more sustainable energy model following the entry into force of the Paris Climate Summit Agreement on 4 November, only eleven months after it was signed. This swiftness of action, which stands in contrast with the almost eight years that the Kyoto Protocol took to come to fruition, reveals the firm commitment of the international community to reduce the emissions causing climate change and to limit the increase in temperature to less than 2 degrees by the end of the century as compared to the levels of the pre-industrial era, leaving the door open for an improvement of this goal to 1.5 degrees.

This commitment was ratified at the latest Climate Summit, held in Marrakesh, through the establishment of the agenda and the instruments needed to implement the Paris Agreement over the next two years and the preparation of working programmes on key issues in order to facilitate compliance therewith.

Meanwhile, the European Commission has affirmed its goal of a 40% reduction in CO₂ emissions by 2030 and its intention for the European Union to lead the energy transition through its “Clean Energy for All Europeans” package of proposals.

In this context, and given the technological potential of our industry to contribute to decarbonisation thanks to renewable energy, increased electrification of the economy is indispensable to honour the international commitments concerning emissions and at the same time respond to the strong growth in global energy demand.

In the coming years, Iberdrola will intensify its firm wager on the solutions required by the energy transition and which have made the company the utility of the future: more renewable energies, increased storage capacity, more and smarter grids, and growing digitisation to offer new and better services to our customers.

2016-2020: accelerating growth

In February 2017, Iberdrola updated its *Outlook 2016-2020*, which was presented a year ago, following its decision to increase investments to 25,000 million euros during the period in view of the company's financial strength to take advantage of new

opportunities for growth, primarily for the development of renewable energy projects in the United States.

Following its unique model, which combines geographic diversification with a focus on activities linked to the energy transition, the Company will allocate 91% of investment to the expansion and digitisation of networks, renewable energy, and regulated generation, which areas will contribute 81% of the Group's Ebitda. By currency, the investments will be split amongst dollars (48%), pounds (29%), euros (20%), and other (3%), and will go mainly to countries with an A rating.

Iberdrola will add 8,200 MW of new capacity to its generation pool through 2020, such that the Group's overall capacity will exceed 50,000 MW (with more than 29,000 MW of renewable energy), growing 12% from year-end 2015.

During the 2016-2020 period, the Company expects to obtain annual average growth in after-tax profits of approximately 7.5% (which will come mainly from countries with an A rating), up to approximately 3,500 million euros.

At the same time, we will continue to maintain financial strength, increase the return on investments, and improve operational efficiency thanks to advances in automation and digitisation in all businesses and processes.

Iberdrola will thus offer its shareholders growing remuneration in line with its results, with a pay-out of between 65% and 75%, such that a range of between 0.37 and 0.40 euro per share could be reached by 2020, with a floor of 0.31 euro per share in any case. We will also maintain the flexible dividend formula, and the current number of outstanding shares will remain stable.

Impact on society

The expansion of this strategic coverage will allow us to continue generating a positive economic and social impact on all of the regions in which we have a presence, contributing to their progress and to the well-being of their citizens. According to a study by PwC,⁽¹⁾ for each euro obtained in profits, Iberdrola contributes 11.1 euros to the GDP of the countries in which it does business.

We will thus continue to act as a major driving force through procurement contracts (which came to more than 9,800 million euros in 2016, thus exceeding the record figure for the prior year) and through our commitment to maintaining and creating stable and quality jobs, as shown by the addition of more than 2,600 people to our workforce only last year. Overall, Iberdrola provides direct, indirect, and induced employment to 288,000 people throughout the world, thanks to its investments and operations.⁽¹⁾

"The expansion of our strategic coverage will allow us to continue generating a positive economic and social impact on all of the regions in which we have a presence".

Our unwavering commitment to the training of the company's personnel (we currently provide three times more hours of training per employee per year than the average of European companies⁽¹⁾) will be boosted by the activities of the Iberdrola Campus in Madrid, which, with a built-up area of 45,000 square metres and 540 seats in classrooms and workshops, has already become a leading centre for corporate training. We will also continue to improve the management of our human resources by promoting the reconciliation of working and family life, gender equality, and job security.

Iberdrola will also strengthen its commitment to clean energies and to protection of the environment, by increasing its production capacity with renewable technologies over the next years and by reaffirming its goal to reach a 50% reduction in emissions by 2030 as compared to 2007 levels.

The development of our sustainable business model will allow us to remain at the top of the main indices in this field, such as the Dow Jones Sustainability Index (on which we are the only European electric utility to have been included for seventeen years), FTSE4Good, and CDP Climate Change.

Furthermore, our efforts in the area of R&D (to which we allocated 211 million euros in 2016) will be focused on sustainability, the promotion of renewable energy, and the exploitation of the opportunities offered by digitisation and automation for the development of new products and services. We thus expect to continue to be at the forefront among the most innovating electric utilities, Iberdrola now being the fourth largest electric company in the world by volume of investment.⁽¹⁾

As part of our commitment to society, the Foundations of the Iberdrola Group will continue with their programmes in the areas of training and research (primarily through the International Scholarship Programme), the protection of biodiversity and the promotion of art and culture, and cooperation and solidarity with the most vulnerable groups.

In the coming years, we will also move forward with the "Electricity for All" programme, which in 2016 already reached more than two and a half million beneficiaries in emerging or developing countries who have been given access to electric power, the aim being to reach four million beneficiaries by 2020. In parallel with all of the foregoing, Iberdrola will continue to develop its Corporate Governance System, based on ethical principles, transparency, and leadership in the application of the best international practices on good governance, an area in which the company has become an international leader.

Iberdrola Today

1.1 Iberdrola Today

Our activities

- Production of electricity from renewable and conventional sources.
- Purchase/sale of electricity and gas on wholesale markets.
- Transmission and distribution of electricity.
- Supply of electricity, gas, and related energy services.
- Other activities, mainly linked to the energy sector.

Presence focused on the Atlantic area

Iberdrola carries out its activities mainly in the five countries of the Atlantic area: Spain, the United Kingdom, the United States, Mexico, and Brazil.

What we are

The process of internationalisation carried out in recent years has led Iberdrola to be one of the leading electric companies, and among the largest utilities in the world by stock market capitalisation. The corporate and governance structure is described in chapter 5.1 of this report and consists of:

- Iberdrola, as a holding company.
- Country subholding companies in the 5 main geographic areas of activity.
- Head of business companies reporting to the country subholding companies.

Iberdrola is one of the leading electric companies in the world.

2.

Business Model and Strategy

2.1 The Future of Energy

Opportunities for continued growth

The energy sector presents strong opportunities for growth over the long term.

Electricity production by type of source (TWh)

Source: World Energy Outlook 2016 - International Energy Agency

“Meeting the emissions targets will only be possible by massively electrifying the economy, through more clean energies, especially hydroelectric, wind and solar power, more storage capacity, and more and smarter distribution networks”

Ignacio Galán, at the WORLD ECONOMIC FORUM 2017

The electric industry, according to World Energy Outlook 2016

The Paris Agreement on climate change (COP21) will transform the global energy system in the coming decades.

The electricity sector is the focus of many of the Paris commitments. Almost 60% of all new electric generation capacity to be installed through 2040 will come from renewable sources. It is also estimated that by 2040 most renewable generation will be competitive without needing any kind of subsidy.

Another important factor in the near future will be the strengthening of the electric distribution grids, to facilitate better integration of renewable technologies, and ensuring the availability of sufficient backup capacity.

It will also be interesting to have the ability to store energy and to improve energy efficiency in all industries and energy-using processes.

Investment in electricity infrastructure within and outside of the OECD

Source: The Future of Electricity Report, World Economic Forum 2016

Evolution of demand^{(1), (2)}

The prospects set out in *International Energy Outlook 2016* regarding the use of energy continue to show an increase in energy demand over the next three decades, driven mainly by non-OECD countries, whose strong long-term economic growth translates into a growing demand for energy.

The EU Roadmap forecasts that electricity will at least double its share in final energy demand to 36-39% in 2050, which would contribute to a reduction in carbon emissions in heating systems and in the transport sector.

The energy sector is launching measures to reduce CO₂ emissions, showing its commitment to reach the goals set out in the Paris Agreement on climate change.

Growth in global electricity production (TWh)⁽³⁾

Sources: [1] *World Energy Outlook 2016* - IEA; [2] *Energy Roadmap 2050* of the European Parliament; [3] *World Energy Outlook 2016* - IEA

Trends in production and use of electricity

Sectoral^{(4), (5), (6)}

- The European Union has a significant challenge in meeting its commitments on climate and energy established for 2020, 2030, and 2050. The energy sector knows that supplying energy with lower CO₂ emissions is not an option, but rather a necessity.
- Rapid development of electricity output with renewable sources will mean lower manufacturing costs: an additional reduction in the average cost of photovoltaic solar energy and onshore wind energy is expected from now through 2040.
- Unsustainable pressure on natural resources. A world economy four times larger than today is projected to use 80% more energy in 2050.

Technological^{(4), (5), (7)}

- Rapid implementation of technologies with low variable costs, like most renewable energies, increases the possibility of sustainable periods of low wholesale electricity prices.
- Intelligent technologies applied to networks and remote management will allow for more active participation of demand and thus strengthen the role of the consumer in the energy market.
- Urban/technological lifestyles require more electricity. The growing middle class, the increase in income, and the larger amount of electric appliances will contribute to a doubling of electricity demand through 2060.
- Electricity storage, as a still-embryonic technological possibility, can open up new vistas for the operation and management of power systems.

Consumption^{(4), (6)}

- 1.2 billion people, or 17% of the global population, currently lack access to electricity, and 2.7 billion people, or 38% of the global population, put their health at risk by resorting to the traditional use of solid biomass for cooking.
- Over the next 25 years, it will be necessary to reduce emissions by almost half in order to halt climate change, with the difficulty that if consumption stays on its current pace, it will have increased by approximately 45%. "To solve this equation, we will need a huge energy transformation that can increase efficiency and substantially alter the energy mix with a higher contribution of low carbon sources" (Ignacio Galán).
- The development of new uses and applications for electricity may result in new markets and opportunities.

2.2 Business Model

The purpose of the business model defined for the Iberdrola Group is the “supply of reliable, high-quality and environmentally-friendly energy”, through a sustainable, long-term industrial enterprise.

The model is built on three pillars: a framework of trust based on an advanced governance model; the Mission, Vision, and Values of the Iberdrola Group defined by the Board of Directors; and the distinguishing factors that make Iberdrola a different company.

The model’s competitiveness is achieved through responsible management of the tangible and intangible assets of the Company. To apply this model, Iberdrola has defined the activities in which it seeks to be an active player, structuring its management into three global businesses: The Networks Business, the Wholesale and Retail Business, and the Renewables Business, with a Corporation as the Group’s central management unit.

Framework of trust

To ensure the sustainability of its business model, Iberdrola has implemented:

- A Corporate Governance System consistent with best international practices.
- Corporate ethics, internalised by the management units and the organisation as a whole.
- Social responsibility policies, with a view to meeting the expectations of Stakeholders.
- An advanced risk control system, to maintain an optimal “risk/opportunity” balance, taking advantage of opportunities and mitigating risks.

⊙ Corporate Governance Model
/ page 78

Mission, Vision, and Values

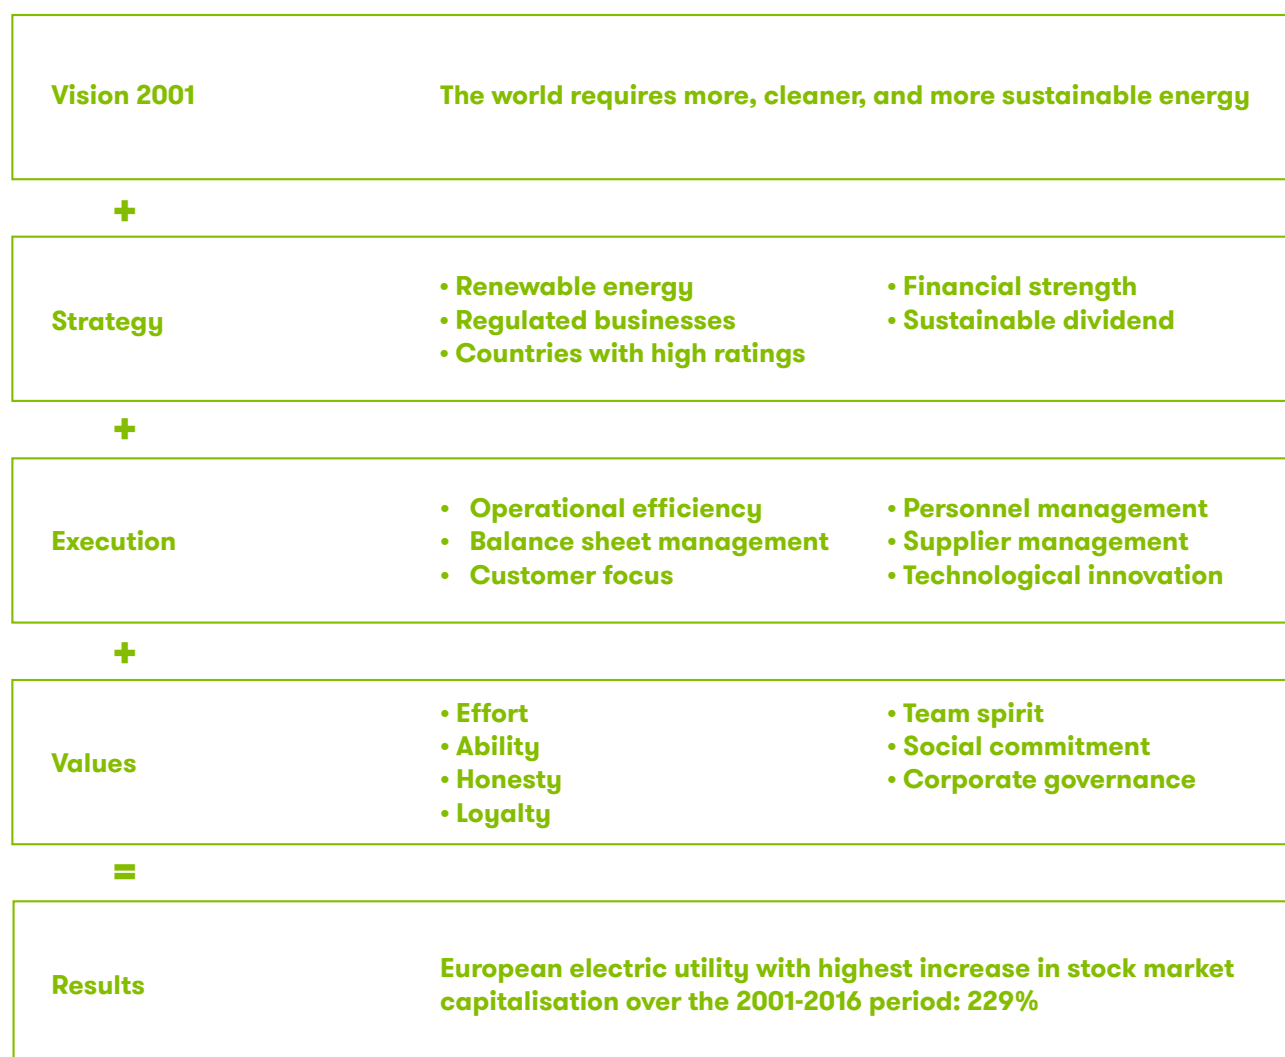

“We want to be the leading multinational group in the energy sector at the forefront of a better future, sustainably creating value with a quality service for people...”.

This Vision is based on twelve Values:

- Sustainable creation of value
- Ethical principles
- Good corporate governance and transparency
- Development of our workforce
- Social commitment
- Sense of belonging
- Safety and reliability
- Quality
- Innovation
- Respect for the environment
- Customer focus
- Institutional loyalty

⊙ Ethics and Social Responsibility
/ page 90

Iberdrola wants to be a responsible and sustainable company, serving society and people
 The Company has been leading with a history of growth and foresight...

... with a very positive impact on society

Iberdrola generates a number of very significant economic, social, and environmental impacts on the countries in which it does business. The most significant are⁽¹⁾:

- Annual generation of more than €27,000 million in Gross Domestic Product (GDP) in the countries in which it operates.
- Annual contribution of more than €4,400 million in investments, for the capital formation of the world economy.
- Investment of more than €2,300 million in “green generation” (2013-15), entailing:
 - Installed green capacity (hydroelectric and renewable) constituting 55% of all of Iberdrola’s installed capacity.
 - Avoidance of the emission of more than 57 million tonnes of CO₂.
- Creation of close to 300,000 jobs throughout the world (direct, indirect, and induced employment).
- Investments of more than €100 million in rural electrification programmes in Brazil (2013-15), and facilitating access to electricity for more than 1.4 million people in developing countries (2014-15).

⁽¹⁾ Data from a Study of Iberdrola’s Impact, prepared by PwC, based on 2015 figures.

Iberdrola's strategy is perfectly aligned with the Sustainable Development Goals (SDGs)

Iberdrola is fully committed to the Sustainable Development Goals defined by the United Nations for the 2015-2030 period. There are 17 global goals intended to transform our world, ending poverty, fighting against inequality and injustice, and confronting climate change. They affect both developing and developed countries, and also all types of organisations and institutions, including companies.

Iberdrola has incorporated the Sustainable Development Goals (SDGs) into its business strategy and its *Sustainability Policy*.

The Company has prioritised the various SDGs based on type of activity, defining 3 levels of contribution:

Main focus

	Goal		2020			
	▲ Access to electricity		4 million people			

	Goal		2020	2030	2050	
	▼ CO ₂		30%	50%	Neutral	

Direct contribution

Indirect contribution

Iberdrola has set ambitious challenges relating to the Goals selected as its principal Focus:

- **Goal 13 Climate action:** Achieve a 30% reduction in the intensity of CO₂ emissions by 2020 compared to those in 2007; a 50% reduction in emissions intensity by 2030; and be carbon neutral by 2050.

At year-end 2016, Iberdrola's emissions intensity was 34% lower than the European average, and 66% of its installed capacity is emission-free.

- **Goal 7 Affordable and clean energy:** By 2020, bring electricity to 4 million people who today lack access to this energy source.

By year-end 2016, we had contributed to 2.5 million people benefiting from access to electricity through projects carried out in various countries of Latin America and Africa.

/ page 43

Focus on basic and regulated businesses

Approximately 75% of Ebitda comes from regulated businesses or long-term contracts.

Operational efficiency

An energy model based on clean energy, networks, and digitisation has allowed our Company to be 30% more efficient than the average for the industry in Europe.

International diversification

Approximately 55% of earnings are generated outside of Spain.

Financial strength and solidity of the Group

- Strengthening of the balance sheet due to growth in Ebitda and FFO, which allows for continued strength in solvency ratio levels.
- Liquidity position that covers financial needs for more than 18 months under a stress scenario.

© Financial capital
/ page 62

© Natural Capital
/ page 70

Commitment to clean and competitive energies

- Generation and production of largely emissions-free electricity.
- Large portfolio of offshore wind generation projects and wave and tidal power projects.
- Clear goals for reducing emissions.

Global, committed, and qualified workforce

- Stable and high-quality jobs, with high level of training.
- Health and safety as values: "accident reduction" goal.
- The companies of the Group have been recognised: In Spain for their Reputation (Merco) and in Brazil as the best company to work for in Latin America (Great Place to Work).

2.4 Management of Tangible and Intangible Assets

	ⓘ Financial capital / page 62	ⓘ Manufactured Capital / page 64	ⓘ Intellectual Capital / page 66
	Financial capital	Manufactured capital	Intellectual capital
What is it?	Financial resources that the Company already has or obtains through financing.	Tangible assets or goods used by the Company to carry out its business activities.	Intangible, knowledge-based assets.
Management Approach	Create value for shareholders through sustainable growth.	Offer a competitive supply of energy in a safe and reliable environment.	Consider innovation as a strategic element of the Company.
Significant aspects	<ul style="list-style-type: none"> • Balanced growth. • Sound financial structure. • Operational efficiency. • Sustainable results and dividends. 	<ul style="list-style-type: none"> • Power generation assets. • Power transmission and distribution assets. • Other assets. 	<ul style="list-style-type: none"> • Promotion of R&D. • Efficiency and new products and services. • Disruptive technology and business models.

The Iberdrola Group holds valuable assets for the development of its business model. The strategy defined by the Company transforms these assets to create value for all its Stakeholders.

<p>⊙ Human Capital / page 68</p>	<p>⊙ Natural Capital / page 70</p>	<p>⊙ Social and Relational Capital / page 72</p>
Human capital	Natural capital	Social and relationship capital
Employee knowledge, skills, experience and motivation.	Natural resources affected by the Company's activities.	Ability to share, relate, and collaborate with its Stakeholders, promoting community development and well-being.
Guarantee the availability of a committed and qualified workforce.	Ensure sustainable use of natural resources and contribute to combating climate change.	Promote relations of trust with Stakeholders, improving the quality of life of people in areas where the Group has a presence.
<ul style="list-style-type: none"> • Global human resources management. • Goal of "accident reduction". • Talent management. • Diversity, equal opportunity, and reconciliation. 	<ul style="list-style-type: none"> • Environmental management. • Preservation of biodiversity. • Prevention of pollution. • Operating excellence and energy efficiency. • Waste management. 	<ul style="list-style-type: none"> • Stakeholder relations. • Community support and electricity access programmes. • Foundations of the Iberdrola Group. • Corporate reputation. • Brand management. • Informational transparency.

2.5 Value Chain

Power generation

Electricity production through the construction, operation, and maintenance of generating plants, and purchase/sale of energy on wholesale markets.

Power transmission and distribution

Construction, operation, and maintenance of electrical lines, substations, transformer centres, and other infrastructure, to transfer electrical power from production centres to the end user.

2.6 Strategic Foundations

for 2016-2020

Market conditions

The global energy markets are showing a certain amount of volatility, which is a reflection of geopolitical factors affecting the oil- and gas-producing countries. Our update of the scenario for the 2016-2020 period compared to prior forecasts is maintenance of prices in Spain and an increase in electricity prices in the United Kingdom, explained by an increase in the price of gas. We expect a relatively flat scenario over the full period. The diversification of businesses and countries will allow the Company to develop a strategy of growth and value creation that conforms to this environment.

Challenges and opportunities

Challenges

- Decarbonisation in the energy sector. Demand for cleaner and more sustainable energy.
- Management of a scenario of constant prices for energy in the medium term.
- Attainment of higher efficiency levels in all businesses.
- Regulatory management in all businesses, with special emphasis on transmission and distribution businesses, and in the development of the single market in Europe.
- Implementation of an investment plan focused on growth in the businesses of regulated networks, renewables, and long-term contracted generation.

Opportunities

- Balanced business model focused on regulated activities and renewable generation.
- Significant experience in the development and construction of network and emission-free generation projects.
- International diversification with a presence in countries with stable and predictable regulatory frameworks that require investment in the electricity and gas sectors.
- High quality of assets.
- Proven management capacity, culture of efficiency, and results.
- Culture of innovation to implement digitisation in relation to customers and the development of new products and services.

Growth vectors 2016-2020

Investments

- United States: the Company, through Avangrid, will continue with new onshore wind developments, taking advantage of the extension of tax credits to 2020. It is also facing growth in the area of distribution networks as well as in transmission.
- Mexico: it will consolidate its position as the largest private power generator in Mexico, through new plants under long-term contract with the Federal Electricity Commission (*Comisión Federal de Electricidad*) (CFE), and also taking advantage of the opportunities arising from the liberalisation of the sector.
- United Kingdom: Iberdrola continues with its growth phase in the power transmission and distribution businesses and with the start-up of onshore and offshore renewable energy projects. Offshore wind will gain significance beginning in 2018.
- Brazil: strengthened growth in renewables, maintaining its position as largest electricity distributor by number of customers.
- Spain: maintenance and improvement of facilities. Growth in smart grids.

Operational efficiency

- In all areas of activity, with a plan to save €1,300 million over the period.

.... expanding the geographic diversification of the Company in countries with an A rating, and increasing its presence in regulated businesses with low risk and the generation of recurring cash flows.

Strategic pillars

Iberdrola's strategy for 2016-2020 will remain focused on balanced growth, ensuring its financial strength and the sustainability of its dividend policy, the growth of which will be linked to growth in results.

New investments will be concentrated in countries with high credit ratings (A rating), and in businesses that are preferably regulated or under long-term contract, thus improving the profile of the Company.

1. Balanced growth

- Investments focused on businesses and countries with stable and predictable regulatory frameworks, 71% in countries with a credit rating of A.
- Net investment increases €1,000 million over the plan presented in 2016, to €25,000 million, due to higher growth in renewable generation in the United States.
- Of total investments during the period, 75% are focused on growth and the rest on maintenance.
- Electric power transmission and distribution networks will account for 42% of net investments. Of the overall amount, 42% will be dedicated to renewable energy and 7% to regulated wholesale generation. 9% of the total will be invested in the Wholesale and Retail business.
- The regulated businesses (networks, renewables, and regulated generation) will account for 90% of all planned investments.
- Geographically, Iberdrola will concentrate the bulk of its growth in the international area. By currency, 48% will be invested in dollars, 29% in pounds Sterling, 20%⁽²⁾ in the Euro zone, and 3% in Brazilian reais.

Investment by business and currency 2016-2020

(1) Includes hydroelectric

(2) Includes offshore windfarm in Germany: Wikinger

2. Financial strength

The Company obtained solid results in financial year 2016, thanks to the good performance of the businesses and a reduction in costs. Ebitda reached €7,808 million, increasing 5.5%, although it would have grown 8.2% excluding the exchange rate effect (depreciation of the pound). Net profit grew 11.7% to €2,705 million. The efficient operation of operating assets, together with the above-described investment plan, will lead to sustainable growth in the Company's results, with an estimated average annual increase of approximately 7.5% over the 2016-2020 period.

The profile of the Company's businesses, together with a balanced investment plan, will allow for sustained growth in Ebitda and Net profit of approximately 6% and 7.5%, respectively...

- Average annual funds from operations (FFO) in the amount of €7,100 million will amply exceed investments, which will reach an annual average of €5,100 million. By business, cash flow generation from Wholesale and Retail and from Networks will be significantly greater than investments, while Renewables will invest a number somewhat higher than its cash flow generation.
- Maintenance of the current financial model to provide subsidiaries with an optimal

capital structure giving appropriate financial signals and which is consistent with an investment grade rating, while respecting current guidelines for structural subordination.

- Optimisation of liquidity position (around €8,000 - 9,000 million) to current market conditions in order to improve financial costs, maintaining 18 months of coverage even during stress scenarios.
- Maintenance of the strong 2016 solvency ratios through 2018, after which they will substantially improve, thanks to increase in Ebitda and FFO.

...resulting in the Company proposing a sustainable shareholder remuneration policy linked to the growth in results.

3. Sustainable dividend

- Thanks to the strength of the results obtained, the Company has announced a proposal to immediately increase the annual dividend to 0.31 euro per share with a charge to financial year 2016. This amount is also set as the minimum dividend for future years.
- In the coming years, shareholder remuneration will grow in line with the increase in results, converging towards a payout ratio between 65% and 75%. Taking into account this range and the forecast growth in net profit, the dividend would be between 0.37 and 0.40 euro per share by 2020.

Ebitda by business (forecast to 2020)

Ebitda by currency (forecast to 2020)

2.7. Capital/Business

Relationship

The value created by the business strategy and model of Iberdrola over time translates into an increase in its capital, which in turn feeds back into a cycle of value creation, efficiently inter-relating the operations of the businesses and the capital of the Company. The chart below shows for each Chapter its strategic focus and quantifies an aspiration

or achievement of the Company in this area.

This process creates shared value for both Iberdrola and for its Stakeholders, and constitutes a main vector for achieving the Company's goal to offer a reliable, high-quality, and environmentally-friendly energy supply.

2.8 Comparative Results

and Awards

Iberdrola's Primary Businesses

Regulation is a key factor in the sustainability of Iberdrola's activities.

Energy policies must set clear and predictable goals in order to attract the investment needed to guarantee a safe, competitive, and sustainable supply, developing to the maximum its potential as a source of growth and employment.

3.1 Regulatory Environment

European Union

- The Climate Change Conference (COP21) agreements reached during the Paris Summit in 2015 were ratified in 2016, before the commencement of the Marrakesh Summit. These agreements entail a multilateral commitment to implement measures to reduce emissions in order to limit the increase in temperature to a maximum of 2°C. These measures will foster investment and must be supported by signals incentivising low-carbon technologies. In addition, these costs must be paid in accordance with the “polluting party pays” principle.
 - In November 2016, the European Commission (EC) published the “Clean Energy for All Europeans” package (also known as the “Winter Package”), the legislative proposals of which, in the words of the EC, have three main goals: putting energy efficiency first, achieving global leadership in renewable energy, and providing a fair deal for consumers. Among the more far-reaching measures included in the proposed Directives and Regulations are those concerning the market design reform and the safety of supply framework. Proposals have also been submitted to modify the frameworks for renewables and for energy efficiency, in line with the 2030 goals.
 - During 2017, there will be continued steps in connection with the Emissions Market Directive, and preparation of the regulations and directives contained in the “Winter Package” will begin.
-

Spain

- After the strong tariff deficit during the 2005-2013 period and a slight surplus in 2014 and 2015, the system has reached financial balance. A Ministry Order freezing electricity and gas usage charges for 2017 was published in December 2016.
 - The Supreme Court has rendered judgements holding that the funding system for the subsidised rate (*bono social*) is invalid on the grounds that it is discriminatory. The companies funding these amounts (up to now, the parent companies of vertically integrated groups) must be reimbursed for the amounts contributed between 2014 and 2016, with interest.
-

United Kingdom

- On 23 June 2016, the United Kingdom voted to leave the European Union. Future trade agreements have not yet been determined, but significant changes are expected in the energy regulatory environment in the short term.
 - After the referendum, David Cameron resigned and Theresa May was elected Prime Minister; her government stated that the protection of consumer interests is a priority and reiterated its commitment to decarbonising the economy.
 - The Competition and Markets Authority (CMA) completed its investigation into the industry in June, and the proposed orders were implemented at the end of 2016. The CMA largely disregarded the concerns about the wholesale market and vertical integration, but recommended Ofgem or the Government adopt remedies in the retail market, such as a temporary limit on prepayment tariffs, a data base to help disconnected customers, and reforms in the SME market.
-

United States and Canada

- On 8 November 2016 Donald Trump won the elections and Republicans gained control of Congress and the Senate. The states will continue establishing a large part of the regulations affecting Avangrid.
- In 2016 litigation continued forward to determine whether the Environmental Protection Agency (EPA) can implement the *Clean Power Plan* (CPP). Trump has vowed to revoke it. There are various possible scenarios depending on the decision of the U.S. Court of Appeals for the D.C. Circuit regarding the CPP.
- It is expected that PTCs (Production Tax Credits) will be maintained during the Trump administration, as they have the support of Congress. Current laws already provide for their gradual phase-out, and a change therein would have an impact on regulatory security.
- The methodology to replace net metering in the State of New York is now being debated. An order of the Commission is expected in January 2017.

Mexico

- The energy reform encourages private investment in the generation, sale, and supply of electric power. The networks continue to be under state ownership but are open to contracts with private persons. In this context, the first auction of transmission lines is expected to take place in the first half of 2017. The share of clean energy is forecast to increase up to 35% by 2024 with the creation of a clean energy certification system that will determine certain supply obligations.
- The Real-Time and Day-Ahead Markets began to operate in 2016. Two Long-term Auctions were also held, which will add almost 5 GW of new clean generation capacity.

Brazil

- The regulator has launched a Strategic Plan for the improvement of the Brazilian energy industry in order to carry out a revision of the sector, make improvements, and mitigate the risks facing the players involved. This project will continue until the first quarter of 2018.
- Due to the decrease in demand and the migration of customers to the free market, distributors have found themselves to have contracted for an oversupply of energy. The regulatory agency and the ministry have approved various regulations to minimise the effects of the 2016 oversupply.
- A two-part tariff was approved in 2016 with a view to modernising the tariff system.
- The Government has announced a plan to privatise six state-owned distribution companies belonging to Eletrobras; the plan should be completed before the end of 2017. The wave of privatisations began in 2016 with the auction sale of the distributor CELG.
- 2016 saw a modification in the model defining the maximum contract income by public auction for concessions of transmission lines. The main change was the method for calculation of the WACC,⁽¹⁾ which has been set at 9.67%. This measure increases the profitability of transmission concessions and makes auctions more appealing.

(1) WACC: Weighted Average Cost of Capital.

Work on distribution line
/ Spain

© Iberdrola, S.A.

3.2 Networks

Regulatory environment of the business

Spain

- After the approval of unit costs in December 2015, 2016 was the first year of the first regulatory period, which will end in December 2019.
- The remuneration of Iberdrola Distribución Eléctrica for 2016 was set at €1,664 million. This remuneration will increase each year based on the investments made.

United States

- The new tariff conditions for the NYSEG and RG&E (New York) gas and electricity businesses came into effect in July 2016. They will be in force for three years.
- A new three-year tariff agreement will come into effect for the electricity distribution company UI (Connecticut) in January 2017.
- In Maine, a 10-year tariff agreement for the gas distributor MNG came into effect, and the agreement for the electricity distributor CMP was extended for an additional year.
- The tariff conditions for the gas distributors CNG and SCG (Connecticut) and BCG (Massachusetts) will remain the same in 2017.

United Kingdom

- Ofgem has revised the investment scenario contemplated for the mid-period RII0-T1, with no impact on the transmission projects of ScottishPower Transmission Ltd. (SPT) agreed in 2013 and which will end in 2021.
- Distributors ScottishPower Distribution Ltd. (SPD) and ScottishPower Manweb plc (SPM) carry out their activities during the first regulatory period RII0-ED1, which will extend through March 2023.

Brazil

- The new tariff agreement for Celpe will come into force in April 2017 and will be in effect for five years.
- The tariff agreements for Coelba and Cosern will remain in effect until April 2018, and that for Elektro until 2019.
- The remuneration for the distribution activities of Elektro, Coelba, Cosern, and Celpe has been adjusted based on inflation in Brazil.

New tariff conditions for UI enter into effect in the State of Connecticut (USA) in 2017.

Objectives, risks, and principal activities

Objectives

- Zero accidents.
- Offer our customers excellent service based on the quality of supply and information regarding the network.
- Maximise efficiency in system operations through operational excellence and the digitisation of our assets.
- Lead the transformation towards more efficient integration of renewable and distributed energy.

Significant risks

- Safety of individuals due to risk of accidents.
- Assuring supply in the face of meteorological effects.
- Technological and cybersecurity risks affecting the security of the facilities and service to our customers.

Principal activities 2016

- Spain: continuation of the network digitisation and automation project, with

the installation of more than 8.8 million meters (83.5%) and digitisation of 55,500 transformer centres (66%).

- United Kingdom: developing the investment plans contained in RIIO-T1 and RIIO-ED1. Continuation of the Western Link HVDC project, which is expected to be completed in 2017.
- United States: developing the plan for integrating UIL's distributors within Avangrid. All regulatory quality levels have been met. Submission of filing with the regulator to launch smart meters, and creation of a platform for the integration of distributed generation within New York. Launch of Energy Smart Community project in Ithaca.
- Brazil: strengthening the position of Coelba and Celpe in Brazil's quality ranking thanks to Neoenergia's efficiency and supply quality improvement plan. At Elektro, development of facilities to meet demand and connect new customers.

Outlook 2016-2020

- Increased regulatory visibility in all countries, with investments of €10,300 million. 15% increase in RAV* since 2015, which would increase to 22% taking into account 100% of Neoenergia.
- Increase in efficiency: improvement in NOE/MB* by 2 percentage points, with a 41% in Ebitda/Employee.
- Growth in digitisation of the network (€2,600 million in investments during the 2017-2020 period), to increase efficiency and the quality of supply, and to offer new services to customers.
- Opportunities for selective growth in transmission.

Net Investment of €10,300 million between 2016 and 2020, mainly in the United States and the United Kingdom

2016-2020 cash flow generation to finance investments (€ thousands of millions)

* RAV: Regulatory Asset Value; NOE: Net Operating Expenditure; GM: Gross Margin.

© Quarterly Results Report

Customer service, operational efficiency, and digitisation of networks are the strategic pillars of the Networks Business upon which the business rests.

Customer service

- Investment in expansion, renewal of network, and investments in operation and maintenance to improve service quality for our customers.
- Met service quality targets, despite poor meteorological conditions during the last quarter of 2016.
- Implementation of transmission and distribution projects to improve service quality for customers.
- Development of digital customer service channels: improvements in website, apps, social media, etc.

Efficiency

- Increase in operating expenses contained despite strong increase in activity.
- Implementation of best practices throughout the networks companies, mainly in the areas of asset management, processes and technology, control systems, digitisation and automation, and customer service.
- Emphasis on the fight against electricity fraud in Brazil and Spain.
- Containment of increase in late payments in Brazil due to the country's economic crisis.

Digitisation of the network

- Projects to increase the automation of the MV network.
- Expand visibility of the LV network in Spain.
- Deployment of smart meters in Spain and the United States.
- Focus on maximising operational efficiency and improving service quality and providing useful information to customers.
- Improve customer service using new technologies.
- Strengthened measures to protect against cybersecurity risks associated with new grid management technologies.

3.3 Wholesale and Retail

Regulatory environment of the business

Spain

- Royal Decree 469/2016 was approved in November 2016, establishing the methodology for calculation of voluntary prices for small consumers of electric power and the legal rules governing contracting therefor.
- Ministry Order ETU/1948/2016 was approved in December 2016, establishing specific values for the supply costs of leading supply companies to be included in the calculation of the voluntary price for small consumers during the 2014-2018 period. A fixed amount is set in €/kW and per year and a variable amount is set in €/kWh.
- Royal Decree-Law 7/2016 was published in December 2016, governing the mechanism for financing the cost of the subsidised rate (*bono social*) and establishing other measures for the protection of vulnerable consumers of electric power. This Decree-Law provides that the costs of the subsidised rate shall be borne by the parent companies of the groups engaged in the supply of electric power, or by the supplier companies themselves if they are not part of a group, and expands the protection of groups of vulnerable customers by extending the periods before interruption of supply in the event of non-payment and by including new categories of severely vulnerable customers, who will be considered essential supply customers.
- The availability service of the generation facilities has been extended in 2017.

United Kingdom

- The capacity auction 2020/2021 took place in December 2016, with the participation of both existing plants and new projects. A total of 52.4 GW was awarded at a price of £22.50/kW, of which 48.4 GW correspond to existing capacity (generation and interconnections) and 4 GW to new capacity, mainly diesel engines and batteries.
- Based on the plan for implementation of the measures recommended by the CMA⁽¹⁾ in June 2016, Ofgem⁽²⁾ has proposed limiting the charges for the installation of prepayment meters by court order and prohibiting the billing of more vulnerable customers for the installation. Such limit will be in effect as from April 2017.

Mexico

- There were two long-term auctions in 2016 awarding the proceeds from Power, Capacity and Clean Energy Certificates (*Certificados de Energías Limpias*) (CELs).
- In April 2016, Iberdrola was awarded the Noroeste 887 MW combined cycle plant located in the state of Sinaloa.
- As from August 2016, consumers with demand greater than 1 MW can acquire their energy on the market.

⁽¹⁾ CMA: Competition and Markets Authority

⁽²⁾ Ofgem: Government regulator for gas and electricity markets

Objectives, risks, and principal activities

Objectives

- Competitive supply and excellence in service to customers.
- Operating excellence, safety, and respect for the environment.
- Risk identification and minimisation.
- Safety and continuous improvement in operating efficiency.
- Analysis of growth opportunities.

Significant risks

- Regulatory uncertainty in the countries in which it operates.
- Operating risks: downtime of facilities and incidents with environmental impact.
- Market risk: uncertainty regarding fuel prices and revenues from the sale of electricity and gas.
- Credit, exchange-rate, and interest-rate risks.
- Technological and cybersecurity risks affecting the security of the facilities or the information of our customers.

Principal activities 2016

- Spain: ongoing development of products and services adapted to the needs of customers (Customised Plans, Smart Solar, Iberdrola Smart Home, ...).

- United Kingdom: final shut down of the Longannet Coal Plant took place in the month of April. The decrease in variable rates for domestic gas customers (-5.4%) became effective in March 2016. 180,000 smart meters were installed during 2016.
- Mexico: installation of 409 MW (5th unit of Monterrey CCGT (300 MW), Ramos Arizpe cogeneration (53 MW, and repowerings (56 MW)), in addition to 308 MW from the Baja California III CCGT, which entered into operation at the beginning of 2017. 2,761 MW of thermal capacity under construction.
- Brazil: work continues on the construction of the Baixo Iguazu and Belo Monte hydroelectric plants, of which 245 MW and 1,123 MW belong to Iberdrola through Neoenergia, a company in which Iberdrola holds a stake.
- Portugal: continued construction of the Tamega hydro complex, which will have 1,158 MW. As to Customers, there has been a strengthening of the offer to mass segments with the inclusion of gas and new products and services.

Outlook 2016-2020

- Investments of €4,900 million, mainly to increase installed capacity and to deploy 5.3 million smart meters in the United Kingdom.
- During the period, entry into service of 3,600 MW in Mexico, of which more than 700 MW have already entered into operation and almost 2,800 are under construction.
- In Retail, commitment to digitisation, multiple channels, personalisation of products adapted to the needs of our customers, and service excellence.
- Continuing improvement of operational processes and practices to increase efficiency.

Investment of €4,900 million during the period, of which €3,600 million are for growth

2016-2020 cash flow generation to finance investments (€ thousands of millions)

© Quarterly Results Report

The Wholesale and Retail Business is focused on the safety of operations, the loyalty of customers, and growth in Mexico, which will allow for the stability of results and ensure the generation of funds for the Group.

Efficiency

- Optimisation of thermal production.
- Facilitating operations in complementary markets.
- Operating improvements and increase in availability and energetic yield of the thermal facilities in Mexico and Spain.

Prices

- Minimisation of risks through appropriate hedging of all generation, including renewable generation.

Growth

- Mexico: Almost 2,800 MW under development by 2020:
 - Escobedo I CCGT (857 MW).
 - Noroeste CCGT (887 MW).
 - El Carmen CCGT (866 MW).
 - Bajío Cogeneration (50 MW).
 - Altamira Cogeneration (57 MW).
 - Repowering improvements (44 MW).
- United Kingdom: Continued widespread deployment of smart meters that began in 2016, to reach 100% of customers by 2020.

Customers

- Loyalty-building and development of new products and personalised services adapted to the needs of customers.
- Retail development in Mexico pursuant to changes in legal provisions on energy reform.
- In Portugal, leadership in industrial customers, and strong growth in SMEs and residential customers.

3.4 Renewables

Regulatory environment of the business

Spain

- A proposed Ministry Order was published in December, whereby the specific remuneration for renewables and cogeneration is revised as from 1 January 2017, following the established schedule. In the case of the wind power sector, this will entail increasing the return on investment (ROI) by €212 million, in order to offset the lower existing and expected market prices. It is expected that the final Ministry Order will be published in the first quarter of 2017.
- In 2016 the first auction of renewable capacity took place in Spain, at which 500 MW were awarded in wind-powered capacity and 200 MW in biomass. A new auction of 3,000 MW has been announced to take place in 2017, which will be technologically neutral and subject to controls in order to verify the credibility of the winning projects.

United Kingdom

- In November 2016, the new Government of Theresa May announced the second auction of Contracts for Differences, which is expected to begin in April 2017. Eligible for this auction, with an annual budget of £290 million, will be the less mature technologies: offshore wind, biomass, tidal, and wave, with start-up dates of 2021-22 and 2022-23. The starting price for offshore wind technology is £105/MWh.

United States

- Donald Trump's victory in the presidential elections might entail a shift in the policies expected from the White House for the promotion of renewable energy. However, the main federal support comes in the form of tax credits (PTCs), which have already been approved for the coming years.
- The state support systems are stable and independent of the federal system, and it is expected that such stability will be preserved.

Mexico

- Two long-term auctions took place in 2016 for the sale of 20-year Clean Energy Certificates. The contracts deriving from such auctions included the sale of the energy and capacity associated with the projects awarded.
- According to the schedule, a new auction is slated to take place in April 2017.

Brazil

- The macroeconomic situation has entailed a certain change in planning.
- No wind or photovoltaic MW were awarded in 2016, as the December auction was cancelled due to overextension in the sector.
- It is expected that less volume than usual will be awarded in 2017.

The business will engage in sustainable growth, mainly based on onshore and offshore wind investments in the countries most important to the Group.

Objectives, risks, and principal activities

Objectives

- Safety in operations.
- Efficiency in operations to maximise the profitability of the assets.
- Efficiency in construction costs, with a particular emphasis on offshore wind projects.
- Profitable growth in onshore and offshore wind investments in the countries that are strategic for the Group.

Significant risks

- Competitive auction processes in the markets in which it operates.
- Operational and technological risk.
- Risk of access to evacuation networks and limits on production due to technical restrictions of the networks.
- Open market energy prices.
- Cybersecurity risks with an impact on operations centres of the facilities.

Principal activities 2016

- The year ended with 467 MW of additional capacity: 200 MW in the United States, 183 MW in the United Kingdom, and 84 MW in Brazil.
- There has been a start-up or continued construction of 1,487 MW of onshore wind capacity: 744 MW in the United States, 291 MW in the United Kingdom, 95 MW in Brazil, 32 MW in Spain, and 325 MW in Mexico.
- Construction of photovoltaic solar capacity has commenced in the United States (66 MW) and Mexico (270 MW).
- In offshore wind, there is continued progress on the construction of the 350 MW Wikingen project in the Baltic Sea (Germany). Construction has also commenced on the 714 MW East Anglia I project in the United Kingdom, after being awarded in the 2015 auction.

Outlook 2016-2020

- Investments of €9,500 million, mainly to increase installed capacity in the United States, the United Kingdom, and Brazil during the period.
- Start-up of 4,600 MW, of which 467 MW has already been placed into service in 2016 and more than 3,000 MW is already under construction, including two offshore windfarms: Wikingen (350 MW) and East Anglia I (714 MW).
- Continuing operational improvement, with cost savings, optimisation of useful life of the assets, and improvement in the capacity curve.

Investment plan of €9,500 million over the period, of which €8,800 million are for growth

2016-2020 cash flow generation to finance investments (€ thousands of millions)

© Quarterly Results Report

The business will focus on the safety of operations and on sustainable growth, mainly based on onshore and offshore wind investments in the countries most important to the Group. Efficiency is a key factor for business sustainability in the medium and long terms. Iberdrola will take technological advances into account and will act on the supply chain to allow for improvement in the coming years.

Load factor

Maximising the load factor of facilities, while minimising down time through operating and maintenance measures, as well as other external factors.

Operation and maintenance costs

Continuous improvement in efficiency through global standardisation and systematisation processes.

Project Portfolio

Development of the portfolio of onshore wind projects in the United Kingdom, the United States, Mexico, and Brazil, and the East Anglia 3 (United Kingdom) and St Brieuc (France) offshore wind projects.

3.5 The Cost of Supply,

the Main Factor in the Political and Social Agenda

The cost of electricity supply is taking on a greater role in the political and social agenda. The principal challenge is to reconcile safe and environmentally-friendly supply with the use of renewable energy at prices that are competitive and can be afforded by society as a whole.

In the European Union

- The Agency for the Cooperation of Energy Regulators and the European Commission, in studies on electricity prices published in 2016, confirmed that taxes and components associated with energy and environmental policies have grown the most, reaching half of the bill in countries like Spain, due to the significant renewables effort made by the electric sector. A competitive electricity supply requires the elimination of cost components outside of the service itself, and paying for these costs through general taxes or taxes on all polluting energies.
- The strategy of the Energy Union that commenced in 2015 and that was specified in legislative proposals like the *Clean Energy for All Europeans* (2016) “package” responds to the need to comply with the 2030 environmental agenda (40% reduction in GHG⁽¹⁾ emissions, 27% increase in renewables, and 30% improvement in energy efficiency), monitoring the safety of supply and the competitiveness of the European industry, and allowing prices that are accessible for European citizens.

⁽¹⁾ GHGs: Greenhouse gases

In Spain

- The price of electricity supply in Spain is less than the European average. Less than half the costs of supply are directly related to providing the service. The rest derive from the pursuit of energy policy goals (aid for renewable energy and cogeneration) and social goals (subsidies for electricity in non- mainland territories, recovery of tariff deficits from previous years).
- Iberdrola has established a protocol to ensure energy supply for customers in vulnerable situations, defined as those entitled to subsidised rates (*bono social*) due to being pensioners or all members of a family unit being unemployed, as well as disadvantaged persons identified by the social services. Iberdrola has been collaborating with public authorities and with various institutions and NGOs for this purpose since 2015, signing agreements in order to identify these economically disadvantaged persons. 98.8% of the domestic customers of Iberdrola reside in an area protected by an agreement.

In the United Kingdom

- After the CMA⁽¹⁾ investigation, the debate on prices has focused on higher standard variable tariffs (SVTs): reducing the number of people with SVTs and the disadvantages thereof. Iberdrola has the lowest proportion of SVTs amongst the large suppliers.
- Although the government continues to focus on minimising the costs that it controls, it has maintained capacity auctions, the minimum price of CO₂, and has announced the next auction of Contracts for Difference.

In the United States

- Tariff revisions reflect pressure by regulators to limit returns on capital, while maintaining the investments required to improve the network infrastructure.
- The closure of coal plants and the new regulation developed by the Environmental Protection Agency (EPA) may increase pressure on gas and electricity prices. Shale production might limit this impact.
- Restrictions on transporting natural gas by pipeline in the Northeast could lead to volatility in electricity market prices during periods of extreme weather.
- The development of smart grids, the rapid replenishment of supplies in the face of extreme weather conditions, new EPA regulations, and the integration of new energy sources require major investments, which sometimes conflicts with the goal of reducing final tariffs.
- In 2017, President Trump and the Congress want to focus on comprehensive tax reform, including support for infrastructure and repealing environmental regulations. Trump promised to support oil, gas, and coal, questioned climate science, argued for withdrawing from the Paris Agreement, and opposed a carbon tax. This could affect electricity markets and prices.

⁽¹⁾ CMA: Competition and Markets Authority

In Mexico

- Energy reforms were launched in 2014, with one of the key goals being to improve competition and lower electricity prices for end users.
- With the opening of electrical energy generation to private investment, renewable generation objectives and other measures, such as auctions for the purchase of clean energy certificates, the reform is incentivising competition in order to diversify the energy mix and reduce the costs of generation.

In Brazil

- 2016 was marked by a position of energy overcontracting by the distributors, caused by the reduction in consumption deriving from the economic crisis, consumer migration to the free market without distributors being able to reduce the contracts, and assignment of contracts for a higher-than-necessary amount. The regulatory bodies and government have approved a set of measures to resolve this distributor risk.
- The hydrological situation improved in 2016 in comparison with the previous year, allowing a “green tariff band” structure from April to October, which entails the end customer not paying additional costs for the production of energy.

Iberdrola will support frameworks that expand market deregulation and transparency and that provide incentives for required investments and efficient operations, through tariff structures that give efficient signals to consumers and do not penalise them with costs unrelated to the supply of electricity.

Our Assets

Iberdrola's assets are the basis for the creation of value by the Company, which carries out its activities through the sound management thereof.

In this report, Iberdrola's assets are identified in accordance with the IIRC classification system:

- **Financial capital**
- **Manufactured capital**
- **Intellectual capital**
- **Human capital**
- **Natural capital**
- **Social and relationship capital**

4.1 Financial Capital

	Management approach	Results 2016	Outlook
Balanced growth	<p>The Company has an investment policy consistent with its strategic vision and financial policy. The main goals are:</p> <ul style="list-style-type: none"> • Ensure a return on capital through projects and investments preferably in regulated businesses, renewable assets, or long-term contracts. • Increase geographic diversification, further balancing the contribution of the countries in which it does business. • Tailor investment levels to the actual needs of each market. 	<ul style="list-style-type: none"> • Total investment of €4,264 million, with almost 90% channelled into regulated businesses. • The United Kingdom was the country absorbing the highest volume of investments, with 46% of the total, followed by Spain with 20%, the United States with 16%, and Mexico with 15% of the amount invested. 	<ul style="list-style-type: none"> • Strict investment criteria based on earnings security, project profitability, and strategic fit. • Selection of businesses and countries with predictable and stable regulation and which have an A credit rating. • Net investment of more than €25,000 million over the 2016-2020 period, of which approximately 90% will be dedicated to regulated businesses, renewables, or long-term contracts. • The United States will be the area with the highest volume of investments, with 38% of the total, followed by the United Kingdom with 34%, Spain with 15%, Mexico with 10%, and Brazil with 3%.
Solid financial structure	<ul style="list-style-type: none"> • Iberdrola considers financial strength to be one of the strategic cornerstones that allows it to successfully face potential turbulence in the markets and to be in a position to exploit growth opportunities in the countries in which it does business. • The financial policy seeks stabilisation and subsequent improvement in solvency ratios, balancing an increase in debt with the generation of additional cash flow from new investments. • The debt structure is in line with the profile of the business, which is mostly regulated, and the composition thereof reflects the results obtained in the relevant currencies. 	<ul style="list-style-type: none"> • Gross margin of €12,916 million, growing by 0.6%. • Net profit of €2,705 million, an 11.7% increase over the prior year. Recurring net profit was €2,532 million (+12%), as a result of the favourable performance of the businesses. • Cash flow of €6,311 million (+6.8%). • Net financial debt was €29,414 million, increasing €1,347 million since 2015 as a result of early investments in renewable energy, mainly offshore wind, and various extraordinary events [taxes in Spain, Safe Harbor in United States...] • Liquidity of €8,666 million, which covers more than 24 months of financing needs. 	<ul style="list-style-type: none"> • Average annual Ebitda and net profit growth of approximately 6% and 7.5%, respectively, during the 2016-2020 period. • Average annual net investments of approximately €5,100 million, compared to average annual cash flow generation (FFO) of €7,100 million. • As a result of the investment process, increase in net debt to approximately €32,500 million in 2019 and subsequent decrease to €32,200 million by 2020. • With the current investment plan, solvency ratios in 2017 and 2018 are in line with 2016, and will strengthen in 2019 and 2020. • Optimisation of the liquidity position to cover financing needs for 18 months.
Operational efficiency	<ul style="list-style-type: none"> • The current macroeconomic and regulatory environment requires an additional effort to keep operating costs under control. 	<ul style="list-style-type: none"> • Net operating expenses decrease 4.5% due to cost controls and the closing of the Longannet plant. Excluding the contribution from ULL and the exchange rate effect, the decrease in NOE would have been 6.9%. 	<ul style="list-style-type: none"> • Progressive absorption of the increase in expenses, which will grow less than gross margin during the 2016-2020 period, maintaining an industry-leading position of leadership in cost efficiency.
Sustainable results and dividends	<ul style="list-style-type: none"> • Iberdrola offers its shareholders an industrial enterprise for the long-term creation of value. The confidence of its shareholders enables Iberdrola to secure the resources needed to move its enterprise forward. 	<ul style="list-style-type: none"> • Shareholder remuneration of 0.286 euro per share, equal to a dividend yield of 4.59%. • Flexible dividend offering tax benefits. 	<ul style="list-style-type: none"> • Increase of dividend to 0.31 euro per share, with a charge to 2016 profits. This amount is established as the minimum figure for future financial years. • Maintenance of the flexible dividend programme. • Target of maintaining the number of shares at 6,240 million, neutralising the capital increases associated with implementation of the flexible dividend programme. • Growing shareholder remuneration, in line with the increase in results, converging on a payout ratio of between 65% and 75%. Taking into account results forecasts, the dividend will be between 0.37 and 0.40 euro per share by 2020.

Create value for the shareholder with sustainable growth

Net Debt (€M)

* Pro-forma including UIL.

Adjusted net financial debt at 31 December 2016 increased by €1,347 million to €29,414 million, compared to €28,067 million at 31 December 2015, as a result of €720 million of non-recurring taxes in Spain arising from RDL 2/2016 on measures for reducing the public deficit in Spain and other matters, and due to early investments in renewables and the Safe Harbor in the United States (€328 million), among other reasons.

Maturity of financial debt (€M)

Comfortable maturity profile.

Ebitda by business 2016

Debt structure by currency in 2016

Debt structured by origin of cash flow earned in each currency. Includes derivatives to hedge net investment.

Investment by geographic area 2016

Diversification of investments, with a heavy concentration outside of the euro zone.

Gross margin by business 2016

4.2 Manufactured Capital

	Size	Principal activities 2016	Outlook
Electric power generation assets	<ul style="list-style-type: none"> Iberdrola's generation assets comprise nearly 300 windfarms, almost 90 hydroelectric power plants (in addition to the mini- hydro plants), 36 thermal power stations using various technologies, 5 of which are nuclear, and other facilities built and operated according to the best available practices. 	<ul style="list-style-type: none"> ISO 9000 certification has been attained for the operation of windfarms in Spain and the United Kingdom. 	<ul style="list-style-type: none"> Construction continues on almost 1,700 MW of onshore wind, 336 MW of photovoltaic, and 1,064 MW of offshore wind. In Mexico, construction will continue on almost 2,700 MW in combined cycle and 100 MW in cogeneration. In Portugal, there is continued construction of the Tamega hydroelectric complex, with 1,158 MW. In Brazil, work continues on the construction of the Baixo Iguaçu (350 MW total) and Belo Monte (11,233 MW total) hydroelectric plants, through Neoenergia.
Power transmission and distribution assets	<ul style="list-style-type: none"> Iberdrola's electricity transmission and distribution networks comprise over 30,000 km of transmission lines, over 1 million km of distribution lines, roughly 4,000 substations and over 1.4 million transformers, built and operated to supply a high-quality, reliable service. 	<ul style="list-style-type: none"> In Spain, more than 8.8 million smart meters have been installed (83.5%) and 55,500 transformer centres have been digitised (66%). In the United Kingdom, work has advanced on the Western Link project (completion expected in 2017). SPEN received the Customer Care Award for its customer service and the Scottish Green Energy Award for innovation. Elektro was awarded the National Quality and Iberoamerican Quality awards in 2016. In the United States, Avangrid began the Smart Grid Community Project in Ithaca (NY). 	<ul style="list-style-type: none"> Significant proposed transmission projects in Maine and New York to permit the connection of renewable generation projects expected by 2020. Installation of 1.8 million smart meters in New York and automation of the network, putting Avangrid at the forefront of the REV initiative. Investments in the United Kingdom transmission network, to improve the reliability and quality of supply. Progress with the digitisation of the network to lead the transformation towards a Distribution System Operator.
Other assets	<ul style="list-style-type: none"> Iberdrola manages approximately 690,000 m² of offices and work centres throughout the world, with a total of 770 properties, of which 358 are located in Spain, 45 in the United Kingdom, 117 in the United States, 231 in Brazil, and 19 in the rest of the world. These properties, which follow the same corporate criteria in the interior spaces, are designed, built, and operated in accordance with the strictest sustainability and efficiency standards. 	<ul style="list-style-type: none"> ScottishPower's new corporate headquarters in Glasgow. This is a property with more than 20,000 square meters of offices for more than 1,600 employees. Start-up and the first transfer occurred during the month of December. Phase I of the Iberdrola Campus began in the month of September. Located in San Agustín de Guadalix, this infrastructure is intended to become the backbone of knowledge and training for the employees of the Group. 	<ul style="list-style-type: none"> As a culmination to the process of integrating Avangrid, the infrastructure holding its corporate headquarters, located at 180 Marsh Hill Road, Orange, CT, will commence operations during 2017. During the first half of 2017, it is expected that more than 1,600 employees will be transferred to the Glasgow headquarters, as well as the closing of surplus buildings. Construction will begin during 2017 on phase II of the Iberdrola Campus, which will include an expansion of training infrastructures and an office complex. Completion is expected during the first half of 2019.

4.3 Intellectual Capital

	Management Approach	Principal activities 2016	Outlook
Promotion of R&D	<ul style="list-style-type: none"> In anticipation of the energy transition towards a more sustainable model, Iberdrola has made an advance wager on innovative solutions that require greater electrification of the economy: more clean energy, more storage capacity, more and smarter grids, and more digitisation. 	<ul style="list-style-type: none"> Significant increase in R&D investment: More than €211 million in 2016, a 6% increase over 2015. Being recognised as the most innovative utility in Spain and the third most innovative in Europe, according to the European Commission. Launch of “Iberdrola Universitas”, an initiative that will gather together all of Iberdrola’s activities with the academic world. The goals are to promote a university-company transfer of knowledge, the attraction of talent, and contribution to the “social dividend”. 	<ul style="list-style-type: none"> Progress on the R&D Plan 2015-2017. R&D will continue to be a key factor to successfully achieve a new growth phase of our Company, making it the <i>utility of the future</i>, founded on sustainable development, the promotion of renewable energy, and emerging technologies, as engines for the creation of value and social contribution.
Efficiency and new products and services	<ul style="list-style-type: none"> Continuous optimisation of our operations, management of the lifecycle of facilities and equipment, reduction in operating and maintenance costs, and decreasing environmental impact. Development of new and competitive products and services that adapt to an increasingly global market, the main goal of which is to meet the needs of customers. 	<ul style="list-style-type: none"> New initiatives to improve the customer experience: personalisation of content and offers, delivery of proactive real-time communications, online self-service, Optimum Rate, and Energy Advisor. New Smart Home products: Consumption Monitor, an electric meter capable of breaking down the consumption of main domestic appliances, and Smart Lamps, smart LED bulbs that can be controlled from a mobile device. 	<ul style="list-style-type: none"> Our commitment to innovation will continue to be a priority in order to keep Iberdrola at the forefront of developing the new products, services, and business models that are transforming the industry. Finally, we will continue making efforts to offer our customers better and more efficient service and to contribute to sustainable development with our innovative activities.
Disruptive technology and business models	<p>Through the Iberdrola Ventures- Perseo corporate venture capital programme, there has been more than €50 million invested since 2008 in technologies and new disruptive businesses, which ensure the sustainability of the energy model. Lines of activity:</p> <ul style="list-style-type: none"> Customer-focused solutions: energy efficiency, demand management, digital solutions, etc. Distributed energy resources: innovative generation and distributed storage solutions. Renewable energy: technologies related to renewable generation (solar, wind, offshore wind). New technologies applied to the operation and maintenance of energy infrastructures: robots, sensors, software, drones, etc. 	<ul style="list-style-type: none"> Positioning of the company Silicon Valley Stem as the market leader in distributed storage. This start-up offers savings to commercial and industrial customers through a solution behind a meter that includes software (big data and cloud) and batteries. Stem reached 200 installations of distributed storage during 2016. Growth and development of the Salamancan company Arbórea Intellbird, jointly owned by Perseo and CDTI, which sells drone inspection services for all kinds of energy infrastructure. During 2016, it has inspected more than 600 of the Company’s wind turbine blades, preventively detecting anomalies and permitting a reduction in the cost of repairs and improved planning of corrective maintenance. 	<ul style="list-style-type: none"> Ensure Iberdrola’s access to the energy technologies of the future. Foster entrepreneurship and the development of an innovative entrepreneurial fabric within the energy sector: investment in initiatives with a high social and job creation component. Establish alliances with key technology providers for Iberdrola (Open Innovation Ventures).

Highlight the value of the Company's intangible assets

Main R&D research projects

Renewable energy

- Projects to improve the efficiency of assets and models for the design of windfarms. Monitoring of the main equipment for early detection of failures or reduced production using artificial intelligence/big data. The area of energy resources includes the *HPC4E* (High Performance Computing for Energy) project, which plans to use computational fluid dynamics (CFD) models in future exascale supercomputers.
- The area of offshore wind includes the installation of jacket piling and foundations at the Wikingen offshore windfarm, as well as innovative substation design based on a 6-legged jacket foundation design built in two separate blocks to simplify transport to the site.
- Renewable energy integration projects include the exceptional *ESS2Wind* project, which aims to analyse the possible application of battery storage systems associated with windfarms to provide auxiliary services to the system.

Smart grids

- The *iGreenGrid* project for developing specific methods for integrating renewable energy into the electric distribution grids and the *Discern* project for comparing different smart grid solutions to discover the ideal arrangement of architectures were successfully completed.
- In the United Kingdom, work continues on the *Visor*, *Angle* and *Fitness* projects to improve the transmission and distribution network, strengthening smart grids.

Clean generation

- The *CO₂Formare* project, the goal of which is to avoid macrofouling in a sustainable manner, reducing environmental impact. The first tests for injecting CO₂ into water have been performed, the results have been satisfactory, and the previously developed CO₂ capture modules will soon be installed at the plant.
- The *Prexes* project, which focuses on developing a model for predicting expansion in concrete hydraulic structures.

Investments in R&D (€M)

4.4 Human Capital

	Management approach	Principal activities 2016	Outlook
Global human resources management	<ul style="list-style-type: none"> • Achieve the goals of competitiveness and business efficiency in a climate of social peace, fostering stable, high- quality employment. • Harmonise human resources processes and make inroads with implementing the Iberdrola culture in all countries, respecting specific local conditions. 	<ul style="list-style-type: none"> • Finalisation of the project for integration of the Human Resources Model [OneHR project] at Avangrid. • Management of an appropriate labour relations framework that can be adapted to suit business and social requirements. 	<ul style="list-style-type: none"> • Consolidate the Human Resources function at Avangrid, extending and unifying best practices. • Strengthen the commitment to social responsibility, fostering ethical and responsible behaviour. • Maintain team pride, workforce satisfaction, job commitment, and productivity.
Goal of "accident reduction"	<ul style="list-style-type: none"> • Prioritise the safety of individuals at the Group's facilities and within its sphere of influence, fostering a progressive reduction in incident rates and improving health and safety conditions. • Replicate throughout the Group the best practices identified in the area of occupational health and safety, fostering a culture of excellence in management and coordinating global preventive activities. 	<ul style="list-style-type: none"> • Attainment and/or maintenance of the OHSAS 18001 certification, and approval of a system of global prevention standards in accordance with the Group's policy. Assessment of level of conformance to global standards. • Monitoring of proactive and reactive indicators among the Group's companies for the global scorecard. • Establishment of goals for the management of occupational health and safety at subcontractors. • Identification and application of best safety practices. Exchange of lessons learnt. Creation of groups to promote safe behaviour. 	<ul style="list-style-type: none"> • Define the global occupational health and safety strategy for the coming years. • Continue with assessment of level of conformance to global standards and the implementation of improvement groups to promote safe behaviour. • Continue developing certifications of the Group in accordance with OHSAS 18001. • Analysis of accident rate and establishment of goals for Group and subcontractor employees. • Global campaigns to raise awareness on certain types of common accidents.
Talent management	<ul style="list-style-type: none"> • Drive staff qualifications, preparing employees to work in a multicultural environment and making continual efforts to improve their employability. • Develop alternatives to compensate for factors stemming from the ageing of the workforce. • Maintain a team of competent, committed, and motivated professionals, which is key for the sustained success of the business. 	<ul style="list-style-type: none"> • Promotion of job and international mobility within multicultural teams in a global context. • Launch of new Management School programmes. • Expansion of the professional training and development model to all countries. • Identification of the group of high-potential professionals to provide the organisation with professionals will lead the Iberdrola of the future. • Expansion of the process of publishing internal vacancies at the global level. 	<ul style="list-style-type: none"> • Strengthen the talent and leadership development management model at the international level. • Define and implement the Global Development Roadmap for the Iberdrola Group. • Attract the best talent, strengthening excellence in our selection processes. • Integrated talent management of the Company in order to train future leaders, preparing them now to assume larger responsibilities. • Development of the second phase of the Campus project.
Diversity, equal opportunity, and reconciliation	<ul style="list-style-type: none"> • Guarantee a social model committed to professional excellence and the quality of life of our employees. • Development of labour relations based on equal opportunity, non- discrimination, and respect for diversity. • Create a high-quality labour environment by committing to reconciliation, and promote a position of leadership in these areas in the countries in which it does business similar to that enjoyed in Spain. • Align the Corporate Volunteering Programme with the Sustainable Development Goals defined by the United Nations. 	<ul style="list-style-type: none"> • International cultural exchange programmes. • Corporate Volunteerism Activities focused on improving the quality of life and the integration of vulnerable groups, including the <i>International Volunteering Day</i>, the <i>Involve</i> international volunteering programme, and the project for improving the electricity situation of several refugee camps in Ethiopia. • Launch of the volunteer project regarding the fight against climate change. Sustainable Development Goals 4 (Quality education) and 13 (Climate action). 	<ul style="list-style-type: none"> • Continue to foster improvements in the quality of people's lives through social-welfare activities in all of the countries in which the Iberdrola Group has a presence, creating a global volunteer community. • Promote the internationalisation of social programmes and strengthen ties among the employees of the Group at the global level. • Contribute to achieving the Sustainable Development Goals defined by the United Nations for the 2015-2030 horizon.

Ensure the availability of a committed, qualified workforce in a safe and stable environment

4.6 Social and Relationship Capital

Stakeholder relations

Iberdrola wants to engage its Stakeholders in all of its activities and businesses, participating in an ongoing and constructive dialogue with them in order to know their expectations, build strong ties, and thus generate confidence and forge a sense of belonging to an excellent company, of which they feel they are a part.

Management approach

Iberdrola's strategic approach sets great store by its relations with Stakeholders, giving importance to the dual facets of this relationship:

- In terms of social responsibility, meeting their expectations and needs.
- In terms of reputation, managing Stakeholders' perception of the Company.

Principal activities 2016 and Outlook

- Approval of a new *Stakeholder Relations Model*, the goals of which are:
 - To further develop the *Stakeholder Relations Policy* approved by the Board of Directors in 2015.
 - To systematise Stakeholder relations throughout the Iberdrola Group.

- To create a business culture with respect to the significance of dialogue with the Stakeholders.
- Monitoring of the AA1000 standard, in accordance with the principles of inclusiveness, materiality, and responsiveness:
 - Update of the channels of communication with the Stakeholders.
 - Identification of the most significant matters.
 - Balanced and reasonable response thereto.
- New microsite on the Employee Portal (Intranet) to internally disseminate the importance of the dialogue and of the relations with Stakeholders.
- In 2017, implementation of the new *Stakeholder Relations Model* throughout the Iberdrola Group.

A materiality analysis allows for prioritisation of the issues most important to the Company's Stakeholders.

Materiality

A Materiality Study allows for prioritisation of the issues most important to the Iberdrola's Stakeholders. In the *Sustainability Report 2016*, Iberdrola explains the management approaches taken by the Company in regard to these significant issues and the results achieved. The following graph summarises the main issues.

Community support and electricity access programmes

Primary programmes

Activities 2016

- Contribution of €44 million to the community in the countries in which Iberdrola operates, measured according to the London Benchmarking Group (LBG) international standard.
- International corporate volunteering programme, offering various volunteering opportunities to employees in Spain, the United Kingdom, the United States, Mexico, and Brazil.
- Entrepreneurial support: over €46 million of procurement from companies in operation for less than 5 years, and €70 million in venture capital for new initiatives with high technological value.
- Programmes and pricing to aid vulnerable groups in Spain, the United Kingdom, the United States, and Brazil.
- Rural electrification programmes in Brazil, to which €18 million has been allocated on a consolidated basis.
- Programmes implemented by the foundations created by Iberdrola in the principal countries in which it operates.
- Development of the *Electricity for All Programme*.

Electricity for Everyone

- The Sustainable Development Goals (SDGs) 2015-2030, approved at the UN Sustainable Development Summit in New York (September 2015), entail the recognition of energy as an engine of sustainable growth.
- The *Electricity for All* programme is Iberdrola's response to this demand to extend universal access to modern forms of energy, with environmentally sustainable, financially affordable, and socially inclusive models. This initiative is focused on sustainable electrification activities in emerging and developing countries.
- Iberdrola has set itself the goal of reaching 4 million beneficiaries of this programme by 2020. At year-end 2016, the programme had reached 2.5 million users.

Economic value distributed (€M)

Item	2015	2016
Procurement from suppliers	5,093	6,415
Payments to providers of capital	1,646	2,692
Payments to government administrations	2,746	2,740
Employee remuneration	2,187	2,260

Foundations of the Iberdrola Group

Activities 2016

- Iberdrola has strengthened the operation of its foundation activities in Spain, the United Kingdom, the United States, Mexico, and Brazil through the actions of the Foundations Committee, as the body coordinating all of their activities and of the corresponding Boards of Trustees in each country.
- Contributions and amounts dedicated to activities have increased in all countries, including the United States, where the Avangrid Foundation has integrated a large portion of the social welfare actions carried out by UIL and its foundations.
- As regards the activities themselves, the four areas of the Master Plan (Training and Research, Art and Culture, Sustainability and Biodiversity, and Cooperation and Solidarity) have been promoted in all of the countries.
- In the training area, Iberdrola's *Scholarships and Research Assistance Programme* gave a total of 130 scholarships for students in the five aforementioned countries in 2016.
- The area of art and culture includes illumination projects like that for the *Municipality of San Sebastián*, support for exhibitions like the new *Energise Area of the National Museum of Scotland*, and projects supporting music like the *Eastman School of Music* in Rochester.
- In the area of sustainability and biodiversity, there have been multiple collaboration projects with educational and environmental centres in these five countries.
- In the area of cooperation and solidarity, there has been a strengthening of the *Social Assistance* programme in Spain and the many collaborations in the United States and the United Kingdom.

Contribution by programme (%)

Soundness and strength of the brand

- Management of the brand in such a way that it transmits the principles set out in the *Mission, Vision, and Values of the Iberdrola Group* and reflects the Company's strategy of commitment to the environment.
- Consolidation of an international brand, strengthening communication and alignment under a single brand positioning strategy in the countries in which the Company operates.

Brand value* (€M)

Source: Ranking of Best Spanish Brands by Interbrand.

Evolution of the digital ecosystem

- Offer of useful and dynamic information, with messages adapted to each stakeholder.
- Facilitate direct interaction with our stakeholders, overcoming barriers and making use of existing synergies.

Iberdrola on social media and the Internet:

Brand and reputation intelligence

- At Iberdrola, the establishment and attainment of goals allows for the conquering of challenges and sustainable growth. Thanks to the alignment between these goals and the expectations of the Stakeholders, both internal and external recognition is achieved and relations of trust are strengthened, thus increasing reputation.
- In 2016, the creation of a Brand and Reputation Intelligence Unit has allowed for progress down the path of acquiring an awareness and analysis of the brand and management of the corporate reputation as elements to take into account in short-, medium-, and long-term strategic decision-making.
- Good corporate governance is the great driver for identifying and evaluating reputation risks through policies, while the value of the brand and the value of the Company are the major beneficiaries of the implementation of an intelligence system that protects the Company from negative impacts on its reputation and risks. This is reflected in the following chart on the value creation process using brand and reputation analysis and intelligence tools:

Figure 1.
Brand and reputation intelligence value creation process

- Within this context, one of the greatest challenges on which progress has been made this year was the identification of reputational risk factors as well as the implementation of initiatives that raise the Company's awareness to confront and overcome them. Being aware of the opinion of the Stakeholders, their expectations, and what they think of the business is a vital issue for overcoming this challenge and maximising the success of the Company within a competitive marketplace and in the financial markets. Along these lines, a worldwide employee opinion survey was carried out in 2016. This has provided an awareness of the opinion of the employees regarding Iberdrola's reputation and the local brands through which it acts in the following countries: Spain, United Kingdom, United States, Mexico, and Brazil.
- Finally, good reputation shows that good governance is aligned not only with shareholders and the financial community but also with customers, employees, and each and everyone of the Stakeholders, for which reason management plans are being implemented with each of them.

A Framework of Trust

5.1 Corporate Governance Model

Foundations of Iberdrola's corporate governance model

A. Corporate Governance System

Iberdrola is a leading multinational Group in the energy industry that seeks to create value in a sustainable manner for society, citizens, customers, and shareholders; which innovates and uses environmentally-friendly energy sources and considers its employees to be a strategic asset; committed to social return through all its business activities, generating employment and wealth in its environment, all within a strategy of social responsibility and compliance with tax regulations.

Iberdrola has adopted a Corporate Governance System made up of the *Mission, Vision, and Values* of the Group, *By-Laws, Corporate Policies, Internal Corporate Governance Rules*, and other internal codes and procedures, all available at www.iberdrola.com.

The content thereof is inspired by and based on a commitment to best corporate governance practices, business ethics, and social responsibility in all of its areas of activity.

Position	Director	Status	Date of last appointment	Ending date

⁽¹⁾ Inés Macho Stadler is the lead independent director (*consejera coordinadora*).

B. Governance model

Appropriate differentiation between the duties of strategy and supervision and those of guidance and management:

- The Board of Directors of Iberdrola, S.A., made up of a large majority of independent directors, focuses its activity on the determination, supervision, and monitoring of the strategies and general guidelines that must be followed by the Group.
- The chairman of the Board of Directors & chief executive officer and the rest of the management team are responsible for the organisation and strategic coordination of the Group, through the dissemination, implementation, and monitoring of the overall strategy and basic guidelines.
- In all of the countries in which the Group operates, organisation and strategic coordination is implemented through country subholding companies, which group together equity stakes in the energy head of business companies carrying out their activities in the respective country and centralise the provision of services common to such companies. In addition, the Group has a country subholding company that groups together the non-energy businesses. Country subholding companies have Boards of Directors, including independent directors and their own Audit and Compliance Committees, Internal Audit divisions or units, or Compliance divisions.
- The head of business companies are in charge of the day-to-day administration and effective management of each business. They also have Boards of Directors, which include independent directors and specific management teams. This structure, which operates together with the Group's Business Model, allows for an overall integration of the businesses (Networks, Wholesale and Retail, and Renewables) and focuses on maximising the operational efficiency thereof through the implementation of best market practices.

Corporate and governance structure of Iberdrola, S.A

(*) Company listed on the New York Stock Exchange.

C. Equity structure

Iberdrola has more than 600,000 shareholders throughout the world, and none of them has a controlling interest.

Foreign institutional shareholders account for 62.8% of the capital.

© External corporate governance awards / page 39

With Shareholder Week, which culminates with the holding of the General Shareholders' Meeting, Iberdrola brings the Company closer to and promotes interaction with its shareholders to give form to its corporate governance and social responsibility strategy, sharing events and initiatives regarding social-welfare, cultural, technological innovation, and digital transformation actions.

Iberdrola's response to the corporate governance challenge

A. Continuous Improvement of its corporate governance rules and practices

On corporate governance matters, the Company looks to the Good Governance Code of Listed Companies published by the CNMV and generally accepted recommendations in the international markets.

71.4% of the directors are independent.

Remuneration policy	Executive directors' variable remuneration tied to objectives.
	Transparency.
	Provision for revision and reimbursement of deferred variable remuneration.
Operation of the Board	71.4% of directors are independent.
	System of checks and balances, including a lead independent director (<i>consejera coordinadora</i>).
	All consultative committees have 100% or a majority of independent directors.
	Gender diversity: 5 women on the Board. All consultative committees are chaired by women.
	Cultural diversity: directors from 6 countries of origin.
	Rationale for proposed appointments.
Social responsibility and corporate reputation	External evaluation of governance bodies.
	Specific Corporate Social Responsibility Committee.
	Social Responsibility Policies.
	Company social action strategy through foundations related to the Iberdrola Group in Spain, United Kingdom, Brazil, United States, and Mexico.

© Ethics and Social Responsibility / page 90

B. Commitment to shareholders and investors

- The strength of the Group's industrial and financial model will us to continue on a path of increased profits and shareholder remuneration thanks to balanced growth focused on the regulated networks businesses, renewables, and long-term contracted assets.
- Engagement: shareholders are the key players within the Corporate Governance System, which includes good governance practices beyond those required by applicable law. The *Shareholder Engagement Policy* is implemented through various channels of participation intended to build a continuous dialogue beyond the General Shareholders' Meeting.
- Boost shareholders' participation at the General Shareholders' Meeting through the payment of an attendance bonus. Since its implementation in 2007, the quorum in attendance at the General Shareholders' Meeting has exceeded 75%, and has exceeded 77% during the last three years.

The quorum in attendance at the 2016 General Shareholders' Meeting was 77.91%.

C. Alignment between corporate governance and strategy

- Director remuneration aligned with strategic objectives and shareholder return. The remuneration model for directors is based primarily on three components:

Remuneration model for the Board

Type of remuneration	External (non- executive) directors	Executive directors
Fixed	According to their duties	On market terms.
Short-term variable	Not applicable	Tied to annual targets.
Long-term variable	Not applicable	Tied to multi-annual targets and paid in shares (3-year accrual period and payment deferred over 3 years following accrual).

There were only 2.16% votes against the *Annual Director Remuneration Report 2015*.

Parameters to which the annual variable remuneration of executive directors is tied in 2017

Financial	Results. Shareholder return.
Social responsibility	Presence on international indices. Level of consensus received for the proposals of the Board at the General Shareholders' Meeting. Growing female presence in management positions. Labour climate. Professional training.

Parameters to which the multi-annual variable remuneration of executive directors is tied (2017-2019)

Net profit.
Total shareholder return.
Financial strength.
Reduction in CO ₂ emissions.

Principal activities of the Board of Directors

Key issues in 2016

Iberdrola's Board of Directors has focused its activities on approving the strategic goals of the Group, on defining its organisational model, and on supervising the implementation and further development thereof.

Strategy		
Growth	The Board of Directors approves the strategic goals and determines the focus of the Group's most significant investments, ensuring that they are made in the businesses identified as priority, regulated, and renewable businesses, as well as in countries with a high credit rating.	<p>Approval and update of the Outlook 2016-2020 and of the strategic pillars.</p> <p>Approval of the strategy and budgets for financial year 2017.</p>
Financial strength	The Board of Directors determines the financial strategy during a growth phase of the Company.	Approval of a set of diversified financing sources .
Sustainable remuneration	The Board of Directors ensures that shareholder remuneration is aligned with growth in the Group's results.	<p>Validation of the objective of growth in shareholder remuneration in line with the increase in results.</p> <p>Approval of an approximately 11% increase in shareholder remuneration with a charge to 2016.</p>

Noteworthy milestones: Outlook 2016-2020.

Increase of close to 11% in shareholder remuneration with a charge to 2016.

Supervision		
Supervision	The Board of Directors, with the support of the Executive Committee, supervises on an ongoing basis the implementation of the Group's strategy and the development of the Group's organisational model.	<p>Detailed study of priority markets.</p> <p>Analysis of the performance and expectations for the future of the Businesses.</p> <p>Monitoring the integration of Avangrid.</p> <p>Regular supervision of key financial indicators.</p> <p>Monitoring of the impact that the merger between Siemens and Gamesa will have on Iberdrola.</p>

Noteworthy milestone: Monitoring the integration of Avangrid and the merger between Siemens and Gamesa

Iberdrola's Board of Directors has also devoted a significant portion of its time to dealing with other strategic issues relating to the management of the Group:

Risk supervision and control

The Board of Directors is deeply involved in the supervision of the Group's risks: it monitors the level of risk by means of periodic tracking of the most significant threats.

Identification and analysis of the main risks facing the Group.

Ongoing monitoring of risks with a possible impact on financial year 2016.

Annual revision of the Risk Policies.

Update of the guidelines on risk limits.

Approval of the *Report on Risk Control and Management Systems*.

Noteworthy milestone: Risk Analysis 2016-2020

Director and senior officer remuneration

The Board of Directors has supervised the remuneration model in order to verify that it is consistent with the Company's performance and with shareholder return, thus ensuring the maximisation of long-term value.

Comparative analysis of director remuneration.

Freezing of non-executive director remuneration since 2008.

Establishment of the limit on variable remuneration as well as the targets to which it is linked.

Approval of the fixed and variable remuneration of senior officers for financial year 2016.

Noteworthy milestone: Comparative analysis of director remuneration and supervision of the consistency of the Group's remuneration model.

Corporate governance

Ongoing efforts to identify and implement best corporate governance practices are key pillars for the creation of sustainable value.

Formalisation of the *Mission, Vision, and Values* of the Iberdrola Group as an integral norm of the Corporate Governance System.

Making various improvements designed to encourage shareholder participation in the General Shareholders' Meeting.

Successive amendments to the Corporate Governance System and approval of an *Anti-Corruption and Anti-Fraud Policy*.

Coordination and supervision of the process of evaluation of the Board of Directors.

Review of contacts made by the chairman and the management team with key market players.

Noteworthy milestone: Ongoing improvement of the Corporate Governance System and inclusion of the *Mission, Vision, and Values* of the Iberdrola Group within the Company's set of rules

Social responsibility and sustainability

The Board is committed to maintaining leadership in the fight against climate change, the development of clean energy, and respect for the environment, as well as in the maximisation of the social dividend.

Amendment of various social responsibility and sustainability policies and formalisation of the commitment adopted by Iberdrola in the fight against climate change.

Introduction of new measures to promote gender equality and the reconciliation between professional and personal life.

Approval of incentives to strengthen the Group's commitment to innovation and to a healthier and more egalitarian and just society.

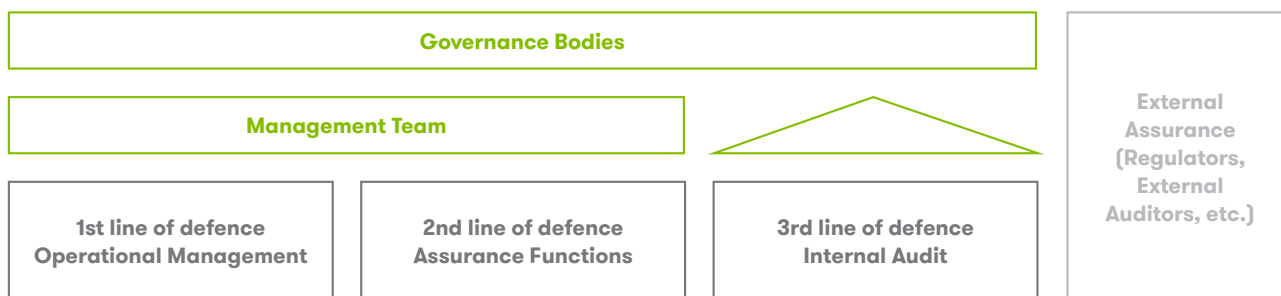

Monitoring the Group's activities in the area of sustainability and the alignment thereof with the main reference bodies.

Noteworthy milestone: Formalisation of commitments relating to the fight against climate change.

5.2 Three Lines of Defence

Three lines of defence model

The Internal Control System of Iberdrola and the companies of its Group is configured by reference to international best practices. It is based on a guarantee combined around three lines of defence, providing a comprehensive view of how the different parts of the organisation interact in an effective and coordinated manner, increasing the efficiency of the processes for management and internal control of the entity's significant risks.

Based on the document "Guidance on the 8th EU Company Law Directive, article 41" ECIIA/FERMA, September 2010.

1st line of defence Operational Management

As the first line of defence, the management team and the professionals of Iberdrola and its Group are the direct managers of the risks of the entity. Thus, the Management of the Company is responsible for maintaining effective control and implementing procedures to control risks on a continuous basis.

Internal Control Objectives (COSO. May 2013)

Operations objectives- Pertain to the effectiveness and efficiency of the entity's operations, including operational and financial performance goals, and safeguarding assets against loss.

Reporting objectives- Pertain to internal and external financial and non-financial reporting and may encompass reliability, timeliness, transparency, or other terms as set forth by regulators, recognised standard setters, or the entity's policies.

Compliance objectives- Pertain to adherence to laws and regulations to which the entity is subject.

© Significant Risks Facing Iberdrola's Primary Businesses
/ pages 48, 52, 56

2nd line of defence Assurance Functions

As the second line of defence, certain functions provide the foundation for the entity's internal control system, proposing guidelines to the Board of Directors and monitoring how the first line of defence implements them.

The primary assurance functions within Iberdrola, within their respective areas of responsibility, are: (i) the Group's Risk Division, within the framework of its functions within the Comprehensive Risk Control and Management System; (ii) the Compliance Unit, which is responsible for the Compliance System; and (iii) the Internal Control Division, which is part of the Administration and Control Division, within its duties relating to the internal control and risk management systems in relation to the preparation of financial information (ICFRS).

Iberdrola adopts the three lines of defence model to ensure effective and integrated management of its Internal Control System.

© Comprehensive Risk Control and Management System
/ page 86

© Compliance Unit
/ page 90

3rd line of defence

Internal Audit

The Internal Audit function, as the third line of defence, proactively ensures the proper functioning of the internal control, risk management, and governance systems, systematically auditing the first and second lines in the performance of their respective duties of management and control.

To ensure its independence, the director of the Internal Audit Area reports hierarchically to the chairman of the Board of Directors and functionally to the Audit and Risk Supervision Committee. The Internal Audit divisions of the various country subholding companies have this same positioning, and are coordinated under the framework of the *Basic Internal Audit Regulations of Iberdrola, S.A. and its Group*.

The 2016 annual activities plans of the Internal Audit Area Division of Iberdrola, S.A. and of the Internal Audit divisions of the Group, with a risk-based focus looking to support the achievement of the Company's goals, responded to the requirements established by the Audit and Risk Supervision Committee of Iberdrola, S.A. and the respective Audit and Compliance Committees of the country subholding companies, and included work for the senior management and the rest of the organisation, including:

- Annual audits of compliance with the *Code of Ethics* at Iberdrola, S.A. and at each of the country subholding companies.
- Audits of the process for determining and monitoring the limits and indicators of the Risk Policies of the Group's businesses.
- Half-yearly reviews of the operation of the most critical controls of the Internal Control Over Financial Reporting (ICFR) System, as well as reviews of the various cycles of preparation of the financial information of Iberdrola, S.A. and the various companies of the Group, within the framework of the general goal of reviewing the entire ICFR over a period of 3 years.

Continuing with the commitment made in 2005, Internal Audit submits to an exhaustive review every five years of compliance with professional internal audit rules (called a Quality Assurance Review) by the Global Institute of Internal Auditors. During the last review in 2015, the certification of Iberdrola, S.A. and of ScottishPower was renewed and the scope of the certification was expanded to include Iberdrola España and Avangrid.

Furthermore, since Internal Audit obtained ISO 9001 certification in 1999, it has continued to renew it through the current version ISO 9001-2008, which is expected to be updated to version ISO 9001-2015 in 2017. This ensures that all of the Group's internal auditors perform duties under the same framework and that such framework is aligned with the international professional rules of the function.

Basic Internal Audit Regulations of Iberdrola, S.A. and its Group

Approved by the Board of Directors of Iberdrola, S.A. upon a proposal of its Audit and Risk Supervision Committee (updated on 15-Dec-2015).

Defines the nature, as an independent internal unit, and establishes the regulation, competencies, powers, and duties of Internal Audit, among other things.

Establishes the framework of relations with: i) the Board of Directors, its Chairman and Committees; ii) the Internal Audit divisions of the other companies of the Group; and iii) the rest of the organisation.

Disseminates the knowledge of the Internal Audit function among the professionals of the Group.

Serves as a reference for the management model and the quality system of the Internal Audit Area of the Company and the Internal Audit divisions of the other companies of the Group.

External assurance

Regulatory bodies and other entities external to the organisation play a significant role in the general structure of governance, internal control, and risks of Iberdrola, especially in the regulated businesses. The regulators establish requirements intended to strengthen the controls of an organisation and perform a function of independent and separate monitoring, and the auditors provide assurance regarding the true and fair view of the entity's financial information. In this regard, the powers of the Audit and Risk Supervision Committee of Iberdrola, S.A. and the Audit and Compliance Committees of the country subholding companies include ensuring the preservation of the independence of the auditors in the performance of their duties.

Financial Statements

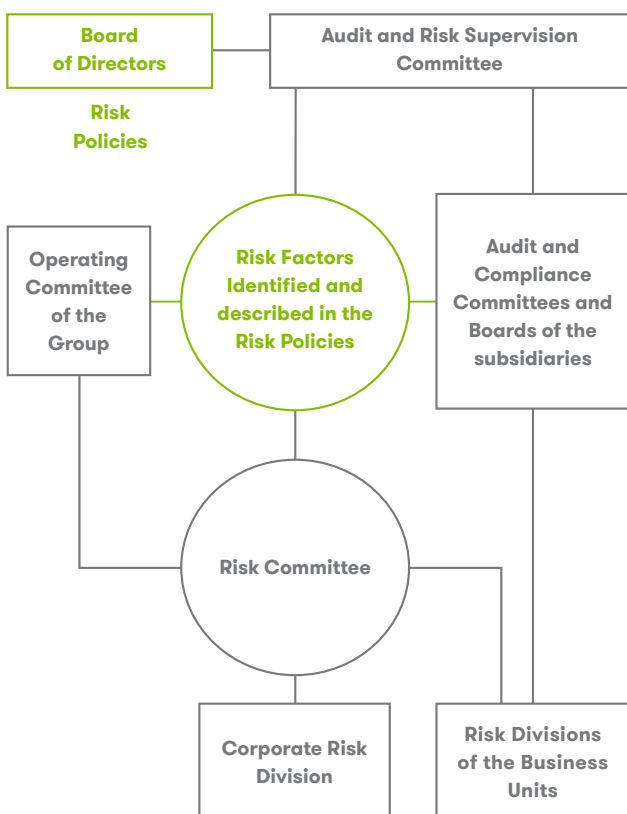

5.3 Risks

The essential elements of proper risk management are foresight, independence, and commitment to the business objectives of the Group.

Commitment of the Board of Directors and of senior management

Iberdrola's Board of Directors and senior management is strongly committed to and engaged in the management of the Group's risks:

- **Ex-ante:** acceptable levels of risk tolerance are reviewed and approved on an annual basis through risk policies and limits that establish the qualitative and quantitative risk appetite at the Group level and at each of the main businesses.
- **Ex-post:** periodic monitoring of significant risks and threats and the various exposures of the Group, as well as of compliance with the approved risk policies, limits, and indicators.

Comprehensive Risk Control and Management System

The *General Risk Control and Management Policy* of the Group approved by the Board of Directors establishes the mechanisms and basic principles for appropriate management of the risk/opportunity ratio, at a risk level that makes it possible to:

- Attain strategic goals with controlled volatility.
- Provide the maximum level of assurance.
- Protect the results and reputation of the Group.
- Defend the interests of the Stakeholders and guarantee the business stability and financial strength of the Group.

At the operational level, the Comprehensive Risk Control and Management System is structured around a Risk Committee and an independent specialised Risk Division that analyses and quantifies the risks within the main businesses of the Group.

Duties of the Risk Division

Centralised Approach – Active Management

Credit risk. Approval of counterparties and limits and/or establishment of admission criteria in order to minimise credit losses within the Group.

Market risk. Approval of detailed limits in order to delimit the effects of volatility in the markets in which the Group operates.

ERM* Approach – Integrated Vision

Ensure that the Group's significant risks are adequately identified, measured, managed, and controlled and that they are periodically reported to the various committees.

Instruments and reports:

- Risk policies and risk limits and indicators.
- Quarterly report on key risks.

Operational risk is managed through insurance and participation in the Group's information technology governance and cybersecurity committees.

(*) ERM: Enterprise Risk Management.

Risk policies and limits of the Iberdrola Group

The Group's Risk Policies are approved by the Board of Directors on an annual basis.

The country subholding companies of the various countries develop and approve their own policies through their Boards of Directors.

General Risk Control and Management Policy.

Specific risk policies for the various businesses of the Group:

- Risk Policy for the Liberalised Businesses of the Iberdrola Group.
- Risk Policy for the Renewable Energy Businesses of the Iberdrola Group.
- Risk Policy for the Networks Businesses of the Iberdrola Group.
- Risk Policies for the Engineering and Construction Businesses.
- Risk Policies for the Real Estate Businesses.

Corporate risk policies:

- Corporate Credit Risk Policy.
- Corporate Market Risk Policy.
- Operational Risk in Market Transactions Policy.
- Insurance Policy.
- Investment Policy.
- Financing and Financial Risk Policy.
- Treasury Share Policy.
- Risk Policy for Equity Interests in Listed Companies.
- Reputational Risk Framework Policy.
- Procurement Policy.
- Information Technologies Policy.
- Cybersecurity Risk Policy.

ERM management system

- Strategic positioning towards risk.
- Responsibilities to manage risk.
- Proactive and preventive actions.
- Quantitative and qualitative limits.
- Quarterly report on risk limits.

Principal risk factors of the Iberdrola Group

The Group is exposed to various risks inherent in the different countries, industries, and markets in which it operates, and which may prevent it from achieving its objectives and implementing its strategies. These risks, which are set out in the risk policies, are:

Credit risks: possibility of contractual breach by a counterparty, causing economic or financial losses.

Market risks: exposure to volatility in variables like prices of electricity and other energy commodities, exchange rate, interest rate, etc.

Business risks: deriving from the uncertainty of the behaviour of variables intrinsic to the business, characteristics of demand, climatology, etc.

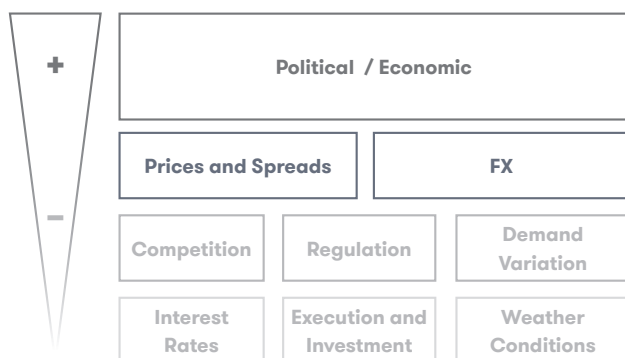

Operational, Technological, Environmental, Social, and Legal Risks: economic losses resulting from inadequate internal procedures, technical failures, human errors, etc.

Political and regulatory risks: coming from regulatory changes made by the regulators that can affect remuneration of the regulated businesses, environmental or tax provisions, etc.

Reputational risks: potential negative impacts on the Company arising from performance below the expectations of its Stakeholders.

Corporate governance risks: those that endanger the corporate interest and strategy of the Company.

Integrated Risk Analysis - Plan 2016-2020

Main sources of risk

The political/economic uncertainty of the countries in which the Iberdrola Group maintains a presence, which is difficult to quantify, represents the main source of risk due to its impact on key variables such as exchange rate, interest rate, regulatory changes, etc.

The prices of commodities and their impact on electricity prices represent the second source of risk for the Group.

Impact on Ebitda by business

Average annual EBITDA share '17-'20	Risk as % of annual EBITDA '17-'20
20%	Wholesale and Retail Business 4.5% - 5.5%
23%	Renewables Business 1.0% - 1.5%
57%	Regulated Business* 1.0% - 1.5%

(*) Networks & Mexico

Due to its intrinsic nature, despite representing only 20% of Ebitda, the Wholesale and Retail Business holds the greatest proportion of at-risk Ebitda for the period 2017 – 2020, amounting to between 4.5 and 5.5%. The various risk profiles of the businesses are as follows:

Wholesale and Retail Business: The main variable that affects the Group's results is the price of electricity, which is closely correlated to the price of the fuel used to produce it. These risks are mitigated by offsetting at-risk positions between wholesale and retail activities, by diversifying purchase/sale agreements and the specific clauses thereof, and by trading in derivatives.

Renewables Business: Risks deriving from the Renewables Business, mainly the uncertainty of wind resources and the established remuneration systems, are mitigated via:

- The wide geographical spread of the large number of available windfarms.
- The various regulatory frameworks aimed at fostering the development of renewable energy, based on formulas that can include premiums, green certificates, tax deductions, or regulatory tariffs that allow investors to obtain an appropriate and reasonable return.

Regulated Businesses: The regulation applicable to the Networks Businesses of each of the countries in which the Group operates establishes periodically updated frameworks that ensure a reasonable and predictable return. These frameworks provide incentives and penalties for efficiency, quality of service, and potentially for management of bad debts, with a minor and insignificant overall impact.

In Mexico, the Iberdrola Group sells most of its electricity production through long-term, fixed-price contracts to the Federal Electricity Commission (*Comisión Federal de Electricidad*) (CFE), and the rest of its production to private customers at prices indexed to the CFE rate.

Risk factors and mitigation measures

Greater detail is offered below regarding the main risk factors for the income statement of a specific financial year and the main measures of mitigation to address them.

The activities carried out by the Group are subject to various market, business, credit, operational and regulatory risks, arising out of the uncertainty of the main variables that affect them, including: changes in the price of commodities; changes in hydroelectric and wind production (both internal and external); change in demand for electricity and gas; and availability of the plants.

Changes in the price of electricity	The main variable affecting the results of the Group's Wholesale and Retail Businesses and Renewables Businesses as regards market prices is the price of electricity, which bears a close correlation to the price of fuel and applicable emission rights, required to produce such electricity.		
Changes in the prices of energy commodities	Offsetting at-risk positions between wholesale and retail activities allows for a large reduction in the Group's market risk; the remaining risk is mitigated via diversification of purchase/sale agreements and the specific clauses thereof, and by trading in derivatives.		
Profit margin	The Group's Renewables Businesses preferentially sell their energy at: i) regulated tariff; or ii) fixed price via long-term power purchase agreements (PPAs). The remaining market exposure of the Spain and United Kingdom Renewables Businesses is transferred to the Wholesale and Retail Business of such countries.		
	Possible impact of a 5% change in the price of electricity and/or of energy commodities and CO ₂	Wholesale and Retail Business - Spain - United Kingdom - Mexico United States Renewables Business	● Includes the exposure of the Spain Renewables Business (windfarms prior to 2014) ● Includes the exposure of United Kingdom Renewables Business (component of energy farms subject to ROCs). ● Long-term agreements with the CFE(1) have no market risk ● Includes 33% risk for windfarms without long-term sales agreements
Change in hydroelectric resources Spain	In the long term, wet years compensate for dry years. In the short-to-medium term, the storage capacity of hyperannual reservoirs and the Group's portfolio of power plants mitigate the level of volatility of the annual results.	Possible impact of lower hydroelectric production(*) (*) Corresponding to dry year, followed by two dry or semi-dry years.	● Spain Wholesale and Retail Business
Change in wind resources of the Group	The geographical spread of the Iberdrola Group's windfarms mitigates the annual volatility of wind production at the Group level and its possible impact on results for a specific year.	Possible impact of lower wind production	● Group Renewables Business
Change in demand	Higher or lower growth in annual demand has a moderate short-term impact on the Group's results, given the characteristics of the Group's generation facilities and the structure of the long-term power purchase agreements (PPAs).	Possible impact of 1% reduction in demand	● Spain Wholesale and Retail Business ● United Kingdom Wholesale and Retail Business
Change in interest rate	In order to mitigate this risk, the Iberdrola Group maintains a fixed-rate and variable-rate debt structure, based on the structure of its revenues and the sensitivity thereof to changes in interest rates.	Possible impact on financial cost of +25 basis point increase	● Group financial cost
Change in exchange rate	The Group mitigates this risk by taking on debt and carrying out all its financial flows in the functional currency corresponding to each company, whenever possible and economically efficient, managing its open positions with financial derivatives. The risk associated with the translation of expected results from subsidiaries in a currency other than the euro is closed out annually.	Possible impact on financial cost of 5% increase in currency	● Group financial cost
Credit risk	This risk is appropriately managed and limited based on the type of transaction and the credit standing of the counterparties. As regards credit risk corresponding to accounts receivable for retail activity, late payments/defaults have been kept to moderate levels, close to 1% of the total invoicing for this activity.		
Operational risk	These risks are mitigated by making the necessary investments, applying operation and maintenance procedures and programmes (supported by quality systems), planning appropriate training and skills development for staff, and finally by obtaining appropriate casualty and civil liability insurance.		
Regulatory and political risk	The Group is subject to laws and regulations on tariffs and other regulatory aspects of its activities in the countries in which it does business. The introduction of new laws/regulations or amendments to existing ones could adversely affect operations, annual results and the financial value of the businesses of the Group.

5.4 Ethics and Social Responsibility

Compliance Unit

Iberdrola has a Compliance Unit, as a collective, internal, and permanent body linked to the Corporate Social Responsibility Committee of the Board of Directors.

There are also Audit and Compliance Committees at the level of each country subholding company and/or head of business company. Their duties including promoting a culture of ethical behaviour and zero tolerance for the commission of unlawful acts or fraud. Iberdrola's Compliance System is made up of the substantive rules, formal procedures, and major activities within the Group to encourage the organisation to act in accordance with applicable ethical principles and legal provisions, through a set of procedures and actions designed to prevent, detect, and react to irregular actions, fraud, or actions contrary to the Iberdrola Group's Code of Ethics or applicable laws and regulations.

Main activities in the area of ethics and compliance

Various programmes and control mechanisms for different regulatory environments are implemented at the Group within the framework of the Compliance System.

These include the crime prevention programmes, which are implemented within the framework of the process of reviewing and adapting the duties imposed by the Spanish Criminal Code, without prejudice to the legal provisions applicable in any other jurisdiction in which the Company does business, as well as the programme for compliance with the *Code of Ethics*, which includes specific training and communication plans for all professionals of the Group, among other things.

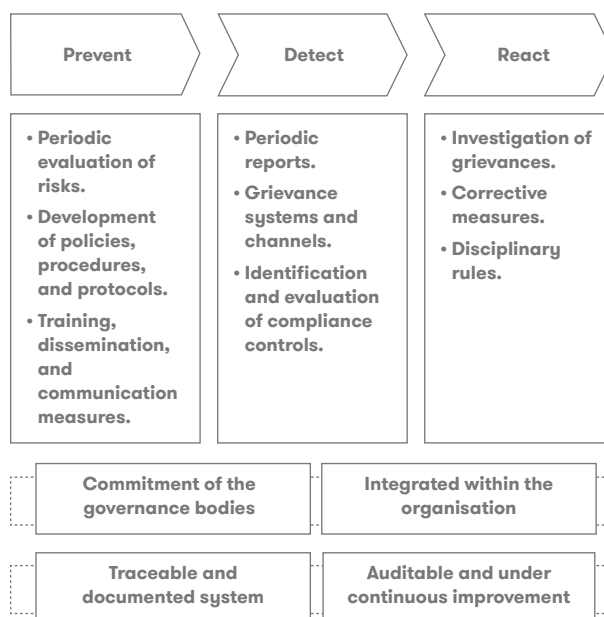

Iberdrola also has a Compliance Unit Office (the "Office"), managed by the Compliance Director and made up of members representing the various areas that form the

Compliance System. All functions that are entrusted with powers relating to compliance are coordinated through the Office, which ensures the effective functioning of the Compliance System as a whole.

Powers of the Unit

The Compliance Unit has powers related to the *Code of Ethics*, the *Anti-Corruption and Anti-Fraud Policy*, the *Crime Prevention Policy*, the *Internal Regulations for Conduct in the Securities Markets*, legal provisions regarding the separation of activities, and all other powers that may be entrusted thereto by the Corporate Social Responsibility Committee or the Board of Directors of the Company or that are established in Iberdrola's Corporate Governance System.

The Iberdrola Group's compliance system

Principal awards

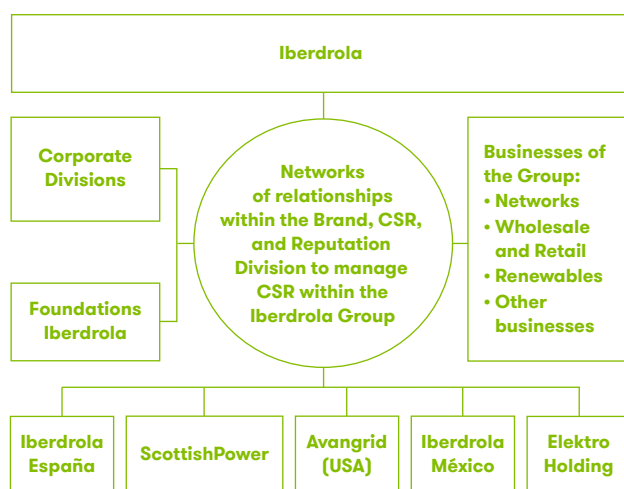

Iberdrola has been chosen for the fourth consecutive year as one of the most ethical companies in the world, according to the *World's Most Ethical Companies* ranking prepared by the *Ethisphere Institute*. This

Iberdrola considers its corporate values to include ethical principles, good corporate governance and transparency, and social commitment.

ranking recognises organisations that are committed to ethical leadership and behaviour at the corporate level.

NYSE Governance Services, together with the Ethisphere Institute, also awarded the “Compliance leader verification” certification to Iberdrola in 2015.

Organisation of social responsibility within the Group

The Iberdrola Group has an organisational structure designed to promote and manage responsible actions with its Stakeholders. The Corporate Social Responsibility and Reputation Committee and the CSR and Reputation Committees of the country subholding companies coordinate the balanced development of social responsibility within the Iberdrola Group. The CSR Committee of the Board of Directors performs the duties of supervision within its purview.

CSR plans of the Group

2015 saw the approval of the *CSR 2015-2017 Plan* for the Iberdrola Group, covering five areas of activity (dialogue with local communities, measurement tools, etc.), with a focus based on the various Stakeholders.

The CSR Plan is made up of various programmes, projects, and monitoring indicators, both cross-sectional for all involved organisations of Iberdrola as well as specific

for each business or corporate area of the Company.

Monitoring of the Plan is analysed on a half-yearly basis by the Corporate CSR and Reputation Committee and by the CSR Committee of the Board of Directors.

External awards

2016 world leader in utilities sector, with 91 points. Selected in all prior years.

Selected in 2017. Only Spanish electric company among the 100 most sustainable companies in the world.

First utility with nuclear assets to meet standards, selected for 6 years in a row.

A-List, the highest category.

Iberdrola a sponsor.

Iberdrola selected AAA.

Iberdrola selected.

Qualified as “Gold Class” in the electricity sector.

First Spanish utility and fifth worldwide.

Leader among Spanish utilities: electricity, gas, and water.

Iberdrola selected

Iberdrola among top 25 scoring companies.

About this Report

This report, which Iberdrola directs to both its shareholders and investors and all of its Stakeholders, has been prepared under the innovative “integrated report” concept, and constitutes one more example of the Group’s desire to be innovative in the area of transparency.

6.1 About this Report

Integrated report

- This report has been prepared in accordance with the reporting framework published by the International Integrated Reporting Council (IIRC) and in accordance with the recommendations thereof, taking into consideration the individual and consolidated financial statements of the Company formulated by the Board of Directors, audited and pending approval by the shareholders at the General Shareholders' Meeting of Iberdrola.
- A multi-disciplinary team made up of corporate businesses and areas of the Group was created in order to provide a complete view of the Company, its business model, the challenges and risks it faces, and its social, environmental, financial, and governance performance. The participating organisations guarantee the completeness of the information included.
- This content of this document has been reviewed by the Company's Operating Committee. It has also been reported on favourably by the Corporate Social Responsibility Committee, which has submitted the report to the Board of Directors for its final consideration. Based on all of the foregoing, the Board of Directors has approved this *Integrated Report February 2017* at its meeting of 21 February 2017.

Information boundaries

- The information submitted covers Iberdrola and its subsidiaries and affiliates. The information boundaries are defined in the Group's consolidated annual financial statements and *Sustainability Report*.
- The Group's performance in recent years is connected to external corporate transactions and internal management decisions, which the reader should take into account in order to properly interpret this report. These transactions and activities are described in the Group's public information, the following being particularly noteworthy:
 - The application of IFRS 11 to the 2013 to 2016 figures, which mainly affects Brazil.
 - The integration of UIL Holdings Corporation into Iberdrola USA (December 2015), which is now called Avangrid, a company listed on the New York Stock Exchange and the country subholding company of the Group in the United States.

This report has been prepared in accordance with the reporting framework published by the International Integrated Reporting Council (IIRC).

Material aspects identified

- Iberdrola has channels of communication and dialogue with its Stakeholders, developed in accordance with the principles of the AA1000 Assurance Standard, as described in detail in the *Stakeholder Relations Policy* and in the *Sustainability Report*.
- The Company also performs materiality analyses that help identify matters of significance to its Stakeholders, bringing to light particularly sensitive financial, environmental, or social issues related to the business in the various communities and geographic areas in which the Group operates.
- The contents of this report have been selected by taking into account the existing channels for dialogue as well as the materiality analyses and the framework defined by the IIRC for this kind of information.

© Social and Relational Capital
/ page 72

Internal and external verification

- This report has been subject to a process of internal verification, by means of a limited review performed by the Management of the Internal Audit Division of Iberdrola.
- Although it has not been subject to a process of independent external verification, a significant portion of the information contained herein relating to financial year 2016 and to previous years comes from annual financial reports and sustainability reports, all of which have been the subject of an external audit or verification for which the respective certificates are available. The remaining information comes mainly from other reports or public presentations made by the Company.

6.1 Provide a site plan (or plans) including a map (or maps) that clearly identifies the location of the proposed project site, Offshore Delivery Facilities project locations, the assumed right-of-way width, the total acreage for Eligible Facilities, the anticipated interconnection point (or, if applicable, multiple points for Offshore Delivery Facilities), deployment facilities, and the relationship of the site to other local infrastructure, including transmission facilities, roadways, federal and state waters, and waterways. In addition to providing the required map(s), provide a site layout plan which illustrates the location of all major equipment and facilities on the site.

Site plan included? Yes ☒ No ☐ If not, please explain:

SITE PLANS

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] Site plans identifying each element of the Project and their location are included below and provided as **Attachment 6.1-1**. These site plans are preliminary and pending final design, permitting, and stakeholder consultation, which is typical at this stage of development. **Figure 6.1-1** illustrates the Project's Eligible Facility site.

Figure 6.1-1 *Eligible Facility Site*

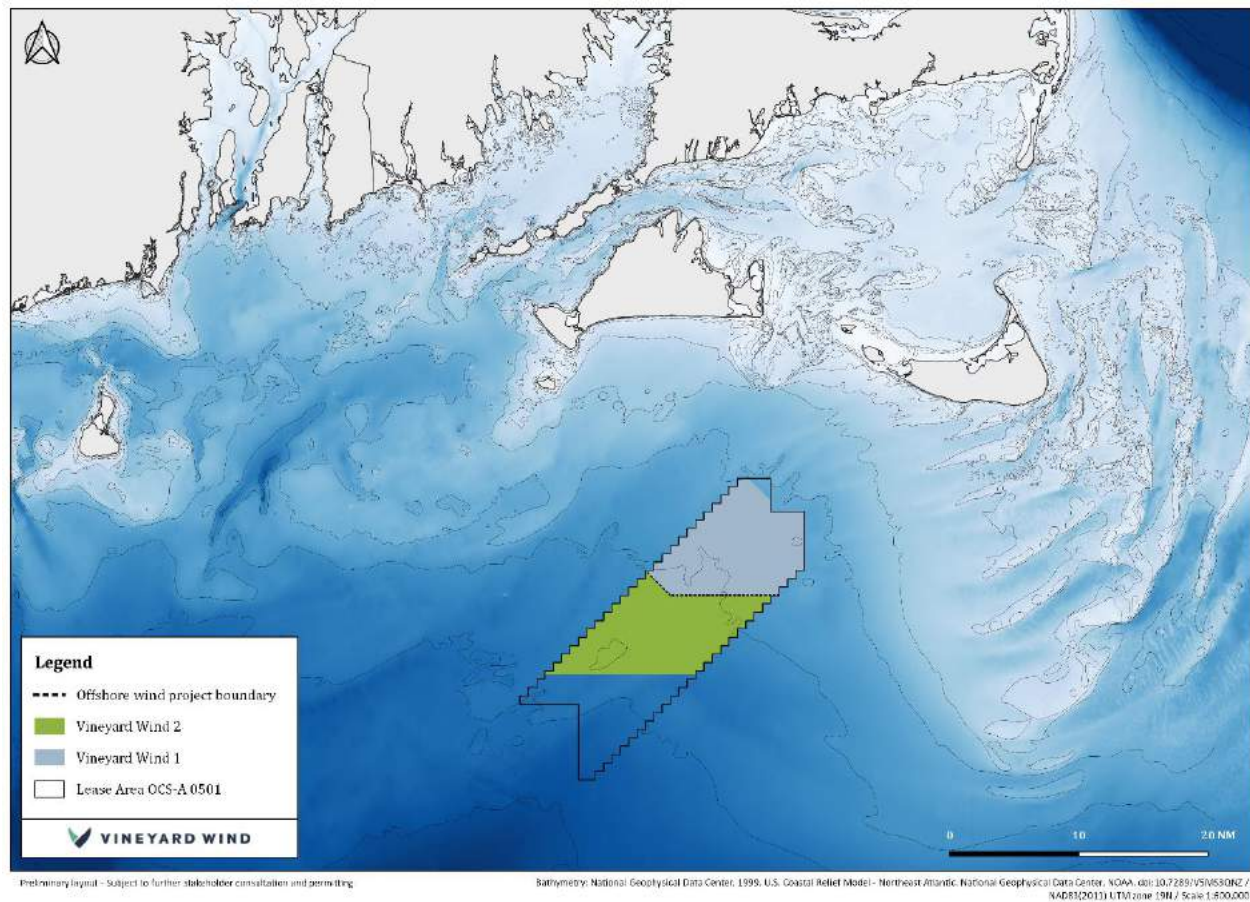

Figure 6.1-2 depicts the Project's site plan for the Offshore Wind Energy Generation facilities located in Lease Area OCS-A 0501; the wind turbine generators (WTGs) and electrical service platform (ESP) are in the middle portion of Lease Area OCS-A 0501, immediately south of Vineyard Wind 1. Final WTG layout and configuration are subject to further stakeholder consultation and permitting.

[Redacted]

[Redacted]

[Redacted]

The Project's landfall location, cable route, and onshore substation site are depicted in **Figure 6.1-4**. [REDACTED] as further described in response to **Question 6.4**. [REDACTED]

6.2 Identify any real property rights (e.g., fee-owned parcels, rights-of-way, development rights or easements or leases) that provide the right to use the Eligible Facility site and Offshore Delivery Facilities locations including for Eligible Facilities and any rights of way needed for interconnection.

- i. Does the project have a right to use the Eligible Facility site and/or Offshore Delivery Facilities locations for the entire proposed term of the PPA or tariff (e.g., by virtue of ownership or land development rights obtained from the owner)?

Yes ☒ No ☐ If not, please explain:

REAL PROPERTY RIGHTS

Identification

The Project has the right to use the Eligible Facility site and portions of the Offshore Delivery Facilities location (i.e., onshore substation site and onshore cable route) for the entire proposed term of the Power Purchase Agreement (PPA). These rights are primarily secured through and governed by the following:

- Lease Agreement with BOEM for Lease Area OCS-A 0501;

[REDACTED]

Lease Agreement

Vineyard Wind has executed a lease agreement for Lease Area OCS-A 0501 with BOEM for the purpose of offshore wind energy generation on the Outer Continental Shelf. A copy of the Lease Agreement is provided as **Attachment 6.2-1**, and a letter of good standing from BOEM is provided as **Attachment 6.2-2**.

The lease agreement provides Vineyard Wind the mechanism to build and operate offshore wind projects within the Eligible Facility site and to install the related necessary grid connection system within federal waters. It also allows for commercial operation of the Project for a period of at least 25 years.

[REDACTED]

[REDACTED]

-
- ii. *If so, please detail the Bidder's rights to control the Eligible Facility site and/or Offshore Delivery Facilities locations.*
-

Rights to Control

Eligible Facility Site

As described above, Vineyard Wind has the exclusive right to construct Offshore Wind Generation Facilities in Lease Area OCS-A 0501 pursuant to a lease agreement with BOEM. To exercise this right, Vineyard Wind is required to obtain approval for the Project through the federal permitting process, which is further described in **Section 7**. This process includes submission of a Construction and Operations Plan (COP) to BOEM, along with submission of a Facilities Design Report (FDR) and

Fabrication & Installation Report (FIR). [REDACTED]

[REDACTED] As required by BOEM’s regulations, the FDR and FIR will be submitted following approval of the COP and final design of the Project.

Offshore Delivery Facilities

Vineyard Wind’s lease agreement with BOEM for Lease Area OCS-A 0501 also provides Vineyard Wind with the right to obtain one or more easements in federal waters for the purpose of installing and using offshore export cables. As described above, to exercise this right, Vineyard Wind must obtain approval through the federal permitting process described in **Section 7**.

The portion of the OECC that passes through state waters is subject to review and permitting at the state, regional, and local level, as detailed in **Section 7**. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

-
- iii. *Describe the status of acquisition of real property rights, any options in place for the exercise of these rights and describe the plan for securing the necessary real property rights, including the proposed timeline. Include these plans and the timeline in the overall project timeline.*
-

Acquisition

As already noted, Vineyard Wind has already secured most of the real property rights, or instruments to obtain real property rights, that are required for the Project. Any remaining real property rights will be acquired in line with the Project schedule provided in **Section 9**. **Table 6.2-1** provides an overview of the status of the key real property rights required to construct and operate the Project.

Offshore Interconnection Route in Federal Waters

Per U.S.C. § 585.200(b), Vineyard Wind is entitled to one or more easements in which to locate the offshore export cables in federal waters as needed to enable grid connection for Offshore Wind Generation Facilities located in the Lease Area. This easement(s) will be issued upon approval of the COP and will be recorded as an addendum to the lease agreement for Lease Area OCS-A 0501. [REDACTED]

[REDACTED]

[REDACTED]

Onshore Substation

[REDACTED]

-
- iv. *Identify any joint use of existing or proposed real property rights*
-

Joint Use

[REDACTED]

6.3 *Provide evidence that the Eligible Facility site and Offshore Delivery Facilities locations are properly zoned or permitted. If the Eligible Facility site and Offshore Delivery Facilities locations are not currently zoned or permitted properly, identify present and required zoning and/or land use designations and permits and provide a permitting plan and timeline to secure the necessary approvals.*

Detail the zoning and permitting issues:

ZONING AND PERMITTING

[REDACTED]

[REDACTED] Vineyard Wind's permitting team continues to maintain an active permitting effort on all fronts, which should further facilitate the successful and timely permitting of the Project.

Zoning

Eligible Facility Site

The Lease Area is entirely in federal waters and is subject only to federal jurisdiction. Thus, there are no zoning requirements for the Eligible Facility site.

Offshore Interconnection Route

Similar to the Eligible Facility site, the Project's offshore export cables are not subject to zoning requirements.

Onshore Interconnection Route

[REDACTED]

Onshore Substation

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Permitting

Eligible Facility Site

As noted in response to **Question 6.1**, the Eligible Facility site is governed by Vineyard Wind’s lease agreement with BOEM for Lease Area OCS-A 501. This lease provides Vineyard Wind the mechanism to build and operate an offshore wind farm within the Lease Area and to install the related necessary grid connection system within federal waters. As discussed in **Section 7**, the federal permitting and approval process under BOEM includes submission of a COP, along with submission of an FDR and FIR. [REDACTED] The FDR and FIR will be submitted following approval of the COP and final design of the Project.

Offshore and Onshore Interconnection Route

The interconnection route for the Project, which includes both offshore and onshore elements, is described in response to **Question 6.4**. The offshore portions of the interconnection route occurring in federal waters are subject to Project approval in line with the federal permitting process described immediately above. Massachusetts, regional, and local approvals are required for the portions of the offshore interconnection route occurring in state waters and onshore cable route, as described in **Section 7**.

Onshore Substation

[REDACTED]

[REDACTED] Vineyard Wind will initiate the permitting process for the onshore substation according to the timeline provided in **Table 6.3-1**.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] if needed.

Permitting plan and timeline:

Start Date: [REDACTED] *End Date:* [REDACTED]

Permitting Plan and Timeline

Table 6.3-1 below provides a summary overview of the Project’s permitting timeline. A detailed permitting plan and timeline is provided in **Section 7** and is included as part of the Project’s overall schedule in **Section 9**.

6.4 Provide a description of the area surrounding the Eligible Facility site and Offshore Delivery Facilities locations (including landfall), including a description of the local zoning, flood plain information, existing land or waterway use, and setting.

PROJECT DESCRIPTIONS

Eligible Facility Site Location

The Eligible Facility site is located in Lease Area OCS-A 0501 in federal waters in the Atlantic Ocean. The Lease Area comprises more than 260 square miles (sq mi) and is approximately 10 mi wide and 31 mi long. At its nearest point, Lease Area OCS-A 0501 is just over 14 mi from the southeast corner of Martha's Vineyard and a similar distance from Nantucket. [REDACTED]

[REDACTED]

The Lease Area is located entirely within the Massachusetts Wind Energy Area (MA WEA), which was identified by BOEM, after a multi-year public process and environmental review, as suitable for wind energy development. The MA WEA is located approximately 13.6 mi south of Martha's Vineyard and 15 mi southwest of Nantucket. It occupies approximately 1,161 sq mi in total and extends 38 mi southward to the 197-foot depth contour and has an east/west extent of approximately 54 mi.

As the Eligible Facility site is located beyond state territorial waters, there are no local zoning, flood plain, or existing land use details to provide.

Offshore Delivery Facilities Locations

The Offshore Delivery Facilities locations include the following:

- The OECC from the Eligible Facility site through federal and state waters,

6.5 Describe how the bidder plans to gain interconnection path site control and describe the status of the plan.

INTERCONNECTION SITE CONTROL PLAN

The Project's proposed offshore and onshore interconnection path from Lease Area OCS-A 0501 to the ISO-NE PTF node is illustrated in the site plans provided in response to **Question 6.1**. As detailed in response to **Question 6.2**, the interconnection path site control plan is currently being implemented, with several critical permissions already granted or obtained, and the remaining having clear and highly likely paths to securing.

6.6 Please provide documentation to show evidence of the interconnection request to ISO-NE, the applicable New England Transmission Owner, or any neighboring control areas, to interconnect at the Capacity Capability Interconnection Standard. Please describe the status of any planned interconnection to the grid. Additionally, any studies undertaken by ISO-NE or the bidder must be provided.

6.7 The studies should describe the Project's electrical system performance, its impact to the reliability of the New England Transmission system, how the project would satisfy ISO NE's I.3.9 requirements, and how the project will meet the Capacity Capability Interconnection Standard. Projects that do not have I.3.9 approval from ISO-NE must include technical reports or system impact studies that approximate the ISO-NE interconnection process, including but not limited to clear documentation of study technical and cost assumptions, reasoning, and justification of such assumptions. All projects must also provide analysis that approximates the ISO-NE CCIS interconnection analysis as defined in Planning Procedure 10. Please also provide the status of any additional interconnection studies already underway with ISO-NE and/or the transmission owner. All studies must follow the current ISO-NE interconnection procedures and detail any assumptions regarding resources ahead of the Project in the ISO-NE interconnection queue. All network upgrades identified in these studies must be clearly documented and included in the bid price. Provide a copy of an interconnection agreement, if any, executed by the bidder with respect to the proposed project. If an interconnection agreement has not been executed, please provide the steps that need to be completed before an interconnection agreement can be executed and the associated timeline.

Performance and its impact:

PROJECT PERFORMANCE AND IMPACT

The studies completed or in progress by ISO-NE in **Table 6.6-1** and those completed by Vineyard Wind in **Table 6.6-2** describe the Project's electrical system performance, its impact to the reliability of the New England Transmission system, and how the Project will meet the Network Capability Interconnection Standard (NCIS) and the Capacity Capability Interconnection Standard (CCIS).

Improving System Reliability

ISO-NE's Operational Fuel-Security Analysis, released in 2018, demonstrates that overall electricity system reliability is and will increasingly become challenged during the winter peak demand periods considering the trends driving the evolution of New England's power system:

- The region's demand for natural gas is growing and natural gas infrastructure capacity is not always adequate to deliver all of the gas needed during the winter months for both heating and power generation.
- A substantial amount of coal, oil, and nuclear fueled capacity, which has been essential for maintaining reliability when natural gas is in short supply, has retired or announced plans to retire by 2022.
- A large proportion of the proposed new power plants will be powered by natural gas, which further exacerbates the region's dependency on this fuel source.

The Project will help alleviate these negative trends by increasing the fuel diversity of New England's PTF system and adding local, high capacity generation built at a substantial scale; the Project is large enough to make a significant contribution to replacing the capacity and energy output that is being lost by the retirement of traditional so-called baseload power plants.

Offshore wind enjoys one of the highest capacity factors of intermittent resources with a favorable production profile, relative to the system's winter peak demand. As a result, the Project will help reduce the over-dependency on natural gas in peak demand seasons and improve overall system reliability by ensuring that sufficient capacity is available to meet demand at all times of the year.

6.10 To the extent that you provide an alternative interconnection scenario based on ISO-proposed interconnection process changes, you must also include studies using the proposed ISO-NE-proposed process. Any such studies must be accompanied with clear documentation of study technical and cost assumptions, reasoning, and justification of such assumptions.

ALTERNATIVE INTERCONNECTION SCENARIOS

Vineyard Wind is not considering any alternative interconnection scenarios for the Project at this time, given the advanced state of the interconnect process, related land-right acquisition, and high probability to successfully permit the planned interconnection.

6.11 Provide the electrical models of all energy resources supporting the proposed project in accordance with the filing requirements of the ISO-NE Tariff Schedule 22 and 23.

Electrical models attached: ☐ If none, please explain:

ELECTRICAL MODELS

[REDACTED]

[REDACTED]

INCREMENTAL DATA REQUIREMENTS

-
-
- ii. *If the Bidder does not use PSSE, provide in text format necessary modeling data as follows:*

- Line Data:

Voltage Thermal Ratings

Impedances (r, X and B)

*Line Length: from to
(bus numbers and names)*

Please refer to Appendix A-2 in **Attachment 6.6-4**.

- Transformer data (including Phase shifting transformers if applicable):

Terminal Voltages Thermal Ratings

Impedance

*From To
(bus numbers and names)*

Please refer to Appendix A-2 in **Attachment 6.6-4**.

- Reactive compensation models as necessary

Please refer to Appendix A-2 in **Attachment 6.6-4**.

- Other changes to the model that would occur due to a Project such as terminal changes for lines/transformer/generator leads/loads etc.

Please refer to Appendix A-2 in **Attachment 6.6-4**.

6.15 Please detail with supporting information and studies (as available) that the delivery profile contemplated in your proposal reflects any constraints or curtailments, if any, after the upgrades that are expected to take place pursuant to the CCIS standards. If you are planning to make voluntary upgrades beyond those associated with the CCIS standard, as more fully described in the RFP, please describe the transmission network upgrades necessary, their estimated cost (for which the bidder would have cost responsibility, and the impact on the proposed generation schedule by reducing remaining constraints or curtailments.

[REDACTED]

[REDACTED]

6.16 Please provide sufficient information and documentation to demonstrate that the proposed point of delivery into ISO-NE, along with their proposed interconnection and transmission upgrades including any transmission upgrades beyond the point of interconnection, is sufficient to ensure the scheduled delivery profile of the proposal's Offshore Wind Energy Generation.

<p align="center">UNITED STATES DEPARTMENT OF THE INTERIOR BUREAU OF OCEAN ENERGY MANAGEMENT</p> <p align="center">COMMERCIAL LEASE OF SUBMERGED LANDS FOR RENEWABLE ENERGY DEVELOPMENT ON THE OUTER CONTINENTAL SHELF</p> <p><i>Paperwork Reduction Act of 1995 statement: This form does not constitute an information collection as defined by 44 U.S.C. § 3501 et seq. and therefore does not require approval by the Office of Management and Budget.</i></p>	Office	Renewable Energy Lease Number
	Herndon, VA	OCS-A 0501
	Cash Bonus and/or Acquisition Fee \$150,197	Resource Type Wind
	Effective Date April 1, 2015	Block Number(s) See Addendum A

This lease, which includes any addenda hereto, is hereby entered into by and between the United States of America, ("Lessor"), acting through the Bureau of Ocean Energy Management ("BOEM"), its authorized officer, and

Lessee	Interest Held
Offshore MW LLC	100%

("Lessee"). This lease is effective on the date written above ("Effective Date") and will continue in effect until the lease terminates as set forth in Addendum "B." In consideration of any cash payment heretofore made by the Lessee to the Lessor and in consideration of the promises, terms, conditions, covenants, and stipulations contained herein and attached hereto, the Lessee and the Lessor agree as follows:

Section 1: Statutes and Regulations.

This lease is issued pursuant to subsection 8(p) of the Outer Continental Shelf Lands Act ("the Act"), 43 U.S.C. §§ 1331 *et seq.* This lease is subject to the Act and regulations promulgated pursuant to the Act, including but not limited to, offshore renewable energy and alternate use regulations at 30 CFR Part 585 as well as other applicable statutes and regulations in existence on the Effective Date of this lease. This lease is also subject to those statutes enacted (including amendments to the Act or other statutes) and regulations promulgated thereafter, except to the extent that they explicitly conflict with an express provision of this lease. It is expressly understood that amendments to existing statutes, including but not limited to the Act, and regulations may be made, and/or new statutes may be enacted or new regulations promulgated, which do not explicitly conflict with an express provision of this lease, and that the Lessee bears the risk that such amendments, regulations, and statutes may increase or decrease the Lessee's obligations under the lease.

Section 2: Rights of the Lessee.

- (a) The Lessor hereby grants and leases to the Lessee the exclusive right and privilege, subject to the terms and conditions of this lease and applicable regulations, to: (1) submit to the Lessor for approval a Site Assessment Plan (SAP) and Construction and Operations Plan (COP) for the project identified in Addendum "A" of this lease; and (2) conduct activities in the area identified in Addendum "A" of this lease ("leased area") that are described in a SAP or COP that has been approved by the Lessor. This lease does not, by itself, authorize any activity within the leased area.
- (b) The rights granted to the Lessee herein are limited to those activities described in any SAP or COP approved by the Lessor. The rights granted to the Lessee are limited by the lease-specific terms, conditions, and stipulations required by the Lessor per Addendum "C."
- (c) This lease does not authorize the Lessee to conduct activities on the Outer Continental Shelf (OCS) relating to or associated with the exploration for, or development or production of: oil, gas, other seabed minerals, or renewable energy resources other than those renewable energy resources identified in Addendum "A."

Section 3: Reservations to the Lessor.

- (a) All rights in the leased area not expressly granted to the Lessee by the Act, applicable regulations, this lease, or any approved SAP or COP, are hereby reserved to the Lessor.
- (b) The Lessor will decide whether to approve a SAP or COP in accordance with the applicable regulations in 30 CFR Part 585. The Lessor retains the right to disapprove a SAP or COP based on the Lessor's determination that the proposed activities would have unacceptable environmental consequences, would conflict with one or more of the requirements set forth in subsection 8(p)(4) of the Act (43 U.S.C. § 1337(p)(4)), or for other reasons provided by the Lessor pursuant to 30 CFR 585.613(e)(2) or 30 CFR 585.628(f)(2). Disapproval of plans will not subject the Lessor to liability. The Lessor also retains the right to approve with modifications a SAP or COP, as provided in applicable regulations.
- (c) The Lessor reserves the right to suspend the Lessee's operations in accordance with the national security and defense provisions of section 12 of the Act and applicable regulations.
- (d) The Lessor reserves the right to authorize other uses within the leased area that will not unreasonably interfere with activities described in Addendum "A."

Section 4: Payments.

- (a) The Lessee must make all rent payments to the Lessor in accordance with applicable regulations in 30 CFR Part 585, unless otherwise specified in Addendum "B."
- (b) The Lessee must make all operating fee payments to the Lessor in accordance with applicable regulations in 30 CFR Part 585, as specified in Addendum "B."

Section 5: Plans.

The Lessee may conduct those activities described in Addendum "A" only in accordance with a SAP or COP approved by the Lessor. The Lessee may not deviate from an approved SAP or COP except as provided in applicable regulations in 30 CFR Part 585.

Section 6: Associated Project Easements.

Pursuant to 30 CFR 585.200(b), the Lessee has the right to one or more project easements, without further competition, for the purpose of installing gathering, transmission, and distribution cables, pipelines, and appurtenances on the OCS, as necessary for the full enjoyment of the lease, and under applicable regulations in 30 CFR Part 585. As part of submitting a COP for approval, the Lessee may request that one or more easement(s) be granted by the Lessor. If the Lessee requests that one or more easement(s) be granted when submitting a COP for approval, such project easements will be granted by the Lessor in accordance with the Act and applicable regulations in 30 CFR Part 585 upon approval of the COP in which the Lessee has demonstrated a need for such easements. Such easements must be in a location acceptable to the Lessor, and will be subject to such conditions as the Lessor may require. The project easement(s) that would be issued in conjunction with an approved COP under this lease will be described in Addendum "D" to this lease, which will be updated as necessary.

Section 7: Conduct of Activities.

The Lessee must conduct, and agrees to conduct, all activities in the leased area in accordance with an approved SAP or COP, and with all applicable laws and regulations.

The Lessee further agrees that no activities authorized by this lease will be carried out in a manner that:

- (a) could unreasonably interfere with or endanger activities or operations carried out under any lease or grant issued or maintained pursuant to the Act, or under any other license or approval from any Federal agency;
- (b) could cause any undue harm or damage to the environment;
- (c) could create hazardous or unsafe conditions; or
- (d) could adversely affect sites, structures, or objects of historical, cultural, or archaeological significance, without notice to and direction from the Lessor on how to proceed.

Section 8: Violations, Suspensions, Cancellations, and Remedies.

If the Lessee fails to comply with (1) any of the applicable provisions of the Act or regulations, (2) the approved SAP or COP, or (3) the terms of this lease, including associated Addenda, the Lessor may exercise any of the remedies that are provided under

the Act and applicable regulations, including, without limitation, issuance of cessation of operations orders, suspension or cancellation of the lease, and/or the imposition of penalties, in accordance with the Act and applicable regulations.

The Lessor may also cancel this lease for reasons set forth in subsection 5(a)(2) of the Act (43 U.S.C. § 1334(a)(2)), or for other reasons provided by the Lessor pursuant to 30 CFR 585.437.

Non-enforcement by the Lessor of a remedy for any particular violation of the applicable provisions of the Act or regulations, or the terms of this lease, will not prevent the Lessor from exercising any remedy, including cancellation of this lease, for any other violation or for the same violation occurring at any other time.

Section 9: Indemnification.

The Lessee hereby agrees to indemnify the Lessor for, and hold the Lessor harmless from, any claim caused by or resulting from any of the Lessee's operations or activities on the leased area or project easements or arising out of any activities conducted by or on behalf of the Lessee or its employees, contractors (including Operator, if applicable), subcontractors, or their employees, under this lease, including claims for:

- a. loss or damage to natural resources,
- b. the release of any petroleum or any Hazardous Materials,
- c. other environmental injury of any kind,
- d. damage to property,
- e. injury to persons, and/or
- f. costs or expenses incurred by the Lessor.

Except as provided in any addenda to this lease, the Lessee will not be liable for any losses or damages proximately caused by the activities of the Lessor or the Lessor's employees, contractors, subcontractors, or their employees. The Lessee must pay the Lessor for damage, cost, or expense due and pursuant to this section within 90 days after written demand by the Lessor. Nothing in this lease will be construed to waive any liability or relieve the Lessee from any penalties, sanctions, or claims that would otherwise apply by statute, regulation, operation of law, or could be imposed by the Lessor or other government agency acting under such laws.

"Hazardous Material" means

1. Any substance or material defined as hazardous, a pollutant, or a contaminant under the *Comprehensive Environmental Response, Compensation, and Liability Act* at 42 U.S.C. §§ 9601(14) and (33);
2. Any regulated substance as defined by the Resource Conservation and Recovery Act ("RCRA") at 42 U.S.C. § 6991 (7), whether or not contained in or released from underground storage tanks, and any hazardous waste regulated under RCRA pursuant to 42 U.S.C. §§ 6921 *et seq.*;

3. Oil, as defined by the Clean Water Act at 33 U.S.C. § 1321(a)(1) and the Oil Pollution Act at 33 U.S.C. § 2701(23); or
4. Other substances that applicable Federal, state, tribal, or local laws define and regulate as "hazardous."

Section 10: Financial Assurance.

The Lessee must provide and maintain at all times a surety bond(s) or other form(s) of financial assurance approved by the Lessor in the amount specified in Addendum "B." As required by the applicable regulations in 30 CFR Part 585, if, at any time during the term of this lease, the Lessor requires additional financial assurance, then the Lessee must furnish the additional financial assurance required by the Lessor in a form acceptable to the Lessor within 90 days after receipt of the Lessor's notice of such adjustment.

Section 11: Assignment or Transfer of Lease.

This lease may not be assigned or transferred in whole or in part without written approval of the Lessor. The Lessor reserves the right, in its sole discretion, to deny approval of the Lessee's application to transfer or assign all or part of this lease. Any assignment will be effective on the date the Lessor approves the Lessee's application. Any assignment made in contravention of this section is void.

Section 12: Relinquishment of Lease.

The Lessee may relinquish this entire lease or any officially designated subdivision thereof by filing with the appropriate office of the Lessor a written relinquishment application, in accordance with applicable regulations in 30 CFR Part 585. No relinquishment of this lease or any portion thereof will relieve the Lessee or its surety of the obligations accrued hereunder, including but not limited to, the responsibility to remove property and restore the leased area pursuant to section 13 of this lease and applicable regulations.

Section 13: Removal of Property and Restoration of the Leased Area on Termination of Lease.

Unless otherwise authorized by the Lessor, pursuant to the applicable regulations in 30 CFR Part 585, the Lessee must remove or decommission all facilities, projects, cables, pipelines, and obstructions and clear the seafloor of all obstructions created by activities on the leased area, including any project easements within two years following lease termination, whether by expiration, cancellation, contraction, or relinquishment, in accordance with any approved SAP, COP, or approved Decommissioning Application, and applicable regulations in 30 CFR Part 585.

Section 14: Safety Requirements.

The Lessee must:

- a. maintain all places of employment for activities authorized under this lease in compliance with occupational safety and health standards and, in addition, free from recognized hazards to employees of the Lessee or of any contractor or subcontractor operating under this lease;
- b. maintain all operations within the leased area in compliance with regulations in 30 CFR Part 585 and orders from the Lessor and other Federal agencies with jurisdiction, intended to protect persons, property and the environment on the OCS; and
- c. provide any requested documents and records, which are pertinent to occupational or public health, safety, or environmental protection, and allow prompt access, at the site of any operation or activity conducted under this lease, to any inspector authorized by the Lessor or other Federal agency with jurisdiction.

Section 15: Debarment Compliance.

The Lessee must comply with the Department of the Interior's non-procurement debarment and suspension regulations set forth in 2 CFR Parts 180 and 1400 and must communicate the requirement to comply with these regulations to persons with whom it does business related to this lease by including this requirement in all relevant contracts and transactions.

Section 16: Equal Opportunity Clause.

During the performance of this lease, the Lessee must fully comply with paragraphs (1) through (7) of section 202 of Executive Order 11246, as amended (reprinted in 41 CFR 60-1.4(a)), and the implementing regulations, which are for the purpose of preventing employment discrimination against persons on the basis of race, color, religion, sex, or national origin. Paragraphs (1) through (7) of section 202 of Executive Order 11246, as amended, are incorporated in this lease by reference.

Section 17: Certification of Nonsegregated Facilities.

By entering into this lease, the Lessee certifies, as specified in 41 CFR 60-1.8, that it does not and will not maintain or provide for its employees any segregated facilities at any of its establishments and that it does not and will not permit its employees to perform their services at any location under its control where segregated facilities are maintained. As used in this certification, the term "facilities" means, but is not limited to, any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, timeclocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees. Segregated facilities include those that are segregated by explicit directive or those that are in fact segregated on the basis of race, color, religion, sex, or

national origin, because of habit, local custom, or otherwise; provided, that separate or single-user restrooms and necessary dressing or sleeping areas must be provided to assure privacy as appropriate. The Lessee further agrees that it will obtain identical certifications from proposed contractors and subcontractors prior to awarding contracts or subcontracts unless they are exempt under 41CFR 60-1.5.

Section 18: Notices.

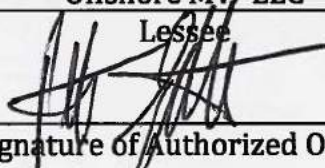

All notices or reports provided from one party to the other under the terms of this lease must be in writing, except as provided herein and in the applicable regulations in 30 CFR Part 585. Written notices must be delivered to the party's Lease Representative, as specifically listed in Addendum "A," either electronically, by hand, by facsimile, or by United States first class mail, adequate postage prepaid. Either party may notify the other of a change of address by doing so in writing. Until notice of any change of address is delivered as provided in this section, the last recorded address of either party will be deemed the address for all notices required under this lease. For all operational matters, notices must be provided to the party's Operations Representative, as specifically listed in Addendum "A," as well as the Lease Representative.

Section 19: Severability Clause.

If any provision of this lease is held unenforceable, all remaining provisions of this lease will remain in full force and effect.

Section 20: Modification.

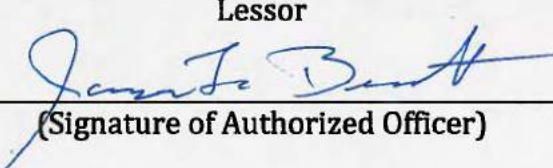

Unless otherwise authorized by the applicable regulations in 30 CFR Part 585, this lease may be modified or amended only by mutual agreement of the Lessor and the Lessee. No such modification or amendment will be binding unless it is in writing and signed by the Lease Representatives of both the Lessor and the Lessee.

Federal Express Tracking No.: 8060-6102-1401

Dear Mr. Giller:

Please find enclosed one fully executed copy of Offshore MW LLC's commercial lease OCS-A 0501. The lease comprises 166,886 acres, more or less, lying within the Massachusetts Wind Energy Area and will become effective April 1, 2015.

The Bureau of Ocean Energy Management congratulates you on this achievement and looks forward to working with you.

Please do not hesitate to contact me at our main office number (703) 787-1300 if you have any questions.

Sincerely,

James F. Bennett
Program Manager
Office of Renewable Energy Programs

- 16) Block 6125, All of Block
- 17) Block 6126, N1/2, N1/2 of S1/2, S1/2 of SW1/4, SW1/4 of SE1/4
- 18) Block 6127, N1/2 of NW1/4, SW1/4 of NW1/4

- 19) Block 6174, E1/2, E1/2 of W1/2
- 20) Block 6175, N1/2, N1/2 of S1/2, S1/2 of SW1/4, SW1/4 of SE1/4
- 21) Block 6176, N1/2 of NW1/4, SW1/4 of NW1/4
- 22) Block 6224, NE1/4, E1/2 of W1/2, N1/2 of SE1/4, SW1/4 of SE1/4
- 23) Block 6225, N1/2 of NW1/4, SW1/4 of NW1/4

For the purposes of these calculations, a full Block is 2,304 hectares. The acreage of a hectare is 2.471043930.

III. Renewable Energy Resource

Wind

IV. Description of the Project

A project to generate energy using wind turbine generators and any associated resource assessment activities, located on the OCS in the leased area, as well as associated offshore substation platforms, inner array cables, and subsea export cables.

V. Description of Project Easement(s)

Once approved, the Lessor will incorporate Lessee's project easement(s) in this lease as Addendum "D."

U.S. DEPARTMENT OF THE INTERIOR
BUREAU OF OCEAN ENERGY MANAGEMENT

ADDENDUM "B"

LEASE TERM AND FINANCIAL SCHEDULE

Lease Number OCS-A 0501

I. Lease Term

The duration of each term of the lease is described below. The terms may be extended or otherwise modified in accordance with applicable regulations in 30 C.F.R. Part 585.

Lease Term	Duration
Preliminary Term	1 year
Site Assessment Term	5 years
Operations Term	25 years

Schedule: Addendum "C" includes a schedule and reporting requirements for conducting site characterization activities.

Renewal: The Lessee may request renewal of the operations term of this lease, in accordance with applicable regulations in 30 CFR Part 585. The Lessor, at its discretion, may approve a renewal request to conduct substantially similar activities as were originally authorized under this lease or in an approved plan. The Lessor will not approve a renewal request that involves development of a type of renewable energy not originally authorized in the lease. The Lessor may revise or adjust payment terms of the original lease as a condition of lease renewal.

Unless otherwise described below, the Preliminary Term begins on the Effective Date of this lease for leases issued competitively. Unless otherwise described below, for noncompetitively issued leases, the Site Assessment Term begins on the Effective Date of this lease. The Operations Term begins on the date that the Lessor approves the Lessee's Construction and Operations Plan (COP).

II. Definitions

"Lease Issuance Date" refers to the date on which this lease has been signed by *both* the Lessee and the Lessor.

"Effective Date" has the same meaning as "effective date" in BOEM regulations provided in 30 CFR 585.237.

"Lease Anniversary" refers to the anniversary of the Effective Date of the lease.

"End Date" refers to the earlier of a) the last calendar day of the last month of the Operations Term; or b) the date on which the lease terminates in the event of a lease termination.

"Commercial Operations" means the generation of electricity or other energy product for commercial use, sale, or distribution.

"Commercial Operation Date," or "COD," refers to the date on which the Lessee first begins Commercial Operations on the lease.

"Delivery Point" is the meter identified in the COP where the Lessee's facility interconnects with the electric grid to deliver electricity for sale.

An individual wind generation turbine is said to be "available for Commercial Operations" on or after the first day that it engages in Commercial Operations on the lease; and to be no longer available for Commercial Operations on or after the day when it is permanently decommissioned. These dates are determined by the COP.

III. Payments

Unless otherwise authorized by the Lessor in accordance with the applicable regulations in 30 CFR Part 585, the Lessee must make payments as described below.

(a) **Rent.** The Lessee must pay rent as described below:

Rent payments prior to the COD, or prior to the lease End Date in the event that the lease terminates prior to the COD, are calculated by multiplying the acres in the leased area times the rental rate per acre as follows:

Lease OCS-A 0501

- Acres in Project Area: 166,886
- Annual Rental Rate: \$3.00 per acre or fraction thereof
- Rental Fee for Entire Project Area: $\$3.00 \times 166,886 = \$500,658$

The first year's rent payment of \$500,658 is due within 45 days of the date that the lease is received by the Lessee for execution. Rent for the entire leased area for the next year and for each subsequent year is due on or before each Lease Anniversary through the year in which the COD occurs. The rent for each year subsequent to the COD on the imputed portion of the lease not authorized for Commercial Operations is due on or before each Lease Anniversary. The imputed portion of the lease that is not authorized for Commercial Operations at each Lease Anniversary in year t , S_t , and the corresponding Adjusted Annual Rent Payment will be determined as follows:

$$(A) S_t = \left(1 - \frac{M'_t}{\text{MAX}(M'_t: \text{for all } t \geq 2)}\right)$$

(B) *Adjusted Annual Rent Payment* = S_t * *Rental Fee for Entire Leased Area*

Where:

S_t = Portion of the lease not authorized for Commercial Operations in year t based on the definition of t in Section III (b) (4) below.

M'_t = Actual Nameplate capacity expressed in megawatts (MW) rounded to the nearest second decimal in year t of Commercial Operations on the lease as defined in Section III (b) (4) below, prior to any adjustments as specified in the most recent approved COP for turbine maintenance, replacements, repowering, or decommissioning. For our purposes nameplate capacity is the maximum rated electric output the turbines of the wind farm facility under commercial operations can produce at their rated wind speed designated by the turbine's manufacturer.

$\text{MAX}(M'_t)$ = Highest value of M'_t projected in the most recent approved version of the COP to be achieved in any year of Commercial Operations on the lease.

The Adjusted Annual Rent Payment calculated in Equation (A) herein, will be rounded up to the nearest dollar. The annual rent payments will be set forth in Addendum "E" when the COP is initially approved or subsequently revised.

Consider an example of a 1,000 MW project on a lease with an Effective Date of January 1, 2014, and a COD of January 1, 2022, on a lease area consisting of 100,000 acres as follows:

Payment (Jan. 1 st)	M'_t (MW)	$\text{MAX}(M'_t)$ (MW)	$\left(1 - \frac{M'_t}{\text{MAX}(M'_t)}\right)$	Rental Fee for Entire Area	Payment Amount
2014	0	1,000	1.0	\$300,000	\$300,000
...
2021	0		1.0		\$300,000
2022	500		0.5		\$150,000
2023	500		0.5		\$150,000
2024	500		0.5		\$150,000
2025	800		0.2		\$60,000
2026	800		0.2		\$60,000
2027	800		0.2		\$60,000
2028	1,000		0.0		\$0

In the event a revised COP is approved by BOEM that identifies an alternative installation schedule that differs from the previously-approved COP, the Lessee must make subsequent payments based on the revised installation schedule. In addition, the Lessee must make a payment equal to the sum of any incremental annual rent payments that would have been due at the Lease Anniversary of prior years based on the differences between the Initial Installation Schedules specified in the previously-approved COP and the revised COP, plus interest on the annual balances, in accordance with 30 CFR 1218.54.

Consider an example whereby the initial COP specified an installation schedule with all 1,000 MW online at the COD, i.e., M'_t is 1,000 MW at COD. The following table demonstrates

how the back rent payments would be calculated if the project was initially scheduled as a single phase, but then later determined to be the three-phase project as shown in the previous example in a revised COP approved prior to the payment due on January 1, 2023.

Payment (Jan. 1 st)	Initial M_i (MW)	Revised M_i (MW)	Single-Phase Payment Amount	Three-Phase Payment Amount	Back Rent Payment Amount	Subsequent Rent Payment Amount
2014	0	0	\$300,000	\$300,000	\$0	\$0
...
2021	0	0	\$300,000	\$300,000	\$0	\$0
2022	1,000	500	\$0	\$150,000	\$150,000	\$0
2023	1,000	500	\$0	\$150,000	\$0	\$150,000
2024	1,000	500	\$0	\$150,000	\$0	\$150,000
2025	1,000	800	\$0	\$60,000	\$0	\$60,000
2026	1,000	800	\$0	\$60,000	\$0	\$60,000
2027	1,000	800	\$0	\$60,000	\$0	\$60,000
2028	1,000	1,000	\$0	0	\$0	\$0

The last rent payment prior to Commercial Operations being authorized on the entire lease area, i.e., the year in which the value of S_t is equal to zero, or prior to the lease End Date, in the event that the lease terminates prior to Commercial Operations being authorized on the entire lease area, will represent the final rent payment, unless a revised COP identifying an alternative maximum initial capacity is approved by BOEM. All rent payments, including the last rent payment, are payable for the full year and will not be prorated to the COD or other installation milestones. The COD is equivalent to the authorization date for the first phase of development on the lease, to be updated based on the initial or revised approved COP documentation. The schedule of rent payments on the lease is defined in Addendum "E". All rent payments, except for the first rent payment, must be made as required in 30 CFR 1218.51. Late rent payments will be charged interest in accordance with 30 CFR 1218.54.

(1) Project Easement.

Rent for any project easement(s) is described in Addendum "D".

(2) Relinquishment.

If the Lessee submits an application for relinquishment of a portion of the leased area within the first 45 calendar days following the date that the lease is received by the Lessee for execution, and the Lessor approves that application, no rent payment will be due on that relinquished portion of the leased area. Later relinquishments of any leased area will reduce the Lessee's rent payments due the year following the Lessor's approval of the relinquishment, through a reduction in the Acres in Leased Area and the corresponding Rental Fee for the Entire Leased Area and any related Adjusted Annual Rent Payments.

(b) **Operating Fee.** The Lessee must pay an operating fee as described below:

(1) Initial Operating Fee Payment.

The Lessee must pay an initial prorated operating fee within 45 calendar days after the COD. The initial operating fee payment covers the first year of Commercial Operations on the lease and will be calculated in accordance with subsection (4) below, using an operating fee rate of 0.02 and a capacity factor of 0.4.

(2) Annual Operating Fee Payments.

The Lessee must pay the operating fee for each subsequent year of Commercial Operations on or before each Lease Anniversary following the formula in subsection (4) below. The Lessee must calculate each operating fee annually subsequent to the initial operating fee payment using an operating fee rate of 0.02 through the twenty-five year operations term of the lease. The capacity factor of 0.4 will remain in effect until the Lease Anniversary of the year in which the Lessor adjusts the capacity factor.

(3) Final Operating Fee Payment.

The final operating fee payment is due on the Lease Anniversary prior to the End Date. The final operating fee payment covers the last year of Commercial Operations on the lease and will be calculated in accordance with the formula in subsection (4) below.

(4) The formula for calculating the operating fee in year t .

F_t	=	M_t	*	H	*	C_p	*	P_t	*	r_t
(annual operating fee)		(nameplate capacity)		(hours per year)		(capacity factor)		(power price)		(operating fee rate)

Where:

t =	the year of Commercial Operations on the lease starting from each Lease Anniversary, where t equals 1 represents the year beginning on the Lease Anniversary prior to, or on, the COD.
F_t =	the dollar amount of the annual operating fee in year t .
M_t =	<p>the nameplate capacity expressed in megawatts (MW) rounded to the nearest second decimal place in year t of Commercial Operations on the lease.</p> <p>The value of M_t reflecting the availability of turbines, will be determined based on the COP. This value will be adjusted to reflect any modifications to the COP approved by BOEM as of the date each operating fee payment is due, in accordance with the calculation in Equation 1, for each year of Commercial Operations on the lease.</p>

$$(1) M_t = \sum_{w=1}^{W_t} \left(N_w * \left[\frac{\left(\sum_{d=1}^D E_{w,t,d} \right)}{D} \right] \right)$$

Where:

W_t = Number of individual wind generation turbines, w , that will be available for Commercial Operations during any day of the year, t , per the COP.

N_w = Nameplate capacity of individual wind generation turbine, w , per the COP expressed in MW.

$E_{w,t,d}$ = Indicates whether individual wind generation turbine, w , will be available for Commercial Operations on day d of year t . The value is set to 1 for any day in year t for which the condition is true, i.e., the wind turbine will be available for Commercial Operations, and zero for any day in year t for which the condition is false, i.e., the wind turbine will not be available for Commercial Operations. The month of February is always assumed to have 28 days for purposes of this calculation, where March 1st will be counted as the first day of Commercial Operations if Commercial Operations commence on February 29th of a leap year.

D = Days in the year set equal to 365 in all years for purposes of this calculation.

M_t may be reduced only in the event that installed capacity is permanently decommissioned per the COP. M_t will not be changed in response to routine or unplanned maintenance of units, including the temporary removal of a nacelle for off-site repair or replacement with a similar unit.

EXAMPLE: Assume that the Lease Anniversary is January 1st, the COD is July 1, 2018, that the facility will ultimately have 100 individual wind generation turbines with a nameplate capacity of 5.0 MW each, and that the COP specifies the following, cumulative installation schedule for wind turbines to become available for Commercial Operations:

- July 1, 2018 (COD): 20 turbines (20 new units);
- October 1, 2018: 45 turbines (25 new units);
- January 1, 2019: 50 turbines (5 new units);
- July 1, 2019: 65 turbines (15 new units);
- January 1, 2020: 95 turbines (30 new units);
- February 29, 2020: 100 turbines (5 new units).

Further assume that the COP calls for 50 of the turbines to be decommissioned after September 30, 2039 ($t = 22$), and that the remaining turbines are decommissioned at the End Date of March 15, 2040 ($t = 23$).

The value of M_t would be estimated as demonstrated in Table 1a for each year of Commercial Operations on the lease in this example.

Table 1a: Example of M_t Calculations for Installation and Decommissioning

t	Turbines	MW	Commercial Operations Period	Comm. Ops. Days	Days in Year	Share of Days	MW	M_t
1	20	100	Jul. 1 st to Dec. 31 st	184	365	50.41%	50.41	81.92
	25	125	Oct. 1 st to Dec. 31 st	92		25.21%	31.51	
2	50	250	Jan. 1 st to Dec. 31 st	365		100.00%	250.00	287.81
	15	75	Jul. 1 st to Dec. 31 st	184		50.41%	37.81	
3	95	475	Jan. 1 st to Dec. 31 st	365		100.00%	475.00	495.96
	5	25	Mar. 1 st to Dec. 31 st	306		83.84%	20.96	
4	100	500	Jan. 1 st to Dec. 31 st	365		100.00%	500.00	500.00
...
21	100	500	Jan. 1 st to Dec. 31 st	365		100.00%	500.00	500.00
22	50	250	Jan. 1 st to Dec. 31 st	365		100.00%	250.00	436.98
	50	250	Jan. 1 st to Sep. 30 th	273		74.79%	186.98	
23	50	250	Jan. 1 st to Mar. 15 th	74		20.27%	50.68	50.68

To illustrate the impact of decommissioning a portion of the individual wind generation turbines and replacing them with units of greater capacity on the calculation of M_t , assume that at the end of March 31, 2022, 10 units are to be made unavailable due to decommissioning, and that the incremental units have a capacity of 7.0 MW and are expected to be made available for Commercial Operations on September 15, 2022. The impact on M_t in 2022 and in subsequent years starting in 2023 and continuing until decommissioning is illustrated in Table 1b.

Table 1b: Example of M_t Calculations for Repowering

t	Turbines	MW	Commercial Operations Period	Comm. Ops. Days	Days in Year	Share of Days	MW	M_t
5	90 (5.0)	450	Jan. 1 st to Dec. 31 st	365	365	100.00%	450.00	483.04
	10 (5.0)	50	Jan. 1 st to Mar. 31 st	90		24.66%	12.33	
	10 (7.0)	70	Sep. 15 th to Dec. 31 st	108		29.59%	20.71	
6	90 (5.0)	450	Jan. 1 st to Dec. 31 st	365		100.00%	450.00	520.00
	10 (7.0)	70	Jan. 1 st to Dec. 31 st	365		100.00%	70.00	

$H =$ the number of hours in the year for billing purposes which is equal to 8,760 for all years of Commercial Operations on the lease.

$C_p =$ the "Capacity Factor" in Performance Period p , which represents the share of anticipated generation of the facility that is delivered to where the Lessee's facility interconnects with the electric grid (i.e. the Delivery Point) relative to its generation at continuous full power operation at the nameplate capacity, expressed as a decimal between zero and one.

The initial Capacity Factor (C_0) will be set to 0.4.

The Capacity Factor will be subject to adjustment at the end of each Performance Period. After the sixth year of Commercial Operations on the lease has concluded, the Lessee will utilize data gathered from years two through six of Commercial Operations on the lease and propose a revised Capacity Factor to be used to calculate subsequent annual payments, as provided for in Table 2 below. A similar process will be conducted at the conclusion of each five-year Performance Period, thereafter.

Table 2: Definition of Performance Periods

Performance Period (<i>p</i>)	Commercial Operation Years (<i>t</i>)	Payments Affected by Adjustment	Capacity Factor (<i>c</i>)	Date End Year (<i>n</i>)
0 (COD)	Not Applicable	Payments 1 to 7	$c_0=0.4$	--
1	$t = 2$ to 6	Payments 8 to 12	c_1	$n_1=6$
2	$t = 7$ to 11	Payments 13 to 17	c_2	$n_2=11$
3	$t = 12$ to 16	Payments 18 to 22	c_3	$n_3=16$
4	$t = 17$ to 21	Payments 23 to End Date	c_4	$n_4=21$

Adjustments to the Capacity Factor

The Actual 5-year Average Capacity Factor (X_p) is calculated for each Performance Period after COD ($p > 0$) per Equation 2 below. X_p represents the sum of actual, metered electricity generation in megawatt-hours (MWh) at the Delivery Point to the electric grid (A_t) divided by the amount of electricity generation in MWh that would have been produced if the facility operated continuously at its full, stated capacity (M_t) in all of the hours (h_t) in each year, t , of the corresponding five-year period.

$$(2) \quad X_p = \frac{\sum_{t=n-4}^n A_t}{\left(\sum_{t=n-4}^n M_t * h_t \right)}$$

Where:

M_t = Nameplate Capacity as defined above.

n = "Date End Year" value for the Performance Period, p , as defined in Table 2.

p = Performance Period as defined in Table 2.

A_t = Actual generation in MWh associated with each year of Commercial Operations, t , on the lease that is transferred at the Delivery Point; Delivery Point meter data supporting the values submitted for annual actual generation must be recorded, preserved, and timely provided to the Lessor upon request. In the event the Lessor requires the assistance of the Lessee in obtaining information useful in verifying such information, for example by waiving confidentiality with respect to data held by a third party, such assistance must be timely provided.

h_t = Hours in the year on which the Actual Generation associated with each year of Commercial Operations, t , on the lease is based; this definition of "hours in the

	<p>year" differs from the definition of H in the operating fee equation above. The hours in the year for purposes of calculating the capacity factor must take into account the actual number of hours, including those in leap years.</p> <p>The value of the Capacity Factor at the outset of Commercial Operations ($p = 0$) is set to 0.4 as stated in equation 3:</p> <p>(3) $C_0 = 0.4$</p> <p>The value of the Capacity Factor corresponding to each Performance Period (C_p) is set according to equations 4A, 4B, and 4C as follows for each value of p greater than zero. The Capacity Factor is set equal to the Actual 5-Year Average Capacity Factor provided that the value falls within a range of plus or minus 10 percent of the previous Performance Period's capacity factor.</p> <p>(4A) $C_p = X_p$ for $C_{p-1} * 0.90 \leq X_p \leq C_{p-1} * 1.10$</p> <p>(4B) $C_p = C_{p-1} * 0.90$ for $X_p < C_{p-1} * 0.90$</p> <p>(4C) $C_p = C_{p-1} * 1.10$ for $X_p > C_{p-1} * 1.10$</p> <p>All values for C_p must be rounded to the nearest third decimal place.</p>
$P_t =$	<p>a measure of the annual average wholesale electric power price expressed in dollars per MW hour.</p> <p>The Lessee must calculate P_t at the time each operating fee payment is due, subject to approval by the Lessor. The Base Price (P_b) must equal the weighted average of the peak and off-peak spot price indices for the Northeast – Massachusetts Hub power market for the most recent year of data available as reported by the Federal Energy Regulatory Commission (FERC) as part of its annual <u>State of the Markets Report</u> with specific reference to the summary entitled "Electric Market Overview: Regional Spot Prices." The latest version of this report is available at http://www.ferc.gov/market-oversight/mkt-electric/overview/elec-ovr-3yr-regional-elec-pr.pdf. If FERC stops publishing its annual <u>State of the Markets Report</u> required for this calculation or the specified location of the data changes over time, the Lessor must specify an alternate source of data and methodology that is approximately equivalent.</p> <p>The peak and off-peak price indices must be weighted 52.0% and 48.0%, respectively, for purposes of estimating the weighted index value for the Base Price. For example, in the March 12, 2012 State of the Markets Report the peak price index for 2011 was \$51.99/MWh and the corresponding off-peak price index for 2011 was \$33.94/MWh, resulting in a weighted index value for the Base Price for 2011 (P_{2011}) of \$43.33/MWh ($= 52.0\% * \\$51.99 / \text{MWh} + 48.0\% * \\$33.94 / \text{MWh}$). The calculation of P_b must be rounded up to the nearest, second decimal place.</p>

The Base Price must be adjusted for inflation from the year associated with the published spot prices to the year in which the operating fee is to be paid as shown in equations (5A) and (5B):

$$(5A) \quad P_t = P_b * \left(\frac{GDP_g}{GDP_{g-1}} \right)^{y-g} * \left(\frac{GDP_g}{GDP_b} \right) \text{ for } g \geq b$$

$$(5B) \quad P_t = P_b * \left(\frac{GDP_g}{GDP_{g-1}} \right)^{y-b} \text{ for } g < b$$

Where:

GDP = Annual Implicit Price Deflators for Gross Domestic Product (GDP deflator index) from Table 1.1.9, line 1, in the Survey of Current Business published by the U.S. Bureau of Economic Analysis (BEA) in the specified period; the latest version of this data is currently available at:

<http://bea.gov/iTable/iTable.cfm?ReqID=9&step=1>

If BEA stops publishing the data required for this calculation, or the specified location of the data changes over time, the Lessor will specify an alternative source of data and methodology that it considers approximately equivalent.

b = The most recent year for which FERC reports the appropriate electricity spot price data expressed as the year, e.g., 2009, as in the illustrative example below.

g = The most recent year for which GDP deflator indices are available from BEA expressed as the year, e.g., 2011, as in the illustrative example below.

y = The year the annual payment is due expressed as the year corresponding to the value of *t* described above, e.g., 2013, as in the illustrative example below.

The second term on the right-hand side of equation (5A) represents a projected annual change in the index of inflation employing the last year of data available from BEA, while the third term represents the cumulative change in the index of inflation up to the previous year.

Example:

The following hypothetical example is provided to illustrate the methodology using Equation (5A) and the illustrative values provided for *b*, *g*, and *y* above, applied to historical GDP deflator data. If the actual FERC price indices are based on 2009 data and the GDP deflator indices are available for 2011, the inflation-adjusted price index value would be determined from equation (5A) as follows for a payment occurring in *y* = 2013:

	$P_{t(2013)} = P_{2009} * \left(\frac{GDP_{2011}}{GDP_{2010}} \right)^{2013-2011} * \left(\frac{GDP_{2011}}{GDP_{2009}} \right) = \frac{\$38.40}{\text{MWh}} * \left(\frac{113.361}{110.992} \right)^2 * \left(\frac{113.361}{109.729} \right) = \frac{\$41.38}{\text{MWh}}$ <p>Note: The current GDP deflator index is 113.361 for 2011, 110.992 for 2010, and 109.729 for 2009 (last revised by BEA on April 27, 2012); the FERC index price for the year 2009 is \$38.40/MWh (On-peak: \$44.60/MWh; Off-peak: \$31.68/MWh; last revised March 12, 2012). Although 2011 FERC prices are available, the 2009 prices are used in the example to illustrate the concept.</p> <p>The Lessor and the Lessee will use the latest FERC price indices and revised BEA GDP deflator index values at the time the pricing adjustments are made. The source of data used in the calculations must be noted in the Lessee's documentation supporting their estimate of the value of P_t each year for review and approval by the Lessor.</p>
$r_t =$	the operating fee rate of 0.02 (2%).

(c) Reporting, Validation, Audits, and Late Payments.

The Lessee must submit the values used in the operating fee formula to the Lessor at the time the annual payment based on these values is made. Submission of this and other reporting, validation, audit and late payment information as requested by the Lessor must be sent to the Lessor using the contact information indicated in Addendum "A", unless the Lessor directs otherwise. Failure to submit the estimated values and the associated documentation on time to the Lessor may result in penalties as specified in applicable regulations.

Within 60 days of the submission by the Lessee of the annual payment, the Lessor will review the data submitted and validate that the operating fee formula was applied correctly. If the Lessor validation results in a different operating fee amount, the amount of the annual operating fee payment will be revised to the amount determined by the Lessor.

The Lessor also reserves the right to audit the meter data upon which the Actual 5-year Average Capacity Factor is based at any time during the lease term. If, as a result of such audit, the Lessor determines that any annual operating fee payment was calculated incorrectly, the Lessor has the right to correct any errors and collect the correct annual operating fee payment amount.

If the annual operating fee is revised downward as a result of the Lessee's calculations, as validated by the Lessor, or an audit of meter data conducted by the Lessee or Lessor, the Lessee will be refunded the difference between the amount of the payment received and the amount of the revised annual operating fee, without interest. Similarly, if the payment

amount is revised upward, the Lessee is required to pay the difference between the amount of the payment received and the amount of the revised annual operating fee, plus interest on the balance, in accordance with 30 CFR § 1218.54.

Late operating fee payments will be charged interest in accordance with 30 CFR § 1218.54.

III. Financial Assurance

The Lessor will base the determination for the amounts of all SAP, COP, and decommissioning financial assurance requirements on estimates of the cost to meet all accrued lease obligations. The Lessor determines the amount of supplemental and decommissioning financial assurance requirements on a case-by-case basis. The amount of financial assurance required to meet all lease obligations includes:

- (a) **Initial Financial Assurance.** Prior to the Lease Issuance date, the Lessee must provide an initial lease-specific bond, or other approved means of meeting the Lessor's initial financial assurance requirements in an amount equal to \$100,000.
- (b) **Additional Financial Assurance.** In addition to the initial lease-specific financial assurance discussed above, the Lessee is also required to provide additional supplemental bonds associated with the SAP and COP, or other form of financial assurances and a decommissioning bond or other approved means of meeting the Lessee's decommissioning obligations.
 - (1) Prior to the Lessor's approval of a SAP, the Lessor will require an additional supplemental bond or other form of financial assurance in an amount determined by the Lessor based on the complexity, number, and location of all facilities involved in the site assessment activities planned in the SAP, and estimates of the costs to meet all accrued obligations, in accordance with applicable BOEM regulations (30 CFR 585.515-537). The supplemental financial assurance requirement is in addition to the initial lease-specific financial assurance in the amount of \$100,000. The Lessee may meet these obligations by providing a new bond or other acceptable form of financial assurance, or increasing the amount of its existing bond or other form of financial assurance.
 - (2) Prior to the Lessor's approval of a COP, the Lessor may require an additional supplemental bond or other form of financial assurance in an amount determined by the Lessor based on the complexity, number, location of all facilities, activities and Commercial Operations planned in the COP, and estimates of the costs to meet all accrued obligations, in accordance with applicable BOEM regulations (30 CFR 585.515-537). The supplemental financial assurance requirement is in addition to the initial lease-specific financial assurance in the amount of \$100,000 and an additional supplemental bond or other form of financial assurance required with the SAP. The Lessee may meet this obligation by providing a new bond or

other acceptable form of financial assurance, or increasing the amount of its existing bond or other form of financial assurance.

- (3) The Lessor will require a decommissioning bond or other form of financial assurance based on the anticipated decommissioning costs in accordance with applicable BOEM regulations (30 CFR 585.515-537). The decommissioning obligation must be guaranteed through an acceptable form of financial assurance and will be due according to the schedule beginning before commencement of the installation of commercial facilities on a date or dates to be determined by the Lessor.
- (C) **Adjustments to Financial Assurance Amounts.** The Lessor reserves the right to adjust the amount of any financial assurance requirement (initial, supplemental or decommissioning) associated with this lease and/or reassess the Lessee's cumulative lease obligations, including decommissioning obligations, at any time. If the Lessee's cumulative lease obligations and/or liabilities increase or decrease, the Lessor will notify the Lessee of any intended adjustment to the financial assurance requirements and provide the Lessee an opportunity to comment in accordance with applicable BOEM regulations.

U.S. DEPARTMENT OF THE INTERIOR
BUREAU OF OCEAN ENERGY MANAGEMENT

ADDENDUM "C"

LEASE-SPECIFIC TERMS, CONDITIONS, AND STIPULATIONS

Lease Number OCS-A 0501

The Lessee's rights to conduct activities on the leased area are subject to the following terms, conditions, and stipulations. The Lessor reserves the right to impose additional terms and conditions incident to the future approval or approval with modifications of plans, such as a Site Assessment Plan (SAP) or Construction and Operations Plan (COP).

1 DEFINITIONS

- 1.1 Definition of "Archaeological Resource": The term "archaeological resource" has the same meaning as "archaeological resource" in BOEM regulations provided in 30 CFR 585.112.
- 1.2 Definition of "Dynamic Management Area (DMA)": The term "DMA" refers to a temporary area designated by the National Oceanic and Atmospheric Administration (NOAA) National Marine Fisheries Service (NMFS) and consisting of a circle around a confirmed North Atlantic right whale sighting. The radius of this circle expands incrementally with the number of whales sighted, and a buffer is included beyond the core area to allow for whale movement. Mandatory or voluntary speed restrictions may be applied by NOAA NMFS within DMAs. Information regarding the location and status of applicable DMAs is available from the NMFS Office of Protected Resources.
- 1.3 Definition of "Effective Date": The term "Effective Date" has the same meaning as "effective date" in BOEM regulations provided in 30 CFR 585.237.
- 1.4 Definition of "Geological and Geophysical Survey (G&G Survey)": The term "G&G Survey" serves as a collective term for surveys that collect data on the geology of the seafloor and landforms below the seafloor. High resolution geophysical surveys and geotechnical (sub-bottom) exploration are components of G&G surveys.
- 1.5 Definition of "Geotechnical Exploration": The term "Geotechnical Exploration" is used to refer to site specific sediment and underlying geologic data acquired from the seafloor and the sub-bottom and includes geotechnical surveys utilizing borings, vibracores, and cone penetration tests.
- 1.6 Definition of "High Resolution Geophysical Survey (HRG Survey)": The term "HRG Survey" means a marine remote-sensing survey using, but not limited to, such equipment as side-scan sonar, magnetometer, shallow and medium (Seismic) penetration sub-bottom profiler systems, narrow beam or multibeam echo sounder, or other such equipment employed for the purposes of providing data on geological conditions, identifying shallow hazards, identifying archaeological resources, charting bathymetry, and gathering other site characterization information.
- 1.7 Definition of "Listed Species": The term "listed species," also referred to in adjective form as "listed," means any species of fish, wildlife, or plant that has been determined to be endangered or threatened under Section 4 of the Endangered Species Act. Listed species are provided in 50 CFR 17.11-12.
- 1.8 Definition of "Protected-Species Observer": The term "protected-species observer," or "observer," means an individual who is trained in the shipboard identification and behavior of protected species. Protected species include marine mammals (those protected under the Endangered Species Act and those protected under the Marine Mammal Protection Act) and sea turtles.

- 1.9 Definition of "Ramp-up": The term "ramp-up" means the process of incrementally increasing the acoustic source level of the survey equipment when conducting HRG surveys until it reaches the operational setting.
- 1.10 Definition of "Site Assessment Activities": The term "site assessment activities" or "site assessment," has the same meaning as "site assessment activities" in 30 CFR 585.112.
- 1.11 Definition of "Qualified Marine Archaeologist": The term "qualified marine archaeologist" means a person retained by the Lessee who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology (48 FR 44738-44739), and has experience analyzing marine geophysical data.
- 1.12 Definition of "Take": The terms "Takes," "Taken," and "Taking" have the same meaning as the term "take" as defined in 16 U.S.C. § 1532(19).

2 SCHEDULE

2.1 Site Characterization

2.1.1 Survey Plan(s).

- 2.1.1.1 **SAP Survey Plan.** If the Lessee proposes to conduct site assessment activities during the site assessment term, then the Lessee must submit to the Lessor a complete SAP survey plan. This SAP survey plan must include details and timelines of the surveys to be conducted on this lease necessary to support the submission of a SAP (i.e., necessary to satisfy the information requirements in the applicable regulations, including, but not limited to 30 CFR 585.606, 610, 611).

The Lessee must submit the SAP survey plan to the Lessor at least 30 calendar days prior to the date of the required pre-survey meeting with the Lessor (See 2.1.2). The Lessor may require that the Lessee modify the SAP survey plan to address any comments the Lessor submits to the Lessee on the contents of the SAP survey plan in a manner deemed satisfactory to the Lessor prior to the commencement of the survey activities described in the SAP survey plan.

- 2.1.1.2 **COP Survey Plan.** The Lessee must submit to the Lessor a complete COP survey plan providing details and timelines of the surveys to be conducted on this lease that are necessary to support the submission of a COP (i.e., necessary to satisfy the information requirements in the applicable regulations, including, but not limited to 30 CFR 585.621, 626, 627). The COP survey plan must be submitted to the Lessor at least 30 calendar days prior to the date of the required pre-survey meeting with the Lessor (See 2.1.2). The Lessee must modify the COP survey plan to address any comments the Lessor submits to the Lessee on the contents of the COP survey plan in a manner deemed satisfactory to the Lessor prior to the commencement of these survey activities.

- 2.1.2 Pre-Survey Meeting(s) with the Lessor. At least 60 days prior to the initiation of survey activities in support of the submission of a plan (i.e., SAP and/or COP), the Lessee must hold a pre-survey meeting with the Lessor to discuss the applicable proposed survey plan and timelines. The Lessee must ensure the presence of a Qualified Marine Archaeologist at this meeting (See 4.2.2).

2.2 Progress Reporting

- 2.2.1 Semi-Annual Progress Report. The Lessee must submit to the Lessor a semi-annual (i.e., every six months) progress report through the duration of the site assessment term that includes a brief narrative of the overall progress since the last progress report, or – in the case of the first report – since the Effective Date. The progress report must include an update regarding progress in executing the activities included in the survey plan(s), and include as an enclosure an updated survey plan(s) accounting for any modifications in schedule.

3 NATIONAL SECURITY AND MILITARY OPERATIONS

The Lessee must comply with the requirements specified in stipulations 3.1, 3.2 and 3.3 when conducting site characterization activities in support of plan (i.e., SAP and/or COP) submittal.

3.1 Hold and Save Harmless

Whether compensation for such damage or injury might be due under a theory of strict or absolute liability or otherwise, the Lessee assumes all risks of damage or injury to persons or property, which occur in, on, or above the OCS, to any persons or to any property of any person or persons in connection with any activities being performed by the Lessee in, on, or above the OCS, if such injury or damage to such person or property occurs by reason of the activities of any agency of the United States Government, its contractors, or subcontractors, or any of its officers, agents or employees, being conducted as a part of, or in connection with, the programs or activities of the individual military command headquarters (hereinafter “the appropriate command headquarters”) listed in the contact information provided as an enclosure to this lease.

Notwithstanding any limitation of the Lessee’s liability in Section 9 of the lease, the Lessee assumes this risk whether such injury or damage is caused in whole or in part by any act or omission, regardless of negligence or fault, of the United States, its contractors or subcontractors, or any of its officers, agents, or employees. The Lessee further agrees to indemnify and save harmless the United States against all claims for loss, damage, or injury in connection with the programs or activities of the command headquarters, whether the same be caused in whole or in part by the negligence or fault of the United States, its contractors, or subcontractors, or any of its officers, agents, or employees and whether such claims might be sustained under a theory of strict or absolute liability or otherwise.

3.2 Evacuation or Suspension of Activities

- 3.2.1 **General.** The Lessee hereby recognizes and agrees that the United States reserves and has the right to temporarily suspend operations and/or require evacuation on this lease in the interest of national security pursuant to Section 3(c) of this lease.
- 3.2.2 **Notification.** Every effort will be made by the appropriate military agency to provide as much advance notice as possible of the need to suspend operations and/or evacuate. Advance notice will normally be given before requiring a suspension or evacuation. Temporary suspension of operations may include, but is not limited to the evacuation of personnel and appropriate sheltering of personnel not evacuated. "Appropriate sheltering" means the protection of all Lessee personnel for the entire duration of any Department of Defense activity from flying or falling objects or substances and will be implemented by an order (oral and/or written) from the BOEM Office of Renewable Energy Programs (OREP) Program Manager, after consultation with the appropriate command headquarters or other appropriate military agency, or higher Federal authority. The appropriate command headquarters, military agency, or higher authority will provide information to allow the Lessee to assess the degree of risk to, and provide sufficient protection for, the Lessee's personnel and property.
- 3.2.3 **Duration.** Suspensions or evacuations for national security reasons will not generally exceed seventy-two (72) hours; however, any such suspension may be extended by order of the OREP Program Manager. During such periods, equipment may remain in place, but all operations, if any, must cease for the duration of the temporary suspension if so directed by the OREP Program Manager. Upon cessation of any temporary suspension, the OREP Program Manager will immediately notify the Lessee that such suspension has terminated and operations on the leased area can resume.
- 3.2.4 **Lessee Point-of-Contact for Evacuation/Suspension Notifications.** The Lessee must inform the Lessor of the persons/offices to be notified to implement the terms of 3.2.2 and 3.2.3.
- 3.2.5 **Coordination with Command Headquarters.** The Lessee must establish and maintain early contact and coordination with the appropriate command headquarters, in order to avoid or minimize the potential to conflict with and minimize the potential effects of conflicts with military operations.
- 3.2.6 **Reimbursement.** The Lessee is not entitled to reimbursement for any costs or expenses associated with the suspension of operations or activities or the evacuation of property or personnel in fulfillment of the military mission in accordance with 3.2.1 through 3.2.5 above.

3.3 Electromagnetic Emissions

The Lessee, prior to entry into any designated defense operating area, warning area, or water test area, for the purpose of commencing survey activities undertaken to support SAP or COP submittal must enter into an agreement with the commander of the appropriate command headquarters to coordinate the electromagnetic emissions associated with such survey activities. The Lessee must ensure that all electromagnetic emissions associated with such survey activities are controlled as directed by the commander of the appropriate command headquarters.

4 STANDARD OPERATING CONDITIONS

4.1 General

4.1.1 Vessel Strike Avoidance Measures. The Lessee must ensure that all vessels conducting activity in support of plan (i.e., SAP and/or COP) submittal comply with the vessel-strike avoidance measures specified in stipulations 4.1.1.1 through 4.1.1.7, except under extraordinary circumstances when complying with these requirements would put the safety of the vessel or crew at risk.

4.1.1.1 The Lessee must ensure that vessel operators and crews maintain a vigilant watch for cetaceans, pinnipeds, and sea turtles and slow down or stop their vessel to avoid striking these protected species.

4.1.1.2 The Lessee must ensure that all vessel operators comply with 10 knot (<18.5 km/hr) speed restrictions in any Dynamic Management Area (DMA). In addition, the Lessee must ensure that all vessels operating from November 1 through July 31 operate at speeds of 10 knots (<18.5 km/hr) or less.

4.1.1.3 North Atlantic right whales.

4.1.1.3.1 The Lessee must ensure all vessels maintain a separation distance of 500 m (1,640 ft) or greater from any sighted North Atlantic right whale.

4.1.1.3.2 The Lessee must ensure that the following avoidance measures are taken if a vessel comes within 500 m (1,640 ft) of any North Atlantic right whale:

4.1.1.3.2.1 If underway, vessels must steer a course away from any sighted North Atlantic right whale at 10 knots (<18.5 km/h) or less until the 500 m (1,640 ft) minimum separation distance has been established (except as provided in 4.1.1.3.2.2).

4.1.1.3.2.2 If a North Atlantic right whale is sighted in a vessel's path, or within 100 m (328 ft) to an underway vessel, the underway vessel must reduce speed and shift the engine to neutral. The Lessee must not engage the engines until the North Atlantic right whale has moved outside the vessel's path and beyond 100 m (328 ft).

4.1.1.3.2.3 If a vessel is stationary, the vessel must not engage engines until the North Atlantic right whale has moved beyond 100 m (328 ft), at which point the Lessee must comply with 4.1.1.3.2.1.

4.1.1.4 Non-delphinoid cetaceans other than the North Atlantic right whale.

4.1.1.4.1 The Lessee must ensure all vessels maintain a separation distance of 100 m (328 ft) or greater from any sighted non-delphinoid cetacean.

4.1.1.4.2 The Lessee must ensure that the following avoidance measures are taken if a vessel comes within 100 m (328 ft) of any non-delphinoid cetacean:

4.1.1.4.2.1 If any non-delphinoid cetacean is sighted, the vessel underway must reduce speed and shift the engine to neutral, and must not engage the engines until the non-delphinoid cetacean has moved outside of the vessel's path and beyond 100 m (328 ft).

4.1.1.4.2.2 If a vessel is stationary, the vessel must not engage engines until the non-delphinoid cetacean has moved out of the vessel's path and beyond 100 m (328 ft).

4.1.1.5 Delphinoid cetaceans.

4.1.1.5.1 The Lessee must ensure that all vessels maintain a separation distance of 50 m (164 ft) or greater from any sighted delphinoid cetacean.

4.1.1.5.2 The Lessee must ensure the following avoidance measures are taken if the vessel comes within 50 m (164 ft) of a sighted delphinoid cetacean:

4.1.1.5.2.1 The Lessee must ensure that any vessel underway remain parallel to a sighted delphinoid cetacean's course whenever possible, and avoid excessive speed or abrupt changes in direction. The Lessee may not adjust course and speed until the delphinoid cetacean has moved beyond 50 m (164 ft) and/or the delphinoid cetacean has moved abeam of the underway vessel.

4.1.1.5.2.2 The Lessee must ensure that any vessel underway reduce vessel speed to 10 knots (18.5 km/h) or less when pods (including mother/calf pairs) or large assemblages of delphinoid cetaceans are observed. The Lessee may not adjust course and speed until the delphinoid cetaceans have moved beyond 50 m (164 ft) and/or abeam of the underway vessel.

4.1.1.6 Sea Turtles and Pinnipeds.

4.1.1.6.1 The Lessee must ensure all vessels maintain a separation distance of 50 m (164 ft) or greater from any sighted sea turtle or pinniped.

4.1.1.7 Vessel Operator Briefing. The Lessee must ensure that all vessel operators are briefed to ensure they are familiar with the requirements specified in 4.1.1.

4.1.2 Marine Trash and Debris Prevention. The Lessee must ensure that vessel operators, employees, and contractors engaged in activity in support of plan (i.e., SAP and/or COP) submittal are briefed on marine trash and debris awareness and elimination, as described in the BSEE NTL No. 2012-G01 ("Marine Trash and Debris Awareness and Elimination") or any NTL that supersedes this NTL, except that the Lessor will not require the Lessee, vessel operators, employees, and contractors to undergo formal training or post placards. The Lessee must ensure that these vessel operator employees and contractors are made aware of the environmental and socioeconomic impacts associated with marine trash and debris and their responsibilities for ensuring that trash and debris are not intentionally or accidentally discharged into the marine environment. The above-referenced NTL provides information the Lessee may use for this awareness training.

4.2 Archaeological Survey Requirements

4.2.1 Archaeological Survey Required. The Lessee must provide the results of an archaeological survey with its SAP and COP.

4.2.2 Qualified Marine Archaeologist. The Lessee must ensure that the analysis of archaeological survey data collected in support of plan (e.g., SAP and/or COP) submittal and the preparation of archaeological reports created in support of plan submittal are conducted by a Qualified Marine Archaeologist.

4.2.3 Tribal Pre-Survey Meeting. Subsequent to any pre-survey meeting with the Lessor (see 2.1.2) and at least 45 calendar days prior to commencing survey activities performed in support of plan (i.e., SAP and/or COP) submittal, the Lessee must invite by certified mail the Narragansett Indian Tribe, the Mashpee Wampanoag Tribe, and the Wampanoag Tribe of Gay Head (Aquinnah) to a tribal pre-survey meeting. The purpose of this meeting will be for the Lessee and the Qualified Marine Archaeologist to discuss the Lessee's Survey Plan and consider requests to monitor portions of the archaeological survey and the geotechnical exploration activities, including the visual logging and analysis of geotechnical samples (e.g., cores, etc.). The meeting must be scheduled for a date at least 30 calendar days prior to commencing survey and at a location and time that affords the participants a reasonable opportunity to participate. The anticipated date for the meeting must be identified in the timeline of activities described in the applicable survey plan (see 2.1.1).

4.2.4 Geotechnical (Sub-bottom) Exploration. The Lessee may only conduct geotechnical exploration activities performed in support of plan (i.e., SAP and/or COP) submittal in locations where an analysis of the results of geophysical surveys has been completed. This analysis must include a determination by a Qualified Marine Archaeologist as to whether any potential archaeological resources are present in the area. Except as allowed by the Lessor under 4.2.6, the geotechnical exploration activities must avoid potential archaeological resources by a minimum of 50 m (164 ft), and the avoidance distance must be calculated from the maximum discernible extent of the archaeological resource. A Qualified Marine Archaeologist must certify, in the Lessee's archaeological reports, that geotechnical exploration activities did not impact potential historic properties identified as a result of the HRG surveys performed in support of plan submittal, except as follows: in the event that the geotechnical exploration activities did impact potential historic properties identified in the archaeological surveys without the Lessor's prior approval, the Lessee and the Qualified Marine Archaeologist who prepared the report must instead provide a statement documenting the extent of these impacts.

4.2.5 Monitoring and Avoidance. The Lessee must inform the Qualified Marine Archaeologist that he or she may be present during HRG surveys and bottom-disturbing activities performed in support of plan (i.e., SAP and/or COP) submittal to ensure avoidance of potential archaeological resources, as determined by the Qualified Marine Archaeologist (including bathymetric, seismic, and magnetic anomalies; side scan sonar contacts; and other seafloor or sub-surface features that exhibit potential to represent or contain potential archaeological sites or other historic properties). In the event that this Qualified Marine Archaeologist indicates that he or she wishes to be present, the Lessee must facilitate the Qualified Marine Archaeologist's presence, as requested by the Qualified Marine Archaeologist, and provide the Qualified Marine Archaeologist the opportunity to inspect data quality.

4.2.6 No Impact without Approval. In no case may the Lessee knowingly impact a potential archaeological resource without the Lessor's prior approval.

4.2.7 Post-Review Discovery Clauses. If the Lessee, while conducting site characterization activities in support of plan (i.e., SAP and/or COP) submittal, discovers a potential archaeological resource such as the presence of a shipwreck (e.g., a sonar image or visual confirmation of an iron, steel, or wooden hull, wooden timbers, anchors, concentrations of historic objects, piles of ballast rock), prehistoric artifacts, and/or relict landforms, etc. within the project area, the Lessee must:

4.2.7.1 Immediately halt seafloor/bottom-disturbing activities within the area of discovery;

4.2.7.2 Notify the Lessor within 24 hours of discovery;

4.2.7.3 Notify the Lessor in writing via report to the Lessor within 72 hours of its discovery;

- 4.2.7.4 Keep the location of the discovery confidential and take no action that may adversely affect the archaeological resource until the Lessor has made an evaluation and instructs the applicant on how to proceed; and
- 4.2.7.5 Conduct any additional investigations as directed by the Lessor to determine if the resource is eligible for listing in the National Register of Historic Places (30 CFR 585.802(b)). The Lessor will do this if: (1) the site has been impacted by the Lessee's project activities; or (2) impacts to the site or to the area of potential effect cannot be avoided. If investigations indicate that the resource is potentially eligible for listing in the National Register of Historic Places, the Lessor will tell the Lessee how to protect the resource or how to mitigate adverse effects to the site. If the Lessor incurs costs in protecting the resource, under Section 110(g) of the National Historic Preservation Act, the Lessor may charge the Lessee reasonable costs for carrying out preservation responsibilities under the OCS Lands Act (30 CFR 585.802(c-d)).

4.3 Geological and Geophysical (G&G) Survey Requirements

- 4.3.1 The Lessee must ensure that all vessels conducting activity in support of a plan (i.e., SAP and/or COP) submittal comply with the geological and geophysical survey requirements specified in 4.3 except under extraordinary circumstances when complying with these requirements would put the safety of the vessel or crew at risk.
- 4.3.2 Visibility. The Lessee must not conduct G&G surveys in support of plan (i.e., SAP and/or COP) submittal at any time when lighting or weather conditions (e.g., darkness, rain, fog, sea state) prevents visual monitoring of the HRG survey exclusion zone (see 4.3.6) or the geotechnical exploration exclusion zone (see 4.3.7), except as allowed under 4.3.3.
- 4.3.3 Modification of Visibility Requirement. If the Lessee intends to conduct G&G survey operations in support of plan submittal at night or when visual observation is otherwise impaired, it must submit to the Lessor an alternative monitoring plan detailing the alternative monitoring methodology (e.g. active or passive acoustic monitoring technologies). The Lessor may, after consultation with NMFS, decide to allow the Lessee to conduct G&G surveys in support of plan submittal at night or when visual observation is otherwise impaired using the proposed alternative monitoring methodology.
- 4.3.4 Protected-Species Observer. The Lessee must ensure that the exclusion zone for all G&G surveys performed in support of plan (i.e., SAP and/or COP) submittal is monitored by one or more NMFS-approved protected-species observers. The Lessee must provide to the Lessor a list of observers and their résumés no later than 45 calendar days prior to the scheduled start of surveys performed in support of plan submittal. The résumés of any additional observers must be provided 15 calendar days prior to each observer's start date. The Lessor will send the observer's information to NMFS for approval.
- 4.3.5 Optical Device Availability. The Lessee must ensure that reticuled binoculars and other suitable equipment are available to each observer to adequately perceive and monitor protected marine species within the exclusion zone during surveys conducted in support of plan (i.e., SAP and/or COP) submittal.
- 4.3.6 High-Resolution Geophysical (HRG) Surveys. Stipulations specific to HRG surveys conducted in support of plan (i.e., SAP and/or COP) submittal where one or more acoustic sound sources is operating at frequencies below 200 kHz are provided in 4.3.6.1 through 4.3.6.10:
- 4.3.6.1 Establishment of Default Exclusion Zone. The Lessee must ensure that a 200-meter default exclusion zone for cetaceans, pinnipeds, and sea turtles will be monitored by a protected species observer. In the case of the North Atlantic right whale, the minimum separation distance of 500 m (1,640 ft) as required under 4.1.1.3 must be observed.

- 4.3.6.1.1 If the Lessor determines that the exclusion zone does not encompass the 180 dB Level A harassment radius calculated for the acoustic source having the highest source level, the Lessor will consult with NMFS and may impose additional, relevant requirements on the Lessee, including but not limited to, required expansion of this exclusion zone.
- 4.3.6.2 Field Verification of Exclusion Zone. The Lessee must conduct field verification of the exclusion zone for HRG survey equipment operating below 200 kHz. The Lessee must take acoustic measurements at a minimum of two reference locations and in a manner that is sufficient to establish the following: source level (peak at 1 meter) and distance to the 180, 160, and 150 dB_{rms} re 1μPa sound pressure level (SPL) isopleths as well as the 187 dB re 1μPa cumulative sound exposure level (cSEL). Sound measurements must be taken at the reference locations at two depths (i.e., a depth at mid-water and a depth at approximately 1 meter (3.28 ft) above the seafloor). The Lessee must report the field verification results to the Lessor in the SAP and COP Survey Plans, unless otherwise authorized by the Lessor.
- 4.3.6.3 Field Verification Plan for HRG Survey Exclusion Zone. The Lessee must submit a plan for verifying the sound source levels of any electromechanical survey equipment operating at frequencies below 200 kHz to the Lessor no later than 45 days prior to the commencement of the field verification activities. The plan must demonstrate how the field verification activities will comply with the requirements of 4.3.6.2. The Lessor may require that the Lessee modify the plan to address any comments the Lessor submits to the Lessee on the contents of the plan in a manner deemed satisfactory to the Lessor prior to the commencement of the field verification activities.
- 4.3.6.4 Modification of Exclusion Zone Per Lessee Request. The Lessee may use the results from its field-verification efforts to request modification of the exclusion zone for the specific HRG survey equipment under consideration. Any new exclusion zone radius proposed by the Lessee must be based on the most conservative measurement (i.e., the largest safety zone configuration) of the target Level A or Level B harassment acoustic threshold zone as defined for the purposes of the Marine Mammal Protection Act. This modified zone must be used for all subsequent use of field-verified equipment. The Lessee may periodically reevaluate the modified zone using the field verification procedures described in 4.3.6.2. The Lessee must obtain Lessor approval of any new exclusion zone before it may be implemented.
- 4.3.6.5 Clearance of Exclusion Zone. The Lessee must ensure that active acoustic sound sources will not be activated until the protected species observer has reported the exclusion zone clear of all cetaceans, pinnipeds, and sea turtles for 60 minutes.

- 4.3.6.6 Seasonal Management Areas (SMAs) Right Whale Monitoring. The Lessee must ensure that vessel operators monitor National Marine Fisheries Service's (NMFS) North Atlantic Right Whale reporting systems (e.g., the Early Warning System, Sighting Advisory System, and Mandatory Ship Reporting System) for the presence of North Atlantic right whales during HRG survey operations within or adjacent to SMAs and/or DMAs.
- 4.3.6.7 Dynamic Management Area Shutdown Requirement. The Lessee must ensure that vessels cease HRG survey activities within 24 hours of NMFS establishing a DMA in the Lessee's HRG survey area. HRG surveys may resume in the affected area after the DMA has expired.
- 4.3.6.8 Electromechanical Survey Equipment Ramp-Up. The Lessee must ensure that when technically feasible, a "ramp-up" of the electromechanical survey equipment occurs at the start or re-start of HRG survey activities. A ramp-up would begin with the power of the smallest acoustic equipment for the HRG survey at its lowest power output. The power output would be gradually turned up and other acoustic sources added in a way such that the source level would increase in steps not exceeding 6 dB per 5-minute period.
- 4.3.6.9 Shut Down for Non-Delphinoid Cetaceans and Sea Turtles. If a non-delphinoid cetacean or sea turtle is sighted at or within the exclusion zone, an immediate shutdown of the electromechanical survey equipment is required. The vessel operator must comply immediately with such a call by the observer. Any disagreement should be discussed only after shut-down. Subsequent restart of the electromechanical survey equipment must use the ramp-up provisions described above and may only occur following clearance of the exclusion zone of all cetaceans, pinnipeds, and sea turtles for 60 minutes.
- 4.3.6.10 Power Down for Delphinoid Cetaceans and Pinnipeds. If a delphinoid cetacean or pinniped is sighted at or within the exclusion zone, the electromechanical survey equipment must be powered down to the lowest power output that is technically feasible. The vessel operator must comply immediately with such a call by the observer. Any disagreement or discussion should occur only after power-down. Subsequent power up of the electromechanical survey equipment must use the ramp-up provisions described in 4.3.6.8 and may occur after (1) the exclusion zone is clear of a delphinoid cetacean and/or pinniped or (2) a determination by the protected species observer after a minimum of 10 minutes of observation that the delphinoid cetacean and/or pinniped is approaching the vessel or towed equipment at a speed and vector that indicates voluntary approach to bow-ride or chase towed equipment. An incursion into the exclusion zone by a non-delphinoid cetacean or sea turtle during a power-down requires implementation of the shut-down procedures described in 4.3.6.9.

4.3.6.10.1 Pauses in Electromechanical Survey Sound Source. The Lessee must ensure that if the electromechanical sound source shuts down for reasons other than encroachment into the exclusion zone by a non-delphinoid cetacean or sea turtle, including, but not limited to, mechanical or electronic failure, resulting in the cessation of the sound source for a period greater than 20 minutes, then the Lessee must restart the electromechanical survey equipment using the full ramp-up procedures and clearance of the exclusion zone of all cetaceans, pinnipeds, and sea turtles for 60 minutes. If the pause is less than 20 minutes the equipment may be re-started as soon as practicable at its operational level as long as visual surveys were continued diligently throughout the silent period and the exclusion zone remained clear of cetaceans, pinnipeds, and sea turtles. If visual surveys were not continued diligently during the pause of 20-minutes or less, the Lessee must restart the electromechanical survey equipment using the full ramp-up procedures and clearance of the exclusion zone of all cetaceans, pinnipeds, and sea turtles for 60 minutes.

4.3.7 Geotechnical (Sub-bottom) Exploration. Stipulations specific to geotechnical exploration conducted in support of plan (i.e., SAP and/or COP) submittal are provided in 4.3.7.1 through 4.3.7.6.

4.3.7.1 Establishment of Default Exclusion Zone. The Lessee must ensure that a 200-meter default exclusion zone for all cetaceans, pinnipeds, and sea turtles will be monitored by a protected species observer around any vessel conducting geotechnical surveys.

4.3.7.2 Modification of Exclusion Zone Per Lessee Request. If the Lessee wishes to modify the 200 m (656 ft) default exclusion zone for specific geotechnical exploration equipment, then the Lessee must submit a plan for verifying the sound source levels of the specific geotechnical exploration equipment to the Lessor. The plan must demonstrate how the field verification activities will comply with the requirements of 4.3.7.3. The Lessor may require that the Lessee modify the plan to address any comments the Lessor submits to the Lessee on the contents of the plan in a manner deemed satisfactory to the Lessor prior to the commencement of field verification activities. Any new exclusion zone radius proposed by the Lessee must be based on the most conservative measurement (i.e., the largest safety zone configuration) of the Level B harassment acoustic threshold zone as defined for the purposes of the Marine Mammal Protection Act. This modified zone must be used for all subsequent use of field-verified equipment. The Lessee may periodically reevaluate the modified zone using the field verification procedures described in 4.3.7.3. The Lessee must obtain Lessor approval of any new exclusion zone before it may be implemented.

- 4.3.7.3 **Field Verification of Exclusion Zone.** If the Lessee wishes to modify the existing exclusion zone, the Lessee must conduct field verification of the exclusion zone for the specific geotechnical exploration equipment. The results of the sound measurements from the survey equipment must be used to establish a new exclusion zone, which may be greater than or less than the 200 m (656 ft) default exclusion zone depending on the results of the field tests. The Lessee must take acoustic measurements at a minimum of two reference locations and in a manner that is sufficient to establish the following: source level (peak at 1 meter) and distance to the 180, 160, and 150 dBrms re 1 μ Pa sound pressure level (SPL) isopleths as well as the 187 dB re 1 μ Pa cumulative sound exposure level (cSEL). Sound measurements must be taken at the reference locations at two depths (i.e., a depth at mid-water and a depth at approximately 1 meter above the seafloor).
- 4.3.7.4 **Clearance of Exclusion Zone.** The Lessee must ensure that the geotechnical sound source is not activated until the protected species observer has reported the exclusion zone clear of all cetaceans, pinnipeds, and sea turtles for 60 minutes.
- 4.3.7.5 **Shut Down for Non-Delphinoid Cetaceans and Sea Turtles.** If any non-delphinoid cetaceans or sea turtles are sighted at or within the exclusion zone, an immediate shutdown of the geotechnical survey equipment is required. The vessel operator must comply immediately with such a call by the observer. Any disagreement or discussion should occur only after shut-down. Subsequent restart of the geotechnical survey equipment may only occur following clearance of the exclusion zone for 60 minutes for all cetaceans, pinnipeds, and sea turtles.
- 4.3.7.6 **Pauses in Geotechnical Survey Sound Source.** The Lessee must ensure that if the geotechnical sound source shuts down for reasons other than encroachment into the exclusion zone by a non-delphinoid cetacean or sea turtle, including, but not limited to, mechanical or electronic failure, resulting in the cessation of the sound source for a period greater than 20 minutes, the Lessee must ensure clearance of the exclusion zone of all cetaceans, pinnipeds, and sea turtles for 60 minutes before restarting the geotechnical survey equipment. If the pause is less than 20 minutes, the equipment may be re-started as soon as practicable as long as visual surveys were continued diligently throughout the silent period and the exclusion zone remained clear of cetaceans, pinnipeds, and sea turtles. If visual surveys were not continued diligently during the pause of 20-minutes or less, the Lessee must restart the geotechnical survey equipment only after the clearance of the exclusion zone of all cetaceans, pinnipeds, and sea turtles for 60 minutes.

4.4 Reporting Requirements

The Lessee must ensure compliance with the following reporting requirements for site characterization activities performed in support of plan (i.e., SAP and/or COP) submittal and must use the contact information provided as an enclosure to this lease, or updated contact information as provided by the Lessor, to fulfill these requirements where appropriate:

- 4.4.1 Reporting Injured or Dead Protected Species. The Lessee must ensure that sightings of any injured or dead protected species (e.g., marine mammals, sea turtles or sturgeon) are reported to the NMFS Northeast Region's Stranding Hotline (800-900-3622 or current) within 24 hours of sighting, regardless of whether the injury or death is caused by a vessel. In addition, if the injury or death was caused by a collision with a project-related vessel, the Lessee must ensure that the Lessor is notified of the strike within 24 hours. The Lessee must use the form provided in Appendix A to Addendum "C" to report the sighting or incident. If the Lessee's activity is responsible for the injury or death, the Lessee must ensure that the vessel assist in any salvage effort as requested by NMFS.
- 4.4.2 Reporting Observed Impacts to Protected Species. The Lessee must ensure that the observer report any observations concerning impacts on Endangered Species Act listed marine mammals, sea turtles or sturgeon to the Lessor and NMFS within 48 hours. The Lessee must report any injuries or mortalities using the Incident Report in Appendix A to Addendum "C". Any observed takes of listed marine mammals, sea turtles or sturgeon resulting in injury or mortality must be reported within 24 hours to the Lessor and NMFS.
- 4.4.3 Final Report of G&G Survey Activities and Observations. The Lessee must provide the Lessor and NMFS with a report within 90 calendar days following the commencement of HRG and/or geotechnical exploration activities and at the conclusion of HRG and/or geotechnical exploration activities that includes a summary of the survey activities, all protected species observer reports, a summary of the survey activities and an estimate of the number of listed marine mammals, sea turtles or sturgeon observed and/or Taken during these survey activities.
- 4.4.4 Protected Species Observer Reports. The Lessee must ensure that the protected-species observer record all observations of protected species using standard marine mammal observer data collection protocols. The list of required data elements for these reports is provided in Appendix B to Addendum "C".
- 4.4.5 Marine Mammal Protection Act Authorization(s). If the Lessee is required to obtain an authorization pursuant to section 101(a)(5) of the Marine Mammal Protection Act prior to conducting survey activities, then the Lessee must provide to the Lessor a copy of the authorization prior to commencing these activities.

BUREAU OF OCEAN ENERGY MANAGEMENT**

ADDENDUM "D"

PROJECT EASEMENT

Lease Number OCS-A 0501

This section includes a description of the Project Easement(s), if any, associated with this lease, and the financial terms associated with it. This section will be updated as necessary.

I. Rent

The Lessee must begin submitting rent payments for any project easement associated with this lease commencing on the date that BOEM approves the Construction and Operations Plan (COP) or modification of the COP describing the project easement. Annual rent for a project easement 200 feet wide, centered on the transmission cable, is \$70.00 per statute mile. For any additional acreage required, the Lessee must also pay the greater of \$5.00 per acre per year or \$450.00 per year.

**U.S. DEPARTMENT OF THE INTERIOR
BUREAU OF OCEAN ENERGY MANAGEMENT**

ADDENDUM "E"

RENT SCHEDULE

Lease Number OCS-A 0501

This section includes a description of the schedule for rent payments that will be determined after the Construction and Operations Plan (COP) has been approved or approved with modifications. This section will be updated as necessary.

Unless otherwise authorized by the Lessor in accordance with the applicable regulations in 30 CFR Part 585, the Lessee must make rent payments as described below.

BUREAU OF OCEAN ENERGY MANAGEMENT

APPENDIX A TO ADDENDUM "C"

Lease Number OCS-A 0501

INCIDENT REPORT: PROTECTED SPECIES INJURY OR MORTALITY

Photographs and/or video footage should be taken of all injured or dead animals, if possible.

Observer's full name and/or Reporter's full name: _____

Date and Time animal observed: _____

Date and Time animal/samples collected: _____

Location of Incident (Latitude/Longitude): _____

Species Identification (closest taxonomic level possible): _____

Photograph/Video footage collected: YES / NO If Yes, was the data provided to NMFS?
YES / NO

Name of vessel, vessel speed at time of incident, and activity ongoing at time of observation
(e.g., transit, survey, pile driving): _____

Environmental conditions at time of observation (i.e., Beaufort sea state, cloud cover, wind
speed, glare): _____

Water temperature (°C) and depth at site of observation: _____

Describe location of animal and events leading up to, including, and after, the incident:

Status of all sound-source use in the 24 hours preceding the incident: _____

Describe all marine mammal, sea turtle, and sturgeon observations in the 24 hours preceding the incident:

Marine Mammal information:

Injuries observed: _____

Condition/description of animal: _____

Other remarks: _____

Date and time incident reported to NMFS Stranding Hotline: _____

Sturgeon Information:

Fork length (or total length): _____ Weight: _____

Condition of specimen/description of animal: _____

Fish Decomposed: NO SLIGHTLY MODERATELY SEVERELY

Fish tagged: YES / NO *Please record all tag numbers.* Tag #: _____

Photograph taken: YES / NO
(please label *species, date, geographic site* and *vessel name* when transmitting photo)

Genetics sample taken: YES / NO

Genetics sample transmitted to: _____ on (mm/dd/yyyy) _____

Sea Turtle Species Information: *(please designate cm/m or inches)*

Weight (kg or lbs): _____

Sex (circle): Male Female Unknown How was sex determined? _____

Straight carapace length: _____ Straight carapace width: _____

Curved carapace length: _____ Curved carapace width: _____

Plastron length: _____ Plastron width: _____

Tail length: _____ Head width: _____

Condition of specimen/description of animal: _____

Existing Flipper Tag Information

Left: _____ Right: _____

PIT Tag #: _____

Miscellaneous:

Genetic biopsy taken: YES / NO

Photos taken: YES / NO

Turtle Release Information:

Date: _____ Time: _____

Latitude: _____ Longitude: _____

State: _____ County: _____

Remarks: (note if turtle was involved with tar or oil, gear or debris entanglement, wounds or mutilations, propeller damage, papillomas, old tag locations, etc.):

APPENDIX B TO ADDENDUM "C"

REQUIRED DATA ELEMENTS FOR PROTECTED SPECIES OBSERVER REPORTS

Lease Number OCS-A 0501

Per ADDENDUM "C", 4.4.4, the Lessee must ensure that the protected-species observer record all observations of protected species using standard marine mammal observer data collection protocols. The list of required data elements for these reports is provided below:

1. Vessel name;
2. Observers' names and affiliations;
3. Date;
4. Time and latitude/longitude when daily visual survey began;
5. Time and latitude/longitude when daily visual survey ended; and
6. Average environmental conditions during visual surveys including:
 - a. Wind speed and direction;
 - b. Sea state (glassy, slight, choppy, rough, or Beaufort scale);
 - c. Swell (low, medium, high, or swell height in meters); and
 - d. Overall visibility (poor, moderate, good).
7. Species (or identification to lowest possible taxonomic level);
8. Certainty of identification (sure, most likely, best guess);
9. Total number of animals;
10. Number of juveniles;
11. Description (as many distinguishing features as possible of each individual seen, including length, shape, color and pattern, scars or marks, shape and size of dorsal fin, shape of head, and blow characteristics);
12. Direction of animal's travel – related to the vessel (drawing preferably);
13. Behavior (as explicit and detailed as possible; note any observed changes in behavior); and
14. Activity of vessel when sighting occurred.

ATTACHMENT 6.2-2 BOEM Letter of Good Standing

United States Department of the Interior

BUREAU OF OCEAN ENERGY MANAGEMENT

WASHINGTON, DC 20240-0001

NOV 13 2017

Mr. Erich Stephens
Vineyard Wind LLC
700 Pleasant Street, Suite 510
New Bedford, Massachusetts 02740

RE: Letter of Good Standing, Lease OCS-A 0501

Dear Mr. Stephens:

As of the date of this letter, the Bureau of Ocean Energy Management (BOEM) considers lease OCS-A 0501 to be in good standing. There are no outstanding lease obligations and the Office of Natural Resources Revenue has reported that all rental payments have been timely received.

The lease was issued to Offshore MW LLC effective April 1, 2015. On April 29, 2017, BOEM acknowledged that Offshore MW LLC changed its name to Vineyard Wind LLC effective October 17, 2016. BOEM records reflect the following ownership, including all rights, title, and interest, of the subject lease:

Vineyard Wind LLC – 100%

Please contact Ms. Gina Best at (703) 787-1341 or gina.best@boem.gov if you have questions regarding the status of your lease.

Sincerely,

James F. Bennett
Program Manager
Office of Renewable Energy Programs

SECTION 7 OF APPENDIX A TO THE RFP ENVIRONMENTAL ASSESSMENT, PERMIT ACQUISITION PLAN, AND NEW CLASS I RPS CERTIFICATION

OVERVIEW

Vineyard Wind is the most experienced company permitting offshore wind projects in the US and was the first company to submit a Construction and Operations Plan (COP) to the Bureau of Ocean Energy Management (BOEM) in 2017. As the first 800 megawatt (MW) project (“Vineyard Wind 1”) has progressed through the permitting process, the company has built strong collaborative relationships with federal, state, and local regulators along with a diverse array of stakeholders. Because of its pioneering role, Vineyard Wind has also gained unique insight into the process for permitting offshore wind projects, which is reflected in the permitting plan for Vineyard Wind 2 (the “Project”).

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] A Host Community Agreement (HCA) that is already in place with the Town accommodates the Project and includes clear guidelines and community benefits that facilitate siting and the permitting processes.

Additional factors supporting the successful permitting of the Project, include:

- Vineyard Wind's permitting team, which is comprised of global and national leaders in offshore wind and Massachusetts energy infrastructure permitting;
- A well-sited offshore wind project that avoids environmental impacts to the greatest extent practicable;
- A community outreach approach that has proven effective at building support for offshore wind projects; and
- Several years of regular contact and constructive conversations with the relevant permitting agencies as well as an array of stakeholders.

As further described in this section, these factors will provide significant additional advantages to the Project as it moves forward, and ensure the Project is permitted as planned.

7.1 Provide a list of all the permits, licenses, and environmental assessments and/or environmental impact statements required to construct and operate the project. Along with this list, identify the governmental agencies and States that are responsible for issuing approval of all the permits, licenses, and environmental assessments and/or environmental impact statements. If a bidder has secured any permit or has applied for a permit, please indicate this in the response.

PERMITS AND ASSESSMENTS

Vineyard Wind 2 is comprised of three major elements that determine the scope of federal, state, regional, and local permitting requirements:

1. Project elements located offshore beyond state territorial waters (i.e., beyond three nautical miles [NM] seaward of the low water mark of the shore) are exclusively within federal jurisdiction. This includes the WTG array, the [REDACTED] inter-array cabling, the offshore electrical service platform (ESP), and portions of the [REDACTED] offshore export cables.

2. Project elements located within state territorial limits are subject to state permitting requirements, as well as federal permitting requirements. This includes the [REDACTED] offshore export cables, the [REDACTED] underground onshore export cables, the onshore substation, and a new onshore substation needed to make the grid connection.
3. The underground onshore export cables, the onshore substation, and portions of the offshore export cables, are subject to local and regional reviews by including, but not limited to, town conservation commissions and regional planning commissions.

A summary of all the permits, licenses, and environmental assessments or statements for the Project is provided in **Tables 7.1-1, 7.1-2, and 7.1-3.**

Federal Permits and Approvals

As described in more detail below, the principal federal authorizations and permits required to construct and operate the Project include:

- BOEM's Office of Renewable Energy Programs' approval of Vineyard Wind's COP, along with submission of a Facilities Design Report (FDR) and Fabrication & Installation Report (FIR);
- A permit to construct structures in navigable waters under Section 10 of the Rivers and Harbors Act of 1899, issued by the US Army Corps of Engineers (ACOE);
- A Clean Water Act (CWA) Section 404 permit to discharge dredge or fill into waters of the United States, issued by the ACOE;
- A Clean Air Act (CAA) Outer Continental Shelf (OCS) permit for emissions from vessels and equipment used during construction and operation of the Project, issued by the EPA;
- An Incidental Harassment Authorization (IHA) or Letter of Authorization (LOA) under the Marine Mammal Protection Act (MMPA) for construction-related noise associated with pile installation, issued by the NMFS;
- US Coast Guard (USCG) issuance of Private Aids to Navigation (PATON); and
- FAA determinations of "no hazard," for any structures within FAA jurisdiction (including temporary construction equipment).

Another required permit that does not involve environmental or other reviews before issuance includes:

- A National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater.

The above list does not include reviews that will be conducted by other agencies with which the lead permitting agency consults, as described below.

Table 7.1-1 lists the expected federal permits required for the Project and their status.

Federal Permitting Process

Bureau of Ocean Energy Management: BOEM has jurisdiction under the Outer Continental Shelf Lands Act to issue leases, easements, and rights-of-way (ROWs) for the development of renewable energy on the OCS and to ensure that activities conducted on the OCS are carried out in a manner that adequately addresses environmental protection, safety, protection of US national security, and protection of the rights of others to use the OCS and its resources. BOEM authorizes development on the OCS through its review and approval of a project's Site Assessment Plan (SAP) and COP and will be the lead federal agency for the Project.

A table with 10 rows and 2 columns. The entire content of the table is redacted with black bars.

A SAP describes the initial activities to characterize a site (e.g., installation of meteorological towers and meteorological buoys). 

A table with 4 rows and 2 columns. The entire content of the table is redacted with black bars.

The next major step in the Project's federal permitting process will be preparation and submission of a COP. In approving a COP, BOEM must comply with its obligations under the National Environmental Policy Act (NEPA), the National Historic Preservation Act (NHPA), the Magnuson-Stevens Fishery Conservation and Management Act (MSFCMA), the Migratory Bird Treaty Act (MBTA), the CAA, and the Endangered Species Act (ESA). Thus, BOEM coordinates and consults with numerous other federal agencies, including NMFS, US Fish and Wildlife Service (USFWS), EPA, and the USCG during the review process. When appropriate, BOEM also coordinates with states under the Coastal Zone Management Act (CZMA) to ensure that a project is consistent with state-level coastal zone management plans.

Army Corps of Engineers: Section 10 of the Rivers and Harbors Act of 1899 prohibits the unauthorized obstruction or alteration of any navigable water. A Section 10 permit from the ACOE is needed for the installation of the WTGs and the ESP, the installation of the offshore cable systems, and the cable landfall structures. Section 404 of the CWA prohibits discharges of dredge or fill material into waters of the United States (i.e., waters beyond the three nautical mile limit for state territorial waters). A Section 404 permit from the ACOE is needed because construction will involve dredging and potentially backfilling portions of the seabed associated with the installation of the offshore transmission cable. Like BOEM, the ACOE must comply with its obligations under NEPA, NHPA, MSFCMA, MBTA, and ESA. However, to avoid duplication of effort, the ACOE will likely be a cooperating agency with BOEM through the NEPA process.

Environmental Protection Agency: A CAA permit is required for emissions from vessels and equipment used during construction and operation of the Project on the OCS. OCS sources subject to the permit include any equipment or activity that has the potential to emit any air pollutant. A vessel itself is not considered an OCS source unless it attaches to the seabed, but vessel emissions associated with an OCS source are included in the permit. The EPA will likely coordinate with BOEM to satisfy its obligations under the ESA and other relevant statutes.

National Marine Fisheries Service: An IHA or LOA under the MMPA is necessary for construction, principally because of the potential noise impacts to marine mammals associated with pile driving. Under the MMPA, the noise levels associated with construction have the potential to “harass” marine mammals and, therefore, an authorization is required. [REDACTED]

Federal Aviation Administration: The FAA requires a public notice of the proposed construction of a structure that is more than 200 feet (ft) above ground level or within certain distances of airports. [REDACTED]

[REDACTED] Vineyard Wind will also consult with the US Department of Defense Siting Clearing House with respect to military air traffic.

Coastal Zone Management and Coastal Resources Management Council: The CZMA gives states the authority to review federal actions that impact their coastal uses and/or resources to ensure that such actions are consistent with a state’s federally approved coastal zone management program and policies. The Rhode Island Coastal Resources Management Council (CRMC) and the Massachusetts Office of Coastal Zone Management (CZM) are responsible for implementing the federal consistency review process for Rhode Island and Massachusetts, respectively, pursuant to the CZMA (15 C.F.R. part 930, subpart E).

**Table 7.1-1 Federal Permits for Vineyard Wind 2**

Agency/Regulatory Authority	Permit/Approval	Status
Bureau of Ocean Energy Management (BOEM)	Site Assessment Plan approval	Not required
	Construction and Operations Plan approval	To be filed (TBF)
	National Environmental Policy Act Environmental Review, including: Consultation under Section 7 of the Endangered Species Act with National Marine Fisheries Service and US Fish and Wildlife Service, Coordination with states under the Coastal Zone Management Act, Government-to-Government Tribal Consultation, Consultation under Section 106 of the National Historic Preservation Act, and Consultation with National Marine Fisheries Service for Essential Fish Habitat (EFH).	To be initiated by BOEM
US Environmental Protection Agency	National Pollutant Discharge Elimination System General Permit for Construction Activities	TBF
	Outer Continental Shelf Air Permit	Notice of Intent TBF
US Army Corps of Engineers	Individual Clean Water Act Section 404 (Required for side-casting of dredged material and placement of foundations, scour protection, and cable protection)	TBF
	Rivers and Harbors Act of 1899 Section 10 Permit (Required for all offshore structures and dredging activities)	TBF
US National Marine Fisheries Service	Incidental Harassment Authorization or Letter of Authorization	TBF
US Coast Guard	Private Aids to Navigation authorization	TBF
Federal Aviation Administration	No Hazard Determinations (for activities at construction staging areas and vessel transits, if required)	TBF
MA Coastal Zone Management/ RI Coastal Resources Management Council	Consistency Review pursuant to Coastal Zone Management Act	TBF

State Permits and Approvals

At the state level, Project elements located in Massachusetts waters, as well as onshore elements, are subject to two primary review processes: (1) a broad adjudicatory review by the Energy Facilities Siting Board (EFSB), which can incorporate a request for local zoning relief; and (2) an environmental review under the Massachusetts Environmental Protection Act (MEPA).

Project elements under Massachusetts's jurisdiction will also require review and/or permits from the state's Department of Environmental Protection (MassDEP), Division of Marine Fisheries (DMF), and Department of Transportation. Required consultations with the Massachusetts Natural Heritage and Endangered Species Program, the Massachusetts Historical Commission (MHC), and the

Massachusetts Board of Underwater Archaeological Resources (MBUAR) will be conducted as part of the MEPA review. MHC and MBUAR also issue permits for archaeological investigations and participate in BOEM's Section 106 review.

Table 7.1-2 lists all of the expected state permits required for the Project and their status.

State Permitting Process

Energy Facilities Siting Board: The EFSB reviews proposals to construct certain energy facilities, including large power plants, electric transmission lines, and natural gas pipelines. Pursuant to M.G.L. c. 164, § 69J, no applicant shall commence construction of a “facility” unless a petition for approval of construction has been granted by the EFSB. A jurisdictional “facility” includes “a new electric transmission line having a design rating of 69 kilovolts or more and which is one mile or more in length on a new transmission corridor” (M.G.L. c. 164, § 69G). The EFSB also has the ability to grant a Certificate of Environmental Impact and Public Interest (approval under M.G.L. c. 164, §§ 69K-69O), which has the effect of granting other state, regional, and local permits.

For the Project, Vineyard Wind would need to file a petition with the EFSB to construct the transmission line (i.e., export cable) and onshore substation pursuant to M.G.L. c. 164, § 69J (Section 69J Petition). Vineyard Wind would also need to file related petitions with the Department of Public Utilities (DPU) for approval of the construction of transmission lines and for relief from local zoning requirements. Vineyard Wind expects the DPU petitions to be consolidated for review with the Section 69J Petition.

Massachusetts Environmental Policy Act: MEPA jurisdiction is triggered when an entity undertakes certain activities in Massachusetts that require one or more state permits. In this instance, MEPA jurisdiction only applies to those portions of the Project located within Massachusetts, including its territorial waters. Therefore, the Project components subject to MEPA review are the onshore and offshore cable system out to the mapped three-nautical mile state territorial sea boundary. MEPA review would consist of an Environmental Impact Report (EIR), whose scope is limited to those aspects of the Project within the subject matter of any required state permits that are likely, directly or indirectly, to cause damage to the environment. Vineyard Wind would initiate MEPA review by filing an Environmental Notification Form (ENF) with the MEPA office.

Table 7.1-2 State Permits for Vineyard Wind 2

Agency/Regulatory Authority	Permit/Approval	Status
Massachusetts Environmental Policy Act Office	Certificate of Secretary of Energy and Environmental Affairs on Final Environmental Impact Report	Environmental Notification Form To be filed (TBF)
Massachusetts Energy Facilities Siting Board	M.G.L. c. 64, § 69J Approval	TBF
Massachusetts Department of Public Utilities	M.G.L. c. 164, § 72, Approval to Construct M.G.L. c. 40A, § 3 Zoning Exemption (if needed)	TBF TBF
Massachusetts Department of Environmental Protection	Chapter 91 Waterways License/Water Quality Certification (Section 401 of the Clean Water Act)	TBF
Massachusetts Division of Marine Fisheries	Letter of Authorization and/or Scientific Permit (for surveys and pre-lay grapnel run)	TBF
Massachusetts Department of Transportation	Road Crossing Permits and Rail Division Use and Occupancy License (if needed)	TBF
Massachusetts Board of Underwater Archaeological Resources	Special Use Permit	TBF
Natural Heritage and Endangered Species Program	Conservation and Management Permit (if needed)	TBF
Massachusetts Historical Commission	Field Investigation Permits (980 C.M.R. § 70.00)	TBF

7.2 Provide the anticipated timeline for seeking and receiving the required permits, licenses, and environmental assessments and/or environmental impact statements. Include a project approval assessment which describes, in narrative form, each segment of the process, the required permit or approval, the status of the request or application and the basis for projection of success by the milestone date. All requirements should be included on the project schedule in Section 10.

PERMITTING TIMELINE

[REDACTED] The permitting will allow for construction to proceed in one cycle or in stages. Therefore, as with Vineyard Wind 1, the permits will accommodate buildout of the Project's maximum capacity regardless of the commercial scenarios that lead to the full buildout.

The required federal, state, regional, and local reviews and permits for the Project, together with an explanatory discussion, are provided in response to **Question 7.1**. The Project's permitting schedule is described in more detail below. A brief overview of the timeline is shown in **Table 7.2-1**, and all permit requirements are included in the Project schedule included in **Section 9**.

[REDACTED]

[REDACTED]

Factors supporting the above permitting timeline include:

- **Significant Survey Work Already Completed:** [REDACTED] Additional offshore G&G surveys are currently underway, which will augment the information gained through prior activities to support the timely permitting process for the Project.
- **The Lease Area is Well-Understood from an Environmental Assessment Perspective:** Vineyard Wind has already conducted a thorough review of the available baseline data and available data on potential impact areas (e.g., marine mammals, birds, etc.). Additional avian and fisheries surveys are currently underway in support of the Project's permitting process.
- **Pre-filing Consultation with Agency and Non-Governmental Stakeholders:** Prior to filing a COP, Vineyard Wind will consult with fisheries stakeholders and regulators regarding the Project's proposed layout (these consultations are already underway), as well as meetings with federal agencies regarding the requirements for assessing the Project's cumulative impacts. These early meetings will address two of the most important issues facing all offshore wind projects (i.e., fisheries and cumulative impacts) and ensure the federal, state, and local permit filings address the concerns of key stakeholders.
- **HCA with the Town of Barnstable:** Vineyard Wind's existing relationship and agreement with the Town of Barnstable positions the Project ahead of others with respect to building trusted relationships with local officials, building community support, and securing the necessary permits and approvals in a timely manner.
- **Lessons Learned from Vineyard Wind 1.** Vineyard Wind is the only developer with firsthand experience permitting an offshore wind project in federal waters for Massachusetts. The lessons learned from that experience have been built into the

Project's permitting strategy and timeline, which afford ample time for stakeholder consultation and feedback prior to COP submission and throughout the permitting process.

- **Extensive Local Outreach and Network of Supporters.** Vineyard Wind has undertaken an extensive local public outreach and community participation program in support of Vineyard Wind 1. This has resulted in considerable public debate about the net benefits of offshore wind for local communities, and a broader understanding of offshore wind and the various related issues by local residents than would otherwise be the case. It has also resulted in a strong network of local supporters, who provide third party validation and an important channel for communicating accurate information regarding issues and questions of concern, as well to the benefits of offshore wind projects.

Federal Permitting Timeline

Bureau of Ocean Energy Management

Once filed, BOEM conducts technical and environmental reviews of the COP, which is coordinated through BOEM's NEPA process. The agency then issues a Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS).

Army Corps of Engineers

The ACOE will coordinate its reviews of Vineyard Wind's Section 10 and Section 404 permits with BOEM's NEPA process. The ACOE will actively participate in BOEM's process to allow it to adopt the Final EIS and the findings of associated reviews.

Environmental Protection Agency

Upon receipt of the NOI, the EPA would designate the Corresponding Onshore Area (COA) and publish a consistency update to the OCS Air Regulations (40 C.F.R. Part 55).

The EPA reviews the application for completeness within approximately 30 days and then prepares a draft permit and Statement of Basis. The draft permit is then available for public comment for 30 days. Following the close of the comment period, the EPA addresses comments and issues a final permit. The permit becomes effective approximately 30 days after it is finalized.

In issuing a permit, the EPA has an obligation to comply with the ESA. However, to avoid duplication of effort, the EPA typically relies upon BOEM's ESA assessments and consultations.

National Marine Fisheries Service

Under the MMPA, an IHA is to be issued 120 days after an application is considered complete. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Federal Aviation Administration and US Coast Guard

Both the FAA and USCG will be involved in Project development and ongoing permitting activities with Vineyard Wind and through coordination with BOEM. [REDACTED]

[REDACTED]

State, Regional, and Local Timelines

As discussed in response to **Question 7.1**, Massachusetts, regional, and local approvals are required for portions of the offshore cables, as well as the onshore components, over which Massachusetts and its regional and local entities have jurisdiction. Massachusetts, regional, and local approvals are not required for Project elements located in federal waters.

Energy Facilities Siting Board

The EFSB process will be initiated by Vineyard Wind with the filing of its petition. A 14 to 15 month review period is reasonably expected because the Baker Administration has streamlined the process by eliminating the time-consuming “bench or issues memo” step, thus shortening the previous process by several months. In conjunction with the EFSB petition filing, Vineyard Wind will file the DPU Section 72 and 40A petitions listed in **Table 7.1-2**. Review of these petitions is normally consolidated with the EFSB review. After filing the EFSB petition, the next step in the process is a public hearing and public comment period. The EFSB will then review all comments and request clarification or further information from Vineyard Wind. [REDACTED]

[REDACTED]

[REDACTED]

Massachusetts Environmental Policy Act

[REDACTED] From there, an ENF certificate is issued, after which Vineyard Wind will submit a Draft EIR. Following public review and comment on the Draft EIR and the issuance of a Secretary’s Certificate outlining the scope for a Final EIR, Vineyard Wind will submit a Final EIR. [REDACTED]

[REDACTED]

Massachusetts Permits

Massachusetts permits cannot be issued until the EFSB and MEPA reviews are completed. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Coastal Zone Management and Coastal Resources Management Council

The federal consistency review process will be initiated by Vineyard Wind after the COP has been filed with BOEM. CZM and CRMC review must be completed within six months unless the parties agree to stay the six-month review period in favor of a longer review period. [REDACTED]

agree to stay the six-month review period in favor of a longer review period. [REDACTED]

7.3 Provide information detailing prior experience in environmental impact assessment processes.

ENVIRONMENTAL IMPACT ASSESSMENT EXPERIENCE

Vineyard Wind's permitting team is comprised of global and national leaders in offshore wind and energy infrastructure permitting in southern New England. The permitting team is led by Rachel Pachter, who previously served as the permitting manager for the only US offshore wind project in federal waters to ever receive full permits. Rachel is also leading the permitting for Vineyard Wind 1. The permitting team also includes specialized consultants in environmental impacts assessments, marine biology, hydrodynamic modeling, marine mammals, marine acoustical modeling, avian studies, visual studies, cultural resources, marine navigation, and fisheries.

The permitting team's unique depth and breadth of experience comprises substantial local environmental impact assessment experience with the following:

- A Large-scale offshore wind energy projects, including in Nantucket Sound and the Massachusetts Wind Energy Area (MA WEA);
- Offshore power cables from Cape Cod to both Nantucket and Martha's Vineyard;
- A number of major utility transmission and substation projects on Cape Cod;
- Several utility gas pipeline projects in and along roadways on Cape Cod;

- Third-party environmental compliance monitoring for the Block Island Wind Farm and other Massachusetts energy projects;
- Major utility infrastructure projects in southeastern Massachusetts (one of which involved completing the full Federal Energy Regulatory Commission NEPA review process and included extensive marine elements); and
- Multiple marine and coastal projects in Massachusetts and Rhode Island.

Attachment 7.3-1 further describes the permitting team’s qualifications, successes, and environmental impact assessment experience.

Further, Vineyard Wind’s lead environmental consultant, Epsilon Associates, has been the primary consultant on Vineyard Wind 1 and brings considerable experience and understanding of key issues to the current Project. In addition to its work on Vineyard Wind 1, Epsilon has been involved in more than 25 EFSB cases and hundreds of MEPA and Conservation Commission reviews. Personnel from Epsilon Associates have also been involved in nearly 20 major energy projects in Massachusetts. These projects include renewable energy, gas generating facilities, as well as a proposed liquefied natural gas facility. Epsilon has vast experience in environmental permitting services and support, including air permitting, coastal and marine permitting for offshore infrastructure and submarine cables, environmental compliance monitoring, and expert witness testimony. In particular, Epsilon Associates has experience preparing permit applications for state agencies, including the EFSB, CZM, MassDEP, and the Rhode Island CRMC.

Vineyard Wind’s permitting team and Epsilon have the benefit of the environmental assessment and permitting experience gained developing Vineyard Wind 1. This experience is currently unparalleled in the offshore wind sector and has yielded critical insights into the project development and permitting process, that will be leveraged to support the successful permitting of the Project.

7.4 Please provide information on any fisheries mitigation measures designed to avoid, minimize and mitigate impacts on the commercial fishing industry, including but not limited to, progress on the following practices: fisheries outreach and communication plan; project siting and design; and financial compensation.

FISHERIES MITIGATION MEASURES

Vineyard Wind has a strong understanding of the commercial fishing sector’s concerns. As detailed in this section, the Project is responsive to these concerns as well as stakeholder input the company has previously received. The response to **Question 7.5.iv** also outlines a set of preliminary measures aimed at avoiding, minimizing, and mitigating potential impacts to fisheries, invertebrates, and their habitats during the Project’s construction, operations, and decommissioning phases.

Fisheries Outreach and Communication Plan

Vineyard Wind is committed to working with fisheries stakeholders so that both the wind and fishing industries can grow and thrive together. This commitment is long-standing, and will continue through the Project’s design and permitting, construction, operations, and decommissioning phases. Building trusted and mutually respectful communication with the diverse fishing communities in the

region can be challenging and takes years to cultivate. For these reasons, early, often, transparent, and pro-active communication and engagement with the fishermen with whom Vineyard Wind shares the waters will always be a top priority.

Fisheries Outreach

Vineyard Wind has met with hundreds of fisheries stakeholders since 2010, including fishermen from various gear types, fishing advocacy organizations, and local fisheries groups who are most likely to be affected by offshore wind development on the OCS. Vineyard Wind was the first US developer to engage a fisheries representative, and today has formal relations with four fisheries representatives who represent a variety of gear types and home ports.

Vineyard Wind has a full-time Fisheries Liaison Officer, who has deep knowledge of fishing practices and issues, and an extensive network of personal relations with a wide variety of fishermen in the region. This full-time Fisheries Liaison Officer is supported by a number of fishing liaison consultants, who take on special tasks such as managing communications and observations offshore during vessel operations, or seeking information on fishing in a specific location or gear type.

Vineyard Wind's extensive outreach and engagement efforts include communication, relationship building, and collaboration with groups such as:

- Anglers for Offshore Wind
- Cape Cod Fishermen's Alliance
- Commercial Fisheries Center of Rhode Island
- Coonamessett Farm Foundation
- Eastern Fisheries
- Falmouth Fishermen's Association
- Fishing Partnership Support Services
- Hercules SLR
- KSJ Seafood Inc.
- Long Island Commercial Fishing Association
- Massachusetts DMF
- Massachusetts Fisheries Institute
- Massachusetts Fisheries Working Group
- Massachusetts Fishermen's Partnership and Support Services
- Massachusetts Lobstermen's Association
- Martha's Vineyard Fishermen Preservation Trust
- Mid-Atlantic Fisheries Management Council

- National Academy of Sciences, Offshore Renewable Energy development and Fisheries Conference
- New Bedford Port Authority
- Northeast Fisheries Science Center
- New England Fishery Management Council
- Northeast Fishery Sector Managers VII, VIII, X, XI, XIII
- Northwest Atlantic Fisheries Organization
- New England Aquarium
- Recreational Fishing Alliance
- Responsible Offshore Development Alliance (RODA)
- Responsible Offshore Science Alliance (ROSA)
- Rhode Island Department of Environmental Management
- Rhode Island Fisheries Advisory Board (FAB)
- Rhode Island Marine Fisheries Council
- Rhode Island Salt Water Angler's Association
- Scallop Industry Advisors Meeting
- School for Marine Science and Technology (SMAST, UMass Dartmouth)
- Seafreeze
- Stoveboat- Saving Seafood
- Town Dock
- Woods Hole Oceanographic Institution

Vineyard Wind is a member of, and active participant in, the Massachusetts Fisheries Working Group on Offshore Wind Energy and Habitat Working Group on Offshore Wind Energy; attends the Rhode Island FAB meetings and has had numerous communications with its chairman, Lanny Dellinger; and is a member of the New York State Energy Research and Development Authority Fisheries Technical Working Group. Vineyard Wind is also in contact with the relevant federal (e.g., BOEM, USCG, and NMFS) and state agencies in Massachusetts, Rhode Island, and New York on fishery-related matters. Vineyard Wind is also in near daily communication with individual fishermen from the commercial (fixed and mobile gear) and recreational fishing sectors.

Fisheries Communication Plan

Vineyard Wind employs a variety of outreach and engagement approaches to communicate and maintain relationships with fisheries stakeholders. These include informal conversations with existing contacts, expanding the company's network of Fisheries Representatives, attending fishing industry trade events and recreational fishing shows, and working with the various associations and organizations that represent fishing interests.

To guide the company's outreach and engagement efforts with the fishing community, Vineyard Wind has developed a Fisheries Communication Plan (FCP; see **Attachment 7.4-1**). The is based on best practice guidelines and feedback from the fishing community. The document is publicly available on Vineyard Wind's website (<https://www.vineyardwind.com/fisheries/>) and updated on a regular basis.

The FCP has six main objectives:

1. Enhance the safety of all who work on the ocean in the wind farm, cable corridors, and landfall location;
2. Seek stakeholder concerns and strive for open, transparent resolution of those concerns;
3. Quantify and avoid or mitigate adverse impacts on fisheries;
4. Understand, as fully as possible, historic, current, and potential fisheries in the affected areas;
5. Identify gaps in information relating to fish and fisheries to inform research and monitoring strategies; and
6. Demonstrate decisions, that may impact the fishery industry, are based on best available and most credible information.

Vineyard Wind remains committed to robust stakeholder outreach and consultation with a diverse range of fisheries stakeholders. As the Project moves forward, the company will continue its practice of working with fisheries stakeholders to collaboratively identify and implement appropriate mitigation measures and supporting independent research to address data gaps.

Project Siting and Design

Vineyard Wind has taken steps to site and design a Project that minimizes impacts to the commercial fishing sector and allows fishing and other vessels to transit the Lease Area in a safe and efficient manner. Vineyard Wind has already started extensive outreach with fisheries stakeholders, before the Project's formal permitting process begins, in order to obtain input on the Project's preliminary design, including the design elements discussed below, and anticipates further refining the Project's design based on stakeholder input.

Project Site

The Project will be installed in Lease Area OCS-A 0501, which is located in the MA WEA. The MA WEA was developed by BOEM, with significant stakeholder input through a multi-year process, with the objective of minimizing and avoiding impacts to the marine environment and existing fisheries. For example, after considering stakeholder comments, BOEM modified the MA WEA to exclude some areas of important habitat and fisheries value. BOEM then conducted an Environmental Assessment of Commercial Wind Leasing and Site Assessment Activities, which resulted in a Finding of No Significant Impact. Siting choices associated with these processes were the first step to minimize and avoid impacts to fish, invertebrates, and fisheries during Project construction, operation, and decommissioning.

Wind Turbine Generator Spacing and Layout

The Project's preliminary layout reflects commitments Vineyard Wind has made to the commercial fishing industry as well as feedback from fishery stakeholders. First, the Project's WTG rows are oriented in an east-west direction to allow current commercial fishing practices to continue in the Lease Area. Second, Vineyard Wind has aligned the Project's WTG rows with the WTG rows in the adjacent lease area controlled by Bay State Wind in order to facilitate safe and efficient transit as well as commercial fishing activities across lease areas. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Transit Corridors

Vineyard Wind has been actively engaged in the stakeholder processes regarding determining transit corridors through the WEA. Vineyard Wind notes that the USCG is expected to release a Port Access Route Study regarding this question in September 2019, and the Project will be able to accommodate any recommendations or requirements resulting from that study.

WTG Foundations

Vineyard Wind is considering opportunities to maximize fisheries value through the design of tower bases and installation of scour protection material, such that the design results in improved quality of fishery habitat. For example, Vineyard Wind has received feedback from recreational fishermen that they would prefer more "structure" for scour protection (e.g. a variety of rock sizes). At the same time, commercial fishermen, particularly mobile gear fishermen, are concerned about snagging fishing gear on the scour protection and would prefer as little scour protection as possible. Vineyard Wind will work with commercial and recreational fishermen to design foundations and scour protection for the Project that, to the greatest extent practicable, is responsive to both groups' requests.

Cable Siting, Protection, and Installation

[REDACTED]

[REDACTED] As with Vineyard Wind 1, to minimize potential environmental and fisheries impacts, the Project's cable route will be refined through micro-siting informed by survey data and fishermen's input, and further screening of the proposed landfall location will be conducted. Hard bottom habitat will be avoided wherever possible (e.g., through micro-siting) and the cable will be buried at appropriate depths (i.e., 5-8 ft) whenever possible to reduce the risk of fishing gear loss due to snags on cables and cable protection like concrete mattresses.

A cable burial depth of 5-8 ft will also minimize potential impacts associated with electromagnetic fields. In addition, cable burial techniques that minimize suspended sediments will be selected to limit potential short-term impacts on species and habitats during the Project's construction phase. Finally, Vineyard Wind is also considering the use of virtual AIS to remotely alert vessels to cable locations and further reduce the risk of fishing gear snags. Vineyard Wind is also consulting with fishermen in order to determine optimal cable protection methods, to avoid fishing gear snags in unforeseen circumstances where cable burial to target depths is not able to be achieved.

Scheduling Site Assessment and Construction Activities

Vineyard Wind will further mitigate potential impacts to commercial fishermen by developing site assessment and construction schedules that, to the greatest extent practicable: (1) minimize conflicts with fishing activities; and (2) provide fisheries stakeholders advanced notice of planned activities in Lease Area OCS-A 0501 and along the OECC. Vineyard Wind will develop these schedules in consultation with its Fisheries Representatives and potentially impacted commercial fishermen.

For the Project's construction phase, specifically, the schedule will include, to the extent possible, methods such as alternating construction sites or schedules to minimize impacts to fishermen and other OCS user groups. It is recognized that different gear types, species, and fishing communities may have different and sometimes conflicting seasonal needs. In such cases, Vineyard Wind will work with all impacted fishing communities to identify a construction schedule that minimizes impacts to all or most users, to the extent possible, and that avoids or minimizes conflict among user groups.

Fisheries Monitoring and Fisheries Studies

Independent research to address data gaps is essential to understand and minimize impacts to fisheries potentially attributable to offshore wind. That's why Vineyard Wind fully supports independent research efforts and is itself contributing directly to such efforts through data collection and sharing with academic institutions and experts.

In 2017, Vineyard Wind entered into an agreement with UMass Dartmouth's School for Marine Science and Technology (SMAST) to develop a fisheries survey and monitoring program capable of supporting long-term, regional studies and monitoring potential construction impacts on fisheries resources in Lease Area OCS-A 0501. To develop this framework, SMAST held multiple workshops with regional fishermen to identify priority areas for fisheries and ecological impact assessment.

Based on the input received from more than 75 commercial and recreational fishermen who attended these workshops, and input from academics and government resource agencies, SMAST recommended a number of fisheries monitoring and research methods, including:

- Research procedures that encompass an array of species, ranging from fish caught with fixed gear to those caught with trawls to samplings of juvenile life stages;
- Integrated methodologies that will support additional and/or on-going fisheries research;
- Use of a "nested and modular" study design that can be used for both the relatively small area studied during construction monitoring but also utilized effectively for longer-term studies across the wider region;
- Creation of a standing committee/working group of commercial fishermen to review findings and, if needed, make recommendations based on initial findings while studies are underway; and
- Use of local fishermen to provide vessels in support of the studies.

In April 2019, Vineyard Wind announced it would implement all SMAST recommendations to guide fisheries monitoring during project construction and initiate longer-term studies as part of a regional approach to fisheries studies. This comprehensive research effort, which is led by SMAST on behalf of Vineyard Wind, is already underway for with studies initiated in Q2 2019.

Overall, the SMAST studies seek to further public understanding of the effects of offshore wind development and inform future permitting and public policy decisions regarding wind energy facility siting. The studies will help establish a body of knowledge to the benefit of the US offshore wind industry and fishing community. Vineyard Wind will publicly share all data and reports resulting from the SMAST studies and all subsequent projects in Vineyard Wind's lease areas on the company's website so it is readily available to federal and state agencies, academic institutions, and other interested parties. Vineyard Wind also anticipates publicly sharing data collected from any other Project-related fisheries surveys and monitoring it undertakes or funds.

Mitigation and Financial Compensation

As already noted, BOEM undertook considerable effort to avoid high value fishing areas in selecting what eventually became the Lease Area OCS-A 0501; this process has subsequently been validated by reports that indicate that the fisheries landing value from the Lease Area is one of the lowest of all existing or proposed lease areas. After BOEM effectively avoided significant fishing areas, Vineyard Wind then took steps to minimize fisheries impacts, as described above. For example, the east-west WTG orientation, and design elements aimed at minimizing the potential loss of fishing gear due to snags on foundation structures, associated cables and cable protection, or related structures. Other examples include prioritizing cable burial to a depth that allows continued fishing over the cable, and limiting the use of cable protection such as concrete mattresses. Despite these substantial efforts to avoid and minimize impacts to fisheries, there may remain some possible impacts to fisheries for which mitigation, in forms including financial compensation, is appropriate.

Vineyard Wind is currently finalizing procedures for Vineyard Wind 1 to provide fair compensation to fishermen for gear loss. It has been determined that an independent, third party will evaluate fishing gear loss claims and, when deemed appropriate, make payments from funds provided by Vineyard Wind and held in escrow or trust. These procedures can be extended to the Project or a separate gear loss compensation mechanism can be created. The final procedures, along with guidance in determining appropriate levels of compensation, will be determined through detailed discussions with the fishing community and relevant agencies.

Vineyard Wind has received feedback from fishermen that the independent third-party review process should include claims assessment by a regional fisherman from the gear type in question. These individuals could potentially be compensated by Vineyard Wind on a per-claim basis. Fishermen have also told the company they prefer the same format for gear loss/compensation across all lease areas and would prefer to have one "place" or organization handling claims regardless of which WTG, cable, survey vessel, etc. was involved. Vineyard Wind supports such a mechanism and would participate in further conversations on this topic in the Massachusetts Fisheries Working Group and other forums.

Beyond gear loss, it is too early in the Project development process to determine if a fisheries compensation plan is warranted and what type of compensation would be most effective. Compensatory mitigation is the last step and only employed to the extent that proposed avoidance and mitigation measures prove insufficient.

7.5 Provide a preliminary environmental characterization of the site and project, including both construction and operation. In addition, the bidder should identify environmental impacts associated with the proposed project and any potential impediments to development. A plan to avoid, minimize, or mitigate such impacts or impediments should also be included. The analysis should address each of the major environmental areas presented below, for the proposed project.

PRELIMINARY ENVIRONMENTAL CHARACTERIZATION

The preliminary environmental characterization provided in response to this question describes the Project's Offshore Wind Generation Energy facility site, OECC, proposed landfall location, onshore cable route, and onshore substation from an environmental assessment perspective. This assessment is largely based on the environmental analysis Vineyard Wind submitted as part of the COP for Vineyard Wind 1, which is in the same lease area, and supplemented by the company's ongoing survey and assessment work.² Proposed and potential avoidance, minimization, and mitigation measures for each of the major environmental areas are also discussed.

Vineyard Wind's Project Development Philosophy

Vineyard Wind's approach to avoiding, minimizing, restoring, and offsetting the potential environmental impacts of offshore wind can be summarized as follows: careful siting and collaborative development. Careful siting entails developing offshore wind projects so they avoid potential impacts to the greatest extent possible from the outset. Collaborative development means working with a range of stakeholders before and during a project's permitting process to refine layouts and design elements to further avoid impacts and/or minimize the risk of impacts when they are unavoidable. Collaborative development also means working with stakeholders to craft solutions that mitigate and offset a project's likely potential impacts. This builds on the approach Vineyard Wind employed with Vineyard Wind 1, and reflects the lessons learned developing the country's first commercial-scale offshore wind farm.

Designing a project which avoids or minimizes potential impacts and incorporates stakeholder concerns is an iterative, data-driven process. The quality of this process is directly dependent on the experience, knowledge, and skills of those involved. Vineyard Wind's permitting team has significant experience in data collection, environmental studies, marine and terrestrial environmental impact assessment, and permitting (see **Attachment 7.3-1**). What's more, the experience that Vineyard Wind has already gained from Vineyard Wind 1 will be directly applicable to the Project and further enhance the team's ability to develop, permit, and deploy a well-sited offshore wind farm with limited environmental impact.

² The complete environmental analysis can be found in Volume III of the COP, which is available on BOEM's website (www.boem.gov/Vineyard-Wind/).

Vineyard Wind is committed to working with environmental stakeholders and taking steps to implement appropriate mitigation measures to offset Project impacts that cannot be avoided through careful siting and collaborative design. This commitment is perhaps best exemplified by the agreement that Vineyard Wind has entered into with the Natural Resources Defense Council, National Wildlife Federation, and Conservation Law Foundation to ensure protection of the North Atlantic Right Whale (NARW; *Eubalaena glacialis*) during construction and operation of Vineyard Wind 1 (see **Attachment 7.5-1**). Among other things, this historic agreement clearly demonstrates that Vineyard Wind's project development philosophy is firmly centered on the responsible and sustainable use of the nation's offshore wind resources.

Project Area

The Project is comprised of both offshore and onshore elements. The offshore elements are the Offshore Wind Generation Energy Facility site and OECC, and the onshore elements are the landfall location where the offshore export cable comes to shore, onshore cable routes, and the onshore substation location. Each of these is described, in turn, below.

Offshore Wind Generation Energy Facility Site

The Offshore Wind Generation Facility site for the Project is located in Lease Area OCS-A 0501. Vineyard Wind has a strong understanding of Lease Area OCS-A 0501, [REDACTED] and has conducted a thorough review of available baseline data to support the permitting reviews for Vineyard Wind 1. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

While no energy facility has zero impact, the MA WEA, where Lease Area OCS-A 0501 is located, is an environmentally superior location to build an offshore wind project in terms of minimizing potential impacts and providing maximum benefits. The MA WEA was developed and refined by the BOEM with significant stakeholder input with the objective of minimizing and avoiding impacts to the marine environment and fisheries. For example, the MA WEA was designed taking bird activity south of Nantucket Island into account. During the Area Identification process (2012) for the MA WEA, BOEM excluded some of the OCS lease area blocks that overlapped with high value sea duck habitat and areas that, if ultimately developed with commercial wind energy facilities, would likely cause substantial conflict with commercial and recreational fishing activities.³ BOEM then conducted an Environmental Assessment of Commercial Wind Leasing and Site Assessment Activities, which resulted in a Finding of No Significant Impact. Siting choices associated with these processes were the first step to minimize and avoid impacts to fisheries, marine mammals, and other resources and habitats.

³ See U.S. Department of Interior, Bureau of Ocean Energy Management (2012). Commercial Wind Lease Issuance and Site Assessment Activities on the Atlantic Outer Continental Shelf Offshore Massachusetts, Environmental Assessment, pg. 10. Available at: https://www.boem.gov/uploadedFiles/BOEM/BOEM_Newsroom/Library/Publications/2012/BOEM-2012-087.pdf.

[REDACTED]

Landfall Location

[REDACTED]

Onshore Export Cable Route

[REDACTED]

The planned route will avoid crossing sensitive resource areas, such as streams or other wetlands, to the greatest extent feasible. [REDACTED]

Substation Location

[REDACTED]

MAJOR ENVIRONMENTAL AREAS

i. Air quality

Air Quality

The Project's construction is expected to have minor impacts on air quality, as detailed in **Table 7.5-1** below. The Project's operation, however, will result in significant air quality and climate change benefits as detailed in **Section 13** and is a net benefit to the environment.

**Table 7.5-1 Air Quality Impacts and Proposed Mitigation Measures**

Potential Impacts and Impediments to Development	Short-term air emissions will come primarily from vessels used in Lease Area OCS-A 0501 during construction and operations. These air emissions are unlikely to have any effect on onshore areas due to the Lease Area's location and the fact that prevailing winds are from the west. Short-term air emissions are also not anticipated to result in any violation of Massachusetts or National Ambient Air Quality Standards.
Avoidance, Minimization, or Mitigation Measures	Air emissions from the Project are likely to be minimized by using low-sulfur fuels and other best management practices for engine operations. Air quality impacts will be further mitigated and minimized through the US Environmental Protection Agency's Outer Continental Shelf Air Permit process under 40 C.F.R. 55. [REDACTED] [REDACTED] [REDACTED]

ii. Community

Community

The area where the [REDACTED] is located qualifies as an Environmental Justice (EJ) community, as defined in Massachusetts Environmental Justice Executive Order No. 552 (2014), based on income and minority population. Vineyard Wind has not identified any special or adverse impacts to these communities resulting from the Project or Project-related activities.

Table 7.5-2 Community Impacts and Proposed Mitigation Measures

Potential Impacts and Impediments to Development	The Project is not anticipated to create disproportionately high or adverse health or environmental effects on minority and low-income populations.
Avoidance, Minimization, or Mitigation Measures	In accordance with Massachusetts' Environmental Justice (EJ) policy, Vineyard Wind's community outreach plan includes specific engagement measures for EJ communities to learn about and provide input to the Project (see Attachment 7.6-1).

iii. Cultural resources

Cultural Resources

Cultural resources are an important concern both offshore and onshore. Several federally recognized tribes will be involved in the Project's review through the federal Section 106 process. Vineyard Wind has already conducted extensive outreach with these tribes and provided briefings to those interested in all fieldwork conducted for Vineyard Wind 1. Vineyard Wind has started a new round of outreach with these tribes, as well as the Chappaquiddick Wampanoag Tribe, and will continue its

outreach and fieldwork as the Project moves forward. **Table 7.5-3** summarizes how Vineyard Wind will assess the potential for impacts to cultural resources and how appropriate avoidance, minimization, and mitigation measures will be identified.

Table 7.5-3 Potential Cultural Resources Impacts and Mitigation Measures

<p>Potential Impacts and Impediments to Development</p>	<p>The Public Archaeology Lab (PAL) will complete an archaeological due diligence review of potential onshore cable routes and the onshore substation site. [REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p>
<p>Avoidance, Minimization, or Mitigation Measures</p>	<p>PAL will conduct a reconnaissance level archaeology survey of terrestrial areas where Project impacts are possible, including completion of background research and filing of an archaeological permit application with Massachusetts Historical Commission (MHC). Areas determined to have moderate or high archaeological sensitivity will be subject to intensive archaeological field investigations or monitored during construction. Offshore surveys planned for the field campaign in support of the Project's Construction and Operations Plan will include coverage of all areas where bottom disturbance could occur during construction and operation activities. Survey results will be reviewed by a Qualified Marine Archaeologist prior to any ground disturbance.</p> <p>Avoidance, minimization, and mitigation measures for terrestrial and submarine historical and archaeological resources will be determined in consultation with the consulting parties including, but not limited to, the Bureau of Ocean Energy Management, MHC, Massachusetts Board of Underwater Archaeological Resources, and tribal representatives through the Section 106 process.</p>

iv. Fishery, avian, and marine mammal impacts

Fishery and Invertebrate Impacts

A number of finfish and invertebrate species occur in and around Lease Area OCS-A 0501 and the OECC, including many commercially important species. A list of major fish and invertebrate species potentially occurring in these areas can be found in Table 6.6-1 of Volume III of the COP for Vineyard Wind 1, which is included as **Attachment 7.5-2**. The COP for Vineyard Wind 1 also identifies Essential Fish Habitat in both benthic and substrate water column habitats for 47 fish and invertebrate species. Further desktop review, surveys, and consultations with fisheries stakeholders are currently being conducted to confirm fish and invertebrate assemblage as well as temporal and spatial variations in fish, invertebrates, and their habitats in and around the Offshore Wind Energy Generation facility site and the OECC.

The overall impact of the Project on finfish, invertebrates, and their habitats is anticipated to be short-term, localized, and largely confined to the installation of Project components. Population level impacts are not anticipated. This assessment is supported by the Draft Environmental Impact

Statement (DEIS) issued by BOEM in December 2018 for Vineyard Wind's first 800 MW project,⁴ and will be confirmed after additional desktop research, surveys, and fisheries stakeholder consultation are completed. Vineyard Wind has adopted or is considering a set of avoid/minimize/mitigate measures for the Project to reduce impacts to fisheries resources and other sensitive species, as summarized in **Table 7.5-4**. Additional measures will be considered as the Project moves through the design and permitting phase.

Table 7.5-4 Fishery and Invertebrate Impacts and Proposed Mitigation Measures

Potential Impacts and Impediments to Development	<ul style="list-style-type: none"> Fish species may be impacted by underwater noise during pile installation and possible siltation during cable installation. Fishery habitat may also be impacted during construction and operation of the Project. Commercial fishing may be impacted by construction activity during installation and by the presence of the Project during operations. The overall impact of the Project on finfish, invertebrates, and their habitats is anticipated to be short-term, localized, and largely confined to the installation of Project components. Population level impacts are not anticipated.
Avoidance, Minimization, or Mitigation Measures	<ul style="list-style-type: none"> Underwater noise during pile installation will be mitigated through a soft start, which allows fish time to move away from the area, and/or other methods to be determined based on knowledge gained in the field and consultations with agencies and stakeholders. Cable burial techniques will be selected to minimize suspended sediments during installation. The majority of the cables will be installed in coarse grained sediment that would settle down quickly after installation, which reduces impacts from suspended sediments in the water column. Additionally, offshore cables have also been sited to avoid areas sensitive habitats to the greatest extent feasible. Vineyard Wind does not plan to restrict fishing or transit in the Lease Area, except for required safety zones during construction or maintenance. WTG layout and spacing will incorporate preferences of commercial fishing interests. In addition, Vineyard Wind will implement a pre- and post-construction fisheries monitoring program to measure the Project's effect on fisheries resources. Cable burial for the inter-array cables and export cables will allow for continued ground fishing during Project operations. Vineyard Wind will prioritize cable burial over the use of any cable protection that could impede fishing activity.

As noted in response to **Question 7.4**, Vineyard Wind has undertaken substantial effort to meet with and understand the concerns of various fisheries stakeholders, including commercial fishing interests. The planning for the Project, including key elements of its design, reflects the feedback that Vineyard Wind has received from the fishing community. Vineyard Wind will continue working with fisheries stakeholders to refine the Project's design and identify appropriate additional mitigation measures before and during the permitting process.

⁴ Available at: <https://www.boem.gov/Vineyard-Wind/>.

Avian Impacts

Occurrence of birds in the MA WEA and surrounding area is well-documented, with multiple studies providing important information on avian presence and abundances at a series of useful scales. Based on the assessment completed for Vineyard Wind 1, the species most likely to occur within Lease Area OCS-A 0501 and surrounding waters include 22 species of gulls and terns, 17 species of sea ducks, nine species of shearwaters and petrels, four species of loons and grebes, and three species of gannets and cormorants (see **Attachment 7.5-3**).

During construction, operation, and decommissioning, coastal birds may be exposed during migration and marine birds during all seasons. However, based on the assessment completed for Vineyard Wind 1, coastal birds are expected to have insignificant-to-unlikely behavioral vulnerability to construction activities and unlikely-to-potential vulnerability to WTGs during operation. Depending on the species, marine birds are expected to have a range of behavioral vulnerability and a range of exposure to an offshore wind project located in Lease Area OCS-A 0501. Potential impacts will be minimized through the mitigation measures summarized in **Table 7.5-5** below.

Currently available information indicates that the Project will have negligible-to-minor impacts on bird species likely to occur in Lease Area OCS-A 0501 and the OECC. This assessment is supported by the DEIS for Vineyard Wind 1.

Table 7.5-5 Avian Impacts and Proposed Mitigation Measures

Potential Impacts and Impediments to Development	The primary potential impacts to avian species are mortality or injury due to collision with the WTGs. Federally listed endangered species may have limited exposure to the Project, which would largely be restricted to few individuals during the migration periods. Impacts to these species are expected to be unlikely or insignificant.
Avoidance, Minimization, or Mitigation Measures	<ul style="list-style-type: none"> • Location: The offshore location of the Lease Area avoids potential impacts to many avian species. • Lighting: Vineyard Wind will use best management practices to reduce lighting, which can attract birds, as much as is practicable during construction and operation and follow Federal Aviation Administration recommendations to use red-flashing aviation lights (that fully extinguish), which are favored over steady burning and/or white lights, during operation. [REDACTED]

Marine Mammal Impacts

Twenty-six species of marine mammals occur at least occasionally in the MA WEA. Of those, species that commonly occur in or around the Offshore Wind Energy Generation facility site and the OECC, include:

- NARW,
- Humpback Whale (*Megaptera novaeangliae*),
- Fin Whale (*Balaenoptera physalus physalus*),
- Sei Whale (*Balaenoptera borealis*),

- Minke Whale (*Balaenoptera acutorostrata acutorostrata*),
- Long-Finned Pilot Whale (*Globicephala melas*),
- Atlantic White-Sided Dolphin (*Lagenorhynchus acutus*),
- Short-Beaked Common Dolphin (*Delphinus delphis*),
- Bottlenose Dolphin (Western North Atlantic Offshore Stock),
- Harbor Porpoise (*Phocoena phocoena*),
- Harbor Seal (*Phoca vitulina concolor*), and
- Gray Seal (*Halichoerus grypus*).

All marine mammals are protected by the MMPA (16 U.S.C. § 1361 *et seq.*). Four large whale species that could occur in and around the Offshore Wind Energy Generation facility site and the OECC-NARW, Fin Whale, Sei Whale, and Sperm Whale- are listed as endangered, and therefore, are afforded additional protection under the ESA (16 U.S.C. § 1531 *et seq.*).

Sound and vessel interactions are the primary potential concerns for marine mammals. For all Project phases, disturbance to marine mammals may result from short-term, localized noise and increases in vessel traffic. However, the noise produced by pile driving is of greatest concern as it is the loudest activity expected to occur during the Project's construction phase. While Vineyard Wind is considering monopile and jacket foundations for the WTGs, the majority of the WTG foundations are expected to be monopiles; a jacket foundation has been proposed for the ESP.

It is estimated that each monopile will typically take less than approximately three hours to install; jacket pin piles will take less time to install than monopiles. It is anticipated that up to two monopile foundations and a maximum of one complete jacket could be installed per day. There will be many days where no pile driving occurs, creating periods without pile driving noise throughout the construction period. Some habituation and/or adaptation to pile driving noise may occur. Vineyard Wind is also looking into alternate foundation types that do not involve pile driving and assessing their feasibility based on site conditions and other factors. Further, Vineyard Wind is in discussions and analysis with hammer manufacturers on potential advancements in hammer technologies to reduce noises in the frequency bands associated with the species specific to the MA WEA.

While it is premature to discuss all potential mitigation measures at this stage of the Project's development, a number of measures and initiatives have been identified. Measures such as the establishment of clearance and monitoring zones, pile driving soft-start procedures, vessel speed restrictions and avoidance measures, noise reduction technology, and the use of protected species observers and underwater vocalization detection systems (i.e., Passive Acoustic Monitoring [PAM]) are expected to be part of the final mitigation plan. **Table 7.5-6** below summarizes potential mitigation measures for the Project. Vineyard Wind will work collaboratively with BOEM, the National Oceanic and Atmospheric Administration (NOAA), and other stakeholders to further develop mitigation measures that effectively minimize and avoid the risk of potential impacts to marine mammals from noise generated during the construction and operation of the Project.

Appropriate mitigation and best management practices must consider both practicability for a large-scale project and effectiveness at avoiding and minimizing impacts to marine mammals. Practicability includes safety, logistical ability, project integrity, environmental impacts, and the potential to increase the Project's construction duration, which may have secondary impacts on other Project resources. Options will be modeled and weighed against biological value and effectiveness relative to practicability. BOEM and NOAA will be engaged in this iterative and adaptive process that will also incorporate lessons learned from Block Island offshore wind farm's five-turbine demonstration project located near the Massachusetts/Rhode Island Wind Energy Area and Vineyard Wind's first 800 MW project.

Table 7.5-6 *Marine Mammal Impacts and Potential Mitigation Measures*

<p>Potential Impacts and Impediments to Development</p>	<ul style="list-style-type: none"> • Construction: Disturbance is expected to primarily result from pile driving noise; however, there is also potential for vessel interaction. For federally listed whale species, there are no anticipated losses of individuals, but disturbance of individuals may occur. • Operation: Current literature indicates noise generated from the operation of wind farms is minimal and only localized avoidance behaviors are expected, if at all; acclimation to the noise over time may occur.
<p>Avoidance, Minimization, or Mitigation Measures</p>	<ul style="list-style-type: none"> • Measures that Vineyard Wind expects to employ include the establishment of clearance and monitoring zones, pile driving soft-start procedures, vessel speed restrictions and avoidance measures, and the use of protected species observers. Project vessels will also comply with the National Marine Fisheries Service Regional Viewing Guidelines while in transit. Vineyard Wind will use the learnings and experience gained on Vineyard Wind 1 to develop a mitigation plan for the Project. • Enhanced mitigation measures for the North Atlantic Right Whale may include time of year restrictions on pile driving, passive acoustic monitoring (PAM), extended PAM clearance zones, and aerial or boat surveys across a clearance zone prior to the start of piling. Final measures will be determined in consultation with federal and state agencies and environmental stakeholders. • Vineyard Wind is considering a number of noise mitigation technologies. Options under consideration include equipment selection that is optimized for sound reduction (Integrated Pile Installer), underwater noise abatement systems (e.g., AdBm encapsulated air-filled resonators), and/or bubble curtains to reduce sounds levels. Vineyard Wind will collaborate with BOEM and the National Oceanic and Atmospheric Administration to integrate practicable technology choices in equipment, mitigation, and monitoring to meet the necessary standards for permitting and successful consultations. • Vineyard Wind is also supporting the development of technologies to reduce impacts to marine mammals through the \$3 million Wind and Whales fund established in connection with Vineyard Wind 1. This effort will benefit all future projects including the one proposed here.

Vineyard Wind is also considering a set of enhanced mitigation measures for the NARW to further reduce exposure and potential impacts. For example, during certain times of the year, Vineyard Wind may implement, among other things, 24/7 PAM, extended PAM clearance zones, and aerial or boat surveys across a clearance zone prior to the start of piling. Such measures are similar to those

included in the agreement, announced in January 2019, between Vineyard Wind and the Natural Resources Defense Council, National Wildlife Federation, and Conservation Law Foundation whereby Vineyard Wind committed to implement voluntary, enhanced measures to protect the NARW (see **Attachment 7.5-1**). Enhanced mitigation measures for the Project will be developed in consultation with BOEM, NOAA, state agencies, and environmental stakeholders, and benefit from lessons learned during Vineyard Wind 1.

v. *Other ecological and biological resources (including endangered species)*

Other Ecological and Biological Resources

Other Ecological and Biological Resources relevant to the Project are bats, sea turtles, and terrestrial fauna.

Bats

The Project will be located approximately 23 mi from Martha's Vineyard. As such, the overall exposure of bat species to the Offshore Wind Generation Energy facility is expected to be insignificant-to-unlikely. With respect to Northern Long-eared Bats (*Myotis septentrionalis*), based on BOEM's Biological Assessment for Vineyard Wind 1, given the rarity of the bat in the region, its ecology, and habitat requirements, it is extremely unlikely this species would traverse portions of Lease Area OCS-A 0501. Onshore, Vineyard Wind will adhere to Northern Long-eared Bat ESA 4(d) Rule, and any applicable local regulations for this and other endangered or threatened species.

Sea Turtles

Sea turtles are reptiles that use marine habitats throughout the tropical and temperate regions of the world's oceans, in addition to adjacent terrestrial habitats (i.e., sandy beaches) for nesting. Seven species of sea turtles occur worldwide, all of which are protected under the ESA. However, only four species of sea turtles are likely to occur in and around the Offshore Wind Generation Facility site, OECC, and New England waters: Loggerhead Sea Turtle (*Caretta caretta*), Kemp's Ridley Sea Turtle (*Lepidochelys kempii*), Green Sea Turtle (*Chelonia mydas*), and Leatherback Sea Turtle (*Dermochelys coriacea*). Sea turtle presence in the MA WEA is primarily limited to summer and fall months as sea turtles use warmer water habitats in the winter months. In addition, no nesting sites are expected near the proposed landfall location for the Project.

Best available science indicates that sea turtle hearing is less than that of marine mammals; and therefore, the proposed mitigation measures for marine mammals provide even more conservative measure for sea turtles. These measures are summarized in **Table 7.5-6**.

Terrestrial Fauna

[REDACTED]

vi. Landscape and visual

Landscape and Visual

The area of potential visual effects for the Project includes Martha's Vineyard, Nantucket Island, the Elizabeth Islands, associated smaller islands, and a portion of Cape Cod. The islands are generally characterized by low elevation, with undulating hills and shallow depressions. Elevations range from sea-level to approximately 110 ft above sea-level in the central portion of Martha's Vineyard and Nantucket. Most of the oceanfront is fringed by barrier beaches and sand dunes. The overall aesthetic character of Martha's Vineyard and Nantucket is that of a small-town landscape with minimal urban development. The horizon, looking south towards the ocean, is typically defined by a view of the open ocean. Lights from boats and ships, and often nearby shores, can be seen from all locations of the coastline on the ocean horizon on most nights.

The Project is located approximately 23 mi from the nearest shoreline on Martha's Vineyard, 25 mi from Nantucket, and south of Vineyard Wind 1. At this distance, only a portion of the WTGs will be visible from land-based vantage points and are likely to be considered visually subordinate to the landscape. Normal atmospheric phenomena, including fog, particulate matter, smog or any combination thereof, will further reduce the potential visibility of the WTGs. An assessment of visibility for Vineyard Wind 1 indicates that for Nantucket the closest WTG (14.9 miles) may be visible 50% of annual daylight hours; however, this does not include all visibility reducing factors such as sea salts, wind, and other factors. For this Project, the expected visibility would be even less since the closest WTG is approximately 23 mi from Martha's Vineyard and 25 mi from Nantucket. [REDACTED]

[REDACTED] The WTGs will not be visible from Cape Cod or any other mainland locations.

[REDACTED]

Table 7.5-7 Landscape and Visual Impacts and Proposed Mitigation Measures

<p>Potential Impacts and Impediments to Development</p>	<ul style="list-style-type: none"> • Portions of Project's wind turbine generators (WTGs) and night lighting may be visible under certain conditions from some land-based vantage points on Martha's Vineyard and Nantucket. • Areas in the immediate vicinity of the Project's onshore substation may experience limited visual impacts.
<p>Avoidance, Minimization, or Mitigation Measures</p>	<ul style="list-style-type: none"> • Distance from shore: Due to the distance of the WTGs from shore, the curvature of the Earth obstructs the visibility of the Project in its entirety (e.g., from Cape Cod) and partially obstructs the visibility from other locations. At no point, can any of the WTGs be viewed at their full height from shore. Meteorological and atmospheric conditions will further limit the visibility of the WTGs. • WTG design and appearance: The WTGs are uniform in shape, color, size of rotor blades, nacelles, and towers to minimize visual contrast. The white to light gray color selected for all WTG components is designed to minimize contrast with the sky under most conditions. <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p>

vii. Oceanography

Oceanography

The Project will be located in Lease Area OCS-A 0501, which is located in the open Atlantic Ocean south of Martha's Vineyard and Nantucket. [REDACTED]

[REDACTED] The dominant wind and sea direction is from the southwest and south with a secondary component from the northwest. Sediment is transported by longshore drift and tidal currents, with episodic storm events causing more severe erosion and distribution. Tides are semi-diurnal with two high and two low tides occurring daily. The Project is not expected to impact oceanography, and the measures described in **Table 7.5-8** will ensure minimal disturbance to and protection of the ocean's resources.

**Table 7.5-8 Oceanography Impacts and Proposed Mitigation Measures**

Potential Impacts and Impediments to Development	The Project is not expected to impact oceanography.
Avoidance, Minimization, or Mitigation Measures	<ul style="list-style-type: none"> • An overarching Safety Management System, Oil Spill Response Plan, waste management plans, emergency response plan as well as others will be in place to protect ocean resources. • WTGs will be widely spaced with Project structures impacting less than 1% of the Offshore Wind Energy Generation facility site where they will be installed.

viii. Sound, noise and vibration

Sound, Noise and Vibration

The Project's noise level impacts are primarily limited to the construction phase and result from pile-driving activities undertaken to install the Project's foundations. As already discussed, the underwater noise generated by pile driving has the potential to impact marine mammal and other marine species in the vicinity of these activities. Other potential sound-producing activities during the Project's construction phase are vessel traffic, cable installation, and survey operations. The potential sound-producing activities for the Project's operations phase are WTG operation, vessel traffic, and survey operations. There is a low risk, however, that the Project's operations and maintenance activities would result in potential noise impacts, including acoustic impacts to marine mammal and other marine species.

Table 7.5-9 Sound, Noise and Vibration Impacts and Proposed Mitigation Measures

Potential Impacts and Impediments to Development	<ul style="list-style-type: none"> • Construction: Noise during construction, particularly during pile driving, is addressed in response to Question 7.5.iv, and will be analyzed in-depth through the permitting process. • Operation: Current literature indicates noise generated from the operation of wind farms is minimal and only localized avoidance behaviors are expected; acclimation to the noise over time may occur.
Avoidance, Minimization, or Mitigation Measures	<ul style="list-style-type: none"> • Noise mitigation measures are addressed in response to Question 7.5.iv. • Appropriate monitoring and mitigation procedures, like those required in the lease agreement for Lease Area OCS-A 0501 for site assessment, would be utilized to minimize potential impacts from survey operations.

ix. Socio-economic and land use

Socio-economic and Land Use

[REDACTED]

[REDACTED]

[REDACTED]

x. Traffic and transportation (including Navigation)

Traffic and Transportation

The majority of the Project will be located offshore in Lease Area OCS-A 0501. The most significant operational impact in the offshore environment is related to navigation in the Offshore Wind Energy Generation facility site. [REDACTED]

[REDACTED]

[REDACTED]

**Table 7.5-10**

includes an overview of potential traffic, transportation, and navigation-related impacts as well as proposed mitigation measures.

Table 7.5-10 Traffic and Transportation Impacts and Proposed Mitigation Measures

<p>Potential Impacts and Impediments to Development</p>	<ul style="list-style-type: none"> • Offshore: Project-related activities may impact navigation capacity and vessels transiting to and from ports along the south coast of Massachusetts, Cape Cod, and the Islands. Congestion in the port(s) could also occur during the construction phase. Temporary restrictions on non-Project-related vessels transiting in the immediate vicinity of the Project's construction vessels may be necessary. Aside from this, no significant disruptions to navigation patterns or aids to navigation are anticipated during the construction. During the operations phase, the Project may increase risks to navigation. However, the structures will also be considered Private Aids to Navigation (PATONS). • [REDACTED]
<p>Avoidance, Minimization, or Mitigation Measures</p>	<ul style="list-style-type: none"> • The Project is sited within the Massachusetts Wind Energy Area, which, after public comment, was developed to avoid shipping lanes and United States Coast Guard (USCG)-designated Traffic Separation Schemes. [REDACTED] • To minimize hazards to navigation, all Project-related vessels, equipment, and appurtenances will display the required navigation lighting and day shapes. Notices to Mariners (NTMs) will be distributed to notify recreational and commercial vessels of their intended operations to/from and within Lease Area OCS-A 0501. Vineyard Wind's FCP will keep relevant parties informed (see Attachment 7.4-1). • Vineyard Wind will continue working with ferry operators, harbor pilots, other vessel operators, the Harbor Development Commissions, the Harbor Masters, USCG, and other entities to ensure disruption to commercial vessel traffic and navigation is minimized to the greatest extent practicable. Vineyard Wind has also engaged with the marine pilots to coordinate installation vessel approaches, as required by state and federal law, and to minimize impacts to commercial vessel traffic and navigation. A traffic management plan will be developed for harbor activities. • To aid mariners navigating Lease Area OCS-A 0501, WTGs and the electrical service platform will contain fog horns and be lit, marked, and maintained as PATONs in reference to International Association of Lighthouse Authorities guidance. NTMs will be distributed to notify recreational and commercial vessels of construction activities. • [REDACTED]

xi. Water resources (including quality and flood risk)

Water Resources

The Project is not expected to have any significant environmental or biological impacts related to offshore water resources during either the construction or operational phases as detailed in **Table 7.5-11**. As noted in response to **Question 7.5.vii**, multiple plans, pertaining to either the construction or operation of the Project, or both, will be in place to ensure protection of the ocean resources, including an Oil Spill Response Plan, waste management plans, an emergency response plan, and an overarching Safety Management System.

Certain construction activities, such as cable installation, may have limited, temporary, and small-scale impact to water quality via sediment resuspension and dispersion. In most cases, during installation of the offshore cable system, mobilized sediment will not be transported far by the currents and will settle rapidly. Based on sediment dispersion modelling for Vineyard Wind 1, maximum deposition is typically less than 0.2 inches (in).

Table 7.5-11 Water Resources Impacts and Proposed Mitigation Measures

<p>Potential Impacts and Impediments to Development</p>	<ul style="list-style-type: none"> • Pile driving, offshore cable installation, horizontal directional drilling (HDD), installation of scour protection, and dredging may impact offshore water resources through sediment resuspension and dispersion. Impacts will be short-term and localized. Based on sediment dispersion modelling, maximum deposition associated with cable installation is typically less than 0.2 in. • Routine releases from vessels, bilge water, engine cooling water, deck drainage and/or ballast water are expected. Such releases would quickly disperse, dilute, and biodegrade so that impacts to offshore water resources would be minimal. • [REDACTED]
<p>Avoidance, Minimization, or Mitigation Measures</p>	<ul style="list-style-type: none"> • Cable installation methods, such as HDD and using the least environmentally impactful offshore cable installation techniques (such as a jet plow or similar), will be employed to avoid and minimize potential impacts. • Multiple plans will be in place to ensure protection of the ocean resources including an Oil Spill Response Plan, waste management plans, emergency response plans, and an overarching Safety Management System. • Offshore export cables do not contain any fluids. • [REDACTED]

The Project is not anticipated to impact access to or the quality of any onshore water resources, including but not limited to wetlands, and wetland soils, waterbodies, watercourses, groundwater, drinking water, and public water supplies. [REDACTED]

7.6 Provide documentation identifying the level of public support for the project including letters from public officials, newspaper articles, etc. Include information on specific localized support and/or opposition to the project of which the bidder is aware. Provide copies of any agreements with communities and other constituencies impacted by the project, and a stakeholder map with a plan for community engagement activities. Please discuss the status of the stakeholder plan.

Vineyard Wind's community outreach work has been underway for a decade and has fostered strong community support for offshore wind. As a result of these efforts, Vineyard Wind is viewed by many as a trusted community partner. Vineyard Wind 1 enjoys substantial public support. Vineyard Wind 2 will benefit greatly from this existing base of support. The company is also confident in its ability to continue to successfully engage with local communities on Cape Cod, Martha's Vineyard, and Nantucket and secure public support for the Project.

COMMUNITY OUTREACH PLAN

Vineyard Wind has developed a community outreach plan (the "Plan") for the Project, included as **Attachment 7.6-1**. The Plan builds on the experience gained developing the company's first Massachusetts project and provides a high degree of assurance that potentially impacted communities will support it. As detailed below, the community outreach plan includes stakeholder maps for each of the major stakeholder groups identified and describes community engagement strategies for the Project's design and permitting, construction, and operations phases.

This Plan defines stakeholders as individuals, institutions, groups, or communities that may be directly or indirectly affected by Project-related activities or have an interest in them. This diverse group spans several states and is comprised of communities or individuals and their formal and informal representatives, including national or local government authorities, elected officials, community organizations, public interest groups, and others.

These stakeholders are categorized into one of five primary stakeholder groups:

- Federal, State, and Local Government Entities
- Local Communities
- Fisheries and Marine Users
- Business, Organized Labor, Non-Profit, and Other Interest Groups
- Tribes

While the Plan includes a stakeholder mapping exercise for fisheries stakeholders, engagement and communication with these stakeholders is primarily be managed through Vineyard Wind's FCP (see **Attachment 7.4-1**). The Plan does not include supply chain stakeholders, which are managed through the Project's procurement process (see **Section 8**).

As detailed in the Plan, Vineyard Wind's approach to community outreach is to provide stakeholders regular and meaningful opportunities to offer input into the project development process and to develop community benefits on a collaborative basis. For example, during the design and permitting phase for Vineyard Wind 1, Vineyard Wind has:

- Provided ample opportunity in multiple public forums for interested stakeholders to learn about the project, ask questions, and share feedback;
- Responded to concerns raised by fisheries and marine users stakeholders by, among other things, making changes to the project's design and agreeing to implement fisheries monitoring studies recommended by SMAST;
- Entered into an historic agreement with environmental organizations to secure additional protections for the NARW during project construction; and
- Negotiated an HCA with the Town of Barnstable that not only supports Vineyard Wind 1 project but this Project as well.

The company's hands-on collaborative approach to community outreach has proven successful in Vineyard Wind 1, and a substantially similar approach will be implemented for Vineyard Wind 2. The Project also stands to reap significant benefits from Vineyard Wind's early and on-going outreach efforts and the trust the company has built along the way by following through on its commitments and responding to stakeholder concerns. Finally, the community outreach plan is a dynamic document that will be revisited and updated as the Project moves forward to ensure it remains relevant and responsive to the interests of new and existing stakeholders.

Status of Community Engagement Activities

Vineyard Wind's outreach efforts have intensified significantly in the past three years as Vineyard Wind 1 has moved through the design and permitting phase. The company is in daily contact with a wide array of federal, state, fisheries, community, and environmental stakeholders. [REDACTED]

[REDACTED] These meetings are in addition to regular calls and emails that Vineyard Wind has with these stakeholders.

[REDACTED]

[REDACTED]

Furthermore, most of the learnings and benefit of fisheries outreach related to Vineyard Wind 1 can and will be applied to Vineyard Wind 2. [REDACTED]

Support for Vineyard Wind in the Community

Vineyard Wind has been working for the better part of a decade to build support for the country's first commercial-scale offshore wind farm. Behind Vineyard Wind's outreach efforts is a dedicated outreach team comprised largely of community organizing and campaign veterans who have spent years working for environmental non-profits, community organizations, elected officials, and political and advocacy campaigns in and around Massachusetts.

The support letters included as **Attachment 7.6-3** speak to the success of Vineyard Wind's community outreach efforts and sincere commitment to working with local communities to develop well-sited offshore wind projects. These letters come from a variety of stakeholders, including state legislators, town managers, chambers of commerce, business development groups, solar companies, environmental organizations, and private citizens in Massachusetts and Rhode Island. Excerpts from some of the support letters are included below:

"Vineyard Wind has demonstrated its willingness and commitment to developing community benefits on a collaborative basis, listening to community concerns, and developing offshore wind in a manner that delivers significant benefits to the Commonwealth."

- Mark Ells, Barnstable Town Manager

"The creation of a major new industry such as offshore wind in the public domain is a major undertaking for sure. It is impossible to predict any and all circumstances that will occur as we launch this new industry. For that reason, we believe that Vineyard Wind is an excellent partner. They have demonstrated a sound commitment to incumbent industries, the environment, and minimizing impacts to the ocean environment. We believe they will continue this commitment throughout the project's development and operation."

- Wendy Northcross, CEO, Cape Cod Chamber of Commerce

"[We have] carefully followed and been impressed by Vineyard Wind's efforts to mitigate project impacts and address community concerns."

- Moncrieff Cochran, Executive Director, Cape Cod Climate Change Collaborative

"We are pleased to see that Vineyard Wind has made every effort to reduce the environmental impacts on local communities and to address the concerns of those in the fishing industry who feel they might be adversely affected. Vineyard Wind has listened to these concerns and taken steps to alleviate them."

- Dorothy McIver, Greening Greenfield

“Vineyard Wind is committed to responsible renewable energy project development as evidenced by the recently announced agreement with environmental organizations to protect the critically-endangered North Atlantic right whale.”

- Alex Papali, Clean Water Action

Vineyard Wind 1 has also been formally endorsed by the Association to Preserve Cape Cod (APCC).⁵ At a press conference announcing APCC’s support, Executive Director Andrew Gottlieb noted that “Vineyard Wind has chosen to get out in front of potential problems and effects, to meet with stakeholders early, to work to understand concerns and has done a serious job in managing project impacts.”⁶

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Building Pathways South, a collaboration between several building trades councils and The Women’s Fund of Southeastern Massachusetts, notes in a support letter that “Vineyard Wind has demonstrated its commitment to offshore wind bringing union jobs to Southeastern Mass through signing [project labor agreements] for both its first and second projects” (see **Section 14**). Vineyard Wind was also awarded the John A.S. McGlennon Award for Corporate Leadership the Environmental Business Council in recognition of the company’s foresight, leadership, and commitment in bringing the nation’s first commercial-scale offshore wind Project to Massachusetts and New England.⁸

Finally, Vineyard Wind staff spend a great deal of time in the community organizing, attending, speaking at, and sponsoring events. Vineyard Wind believes this kind of engagement is not only important to build support for offshore wind projects but is a necessary part of being a good corporate citizen. For example, this year alone, Vineyard Wind has hosted 12 community events and Vineyard Wind staff have presented at and/or attended another 48. Vineyard Wind’s quarterly newsletters, included as **Attachment 7.6-4**, showcase the range of events that staff at all levels participate in on a regular basis. These include career fairs for high school students, speaking at community roundtables on climate change, sponsoring fisheries-related trade shows, and organizing events aimed at increasing consumer awareness around renewable energy and electric vehicle transport solutions. A summary of the community outreach events Vineyard Wind has either hosted, presented at, or attended between January and July 2019 is included as **Attachment 7.6-5**.

Vineyard Wind in the Media

Vineyard Wind's offshore wind development efforts have attracted significant media coverage, the vast majority of which has been positive. News stories of note discuss Vineyard Wind 1's competitive pricing, community agreements, achievement of important project milestones, and the recent announcement by a WTG manufacturer to locate its US headquarters in Boston. A selection of news stories and letters to the editor are included as **Attachment 7.6-6**.

COMMUNITY AGREEMENTS

Host Community Agreement

Vineyard Wind has entered into an HCA with the Town of Barnstable, which will host onshore components for both of Vineyard Wind's projects (see **Attachment 6.2-3**). The HCA commits Vineyard Wind to certain protection and benefits requested by the Town to offset or mitigate any potential impacts associated with hosting offshore wind project infrastructure. [REDACTED]

[REDACTED]

[REDACTED]

Community Benefits Agreement

Vineyard Wind will continue its partnership with Vineyard Power Cooperative (Vineyard Power), a 501(c)12 non-profit community-owned energy cooperative on Martha's Vineyard. The company first began collaborating with Vineyard Power in 2011. The partnership was formalized in 2015 with the signing of the first, federally recognized offshore wind Community Benefit Agreement (CBA) in connection with Vineyard Wind 1. Among other things, the CBA gives Vineyard Power lead responsibility for aspects of Vineyard Wind's community outreach efforts and aims to bring tangible value from offshore wind to Martha's Vineyard and the region. Overall, this partnership has been very effective and significantly enhanced local community input into the project design process.

7.7 Provide documentation demonstrating that the project was or will be qualified as New Class I Renewable Portfolio Standard Eligible Resource under M.G.L. c. 25A, § 11F, and 225 CMR 14.00.

QUALIFYING AS A CLASS I RENEWABLE RESOURCE

Vineyard Wind 2 is a new offshore wind generation resource located within the ISO-NE Control Area that will begin operating after December 31, 1997 and generate electricity using wind energy as its fuel source. The Project will therefore qualify as a "New Class I Renewable Portfolio Standard Eligible Resource" as defined under M.G.L. c. 25A § 11F and 225 C.M.R. 14.00. Vineyard Wind will provide documentation demonstrating such qualification at the appropriate time as per the regulations.

7.8 All bidders must include sufficient information and documentation that demonstrates that the bidder will utilize an appropriate tracking system to ensure a unit-specific accounting of the delivery of Offshore Wind Energy Generation, to enable the Department of Environmental Protection, in consultation with DOER, to accurately measure progress in achieving the commonwealth's goals under chapter 298 of the acts of 2008 or Chapter 21N of the General Laws. The RECs associated with Offshore Wind Energy Generation must be delivered into the Distribution Companies' NEPOOL GIS accounts.

TRACKING SYSTEM

Vineyard Wind will utilize the New England Power Pool Generation Information System (NEPOOL GIS) as the tracking system to ensure a unit-specific accounting of the delivery of Offshore Wind Energy Generation, to enable MassDEP, in consultation with Massachusetts Department of Energy Resources, to accurately measure progress in achieving the Commonwealth's goals under chapter 298 of the acts of 2008 or Chapter 21N of the General Laws. Additionally, Vineyard Wind hereby certifies that the Renewable Energy Credits (RECs) associated with the Offshore Wind Generation will be delivered into the Distribution Companies' NEPOOL GIS accounts according to the terms specified in any power purchase agreement.

7.9 Identify any existing, preliminary or pending claims or litigation, or matters before any federal agency or any state legislature or regulatory agency that might affect the feasibility of the project or the ability to obtain or retain the required permits for the project.

CLAIMS OR LITIGATION

There are no existing, preliminary, or pending claims or litigation, or matters before any federal agency or any state legislature or regulatory agency that might affect the feasibility of the Project or the ability to obtain or retain the required permits for the Project.

ATTACHMENT 7.4-1 Fisheries Communication Plan

Vineyard Wind Fisheries Communication Plan

Revised August 2019

I. Introduction

Vineyard Wind's Fisheries Communication Plan (FCP) is a living document that began in 2011 in order to develop strategies to improve communication with fishermen potentially affected by the development of offshore wind projects. The document continues to evolve with continuous feedback and guidance from fishermen, fishing organizations, and regulatory agencies. The increased participation from the fishing industry will help us to reduce user conflict, improve project design, and build a better understanding between the two industries.

If you would like to receive updated versions of this FCP when they become available, or have any suggestions on how to improve this plan please send an email to fisheries@vineyardwind.com.

II. Vineyard Wind's Lease Areas

a. Overview

Vineyard Wind holds two lease areas for wind energy development on the Outer Continental Shelf (OCS): Lease Area OCS-A 0501 and Lease Area OCS-A 0522. As shown in Figure 2.1, both areas are in the Massachusetts Wind Energy Area (MA WEA). The MA WEA was designated by the Bureau of Ocean Energy Management (BOEM), with significant stakeholder input, including the BOEM MA Renewable Energy Taskforce (made up of local and state elected officials in Massachusetts and Rhode Island), the MA Fishery Working Group (FWG)¹, and the MA Habitat Working Group (HWG)² with the intention towards minimizing and avoiding impacts to the marine environment. For example, after considering stakeholder comments, BOEM modified the MA WEA to exclude an area of high fisheries value so as to reduce potential conflict with commercial and recreational fishing activities. Siting choices were considered to minimize and avoid potential impacts to environmental and fisheries resources from offshore wind development on the OCS.

b. Lease Area OCS-A 0501

Lease Area OCS-A 0501 is located approximately 12.4 nautical miles (NM) from the southeast corner of Martha's Vineyard and a similar distance from the southwest side of Nantucket. The Lease Area comprises more than 260 square miles (sq. mi) and is approximately 8.7 NM wide and 26 NM long. Water depths range from about 121-197 feet (ft), gradually increasing as distance from land increases. The Lease Area has high wind speeds, excellent seafloor conditions, moderate water depths, and reasonable proximity to multiple grid connection locations in an area of high electrical load and a need for new generation capacity.

¹ The FWG is made up of fishermen, fisheries scientists, and other interested parties. Early meetings addressed usage of the potential wind areas by various gear types as well as fisheries science. The FWG, convened by the State of Massachusetts, continues to meet and engage in offshore wind issues.

² The HWG is made up of NGOs, scientists, agencies and other interested parties. Early meetings addressed issues such as marine mammal and avian use of the potential wind areas. The HWG, convened by the State of Massachusetts, continues to meet and engage in offshore wind issues.

c. Lease Area OCS-A 0522

Lease Area OCS-A 0522 is located approximately 24-44 NM south of Nantucket. The Lease Area comprises more than 330 sq. mi and is approximately 18 NM wide and 12 NM long. Water depths range from about 100-198 ft. The Lease Area has high wind speeds, excellent seafloor conditions, moderate water depths, and reasonable proximity to multiple grid connection locations in an area of high electrical load and a need for new generation capacity.

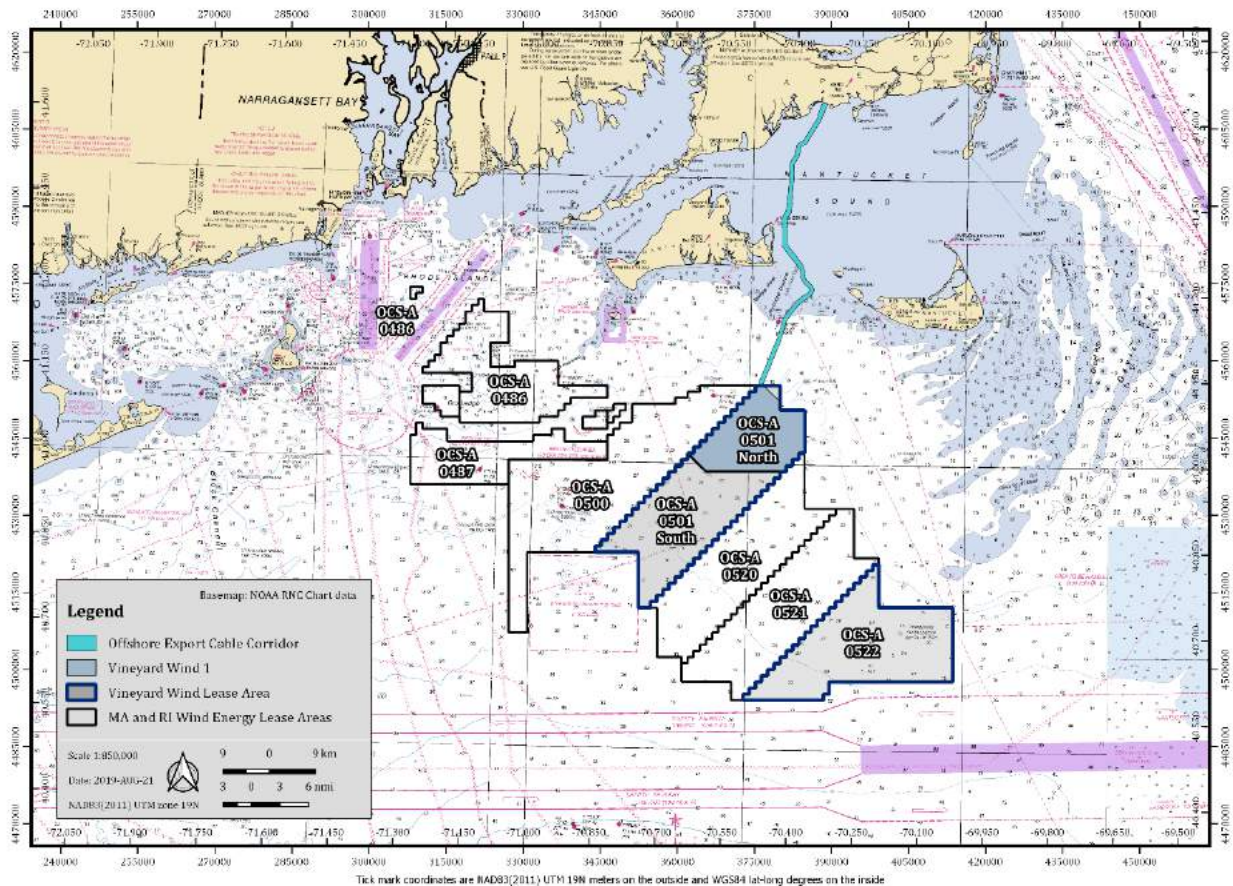

Figure 2.1. Chart of Lease Areas and planned cable corridor route for Vineyard Wind 1.

III. Vineyard Wind's Offshore Wind Projects

a. Overview

Vineyard Wind is developing the nation's first utility-scale offshore wind energy project off the coast of Massachusetts within the northern portion of Lease Area OCS-A 0501. Vineyard Wind is also planning projects in the southern portion of Lease Area OCS-A 0501 and in Lease Area OCS-A 0522.

b. Vineyard Wind 1

Vineyard Wind's first offshore wind project, referred to as Vineyard Wind 1, is an 800 MW facility that will be located in the northern portion of Lease Area OCS-A 0501. The project site is approximately 118 sq. mi in size with water depths ranging from 121-162 feet. In May 2018, this project was awarded long-term contracts with Massachusetts electric distribution companies and is on track to be the first utility-scale offshore wind project in the US. The Vineyard Wind 1 project will generate clean, renewable, cost-competitive energy for over 400,000 homes and businesses across the Commonwealth, while reducing carbon emissions by over 1.6 million tons per year.

c. Future Vineyard Wind projects

Vineyard Wind is developing new projects in the remaining portion of the Lease Area OCS-A 0501 and in Lease Area OCS-A 0522 and is seeking to secure long-term contracts for these projects through state-led energy procurements. Future Vineyard Wind projects' turbines are to be set in an east to west layout, based on fishermen input. As Vineyard Wind moves forward with future projects, the company will always work to strengthen its communication between potentially affected fishermen and fishery organizations during design, development, construction, operation, and final decommissioning of its offshore wind projects.

IV. Fisheries Communication Plan Objectives and Strategy

a. Objectives

The purpose of the Fisheries Communication Plan (FCP) is to define outreach and engagement to potentially affected fishing interests during design, development, construction, operation, and final decommissioning of offshore wind projects, with seven main objectives:

1. Enhance the safety of all who work on the ocean in the wind farms, cable corridors, and landfall sites.
2. Seek stakeholder concerns and strive for open, transparent communication so as to avoid conflicts before they develop, and quickly and fairly resolve conflicts that do develop.
3. Quantify and avoid, minimize and when warranted mitigate adverse impacts on fisheries, and inform appropriate measures for mitigation.
4. Understand, as fully as possible, historic, current, and potential fisheries in the affected areas
5. Identify gaps in information relating to fish and fisheries to inform research and monitoring strategies.
6. Demonstrate decisions, that may impact the fishing industry, are based on the best available and most credible information, recognizing that information gathering is an on-going iterative process, that there is never a point when complete and final information is available, and that some information can be expected to contradict other information.
7. Facilitate a professional co-existence of these two offshore industries, in which both industries can prosper on a long-term basis

b. Strategy

The foundation for achieving these objectives will be built on Vineyard Wind's existing relationships with the fishing communities, cultivated since 2010, and to continuously work towards trusted and mutually respectful lines of communications with the diverse fishing communities of the region. Regular, frequent, and open consultation is primary to ensuring all parties are well informed and can work towards the shared objective of maintaining thriving fisheries alongside offshore wind development in the region.

This FCP is based on best practice guidance and has improved with input from the fishing industry through feedback and consultation. Best practice guidance from other resources includes but is not limited to:

- Guidelines for Information Requirements for a Renewable Energy Construction and Operations Plan, Attachment A – Version 3.0, BOEM April 2016
- Fishing Liaison with Offshore Wind and Wet Renewables Group (FLOWW) Best Practice Guidance for Offshore Renewables Developments: Recommendations for Fisheries Liaison, January 2014
- Development of Mitigation Measures to Address Potential Use Conflicts between Commercial Wind Energy Lessees/Grantees and Commercial Fishermen on the Atlantic Outer Continental Shelf, BOEM 2014 – 654
- Fishing and Submarine Cables Working Together – International Cable Protection Committee, February 2009, Second Edition
- Options for Cooperation between Commercial Fishing and Offshore Wind Energy Industries: A review of relevant tools and best practices, SeaPlan November 2015
- Commercial Fisheries Mitigation Strategy – Developing Wind Energy in the Outer Moray Firth, Moray offshore renewables ltd 2003
- Oregon's Fishermen's Cable Committee
- Coordination with Fisheries Liaisons from Orsted, Equinor, Mayflower

V. Fisheries Outreach Team

a. Overview

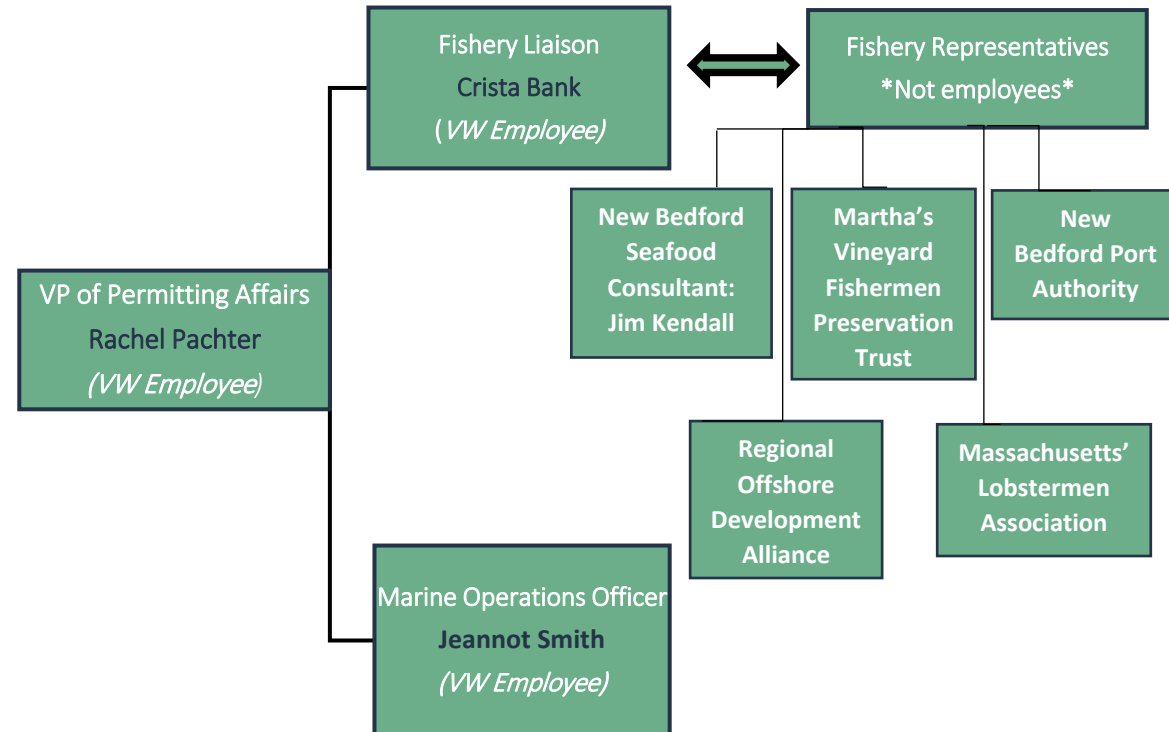

Fisheries communication is conducted through several roles including Fisheries Representatives (FR) and Fisheries Liaisons (FL). Vineyard Wind has hired one FL and a number of FRs who have been actively engaged with the fishing industry regarding the Vineyard Wind project since 2010. Below is a graphic explaining the communication channel relationship between the FLs and the FRs. Contact details for the FL and FRs can be found in the Section V.b. and Section V.c.

VINEYARD WIND

Fisheries Outreach Organization Matrix

- The Vineyard Wind Fisheries Liaison (FL) is employed by Vineyard Wind and reports directly to the Vineyard Wind Permitting Affairs Manager. The FL is responsible for overall implementation of the communications plan, in particular communicating project plans and activities that might impact the fishing industry during pre, during, and post construction activities of the offshore wind farm and reporting interactions or concerns from the industry to the Permitting Affairs Manager.
- The Fishery Representatives (FR) do not work on behalf of Vineyard Wind, but rather represent their respective fishing communities to Vineyard Wind. The FRs collect and report information about fishing industry activities and concerns to the FL as well as collect and relay accurate/relevant project information to the fishing community from the FLs.
- The Marine Operations Officer (MOO) is responsible for safe marine operations by Vineyard Wind, and ensuring that Vineyard Wind is a good neighbor generally while on the water. As such, there is frequent interaction, information exchange, and coordination between the MOO and the FL

The FR represents a particular fishery industry, organization, gear type, port, region, state, or sector(s), and is responsible for communicating concerns, issues, and other input to the project from development and pre-construction through decommissioning of the project. Typically, the FR is an active fisherman, or group representing active fishermen, within the region, fishery, state, or sector they represent. While FRs are compensated for their time and expenses by the project, their duty is to the fishing region, industry, organization, gear-type, or sector they represent. FRs are solicited through a fair and equitable process by the FL who ensures these individuals or organizations adequately and fairly represent their respective industry, gear type, port, or region and have the support of the fisheries stakeholders they represent.

The FL facilitates the work of the FRs by serving as a knowledgeable point of contact to which the FRs can efficiently and effectively communicate. The FL also communicates across fishery communities and regions, inside and outside of the FR network, in order to educate and disseminate vital information regarding the project to fishermen and to receive input back to the project. The FL works to validate fisheries information through cross-referencing among data sources.

The FL seeks to:

- develop relationships and direct lines of communication with individuals that are representative of all potentially impacted fishing regions, industries, and interests;
- identify and engage new FRs;
- confirm appropriate identification of potentially affected fisheries; and
- develop communication methods and tools.

The FL also works with the FRs and scientists to develop measures to reduce potential impacts to fisheries before any impacts may occur and develop resources and potential methods to monitor fisheries species and potential changes in species abundance and distribution pre/during/post construction. The FL is responsible for implementing this plan and updating it at least annually or as needed.

The FL and FR's will work together to review, evaluate and improve the effectiveness of the outreach and two-way communication. Vineyard Wind will review these methods quarterly. The FL and the FR will also report progress to the Bureau of Ocean Energy Management and National Marine Fisheries Service.

b. Fisheries Liaison

Currently, Crista Bank is the Vineyard Wind FL. The FL is employed by Vineyard Wind and works on behalf of the project. Her contact information, which is provided below, is posted on Vineyard Wind's website.

FL Name: Crista Bank
Phone: 508-525-0421
Email: cbank@vineyardwind.com

The FL is available by phone, email, and through our website for ongoing communication. There is a specific form on our website (<https://www.vineyardwind.com/fisheries>) for fishermen to fill out their contact information and concerns. The form is sent directly to the FL's email, and a follow-up phone call and/or email is made shortly after receipt of the contact information.

A full job description for the FL is included as Appendix 1.

Onboard Fisheries Liaison

During offshore operations that continues for periods of weeks-to-months, Vineyard Wind may also engage an Onboard Fisheries Liaison (OFL), serving onboard a vessel during the time of its operations for Vineyard Wind. The OFL's role is, simply put, to continue the role of the FL offshore, so that there is effective communication on-site, in real time. The OFL reports to the FL, and serves as the FL's "eyes, ears, and voice" during offshore operations. The OFL records observed fisheries activities, ensures vessel operations are compliant with this FCP and other fisheries related policies, and in particular seeks to avoid negative fisheries interactions by looking out for fixed gear and establishing communications (usually by VHF radio) with fishing vessels when appropriate. If there is a negative fisheries interaction, the OFL works with the FL and relevant FRs to quickly resolve the matter safely, fairly, and efficiently. Typically the OFL is contracted for the duration of a vessel's operations for Vineyard Wind, and is an individual familiar with marine operations and fishing practices in the region.

c. Fisheries Representatives

The current list of FRs with contact information is provided below and posted on Vineyard Wind's website:

FR Name: New Bedford Seafood Consulting
Contact: Jim Kendall
Phone: 508-287-2010
Email: nbsc@comcast.net

FR Name: New Bedford Port Authority
Contact: Ed Washburn
Phone: 508-961-3000

FR Name: Massachusetts Lobster Association
Contact: Beth Casoni
Phone: 781-545-6984
Email: beth.casoni@lobstermen.com

FR Name: Martha's Vineyard Fishermen's Preservation Trust
Contact: Shelley Edmundson
Phone: 508-687-0344
Email: mvfishermen@gmail.com

FR Name: Responsible Offshore Development Alliance
Contact: Annie Hawkins
Phone: 617 359-2576
Email: annie@rodafisheries.org

Full roles and responsibilities for the FR are included as Appendix 2. FR biographies can be found in Appendix 3.

Vineyard Wind continuously seeks additional FRs to provide regular input to the project development work. Specifically, at this time, Vineyard Wind is seeking FRs in Rhode Island, Connecticut, New York, and New Jersey. If you are interested or have suggestions, please contact Crista Bank, FL (see above).

In addition to the formal FR roles, several organizations and working groups provide direct access to fishermen and have been helpful in disseminating information and providing feedback. These include, but are not limited to:

- NYSERDA Fisheries Technical Working Group (F-TWG)
- Massachusetts Fisheries Working Group
- Rhode Island Fisheries Advisory Board (FAB)
- Massachusetts Department of Marine Fisheries
- Rhode Island Department of Environmental Management
- New England Fishery Management Council
- Mid-Atlantic Fishery Management Council
- Commercial Fisheries Center of Rhode Island
- Long Island Commercial Fishing Association
- Atlantic States Marine Fisheries Commission

Vineyard Wind is committed to working with fishermen and fishing organizations. If you would like to receive emails or text message updates and mariner notices please email the project at fisheries@vineyardwind.com.

VI. Stakeholder Identification and Outreach

a. Overview

Vineyard Wind has proactively engaged with potentially affected fisheries throughout the development of its lease areas. Vineyard Wind regularly communicates with stakeholders and has incorporated input from stakeholders into the project's design, communication plans, and mitigation measures. Vineyard Wind will maintain frequent dialogue with stakeholders as the Project moves forward.

b. Potentially Affected Fisheries

Based on Vineyard Wind's outreach and experience to-date, the fisheries most likely to potentially be affected in OCS-A 0501 during the construction, operation and decommissioning of the projects are:

- Nantucket Sound: conch, squid, surf clam, fluke, sea bass, demersal recreational
- Muskeget Channel: Surf Clam, commercial sea bass, demersal recreational
- Lease Area: Surf clam, squid, fluke, mackerel, whiting, butterfish, scup, monkfish, lobster, scallop, large pelagic recreational

Based on Vineyard Wind's outreach and experience to-date, the fisheries most likely to potentially be affected in OCS-A 0522 during the construction, operation, and decommissioning of the projects are:

- Mackerel, whiting, butterfish, Jonah crab, lobster, scallop, surf clam, large pelagic recreational

These groups are prioritized during the implementation of this plan. Regular reviews are used to modify or confirm this prioritization, as needed.

c. Outreach Approach and Tactics

Vineyard Wind employs a variety of outreach and engagement approaches to communicate and maintain relationships with fisheries stakeholders. These include informal conversations with existing contacts, expanding the company's network of Fisheries Representatives, attending fishing industry trade events and recreational fishing shows, presenting at commercial and recreational fishing group meetings, and working with the various associations and organizations that represent fishing interests. Vineyard Wind understands that some fishermen do not feel adequately represented by fishing organizations, or Fisheries Representatives, and therefore prefer to communicate information and concerns individually and through different channels of communication. Vineyard Wind is committed to recognizing that individual concerns are just as important as group concerns and will continue efforts to respect anonymity.

Target Audience	Principle Channels	Supporting Tactics
Fishing sector, fishing region, seasonal fisheries, specific fishery gear types, fishermen at sea, charter fishermen, fishery ports	<ul style="list-style-type: none"> • Fisheries Representatives (FRs) and Fisheries Liaison (FL) • Other fishermen • Port Agents • Fish houses • Sector Managers • Media – newspapers, internet, e-mail subscriptions, flyers, and thumb-drives • Fishing organizations, alliances, partnerships, commissions, coalitions, councils, state agencies, federal agencies, and advocacy groups • Local elected officials • Friends and family • Employers 	<ul style="list-style-type: none"> • Access to information via internet, e-mail lists (state and Vineyard Wind), and social media • Industry specific publications or e-mails • Trade magazines • 24-hour phone service for up-to-date project info and emergencies. • Project specific radio alerts to fishermen at sea • FL contact info on website • Attending and speaking at fishermen working group meetings • Fishermen open house information meetings • FL/FR communication channels • Clear daily two-way communication channels between fishery/fishermen and project during construction
Recreational fisherman, recreational boaters	<ul style="list-style-type: none"> • Same as above • Bait shops 	<ul style="list-style-type: none"> • Access to information via Vineyard Wind's website, social media, and newsletters • Advertisements through recreational fishing magazines and websites • FL contact info on website • Attending and speaking at fishermen working group meetings • Fishermen open house information meetings.

VII. Communication Protocols

a. Overview

Communication is a high priority for Vineyard Wind. It is important to ensure fishermen are aware of the activities in the lease area and along the cable route and feel comfortable to reach out with questions and concerns. It is also important to communicate to the Vineyard Wind survey vessels the expected fishing activities in and around the lease area, what to be aware of, and how to handle any interactions with the fishing fleet. The protocols outlined below are procedures Vineyard Wind has implemented to date and we will continue to adjust and adapt protocols as needed. Similar protocols will be standardized and implemented during project construction.

b. Communication and Notification to Fishing Industry Prior to and During Offshore Work

Our communication strategy, which includes recommendations from fishermen and adopts protocols the MA DMF uses for their biannual inshore trawl survey, are as follows:

1. Send Notices to Mariners to Coast Guard
2. Send notifications with all vessel identifying features to Vineyard Wind fisheries email list
3. Publicize through organization websites and newsletters (MA DMF, RI DEM, MLA, sector managers, NOAA port agents, Fishing Support Services navigators, etc.)
4. Publicize through boatracs and skymate
5. Maintain a list of fishermen who wish to receive updates via email or text
6. One week before offshore work begins send out an email/text to fixed gear permit holders reminding them that offshore work is about to begin
7. Three days before offshore work begins send out an email/text to fixed gear permit holders that offshore work is on schedule
8. During offshore work send out a regular email updates detailing progress, both for completed areas and areas next on the list. (DMF, MLA, NBPA, MVFPT).
9. Implement a text notification system where fishermen can sign up to receive daily texts of offshore work progress (i.e. more frequently than general updates, and specific to an area or time of work)
10. Attend fisheries trade shows and outreach events to encourage fishermen to sign up for alerts regarding the project's offshore work
11. Vineyard Wind will hire an OFL, preferably a fisherman, to be on project vessels to be on the lookout for gear and fishing activity in the area and to help facilitate communication via VHF radio during project activities.
12. Vineyard Wind will hire, with help from FRs, local fisherman respected among the fleet to help spread the word exactly when the project vessels will be in their immediate area, relay any work zone areas to stay clear of, and communicate when vessels have left the area.
13. Maintain an email (fisheries@vineyardwind.com) that is monitored by a team, so as to ensure timely response even if the FL is not immediately available. A fisheries team dedicated cell phone number will also be established.

In addition to the protocols listed above, in the time leading up to offshore construction we will hold regular meetings with fishing groups that will be affected during the construction phase to go over the timing of anticipated work, what to expect during construction, and how to best communicate. We will work with our FRs to help coordinate and reach the right fishermen to attend the meetings. Some of the small groups we've identified to date include squid vessels in Nantucket Sound, the conch fleet from the Cape and islands, and the squid fleet from Pt. Judith.

Additional groups or individuals who want to stay updated on vessel activity and construction plans please visit our website and sign up for email and /or text alerts at fisheries@vineyardwind.com.

c. Communication and Fisheries Protocols on Geological Survey Vessels Working for Vineyard

To help communicate with the fishing industry, Vineyard Wind will have an OFL to assist the Captain with communication and to document fishing gear in the area to help avoid interactions, as described above. Before the survey trip begins, the FL and OFL attends the pre-trip meetings with captain, and crew to go over specific fisheries active in the area. If the FL has known coordinates of fixed gear in the area, the information is shared with the captain and OFL. Captain and crew are instructed to communicate respectfully with fishing industries and to work around fishing gear to the greatest extent practicable.

Captain, crew chief, and OFL sign off on communication protocols and gear interaction protocols outlined below:

Vineyard Wind Protocols for Survey Vessel Captains:

- 1) Captains establish an agreed upon safety zone to relay to fishing vessels in the area
- 2) Any communication with fishing vessels is reported to the OFL and be conducted in a professional manner
- 3) Preferably the OFL will have their own VHF unit to monitor radio communications and communicate directly with fishermen, as may be necessary or agreed upon with the Captain, especially if language or accent may be a hinderance to communications with fishermen
- 4) Alert OFL to all gear interactions at the time it occurs, waking the OFL if necessary
- 5) Have one GPS unit in the wheelhouse set up for LORAN coordinates
- 6) Work around fishing gear to the greatest extent practicable
- 7) Plot fixed gear locations while onboard fisheries liaison is off watch and relay information when back on watch

Vineyard Wind Fixed Gear Interaction Protocols for Survey Vessels:

If an incident between a survey vessel and static fishing gear does occur, the following outlines the roles and procedures for such an event:

ON BOARD

- 1) Immediately alert OFL (wake if off watch)
- 2) Fishing gear interaction is logged in daily vessel report, recording time, location, photos, etc.

- 3) If feasible and safe, Vineyard Wind will attach a float or buoy to any gear that is brought on board a project vessel or moved, or if a line was cut, should the gear be returned or remain in the water. The buoy is intended to help the fishermen locate the gear, and is also marked with Vineyard Wind contact information so that communications can be readily established with the affected fishermen
- 4) GPS location and time of relocation is recorded
- 5) Buoy permit number and color is logged
- 6) Pictures are taken of the gear
- 7) FL on land is notified of incident as soon as possible

ON LAND

- 1) FL will cross reference buoy color and permit number with current fishing databases to identify owner of gear
- 2) If FL is unsuccessful in finding owner of gear, FL will give notice to FRs and other fishing organizations. If still unsuccessful in locating the owner, FL will send notice to the relevant state Environmental Police of gear entanglement
- 3) Once fisherman/owner of gear is identified, information regarding buoy location and timeline of interaction will be relayed
- 4) Follow up with fisherman to confirm gear was found
- 5) If gear is not found Gear Loss form will be filled out and processed

The above procedures will be updated prior to construction and will reflect any feedback and lessons learned on the Vineyard Wind projects or learned from other project experiences.

d. Communication during Operations / Safety Management System

An important objective of this plan is to use fisheries communications to enhance safety of all those who work on the ocean in the project area through construction, operations, and decommissioning. Vineyard Wind's Safety Management System (SMS) will outline clear communication protocols and procedures for emergency events such as: collision of a vessel with a turbine structure, gear entanglement, damage to cabling by fishing activity, catastrophic failure of a turbine, or other event. Safety planning will be further elaborated in this plan and the SMS will be a publicly available document that is completed prior to the start of project construction. Tower lighting and marking will adhere to US Coast Guard, Federal Aviation Administration, and Bureau of Ocean Energy Management requirements.

VIII. Financial Compensation

a. Overview

Vineyard Wind is developing and implementing procedures for handling compensation to fishermen for potential gear loss and the loss or reduction of income to fishermen. The level of financial support requires detailed discussions between the impacted fishing community and Vineyard Wind. To start the discussions and gauge the possible economic loss to the fishing fleet Vineyard Wind hired an economist to look at different data sets of fisheries landing values and to produce an economic exposure report. These reports can be found on Vineyard Wind's **website**: www.vineyardwind.com.

b. Gear Loss / Damage

We've heard from many fishermen and FRs that gear loss/damage claims should be simple and direct and be the same across lease holders. The Massachusetts Fishing Working group has created a small task force to start to work on this issue. Vineyard Wind has not yet implemented a gear loss/damage form, in the hopes that a standardized form and protocol will be established soon; however, this decision will be revisited depending on progress towards establishing a standardized form/protocol and the amount of offshore work planned. The Massachusetts Department of Marine Fisheries has a standardized form that Vineyard Wind can also utilize to a large extent.

The procedure for making gear loss/damage claims is expected to evolve as the first project moves through the development process into construction and operations.

c. Lost Revenue

Vineyard Wind will also create a process for filing fishery compensation claims. A third party fiduciary agent will handle claims, and a review board consisting of members from the fishing industry will assist with the claims process. Until this process is developed fishermen should make any such request through the FL whose contact information can be found at www.vineyardwind.com/fisheries. If fishermen are displaced at any phase during the construction term, fishermen will be required to submit evidence of income and fishing location(s) to Vineyard Wind to be compensated.

IX. Fisheries Initiatives

a. Overview

Vineyard Wind takes the concerns of the fishing community seriously and understands that while the conversations between stakeholders are not always easy, it is necessary. We understand the time it takes to meet with us or attend working groups is potentially time away from fishing and we have offered compensation for participation in project specific meetings and will continue to do so, if appropriate and helpful to the process. We recognize that continued engagement with the fishing industry improves the overall project and although it seems slow at times, it improves the understanding between industries.

Some of the key initiatives Vineyard Wind has engaged in as a result of consultations with the fishing industry include, but are not limited to:

- Providing thumb drive electronic charts, showing our lease area and areas of offshore survey work to area fishermen.
- Including Loran navigation lines and closed areas on project charts to facilitate discussion of fishing activities in the area.
- Orienting the wind turbines in a regular grid pattern to allow for navigable uninterrupted travel in multiple directions (to avoid 'zig-zagging').
- Committing to east/west alignment for future projects
- Selecting the largest commercially available turbine in order to reduce the overall area of the first project
- Removing turbine locations along the 20-fathom contour
- Installing AIS on turbines and Electrical Service Platforms (ESPs) to improve navigation and safety.
- Creating protocols for project vessels to adhere to when encountering fishing activity

- Dedicating a page on Vineyard Wind’s website for fishermen (www.vineyardwind.com/fisheries) to find the latest information on surveys and construction, and sign up to receive email or text message alert updates

b. Fisheries Research

FISHERIES RESEARCH

Vineyard Wind understands how important science and research is to the fishing community. Establishing relationships with academic institutions that engage in cooperative fisheries research is a high priority. Vineyard Wind has taken steps to address industry concerns by partnering with UMass Dartmouth’s School for Marine Sciences and Technology (SMAST), an academic institution trusted throughout the fishing community.

A video trawl survey of Vineyard Wind’s lease area OCS-A 0501 and an adjacent control area was completed in October 2018 by researchers from SMAST on the New Bedford-based Fishing Vessel Justice. The goal was to gather preliminary data and to determine the best methods for pre/during/post construction studies in the first project area. This video trawl was an innovative survey method that SMAST scientists wanted to test for use in surveys in the wind energy areas. The result of the test was that further improvements would be needed for the method to be effective, given the soft sea-bottom in the area causing sediment dispersal and hindering video observations.

Vineyard Wind also contracted with SMAST to actively engage with the fishing industry to provide feedback for the pre/during/post construction studies of the project. Four workshops were held in different ports during November and December of 2018 (New Bedford, MA; Kingston, RI; Chatham, MA; and West Tisbury, MA) to share results from the video trawl survey, discuss other potential survey methods, and to work with the fishing industry to help identify research questions for species of concern, both site-specific and regionally. Just over 100 people attended the workshops including over 75 active fishermen. Based on the feedback from the fishing industry, and state and federal regulators, SMAST produced a report with their research recommendations in early 2019. The complete report is available at <https://www.vineyardwind.com/document-room> (listed under Fisheries/Fisheries Studies). Vineyard Wind has adopted the recommendations and surveys began in Spring of 2019, which include a trawl survey, plankton survey, drop camera survey of macroinvertebrates and benthic communities, and a ventless lobster trap survey. The survey areas for trawl and drop camera include all lease areas in order to support baseline data collection for future projects. Data collected and reports from these studies will be used in future permit applications and will be made public through our website and shared with agencies and other institutions.

Recreational fishermen raised concerns that highly migratory species were not addressed in the SMAST research recommendations. Vineyard Wind reached out to recreational fishing groups and individual fishermen to understand their concerns and brainstorm what could be done to better understand recreational fishing in the area and potential impacts. This led to partnering with the New England Aquarium to initiate a study to document highly migratory species presence across all MA/RI lease areas with help from the pelagic recreational fleet. The results of this effort will be included in future permit applications and made publicly available through our website and shared with agencies and academic institutions.

Regional Studies

The need for a regional science approach to offshore wind development is an important component to understand how this new industry may be affecting fisheries and the environment. The absence of a regional science framework has made it challenging for developers and concerned stakeholders to design appropriate studies that can provide consistency across all lease areas. The organization Responsible Offshore Science Alliance (ROSA) is an attempt to fill that void and bring developers, fishing industry, state, and federal agencies together to develop a regional science framework. Vineyard Wind has been part of the working group to get the organization launched and is committed to regional fisheries science.

In engaging SMAST to design pre/during/post-construction studies, as described above, Vineyard Wind asked SMAST (at the suggestion of a comment from NMFS) to consider how these studies might contribute to both a regional and long-term approach to fisheries studies. The study protocol that was developed is considered to be “modular and nested,” allowing specific project studies to contribute to larger regional and longer-term study efforts.

c. Opportunities

At this stage, many in the fishing industry see offshore wind as a threat to their business. However, it is in the developer’s best interest for the fishing industry to thrive and grow. Vineyard Wind is in support of research development to help the fishing industry adjust to the changes offshore wind may bring, either by testing different gear to target species in the wind farm, or testing different technologies to fish more efficiently among turbines.

Vineyard Wind is not proposing to replace fishing jobs with wind development jobs, but there can be opportunities for fishing vessel owners, individual fishermen, and shore side businesses. Some examples include:

- 1) Fishing vessels as safety zone vessels and scout vessels during construction
- 2) Fishermen owned shore support businesses
 - a. sign up by emailing b2b@vineyardwind.com to be listed on the supply chain network and to learn about supply chain events
 - b. attend Meet the Buyer events that are intended to introduce local businesses to wind project contractors
- 3) Fishermen as OFEs on project vessels to help communicate with fishermen working in the vicinity.
- 4) Scholarship availability for fishermen and family members to get free training through the local community colleges and MMA for offshore wind technician certifications

Appendix 1 – Fisheries Liaison Roles and Responsibilities

The role & responsibilities of the Fisheries Liaison (FL) include but are not limited to:

- The FL represents the project to fishermen, on behalf of Vineyard Wind, and is the principal contact to the fishing community
- The FL is not someone currently actively engaged in commercial fishing
- The FL is responsible for the overall effective implementation of the fisheries communications plan
- During project pre-construction development, the FL will communicate directly with Fisheries Representatives (FRs) via email, in person meetings, and conference calls and will provide monthly written reports to management on this outreach. Project management will provide feedback, when necessary, to ensure timely dissemination of information regarding all project activities.
- During project construction, the FL will have direct access to the project management team in order to ensure updated project information is available to the fishing community. It should be noted that changes may take place in real time during construction. Vineyard Wind will endeavor to disseminate that information as quickly and widely as possible either through our website or a 24-hour phone line.
- Refine and enhance this communications plan, given learning experiences and new information received.
- Ensure the project's fisheries communication and communication strategy is effective across all relevant fishing communities, organizations, sectors, regions/ports, seasons, and gear types.
- Establish a clear line of communication with entities from affected fishing regions to ensure all states where the fishing industry could be impacted are well informed during all phases of development and through decommissioning.
- Maintain awareness of ongoing fishery management action development by the New England and Mid-Atlantic Fishery Management Councils and the Atlantic States Fisheries Commission.
- Help develop and refine communication materials in addition to communication plans to ensure effective messaging.
- Develop or recommend mitigation measures.
- Provide a record of relevant project information and communications, including presentations and individual conversations, but maintaining confidentiality as appropriate.
- Participate in BOEM, F-TWG, FAB and MA Fisheries Working Group Meetings
- Maintain a fishery stakeholder database and contacts list for all identified fisheries operating within the vicinity of the offshore development area and export cable corridor throughout all stages of the project.
- Investigate and follow-up on complaints and concerns received or heard about.
- The FL shall have a direct line of communication to the project company's senior management, through which to make recommendations for improvement and address complaints, concerns, and other input received.
- Pro-actively make fisheries aware of upcoming efforts and activities related to the project so as to facilitate shared use of the lease area(s).
- Be available to meet with fishermen representatives in person, via email or social media, phone, or radio outside of regular business hours and on weekends.
- Participate in weekly calls with the project team on conversations, activities, suggestions, questions, and concerns from the fishing community about the project.
- Coordinate and work with FRs, who are active fishermen and serve to facilitate communications between the project and specific fisheries sectors.

- Identify potential FRs and establish working relations; contract OFLs as needed.
- Attend meetings with fisheries groups, regulators, non-government organizations, policy makers, contractors working on the project, and other offshore wind project developers to best ensure shared use of the lease area(s) and good, working relations among the offshore wind industry, fisheries, government, and other stakeholders.
- Supervise and manage contracts as necessary for the effective fisheries surveys and science work undertaken by or on behalf of Vineyard Wind, and participate and provide input into relevant fisheries science initiatives.

Appendix 2 – Fisheries Representatives Roles and Responsibilities

An individual or group's time serving as the Fisheries Representative (FR) will be compensated by Vineyard Wind, but the FR is considered to be an independent, third party agent, serving the fisheries interests, not the project's interests. Role & responsibilities of FRs include but are not limited to:

- Be available to meet with fellow fishermen in person or via email, social media, phone, or radio.
- Pro-actively make the project team aware of fisheries practices, upcoming efforts, and seasons to facilitate shared use of lease area(s).
- Meet directly with the project team at least every quarter to help evaluate communication and outreach efforts, and learn more about project plans.
- Provide a monthly email report to the project team on conversations, activities, suggestions, questions, and concerns from the fishing community about the project; communicate with project management in real time, if needed.
- On occasion, FRs may be asked to serve as guides and points of contact during a particular activity offshore. This may involve, for example, using their own vessel as a guide or scout vessel to the survey vessels, helping to monitor for fishing activities in the area of operation, and communicating with fishing vessels working in the same area.
- Communicate directly with FL for the purpose of effectively disseminating project information to the FR's constituency.
- Disseminate project information to the fishermen who are based in or visit ports in Massachusetts, Rhode Island, Connecticut, New Jersey and New York and may fish in the Vineyard Wind lease area(s) and cable route area(s).
- Be available and accessible to their represented fishery.
- Communicate to FL any potential conflicts regarding surveys and project development.
- Assist FL to understand fishing activity in Vineyard Wind's lease area(s) and submarine cable routes (e.g. gear types, specific fisheries).
- Work with FL to develop and refine fisheries communication plan(s).
- Communication planning, identification of communication methods and frequency, outreach meeting facilitation and support, and other tasks, as needed, for engaging local fishermen during all project phases to ensure effective messaging.
- FR will meet directly with the FL and project management every quarter and evaluate communication and outreach efforts and review quarterly outreach and mitigation measures employed by Vineyard Wind
- Maintain awareness of ongoing fishery management action development by the New England and Mid-Atlantic Fishery Management Councils and the Atlantic States Fisheries Commission.
- Provide input to, or recommend, mitigation measures.
- Participate in working group meetings, such as the Massachusetts Fisheries Working Group, when appropriate for the fishery they represent.

Appendix 3 – Fisheries Representatives

New Bedford Seafood Consulting

Mr. Kendall is the Executive Director of New Bedford Seafood Consulting. He is a former scallop fisherman with over 50 years of experience in the fishing industry and with fisheries issues. Mr. Kendall was a member of a research team for the Commercial Fisheries Research Foundation that focused on discard mortality rates of Southern New England flatfish. Mr. Kendall served as a New England Fishery Management Council member for numerous terms. He has also served on the Massachusetts Fisheries Recovery Commission, the New England Commercial Fishing Law Enforcement Working Group, and is a founding member of the Massachusetts Fishermen's Partnership. Mr. Kendall was featured in the book *A Doryman's Reflection: A Fisherman's Life*. Additionally, Mr. Kendall has been interviewed on WBSM radio and by the New Bedford Standard Times, the Gloucester Times, and the Boston Globe on fisheries issues.

New Bedford Port Authority

The New Bedford Port Authority (NBPA) is the governing body for New Bedford's harbor and city-owned waterfront properties. It is chaired by the Mayor of New Bedford with six other members. The role of the NBPA is to support the Port of New Bedford by continually upgrading port resources; preserving its spot as the #1 U.S. fishing port; and expanding the New Bedford economy.

The NBPA oversees all the commercial and recreational vessel activity within New Bedford city limits, incorporating the city's entire coastline and harbor.

Massachusetts Lobstermen's Association

The Massachusetts Lobstermen's Association is a member-driven organization that accepts and supports the interdependence of species conservation and the members' collective economic interests. The Massachusetts Lobstermen's Association was established in 1963 by the fishermen, for the fishermen, and is presently one of the leading commercial fishing industry associations in New England. On behalf of the 1,800 members, the MLA works to maintain both the industry and the resource. The MLA strives to be proactive on issues affecting the lobster industry and is active in the management process at both the state and federal levels. The MLA communicates with its members through a monthly newspaper, weekly email, Facebook, Twitter and attendance at meetings. For the past 54 years, the MLA has become a trustworthy voice for the industry on important issues, and is looked to by both the fishing industry and the management community.

The Martha's Vineyard Fishermen's Preservation Trust

The Martha's Vineyard Fishermen's Preservation Trust is a Massachusetts 501(c)(3) non-profit corporation established in 2011 to: (i) Preserve the historic fishing fleets, communities, and economies of Martha's Vineyard; (ii) Protect the marine populations and fishing grounds off the coast of Martha's Vineyard and New England; (iii) Educate the community about its local fisheries.

Responsible Offshore Development Alliance (RODA)

RODA is a broad membership-based coalition of fishing industry associations and fishing companies with an interest in improving the compatibility of new offshore development with their businesses. Their approach is to directly collaborate with relevant regulatory agencies (e.g., National Marine Fisheries Service, Bureau of Ocean Energy management, U.S. Coast Guard, fishery management councils, and state agencies), offshore developers, science experts, and others to coordinate science and policy approaches to managing development of the Outer Continental Shelf in a way that minimizes conflicts with existing traditional and historical fishing.

VINEYARD WIND

ATTACHMENT TO:

**SECTION 7 OF APPENDIX A TO THE RFP
ENVIRONMENTAL ASSESSMENT, PERMIT ACQUISITION PLAN AND
NEW CLASS I RPS CERTIFICATION**

**ATTACHMENT 7.5-1 Vineyard Wind – NGO North Atlantic Right
Whale Agreement**

**Vineyard Wind – NGO Agreement
January 22, 2019**

This Agreement dated as of January 22, 2019, is made by and between VINEYARD WIND, LLC (“Vineyard Wind”), which has its principal place of business at Suite 510, Bank Plaza, 700 Pleasant Street, New Bedford, MA 02740, the NATIONAL WILDLIFE FEDERATION, the NATURAL RESOURCES DEFENSE COUNCIL, and the CONSERVATION LAW FOUNDATION (the “NGOs”) (collectively the “Parties”).

WHEREAS, the Parties are united in the belief that responsibly developed offshore wind power has a major role to play in America’s energy future;

WHEREAS, the Parties recognize that wind energy does not have the negative climate effects of carbon emissions from other generation sources, and wind power thus helps to ameliorate impacts like ocean acidification, loss of sea ice, sea level rise, more extreme weather, and many other climate effects;

WHEREAS, the Parties are committed to working together to ensure that the development of much-needed wind electricity generation capacity off the nation’s coasts will occur in a manner that avoids, minimizes, and mitigates adverse impacts on the health of our coastal and marine wildlife;

WHEREAS, the development of offshore wind energy provides a unique opportunity for offshore wind developers to collaborate with academic research institutions, government, environmental organizations, ocean user groups and other stakeholders to advance scientific research that enhances protections for the critically endangered North Atlantic right whale, including research on the effects, if any, of wind farm operations on right whale distribution and habitat use;

WHEREAS, Vineyard Wind is committed to developing offshore wind power projects in the U.S. with robust standards of environmental protection during pre-development, construction, and operations and maintenance activities, while making a meaningful contribution to science that can support the responsible development of America’s vast offshore wind resources;

WHEREAS, the protection of the North Atlantic right whale is a top priority, the Parties recognize and agree that protective actions set forth herein must be done in a manner that ensures human health and safety when working in the offshore environment;

WHEREAS, while this Agreement pertains to protections for the North Atlantic right whale specifically, the Parties agree that the measures set forth herein may also provide additional protections to other marine mammals and protected species;

WHEREAS, this agreement is intended to serve as a model for similar agreements pertaining to offshore wind projects along the East Coast;

WHEREAS, the Parties agree that the commitments made herein apply specifically and solely to Vineyard Wind's first 800 MW project located in the northern portion of the lease area OCS-A-501 (the "Project Area"), and as more fully described in the Construction and Operations Plan submitted to the Bureau of Ocean Energy Management ("BOEM") dated December 19, 2017, as supplemented thereafter (the "Project").

NOW THEREFORE, in consideration of the foregoing the Parties agree as follows:

I. Protective Measures for North Atlantic Right Whales

Vineyard Wind agrees to implement the following measures for responsible offshore wind development in constructing and operating the Project.

A. Construction Activities

Table 1. Seasonal Restrictions on Pile Driving Activities

Timeframe	Mitigation Protocol
Red Period: January 1 – April 30	No pile driving
Yellow Period: November 1 – December 31; May 1 – 14	Enhanced mitigation protocol required
Green Period: May 15 – October 31	Comprehensive monitoring / clearance zone protocol required

1. Red Period: No Pile Driving

During this period of most likely presence of North Atlantic right whales, as specified in Table 1, no pile driving shall occur.

2. Yellow Period: Enhanced Mitigation Protocol for Pile Driving

During the times of likely presence of North Atlantic right whales, as specified in Table 1, an Enhanced Mitigation Protocol will be implemented during each day that pile driving is scheduled to take place. This will include:

- a) Pile driving shall not be initiated at night or when the clearance zone cannot be visually monitored, as determined by the lead Protected Species Observer (hereafter, “PSO”)¹ on duty. Pile driving may continue after dark only if the action began during the day and must proceed for human safety or installation feasibility² reasons;
- b) A clearance zone for North Atlantic right whales shall extend 10,000 meters in all directions from the center of the pile. Pile driving activities shall not be initiated when there is either a visual observation or acoustic detection of one or more North Atlantic right whales within the clearance zone through (i.), (ii.), or (iii.) of this section, and shall be shut-down under either of these circumstances unless it must proceed for human safety or installation feasibility reasons.
 - i. Real-time passive acoustic monitoring (“PAM”)³, assuming a detection range of 10,000 meters, shall be undertaken from a vessel other than a pile driving vessel, or from a stationary unit, to avoid the hydrophone being masked by the pile driving vessel or development-related noise and to ensure that the clearance zone is clear of North Atlantic right whales. PAM shall begin at least 60 minutes prior to commencement of pile driving and shall be conducted throughout the time of pile driving activity; and
 - ii. There shall be vessel-based PSOs stationed at the pile driving site. There shall be a minimum of four PSOs following a two-on, two-off rotation, each responsible for scanning no more than 180° per pile driving event. Observation shall begin at least 60 minutes prior to the commencement of pile driving and shall be conducted throughout the time of pile driving activity; and
 - iii. Between May 1 – 14, a track-line survey fully covering the clearance zone to detect the presence of North Atlantic right whales must be completed prior to commencement of pile driving using at least one of the following methods:

¹ PSO refers to an individual with current National Marine Fisheries Service (“NMFS”) certification as a Protected Species Observer.

² Installation feasibility refers to ensuring that the pile installation event results in a usable foundation for the wind turbine (*e.g.*, installed to the target penetration depth without refusal and with a horizontal foundation/tower interface flange). In the instance where pile driving is already started and a PSO recommends pile driving be halted, the lead engineer on duty will evaluate the following: 1) Use the site-specific soil data and the real-time hammer log information to judge whether a stoppage would risk causing piling refusal at re-start of piling; and 2) Check that the pile penetration is deep enough to secure pile stability in the interim situation, taking into account weather statistics for the relevant season and the current weather forecast. Determinations by the lead engineer on duty will be made for each pile as the installation progresses and not for the site as a whole. This information will be included in the reporting for the Project.

³ Throughout this agreement “PAM” refers to a real-time passive acoustic monitoring system, with equipment bandwidth sufficient to detect the presence of vocalizing North Atlantic right whales.

- An aerial survey, weather permitting (based on safe flying conditions), conducted once the lead aerial observer⁴ determines adequate visibility based on standardized environmental parameters (*e.g.*, glare, sea state, wind speed, etc.); or
 - A vessel-based survey carried out by PSOs conducted during daylight hours.
- c) Pile driving may resume upon confirmation that all North Atlantic right whales have departed the clearance zone:
- i. May 1 – 14: after one day of monitoring using methods described in (b.i.), (b.ii.), and (b.iii.) of this section.
 - ii. November 1 – December 31: methods listed under (b.i.) and (b.ii.) of this section may be used by the lead PSO on duty to confirm that the whales have departed the 10,000 meter zone; if so, piling may commence following observance of the clearance zone monitoring protocol described in (b.i.) and (b.ii.).

3. Green Period: Comprehensive Monitoring / Clearance Zone Protocol for Pile Driving

During this period of less likely presence of North Atlantic right whales, as specified in Table 1, a Comprehensive Monitoring / Clearance Zone Protocol will be implemented during each day that pile driving is scheduled to take place. This will include:

- a) Pile driving shall not be initiated at night or when the clearance zone cannot be visually monitored, as determined by the lead PSO on duty. Pile driving may continue after dark only if the action began during the day and must proceed for human safety or installation feasibility reasons; and
- b) A clearance zone for North Atlantic right whales shall extend a minimum of 1,000 meters in all directions from the center of the pile. Pile driving activities shall not be initiated when there is either the visual observation or acoustic detection of one or more North Atlantic right whales within the clearance zone through (i.) and (ii.) of this section and shall be shut down under either of these circumstances unless it must proceed for human safety or installation feasibility reasons. If a shut-down is implemented, pile driving may resume upon confirmation that all North Atlantic right whales have departed the clearance zone after 60 minutes of monitoring through (i.) and (ii.) of this section.

⁴ The lead aerial observer shall be selected from a roster of qualified lead aerial observers who are available for duty with 12 hours' notice. This roster to be provided by either the New England Aquarium, the Center for Coastal Studies, National Oceanic and Atmospheric Administration ("NOAA"), or other organizations recommended by the organizations listed in this sentence. The Project will use only observers from this roster to the extent they are available at the time needed to perform the monitoring.

- i. Real-time PAM will be implemented at least 60 minutes prior to pile driving. PAM will be undertaken from a vessel other than the pile driving vessel, or from a stationary unit, to avoid the hydrophone being masked by the pile driving or other development-related noise; and
- ii. There shall be a minimum of four PSOs stationed at the pile driving site, following a two-on, two-off rotation, each responsible for scanning no more than 180° per pile driving event. Observation will begin at least 60 minutes prior to the commencement of pile driving and shall be conducted throughout the period of pile driving activity.

4. Installation of Jacket Foundations

No more than two jacket foundations will be installed.

B. Geophysical Surveys During Construction and Post-Construction

This section does not refer to any geophysical surveys carried out as part of site assessment and characterization (“SAC”) stage of offshore wind development. The Parties believe further discussion is necessary to agree upon feasible protocols for SAC surveys that would allow Vineyard Wind to meet BOEM geophysical survey requirements.

Table 2. Seasonal Restrictions on Geophysical Surveys During Construction and Post-Construction

Timeframe	Mitigation Protocol
Red Period: January 1 – May 14	No geophysical surveys with RMS sound pressure levels > 180 dB re 1 uPa at 1 meter for equipment that operates between 7 Hz and 35 kHz unless with Enhanced Mitigation Protocol
Green Period: May 15 – December 31	Comprehensive monitoring / clearance zone protocol required

1. Red Period: No Surveys or Surveys with Enhanced Mitigation Protocol

During this period, as specified in Table 2, no surveys with RMS sound pressure levels > 180 dB re 1 uPa at 1 meter for equipment that operates between 7 Hz and 35 kHz shall occur. An exception can be made for infrequent geophysical surveys that are essential during the construction and micro-siting of the Project to ensure proper installation or maintenance of the Project post-construction. In these instances, the following enhanced mitigation protocol shall be implemented:

- a) A clearance zone for North Atlantic right whales shall extend 1,000 meters in all directions from the survey vessel;

- b) Surveys shall not be initiated at night or when there is either a visual observation or an acoustic detection (confirmed by visual observation) of one or more North Atlantic right whales within the clearance zone and shall be shut down under either of these circumstances. After daylight hours, surveys shall be shut down following an acoustic detection only. Observation and PAM shall begin at least 60 minutes prior to commencement of the survey and shall be conducted throughout the period of the survey activity. Surveying may resume upon confirmation that all North Atlantic right whales have departed the clearance zone after 60 minutes of both visual and acoustic monitoring; and
 - i. Real-time PAM shall be undertaken in a manner that avoids masking of the North Atlantic right whale vocalizations by vessel noise, including use of a system that is independent from the survey vessel if necessary; and
 - ii. There shall be a minimum of four PSOs following a two-on, two-off rotation, each responsible for scanning no more than 180°.
- c) Survey equipment will commence following a ramp-up procedure and will be operated at the lowest source level feasible to meet survey requirements.

2. Green Period: Comprehensive Monitoring / Clearance Zone Protocol for Surveys

During this period, as specified in Table 2, a Comprehensive Monitoring/ Clearance Zone Protocol will be implemented during all surveys with RMS sound pressure levels > 180 dB re 1 uPa at 1 meter for equipment that operates between 7 Hz and 35 kHz. This will include:

- a) A clearance zone for North Atlantic right whales shall extend 500 meters in all directions from the survey vessel and, to the extent feasible, shall be extended to 1,000 meters;
- b) Surveys shall not be initiated when there is either a visual observation or an acoustic detection of one or more North Atlantic right whales within the clearance zone and shall be shut down under either of these circumstances. After daylight hours, surveys shall be shut down following an acoustic detection only. Visual and acoustic surveys shall begin at least 30 minutes prior to commencement of survey activity and shall be conducted throughout the period of the activity. Surveying may resume upon confirmation that all North Atlantic right whales have departed the clearance zone after 30 minutes of visual or acoustic monitoring; and
 - i. Real-time PAM shall be undertaken in a manner that avoids masking of the North Atlantic right whale vocalizations by vessel noise, including use of a system that is independent from the survey vessel if necessary; and

- ii. The clearance zone shall be monitored by at least one PSO and at least two PSOs if feasible.
- c) Survey equipment will commence following a ramp-up procedure and will be operated at the lowest source level feasible to meet survey requirements.

C. Vessel Speed Restrictions

All Project-associated vessels shall adhere to the following speed restrictions:

1. A mandatory speed restriction of 10 knots shall be observed within Dynamic Management Areas (“DMAs”) established by National Oceanic and Atmospheric Administration (“NOAA”) Fisheries, with the exception of crew transfer vessels.⁵
2. A mandatory speed restriction of 10 knots shall be observed within DMAs established by NOAA Fisheries by crew transfer vessels, unless the following procedures result in confirmation that the North Atlantic right whales are clear of the transit route and Project Area for two consecutive days:
 - (a) Vessel based surveys carried out by PSOs conducted during daylight hours and real-time PAM shall be undertaken, in a manner that avoids masking of the North Atlantic right whale vocalizations by vessel noise; or
 - (b) An aerial survey, weather permitting (based on safe flying conditions), conducted once the lead aerial observer⁶ determines adequate visibility based on standardized environmental parameters (*e.g.*, glare, sea state, wind speed, etc.) and real-time PAM shall be undertaken, when feasible, in a manner that avoids masking of the North Atlantic right whale vocalizations by vessel noise.

⁵ A crew transfer vessel is a vessel whose principle purpose is to transfer technicians who work offshore, and the supplies and small-scale components used by these technicians, to and from a port facility and their offshore work location.

⁶ The lead aerial observer shall be selected from a roster of qualified lead aerial observers who are available for duty with 12 hours’ notice. This roster to be provided by either the New England Aquarium, the Center for Coastal Studies, NOAA, or other organizations recommended by the organizations listed in this sentence. The Project will use only observers from this roster to the extent they are available at the time needed to perform the monitoring.

- (c) Following clearance from C. 2. (a.) and (b.), vessel transits conducted within a DMA will employ at least two observers⁷ aboard the vessel to visually monitor for North Atlantic right whales. If a North Atlantic right whale is spotted within or approaching the transit route, vessels shall operate at less than 10 knots until the procedures in C. 2. (a.) and (b.) result in clearance of the transit route for two consecutive days.

3. From November 1 through May 14:

- (a) A 10-knot speed restriction shall be observed by all vessels, with the exception of crew transfer vessels operating within and transiting to/from the lease area and vessels operating in Nantucket Sound (which has not been demonstrated by best available science to provide consistent habitat for North Atlantic right whales).
- (b) A 10-knot speed restriction shall be observed by crew transfer vessels operating within and transiting to/from the Project Area (except while in Nantucket Sound, which has not been demonstrated by best available science to provide consistent habitat for North Atlantic right whales) unless the following measures are in place:
 - i. At least one observer,⁸ and two when personnel are available, aboard the vessel to visually monitor for North Atlantic right whales; and
 - ii. Real-time PAM shall be undertaken in a manner that avoids masking of the North Atlantic right whale vocalizations by vessel noise.
 - iii. If a North Atlantic right whale is detected as a result of the monitoring measures identified in (i.) and/or (ii.) of this section, a 10-knot speed restriction shall be in effect for the remainder of the day.
- (c) To the extent that a DMA occurs between November 1-May 14 the provisions in C. 1. and 2. apply.

D. Reporting

Vineyard Wind commits to report all visual observations and acoustic detections of vocalizing North Atlantic right whales to the National Marine Fisheries Service (“NMFS”) or the Coast Guard within two hours of occurrence when feasible and no later than the end of their shift.

⁷ During construction the observers shall be NMFS certified PSOs. During Project operations and maintenance, the observers shall have North Atlantic right whale observer training provided by a company utilized by NMFS for PSO training or recommended by the organizations listed in footnote 6. Two individuals shall be designated during each vessel trip to conduct monitoring.

⁸ See footnote 7.

E. Underwater Noise Reduction

Vineyard Wind is committed to employing technically and commercially feasible noise reduction and attenuation measures that minimizes impacts to North Atlantic right whales and other high-priority species. Vineyard Wind will implement attenuation mitigation to reduce sound levels by a target of 12 dB. A noise attenuation technology will be implemented (*e.g.*, Noise Mitigation System [NMS], Hydro-sound Damper [HSD], Noise Abatement System [AdBm], bubble curtain, or similar), and a second back-up attenuation technology (*e.g.*, bubble curtain or similar) will be on-hand, to be used if needed given results of field verification. For the Project, Vineyard Wind will not request Level A takes of a North Atlantic Right Whale. Vineyard Wind will inform and receive input from the other Parties as it identifies noise attenuation measures and technologies to be used for the Project.

F. Additional Mitigation Strategies

In addition to the above measures designed to avoid and minimize impacts to North Atlantic right whales, Vineyard Wind commits to considering other mitigation approaches aimed at overall species protection.

II. Commitment to Collaborative Science

Vineyard Wind has made a \$3 million commitment to develop and deploy technologies that ensure heightened protections for North Atlantic right whales and other marine mammals as the U.S. offshore wind industry continues to grow. Vineyard Wind commits to implement the following principles when undertaking marine science and science-based conservation efforts:

- A.** Plan and conduct science and science-based conservation efforts in a collaborative and transparent manner, utilizing recognized marine experts, engaging relevant stakeholders, and making results publicly available;
- B.** Contribute to the field of marine science and make efforts to address the priorities defined by regional and state ocean planning efforts; and
- C.** Advance understanding of the effects of offshore wind development on marine and coastal resources, the effectiveness of mitigation measures (*e.g.*, noise attenuation, thermal detection), and strategies to reduce other stressors facing affected species (*e.g.*, incidental fishing gear entanglement reduction), such as the North Atlantic right whale.

III. Inclusion of Protective Measures in Agency Submittals

Where Vineyard Wind seeks state and federal authorizations to conduct Project activities that may potentially affect the North Atlantic right whale, Vineyard Wind agrees to propose mitigation strategies

consistent with the protective measures set forth herein as they relate to the activity for which authorization is sought. Vineyard Wind will also inform the relevant state and federal agencies of Vineyard Wind's voluntary commitments under this Agreement. To the extent that a state or federal agency declines to adopt, for regulatory purposes, a protective measure specified herein, Vineyard Wind will nevertheless implement the measure provided it does not conflict with regulatory requirements.

IV. Modeling and Adaptive Management

The intent of this agreement is to minimize disruption of normal feeding, breeding and migratory behaviors and prevent injury to right whales. The mitigation measures of this Agreement aim to lower risk from injury to a level approaching zero and to reduce other effects caused by marine noise significantly below that estimated in BOEM's December 2018 Draft Environmental Impact Statement ("DEIS") for Vineyard Wind. The Parties' expectation is that the mitigation measures included in this agreement will meet these goals. To confirm this before construction, Vineyard Wind agrees to re-run and share with the Parties its piling noise exposure model to incorporate the execution of mitigation measures in this Agreement and the Project parameters (*e.g.*, number of monopiles, number of jackets) planned to actually be built (as opposed to the permitting envelope analyzed in the DEIS). Should the revised modeling not demonstrate that impacts from construction are reduced to the levels described in this paragraph, the Parties will consider additional mitigation measures.

While this Agreement applies only to Vineyard Wind's 800 MW project located in the northern portion of the lease area OCS-A-501, the Parties recognize that Vineyard Wind intends to propose future projects. In a good faith effort to continue to work collaboratively and evaluate lessons learned from the Project subject to this Agreement, every two years, or if one of the Parties so requests, the Parties agree to review the scientific data on the occurrence, abundance, habitat use, and conservation status of North Atlantic right whales, particularly in the vicinity of the Project Area, along with any other relevant data, including information on new noise attenuation and monitoring technologies or practices that have become available. This review will inform future projects and agreements between the Parties. To the extent that new protective measures are identified relevant to this Project, Vineyard Wind agrees to evaluate their technical and commercial feasibility and implement them if appropriate.

V. Dispute Resolution

In the event of a dispute among the Parties concerning implementation of or compliance with any aspect of this Agreement, the initiating Party or Parties shall provide the other Party or Parties with a written notice outlining the nature of the dispute and the remedy that is sought. The Parties shall meet and confer, either in person or over the telephone, to work in good faith to attempt to resolve the dispute, including by modification of the agreement if all Parties agree. If agreement on the appropriate resolution of the dispute cannot be reached, the Parties reserve their right to withdraw from the agreement as a last resort.

VI. Term of Agreement

The Parties agree that the protective measures set forth herein will remain in place for five years unless extended or modified by mutual agreement of the Parties.

RE: Vineyard Wind Phase II Letter of Support

Dear Erich,

I am pleased to submit this letter of support for your Phase II project which you are currently developing for the Commonwealth of Massachusetts as part of their on-going offshore wind Request for Proposals (RFP). Vineyard Wind has demonstrated its willingness and commitment to developing community benefits on a collaborative basis, listening to community concerns, and developing offshore wind in a manner that delivers significant benefits to the Commonwealth. The constructive relationship Vineyard Wind has built with our community in Phase I is a positive indicator that Phase II will proceed in a similar manner.

With the support of Town Council and the commitment of staff, the last two years of effort have resulted in a Host Community Agreement that reflects the needs of the community while satisfying requirements of Vineyard Wind and the broader regulatory community. Our relationship has been built on common objective such as providing a clean form of energy while being aware of and sensitive to our community's needs and the sensitive environment upon which we reside have resulted in our further support for your Phase II project.

The positive working relationship that we have developed has allowed us to find mutually beneficial areas of cooperation, including collaboration on important sewer expansion in conjunction with the work on Vineyard Wind Phase I. That collaboration will achieve significant savings, minimize community disturbance and help to address our water and wastewater infrastructure needs in Barnstable. We recognize that any onshore transmission project will present logistical challenges, and the standard of communication and coordination that we have achieved so far in Phase I will serve the Town of Barnstable well as you pursue Vineyard Wind Phase II.

We look forward to working with you to set an example of responsible project management that is responsive to neighborhood, municipal and environmental concerns. We remain supportive of Vineyard Wind in this and future projects that will benefit our community, the Commonwealth, and the environment.

Respectfully,

Mark S. Ells
Barnstable Town Manager

UMass

Dartmouth

SCHOOL FOR MARINE SCIENCE AND TECHNOLOGY

Steven X. Cadrin, Professor
Chair of the Department of Fisheries Oceanography

August 21, 2019

Cristiana Bank, Fisheries Liaison
Vineyard Wind
700 Pleasant Street, Suite 510
New Bedford, MA 02740

Dear Crista:

Based on our experience in collaborating with Vineyard Wind to develop a fisheries monitoring plan for Offshore Wind Lease OCS-A-0501, the Department of Fisheries Oceanography at the UMass Dartmouth School for Marine Science and Technology supports Vineyard Wind's second bid to produce offshore wind energy. Our support is consistent with our current Letter of Intent, the Massachusetts Energy Diversity Act, Ocean Management Plan, and Clean Energy Center as well as the University's Blue Economy initiative. Our Department looks forward to future opportunities for collaborating with Vineyard Wind on expanded fisheries monitoring and research to understand the impacts of offshore wind energy on fisheries (including fish populations, essential habitat, environments, ecosystems and fishing communities).

The Letter of Intent between the University and Vineyard Wind (December 11 2017) formalized a collaboration to plan and conduct pre- and post-construction assessments of fisheries, associated ecological conditions, and socio-economic aspects of fisheries, in and around the Vineyard Wind offshore wind lease area, as designated by the US Bureau of Ocean Energy Management, on the US Outer Continental Shelf. The purpose of this assessment was to help answer questions and provide information that can further the public understanding of potential impacts of offshore wind development and possible means of mitigation of any such impacts. This information is now available to help inform future permitting and public policy decisions.

From my experiences and interactions with Vineyard Wind on the development of a fisheries monitoring program, you have collaborated in good faith with SMAST, government scientists, fishermen, and the general public. Your efforts to actively reach out to diverse fishery communities and to consider their input is appreciated. Our Department would welcome further collaborations.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Steven X. Cadrin'.

Steven X. Cadrin

January 18, 2019

Mr. Matthew Beaton
Secretary of Energy and Environmental Affairs
Massachusetts Executive Office of Energy and Environmental Affairs (EEA)
Attn: MEPA Office Purvi Patel, EEA No. 15787 (Vineyard Wind Connector)
100 Cambridge Street, Suite 900
Boston, MA 02114

Dear Secretary Beaton,

On behalf of the more than twelve hundred-member businesses and organizations in the Cape Cod Chamber of Commerce, I wish to lend our strong support to Vineyard Wind's proposed wind energy facility off the Massachusetts coastline and offer these comments on the recently submitted Final Environmental Impact Report.

Since 1921, the Cape Cod Chamber of Commerce has worked to strengthen and promote the economic viability, cultural richness, environmental sensitivity and the social needs of Cape Cod. The Cape Cod region is grounded in a Blue Economy – one where its water resources drive economic prosperity. This acknowledgement forces recognition that the environment is our economy, and that balancing both is critical to our region's health and wellness. Investment in sound energy policy is a critical component to the region's health and prosperity.

While the construction of offshore wind infrastructure in federal waters is new, the preparation for this day has been underway for over a decade. With the creation of the Massachusetts Task Force in 2009, the State and Federal Government have been engaged in an organized and collaborative effort with local stakeholders to identify the most advantageous wind development areas, while at the same time minimizing adverse impacts on other commercial uses and the marine environment. The submission of a Final Environmental Impact Report by Vineyard Wind represents an important milestone in the nation's progress towards the birth of a new and important industry off our Commonwealth's coastline.

The environmental review process is a critical one, and although arduous, aims to protect the health of our ocean ecosystems – something very important to coastal regions such as ours. We are encouraged by the findings developed in Bureau of Ocean Energy Management's (BOEM) Draft Environmental Impact Statement (BOEM-2018-0069) that show either negligible or minor impacts for nearly all categories reviewed, and moderate but mitigatable impacts to the fishing industry. For certain, fishing is one of our most historic and important coastal industries from an economic and cultural heritage standpoint. We are encouraged by Vineyard Wind's commitment to working with the fishing industry to hear its concerns and find ways to minimize impacts to the extent possible. As an example, Vineyard Wind has an on-staff Fisheries Liaison, as well as Fisheries Representatives who represents the interests of fishermen to the project and help make sure the project is getting the information it should have about the fishing industry.

Vineyard Wind represents an opportunity to end our long-held designation as the terminus of the energy supply pipeline in the United States and would tie directly into the Cape Cod power grid, powering over 400,000 homes. This can result in improved resiliency and emergency planning in the region's historically unreliable electric grid,

and the addition of new storage capacity through distributed projects on the Cape Cod, Martha's Vineyard and Nantucket.

In term of economic development, Vineyard Wind's represents \$1.87 billion in direct economic benefits to Massachusetts including 3,600 new jobs and its development will spur the development of a domestic supply chain for the offshore wind industry to support the many other wind areas currently under lease by the Federal Government as they move into construction.

The creation of a major new industry such as offshore wind in the public domain is a major undertaking for sure. It is impossible to predict any and all circumstances that will occur as we launch this new industry. For that reason, we believe that Vineyard Wind is an excellent partner. They have demonstrated a sound commitment to incumbent industries, the environment, and minimizing impacts to the ocean environment. We believe they will continue this commitment throughout the project's development and operation.

It's time we move forward toward a new energy future focused on clean sources that provide the power we need as a society and minimize impacts on the natural environment and global climate.

Sincerely,

A handwritten signature in dark ink, appearing to read "Wendy Northcross", written in a cursive style.

RE: Vineyard Wind Final Environmental Impact Report, EEA No. 15787

Dear Secretary Beaton:

Founded in 1968, the Association to Preserve Cape Cod (APCC) is the leading nonprofit environmental advocacy and education organization for the Cape Cod, Massachusetts region. APCC works for the adoption of laws, policies and programs that preserve, protect and enhance Cape Cod's natural resources and quality of life.

On December 19, 2018, APCC issued a public statement endorsing the Vineyard Wind project. The decision to support the project followed comprehensive review by APCC of the project's multiple state regulatory filings through the Massachusetts Environmental Policy Act (MEPA) process, including the project's Final Environmental Impact Report (FEIR), as well as the release of the Bureau of Ocean Energy Management's Draft Environmental Impact Statement (DEIS).

APCC believes Vineyard Wind has largely addressed the major issue areas associated with the project through proposed actions that would avoid, minimize or mitigate most of the potential environmental impacts in the offshore and onshore aspects of the project. In the analysis provided in the DEIS and the FEIR, it was determined that where environmental impacts may be unavoidable, those impacts are likely to be minimal.

APCC recognizes that any project of such a large scale will inevitably have some impacts, and Vineyard Wind is no exception. However, APCC is also keenly aware that impacts to the environment and to humans will be catastrophically more significant if nothing is done to address climate change, and if projects such as Vineyard Wind do not move forward. As the first major offshore wind project in the United States,

100% Recycled Paper

482 Main Street | Dennis, MA 02638
Tel: 508-619-3185 | info@apcc.org | www.apcc.org

Vineyard Wind will be a significant step forward in the effort to shift our reliance from greenhouse gas-causing fossil fuels to clean renewable energy sources.

While APCC has expressed support for the project, we recognize that some aspects of project planning are yet to be finalized. Therefore, further project scrutiny in those areas is called for. We also believe there are opportunities to improve proposed mitigation to further protect environmental resources. We encourage Vineyard Wind to continue to work with BOEM, state regulatory agencies and others in addressing the key environmental issues associated with the project. Three areas on which APCC urges particular focus are:

- Protection of marine mammals, especially the critically endangered North Atlantic right whale (*Eubalaena glacialis*).
- Protection of offshore avian species, including federal and state listed species.
- Protection of groundwater at the proposed substation site in Barnstable.

Marine Mammals: APCC supports the package of mitigation proposed by Vineyard Wind to protect marine mammals, including the proposed \$3 million contribution for creation of a Wind and Whales Fund to develop innovative methods and technologies that will maximize protections for marine mammals as the U.S. offshore wind industry becomes established. But, in addition to Vineyard Wind's mitigation proposals, APCC recommends that BOEM require the implementation of other mitigation measures described in Appendix D of the DEIS, including long-term passive acoustic monitoring, daily pre-construction passive acoustic monitoring and visual surveys, and the prohibition of pile driving from sunset to sunrise during construction. Protection of marine mammals must be a fundamental component of this project, and APCC calls on BOEM, the National Marine Fisheries Service, state permitting agencies and Vineyard Wind to continue to seek additional mitigation strategies to further reduce the potential for adverse impacts, especially potential impacts to North Atlantic right whales.

Avian Species: The analysis of potential avian impacts conducted for the DEIS concluded that any offshore impacts would likely be negligible to minor. APCC recommended that BOEM require additional mitigation measures it has considered in its analysis that would further reduce potential for impacts to avian species during construction as well as during ongoing operation phases of the project, particularly mitigation that could help reduce the potential for fatalities of federally listed bird species. According to the FEIR, Vineyard Wind is also continuing its consultations with the Massachusetts Division of Fisheries and Wildlife's Natural Heritage and Endangered Species Program (NHESP) regarding potential impacts to federal and state listed avian species, including roseate tern (*Sterna dougallii*), least tern (*Sternula Antillarum*) and piping plover (*Charadrius melodus*). In its written comments on the project's Supplemental Draft Environmental Impact Report (SDEIR), NHESP noted Vineyard Wind's comprehensive mitigation strategy to protect marine mammals and recommended that a similar approach be implemented for listed avian species. APCC supports NHESP's recommendation and looks to further coordination between Vineyard Wind and NHESP, along with BOEM's input, to develop a strategy to maximize protection of listed avian species.

Substation: APCC applauds the efforts of Vineyard Wind and the town of Barnstable to develop a Host Community Agreement that facilitates the use of Covell's Beach as the cable landing site, enables onshore underground cable routing to be located entirely within existing roadway layouts, and establishes coordination between Vineyard Wind and the town on protecting groundwater at the substation site through a spill containment system, stormwater management plan and other mitigation. APCC strongly encourages the project applicant to continue to pursue the possibility of using biodegradable dielectric fluids for the substation's main transformers, as described in the FEIR. Vineyard Wind stated in the FEIR that a Spill Prevention Control and Countermeasures Plan will be developed but will likely not be ready for the upcoming Cape Cod Commission Development of Regional Impact (DRI) review process. Ensuring that water supplies are protected from hazardous material spills is of paramount importance, and APCC therefore recommends that DRI approval be conditioned on the Commission's and the town of Barnstable's review and approval of a completed plan.

APCC is confident that appropriate, comprehensive strategies and mitigation can be devised through continued consultation between Vineyard Wind, BOEM, state permitting agencies and other sources that will help protect rare species and vital natural resources, both offshore and onshore.

Sincerely,

Andrew Gottlieb

Subject: Vineyard Wind Energy Project
Date: Wednesday, January 09, 2019 7:20:55 PM

To Whom It May Concern,

I write in support of the Vineyard Wind Energy Project proposed for federal waters southwest of my home on Nantucket Island. With a power rating of roughly 800 megawatts the project would displace over 2 million tons of carbon dioxide from the atmosphere annually. It would be like taking over 350,000 cars off the roads of Massachusetts every year. I live 30 miles out to sea and we are on the front lines of climate change with more powerful storms, rising sea levels and coastal flooding. Offshore wind projects like Vineyard Wind would help us reduce our carbon emissions and help to mitigate these devastating effects.

I write in total support of this viable clean renewable energy project. Please do all that is in your power to advance it and see it to the construction phase and project completion.

Thank you for your attention to this important matter.

Sincerely yours,

Carl K. Borchert
Nantucket Island

COMMONWEALTH OF MASSACHUSETTS
THE GENERAL COURT
STATE HOUSE, BOSTON 02133-1053

January 22nd, 2019

Program Manager
Office of Renewable Energy
Bureau of Ocean Energy Management
45600 Woodland Road, Sterling, Virginia 20166

To the Program Manager,

We write to submit comments in support of the Vineyard Wind offshore wind farm proposal. As the United States' first large-scale offshore wind farm, this project will deliver invaluable benefits to our districts by protecting our environment and creating a new green economy for the Cape and the Islands. Since 2010, Vineyard Wind has worked extensively within our communities to increase local involvement in the planning and development process through dozens of forums and public events. Vineyard Power Cooperative signed the first offshore Community Benefits Agreement with Vineyard Wind in January of 2015. Since then, the Vineyard Wind Connector Project has conducted extensive and sustained outreach, seeking input from local residents, elected and appointed officials, local tribes, fishing and marine interests, environmental advocacy groups, and other relevant stakeholder groups. We are confident that this collaborative spirit will continue as the project advances.

In addition, Vineyard Wind recently signed a Host Community Agreement (HCA) with the Town of Barnstable. This agreement establishes a cooperative relationship between the town and the Company to bring power to shore on the Cape, and to provide resiliency in one of the grid's most vulnerable areas in the Commonwealth, while providing extensive economic benefits to the host community. Furthermore, the HCA also ensures the town's active involvement in reviewing Vineyard Wind's onshore infrastructure and construction operations, ensuring protection of local environmental resources.

We are pleased with Vineyard Wind's commitment to developing their Operations & Maintenance facility on Martha's Vineyard, as well as their commitment to providing \$12 million in funding, through their Offshore Wind Accelerator Fund and Windward Workforce Fund. This will ensure the offshore wind industry is anchored in Southeastern Massachusetts and employs and trains local residents for high skilled careers. We are impressed that Vineyard Wind has already begun to work in partnership with local higher education institutions such as Cape Cod Community College, Massachusetts Maritime Academy, and the University of Massachusetts, Dartmouth to implement important workforce and education programs.

We all share concerns about the effects of climate change, but none more so than the residents of the Cape and Islands, who are impacted by these effects on a routine basis. Approving and implementing the Vineyard Wind project will be a tangible demonstration of our commitment to chart a clean energy future. Vineyard Wind's 800 MW offshore wind project will produce enough clean, renewable electricity to power approximately 400,000 homes, and will reduce

CO2 emissions from the ISO New England system by approximately 1,680,000 tons per year – the equivalent of taking 325,000 cars off of state roads. This will be a vital step in meeting our renewable energy and greenhouse gas reduction targets, and protecting our fragile coastal environment. Our coastal communities are particularly vulnerable to climate disruption and ocean acidification, and this project will not only help transition our energy supply to renewable sources and support our local economy, but will critically enhance the reliability of power supply across the Cape and Islands, whose vulnerability was highlighted this past winter when parts of the Cape and Islands lost power for nearly a week during the violent Nor'easters that hit our shores. Supporting this project is an opportunity to take concrete steps toward combatting climate change on a state and local level.

We recognize that with any construction project there will be short-term disturbances to residents along the land cable routes, but Vineyard Wind has actively engaged public works and public safety officials in Barnstable as well as state transportation officials to minimize disturbance. Affected streets will be restored and repaved, leaving them in "like new" condition. Furthermore any temporary local inconveniences should be weighed against the large-scale benefits of this project.

Vineyard Wind has also committed to a Resiliency and Affordability Fund in coordination with local partner Vineyard Power and Citizen's Energy Corporation. This fund will contribute \$1 million annually for 15 years to provide substantial and self-sustaining benefits to local towns that host the off-shore wind project. The company has additionally made an unprecedented commitment to protecting endangered species including the critically endangered North Atlantic Right Whale, through their establishment of a \$3 Million "Wind and Whales" fund to support innovations in marine mammal protection.

According to a study conducted by the Public Policy Center at the University of Massachusetts, Dartmouth, the Vineyard Wind project will generate up to \$17 million annually in new state and local tax revenue beginning in 2021 as a direct result of the development, construction, and annual operation of the project. We cannot afford to overlook the enormous economic benefits of this project, which will help sustain a year-round economy for the Cape and Islands, as well as work to safeguard our communities against the increasingly severe impacts of climate change.

Massachusetts has been a leader in clean energy policy, starting with the 2008 Global Warming Solutions Act which mandated carbon reductions in the Commonwealth and the 2016 Energy Diversity Act which seeks to grow renewable energy in Massachusetts' energy mix. These policies give us a roadmap to a clean energy future in Massachusetts, but their passage must be followed by thoughtful and prompt pursuit of renewable energy projects. Vineyard Wind's successful development is crucial to fulfilling those ambitious goals and our moral obligations.

Once again, we thank you for your consideration of our comments.

Yours,

January 22, 2019

Dr. Walter Cruickshank, Acting Director
Bureau of Ocean Energy Management
Attention: Program Manager, Office of Renewable Energy
45600 Woodland Road
Sterling, VA 20166

RE: Vineyard Wind COP Draft EIS (Docket No. BOEM-2018-0069)

Dear Dr. Cruickshank:

On behalf of the board of trustees of the Cape Cod Climate Change Collaborative (5Cs), I am writing to strongly endorse the proposed Vineyard Wind project, the nation's first large-scale offshore wind energy project. Proposed for siting 14 miles off the coast of Martha's Vineyard, the project intends to bring 800 megawatts of electricity to the Cape and Islands and generate clean, renewable, cost-competitive energy for 400,000+ residents of the Commonwealth of Massachusetts.

Established in 2015, the 5Cs is a consortium of Cape Cod-based organizations whose mission is to unite available resources, organizations and intelligence to mitigate climate change impacts on Cape Cod, reduce greenhouse gas emissions, and work toward achieving "net zero"-based goals for the region. Board members include community leaders from across the region representing organizations such as the Association to Preserve Cape Cod, Cape Air, Cape Light Compact, Center for Coastal Studies, Friends of Pleasant Bay, Outer Cape Energize, Woods Hole Research Center, and numerous faith-based, educational, non-profit and business entities.

On January 15, 2019, the 5Cs issued a public statement endorsing the Vineyard Wind project. We did so in recognition that climate change poses the biggest global threat of our time. Recent federal reports describing acceleration and increased severity of climate change underscore the need for immediate action to generate clean renewable energy for the Cape Cod region, Massachusetts, and beyond. We believe the Vineyard Wind project will make major strides in advancing this goal.

The waters off New England are warming at an alarming rate, much faster than scientists thought just four years ago. Climate change has also created more extreme weather events and unpredictable storms. Climate change poses existential threats to our environment, human health, and the economy—indeed, our entire way of life on Cape Cod. The Cape's fishing industry will be especially

Cape Cod Climate Change Collaborative PO Box 1092, South Orleans, MA 02662
www.capecodclimate.org Phone 607.351.8681 capecodclimate@gmail.com

impacted by warming water, which means cold water fish species will leave the area in search of cooler water or become extinct. It's imperative that we change our energy sources to a low-carbon mix containing a significant amount of renewable energy, starting yesterday.

The 5Cs board has carefully followed and been impressed by Vineyard Wind's efforts to mitigate project impacts and address community concerns. The project, for example, has developed community agreements with municipal partners on the Vineyard and town of Barnstable, committing \$15 million for numerous initiatives which benefit Cape and Islands residents including programs to recruit, mentor and train Massachusetts workers, particularly those in southeastern Massachusetts, for careers in the new offshore wind industry.

The 5Cs also supports comments submitted by the Association to Preserve Cape Cod (APCC) on January 17, 2019. Specifically, we endorse its recommendation that the Bureau of Ocean Energy Management work closely with Vineyard Wind and state agencies to ensure that proposed project mitigation protect the following important environmental resources:

- Marine mammals, especially the critically endangered North Atlantic right whale
- Offshore avian species, including federal and state listed species
- Groundwater at the proposed substation site in Barnstable

We are confident that appropriate regulatory conditions and mitigation will be developed through continued consultation among Vineyard Wind, BOEM, state agencies and other entities charged with protecting rare species and natural resources, both off- and onshore.

Sincerely,

Moncrieff M. Cochran

Moncrieff M. Cochran, Executive Director
Cape Cod Climate Change Collaborative

Letter in support of the Vineyard Wind project

by Christian Roselund

January 21, 2019

I am writing as a resident of Rhode Island in support of Vineyard Wind's proposed off-shore wind project to be located in the Atlantic Ocean south of Martha's Vineyard.

Climate change represents an existential threat to our civilization and our species, and as such we must move as rapidly as possible from burning fossil fuels to non-emitting technologies including renewable sources to meet our energy needs. However, not all forms of renewable energy are equal in terms of their ability to meet demand in New England. Our greatest challenge in this region is not meeting peak electricity demand - it is in meeting demand for the combination of electricity and heat which reaches its highest levels on winter evenings and during very cold weather.

As New England is dependent on imported natural gas for the majority of our electric and heating needs, the limited supply of gas in the winter drives higher electricity prices as well as the burning of dirtier fuels (coal and petroleum) to provide electricity. This is not only an environmental problem, but an economic one for this region. The higher price of electricity during the winter puts stress on residents and businesses, which is further compounded by the lack of visibility into prices due to the uncertain nature of gas markets.

These unique circumstances make offshore wind an ideal solution for New England. A recent study by Massachusetts Clean Energy Center for our regional grid operator indicated that measured wind speeds in the areas for which offshore wind is planned could have enabled a 70% capacity factor during the entire period of the "bomb cyclone" storm last January - a very high level of availability. Furthermore, as the cables for offshore wind farms are underwater, they are less prone to interruption than are those connecting large land-based power plants to the grid.

And while electricity prices are always a factor, building large projects with larger turbines, such as Vineyard Wind proposes, is the best way to bring down prices both for this project and future projects. This project not only provides benefits on its own, but is an important step towards scaling New England's nascent offshore wind industry.

As for coastal resources, I am a resident of Rhode Island who frequently spends time in the summer with my son on beaches on Long Island Sound and on Block Island, and I do not feel that the presence of wind turbines in any way interferes with my enjoyment of these areas. Many who I have spoken to share the same opinion.

Any economic or personal enjoyment concerns regarding the impact of offshore wind development pale in comparison to those stemming from the future impacts of climate change on the coast of Rhode Island, the waters of Long Island Sound and the coastal Atlantic. As one example, warmer waters have already brought invasive species into

Narragansett Bay. Furthermore, no one will be able to enjoy beaches which are underwater, which is a reality which we will face in coming decades if we do not rapidly transition away from fossil fuels.

As for fishing, given the very small portion of the near-coastal Atlantic waters that this project represents, I cannot see how it would have too significant an effect on fishing in any circumstance. The location of this lease was awarded by the state and not by the developer I trust that it is the most suitable location. Additionally, I would like to draw your attention to the Environmental Impact Statement, which also notes that offshore wind projects create artificial reefs which can stimulate a number of species.

And while there still may be concerns for maritime industries, this project will use some of the largest wind turbines commercially available, which will result in both a smaller footprint, and less impact on other uses of the ocean.

Finally, offshore wind development will bring significant jobs and economic opportunities for coastal communities, and will enable a portion of our energy dollars to stay in this region.

Given all of these factors, I strongly support this project, and feel that either the main proposal or options B or C would be good solutions for this state, the region, our nation, and particularly our children who will inherit the world that we leave them.

Christian Roselund

Christian Roselund

Providence, RI 02906

January 25, 2019

Mr. Matthew Beaton, Secretary of Energy and Environmental Affairs
Executive Office of Energy and Environmental Affairs (EEA)
MEPA Office/ Purvi Patel, EEA No. 15787 (Vineyard Wind Connector)
100 Cambridge Street, Suite 900
Boston, MA 02114

RE: Vineyard Wind Connector Final Environmental Impact Report

Dear Secretary Beaton and Ms. Patel,

Clean Water Action (CWA) submits the following letter in support of the Vineyard Wind Connector project. CWA has been working since 1972 to protect the environment, public health, economic well-being and community quality of life. CWA's clean energy campaigns in Massachusetts support efforts to fight climate change and work to bridge racial and economic gaps that sometimes limit the ability of low-income residents and communities of color to benefit directly from the transition to a clean energy future.

CWA supports the Vineyard Wind Connector project for several reasons. First, the project will deliver 800 MW of emission-free electricity to Massachusetts from the nation's first large-scale offshore wind farm. The greenhouse gas emission reductions benefits of the offshore wind farm are estimated to be avoided emissions of 1.6 million tons of carbon dioxide per year.

Second, Vineyard Wind Connector will reduce Massachusetts' reliance on natural gas and lower electricity bills. The Massachusetts Department of Energy Resources projects that Vineyard Wind's 800 MW project will save electricity customers \$1.4 billion over 20 years.

Third, Vineyard Wind has worked closely with local communities in developing Vineyard Wind Connector and has made improvements to the project based on community and other stakeholder

88 Broad Street, Lower Level, Boston MA 02110
617 338 8131 / bostonCWA@cleanwater.org
www.CleanWaterAction.org/MA

input. The Host Community Agreement that Vineyard Wind has signed with the Town of Barnstable ensures the town will directly benefit from the project, and the project more than addresses the limited community concerns about noise and light pollution.

In addition to the above, Vineyard Wind is committed to responsible renewable energy project development as evidenced by the recently announced agreement with environmental organizations to protect the critically-endangered North Atlantic right whale (NARW). This historic agreement sets a strong standard of protection for this species and will help Massachusetts achieve its climate change and renewable energy goals without further endangering the NARW.

For all of these reasons, CWA supports the Vineyard Wind Connector and respectfully requests that you approve it.

Thank you, and please do not hesitate to reach me with any further questions.

Sincerely,

Alex Papali

Subject: Vineyard Wind's Report
Date: Friday, January 25, 2019 11:23:53 AM

Saving our environment from polluting fossil fuels is priority one. Offshore wind turbine farms will go a long way to establishing this priority.

I am pleased that Vineyard Wind in its final environmental impact report has been making accommodations to help save right whales and commercial fisheries, for examples. They have even accommodated several Cape towns by having their cable come ashore at a local beach rather than environmentally and commercially sensitive Lewis Bay.

These kinds of accommodations make Vineyard Wind a thoughtful landlord for this local part of the planet.

Respectfully,

Don Mallinson

January 22, 2019

To whom it may concern:

I am writing on behalf of the Environment Massachusetts Research & Policy Center in support of the proposed Vineyard Wind offshore wind project.

The Environment Massachusetts Research & Policy Center is dedicated to protecting Massachusetts' air, water, and open spaces. We investigate problems, craft solutions, educate the public and decision-makers, and help Bay Staters make their voices heard in local, state, and national debates over the quality of our environment and our lives.

We support the use of our offshore wind resources to provide limitless, pollution-free energy for Massachusetts and other East Coast states.

In Massachusetts, offshore wind is the largest renewable energy resource we have. Last March, we released a report, *Wind Power to Spare: The Enormous Energy Potential of Atlantic Offshore Wind*, documenting the potential for offshore wind energy along the Atlantic coast. Our report found that Massachusetts has the highest offshore wind potential of any state in the nation. Massachusetts' technical potential for offshore wind is equivalent to more than 19 times the state's annual electricity consumption. Even if our heating and transportation are converted to electric power — a trend that is already underway, and a necessary step toward decarbonizing our economy and preventing the worst impacts of global warming — offshore wind will still be sufficient to power Massachusetts eight times over. I have included a copy of the report along with these comments.

Massachusetts' offshore wind resources, along with our potential for other forms of renewable energy like solar, give us confidence that a future powered by 100 percent clean, renewable energy is feasible. When we achieve 100 percent renewable energy, our air will be cleaner, our communities will be healthier, and we'll be doing our part to avoid devastating climate change.

In Massachusetts, public support for clean energy is strong, and state and local officials are responding to this support with ambitious commitments. In 2016, state officials passed a law committing to 1,600 megawatts of offshore wind energy within 10 years. Two years later, legislators opened the door to doubling that commitment to 3,200 megawatts, and Governor Baker promised he would do so.

Once completed, the Vineyard Wind project will produce approximately 6 percent of the electricity consumed in Massachusetts while avoiding 1.6 million tons of carbon dioxide annually, the equivalent of taking 325,000 cars off the road. The project will also result in a significant reduction in other pollutants, like nitrogen oxides and sulfur dioxide, that harm public health.

We are especially excited to see the Vineyard Wind project move ahead because it represents the launching point for the American offshore wind industry. Once this project is underway, we will soon see offshore wind farms providing power to states up and down the East Coast. Because this is the first large-scale offshore wind farm in the United States, it is critical for this project to move ahead in a timely fashion.

There has been an extensive process to gather input on the Vineyard Wind project from key stakeholders, beginning with the selection of lease area sites and continuing through multiple stages of the project's design. Vineyard Wind has responded to this input by making adjustments in the project plans, including reducing the number of turbines and moving the site of the cable landing.

Vineyard Wind has shown a commitment to building a cooperative relationship with the project's host communities. Vineyard Wind is partnering with Vineyard Power, an energy cooperative, to ensure that residents of Martha's Vineyard experience the economic benefits of offshore wind. The company has also committed to significant investments in renewable energy and resiliency in communities throughout Southeastern Massachusetts.

In conclusion, I ask you to do everything in your power to advance the development of the Vineyard Wind project as the first major step toward tapping into the tremendous offshore wind potential of the Atlantic coast. This project is a key component of the clean, healthy, renewable future that Massachusetts deserves.

Sincerely,

A handwritten signature in black ink, appearing to read "Ben Hellerstein", written over a horizontal line.

Ben Hellerstein

State Director

Environment Massachusetts Research & Policy Center

January 22, 2019

Program Manager, Office of Renewable Energy
Bureau of Ocean Energy Management
45600 Woodland Road,
Sterling, Virginia 20166

To Whom It May Concern,

Please accept the following letter on behalf of the Massachusetts Climate Action Project (MCAN) in support of Vineyard Wind's offshore wind project. MCAN is a 501(c)(3) non-profit that works on the state and municipal level with 51 chapters representing more than 70 communities in Massachusetts to fight climate change by promoting clean energy and educating the public on the dangers of dirty energy. MCAN strongly supports recent efforts in Massachusetts and at the federal level to foster the development of offshore wind in the US, a renewable energy resource that has the potential to substantially reduce greenhouse gas emissions.

Vineyard Wind's proposed 800 MW offshore wind farm is an example of a responsibly-sited renewable energy project. As demonstrated by the draft Environmental Impact Statement (DEIS), the company has taken steps to minimize potential negative impacts to the environment and local communities. Vineyard Wind has also invested significant time and resources in local community outreach and education efforts and is a local company with strong ties to the region.

From a climate change perspective, Vineyard Wind's project will avoid approximately 1.6 million tons of CO₂ pollution annually. This is equivalent to removing 3250,000 off the road. Perhaps more important than the project's direct pollution reductions, however, is the role Vineyard Wind's project will play in launching the country's offshore wind industry. As the first commercial-scale offshore wind farm in the US, this project will set the standard for future projects and represents a significant milestone in the transition to a renewable energy future.

The success of Vineyard Wind's project is critical in light of recent news of rising climate change causing pollution and rapidly warming oceans. In 2018, after three years of decline, CO₂ pollution increased in the US by more than 3%. A large portion of the pollution increase came from the power sector, where natural gas met most of the increase in electricity demand. This unfortunate development underscores the need to do more and move faster to support renewable energy and energy efficiency. Given what's at stake, if we fail to rapidly reduce pollution in the coming years, the federal government must take immediate steps to reduce our dependence on fossil fuels.

For all of the reasons listed above, BOEM should grant this project all the necessary approvals and allow it to move forward.

Thank you for your consideration.

Sincerely,

Carol Oldham
Executive Director

From: Dorothy McIver
To: [Patel, Purvi \(EEA\)](#)
Subject: Comments on Vineyard Wind's Final Environmental Impact Report
Date: Saturday, January 19, 2019 8:43:11 PM

Dear Ms Patel,

We are writing to you to convey our comments about the Final Environmental Impact Report for the Vineyard Wind Connector, which would bring electricity from Vineyard Wind's offshore wind farm to shore in Massachusetts.

This project is important to us because it will help alleviate our dependence on fossil fuels while providing a clean renewable source of energy. Vineyard Wind will become the first commercial scale off shore wind farm in the country and we hope it will be the first of many such projects because we have no time to waste. We must drastically reduce our use of fossil fuels and reduce climate change emissions and the resulting impacts on our environment and Vineyard Wind will help us meet our state's remission reduction goals.

We are pleased to see that Vineyard Wind has made every effort to reduce the environmental impacts on local communities and to address the concerns of those in the fishing industry who feel they might be adversely affected. Vineyard Wind has listened to these concerns and taken steps to alleviate them.

Using wind power will also result in health benefits as it will improve our air quality and result in fewer cases of asthma and other respiratory illnesses which are prevalent in our region.

And we will see a growth of well paying green jobs (more than 3000) and lower electrical rates for consumers. Wind power is a resource our coast line is well suited for and we need to take advantage of the opportunities awaiting us. There is very little time left to mitigate the effects of climate change and we need to make changes at a much accelerated rate if we are to leave a habitable planet for our descendants.

So we urge you to approve this valuable project and continue to support the development of renewable energy projects in our state.

Sincerely,

Dorothy McIver

Wakefield, RI 02879
Attn: Executive Director Fugate and Chair Cervenka

Subject: Vineyard Wind LLC Consistency with OceanSAMP

Dear Mr. Fugate and Ms. Cervenka,

Last year was the fourth warmest year on record. 20 of the warmest years on record were in the last 22 years. The wildfires in California almost *doubled* in severity, will continue to grow every year, and become a trend even in the southeast. Over a 1.5 *million* acres burned in 2018. Almost 20 million people were displaced due to climate change in 2017 and experts predict we will see up to 200 million displaced in the next 30 years. In that same time frame, sea level rise will cause up to 311,000 homes to be flooded biweekly. NOAA predicts RI will see 8 ft of sea level rise by 2100 based on emission levels that have increased since the 2017 study. Our predictions consistently fall short of capturing the true severity of the climate crisis. Impacts are always compounding and the interdependence of plant and animal species result in a domino effect that is based on a system so large and complex that it is nearly impossible to predict. Distinguished professor of atmospheric science and the director of the Earth Systems Science Center at Penn State University says its like a minefield that we're stepping out onto as we continue to warm the planet.

To limit the impacts of catastrophic climate change, we must not exceed 1.5C of warming which requires 45% carbon pollution reduction by 2030, a feat likely unachievable without offshore wind. We've known the value of offshore wind development, which is why in 2008 the serious undertaking of the RI Ocean Special Area Management Plan was initiated so that the ocean waters off RI coasts could be used, according to the Plan's Practitioner's Guide, "collaboratively and openly as possible." The consistency of Vineyard Wind's 800-MW offshore wind project and CRMC's jurisdiction over it's issuance is the topic of this letter, which I hope you consider thoroughly and with a view that captures the pivotal nature of what would be the nation's first large-scale offshore wind project.

The region obtained by Vineyard Wind for it's offshore wind project was established as suitable for development by the Federal Government by a process that included extensive stakeholder

engagement that resulted in extreme reductions to the parcels deemed available for lease. The reductions were so prime fishing ground would be avoided and as such, if fishing were to stop altogether in that area, (which is not necessary or likely), would only represent 2% of the total RI fishing landings value. Still, Vineyard Wind began engagement with the Fisherman Advisory Board (FAB) in 2017, before they even started the permitting process for the project. This foundation of this project is one of due consideration, compromise, and collaboration on the part of the company that is seeking to develop federal waters off the shore of RI in consistency with Ocean SAMP goals to mitigate greenhouse gas pollution that causes climate change.

Since Vineyard Wind has been meeting with FAB in 2017 it has had hundreds of meetings with fisherpeople but has only heard about the east-west alignment request in 2018 after extensive geological research had already been done to design each turbine in a way that would be optimal for anchoring to the ocean floor in each specific location. The east-west alignment is not mentioned in the Ocean SAMP, which also included thorough, comprehensive, and meaningful involvement of stakeholders. Still, Vineyard Wind responded to FAB's request and has found a way to decrease the number of turbines that cannot be aligned in an east-west direction by securing the *largest turbine commercial available in the world today*. Under all options for turbine placement options proposed by Vineyard Wind, only about 6% of the entire combined Wind Energy Areas (WEA) would not have east-west rows. Further, Vineyard Wind has committed to orienting all future turbine installations in east-west rows and include a 1 nm separation distance between each row, as requested by the FAB.

In addition to reconfiguration of the turbine arrangement, Vineyard Wind offered a robust compensation package that demonstrates sincere commitment to the fishing industry in our state. While the recent article in the Providence Journal paints a picture that the compensation package came late, I would like to highlight that fisherpeople were not engaging in discussions of mitigation while the package was being developed. Likewise, Governor Raimondo's staff discouraged Vineyard Wind from meeting with FAB while the company met with RI DEM to gather information about fisheries value. I think it is understood that such a package is considered a delicate legal process that requires both parties to audit independently the revenue that is at stake.

Vineyard Wind has proposed a \$30 million comprehensive funding package for the RI Fishing Industry that is based on a study conducted by Dennis M. King, Ph.D., a leading expert in this field with a 20 page Curriculum Vitae of relevant experience. The study includes data and reports from RI DEM. The compensation package consists of \$6.2 million to compensate fishermen for direct impacts which, if not used, can be applied to fishing industry programs. The remaining \$23.8 million is for a fund to support fisheries driven programs to further develop ways for the commercial fishing and offshore wind to coexist.

The old proverb goes, "give a man a fish and he will eat for a night, teach a man to fish and he will eat for a lifetime." Well, these people know how to fish! But with the acidification of the ocean, sea-level rise, change in migration patterns of fish, overpopulation that increases food

demand and results in overfishing, extreme-weather, and other intricacies I fail to mention, the integration of offshore wind power to the grid is an essential component for remediating other grave impacts of climate change. What Vineyard Wind offers is a project that moves us forward in achieving our emission reduction goals, goals that we are not on track to achieve and that are no longer pipedreams but necessary for sustained survival on this planet, while providing resources to the fishing industry so they can adapt and flourish as the energy sector of our economy necessarily transforms to include large-scale renewable energy.

In the Ocean SAMP Practitioner's Guide, on page 48, it says "through the Ocean SAMP, the CRMC commits itself to evaluating the feasibility, safety, and effectiveness of proposed Ocean SAMP area uses under projected conditions in a climate changed world." On the same page, the need to be flexible in the face of climate change is noted as impacts are "occurring at rates faster than originally predicted and that management must adapt in response."

Whether or not this precedent-setting project is deemed consistent by your board will have a significant impact on whether or not we, as state and as a nation, will be able to limit the catastrophic impacts of climate change. Given the extraordinary commitment Vineyard Wind has demonstrated to the fishing industry, the precedent should be set that these commendable mitigation measures that have been taken in this process is the standard for offshore wind development moving forward.

RI was the first to have offshore wind. Don't let us be the state that prevents the first large-scale offshore wind project. Not after we have seen sealife flourish at the base of our turbines. Not when we have 12 years to limit the impacts of climate change that are already catastrophic and put in grave danger the Ocean State. Not when extraordinary measures have been taken to accommodate the fishing industry that requires a transformation of our energy economy if sea-life is to survive the rising temperatures of the ocean which has already risen 2.2F since the 1970's. Not when the project is consistent with the Ocean SAMP.

I urge you to act in accordance with your role in this process and issue the Consistency Certification to Vineyard Wind. Your support will go down in history as a launchpad for large-scale wind energy to be brought to the grid at a competitive price and put us in the right direction for securing a livable future for current generations and generations to come.

Most Sincerely,

Nicole DiPaolo

Sterling, Virginia 20166

To Whom It May Concern,

Please accept the following comments in support of Vineyard Wind's offshore wind project. The draft Environmental Impact Statement (DEIS) issued by your agency clearly demonstrates that the project has taken the necessary steps to minimize potential negative impacts to the environment and local communities. I also support the project because it's being developed by a local company with strong ties to the community. The Bureau of Ocean Energy Management (BOEM) should approve this project and allow it to move forward.

As a Massachusetts resident and owner of a solar energy installation company, I can speak directly to the need to encourage the development of responsibly-sited and managed renewable energy projects in our region. Properly executed, renewable energy projects have the potential to deliver substantial local economic and environmental benefits while joining the global effort to combat climate change. The DEIS provides an overview of a project that will do far more good than harm. Vineyard Wind is committed to working with local communities as the project moves into the construction phase and beyond.

It is imperative that we transition to 100% renewable energy systems to mitigate climate change, but we also need to pay attention to who is able to participate in the transition as well as who receives the benefits. As a locally owned solar installer, we are focused on returning energy dollars back to the local economy, unlike national third party owned developers that export our dollars to investment groups. The same is likely to be true in the emerging offshore wind sector with companies that have local ties to the community showing interest in developing projects in a responsible manner to ensure the communities where they are based receive a large share of the benefits.

As the first commercial-scale offshore wind farm in the country, Vineyard Wind's project has the potential to set the standard for an industry that is at risk of being dominated by multi-national oil and gas giants with a less than stellar environmental protection and community outreach track record. Allowing this project to proceed will put the other offshore wind developers on notice and let them know what steps they will need to take to obtain the necessary permits for their projects.

For all the reasons listed above, BOEM should grant this project all the necessary approvals.

Thank you for your consideration.

With kind regards,

Gregory Garrison, President
Northeast Solar January 13, 2019

Subject: Vineyard Wind project: Public Comment
Date: Wednesday, January 23, 2019 7:27:54 PM

Dear Sir/Mme;

In light of the three recent reports on climate change issued by the Intergovernmental Panel on Climate Change, the UN Environmental Programme and the US Federal government, it is critical that we make a swift transition to renewable energy and abandon our reliance on fossil fuels. The Vineyard Wind offshore wind project will help us do just that.

According to the facts, the wind project will help reduce our MA carbon emissions by over 1.6 metric tons per year (apparently the equivalent of taking 325,000 vehicles off the road). It will provide 400,000 homes with wind power energy and would meet the MA goal of 3200 MW of offshore wind, meeting 25% of the state's energy needs with the clean, renewable, locally sourced energy. The fact that it is locally sourced with a community oriented development approach is an important aspect of this well thought out project. The project has sought to be transparent with frequent public input at every step of the way. Special attention has been focused on the needs and concerns of the fishing industry, indigenous tribal interests, the protection of endangered and local wildlife species, and the minimizing of environmental impacts.

We cannot risk a poor prognosis for environmental, social and economic outcomes by failing to move quickly to renewable energy in an effort to reduce greenhouse gases.....and the window of opportunity to abate global warming is closing rapidly. The Vineyard Wind project offers one path to a sustainable future, a healthy planet and provides a plan to nurture the continuation of life on earth as we know it.

Vineyard Wind will be the US's first large offshore wind farm. I hope it will be a model for others to follow. I highly support this worthwhile and much needed endeavor.

Sincerely,

Ann Rosenkranz

Subject: Vineyard Wind Support
Date: Thursday, January 24, 2019 4:58:56 PM

To Whom it May Concern:

The people at Vineyard Wind have been working diligently to provide renewable off-shore wind energy for the Cape and Islands. They have met with many concerned groups including fishermen, homeowners, etc.

In the last few months we have been apprised of the dire situation-- much worse than was previously known-- about the CO2 levels. We must wean ourselves from fossil fuels!

Vineyard Wind is a good start. They have done their homework and I trust they have the best interests of the Cape and Islands at heart.

With this project, Massachusetts will become a national leader in the off-shore wind energy field. They have the support of Environment Massachusetts, the MA Climate Action Network, the Association to Preserve Cape Cod, the Cape Cod Climate Change Collaborative and the entire Cape and Islands state legislative delegation.

Please support this project.

Sincerely,

Carol Shweder

Program Manager
Office of Renewable Energy
Bureau of Ocean Energy Management
45600 Woodland Road
Sterling, Virginia 20166

Dear Program Manager,

We are writing you today to provide comment in support of the Draft Environmental Impact Statement for the 800 Mega Watt Vineyard Wind offshore wind project.

The SouthCoast Development Partnership is a business led coalition that represents the largest employers, non-profit, and higher education institutions in the SouthCoast region. Offshore wind development continues to be a top economic development priority for this Partnership due to its ability provide employment opportunities to our region's residents, while helping diversify the Commonwealth's energy portfolio.

The Southeastern region of Massachusetts has not experienced the same robust economic growth that greater Boston's innovation economy has achieved. However, we believe that our region's "blue economy" will help catalyze this region's economic trajectory. As the United States' first utility scale offshore wind project, it will brand this region as a hub for renewable energy and marine science and technology.

In particular, we are writing in support of the 3,600 full-time jobs that Vineyard Wind is committing to creating, primarily located in the Southeastern Massachusetts region. Beyond the direct employment, we look forward to working with Vineyard Wind to identify supply chain opportunities for our region's existing businesses. This project can also promote the creation or relocation of related industry partners and employers to our region. We believe that offshore wind can become one of this region's next "anchor" industry, and we support this project.

Please contact SCDP Executive Director, Hugh Dunn, with any questions at (508) 910-9816 or hdunn1@umassd.edu.

Sincerely,

SouthCoast Development Partnership Co-Chairs:

From: Strahler, Alan
To: [Patel, Purvi \(EEA\)](#)
Subject: EEA No. 15787 Vineyard Wind Connector
Date: Sunday, January 20, 2019 2:53:24 PM

To:

Mr. Matthew Beaton, Secretary of Energy and Environmental Affairs
Executive Office of Energy and Environmental Affairs (EEA)
MEPA Office Purvi Patel, EEA No. 15787 (Vineyard Wind Connector)
Via Electronic Delivery

January 20, 2019

Dear Mr. Beaton:

We write today in support of the Vineyard Wind Project, which will provide 84 powerful wind turbines to generate more than 800 MW of carbon-free, renewable energy -- enough to power over 400,000 homes in Massachusetts. This power will reduce emissions of CO₂ by 1.6 million tons per year, as well as significantly ease regional air pollution by NO_x and SO₂. Since our global climate is rapidly changing in the face of increasing atmospheric concentrations of CO₂ and other greenhouse gases, the project will make a very significant contribution to moderating climate change.

In review of the Draft Environmental Impact Statement, the BOEM has found mostly negligible or minor negative impacts to Massachusetts' environment and communities, based on extensive research, data collection, and stakeholder input. Their process has been comprehensive and inclusive, and has included reducing the number of turbines and re-routing the cable landing at Barnstable to provide less impact.

As a coastal island community, Martha's Vineyard is particularly vulnerable to climate disruption and ocean acidification. Our home community, Edgartown, has already experienced impacts of sea level rise and more severe storms. As a result, climate change is very important to us and our community. The Vineyard Wind project will pioneer our local and regional action to reduce our own contribution to greenhouse gas emissions, and help us sustain our community in the face of this change.

Economic impacts of the project for our state will be overwhelmingly positive. Southeastern Massachusetts will reap the equivalent of over 3,600 full-time jobs; our island alone will reap 50 additional jobs in hosting and administering project maintenance and planning. Massachusetts ratepayers will save \$1.4 billion over the 20 year life of the project. Multiplier effects will support small businesses on our Island, and supply chains will provide opportunities for existing Massachusetts companies to feed into offshore wind industry.

Our island cooperative, Vineyard Power, is the local partner for the Vineyard Wind project, and has provided liaison services to Vineyard Wind to mitigate possible environmental and economic impacts as viewed by Island towns. Vineyard Wind has been very responsive and arranged to utilize our Island expertise and capabilities during all phases of the project.

In summary, we strongly support the Vineyard Wind project and find no fault with the MEPA Final Environmental Impact Report.

Sincerely yours,

Alan H. Strahler

RE: Public comment on EEA No. 15787 (Vineyard Wind Connector)

Dear Ms. Patel,

The Vineyard Conservation Society (VCS) is a 54-year old non-profit environmental organization dedicated to conserving the natural resources of Martha's Vineyard – including conservation of energy resources.

VCS strongly believes that, (1) reducing the worst impacts of global climate change requires deployment of an arsenal of renewable energy technologies including wind, and (2) that if we are to succeed, we must simultaneously address conservation and efficiency. Global energy demand is rising rapidly and will continue to do so; for renewable energy to significantly supplant fossil fuels it is essential that we slow the growth in demand. In addition, conservation and efficiency measures are highly cost effective, reduce the impact of peak demand on the grid, and provide carbon reduction benefits immediately.

For the last 15 years, VCS has taken the position that development of renewable energy sources is fundamental to protection of the environment and the public interest, provided it is part of a coherent regulatory framework addressing all offshore wind facilities, which the MEPA unit ensures.

VCS promotes the broadest possible definition of conservation, including habitat, biodiversity, open space, and community character. Therefore, we believe that for offshore wind to succeed, the process must promote the protection of marine resources and provide a net benefit to host communities' local environments. To this end, we were very pleased to learn this week of the agreement with conservation groups to take measures to protect the endangered North Atlantic right whale. We also applaud the plans to allow our emergency management services to use Vineyard Wind's storage batteries, reducing local carbon emissions and air pollution.

Stabilization of atmospheric greenhouse gas emissions is a global environmental priority; yet, renewable energy projects are not without environmental costs. To the greatest extent possible, MEPA regulatory oversight of this project should seek to protect biodiversity and habitat, and to facilitate local benefit for host communities in the form of dollars for energy conservation and efficiency programs.

While we support this project in concept, we would like to see it take the lead, and vigorously initiate and underwrite additional community benefits that promote energy conservation and improved efficiency in its many forms: from earmarking dollars for non-polluting transportation and improving efficiency of machines, to improving energy efficiency of homes and businesses. Development of new energy without an equally forceful effort at energy conservation will undercut the magnitude of change required, and we will lose a pivotal opportunity. With emissions and temperatures rising nearly every year, time is of the essence.

Thank you for the opportunity to comment.

Brendan O'Neill,
Executive Director

NEWS

July/August 2018

A New Course for Renewable Energy

BUILDING AN OFFSHORE WIND INDUSTRY

Officially awarded the opportunity to construct 800MW of offshore wind for the Commonwealth, Vineyard Wind actively seeks contractors and suppliers

Working alongside the Massachusetts Clean Energy Center, Vineyard Wind participated in its first of a series of “Meet the Developer” supply chain events, aimed at connecting developers with local businesses capable of performing the necessary work to construct the nation’s first large-scale offshore wind farm.

The company envisions wide-ranging mutual benefits between local businesses, workforce, and the burgeoning offshore wind industry – the project has a great need for labor, expertise, ports and other infrastructure, and plans to work locally to fill those needs wherever possible. Said Erich Stephens, Chief Development Officer of Vineyard

Wind: “It may seem like uncharted territory for the US, but Southern New England has a wealth of talents and resources that Vineyard Wind needs, from established construction companies, to marine trades and other support services. We are committed to hiring locally wherever possible because it benefits both the local communities and the project to have local talent and know-how on the team.”

VINEYARD WIND OFFICIALS TOUR CAPE, NEW BEDFORD, AND BRAYTON POINT; Site Of Former Coal-Fired Power Plant May Have New Role As Staging Area For Wind Farm Construction

Vineyard Wind officials toured the site of the former Brayton Point coal-fired power plant last month, as part of efforts to explore the potential role of the 300+ acre coastal facility in Vineyard Wind's construction, which is scheduled to begin in 2019. The company has committed \$30 million to community programs and infrastructure investment intended to help build an offshore wind industry along the East Coast. That commitment includes a \$10 million Offshore Wind Accelerator Fund for infrastructure needed to develop the offshore wind industry in the Commonwealth.

With its position on the water and access to major transportation infrastructure, Brayton Point is an appealing location for staging construction of the nation's first utility-scale offshore wind farm. While New Bedford commerce terminal retains its primary role, it's clear that there is a great opportunity for economic development throughout the South Coast.

Pederson indicated that the site could be used for manufacturing of turbine foundations or other parts of the project. "As we build this first project, we're also building the crucial components of a supply chain that will serve a new industry into the future," Pederson said. "While New Bedford provides the important main staging port, there will be a significant need for sites like Brayton Point to support construction and fabrication work for our project and future projects, and we hope to cultivate a sustained partnership in these areas."

Executive board members of Vineyard Wind also toured several sites in early July, including the New Bedford Commerce Terminal, identified as the project's central shoreside construction and staging area, cable landfall locations in Barnstable and Yarmouth, and the site of Vineyard Wind's future substation in Barnstable's Independence Park.

Vineyard Wind CEO Lars Pedersen and Chief Development Officer Erich Stephens toured the site at the end of June, along with State Senator Michael Rodrigues, State Representative Patricia Haddad, and members of Commercial Development Company Inc., the owner of the Brayton Point site.

COMMONWEALTH ANNOUNCES CONTRACT BETWEEN VINEYARD WIND AND UTILITIES

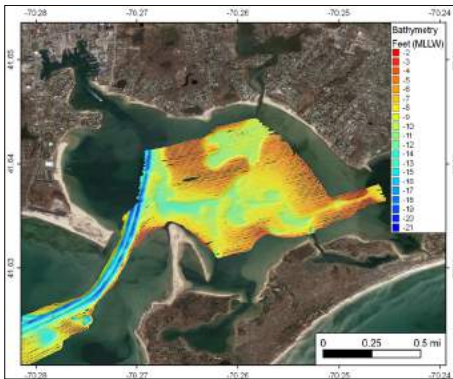

On August 1, the Massachusetts Division of Energy Resources (DOER) announced the execution of a long-term contract between Vineyard Wind and the Commonwealth's electric utilities. According to DOER, the Vineyard Wind project will deliver electricity at a levelized price of 6.5 cents per kilowatt hour, saving Massachusetts ratepayers \$1.4 billion over the anticipated 20-year life of the project.

"Today's historic filing represents the start of an industry, one that will assure access to abundant clean energy resources for decades to come, and Vineyard Wind is pleased to offer a competitive price to energy consumers in the Commonwealth of Massachusetts while continuing to advance the clear environmental and economic benefits associated with offshore wind," said Lars Thaaning Pedersen, CEO of Vineyard Wind. "By utilizing Federal Investment Tax Credits within the structure of a long-term power purchase agreement, Vineyard Wind was able to offer an attractive price to the benefit of consumers while creating value for its shareholders. This long-term investment and commitment to Massachusetts will stimulate job growth, economic development and acceleration of an emerging offshore wind industry in the United States."

The contract is now before the MA Department of Public Utilities for final approval.

LEWIS BAY SURVEY CONDUCTED; DATA ANALYSIS TO PROVIDE PROJECT REFINEMENTS FOR PROPOSED YARMOUTH LANDFALL

Vineyard Wind completed its second marine survey of Lewis Bay this spring and is finalizing data analysis for its most recent bathymetric mapping and analysis of Lewis Bay's seabed. Preliminary results confirm that seabed conditions of the bay where Vineyard Wind plans to install two transmission cables are appropriate for a target burial depth of 6 to 8 feet.

Vineyard Wind's surveys are thought to be the most comprehensive oceanographic study of Lewis Bay ever conducted. Instrumentation includes sidescan sonar, sub-seafloor seismography, high resolution bathymetry, and high-definition video. The analysis will be used to confirm the stability of the seabed, identify any sensitive resources (including eel grass), and will identify any obstructions to be avoided in order to achieve sufficient depths. The company is also analyzing core samples and benthic grabs from the Lewis Bay seabed which constitute the geotechnical analysis of the bay.

PROJECT PERMITTING

STATE SUPPLEMENTAL DRAFT ENVIRONMENTAL IMPACT REPORT UNDERWAY

Vineyard Wind is in the process of drafting a supplement to the Draft Environmental Impact Report submitted to the state in April. As Vineyard Wind was selected as the sole winner of the Commonwealth's first offshore wind procurement and asked to supply the full 800MW solicited by the state's utilities, the document will establish several project specifications unique to the 800MW bid, including refinement of the offshore cable route and confirming the need for only two export cables.

Once supplemental material is submitted, state environmental regulators will open a second 30-day public comment period. All comments on the Draft Environmental Impact Report will be considered as Vineyard Wind drafts the Final Environmental Impact Report, which will provide reference information for the many state agencies reviewing the project.

ENERGY FACILITIES SITING BOARD (EFSB) PROCEEDINGS TO CONTINUE THIS FALL; VINEYARD WIND SUBMITS RESPONSES TO SEVERAL HUNDRED QUESTIONS POSED BY CITIZENS, AGENCIES, AND OTHER INTERESTED PARTIES

The Energy Facilities Siting Board, currently reviewing Vineyard Wind's petition to connect the nation's first utility-scale wind generation facility to the grid, has been consolidating and submitting inquiries to Vineyard Wind in advance of proceedings expected in September. The several hundred questions relate to all aspects of the project, and were generated by comments from residents, inquiries from state agencies and local governments, and other correspondence submitted to the Board.

The Energy Facilities Siting Board reviews proposed electricity generation facilities in the Commonwealth, evaluating proposals on the basis of environmental impact, cost and feasibility. Responses to their questions, called "information requests" touch on the many financial, environmental, planning, and other aspects of the project.

Final determination from the EFSB is expected by spring of 2019.

FALL RELEASE ANTICIPATED FOR BUREAU OF OCEAN ENERGY MANAGEMENT (BOEM) DRAFT ENVIRONMENTAL IMPACT STATEMENT

After Vineyard Wind's federal filing in March 2018, BOEM held a series of public scoping meetings throughout southeastern New England, and a public comment period, to gather information from stakeholders on the Vineyard Wind proposal. The agency has compiled these comments, received any necessary clarification from Vineyard Wind, and is expected to release its Draft Environmental Impact Statement (DEIS) this fall. The DEIS will be open for public comment and BOEM will hold a series of public hearings to gather further input.

IN THE COMMUNITY

Vineyard Wind focuses on concerns of Yarmouth residents in most recent outreach efforts

After over a dozen community events in Barnstable and Yarmouth starting in 2017, including open houses, office hours and public forums, Vineyard Wind participated in two community meetings in July. A meeting with neighborhood associations held at an association member's home on July 2 preceded a public forum hosted by the Yarmouth Board of Selectmen at the Dennis-Yarmouth High School on July 16. Both events focused largely on issues surrounding Lewis Bay, and the questions posed by Yarmouth residents over the long-term health of Lewis Bay.

Erich Stephens, Vineyard Wind's Chief Development Officer who has been with the company since its inception, is optimistic about the recent dialogue with residents and town officials. "We feel that by working together, the town can support an important renewable energy project, have full assurance that the bay is getting all the protection it needs, and receive an additional, long-term revenue stream that will ease the tax burden in the town, and even enhance the condition of the bay," Stephens said. "It's now a matter of striking the balance that achieves all those shared goals."

Spring 2018 also featured several public events hosted by state and federal agencies seeking input to their permitting processes as Vineyard Wind works towards securing more than two dozen permits and authorizations from a range of agencies at the local, regional, state, and

federal level. The Federal Bureau of Ocean Energy Management held a series of public meetings on the Cape, Islands, New Bedford and Rhode Island this spring in order to hear from the public. In April, the State Energy Facilities Siting Board held a hearing at Barnstable High School. Several other similar events will be scheduled by various agencies in the coming months.

HCA negotiations continue with Barnstable; Yarmouth MOU in process

Since Fall 2017, Vineyard Wind has worked to develop Host Community Agreements (HCAs) with the towns of Barnstable and Yarmouth. HCAs offer host towns clarity on the project, establish working partnerships, and provide guarantees and protections for the towns.

Vineyard Wind is in ongoing and productive negotiations towards an agreement with the Town of Barnstable to provide compensation and legal assurances to the town as part of the

company's planned installation in the fall of 2019. The company will locate its substation and grid interconnect in Independence Park, adjacent to an existing substation owned by Eversource.

Vineyard Wind has also resumed dialogue with town officials in Yarmouth to negotiate an agreement with the town. Yarmouth officials are working with Vineyard Wind on structuring an initial payment to the town to support efforts to evaluate and negotiate an agreement on the project's preferred landfall at New Hampshire Avenue. "We want to be a good partner in this process, so making a good faith payment that can be used for preliminary technical or legal review makes sense for everyone," said Nate Mayo, Vineyard Wind's Manager of Development and Policy. "We want to ensure that the town is not incurring unreasonable costs or burdens as it works toward partnering with the project."

The HCAs could include commitments from Vineyard Wind to confine construction to off-season months, accommodate for and assist with local infrastructure needs, support restoration efforts in Lewis Bay, and provide a stable, long-term funding stream for the town. The towns have the opportunity to negotiate additional benefits including financial protections to protect the town from incurring costs, guarantee mitigation for any temporary impacts, and ensure that future dredging, sewerage or wastewater remediation will not be impeded by construction or operations.

The company's proposed primary route begins at New Hampshire Avenue in West Yarmouth, running under Berry Avenue and Higgins Crowell Road, and into Barnstable via one of several potential underground pathways off public roads.

Sampling Work in Barnstable evaluates feasibility of Covell's Beach landfall

Vineyard Wind contractors worked with the Town of Barnstable on a small but important step in their design of a potential cable landfall in Centerville: a core-sampling to provide confirmation of the soil makeup deep under Covell's beach. Initial findings indicated favorable conditions should the company employ horizontal-directional drilling (HDD) to run its cable deep below the beach as one of two options to bring Vineyard Wind's 800 MW of power to land from its project 30 miles south of Cape Cod.

VINEYARD WIND ENGAGES IN PUBLIC POLICY INITIATIVES

MASSACHUSETTS LEGISLATURE PROPOSES EXPANDED OFFSHORE WIND DEVELOPMENT FOR COMMONWEALTH; STATE COMMITS \$15 MILLION TO REDEVELOPMENT OF BRAYTON POINT SITE

As part of the usual flurry of legislative activity on Beacon Hill this summer, Vineyard Wind has been involved in a number of efforts, including a push to protect Nantucket Sound from wind turbine development, and initiatives that would increase renewable energy in the Commonwealth.

The State Senate and House passed legislation with a number of clean energy initiatives, including authorizing a doubling of offshore wind in the Commonwealth to 3200MW. The legislation is expected to be signed by the Governor, who signed the first offshore wind mandate as part of the 2016 Energy Diversity Act.

The legislature also included \$15 million for the redevelopment of Brayton Point in economic development legislation passed in late July. Brayton Point is the site of a former coal-fired power plant, and the area is slated to serve an important role in future offshore wind construction projects.

Vineyard Wind's \$10 million Offshore Wind Accelerator Fund and other potential commitments will form the base of shoreside modifications that developers and policymakers in the Commonwealth hope will anchor southeastern Massachusetts as the next global hub for offshore wind.

VINEYARD WIND WORKS TOWARD PROTECTION FOR NANTUCKET SOUND

This year, Vineyard Wind has been pursuing legislative, regulatory and other policy solutions to secure long-term protection of Nantucket Sound in support of the Alliance to Protect Nantucket Sound and other advocacy groups. Vineyard Wind officials have participated in a meaningful dialogue over the past several months to help protect Nantucket Sound from the siting of wind turbines, and the company plans to continue to be a partner in these important efforts.

While the economics and policy priorities for offshore wind have shifted to the deep ocean, Cape and Islands residents and other stakeholders remain uneasy about industrial development in Nantucket Sound, a legacy left by the failed Cape Wind proposal. Vineyard Wind's priority is to ensure offshore wind development is not pursued in Nantucket Sound, and the company is committed to helping develop a policy structure that supports responsibly-sited offshore wind areas defined through an established process built on stakeholder input.

VINEYARD WIND IS GROWING

Vineyard Wind hires New Bedford-based Fisheries Liaison Crista Bank to head up efforts to connect with fishing industry on project development

Vineyard Wind is thrilled to announce Crista Bank as its latest addition to the team. Vineyard Wind's new Fisheries Liaison, Crista will lead the project's regional engagement with fishing industry representatives on Cape Cod, the South Coast, Rhode Island, Connecticut and New York. A fisheries scientist, Bank brings extensive local, regional, national and international experience and deep knowledge of marine science and fisheries issues to her role at Vineyard Wind.

"For fishermen in the region, offshore wind is something new and unfamiliar, so we have to grow together," Bank said. "It will take a lot of work, thought and compromise, but we can coexist and thrive if we do it right. We need renewable energy, but just as much we need to be a good neighbor, supporting and engaging a valuable industry – I'm excited for the opportunity to play a part in connecting these two important national priorities."

Vineyard Wind seeks to build out its team; several positions recently posted

Ramping up efforts to begin construction in the fall of 2019, Vineyard Wind is seeking to fill crucial construction, management, permitting, and engineering roles. A unique range of talents are needed to build the nation's first large-scale wind farm. Roles include a Quality, Health, Safety and Environmental Manager, as well as several supervisory roles for project construction, engineering, media and finance.

"These roles represent the beginning of an American offshore wind industry," said Vineyard Wind CDO Erich Stephens. "Building a project like this is an enormous undertaking and assembling local talent to support our efforts is no small task. We're focused squarely on the challenges of the project before us, and are confident we can assemble and grow a skilled workforce in Southeastern MA that will support this new industry in the decades to come."

BARNSTABLE SIGNS HOST COMMUNITY AGREEMENT WITH VINEYARD WIND;

Town Council Approves Offshore Wind Farm Cable Landfall In Centerville

Vineyard Wind's offshore wind project achieved a major milestone on October 18 when the Barnstable Town Council voted unanimously to approve Vineyard Wind's proposal to bring its offshore cable onshore at Covell's Beach. This cable will bring the project's emission free electricity to the mainland and deliver it into the grid. The Town's approval of the cable landing supports the project's on-going permitting process at the state level.

The vote comes two weeks after the Town entered into a Host Community Agreement with

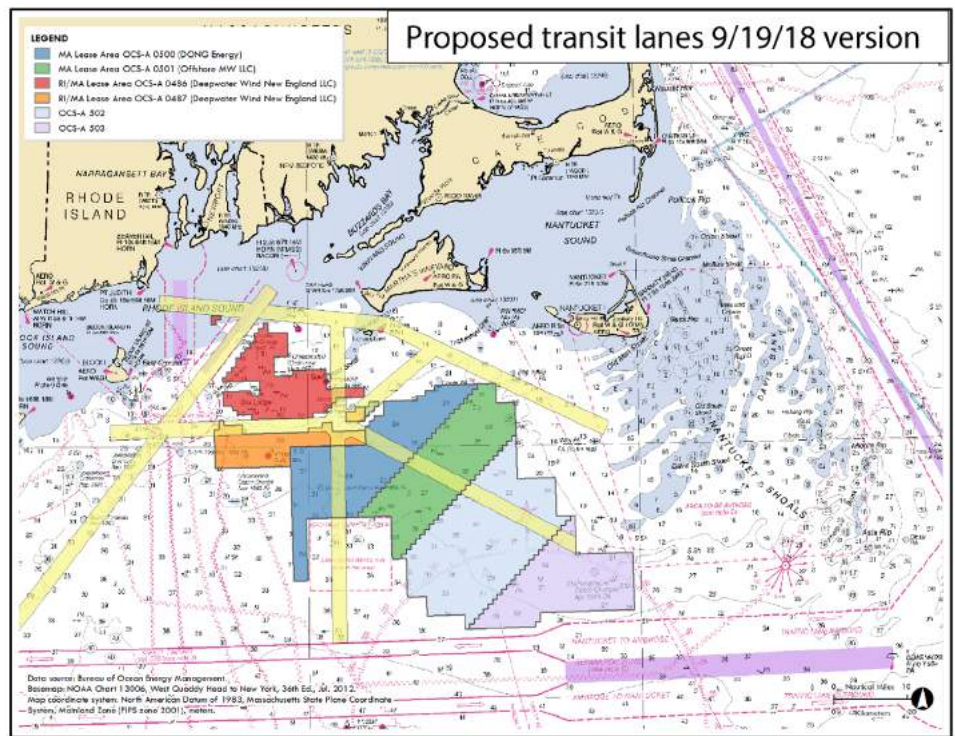

Vineyard Wind. The agreement provides a number of benefits to the Town in exchange for agreeing to "host" parts of Vineyard Wind's project. Among other things, the agreement will provide over \$35 million for the Town, provides for highest protections for the Town's water resources, and ensures that Vineyard Wind's cables will never be used for a wind project in Nantucket Sound. Because Vineyard Wind's cables will be using limited grid connection space on the Cape, this last provision means that as a practical matter, no wind projects will ever be built in Nantucket Sound.

CONTINUED ON NEXT PAGE

Vineyard Wind's project has received strong support from Barnstable residents, with many highlighting the important opportunity Vineyard Wind's project presents for the Town to take action on climate change and secure a major source of new revenue. "I want to commend Town Manager Ells and Charlie McLoughlin, our attorney, and Vineyard Wind as a whole for the cooperative spirit that I've seen," said Councilor John Flores at the October 18 Town Council meeting. "We're taking into account what's in the best interest of the Town and the safety of the community which is critical, and again protecting our water and our aquifer to make sure that there's never going to be an issue for us."

As a result of the Host Community Agreement, Vineyard Wind has designated the Town of Barnstable as its preferred cable landing site under the state's permitting process. Vineyard Wind originally sought to bring its cable on shore at New Hampshire Avenue in Yarmouth, with the Covell's Beach site serving as an alternative. However, in light of the productive negotiations with Barnstable councilors and staff, the company changed its preferred cable route to Covell's Beach on October 2, in advance of the state's Energy Facilities Siting Board (EFSB) proceedings.

The EFSB is responsible for reviewing and approving aspects of Vineyard Wind's project that will be located near- and onshore in Massachusetts as part of the state's permitting process. Both of the proposed project's cable landings, including their respective routes from the wind turbines to the shore, have been heavily researched and surveyed by Vineyard Wind and will be fully evaluated by the EFSB before it issues its final decision on the project.

Vineyard Wind and the Fishing Community Collaborate on Safe Navigation

Vineyard Wind is committed to ensuring wind and the fishing community can safely co-exist offshore. As a result, Vineyard Wind has recently announced its intention to implement a two nautical mile wide transit corridor through its offshore wind lease area. The transit corridor, which has broad support from a variety of fishermen from different ports across the region, will further ensure safe transit of vessels through the wind farm to important fishing grounds and safe passage home for mariners during inclement weather.

Governor Baker Ceremonial Lease Signing

On October 22, Governor Baker and Vineyard Wind representatives participated in a ceremonial lease signing for the New Bedford Marine Commerce Terminal, which will be the main port that Vineyard Wind uses to build its offshore wind farm.

VINEYARD WIND HOSTS LOCAL STUDENT GROUPS

High schoolers from across Massachusetts learn about careers in offshore wind.

On August 1, over 100 high school students from across Massachusetts gathered in New Bedford for an event co-organized by Vineyard Wind to learn about future career opportunities in the rapidly emerging US offshore wind sector.

Students in attendance are enrolled in the “Learn and Earn” summer internship program run by the Massachusetts Clean Energy Center (MassCEC).

The event was organized in cooperation with Bristol Community College and Mass Maritime Academy. Speakers included Steve Pike and Bill White from MassCEC, Anthony Ucci from Bristol Community College and Megan Amsler from Mass Maritime, as well as Vineyard Wind’s Nate Mayo. Students also toured the New Bedford Commerce Terminal, a port that Vineyard Wind will use to build its offshore wind project.

Presentations at the event focused on the growing demand for a talented local workforce to support the offshore wind industry in the coming years. Speakers highlighted the need for specialized skills in marine trades, environmental engineering, and a range of other disciplines. Students eagerly participated in the discussions, asking presenters technical questions and expressing interest in internships at Vineyard Wind.

Events like these are part of a larger effort that the event organizers and others in the region have undertaken to create a strong institutional base in southeastern Massachusetts to expand and support the region’s offshore wind workforce. Additional initiatives include outreach to secondary schools, expanding curriculum at local colleges, coordinating with offshore wind developers, and building the physical infrastructure necessary for technical training programs, such as Mass Maritime’s planned wind turbine base.

Photo (above): Over 100 students toured the New Bedford Commerce Terminal after a presentation on the career opportunities of offshore wind.

Photo (left): Nate Mayo of Vineyard Wind speaks to students about the project and the need for a variety of skilled workers in the offshore wind industry.

VINEYARD WIND SPONSORED EV CAR DAY SPARKS INTEREST ON MARTHA’S VINEYARD

Erik Peckar and Richard Andre of Vineyard Power along with State Representative Dylan Fernandes show support for electric vehicles on Martha’s Vineyard.

On September 8, Vineyard Wind co-sponsored Martha’s Vineyard Electric Vehicle (EV) Plug-In Day, which was hosted by Vineyard Wind’s community partner, Vineyard Power, at the Oak Bluffs Library.

The annual, local community event, held in conjunction with National Drive Electric Week, was an opportunity for Islanders to learn about the benefits and advantages of electric vehicles and gather information about available EV incentives.

This event is aimed at increasing awareness about EVs and supports Vineyard Power’s vision to make the island of Martha’s Vineyard carbon neutral, in domestic electricity, transportation and home heating by 2050. Vineyard Wind is proud to support events which help our island partner achieve their renewable energy goals.

IN THE DISTANCE:

WIND PROJECT VISUAL SIMULATION ON DISPLAY IN NANTUCKET

Local residents invited to view what offshore wind project will look like from shore

Ever wonder what wind turbines look like from 15 miles away?

Vineyard Wind encourages curious Nantucketers to stop by the Shanty on South Beach Street to see a visualization of the proposed Vineyard Wind project as it will look from the Nantucket coastline. Tobias Glidden, a local renewable energy advocate and owner of the Shanty, hopes that the display will help to educate locals and visitors about the importance of renewable energy on the Island.

The visualization is in good company, as Glidden's converted scallop shanty is also home to ACK Smart Energy - Glidden and business partner Zach Dusseau's solar installation business - as well as their electric bicycle showroom. A "solar terrace" supplies clean energy to the building and into the grid.

**VINEYARD WIND**

**NANTUCKET
OFFICE HOURS**

Come view visualization simulations and learn more about our efforts to build the nation's first large scale offshore wind energy project 15 miles south of Nantucket

**Monday through Friday
1:00 PM - 4:00 PM**
The Shanty
4 South Beach St Ext
(Behind The Juice Bar)

"The technology is here, and now it's a matter of education," said Glidden, a former member of the Nantucket Select Board. "We're excited to play a part in communicating with Islanders on a range of clean energy efforts, and Vineyard Wind is among the most important for Nantucket and beyond."

Residents are encouraged to view the visualization, learn about the project, and offer comments. The Shanty is also hosting regular office hours for Vineyard Wind throughout the fall to allow Islanders the opportunity to discuss the project, ask questions, and connect with the developer.

PERMITTING UPDATE:

VINEYARD WIND PROJECT CONTINUES ADVANCING THROUGH STATE PERMITTING PROCESSES

October marks two important achievements for the project on the permitting front in Massachusetts. First, on October 15, the Massachusetts Environmental Policy Act Office (MEPA) issued a certificate of completion to Vineyard Wind's Supplemental Draft Environmental Impact Review (SDEIR). This allows Vineyard Wind to proceed with development of a Final Environmental Impact Review for consideration by MEPA.

Second, the Energy Facilities Siting Board (EFSB) proceedings for the project were held throughout October. The EFSB held these hearings during several days throughout the month on Vineyard Wind's proposed cable route. The purpose of these proceedings is to allow the EFSB members and intervenors to ask Vineyard Wind questions and gather testimony on the proposal. The EFSB is anticipated to announce its decision on the cable route in Spring 2019.

VINEYARD WIND IN THE COMMUNITY

A summary of recent and upcoming local events sponsored or supported by Vineyard Wind.

Vineyard Wind is honored to have participated in several community events in Massachusetts this fall:

Net Zero Cape & Islands Roundtable:

Vineyard Wind was proud to be a sponsor of the Cape Cod Climate Change Collaborative on September 27, at the Cape Cod Resort & Conference Center.

Localizing Benefits from Offshore Wind: Energy, Economy & Environment:

Organized by the Cape Cod chapters of Sierra Club and 350.org, and hosted at the Cape Cod Community College, this October 1 event broadened the discussion about the benefits offshore wind can deliver to the region. Nate Mayo (Vineyard Wind) and Richard Andre (Vineyard Power) both participated in the panel pictured above.

Greater Hyannis Civic Association:

Vineyard Wind provided a presentation to the association board and attendees regarding the project's implications for Barnstable, including benefits that will be delivered by the Host Community Agreement and the project's construction timeline. This event follows a similar presentation to the Centerville Civic Association earlier in the year.

Commercial Marine Fishing Expo:

Vineyard Wind participated in the October 17-18 expo in Providence as part of our ongoing efforts to connect with Rhode Island fishermen.

Mark your calendars for 2019!

WaterWorks Career Day:

On **January 8, 2019** the Cape Cod Chamber of Commerce is organizing a career day to introduce students from all over the Cape, Islands, and South Shore to the opportunities available in the Cape's rapidly growing Blue Economy. Vineyard Wind is honored to be partnered with the Chamber on this event as a Premier Sponsor to teach high school students about the many opportunities to participate in burgeoning ocean-based industries in the area, with a special focus on the near-term need for a local workforce trained in offshore wind.

Massachusetts Lobstermen's Association (MLA) Annual Weekend & Trade Show:

On **January 17-19, 2019**, the MLA is hosting its annual gathering of over 1,800 commercial fishermen.

Vineyard Wind will be participating in the event as a Platinum Sponsor and is eager for the opportunity to engage with some of New England's most iconic fisheries at this event.

If you're interested in having Vineyard Wind participate in an event, please contact Nate Mayo at nmayo@vineyardwind.com.

Winter 2019

A New Course for Offshore Wind

Leading Cape Environmental Advocacy Organization Endorses Vineyard Wind

On December 19, the Association to Preserve Cape Cod (APCC) held a press event to announce their enthusiastic support of the Vineyard Wind project.

“We have reached a point where we are confident the project has worked diligently and successfully to avoid the potential for most environmental impacts,” said APCC Executive Director Andy Gottlieb. “Where environmental impacts may be unavoidable, those impacts are likely to be minimal, and they are proposing comprehensive mitigation to address those potential impacts.”

Gottlieb went on to say that recent climate reports and the Cape’s vulnerability to climate change impacts were the driving reasons behind this timely endorsement.

APCC’s support comes after an exhaustive review of state and federal environmental analyses and in advance of multiple opportunities for the public to weigh in on Vineyard Wind’s permitting through federal and state comment periods. Local permitting will begin in early 2019.

VINEYARD WIND WILL REDUCE CARBON EMISSIONS EQUIVALENT TO TAKING 325,000 CARS OFF THE ROAD.

Photo Credit: Gerald Beetham

PERMIT UPDATE:

Federal and Massachusetts Agencies Ask for Public's Input on Vineyard Wind's Project

Vineyard Wind enters final phase of MEPA permitting; Federal Government releases draft environmental analysis.

Vineyard Wind encourages everyone with an interest in fighting climate change, the business and job opportunities of a new offshore wind industry, energy security and costs, and environmental protection to submit written comments and/or attend one of five public meetings being hosted in January, and to submit written comment to both the federal and state agencies that will be accepting public comment during January.

Please stay tuned for the rescheduling of public meetings due to the federal government shutdown. Details on how to submit comments, along with public meeting dates and locations, are available on Vineyard Wind's website.

The Vineyard Wind project needs to receive permits and approvals from over 30 different government agencies.

On the federal level, the current public comment period focuses on the project's potential environmental benefits and impacts, detailed in the project's Draft Environmental Impact Statement, which was prepared by the Bureau of Ocean Energy Management. On the state level, public comments are being accepted for the project's Final Environmental Impact Report (FEIR), which was drafted by Vineyard Wind and submitted to the Massachusetts Executive Office of Energy and Environmental Affairs. The FEIR represents one of the last steps in Massachusetts' permitting process and review of the project.

VINEYARD WIND TO USE WORLD'S LARGEST WIND TURBINE

The 9.5 MW turbine reduces project's offshore footprint

In November, Vineyard Wind announced it will be using the world's largest and most powerful commercially available offshore wind turbine for its Massachusetts project. The MHI Vestas 9.5 MW turbine is the most world's most efficient, with each unit capable of providing enough energy for over 8,000 homes.

Photo Credit: MHI Vestas Offshore Wind

This turbine is so new to the market, the project team will have to work hard to make sure the turbine receives engineering certifications in time. But Vineyard Wind is glad to be able to use the turbine, as it is one of the ways in which the project is responding to concerns raised by the fishing industry. With this turbine model, Vineyard Wind is able to reduce the total number of turbines for the project from 106 to 84 while at the same time decreasing the project's footprint by more than 20%. Reducing the number of turbines and the overall area of the project, along with several other measures, is designed to make efficient use of the area leased to Vineyard Wind in 2015. "A key to coexistence with the many interests and industries in our oceans is to minimize impacts," Vineyard Wind CDO Erich Stephens said. "We are committed to putting as few structures in the water as possible, and the Vestas 9.5 allows us to do exactly that."

Recent Climate Reports Emphasize Urgent Need to Cut Carbon Emissions, Point to Renewable Energy as Key Solution

As world leaders convened in Poland for an international climate summit in December, three major reports- released by the Intergovernmental Panel on Climate Change, United Nations Environment Programme, and the US federal government- outlined the dire environmental, social, and economic consequences if the world fails to make dramatic progress in the coming decade to limit carbon emissions. These reports also point to the rapid deployment of renewable energy as an essential measure to avoid the worst impacts of climate change.

Fortunately, recent efforts by several Northeastern states, including Massachusetts, to jumpstart the US offshore wind sector promise to deliver thousands of megawatts of climate-friendly power in the coming years. Vineyard Wind's first-in-the-nation large-scale offshore wind project will reduce Massachusetts' carbon emissions by over 1.6 million metric tons per year, the equivalent of taking 325,000 cars off the road while providing over 400,000 homes with fossil-free wind power. Massachusetts' goal of 3,200 MW of offshore wind would meet roughly 25% of the state's energy needs with clean, renewable, locally sourced energy.

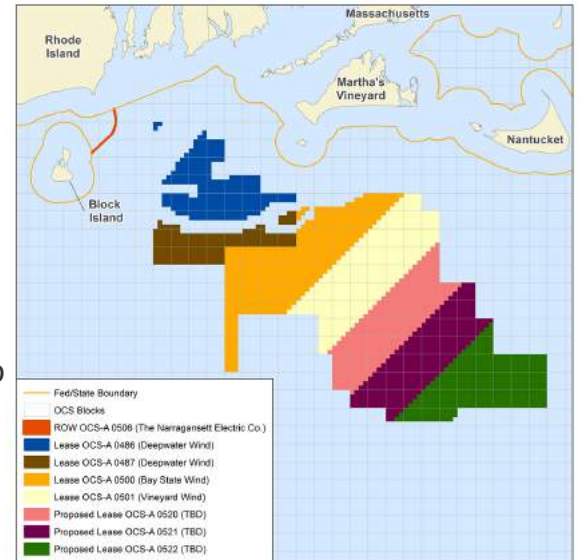

VINEYARD WIND SECURES SECOND LEASE AREA IN LATEST FEDERAL AUCTION

Vineyard Wind continued its path as a leader in the burgeoning US offshore wind industry with the acquisition of a second Offshore Wind Lease area, 30 miles south of Nantucket. The federal government conducted an auction in mid-December to allocate three lease areas off the southeast coast of Massachusetts to project developers via a competitive bidding

process. After 31 rounds of bids over the course of two days, Vineyard Wind was among three winners. Equinor and Mayflower Energy (a joint venture between Shell and EPDR) each acquired a lease area. This record setting auction netted the federal government over \$405 million.

The lease areas auctioned were identified by BOEM through a multi-year, intergovernmental and stakeholder process. The process was fully transparent, and included numerous public meetings held throughout the region. Fishing activity and endangered species were key factors considered when the areas were deemed appropriate for offshore wind development at the conclusion of the process.

Vineyard Wind is committed to continue working with all stakeholders – including the fishing industry, environmentalists, wildlife experts, and local communities – BOEM, and tribal and state agencies — in continuing to build a new industry for the region and making substantial contributions to fighting climate change. This new project lease area will allow us to grow our existing local partnerships, as we continue to apply a community-oriented development approach to our activities.

Want to learn more about the project?

Vineyard Wind staff stand ready to answer your questions and are available to give a presentation to local organizations and community groups that want to know more about offshore wind and the on-going permitting process.

Send questions or presentation requests to info@vineyardwind.com, and one of our staff will get back to you quickly.

VINEYARD WIND IN THE COMMUNITY

New Bedford High School Career Fair

On November 27, Vineyard Wind participated in the annual New Bedford High School Career Fair, alongside many other exhibitors including the Marion Institute and Bristol Community College. This event provided youth in attendance the opportunity to learn about a variety of careers that they could pursue, including careers in the offshore wind sector, along with the skills they will need to acquire to be successful.

Nantucket Christmas Stroll

Vineyard Wind joined the Nantucket Christmas Stroll on December 1 and spent time talking to residents and visitors about how offshore wind can play a role in local efforts to reduce the effects of climate change. Visual simulations of Vineyard Wind's offshore wind farm that were on display during the event will remain available for public viewing downtown at the Shanty (4 Beach Street Ext.) and the Nantucket Planning and Economic Development Office throughout next summer.

Millennial Leadership Summit

On December 3, representatives from Vineyard Wind and community partner Vineyard Power participated in the 100% Renewable Energy for Massachusetts Millennial Leadership Summit, an event organized and hosted by young leaders from environmental organizations, local governments, and renewable energy startups throughout the state. The summit served as a forum for the more than 80 participants representing various non-profits, businesses, and communities to celebrate the Commonwealth's renewable energy achievements to-date and identify areas where millennials are uniquely suited to push harder for a truly equitable shift to 100% renewable energy.

Cape Cod Maritime History Symposium

Vineyard Wind also participated in the Cape Cod Maritime History Symposium, held at the Cape Cod Museum of Natural History in November. Nate Mayo, Manager of Development and Policy, delivered a lecture on the centuries-long relationship between wind resources and maritime commerce and energy. "Our earliest maritime commerce was powered by wind," said Mayo. "We are in a position to use the same resource that powered ships for centuries to start a new industry, one that will provide a local source of energy and help meet our ambitious environmental goals here in Massachusetts."

WaterWorks Career Day

Vineyard Wind was honored to serve as the Premier Sponsor of the Cape Cod Blue Economy's WaterWorks Career Day. Over 300 students from the Cape, Islands, and southern Plymouth County visited Cape Cod Community College to learn more about the many career opportunities presented by offshore wind and other marine industries in Southeastern Massachusetts.

SMAST and Vineyard Wind Host Fisheries Studies Scoping Meetings

As part of Vineyard Wind's on-going commitment to support independent science and fisheries research, Vineyard Wind partnered with the the School for Marine & Science Technology (SMAST) at UMass-Dartmouth to perform pre-and post-construction fisheries assessments that will be key in informing the industry in its future efforts to minimize impacts to marine resources.

As part of this effort, SMAST recently hosted to a series of workshops for fishermen to identify what questions and information would be most valuable for pre- and post-construction assessments of fisheries, ecological conditions, social, and economic aspects of commercial fishing in and around Vineyard Wind's lease area. Input from the fishing community will help define research priorities and shape these important monitoring plans. Stakeholder engagement and environmental stewardship have been core values for Vineyard Wind. Vineyard Wind anticipates working with SMAST and other research organizations, guided by fishermen and other fishing community stakeholders on other collaborative science efforts, so that the best information is available in making future plans and permitting decisions.

Vineyard Wind has organized a network of fishermen and fishing organizations to provide input in the design and operation of the project. Fisheries representatives include the Port of New Bedford and the Massachusetts Lobstermen's Association.

Upcoming Events:

TBD:

BOEM Public Meetings

In December 2018, the Bureau of Ocean Energy Management released its Draft Environmental Impact Statement on Vineyard Wind's project. **Due to the government shutdown, public meetings will be rescheduled.**

Vineyard Wind encourages the public to submit comments online. Please visit, www.VineyardWind.com/DEIS for the most up-to-date information and to learn more about upcoming public meetings.

January 17-20:

Mass Lobstermen's Association Annual Weekend and Trade Show

Vineyard Wind will be sponsoring MLA's annual weekend as part of our efforts to connect with the fishing industry in New England. Representatives from Vineyard Wind will be available during the multi-day event to answer questions about our project and solicit input from fishermen to further inform our project development process.

March 12:

Barnstable Public Forum

Join Vineyard Wind and Barnstable town officials for a presentation about Vineyard Wind's construction plans to bring power to shore at Covell's Beach and connect to the Cape's electrical grid in Hyannis. This forum is open to the public. Vineyard Wind encourages area residents to attend to learn more about the project and ask questions.

North Atlantic Right Whale Protection Agreement Reached

NEWSLETTER
Spring 2019

In January, Vineyard Wind joined the Conservation Law Foundation, Natural Resources Defense Council, and the National Wildlife Federation to announce a landmark agreement to ensure protection of the critically endangered North Atlantic Right Whale.

“This innovative agreement is proof that we can grow the clean energy we need to power our homes and businesses and at the same time protect vulnerable wildlife...”

The agreement stipulates enhanced monitoring and vessel speed restrictions, as well as significant seasonal restrictions on installation activities. Specifically, pile-driving will not occur during January through April, when Right Whales are most likely to be in the area, and significant

monitoring enhancements and restrictions on installation extending from November to Mid-May.

“Scaling up offshore wind in wildlife-friendly ways is essential to confronting the climate crisis,” said Collin O’Mara, president and CEO of the National Wildlife Federation.

The groups had been discussing Right Whale protections for over a year, with each party sharing the understanding that the pursuit of renewable energy is essential to environmental protection, but that offshore wind must be pursued with marine species protection as a top priority.

508-717-8964 • info@vineyardwind.com

Right Whale Protection Agreement Reached *(continued...)*

“This innovative agreement is proof that we can grow the clean energy we need to power our homes and businesses and at the same time protect vulnerable wildlife like the iconic North Atlantic right whale,” said Nathanael Greene, Senior Renewable Energy Advocate at NRDC.

With approximately 410 North Atlantic Right Whales remaining, this protection agreement is lauded as the most significant of its kind, coming at a pivotal time for offshore wind development in the US.

“As we ask more of our oceans, we must ensure that we balance the critical need for clean energy with the protection of our majestic right whales and other marine species,” added Dr. Priscilla Brooks, Director of Ocean Conservation at CLF. “This agreement marks a significant step forward in responsible development of offshore wind energy.”

STATE LEGISLATIVE HIGHLIGHTS

• *H.2920 Massachusetts Rep. David Rogers filed a bill to authorize coordination by New England states to procure additional offshore wind energy. Up to 9 gigawatts of fossil fuel and nuclear power plants are scheduled to go offline in coming years and this bill would establish a regional priority to replace it with clean, renewable offshore wind energy.*

• *H.832 Massachusetts Rep. Joan Meschino seeks to amend the Global Warming Solutions Act (GWSA) to require carbon neutrality by 2050. The bill includes measures for carbon pricing, carbon reduction across industries, and benchmarks in 2030 and 2040.*

VINEYARD WIND RECEIVES KEY STATE APPROVALS

Moves to local, regional permit review

In February, Vineyard Wind received certification of its final Environmental Impact Report (EIR) from Massachusetts Energy and Environmental Affairs Secretary Matthew Beaton. State review began in April 2018 and included an extended public comment period, and supplemental filings after Vineyard Wind was awarded a contract to sell 800 megawatts to Massachusetts public utilities. The Massachusetts Environmental Policy Act Office (MEPA) issued its final certification to Vineyard Wind in February, authorizing the company to seek state and local permits.

“The MEPA environmental review process provided a significant benefit to the project, allowing numerous stakeholders, advocacy groups, and interested citizens to help identify and address impacts so they can be effectively managed or mitigated,” said Erich Stephens, Chief Development Officer for Vineyard Wind. “Our team will continue to work collaboratively with state, regional and local regulatory agencies – as well as all stakeholders- as the project moves forward.”

Vineyard Wind has since filed with the Martha’s Vineyard and Cape Cod Commissions, with approvals from those agencies expected this spring.

The project also received a key approval from the state of Rhode Island via that state’s Coastal Resource Management Council (CRMC) which reviewed whether the project was consistent with the Rhode Island Ocean Special Area Management Plan. Vineyard Wind filed with CRMC in April 2018, but both parties agreed to extend the process by five months so that CRMC’s Fisheries Advisory Board could discuss the project and reach agreement on mitigation measures. CRMC approved the project as consistent on February 28, 2019.

RESCHEDULED FEDERAL PUBLIC MEETINGS COMPLETED

February meetings held on Cape, Islands, New Bedford and Rhode Island

Delayed by the January shutdown of the federal government, the Bureau of Ocean Energy Management rescheduled and held public meetings across Southern New England in February. The opportunities for public input on the agency's Draft Environmental Impact Statement received largely positive comments from the public. Main topics included job creation, marine fisheries impacts, and the urgent need for the region to respond to climate change.

Environmental activists, fishermen, and labor unions were well represented at the meetings, which offered a venue for representatives from the Conservation Law Foundation, National Wildlife Federation, Cape Cod Chamber of Commerce, Association to Preserve Cape Cod, Vineyard Power Cooperative, and other groups to speak in support. The Environmental League of Massachusetts and the Mass Climate Action Network also submitted comments to BOEM in support of the project.

JULIUS LOWE

MARTHA'S VINEYARD RESIDENT

"The forward thinking of a project like this is going to inspire people to think about a greener future."

MELINDA LOBERG

MEMBER OF THE SELECTBOARD,
TOWN OF TISBURY

"This project will have a positive impact on year round jobs for our young people. We are enthusiastic. We cannot wait for this to happen."

BILL LAKE

MARTHA'S VINEYARD RESIDENT

"Few things could be as important as reducing carbon emissions by moving from fossil fuels to renewable energy, and this project will be a huge step in that direction."

FORUM FOR BARNSTABLE RESIDENTS DISCUSSES LOCAL IMPACTS, BENEFITS

Vineyard Wind staff provide project update and timeline for construction at Covell's Beach

The Town of Barnstable hosted a public forum on March 12th at which Vineyard Wind staff gave a brief presentation about the construction schedule and onshore cable route before conducting a Q&A session with the more than forty residents in attendance. Residents asked about traffic mitigation plans and impacts to public access at Covell's Beach (described below), as well as more technical details pertaining to electrical engineering and installation methods.

"It's a big project," said Nate Mayo, who gave the opening presentation on behalf of Vineyard Wind. "But while climate change, marine protections and energy issues are often the focus, we're glad to have a dialogue about how this is going to affect Barnstable residents during construction".

The project is on schedule for construction in Barnstable in the Fall, which will include cable landfall at Covell's Beach, cable routing under Barnstable streets, and substation construction in the Independence Park industrial area. "We will eliminate impact to the beach and nearshore area by using horizontal directional drilling from the parking lot going deep beneath the beach and emerging a thousand feet out," Mayo said. "Construction under roads will move at 100-200 feet per day, and we're minimizing roadwork by coordinating with the town's planned utility maintenance." Construction in roadways and parking lots will be done outside the busy summer months. Portions of the beach parking lot will be available throughout construction, and all disturbed roadways will be repaved. The company is also supporting reconstruction of the Covell's Beach bath house.

Also highlighted at the Barnstable forum was the Host Community Agreement that Vineyard Wind and Barnstable entered into in October. The agreement guarantees \$16 million in mitigation payments for local water resource protection and new drinking water wells, all under control of the town.

(February 15, 2019) Liberty Wind, a partnership of Vineyard Wind and Anbaric, announced a proposal to bring between 400-1200 megawatts of offshore wind energy to New York's electric grid.

The proposal was submitted in response to New York's request to procure offshore wind energy and is part of the Empire State's goal to add 9 gigawatts of wind energy by 2035. The proposed project is 85 miles off the coast of New York and would provide electricity for up to 750,000 homes.

VINEYARD WIND, UMASS TO IMPLEMENT FISHERIES MONITORING STUDIES

Seeks collaboration with Massachusetts, Rhode Island-based vessels to collect data

Vineyard Wind recently announced it will implement recommendations from the University of Massachusetts Dartmouth's School for Marine Science and Technology (SMAST) to guide the project's fisheries monitoring studies during construction, as well as to initiate longer-term studies as part of a regional approach to fisheries studies. SMAST's recommendations were based on its expertise as a leading fisheries research center as well input from active fishermen, government agencies, and academia.

Vineyard Wind and SMAST began work in 2017 to design a broad-based approach for long-term, regional studies in addition to monitoring during construction. SMAST's recommendations were informed by workshops held with fishermen in Rhode Island, New Bedford, Martha's Vineyard,

and Cape Cod last November and December.

The fishing industry raised important questions about the impacts of offshore wind development on the marine environment and on sea life. Based on input from more than 75 commercial and recreational fishermen who participated in the workshops as well as academics and government agencies, SMAST recommended a series of methodologies for fisheries monitoring and research which Vineyard Wind will adopt. SMAST's studies will begin later this spring. The study design includes collaborating with Rhode Island and Massachusetts-based fishermen to collect data.

The comprehensive research effort by SMAST will help establish a robust body of knowledge to benefit the American offshore wind industry and the fishing community long after the first Vineyard Wind project is completed.

Vineyard Wind Celebrates a New Arrival

The Vineyard Wind Team proudly welcomed its newest member this January. Chloe Cullen, the first child of permitting and Outreach Specialist Jen Cullen and her husband Marc arrived happy and healthy in the early morning of January 26. We will miss Jen's dedication and intellect while she is on leave, but Chloe's healthy arrival makes us even more motivated and optimistic about the future. The Vineyard Wind community sends our congratulations and best wishes to Jen and the entire Cullen family!

Upcoming Events:

April 8 - 10: **IPF19**

Vineyard Wind is proud to be participating and sponsoring the Business Network for Offshore Wind's International Partnering Forum (IPF) in New York. This is one of the offshore wind industry's leading technical conferences

May 23: **UMASS DARTMOUTH CIE WORKSHOP**

Save the date for a one-day workshop "Pioneering Ocean Energy Innovation in New England: Wind and Water" hosted by the UMass Dartmouth Center for Innovation & Entrepreneurship

April 13: **TOWN HALL DISCUSSION ON ENERGY & ENVIRONMENT**

Vineyard Wind joins Rep. Sarah Peake, Sen. Julian Cyr, and the Environmental League of Massachusetts at Nauset Middle School on Saturday April 13 to discuss energy and environmental topics. Join us!

June 10-11: **US OFFSHORE WIND 2019**

Join us in Boston for one of the leading supply chain conferences for the offshore wind industry. This is a great event for matchmaking between the developers and local suppliers and contractors.

 #USOW19

VINEYARD WIND IN THE COMMUNITY

New England Saltwater Fishing Show

Vineyard Wind had a booth at the annual New England Saltwater Fishing Show hosted by the Rhode Island Saltwater Anglers Association (RISAA) March 22-24. Over 300 exhibitors and 15,000+ attendees filled the Rhode Island Convention Center in Providence throughout the weekend. Vineyard Wind staff were on hand to talk with visitors of all ages and to answer questions about the project. A frequent question was about whether fisherman will be able to fish near the turbines. The answer is: Yes! Fishing activities can occur as close to the base of the turbines as safety allows.

Massachusetts Lobstermen's Association Annual Weekend and Trade Show

Vineyard Wind staff were on hand at the Mass. Lobstermen's Association Trade Show to speak with and obtain feedback from lobstermen. Common questions included whether fixed gear can be placed within the turbine array (yes, average spacing between turbines is 0.86 nautical miles) and what electromagnetic fields (EMF) the buried transmission cables emit (less than a common magnet and <10% of the earth's own magnetic field).

The Future of Offshore Wind hosted by ELM + SHNS

Vineyard Wind's VP of Permitting Rachel Pachter discussed "The Future of Offshore Wind" before a packed auditorium at a forum cohosted by The Environmental League of Massachusetts (ELM) and the State House News Service on March 6th. Governor Charles Baker gave a keynote address highlighting the importance of offshore wind for combatting climate change.

Mass. Maritime Spring Career Fair

On March 28th, Vineyard Wind staff and community partner Vineyard Power spoke with cadets and alumni at the Massachusetts Maritime Academy about careers in offshore wind and summer internship opportunities. MMA is a state university renowned for its marine-oriented academic programs including Marine Energy Systems Engineering, Marine Safety & Environmental Protection, and others.

BHS STUDENTS STAGE WALK OUT

BARNSTABLE - On March 15, Barnstable High Students joined a global school strike to promote swift actions to address climate change. Inspired by Swedish activist Greta Thunberg, who in recent months spoke at UN Climate Talks in Poland and the World Economic Forum in Davos, students held signs reading "There is no Planet B" and "Make Earth Great Again". A crowd gathered at Craigville Beach, echoed rallying cries, and picked up garbage along the beach. Craigville Beach is adjacent to Covell's Beach, the site where the Vineyard Wind transmission cable will make landfall to deliver renewable electricity to 400,000 Massachusetts homes.

Letter to the Editor

A sailor speaks up for Vineyard Wind

August 1, 2019

To the Editor: I have been following the articles and discussions at civic events regarding the Vineyard Wind project. A few years ago, I was a member of the energy committee on the island that reviewed solar, wind and co-generation possibilities for the island. Very little got done. All of the possible solutions brought lots of controversy out.

Most people on the committee were against a wind farm in Nantucket Sound, as was I. I did support a wind generator at the dump and could see the benefits. Studies costing over \$300,000 were done to see the impacts on the airport, birds, endangered species and noise. All these studies cleared the way for a generator but controversy remained and it never became a reality. Many of us said, "the proper place for a wind farm is off the coasts of our islands where there is almost no commercial traffic."

Now that idea is becoming a reality and there is again controversy. I have sailed past the wind generators off Block Island. I have spoken to islanders there and they like them. I was just in Vinalhaven Island in Maine where there are three big ones on the island. I could not find a single person who was not in support of them on the island. I have visited giant wind fields in the middle of Ireland and spoken to the maintenance people that support the fields. All of the generators were in working order and there were over 40 of them. Some of them were over 30 years old.

I understand that the closest generator in the Vineyard Wind field is 14.5 miles from the tip of Madaket. I am on the car ferry top deck now as I write this and have just passed the Tuckernuck Shoal buoy, which is seven miles north of the Island. That means that I am 15 miles from Hyannis, the same distance as the wind farm will be from Madaket. It is a very clear day. The only thing I can see is the faint outline of three water towers and they are specks on the horizon. I can only deduce that a wind generator 14.5 miles away will look like a mosquito that you faintly see on a white wall from a distance of 10 feet. Most days you won't even know it's there.

Before we condemn this offshore farm, we should remember that we had windmills on our island. The offshore farm will generate enormous clean power that will make our lives better. It is a good place to start moving forward.

Chris Magee

CAPE COD TIMES

Opinion

As stewards of the land we must embrace wind

July 31, 2019

I am afraid of the climate crisis bearing down upon us.

One of my greatest joys while raising my daughters was taking them to the beautiful outdoor places all over Cape Cod. The joy of climbing trees at Wellfleet Bay, fishing for crabs at Dowses Beach and planting a community garden in Marstons Mills. If we don't immediately respond to the changing climate now we may move beyond the tipping point where ecosystems cannot recover.

Scientists suggest we have 12 years to act. I attended five community information sessions hosted by Vineyard Wind so I could learn about its proposed wind farm and its impact on our beloved environment. Each time I came away impressed by the group's integrity and willingness to work cooperatively with environmental organizations, fishing communities and educational institutions.

Individuals can only do so much. We need to move to large-scale renewable energy sources to stop greenhouse gas emissions. I fully support Vineyard Wind and hope the shortsighted opposition by some on Nantucket does not slow down this vital project. We are the stewards of this land and we need to ensure that our children and our children's children enjoy it also.

CAPE COD TIMES

Vineyard Wind moves turbines to aid fishing vessels

By **Mary Ann Bragg** June 24, 2019

NEW BEDFORD — Vineyard Wind announced Monday that it has adjusted the layout for its 84-turbine wind farm to give more room for fishing vessels operating south of the Islands.

The company has moved the planned location of three 9.5 megawatt turbines farther away from the Nantucket Historic District and Chappaquiddick to create additional distance between the wind farm and commercial fishing areas just south of Martha's Vineyard and Nantucket. The redesign also aids fishing vessels traveling around Nomans Land and heading toward fishing grounds southeast of the wind farm, the company said.

The project's plan to deliver 800 megawatts of electricity annually to three Massachusetts utilities is not affected by the adjustments, according to the company.

"Where possible, we have a responsibility to minimize the project's footprint with respect to the history and culture of the Cape and Islands, and existing uses of these waters," said Erich Stevens, Vineyard Wind's chief development officer.

The company has proposed to install an automatic detection and lighting system that would reduce the use of red, flashing aircraft warning lights to what would amount to a few hours per year, according to Monday's statement. The company also has agreed to reduce the visibility of the turbines during daylight hours through the use of white-gray paint.

The company, currently in the midst of federal permitting for the \$2 billion construction project and a long-term operations and maintenance plan for the wind farm, has said it expects to begin construction later this year.

CAPE COD TIMES

Opinion

Vineyard Wind pledges to protect right whales

July 16, 2019

Given the precarious nature of the North Atlantic right whale and the potential harm to these majestic creatures from loud underwater noise and ship strikes, it makes perfect sense for Nantucket residents to ask for a close examination of offshore wind projects ("Islanders challenge Vineyard Wind authorization," July 10, Page One).

But it's a mistake to ask for a delay of the Vineyard Wind project because of those concerns.

Vineyard Wind signed a landmark agreement to institute a comprehensive suite of measures to protect right whales during construction and maintenance of its much-needed offshore wind farm. It pledged to limit boat speeds and curtail underwater construction noise. These commitments are being incorporated into its official agreement with the federal government, which will ensure they are enforced. These are historic and necessary steps that other wind developers should also take.

We need Vineyard Wind up and running to protect our climate and demonstrate that right whale protection and wind development can go hand-in-hand.

Vineyard Wind celebrates opening of Boston office

By Michelle Froese | June 19, 2019

Vineyard Wind, which is developing the United States' first-utility-scale wind farm, celebrated the opening of a permanent Boston office yesterday. The company's new, larger workplace, located in the historic Back Bay neighborhood, will accommodate a growing staff and provide a range of offshore wind services.

These include contractor management, regulatory affairs, and financing — and similar activities needed to support construction of a proposed offshore wind farm that will be located 15 miles south of Martha's Vineyard, as well as other projects in earlier stage of development.

The 800-MW wind farm, under development by Vineyard Wind, will be the first utility-scale wind farm in the U.S. It remains on schedule to begin on-shore construction in 2019 and become operational by 2022.

The Vineyard Wind project continues to move ahead with public and regulatory review through more than 25 federal, state, and local approval processes. These include US Bureau of Ocean Energy Management (federal Environmental Impact Statement), Massachusetts Department of Environmental Protection and Coastal Zone Management, as well as local and regional conservation commissions.

Yesterday's opening event featured a ribbon-cutting and remarks by Massachusetts Governor Charlie Baker, AVANGRID CEO James P. Torgerson, and Vineyard Wind CEO Lars Pedersen.

CAPE COD TIMES

Opinion

Region lucky to work with Vineyard Wind

June 17, 2019

I write in response to the June 7 front-page article “Vineyard Wind makes late pitch to residents,” which discussed an informational meeting held in Centerville June 6 by Vineyard Wind to keep residents up-to-date on the progress of the offshore wind project.

I attended this meeting and I would like to applaud the Vineyard Wind team for its diligence through every step of this process to make sure that the concerns of all stakeholders are addressed and that residents are informed about what is happening. I have met and communicated with several of the staff members over the past few months, and they are always happy to talk to me and answer questions.

The June 6 meeting reinforced that, and those at Vineyard Wind continue to make themselves available by holding office hours at Centerville Library for any residents who still have questions.

We are fortunate that our region has the chance to be a leader in offshore wind development, and even more so because of the amazing work Vineyard Wind has done to come to a mutually beneficial agreement with the town and to ensure that residents are receiving as much information as possible.

Training an offshore wind workforce

By Bronwen Howells Walsh

6/10/19

Vineyard Wind is partnering with regional colleges to train an offshore wind workforce on the Cape and Islands, and it's getting a funding boost from the Commonwealth.

Stephen Pike, executive director and CEO of the Massachusetts Clean Energy Center (MassCEC), recently announced a state award of \$721,500 in educational seed money. That's in addition to \$2 million that the Vineyard Wind contract committed to workforce development and public safety.

"The offshore wind industry is poised to create new renewable energy jobs, and these programs represent an important development as the Commonwealth readies for the first large-scale project in the nation," Pike said. "With Massachusetts' proud maritime heritage, robust innovation economy and academic and training assets, the state is very well positioned to grow a workforce that will contribute to this new American industry for years to come."

Proposed for siting 14 miles off the coast of Martha's Vineyard, the Vineyard Wind project intends to bring 800 megawatts of electricity to the Cape and Islands and generate clean, renewable, cost-competitive energy for 400,000 residents of the Commonwealth. Its staging area is being constructed in New Bedford.

Grant funding recipients include:

Bristol Community College – \$200,000 to establish basic safety training and basic technical training to Global Wind Organization standards at its campus in New Bedford.

Cape Cod Community College – \$66,570 to develop and deliver a suite of courses to introduce students and workers to careers in offshore wind.

Massachusetts Maritime Academy – \$184,000 to establish all five modules of GWO basic safety training at its campus and develop an “introduction to offshore wind” course for MMA cadets. A crew transfer training facility, supported by MassCEC, will be operational in Summer 2019.

UMass Amherst – \$105,500 to complete initial design and develop most of an offshore wind professional certificate program to be offered at the Mt. Ida campus in Newton.

Pile Drivers and Divers Local 56 – \$100,000 to sponsor trade union members for GWO basic safety training at Massachusetts Maritime Academy.

Adult Continuing Education – Martha’s Vineyard (ACE MV) – \$65,000 to partner with BCC and MMA to provide on-island courses and training that supports basic safety and technical certification, as well as offshore wind technician certificates.

In April 2018, MassCEC released a report on the workforce needs and economic impact of the emerging offshore wind industry, finding that the deployment of 1,600 MW of offshore wind is estimated to support between 2,300 and 3,100 direct job years over the next 10 years and generate a total economic impact in Massachusetts of between \$678 million and \$805 million.

The investments will help ensure that the Commonwealth’s thriving green economy has access to workers with the skills and training necessary to facilitate growth in this high-demand job sector, said Rosalin Acosta, Massachusetts Labor and Workforce Development Secretary. “That’s good for the environment and good for the health of the Massachusetts economy.”

The funding builds on the state’s efforts to support a clean energy industry, including recently securing 9,450,000 MW of hydroelectric energy and 800MW of offshore wind energy, the largest procurement in offshore wind by any state in the country.

“Vineyard Wind is proud to support this significant next step forward in preparing Massachusetts workers for construction of the nation’s first commercial scale offshore wind farm,” said Erich Stephens, Vineyard Wind Chief Development Officer. “The

programs announced today provide a strong foundation to our commitment that every Massachusetts' resident will have a meaningful opportunity to access careers in the Commonwealth's newest industry, offshore wind."

State Sen. Julian Cyr (D-Truro) said the grant is "a clear indication that Vineyard Wind is following through on its promise to be a responsible partner to our community."

"By working together with the Commonwealth to provide workforce training that will create good-paying, year-round, high-skilled jobs on Cape Cod and Martha's Vineyard, the economic benefit of Vineyard Wind's investment in the new off-shore wind industry is an important piece of economic development that will strengthen our local economy for the foreseeable future,." he added.

CAPE COD TIMES

Vineyard Wind seeks proposals for whale-detection technology

By Mary Ann Bragg 5/21/19

NEW BEDFORD — Offshore wind developer Vineyard Wind announced Tuesday it is seeking proposals from universities, technology companies and others to implement acoustic monitoring along the company's transit routes off Southeastern Massachusetts to help protect critically endangered North Atlantic right whales.

The organizations submitting the proposals would be asked to provide and operate the equipment, which would detect the presence of right whales and immediately transmit the information to Vineyard Wind.

The acoustic monitoring is part of the company's Jan. 22 agreement with three conservation groups to adopt seasonal restrictions on pile driving when right whales are likely to be in the area, based on on-board observers, acoustic monitoring and boat and airplane surveys.

The company agreed to seasonal restrictions on geophysical surveys during and after construction, and slower boat speeds, all tied to the presence of right whales in the area. The company also committed to report observations and acoustic detection of right whales to federal officials and to use technology that minimizes noise.

In the agreement, Vineyard Wind also committed \$3 million to develop and use technologies to protect the whales and other marine mammals that could be adopted for future offshore wind projects. The company is on track to start construction this year on an 84-turbine wind farm about 15 miles south of Martha's Vineyard, according to company officials.

The right whales, estimated with a total population of 411, migrate annually along the East Coast from Florida to Canada and are considered at risk of extinction within several decades due to injuries and deaths from ships strikes and becoming wrapped in fishing rope, according to researchers and federal regulators responsible for the whales' protection.

Offshore wind project wins OKs for transmission

By Colin A. Young / State House News Service

5/9/19

BOSTON — The 84-turbine wind farm planned for waters off Martha's Vineyard on Thursday secured approval from the state board that reviews proposed energy facilities for the transmission cables that will deliver its renewable energy and the substation that will connect the project to the power grid.

Vineyard Wind said the Massachusetts Energy Facilities Siting Board approved the three petitions it filed to construct and operate 27 miles of on- and off-shore 220-kilovolt electric transmission line, a substation in Barnstable and a 0.1-mile 115 kV underground transmission line between the substation and an existing facility in Barnstable.

“Approval by the Massachusetts EFSB is another affirmation of the collaborative, community-focused approach that Vineyard Wind has taken in designing and developing the nation's first commercial scale offshore wind project,” Erich Stephens, chief development officer of Vineyard Wind, said. “We want to thank the residents and officials of the Town of Barnstable who took the time to explore opportunities to address local concerns while simultaneously delivering enough cost-competitive, carbon-free energy to serve six percent of the Commonwealth's electricity demand, making the project a real win-win-win.”

In its notice advising the public that it would consider Vineyard Wind's petitions, the EFSB said its role was “to determine whether the Project would provide a reliable energy supply for the Commonwealth with a minimum impact on the environment at the lowest possible cost ... whether the proposed Project is necessary, serves the public convenience, and is consistent with the public interest ... whether zoning exemptions are required for the Project and whether the present or proposed use of the land or structures is reasonably necessary for the convenience or welfare of the public.”

Officials at the Energy Facilities Siting Board were not immediately available Thursday to confirm the approval, and the ruling was not listed among the agency's recent decisions on its website.

According to the agency's notice, Vineyard Wind was seeking approval of two proposed routes and variations for transmission cables though it plans to ultimately build only one. Both proposed routes "begin at the outer limit of Massachusetts waters approximately six miles southeast of Chappaquiddick Island, and six miles southwesterly of Muskeget Island, and run northerly to shoreline landing areas in Yarmouth or Barnstable," the EFSB said.

Depending upon which offshore route Vineyard Wind selects, it identified two possible routes to carry the power generated at sea from the shoreline to a substation Vineyard Wind plans to build 5.5 to 6 miles inland at the Independence Park commercial/industrial area in Barnstable.

EFSB said the proposed onshore routes "are all entirely underground and are located primarily within public roadways, with some shorter stretches in existing utility transmission rights-of-way ('ROW'), a MassDOT-owned railroad ROW, and, in some instances, along a MassDOT-proposed bike path corridor and/or unpaved access roadways."

Utility companies and the state tapped Vineyard Wind to construct an 800-megawatt wind farm 15 miles south of Martha's Vineyard and 34 miles from the mainland to fulfill the first half of a 1,600 MW procurement called for in a 2016 clean energy law.

Massachusetts environmental officials completed their review of the Vineyard Wind project, which is expected to be operational by 2022, in February. The EFSB was looking only at the transmission aspects of the project, not the wind farm itself.

Vineyard Wind is planning to financially close on its project and begin on-shore construction work this year, put the first turbine into the seabed in 2021 and have the 84-turbine wind farm operational in 2022.

MVC Approves Undersea Cable for Vineyard Wind

[Holly Pretsky](#)

Saturday, May 4, 2019

Vineyard Wind, the company that plans to build a massive offshore wind farm south of the Vineyard, won approval from the Martha's Vineyard Commission Thursday night for its undersea cables that will transmit electricity to mainland.

The commission was reviewing the project as a development of regional impact (DRI) because part of the cable will through Vineyard waters off the eastern shore of Chappaquiddick. A [public hearing](#) opened in February.

The approval comes with two conditions: the company must return to the commission if it decides to decommission the wind farm, and the commission reserves the right to require a modification if there are unforeseen environmental impacts.

Out the outset of deliberations Thursday night, MVC executive director Adam Turner urged continued oversight of the cables, which will be buried five to eight feet deep about 1.2 miles from the Edgartown shoreline. He said he supports Vineyard Wind, but he expressed doubts that federal agencies including the Bureau of Ocean Energy Management (BOEM) could be trusted to adequately protect the ocean and its wildlife.

“[BOEM] consistently puts the natural environment and sea animals way behind the economic development of energy,” Mr. Turner said. “We are the ones responsible to protect this place, whether BOEM protects it or not.”

Commissioners agreed.

“It may be that evidence comes back that is inconsistent with what their proposal and their testimony said,” said commissioner Joan Malkin of information provided by the company. “If it turns out there are impacts, that would constitute a change.”

Responding to concerns raised during the hearings, Vineyard Wind has promised to share approvals from federal and state agencies with the commission, including a copy of BOEM’s federal environmental impact statement. The company also committed to modifying the cable installation process to protect the North Atlantic Right Whale. In a final offer Thursday night, Vineyard Wind committed to continued monitoring of the benthic habitat to document potential disturbances and recovery.

Based in New Bedford, the company was formed through a partnership between Avangrid Renewables and the Danish company Copenhagen Infrastructure Partners.

The Cape Cod Commission also approved underground cables Thursday in Barnstable. The regional decisions marked a milestone for the proposal, but by no means conclude the permitting process. The project still awaits a sign-off from the Edgartown conservation commission among other local authorities. And multiple state and federal regulatory agencies, most prominently BOEM, still need to grant approvals before the project can begin. In the end, the vote to approve the project was 14-0-1. Clarence A. (Trip) Barnes 3rd abstained, citing concern for wildlife.

Chairman Douglas Sederholm acknowledged Mr. Barnes’s concerns, but said the conditions are designed to monitor unforeseen impacts.

“I think a lot of this is, we don’t know, but we’re going to keep our hook in.” Mr. Sederholm said.

OFFSHORE WIND FARMS ARE SPINNING UP IN THE US—AT LAST

CHRISTOPHER FURLONG

4/17/19

ON JUNE 1, the Pilgrim nuclear plant in Massachusetts will shut down, a victim of rising costs and [a technology](#) that is struggling to [remain economically viable](#) in the United States. But the electricity generated by the aging nuclear station soon will be replaced by another carbon-free source: a fleet of 84 offshore wind turbines rising nearly 650 feet above the ocean's surface.

The developers of the [Vineyard Wind](#) project say their turbines—anchored about 14 miles south of Martha's Vineyard—will generate 800 megawatts of electricity once they start spinning sometime in 2022. That's equivalent to the output of a large coal-fired power plant and more than Pilgrim's 640 megawatts.

"Offshore wind has arrived," says Erich Stephens, chief development officer for Vineyard Wind, a developer based in New Bedford, Massachusetts, that is backed by Danish and Spanish wind energy firms. He explains that the costs have fallen enough to make developers take it seriously. "Not only is wind power less expensive, but you can place the turbines in deeper water, and do it less expensively than before."

Last week, the Massachusetts Department of Public Utilities [awarded](#) Vineyard Wind a 20-year contract to provide electricity at 8.9 cents per kilowatt-hour. That's about a third the cost of other renewables (such as Canadian hydropower), and it's estimated that ratepayers will save \$1.3 billion in energy costs over the life of the deal.

Can offshore wind pick up the slack from Pilgrim and other fading nukes? Its proponents think so, as long they can respond to concerns about potential harm to fisheries and marine life, as well as successfully connect to the existing power grid on land. Wind power is [nothing new](#) in the US, with 56,000 turbines in 41 states, Guam, and Puerto Rico producing a total of 96,433 MW nationwide. But wind farms located offshore, where wind blows steady and strong, unobstructed by buildings or mountains, have yet to start cranking. In recent years, however, the turbines have grown bigger and the towers taller, able to generate three times more power than they could five years ago. The technology needed to install them farther away from shore has improved as well, making them more palatable to nearby communities. When it comes to wind turbines, bigger is better, says David Hattery, practice group coordinator for power at K&L Gates, a Seattle law firm that represents wind power manufacturers and developers. Bigger turbines and blades perform better under the forces generated by strong ocean winds. "Turbulence wears out bearings and gear boxes," Hattery said. "What you don't want offshore is a turbine that breaks down. It is very expensive to fix it."

In the race to get big, Vineyard Wind plans to use a 9.5 MW turbine with a 174-meter diameter rotor, a giant by the standard of most wind farms. But GE last year unveiled an even bigger turbine, the 12 MW Haliade-X. When complete in 2021, each turbine will have a 220-meter wingspan (tip to tip) and be able to generate enough electricity to light 16,000 European homes. GE is building these beasts for offshore farms in Europe, where wind power now generates [14 percent](#) of the continent's electricity (compared to 6.5 percent in the US). "We feel that we have just the right machine at just the right time," says John Lavelle, CEO of GE Renewable Energy's Offshore Wind business.

US officials say there's a lot of room for offshore wind to grow in US coastal waters, with the potential to generate more than 2,000 gigawatts of capacity, or 7,200 terawatt-hours of

electricity generation per year, [according](#) to the US Department of Energy. That's nearly double the nation's current electricity use. Even if only 1 percent of that potential [is captured](#), nearly 6.5 million homes could be powered by offshore wind energy.

Of course, getting these turbines built and spinning takes years of planning and dozens of federal and state permits. The federal government made things a bit easier in the past five years with new rules governing where to put the turbines. The Bureau of Ocean Energy Management (a division of the Department of Interior) now sets boundaries for offshore leases and accepts bids from commercial enterprises to develop wind farms.

The [first offshore project](#) was a 30 MW, five-turbine wind farm that went live at the end of 2016. Developed by Deepwater Wind, the installation replaced diesel generators that once serviced the resorts of Block Island, Rhode Island. Now there are [15 active proposals](#) for wind farms along the East Coast, and others are in the works for California, Hawaii, South Carolina, and New York.

By having federal planners determine where to put the turbines, developers hope to avoid the debacle that was Cape Wind. Cape Wind was proposed for Nantucket Sound, a shallow area between Nantucket, Martha's Vineyard, and Cape Cod. Developers began it with high hopes back in 2001, but pulled the plug in 2017 after [years of court battles](#) with local residents, fishermen, and two powerful American families: the Kennedys and the Koch brothers, both of whom could see the turbines from their homes.

Like an extension cord that won't reach all the way to the living room, Cape Wind's developers were stuck in Nantucket Sound because existing undersea cables were limited in length. But new undersea transmission capability means the turbines can be located further offshore, away from beachfront homes, commercial shipping lanes, or whale migration routes.

Even though cables can stretch further, somebody still has to pay to bring this electricity back on land, says Mark McGranaghan, vice president of integrated grid for the Electric Power Research Institute. McGranaghan says that in Denmark and Germany the

governments pay for these connections and for the offshore electrical substations that convert the turbine's alternating current (AC) to direct current (DC) for long-distance transmission. Here in the US, he predicts these costs will likely have to be paid by utility ratepayers or state taxpayers. "Offshore wind is totally real and we know how to do it," McGranaghan says. "One of the things that comes up is who pays for the infrastructure to bring the power back."

It's not just money. Offshore wind developers must also be sensitive to neighbors who don't like power cables coming ashore near their homes, fishermen who fear they will be shut out from fishing grounds, or [environmental advocates](#) who worry that offshore wind platform construction will damage sound-sensitive marine mammals like whales and dolphins.

Still, maybe that's an easier job than finding a safe place to put all the radioactive waste that keeps piling up around Pilgrim and the nation's 97 other nuclear reactors.

CAPE COD TIMES

DPU approves Vineyard Wind contracts

By Mary Ann Bragg 4/17/19

BOSTON — State public utility regulators have approved long-term offshore wind contracts between Vineyard Wind and electric distribution companies in Massachusetts, giving the offshore wind farm developer a crucial approval needed to start construction by the end of the year.

“The approval of these contracts is an important step toward the completion of the largest offshore wind project in the country,” Gov. Charlie Baker said in a statement issued by the state Department of Public Utilities. The project will “significantly reduce greenhouse gas emissions, provide Massachusetts residents and businesses with cost-effective clean energy and promote economic development,” Baker said.

In mid-July, Eversource, National Grid and Unitil each filed a petition with the department for approval of long-term contracts to purchase offshore wind energy and associated renewable energy certificates. Two months earlier, Vineyard Wind’s bid on the long-term power contracts for 800 megawatts a year was selected for contract negotiation by the three electricity distribution companies.

“This approval ensures that this project offering competitively priced and locally produced offshore wind energy to the Commonwealth can move forward,” state Energy and Environmental Affairs Secretary Matthew Beaton said in the statement. A spokesman for Vineyard Wind declined comment Tuesday, citing previously agreed-upon legal constraints.

The company intends to start construction of the \$2 billion wind farm later this year to take advantage of a one-time federal investment tax credit program. Use of the tax credit within a long-term power purchase agreement was a key factor in the company’s ability to make a competitive offer for the contracts, the company’s CEO, Lars Pedersen, said previously.

An approval of Vineyard Wind's plan to land its high-voltage cable on the southern coast of Barnstable still needs to be approved by the state's Energy Facilities Siting Board, which had been delayed after initial estimates pegged that decision for March 1. The board is expected to meet May 9 in Boston. Likewise, the Cape Cod Commission has continued to May 2 its public hearing on its review of the cable-laying as a development of regional impact.

In the contracts, Vineyard Wind has committed to contributing \$15 million to a fund that will invest in projects designed to promote the use of battery storage in low-income communities and support the state's goal to further the development of energy storage systems across the state, according to the statement.

Criteria used in the evaluation of the bids — where Vineyard Wind emerged the winner, in May — included an economic evaluation of the benefits for ratepayers, the project's ability to foster employment and economic development in Massachusetts, and the project's environmental impacts and the extent to which a project demonstrates that it avoids or mitigates impacts to natural resources and tourism, according to the statement.

The department's order on Tuesday approved the selection of Vineyard Wind — which plans to build 84 turbines south of Martha's Vineyard — and found that the contracts are cost-effective as well as in the public interest, according to the statement.

In August 2016, Governor Baker signed into law an energy diversification measure requiring utilities to competitively solicit and contract for approximately 1,600 megawatts of offshore wind and approximately 1,200 megawatts of clean energy.

The solicitation of the second 800 megawatts of offshore wind energy is expected later this year, with a proposed deadline for submission of confidential proposals set for Aug. 9. However, the request for proposals has not yet been approved by the Department of Public Utilities, a department spokeswoman said.

Vineyard Wind commits to fisheries monitoring

By Mary Ann Bragg

4/7/19

Vineyard Wind says it will adopt research measures recommended by a local university to monitor the effects on fisheries of the 84-turbine offshore wind farm.

NEW BEDFORD — Vineyard Wind has announced that it will adopt research measures recommended by a local university to monitor the effects on fisheries of the 84-turbine offshore wind farm, which when operational could be the first industrial-sized installation in the country.

The company, which intends to begin construction later this year of an 84-turbine wind farm south of Martha's Vineyard, entered into a multi-faceted agreement in 2017 with the University of Massachusetts Dartmouth School for Marine Science and Technology. Part of the agreement was for the school to design an approach to research that would be capable of monitoring the effects on fisheries of the one-time construction of the wind farm. The approach also needed to be capable of handling longer-term, regional studies.

“The fishing industry has raised important questions about the impacts of offshore wind development on the marine environment and on sea life,” the company said in a statement released Friday.

While Rhode Island fishermen in February approved a mitigation package that includes \$4.2 million in payments over 30 years for direct impacts to commercial fishermen as a result of the wind farm, as well as the creation of a \$12.5-million trust set up over five

years that could be used to cover additional costs to fishermen resulting from the project, tensions continue to exist.

“It’s this industry against the world,” Lanny Dellinger, a leader in the Rhode Island commercial fishing community, said at a February meeting. “Look around and see what you’re up against. That’s what we had to weigh as a group. There is no choice here.”

The methodology the school is recommending is based on workshops held in November and December, and pilot projects. The procedures should encompass an array of fish species, and an integration of methods that can support additional and on-going fisheries research; the use of a “nested and modular” study design for both a relatively small construction site as well as a wider region; the creation of a standing committee of commercial fishermen to review findings and make recommendations; and the use of local fishermen to provide vessels to support the studies.

The research is meant to be used by the growing U.S. offshore wind industry and fishing communities, beyond its application to the Vineyard Wind project, the company said.

As part of the 2017 agreement, the school will also conduct the studies, which are expected to begin later this spring.

“SMAST worked with Vineyard Wind as well as fishing industry representatives and government regulators to conduct a series of workshops that culminated in the recommendations,” Steven Lohrenz, the school’s dean said in an email. “Key aspects are that the monitoring will cover a range of spatial scales and will include ongoing interactions with the fishing industry throughout the course of the monitoring effort.”

Last May, Vineyard Wind was selected to negotiate what could be the first contracts in the country for a large-scale, offshore wind farm, to provide 800 megawatts of electricity to three power distributors in Massachusetts. The contracts are now signed and are pending approval before the state Department of Public Utilities. The power cables from the wind farm are to land at a south-facing beach in Barnstable and then snake underground to a new substation off Independence Drive in Hyannis, to connect to the regional power grid. Those cable connection plans, too, are pending approval before the state Energy Facilities Siting Board.

The final environmental impact statement on the project’s construction and operations plan is expected to be completed this summer.

Vineyard Wind and R.I. strike bargain

R.I. Fishery Advisory Board chairman doesn't like settlement.

By

Rich Saltzberg

-

March 4, 2019

Vineyard Wind recently announced a \$16.7 million deal with the Rhode Island Fisheries Advisory Board. The deal was made on behalf of Rhode Island fishermen who ply the waters where a farm of 84 wind turbines is slated to be built by Vineyard Wind. The farm will be situated about 14 miles south of Martha's Vineyard.

"The package agreed to today by the [Rhode Island Fisheries Advisory Board] includes \$12.5 million in funding to a trust fund that would be managed by Rhode Island fishermen for the purpose of ensuring safe and effective fishing in and around Vineyard Wind's project area and future wind farms generally," a release states. "Vineyard Wind will pay \$2.5 million per year for five years into this fund. In addition to this fishermen-directed fund of \$12.5 million, a separate fund totaling \$4.2 million would be established to compensate for any direct impacts to Rhode Island fishermen or other sectors of the Rhode Island fishing industry."

“I just think it was a [expletive] deal for the industry, but it’s the deal that we got,” Newport, R.I., lobsterman Lanny Dellinger, chairman of the Rhode Island Fisheries Advisory Board, told The Times.

“I just don’t think the negotiations were set up fairly,” he said. Dellinger said that he and his fellow advisory board members were pressured with unreasonable timelines and forced to negotiate with an entity backed by a multibillion-dollar energy company, all the while running their own small businesses without any sort of compensation or help to offset the time and energy they spent.

Dellinger said the board felt it had to take the deal because, he said, Vineyard Wind could have appealed to the federal government, the National Oceanic and Atmospheric Administration (NOAA), and the Bureau of Ocean Energy Management (BOEM) for a lesser sum or no compensation at all.

“We were between a rock and a hard place,” he said. “No other way to put it.”

Richard Fuka, Rhode Island Fishermen’s Alliance president, said squid fishermen, who comprise the most lucrative part of the Rhode Island fishing industry, weren’t represented on the board and were therefore cut out of negotiations.

When asked if Vineyard Wind was aware squid fishermen might have not had a seat at the table for negotiations, Vineyard Wind spokesman Scott Farmelant declined to talk about any part of the deal, and referred The Times to the Vineyard Wind release.

Fuka said the immediate area around the Vineyard Wind turbine farm produces \$400 million of annual revenue for the squid fishery. He said the turbines threaten that revenue. Among other concessions, Fuka wants transit corridors between wind turbines to be four miles wide. To date, Vineyard Wind has assented to [two-mile-wide corridors](#). Fuka said that width is insufficient for

mobile-gear fishing boats, like squid boats. He said the gear those boats trail behind them stretches a long way: “Smaller boats, a quarter- to half-mile — bigger boats twice that. It’s quite a bit of wire and net.”

John Keene, president of the Martha’s Vineyard Fishermen’s Preservation Trust, said his organization maintains its support for a four-mile-wide corridor.

Meghan Lapp, fishery liaison for Sea Freeze, Ltd., a commercial fishing enterprise with a squid fleet, told The Times she wants to see a study about transit corridors because the scale of the Vineyard Wind project has no precedent and because the scope of radar interference, if any, remains undetermined. “How far does that radar interference extend?” she asked.

The Times posed several radar questions to BOEM officials when they came to the Vineyard on [Feb. 12](#) to hold a hearing on a draft environmental impact statement for the Vineyard Wind project. The Times was told the BOEM engineering specialist was not present, and nobody else on their team could field the inquiries.

Calls to their Washington, D.C., media office weren’t immediately returned on Friday.

Lapp also alleged the impacts to commercial fisheries were first categorized as “major” in the draft environmental impact statement for the project, but since BOEM expects mitigating measures, it reduced the impact to “moderate.”

Lapp criticized the transparency of the negotiations between Vineyard Wind and Rhode Island Fisheries Advisory Board, alleging the public was kept out of key parts of the process and that some of the economic data used in crafting the deal hasn’t been made publically available. “This sets the precedent for how other projects could go,” she said.

“People don’t seem to realize you’re talking about over 1,400 square miles of uninterrupted turbines between Rhode Island and Massachusetts,” Dellinger said.

Menemsha fisherman Stanley Larsen told The Times he was unconcerned about the potential for piloting problems in and around Vineyard Wind’s project area, citing the sophistication of modern navigation equipment.

Keene said he is in support of Vineyard and other Massachusetts fishermen receiving just compensation for “known” or “expected losses” stemming from wind farms.

Larsen, who is about to return squid fishing to Menemsha in the next two weeks aboard the wooden dragger Richard and Arnold, waxed optimistic about the ramifications of the Vineyard Wind project. “Hope it will drive the price up,” he said.

Overwhelming support for Vineyard Wind at hearing

BOEM officials learn climate change and jobs drive local support.

By

Rich Saltzberg

February 13, 2019

A team from the Bureau of Ocean Energy Management (BOEM) came to the Vineyard Tuesday night to gather public comment on a draft environmental impact statement (EIS) for Vineyard Wind's proposed wind farm some 15 miles south of Aquinnah, and got an earful of enthusiastic support.

Bill Lake, director of Vineyard Power, a Vineyard green energy company affiliated with Vineyard Wind, said the project would be impactful in the quest to combat climate change.

"I think my principal point is in considering the environmental impact statements of the project, it's very important to keep them in perspective," he said. "Any project of this size will have some local impacts. The draft impact statement identifies those impacts and the steps that are possible to minimize them. But the far greater impact of this project will be the positive contribution it will make to meeting the existential threat posed by climate change. The speed at which our climate is changing and the effects, both those we're feeling now and those that are predicted, are just staggering. Few things could be as important as reducing carbon emissions by moving from fossil fuels to renewable energy, and this project will be a huge step in that direction."

Greer Thornton, co-owner of Atria in Edgartown, said she spoke on behalf of her family in support of the Vineyard Wind project.

“As a year-round resident and business owner on Martha’s Vineyard for 20 years, I would like to express my total support for the Vineyard Wind project,” she said. “This project is so needed at this critical time, a time when we may be able to repair, may be able to repair, the severe damage we’ve made to our planet through irresponsible use and production of fossil fuels. In addition to creating much-needed year-round jobs for this Island and its residents, this project could catapult us to compete with the global initiative to be more sustainable and economically viable. If we do not do this now, we will lose on all fronts.”

Nicola Blake, an environmental scientist at the University of California, said the project was particularly right for the commonwealth. “In terms of mitigating climate change, as you know the scientific consensus is that the ocean-atmosphere-terrestrial climate system has already absorbed dangerously large amounts of extra heat, energy, and CO₂, which is an acid, a weak acid, because of fossil fuel emissions such that it’s probably at a tipping point in terms of extreme weather, sea level rise, ocean health, et cetera,” she said. “So also I want to lend my voice to the fact that we cannot afford to wait longer for the transition to renewable offshore wind energy — wind energy is our best option for Massachusetts, given its abundance.”

Rob Hannemann, chairman of Chilmark’s energy and finance committees and a former Tufts engineering professor, said the project was an important step in reducing dependency on fossil fuels. “It’s very clear we will need to cut our fossil fuel usage by 50 percent by the year 2030 from where we sit today,” he said. “That is not going to happen without many projects such as the Vineyard Wind project.”

Speaking on behalf of Tisbury’s board of selectmen, selectman Melinda Loberg said the town was pleased to welcome Vineyard Wind’s yet-to-be-built operation and maintenance facility to the Packer marine terminal on Beach Road, and emphasized the “positive economic impact of jobs, of training our young people,” the facility would bring.

“We are enthusiastic. We can’t wait for this to happen,” she said of the facility and the overall wind farm project.

Loberg described Tisbury as “the gateway town to the Island,” and said it’s especially susceptible to climate change.

“We feel the effects of climate change early in our harbor,” she said. “We’re very vulnerable to storm[s] and sea level rise. As a matter of fact, I think we should all pay attention to the roadway through which all visitors who arrive to the Island on the ferry and material that comes to Packer’s wharf has to travel. This is a roadway that takes people to our hospital and to our neighboring town, and it’s already being undermined by high tides and rainstorms.”

Hunter Moorman, a West Tisbury resident and member of the Massachusetts Chapter of Elders Climate Action, said two recent news items are omens of climate change and underscore the urgency of tackling it.

“Polar bears driven south by the premature breakup of polar ice are now marauding in Russian islands in the Arctic,” he said, disrupting community life, threatening children on their way to school, and even mauling two residents to death. This phenomenon is the result of the melting polar ice cap, which contributed to the steady rise in global sea levels and also to the diminished ability of the ice sheet to reflect the sun’s heat back into the atmosphere.”

He went on to say the world insect population is in peril, based on reports of “a more than 40 percent decline in the world insect population that ‘threatens the collapse of nature,’ and signals unmistakably the launch of the sixth great extinction.”

Moorman said Vineyard Wind could offer some regional and global relief. “Vineyard Wind addresses one of the chief causes of such calamities, global warming caused in large part by greenhouse gases emitted into the atmosphere,” he said. “This project, this Vineyard Wind

project, will achieve over 1.6 million tons of carbon dioxide reductions. That's the equivalent of taking 325,000 cars off the road, along with sizable reductions in nitrous and sulphur dioxides."

There were a few words of caution, however. Megan Ottens-Sargent of Aquinnah and Wes Brighton of Chilmark both warned that wind farm construction could be perilous for the critically endangered right whale.

Brighton, a commercial fisherman and board member of the Martha's Vineyard Fishermen's Preservation Trust, said pile-driving for monopiles could negatively impact both right whales and recently rebounded haddock stocks. He said the project lease area is a type of haddock nursery.

"That exact area is called the Old Haddock Grounds. If you talk to old-timers, that was where a lot of great fishing occurred, and it's a reproductive area for them." Brighton advocated for the use of bubble shields or walls as a way to mitigate the acoustic shock generated by pile-driving.

Ottens-Sargent asked if there was a way to put the brakes on the project should some critical flaw be discovered late in the process. While BOEM officials generally kept silent during the commentary period, Krevor said BOEM has the authority to halt construction if something dire is unearthed after the EIS is finalized.

Alice Berlow expressed her support for the project, but said also, "BOEM, B-O-E-M, you guys and Vineyard Wind, we're watching you. We want you to do this right and we will continue to watch you — hold you accountable to our communities ... So I support you, but I want to say that we're not stopping here, OK?"

State: Vineyard Wind can seek local permits for cable

By Mary Ann Bragg / Cape Cod Times

2/6/19

Vineyard Wind can now move forward with regional and local permitting for its planned offshore wind farm after receiving a critical certificate from state environmental officials, and regulators on the Cape and Islands say they are ready.

“We’ve looked at cables before,” said Paul Foley, the development of regional impact coordinator with the Martha’s Vineyard Commission.

The commission will hold its first public hearing Feb. 21 on Vineyard Wind’s cable-laying plans after receiving a referral from the Edgartown Conservation Commission. The hearing is only on the cables but Foley said he expects community members to be curious about the entire project, which could be the first industrial scale offshore wind farm in the country.

As planned, the two undersea cables would start at an 84-turbine wind farm 15 miles south of the Vineyard and then run north between the Vineyard and Nantucket, in Muskeget Channel, to William H. Covell Memorial Beach in Barnstable, which is the company’s first choice for landfall. The cables would then run underground for about five miles to a new substation off Independence Drive, where they will connect to an existing substation that leads to the regional electricity grid.

On Feb. 1, state Energy and Environmental Affairs Secretary Matthew Beaton issued a certificate determining that the cable-laying project as described in Vineyard Wind’s final environmental impact report complies with state environmental policy law and regulations. But Beaton raised several issues that he said should be addressed as the company seeks its permits. These include better protection of piping plovers at Covell Beach, further analysis for protection of sand lance, and better monitoring and

protections for rare birds. In addition, Vineyard Wind must come up with a better plan to document disturbances and recovery of marine and ocean-floor life, according to the certificate.

Beaton offered specific expectations, based on the company's filing, for the protection of wetlands, waterways, rare species, marine mammals — including critically endangered North Atlantic right whales — shellfish, water and air quality, and historical and archaeological materials. The expectations for mitigation extended to dampening the effects of noise and reducing the effects of construction, including the company paying for a construction monitor, to act on the towns' behalf, to ensure expectations are met.

The company will be expected to pay at least \$240,000 under the state Oceans Act to compensate the state and the public for the project's footprint and anticipated effects, according to the certificate. The fee could increase, with no cap, if the cable laying exceeds estimates. The company will be expected to pay a tidelands occupation fee, under state Chapter 91 licensing, which will be determined after construction is completed.

The two cables will cross both state and federal waters but the certificate applies only to the 23 miles of state waters affected. "The project may proceed to state permitting," Beaton wrote.

His agency considered 84 public comments, some with multiple individuals and groups named, received between Dec. 19 and Jan. 28 in evaluating the Vineyard Wind final environmental impact report.

"The environmental review process provided a significant benefit to the project, allowing numerous stakeholders, advocacy groups, and interested citizens to help identify and address impacts so they can be effectively managed or mitigated," Vineyard Wind's chief development officer Erich Stephens said Tuesday. The company is in the process of asking for permit reviews from the Martha's Vineyard Commission, the Cape Cod Commission, the Barnstable Conservation Commission and others, Stephens said.

The Nantucket Conservation Commission is scheduled to hold its public hearing Wednesday Feb. 6 on Vineyard Wind's notice of intent application for the proposed cables, which will be about three miles from the Nantucket shoreline, at their closest.

The effects will be similar to those from other submarine cable installations reviewed by the conservation commission in 1995 and 2005, according to the application.

At their closest point, the proposed offshore export cables will be approximately 1.2 miles from the Edgartown shoreline. Two possible routes are still under consideration through Muskeget Channel, the company said in its application for a development of regional impact review by the Vineyard commission.

So far on Cape Cod, Vineyard Wind has filed no specific application with the Barnstable Conservation Commission, a department spokeswoman said Tuesday. No specific application from the company has crossed the desks of the Yarmouth Conservation Commission either, board Vice Chairman Thomas Durkin said Tuesday. The company listed an alternative landfall for the cable in West Yarmouth in its final environmental impact report.

The Cape Cod Commission will open a development of regional impact public hearing period within 45 days of the Feb. 1 certificate issued by Beaton, said Jonathon Idman , the agency's chief regulatory officer.

Vineyard Wind was chosen in May to sell 800 megawatts of electricity to three distributors in Massachusetts as part of a mandate in the 2016 Act to Promote Energy Diversity. A state review of the power purchase agreements the company signed with the distributors is expected to conclude in March.

Public meetings hosted by the federal Bureau of Ocean Energy Management start Monday, Feb.11, on Nantucket for Vineyard Wind's draft environmental impact statement for its construction and operations plan. The company intends to start construction onshore this year. The state's Energy Facilities Siting Board is expected to make a decision in April on the cable landing site.

Bloomberg

Whales Will Get Right of Way at Huge Martha's Vineyard Wind Farm

By Chris Martin

January 23, 2019

Migrating whales will have the right of way off the coast of Martha's Vineyard starting this month under a new agreement between a wind developer and environmental groups.

Vineyard Wind, which is building the first commercial-scale offshore wind farm in the U.S., has agreed to halt some construction activity between January and April, during the period when some endangered North Atlantic right whales are most likely to pass through the area. Extra protocols, including whale spotting, will be in place in November, December and May.

Vineyard Wind agreed to stop pile driving for the 800-megawatt offshore wind farm during peak whale-traffic periods, according to a joint statement Wednesday with the Natural Resources Defense Council, National Wildlife Federation and Conservation Law Foundation. That means it won't insert foundation poles for the arrays into the seabed when whales might be around.

"The right whale protection provides an important template other offshore wind projects should consider," Mark Drajem, an NRDC spokesman, said in an email. Vineyard Wind, a partnership of Avangrid Inc. and Copenhagen Infrastructure Partners, will also reduce boat speeds and curtail some work during nearby whale sightings, according to the agreement.

More than 10 gigawatts of offshore wind is expected to be built along the U.S. East Coast over the next decade, according to BloombergNEF.

Climate collaborative endorses Vineyard Wind

Jan 18, 2019

The Cape Cod Climate Change Collaborative board of directors has formally endorsed the Vineyard Wind project, a large-scale offshore wind energy project.

Proposed for siting 14 miles off the coast of Martha's Vineyard, the project intends to bring 800 megawatts of electricity to the Cape and Islands and generate clean, renewable, cost-competitive energy for 400,000 residents of the Commonwealth.

“With climate change posing the biggest global threat of our time and recent federal reports describing acceleration and increased severity of climate change, we must take immediate action to generate clean renewable energy for the Cape Cod region, Massachusetts, and beyond. We believe the Vineyard Wind project will make major strides in advancing this goal,” said Mon Cochran, executive director of the collaborative.

“Climate change poses existential threats to our environment, human health, and the economy—indeed, our entire way of life on Cape Cod.” Cochran continued.

“The Cape’s fishing industry will be especially impacted by warming water, which means cold water fish species will leave the area in search of cooler water or become extinct. It’s imperative that we change our energy sources to a low-carbon mix containing a significant amount of renewable energy, starting yesterday,” Cochran said.

The collaborative noted that Vineyard Wind has developed community agreements with municipal partners on the Vineyard and town of Barnstable, committing \$15 million for numerous initiatives that benefit Cape and Islands residents, including programs to recruit, mentor and train Massachusetts workers, particularly those in southeastern Massachusetts, for careers in the new offshore wind industry.

According to the National Climate Assessment, “Without substantial and sustained efforts to reduce greenhouse gas emissions and regional initiatives to prepare for anticipated changes, climate change is expected to cause growing losses to American infrastructure and property and impede the rate of economic growth over this century.”

Established in 2015, the Cape Cod Climate Change Collaborative is a consortium of Cape and Islands-based organizations and individuals whose mission is to unite available resources, organizations and intelligence to mitigate climate change impacts on Cape Cod, reduce greenhouse gas emissions, and work toward achieving “net zero”-based goals for the region.

Board members represent organizations such as the Association to Preserve Cape Cod, Cape Air, Cape Light Compact, Center for Coastal Studies, Friends of Pleasant Bay, Outer Cape Energize, Woods Hole Research Center, among others.

MHI Vestas Offshore Wind Sets Up Shop In Boston

Posted by MHI Vestas
on 11/14/2013

Manufacturer and service provider MHI Vestas Offshore Wind is establishing its first U.S. office in Boston, enabling the company to focus closely on sales and strategy in the region.

"I am very pleased that MHI Vestas has chosen the Commonwealth of Massachusetts as the location for their corporate offices in America," says state Sen. Marc R. Pacheco. "This announcement is tremendous news for the commonwealth's promising offshore wind industry. Our commitment to a clean energy future will mean more clean energy jobs, improved public health and an overall reduction in statewide carbon emissions."

The new office will be led by wind industry veteran Jason Folsom, the company's U.S. national sales director. MHI Vestas Offshore Wind hired Folsom in November.

The company says additional administrative staff will be hired in the coming months as it continues with its plans for the 800 MW Vineyard Wind project off the coast of Martha's Vineyard, as well as exploring potential projects in nearby states.

"We believe that the U.S. offshore wind industry is starting a prosperous journey," says MHI Vestas Co-CEO Lars Bondo Krogsgaard. "Our office in Boston is our first step before establishing an actual supply chain."

Bloomberg

Martha's Vineyard Wind-Farm Sites Spur \$405 Million Bids

By Jennifer A Dlouhy

December 14, 2018

Three companies bid a record-shattering \$405.1 million to nab U.S. rights to build offshore wind farms near Massachusetts on Friday, a testament to the surging appeal of renewable power and investors' confidence in state demand for it.

[Equinor Wind US](#) LLC, Mayflower Wind Energy LLC and [Vineyard Wind LLC](#) each pledged \$135 million to secure individual leases from the U.S. government, drawn by state pledges to buy offshore wind power. Mayflower is a joint venture of EDP Renewables and [Royal Dutch Shell Plc's](#) Shell New Energies US LLC.

The auction raked in more than nine times [the previous high-water mark](#): a 2016 sale of an offshore wind lease near New York to [Equinor ASA](#) for \$42.47 million. Each of the winning bids also approached [the highest sum](#) paid for oil drilling rights in the Gulf of Mexico since the start of area-wide leasing: \$157 million that Equinor spent nabbing a single 5,760-acre tract in 2012.

This time, the companies were jockeying over three leases spanning nearly [390,000 acres](#) (157,800 hectares) south of the resort islands of Martha's Vineyard and Nantucket where they could install turbines to generate electricity from wind. The location gives them a chance to serve power-hungry cities along the U.S. East Coast and help satisfy state pledges to buy renewable energy.

"These \$100 million-plus bids reflect the strength of state commitments to offshore wind," Cheryl Wilson, an analyst at Bloomberg Intelligence. "They're creating momentum for an offshore industry in the Northeast."

Revenue from the wind auction flows to U.S. government coffers. There are parallels to offshore oil leasing, with energy companies bidding on drilling rights and paying royalties on eventual crude and natural gas production. But the wind leases sold Friday are at least 22 times the size of a typical U.S. offshore oil block, at 127,388, 128,811 and 132,370 acres.

The sale spanned two days and unfolded over 32 rounds, with companies submitting anonymous electronic bids that grew rapidly from \$254,776. Eleven companies were actively bidding at the beginning of the auction on Thursday morning, nearly twice the most-recent record for participation, in 2016, when six developers competed for the New York offering. But by Friday morning, just four remained.

Gust of Interest

The frenzy reflects growing interest in U.S. offshore wind since 2016, when the nation's first such facility, a 30-megawatt facility development near Block Island, Rhode Island, went online.

"The intense competition we've seen in this offshore wind lease auction is completely unprecedented," said Nancy Sopko, director of offshore wind policy at the American Wind Energy Association. "Global businesses now recognize the potential of America's world-class offshore wind resources."

Playing Catch-up

Wind developers are being lured to American waters by near-guaranteed demand, as coastal states ratchet up commitments to buy renewable electricity. Massachusetts doubled its goal for buying offshore wind to 3,200 megawatts in August.

If fully developed, the Massachusetts leases could support approximately 4,100 megawatts of commercial wind generation, enough electricity to power nearly 1.5 million homes, according to the [Bureau of Ocean Energy Management](#).

"Looking up and down the East Coast -- and specifically in the Northeast -- we see states with huge commitments to buying this power," Sopko said. "That is driving incredible demand for this energy."

Declining installation costs and uncertainty about the timing of the next U.S. sale of an offshore wind lease helped feed interest. Analysts also describe growing investor confidence in the stability and predictability of the market, as President Donald Trump continues making territory available for new projects. The U.S. has held eight auctions of federal offshore wind rights since the Obama administration started competitive lease sales in 2013, including two under Trump.

Equinor's victory gives the Norwegian energy company a second U.S. offshore wind lease, building on its existing holding east of New York. State requests to buy renewable power are key to the company's "great confidence in the U.S. market," Christer af Geijerstam, president of Equinor Wind US, said in a phone interview.

The acquisition "gives us a foothold to engage in the Massachusetts and wider New England market, a region notable for its strong commitment to offshore wind," af Geijerstam said. "This is a long-term bet, because it is relying on the states to actually act their ambitions when it comes to offshore wind, but we think that we will prove ourselves to be competitive."

Shell's collaboration with EDPR Offshore North America represents a chance to expand its U.S. wind portfolio beyond existing onshore facilities in California, Texas and Wyoming.

"Shell sees offshore wind in the U.S. as a great opportunity to grow our power business and bring clean energy and economic benefits to the people of Massachusetts," said Dorine Bosman, vice president of Shell Wind Development.

The other victor, Vineyard Wind, is 50 percent owned by funds of Copenhagen Infrastructure Partners and 50 percent by Avangrid Renewables. In an emailed statement, the company said it was committed to working with the fishing industry, environmentalists and other stakeholders "to build a new industry for the region and making substantial contributions to fighting climate change."

Rising Demand

U.S. offshore wind power is [expected to surge](#) over the next decade -- reaching 10,000 megawatts by 2030, compared to just 30 megawatts installed in the water today, according to Bloomberg New Energy Finance.

“Just three years ago, these lease areas had no bidders at all,” noted Liz Burdock, president of the Business Network for Offshore Wind. “This strong interest from the offshore wind marketplace demonstrates the economic potential of the offshore wind industry.”

To keep momentum, industry experts say the Trump administration needs to plan more offshore wind sales, beyond a possible auction of territory near New York in early 2020. The [National Ocean Industries Association](#) has pushed the government to conduct at least four auctions annually, arguing a reliable inventory of regularly scheduled sales is necessary to sustain interest.

“Today’s euphoria is tempered a bit by knowing that we had eight companies not win leases, including someone willing to invest \$120 million in America for a lease but instead left the sale empty handed,” said Tim Charters, vice president of the group.

Companies that participated in the auction included [Cobra Industrial Services Inc.](#), East Wind LLC, EC&R Development LLC, EDF Renewables Development Inc., Innogy US Renewable Projects LLC, Northeast Wind Energy LLC, [PNE WIND USA Inc.](#) and wpd offshore Alpha LLC.

Vineyard Wind enters host community agreement with the Town of Barnstable

By [Michelle Froese](#) | October 5, 2018

Massachusetts offshore wind developer [Vineyard Wind](#) has entered into a host community agreement (HCA) with the Town of Barnstable. The agreement, which has been filed with the Massachusetts Energy Facilities Siting Board (EFSB), represents another milestone for the United States' first large-scale offshore wind farm as it advances through the permitting process to the onset of construction in 2019 and operations by 2021.

The agreement with Barnstable follows the award and execution of long-term contracts between Vineyard Wind and Massachusetts' electric distribution companies to construct an 800 MW wind farm in federal waters south of Martha's Vineyard and approximately 34 miles south of the Cape Cod mainland.

The HCA requires Vineyard Wind to make annual payments to Barnstable of at least \$1.534 million each year in combined property taxes and host community payments. The pact guarantees a total Host Community Payment of \$16 million, plus an additional \$60,000 (adjusted for inflation annually), for each year the project is in operation beyond 25 years.

The HCA also provides opportunity for detailed review of Vineyard Wind's specifications for a new substation by the Town, further ensuring protection of groundwater along with reliable delivery of clean energy to serve over 400,000 Massachusetts homes and businesses.

According to the company, transformers and other electrical equipment at the substation will be underlain by full volume, impervious containment systems. Transmission cables, which will not contain any fluids, will be sited under public roads or sidewalks connecting to an existing substation in an industrial park and requiring no changes to the existing electrical transmission system.

The agreement with Barnstable follows the award and execution of long-term contracts between Vineyard Wind and Massachusetts' electric distribution companies (EDCs) to construct an 800-MW wind farm in federal waters south of Martha's Vineyard and approximately 34 miles south of the Cape Cod mainland. When the Vineyard Wind's project becomes operational, it will reduce Massachusetts' carbon emissions by over 1.6 million tons per year, or the equivalent of removing 325,000 cars from state roads while offering billions in energy-related cost savings over the life of the project.

The Massachusetts Department of Energy Resources reported total net benefits of approximately \$1.4 billion for Massachusetts ratepayers.

In addition to federal and state permitting reviews, the project is actively consulting with tribal and local agencies, including the Conservation Commission and Planning Boards of the Towns of Barnstable and Yarmouth. The project will also be reviewed by the Cape Cod Commission.

In total the Vineyard Wind project will face substantial public review and consultations by nearly 30 federal, tribal, state, and local approval agencies, including from the Army Corps of Engineers, National Marine Fisheries Service, the Massachusetts Energy Facilities Siting Board, Massachusetts DEP and CZM, the Cape Cod Commission and local conservation commissions.

The Boston Globe

Vineyard Wind has a big selling point for its power: cheaper prices

By **Jon Chesto** GLOBE STAFF
AUGUST 14, 2018

The first major offshore wind farm to be built off New England's coast has at least one big selling point, compared to the doomed Cape Wind project that preceded it: much cheaper electricity.

The new project, known as Vineyard Wind, is slated to begin construction next year, some 15 miles south of Martha's Vineyard. Vineyard Wind has generated less opposition than Cape Wind, which succumbed to years of litigation because of its proposed location in Nantucket Sound, as close as six miles to shore.

Cape Wind's high prices fueled some of the opposition, but that apparently won't be a problem for Vineyard Wind.

The state's three investor-owned electric utilities recently disclosed that they will pay Vineyard Wind about \$89 a megawatt hour, on average, over the course of a 20-year contract for the first phase of the project, scheduled to come online in 2021.

A second phase would cost less, an average of \$79 per megawatt hour.

"I'm somewhat speechless at that number," said Paul Flemming, managing director at ESAI Power LLC, an energy consultancy in Wakefield. "We've seen numbers like that in Europe. But they've got the infrastructure set up [already]."

Those prices are roughly one-third the rate of what the Cape Wind project would have charged, and at least half the cost of more recent offshore wind contracts in the United States. They are also about one-fourth the rate charged by Deepwater Wind's Block Island project, a much smaller installation with just five turbines. It's the country's first offshore wind farm.

It's hard to predict precisely how the Vineyard Wind contracts will translate into electric bills for homeowners, because the wholesale power markets fluctuate over time. But the state Department of Energy Resources says it sees the potential for modest savings to ratepayers over the life of the 20-year contracts.

So what gives? How is Vineyard Wind able to deliver such a better price, when its 800-megawatt wind farm would be located farther out to sea, in deeper waters, than Cape Wind's? Many factors make offshore wind more financially viable now than it was a decade ago:

■ **Competition:** Cape Wind was the only game in town when National Grid signed a contract in 2010 at prices that began at \$187 per megawatt hour, and escalated from there. Eversource signed a similar deal, but both utilities backed out when Cape Wind ran into trouble lining up financing.

In contrast, there were three development teams offering to sell off-shore power to the state's electric utilities in a bidding process set in motion by the state's 2016 energy law. Vineyard Wind had one key

advantage: It's furthest along in the permitting process, enabling it to be the one most likely to capitalize on federal tax credits that are scheduled to expire soon.

■ **Experience:** As the first proposed offshore wind farm in the United States, Cape Wind was a trailblazer. But company president Jim Gordon's experience was primarily in developing gas-fired plants, not wind farms.

Bloomberg NEF analyst Tom Harries noted that Vineyard Wind is being developed by more experienced investors: utility Avangrid and investor Copenhagen Infrastructure Partners. That experience, Harris said, is vital to managing expenses. It also lowers the perception of risk, which helps reduce financing costs.

"We had three companies that had real experience that had bid for these projects, [with] the technology and capital to build them," said Bob Rio, an energy expert at Associated Industries of Massachusetts. "The industry matured. It caught up to what we needed."

■ **Technology:** Cape Wind had proposed using 3.6-megawatt turbines, at the time considered cutting edge. Now, though, offshore turbines are bigger and more powerful. General Electric, for example, recently announced plans to make a 12-megawatt turbine. Vineyard Wind will use either 8- or 10-megawatt turbines.

Plus, the more advanced technology seen already in Europe allows wind farms to be built in deeper waters, enabling them to harness stronger winds. That means Vineyard Wind's 80 to 100 turbines will run more efficiently, more frequently approaching peak capacity.

"Our price is more of a reflection of where the global market has moved," said Lars Thaaning Pedersen, Vineyard Wind's chief executive.

■ **Financing:** It's a minor twist, but worth noting. Cape Wind could only secure 15-year contracts from utilities. These new contracts are for 20 years, which spreads costs over a longer period.

■ **Opposition:** Because its turbines will be larger, Vineyard Wind can be built farther from shore. Vineyard Wind does have issues — fishermen are concerned about the towers' impact, and Yarmouth residents worry about a transmission line that's proposed to come ashore in their town.

But Cape Wind would have been in sight of a far more populous area, and was ensnared by years of costly legal appeals. It's hard to know how much of a role, if any, that played in its price for electricity. But the opposition eventually sank that project, while Vineyard Wind has been generating much more support.

Climate-Changed

First Big U.S. Offshore Wind Farm Offers \$1.4 Billion Savings to Customers

By Jim Efstathiou Jr

August 1, 2018, 1:41 PM EDT *Updated on August 1, 2018, 4:16 PM EDT*

Project expected to cut monthly power bills up to 1.5%

Vineyard Wind project will be 18% cheaper than alternatives

Massachusetts electricity users will save about \$1.4 billion over 20 years from the first commercial-scale offshore wind farm in the U.S.

Avangrid Inc. and Copenhagen Infrastructure Partners, joint developers of the 800-megawatt project south of Martha's Vineyard, expect to provide power and renewable energy credits for 6.5 cents a kilowatt-hour according to a [letter](#) Wednesday from the state Department of Energy Resources.

That's a levelized price in 2017 dollars over the term of the contracts, and makes the Vineyard Wind project about 18 percent cheaper than other alternatives, according to the letter. It's also lower than the wind industry expected and shows that offshore wind can be a competitive source of clean energy as costs continue to come down.

"That's pretty shocking for us," said Tom Harries, a wind analyst at Bloomberg NEF. "I think the wider industry expected much higher prices. The repercussions of this are it will probably awaken a lot of other coastal states to the value of offshore wind."

As prices continue to fall, offshore wind is expected to grow by [16 percent](#) annually through 2030, driven by installations in the U.K., Germany, Netherlands and China, according to BNEF. The U.S. is a latecomer to the market, and early projects may cost more than those in Europe, in large part because developers will need to import components for the massive offshore structures, which can be as big as 600 feet (183 meters).

With Vineyard Wind, the U.S. is starting to close the gap, Harries said. While offshore wind is still more costly than onshore wind and solar, it offers other advantages, notably that the turbines will generate power in the winter when prices are high.

Federal tax credits and a long-term power-purchase agreement were part of the equation that helped the wind project “offer an attractive price to the benefit of consumers,” Lars Thaaning Pedersen, chief executive officer of Vineyard Wind, said in a statement.

‘Pretty Fast’

“The general consensus was that it would take a while for new markets to reach levels we’ve seen in Europe and the U.S. seems to be doing this pretty fast,” he said.

The wind farm 15 miles (24 kilometers) south of Martha’s Vineyard is expected to deliver power at a price that lowers monthly energy bills by about 0.1 percent to 1.5 percent, according to the letter. Construction is expected to begin in 2019, with the project in operation by 2021, the developers said in May. It will reduce the state’s carbon emissions by more than 1.6 million tons per year, the equivalent of removing 325,000 cars from the road.

The contracts between the developers and distribution companies [National Grid Plc, Eversource Energy](#) and Unitil Corp. were filed for review Tuesday with the Department of Public Utilities.

Massachusetts has set a goal of installing 1,600 megawatts of offshore wind, enough to power about 1 million homes, by 2027, and lawmakers [approved](#) legislation on Wednesday to double that figure. New York, New Jersey and Maryland are also targeting a combined addition of more than 6 gigawatts by 2030.

[Deepwater LLC](#) built the first U.S. offshore farm in 2016, the 30-megawatt, \$300 million Block Island project off the Rhode Island coast.

“The Vineyard Wind offshore wind generation long-term contracts provide a highly cost-effective source of clean energy generation for Massachusetts customers,” according to the Department of Energy Resources’ letter.

Study gauges economic impact of offshore wind

Job, tax benefits for Mass. much greater than Canadian hydro imports

[BRUCE MOHL](#) Mar 12, 2018

MASSACHUSETTS WON'T GAIN MUCH economically by importing hydro-electricity from Quebec into New England, but a new report indicates the Bay State's upcoming procurement for offshore wind will have a positive impact.

A study commissioned by Vineyard Wind, one of three bidders on the procurement, said an 800 megawatt offshore wind project would yield between 1,180 and 1,633 direct, full-time equivalent jobs in Massachusetts, with most of them in southeastern Massachusetts. Most of the jobs would be in development and construction, with only about 80 in ongoing operations and maintenance.

The project is also expected to generate \$17 million a year in new state and local tax revenue, the report said.

Vineyard Wind commissioned the Public Policy Center at UMass Dartmouth to study the economic impacts of an 800 megawatt and 400 megawatt project. Only the report for an 800 megawatt project was released.

Michael Goodman, the executive director of the UMass Dartmouth center and one of the authors of the report, said the jobs will be high paying (wages ranging from \$77,671 to \$85,021) and located in a section of the state that needs them.

To meet its emissions targets, Massachusetts is in the midst of negotiating a contract for the import of hydro-electricity from Quebec. Most of the economic benefits of the imported electricity (jobs, taxes, and economic development) will flow out of state to Quebec and which ever state hosts the transmission line – either New Hampshire or Maine.

By contrast, the offshore wind procurement is focused on companies that will build wind farms off the coast of Massachusetts and use Massachusetts as a staging area. Goodman said the UMass analysis of

Vineyard Wind's proposal is unique to that project, but he acknowledged the ventures of the other two bidders (Bay State Wind and Deepwater Wind) would probably have a somewhat similar economic impact.

Massachusetts will procure 1,600 megawatts of offshore wind in stages. The initial stage could run anywhere from 250 megawatts to a maximum of 800 megawatts. All of the bidders were required to submit 400 megawatt bids.

The bidders have engaged in a heated behind-the-scenes debate over the optimum size of the initial procurement. Bay State Wind has indicated an 800 megawatt initial procurement would be best because it would deliver low prices for the power and signal to the offshore wind industry that Massachusetts is serious about garnering a large chunk of the emerging industry.

Deepwater Wind has taken a go-slow approach, urging the state to start small and go bigger over time. Officials at Deepwater Wind argue a smaller, initial procurement would give Massachusetts time to build up its capacity to serve the offshore wind industry and capture a greater chunk of the supply chain and more jobs. An 800 megawatt initial procurement, the company argues, could put a damper on bidding for future procurements and lead to more imports of equipment and labor from Europe.

Although the companies have made their arguments for big or small procurements, they have also hedged their bets with proposals of varying sizes.

Goodman said a bigger project is likely to prevail in the procurement because of its ability to offer a lower price due to economies of scale. "I don't follow the logic of smaller is better," he said.

CAPE COD TIMES

Vineyard Wind to hold open houses in [Barnstable, Yarmouth](#)

By Geoff Spillane

Posted Nov 6, 2017 at 5:43 PM Updated Nov 6, 2017 at 5:55 PM

HYANNIS — Vineyard Wind will host two public open houses this week for Barnstable and Yarmouth residents to learn more about offshore wind and a grid/cable connection planned for the towns.

The Barnstable open house will be from 5 to 8 p.m. Tuesday in the cafeteria at Barnstable Intermediate School, 895 Falmouth Road in Hyannis. The Yarmouth event is scheduled for 5 to 8 p.m. Wednesday at the Senior Center, 528 Forest Road in West Yarmouth.

Vineyard Wind is proposing to build an offshore wind energy project 30 miles south of Martha's Vineyard that would power more than 450,000 Massachusetts homes each year.

New Bedford meeting brings wind, fishing industries together

By Michael Bonner / mbonner@s-t.com

Posted Oct 4, 2017 at 5:22 PM Updated Oct 4, 2017 at 7:11 PM

NEW BEDFORD — Jim Kendall painted the city's streets with snow when he articulated how fishermen may feel about offshore wind during a meeting Wednesday that brought both sides together.

As a child on SouthCoast, Kendall spent his snows days sledding on the streets.

"You just can't do stuff like that anymore," he said.

He's seen the same influx in traffic on the ocean in his evolution from fisherman to fishermen representative for Vineyard Wind. Time has added stock limits, marine monuments and the latest is offshore wind. More traffic equates to more difficulty fishing.

"That's part of the problem," Kendall said. "There's constraints now where there never were earlier."

Both offshore wind and commercial fishing understand neither is leaving the ocean. So John Quinn chaired a New England Fisheries Management Council habitat committee meeting in New Bedford, which invited offshore wind representatives.

"My general policy view is I'm viewing wind as complementing not replacing fishing," Quinn said. "That balance is why we're having meetings, seminars and symposiums about it."

Vineyard Wind, Bay State Wind, Deep Water Wind and the Bureau of Ocean Energy Management presented information to the committee for about two hours before an hour question-and-answer session.

Concerns from the committee included navigation around the turbines, radar interference and the burying of cables under the ocean's surface.

It's uncertain how many towers would be erected in certain areas, so the total number of turbines vessels would have to navigate around is unknown. The quota is often based on the demand of specific states. However, many maps were provided of the area where companies own leases off the coast of Massachusetts and Rhode Island.

Research also continues on the effects the turbines impose on marine life in the area.

As one of the first formal meetings between the sides, answers weren't always available. But the discussion set in motion a process where at some point the issues could be solved.

“Oftentimes stuff can be resolved with a phone call or an email,” Quinn said. “They’ve got to work collaboratively to solve some of these pressing issues but not confrontationally.”

There may be no other choice.

“It’s going to happen so I guess we have to try to make the best of it or minimize any of the problems,” Kendall said.

The Inquirer and Mirror

Wind-farm survey vessels off Nantucket for next two weeks

By The Inquirer and Mirror

Posted Aug 8, 2017 at 8:47 AM Updated Aug 8, 2017 at 9:02 AM

(Aug. 8, 2017) Over the next two weeks, Vineyard Wind will be conducting seafloor surveying between its offshore wind-lease site, located approximately 14 miles southwest of Nantucket, and Cape Cod, including Muskeget Channel and Nantucket Sound. In addition, the survey will also include Nantucket's Madaket and Dionis areas.

The company's 45-foot surveying vessel may come within 50 feet of Nantucket's shores in these specific areas between the hours of 9 a.m.-5 p.m. A professional marine mammal observer will be onboard to ensure no danger to sea life or beachgoers.

Vineyard Wind, which is competing with Deepwater Wind and a partnership between DONG Energy and Eversource to build major wind energy installations in leased tracts 15 miles south of Martha's Vineyard, began geophysical surveys last week of the ocean floor "to identify best cable locations," the company said in a notice to boaters.

A 45-foot boat may be operating an unoccupied underwater robot, the company said, and a second boat, a 100-foot vessel, will be conducting shallow coring or collecting sediment samples while maintaining station further offshore.

Both vessels may be towing geophysical equipment up to 300 feet behind them, Vineyard Wind said. The survey work began late last week and is expected to last about three weeks, the offshore wind developer said.

A 2016 law requires Massachusetts utilities to procure 1,600 megawatts of offshore wind and 1,200 megawatts of new hydropower, solar, wind and other renewable sources by 2027. Proposals for 400-800 megawatt projects of offshore wind are due in December, and Vineyard Wind officials have said the company is preparing to submit its bid by then.

Dartmouth man joins Vineyard Wind management

Posted Jul 12, 2017 at 5:00 PM Updated Jul 12, 2017 at 5:00 PM

Vineyard Wind, an offshore wind energy developer vying to build the first utility-scale project off the coast of Massachusetts, has hired Dartmouth resident Jack Arruda to serve as technical development manager for the company.

Arruda has a lengthy background in developing and operating power projects in the Northeast, according to a news release from Vineyard Wind. In his new role, he will lead the local technical development of the proposed Vineyard Wind project and oversee issues such as grid interconnection, on-shore route permitting and cable installation, and managing the development and use of the port facilities for both construction and operation of the project, the release said. He will work closely with the project's fisheries' representative Jim Kendall, the U.S. Coast Guard, the Port of New Bedford and the harbormaster, and other city and state officials.

Vineyard Wind is one of three companies that has acquired lease rights to build wind projects off the coast of Massachusetts. Vineyard Wind's project area is about 15 miles south of Martha's Vineyard, the developer said. Last summer, Massachusetts required utilities to procure 1,600 megawatts of clean, offshore wind energy within the next decade. When the 1,600 megawatts of generation capacity are completed, they will generate enough clean, homegrown energy to power the equivalent of more than 750,000 Massachusetts homes every year, according to the company.

"Jack brings a tremendous depth of technical experience, as well as local knowledge, to Vineyard Wind — exactly what we need to ensure the project is built on time and on budget, and all the while being a good neighbor with the many people who live and work on the SouthCoast and the waters offshore," said Vineyard Wind CEO Erich Stephens. "We're thrilled to have someone with Jack's background join our team as his local experience and knowledge WILL be essential for a successful project and adds to the level of expertise on our team."

A lifelong resident of Dartmouth and a graduate of Massachusetts Maritime Academy with a degree in marine engineering, Arruda has more than 25 years of experience operating and managing energy projects.

"I'm thrilled to be working with Vineyard Wind," Arruda said in the release. "It's the perfect opportunity for me given my background in the power-generation field and having been in the maritime industry earlier in my career. I'm excited about this project. I think offshore wind will play a key role in the energy future of our region, and it's going to bring tremendous opportunity to the South Coast area."

Prior to joining Vineyard Wind, Arruda served as the director of operations for Caithness Energy. Previously, he spent 17 years with Energy Management Inc., where he worked in the development of

solar and combined cycle natural gas-fired electrical generation facilities. In addition, as part of EMI, he was involved in the design and planning around the proposed Cape Wind energy project. He was previously the operations and facility manager at the 270-megawatt natural gas-fired power plant in Tiverton, Rhode Island, for eight years working for Calpine and GE.

Avangrid acquires big stake in Massachusetts offshore wind project with Vineyard Wind

May 11, 2017 [Paul Dvorak](#)

Partnership combines global experience, strategic expertise, and deep financial backing

Avangrid Renewables and Vineyard Wind have formed a strategic partnership to jointly develop a large scale wind energy project off the coast of Massachusetts. Avangrid Renewables is acquiring a 50% ownership interest in Vineyard Wind, the offshore wind energy developer that is part of the Copenhagen Infrastructure Partners (CIP) portfolio.

The companies say this is a major strategic partnership that combines Avangrid Renewables' U.S. onshore wind development capabilities with Copenhagen Infrastructure Partners and Iberdrola's European offshore wind expertise to give Vineyard Wind a significant advantage in building Massachusetts' first offshore wind project.

Avangrid Renewables is a subsidiary of AVANGRID Inc Iberdrola S.A., a worldwide leader in the energy industry with significant offshore wind holdings in Europe, owns 81.5% of the outstanding shares of AVANGRID common stock.

The partnership of the two companies will bring extensive offshore wind expertise and substantial financial firepower to the Commonwealth's initiative to build offshore wind projects in Massachusetts. Last summer, Massachusetts required utilities to procure 1,600 MW of clean, offshore wind energy within the next decade, setting off an intense competition among offshore wind developers in the region.

Three companies to date have acquired lease rights to build projects off the coast, including Vineyard Wind. Vineyard Wind's project area is about 15 miles south of Martha's Vineyard. Vineyard Wind plans to begin construction of its project in early 2020, in order to bring the economic development and clean energy benefits of offshore wind to Massachusetts as soon as possible. Vineyard Wind has also worked hard to establish long-term relationships and partnerships with the local community that will provide significant benefit to the project

Martha's Vineyard Offshore Wind Project Acquired By Danish Company

Posted by **Lauren Tyler**

-

August 26, 2016

Danish fund management company Copenhagen Infrastructure Partners (CIP) has [acquired](#) 100% of Offshore MW LLC, a company holding a 166,886-acre offshore wind energy lease south of Martha's Vineyard in Massachusetts.

The lease was issued by the U.S. Bureau of Ocean Energy Management. The project will be continuously developed by the existing local development team and supported by CIP.

Offshore MW is eligible to participate in the utility tender program established by [recently enacted legislation](#) in Massachusetts. According to CIP, the first tender round to obtain a long-term power off-take agreement is expected to take place in mid 2017.

Richard Andre, president of [Vineyard Power](#), a partner of OffshoreMW, says, "We're very pleased that we'll now be working with the CIP team. We've met with them and know they bring an enormous amount of offshore wind expertise, they have the investment capacity and they appreciate what we have to offer as a local community partner. Together we'll be able to deliver a great project for the Vineyard and for the entire commonwealth."

In addition, the name of the project will be Vineyard Wind to reflect the project's proximity to the island, as well as OffshoreMW's long-standing ties to Vineyard Power Cooperative.

SECTION 8 OF APPENDIX A TO THE RFP ENGINEERING AND TECHNOLOGY; COMMERCIAL ACCESS TO EQUIPMENT

OVERVIEW

The section describes Vineyard Wind 2's (the "Project") engineering and construction plans, and equipment procurement plans. These plans employ highly reliable, commercially available technologies, and were developed by an [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Vineyard Wind is the only developer to go through the procurement process for a large-scale offshore wind project in the US. [REDACTED]

[REDACTED]

[REDACTED]

Vineyard Wind's unparalleled experience in the US offshore wind market means the Project also benefits from the company's:

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] Final manufacturer decisions will be based on previously completed assessments of engineering and supply chain capabilities in the US and abroad, with strong considerations for local sourcing.

Dimensions indicated in this section are typical; and final dimensions will be dependent on the model of wind turbine generator (WTG) selected and final design.

8.1 Provide a reasonable but preliminary engineering plan which includes the following information:

PRELIMINARY ENGINEERING PLAN

The Project incorporates high performance equipment components with established track records in the offshore wind sector. [REDACTED]

[REDACTED]

[REDACTED] Vineyard Wind is therefore confident that the Project's preliminary design and engineering plan will deliver a robust and reliable Project for Massachusetts' ratepayers.

An overview of the major components associated with Project deployment, including specialized equipment required to complete each of the work packages, is provided in **Table 8.1-1**.

i. Type of generation and delivery technology

Type of Generation and Delivery Technology

The Project will generate and deliver renewable emission-free electricity through an offshore wind generation and transmission system. The seven major technology and equipment groups that comprise this system are illustrated in **Figure 8.1-1** and described below.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

ii. Major equipment to be used (including nacelle, hub, blade, tower, foundation, delivery facilities structures and platforms, electrical equipment and cable)

Major Equipment

Wind Turbine Generators

A WTG consists of a steel tower [REDACTED]. On top of the WTG tower is a nacelle (housing) and hub. The nacelle contains a driveshaft and gearbox or direct-drive system (depending on WTG type), as well as the electrical generator, electric motors to yaw the turbine, and workspace. The nacelle also contains a full array of instrumentation, controls, fire protection systems and other safety equipment, ventilation and cooling, and ancillary equipment. Wind sensors mounted on the top of the nacelle are used to control the yaw system, which ensures that the nacelle is facing into the wind, thus maximizing power production. [REDACTED]

[REDACTED]

[REDACTED]

A schematic presentation of a typical WTG of the type planned for the Project is provided as **Figure 8.1-2**.

Foundations for WTGs

The Project will use either monopiles or jackets as the support structure for the WTGs.

Monopile Foundation Concept

A monopile is a single, hollow cylinder fabricated from steel that is driven into the seabed. A TP is mounted on top of the monopile to make the transition from the top of the monopile to the bottom of the WTG tower. Various electrical equipment is located inside the TP to connect the WTG to the inter-array cables. The TP also includes a boat landing for technician access. The Project's monopile foundation concept is illustrated in **Figure 8.1-3**.

The foundation includes the following: inter-array cable hang-off supports, corrosion protection systems (both internally and externally), a boat landing for accessing each turbine, Davit crane to lift tools and parts from the service vessel, marine navigation aids (e.g. ID marking and lights), external and internal platforms (scaffolding), and various electrical components. Scour protection may be installed around each WTG foundation to protect the foundations from scour development.

Jacket Foundation Concept

The jacket design concept consists of three to four-legged support structure with an integrated TP.

The jacket will also contain secondary structures, such as boat landings and cable tubes. The jacket will also be equipped with a corrosion protection system designed in accordance with relevant standards. The jacket concepts are illustrated in **Figure 8.1-4**.

The jacket will contain secondary structures such as tower flange for mounting the WTG, internal and external platforms, and various types of electrical equipment needed during installation and operation.

[REDACTED]

Inter-array Cables

[REDACTED]

[REDACTED] The medium voltage inter-array cables will connect the WTGs to the ESP. The total length of the cables will be optimized according to the Project's layout and WTG model chosen.

[REDACTED]

[REDACTED]

[REDACTED]

Electrical Service Platform

The ESP is comprised of two primary structures: the topside, which contains the electrical components and is located above water, and the foundation substructure, which is mainly below water. The ESP topside will be mounted on a jacket foundation, as depicted in **Figure 8.1-5**.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

The topside will be a conventional steel frame or stretched skin structure with various deck levels, such as the cable deck, main deck, mezzanine or intermediate deck, and roof deck, all designed to house the electrical components. A helideck will likely also be installed on the ESP to improve operations and maintenance (O&M) workability.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

The ESP will contain several additional components, such as a supervisory control and data acquisition (SCADA) system, heating, ventilation, and air conditioning (HVAC), a fire safety system, hydraulic platform crane(s), electrical hoist crane(s), a closed-circuit television (CCTV) system, a communication system (including antenna), Automatic Identification System (AIS), safety kits, aviation and navigational marking, a pollution prevention system, export and inter-array cable hang-off supports, corrosion protection systems, and more.

Offshore Export Cables

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

The export cable system is designed with redundancy to secure reliable transmission from the Project to the grid. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

iv. Status of acquisition of the equipment components

Supply Chain Investigations

Vineyard Wind has completed extensive engineering assessments and investigation of supply chain capabilities and options in Massachusetts, the US, and abroad. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[Redacted]

[Redacted]

v. Whether the bidder has a contract for the equipment. If not, describe the bidder's plan for securing equipment and the status of any pertinent commercial arrangements

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

vi. Equipment vendors selected/considered

Equipment Vendors

Based on Vineyard Wind’s engagement and dialogue with prospective supply chain partners, the following major equipment vendors listed in **Table 8.1-2** are being considered for the Project. More details on equipment vendor considerations and selection criteria are further detailed in the response to **Question 8.1.viii**.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Foundations

Monopiles and TPs are a technology that has been proven in numerous offshore wind projects worldwide. The first monopile projects were installed at the Blyth Offshore Wind Farm (England) in 2000 (Blyth Windfarm, England) and the Horns Rev 1 project (Denmark) in 2002. Since then, more than 2,500 monopiles have been deployed in the offshore wind industry. [REDACTED]

[REDACTED]

Inter-array Cables

Inter-array cables are a well-known technology that has been used for many years in the wind industry. [REDACTED]

[REDACTED]

Electrical Service Platforms

ESPs have been in use in the offshore wind industry since 2002. [REDACTED]

[REDACTED] All suppliers are expected, and will be encouraged, to design the ESP using well-known and proven concepts. The shareholder companies and members of Vineyard Wind's staff also have experience with ESPs of similar complexity.

Export Cables

[REDACTED]

Onshore Substation

The onshore substation's electrical design will be comparable to that of most other offshore wind onshore substations. The electrical design will be derived from the final design of the Project's entire electrical system and based on well-known and proven concepts. There are many experienced contractors in New England and the rest of the US with the expertise to build this type of onshore substation. Shareholder company Avangrid Renewables and affiliate Avangrid Networks have long track records and substantial US onshore experience with designing and constructing onshore substations.

viii. If the equipment manufacturer has not yet been selected, identify in the equipment procurement strategy the factors under consideration for selecting the preferred equipment

Equipment Procurement Strategy

Vineyard Wind's procurement strategy builds [REDACTED]

[REDACTED]

[REDACTED] **Table 8.1-3** outlines key factors that Vineyard Wind will consider when procuring equipment for the Project.

SAME OR SIMILAR EQUIPMENT IN COMMERCIAL OPERATION

A general overview of the equipment track records is provided in response to **Question 8.1.vii.**

[REDACTED]

[REDACTED]

[REDACTED]	[REDACTED]	[REDACTED]	[REDACTED]	[REDACTED]	[REDACTED]	[REDACTED]

8.4 For less mature technologies, provide evidence (including identifying specific applications) that the technology to be employed for energy production is ready for transfer to the design and construction phases. Also, address how the status of the technology is being considered in the financial plan for the project.

TECHNOLOGICAL MATURITY

[REDACTED]

Further, all equipment will be manufactured by or with the involvement of industry leaders. As part of the financing process, an in-depth review of the applied technologies will be performed and taken into consideration when designing the Project management plan.

8.5 Please indicate if the bidder has a full and complete list of equipment needed for all physical aspects of the bid, including generation facilities, turbine support structures, electrical platforms delivery facilities, and mandatory and voluntary transmission system upgrades. If not, identify the areas of uncertainty and when the full and complete list of equipment will be identified.

LIST OF EQUIPMENT NEEDED

The response to **Question 8.1.ii** provides a full and complete list of all major equipment needed for all physical aspects of the bid. [REDACTED]

8.6 Please indicate if the bidder has secured its equipment for all physical aspects of the bid, including generation facilities, delivery facilities, and mandatory and voluntary transmission system upgrades. If not, identify the long-lead equipment and describe the timing for securing this equipment.

EQUIPMENT PROCUREMENT

Vineyard Wind has completed extensive engineering assessments and investigations of US supply chain capabilities and options, [REDACTED]

That Vineyard Wind has not yet secured equipment for the Project, which is normal at this stage of the Project development process. [REDACTED]

The Project's engineering and procurement plan has been prepared in full [REDACTED]

Please refer to the response to **Question 8.1.v** above for details on the Project's procurement plan.

SECTION 9 OF APPENDIX A TO THE RFP PROJECT SCHEDULE

OVERVIEW

This section outlines the schedule and critical path for Vineyard Wind 2 (the “Project”), and details how Vineyard Wind expects to [REDACTED] Vineyard Wind’s confidence in this timeline is based on the shareholder companies’ extensive experience and successful track record managing the execution of projects of similar scope and magnitude around the world. Importantly, this schedule also incorporates the most recent lessons learned and experience from the Vineyard Wind team’s development of the nation’s first commercial-scale offshore wind project, Vineyard Wind 1. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

9.1 Identify the elements on the critical path. The schedule should include, at a minimum, preliminary engineering, financing, acquisition of real property rights, Federal, state and/or local permits, licenses, environmental assessments and/or environmental impact statements (including anticipated permit submittal and approval dates), completion of interconnection studies and approvals, procurement, facility contracts, start of construction, construction schedule, and any other requirements that could influence the project schedule and the commercial operation date.

PROJECT SCHEDULE AND CRITICAL PATH

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

As **Figure 9.1-1** shows, Project planning and implementation is well underway. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Vineyard Wind is also the first offshore wind developer to go through supply chain procurement for all major contract packages for a large-scale offshore wind project. The insights and experience gained through that process have been incorporated into the Project's schedules.

[REDACTED]

[REDACTED]

The detailed schedules will enable the team to coordinate activities, monitor schedule performance, and analyze the impact of changes and adjustments to the Project both during detailed planning and execution.

[Redacted]

[Redacted]

[Redacted text]

[Redacted content]

[Redacted text]

[Redacted content]

CRITICAL PATH ANALYSIS

[REDACTED]

Vineyard Wind is therefore confident that the Project's schedule is achievable and that the Project will be delivered as planned.

The Project's critical path includes three key activities, which are discussed in turn below:

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

9.2 Include a discussion on use of maritime vessels and access to them. Also include a description and discussion of the laydown facility/facilities to be used for construction, assembly, staging, storage, and deployment.

MARITIME VESSELS AND ACCESS

[REDACTED]

[REDACTED]

The central logistical and installation related scopes that Vineyard Wind has identified for the Project are as follows:

- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]

Table 9.2-1 provides a description and status of the key scopes listed above. Robust solutions have been identified for each scope, and Vineyard Wind is confident of the availability of these market solutions, [REDACTED] Further detail, including information on marine vessels and access, can be found in Section 10.

VINEYARD WIND

ATTACHMENT TO:
SECTION 9 OF APPENDIX A TO THE RFP
PROJECT SCHEDULE

ATTACHMENT 9.1-1
REDACTED

SECTION 10 OF APPENDIX A TO THE RFP OPERATION AND LOGISTICS

OVERVIEW

This section provides a detailed construction plan for Vineyard Wind 2 (the “Project”) addressing all necessary arrangements and processes for outfitting, assembly, storage, and deployment of major Project components. The construction plan has been validated by suppliers, is based on the construction plan for the first 800 megawatt (MW) project (“Vineyard Wind 1”), [REDACTED]

[REDACTED] The Project’s construction plan draws on the successes and difficulties of the parent companies’ previous offshore wind developments and their deployments; as such, Vineyard Wind is fully prepared for the Project’s installation.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

10.1 Please list the major tasks or steps associated with deployment of the proposed project and the necessary specialized equipment (e.g. vessels, cranes).

MAJOR PROJECT DEPLOYMENT STEPS AND NECESSARY EQUIPMENT

The installation of Vineyard Wind 2 consists of the following six main work packages:

- Wind turbine generator foundations
- Wind turbine generators
- Inter-array cables
- Electrical service platform
- Offshore export cables
- Onshore cable and substation

A schematic construction plan that depicts the projected sequence of major tasks for each of the Project's work packages is provided in **Figure 10.1-1**. A detailed Project schedule can be found in **Section 9**.

[Redacted]

[Redacted]

[Redacted]

10.2 Please provide documentation to demonstrate site control for all marine terminals and other waterfront facilities that will be used to stage, assemble, and deploy the project for each stage of construction.

- i. Evidence that the bidder or the equipment/service provider have a valid lease, or option to lease, a marine terminal and/or waterfront facility for construction of the offshore wind energy project (e.g., by virtue of ownership or land development rights obtained from the owner).*
-

MARINE TERMINAL FACILITIES

[Redacted content]

[REDACTED]

[REDACTED]

-
- ii. *If not available, describe the status of acquisition of real property rights for necessary marine terminal and/or waterfront facilities, any options in place for the exercise of these rights and describe the plan for securing the necessary real property rights, including the proposed timeline. Include these plans and the timeline in the overall project schedule.*
-

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

iii. Identify any joint use of existing or proposed real property rights for marine terminal or waterfront facilities.

[REDACTED]

For the remaining marine terminal and waterfront facilities, the situation regarding joint use is as follows:

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

10.3 Please describe the proposed approach for staging and deployment of major project components to the project site. Indicate the number, type and size of vessels that will be used, and their respective roles. Please include specific information on how the bidder's deployment strategy will conform to requirements of the Merchant Marine Act of 1920 (the Jones Act).

STAGING AND DEPLOYING MAJOR PROJECT COMPONENTS

The proposed approach for staging and deployment of major components for each of the Project's six work packages is provided in the following subsections. Vineyard Wind has thoroughly reviewed the Jones Act and confirms that the Project's deployment strategy conforms to the requirements of the Jones Act, as summarized below:

- **WTG Foundation and ESP installation:** A foreign flagged installation vessel that remains stationary using dynamic positioning (DP), only allowing necessary movement at the offshore position to safely perform installation activities on site, is not considered coastwise transportation and is thereby in compliance with Jones Act. [REDACTED]

[REDACTED]

- **Inter-array and offshore export cable installation:** The Jones Act generally does not apply to cable laying as cables are not considered "unlading merchandise" between coastwise points because the cable is instead "paid out" in the course of cable laying..

- **WTG installation:** A foreign flagged jack-up installation vessel that remains jacked-up at the offshore position to safely perform installation activities on site is not considered coastwise transportation and is thereby in compliance with the Jones Act; the installation vessel will be fed by Jones Act compliant feeders from the WTG staging port site.
- **Crew transfer:** Crew transfer vessels (CTVs) used to transport personnel from shore to an installation vessel, foundation, WTG, or ESP will be Jones Act compliant vessels and comply with the requirements of the Passenger Vessel Services Act (46 U.S.C. § 55103 (b)).

WTG Foundations

Foundation staging, deployment, and installation broadly consists of the following major tasks, which are further described below:

1. Foundation Component Harbor Transport
2. Foundation Harbor Operation
3. Scour Protection Installation
4. Foundation Site Transport and Installation

WTG Foundation Component Harbor Transport

[REDACTED] as detailed in **Table**

10.3-1. [REDACTED]

[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

Scour Protection Installation

Scour protection will be installed according to the steps outlined in **Table 10.3-3**. Several techniques for placing scour exist (e.g., fall pipes, side dumping, grab placement). Fall pipes involve the use of a pipe that extends from the vessel to the vicinity of the foundation location. This technique is sometimes supported by a remotely operated vehicle (ROV)-guiding the lower end of the pipe, as depicted in **Figure 10.3-2**. [REDACTED]

[REDACTED]
[REDACTED]

[REDACTED]

Electrical Service Platform

The ESP consists of a topside component, which houses the electrical elements, and a jacket foundation substructure secured by piles or suction buckets. ESP deployment and installation consist of the following major tasks, which are further described below:

1. ESP Transport to Site
2. ESP Installation
3. ESP Offshore Commissioning

Electrical Service Platform Transport to Site

[REDACTED]

[REDACTED] The ESP transport steps are shown in **Table 10.3-5**.

[REDACTED]

[REDACTED]	
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

Electrical Service Platform Installation

In general, ESP foundation installation is similar to the process described for WTG foundation installation and [REDACTED]

[REDACTED] A typical ESP foundation and topside installation process is depicted in **Figure 10.3-4**.

Seabed preparation may be required prior to ESP installation. If scour protection is needed, it will be placed at the same time the scour protection for the WTG foundations is installed. The ESP installation steps are provided in **Table 10.3-6**.

	[REDACTED]
	[REDACTED]
	[REDACTED]

Offshore Export Cables

The offshore export cables transmit power from the ESP to shore. Offshore export cable deployment consists of the following main steps, which are further described below:

1. Export Cable Transportation
2. Pre-installation Surveys and Pre-lay Grapnel Run

3. Landfall Installation
4. Cable Laying and Burial
5. Cable Pull-In into the ESP
6. Cable Termination and Commissioning

Export Cable Transportation

[REDACTED]

Pre-installation Surveys, Pre-Lay Grapnel Run, and other Pre-installation Activities

[REDACTED]

Cable Pull-in at the Landfall Installation

[REDACTED]

Cable Laying and Burial

Once the cable landing is complete, the cable laying vessel will move along the offshore export cable route while simultaneously laying and burying the cable. The offshore export cables will be buried beneath the seafloor at a target depth of five to eight feet. [REDACTED]

[REDACTED]

Cable Pull-in into the Electrical Service Platform

[REDACTED]

Cable Termination and Commissioning

[REDACTED]

Inter-array Cables

The inter-array cables connect the WTGs to one another and the ESP. [REDACTED]

[REDACTED]

Inter-array cable deployment consists of the following main steps, which are further described below:

1. Inter-array Cable Transportation
2. Pre-installation Surveys and Pre-lay Grapnel Run
3. First-end Cable Pull-in into the WTG Foundations
4. Cable Installation Between Foundations
5. Second-end Cable Pull-in into the WTG and ESP Foundations
6. Cable Termination and Commissioning

Inter-array Cable Transportation

[REDACTED]

Pre-Installation Surveys and Pre-Lay Grapnel Run

[REDACTED]

[REDACTED]

[REDACTED]

Cable Installation Between Foundations

[REDACTED]

Figure 10.3-5 *Inter-array Cable Installation Vessel*

Second-end Cable Pull-in into the WTG and ESP Foundations

After the inter-array cable is laid, the second end of the inter-array cable will be pulled-in at the next WTG or ESP foundation following a process similar to the first-end pull-in.

Cable Termination and Commissioning

[REDACTED]

Wind Turbine Generators

WTGs are comprised of several components: one to three tower sections, one nacelle, one hub, and three blades. [REDACTED]

WTG staging and deployment consists of the following major tasks, which are further described below:

1. WTG Transport to Pre-assembly Harbor
2. Harbor Operation and Pre-assembly
3. WTG Transport to Site and Installation
4. WTG Commissioning

WTG Transport to Pre-assembly Harbor

Prior to the commencement of WTG installation, components will be transported to the designated port to create a sufficient stock of components to maintain a steady pace of installation activities. WTG components will be transported on multi-purpose HTVs with crane capacities capable of loading and unloading the components.

[REDACTED]

[REDACTED]

[REDACTED]

Figure 10.3-6 *Multi-purpose / Heavylift Vessels with WTG Components*

[REDACTED]

WTG transport will proceed according to the steps outlined in **Table 10.3-8**.

[REDACTED]

[REDACTED]

	[REDACTED]
[REDACTED]	[REDACTED]
	[REDACTED]
	[REDACTED]
	[REDACTED]
	[REDACTED]
	[REDACTED]

WTG Commissioning

WTG installation will be followed by commissioning where the WTGs will be prepared for operation and energized. Commissioning involves conducting tests of the electrical infrastructure and the WTG before responsibility is passed on to the operation and maintenance teams for the duration of the WTG service life. The WTG commissioning and testing phase will happen in parallel with the WTG installation phase.

Onshore Substation and Cable

Onshore Works for staging and deployment consists of the following major tasks, which are further described below:

1. Onshore Substation Construction
2. Landfall Works
3. Duct Bank Works
4. Cable Installation

Onshore Substation Construction

Construction of the onshore substation is planned to occur in parallel with the onshore duct bank and cable installation. Preliminary concepts have been completed, but the final design cannot be completed until the ISO-NE interconnection studies are completed, confirming the final equipment sizing and overall configuration.

Landfall Works

As described previously, HDD will likely be required to create conduits for the offshore export cables at the landfall location. The conduits will connect to the onshore transition vaults. Within the transition vaults, the [REDACTED]

Duct Banks Works

The onshore cables will be installed in individual conduits within a concrete-encased duct bank through public roads and existing rights-of-way before terminating at the onshore substation in [REDACTED] (see **Figure 10.3-8**). Temporary trenching will be required to install the duct bank, and once installation is complete, the trenches will be backfilled, and the road restored to its original condition.

Figure 10.3-8 ***Onshore Open Trench and Duct Bank***

The cable supplier and installer will survey the duct bank conduit with video and mandrel pulling prior to commencing cable installation.

Cable Installation

The onshore cabling will consist of single conductor [REDACTED] [REDACTED] which are likely to be transported to the installation site by truck. This will reduce the need for a large staging area for cable laydown as the cable can be delivered in small lots as required. The cables will be installed between manholes at splice vault locations. A reel containing a segment of the onshore cable will be positioned at one manhole and the pulling vehicle with a winch will be at the next manhole along the onshore export cable route. Once cables are pulled into the duct bank between the vaults, the cables will be spliced together. The supplier will test and commission the cable following cable installation and terminations.

10.4 List the party (e.g. the bidder, or equipment/service providers under contract to the bidder) responsible for each deployment activity and describe the role of each party. Describe the status of bidder's contractual agreements with third-party equipment/service providers.

RESPONSIBLE PARTY FOR EACH DEPLOYMENT ACTIVITY AND ROLE OF EACH PARTY

A list of the potential parties involved in Project deployment is provided in **Table 10.4-1**. This list represents the suppliers with whom Vineyard Wind has been in direct dialogue with and should not be viewed as comprehensive as other suppliers could be relevant. [REDACTED]

ATTACHMENT 10.2-4

REDACTED

The Project's O&M plan is comprised of the following elements:

- [REDACTED]
- [REDACTED]
- [REDACTED]
- [REDACTED]

These elements are aimed at ensuring the most reliable and best possible availability of the Project, while maintaining the highest safety standards and minimizing costs.

O&M Logistics Strategy

A key element supporting the reliable operation of an offshore wind project is a robust O&M logistics strategy. An appropriately designed logistics strategy is essential to ensure the people and materials needed to service and maintain an offshore wind project are available and can be delivered to the site in the required timeframes. [REDACTED]

Vineyard Wind has investigated several potential offshore O&M logistics strategies for the Project.

[REDACTED]

[REDACTED]

Organization and Workforce Strategy

[REDACTED]

Initially, the WTG original equipment manufacturer (OEM) will provide scheduled and unscheduled maintenance services and will be responsible for operating the WTGs under the terms of a full-service warranty agreement. [REDACTED]

[REDACTED]

[REDACTED] the use of major service contractors and their subcontractors will create additional jobs both locally and in the wider supply chain. The O&M workforce can be divided into two key groups:

- **Local Administrative and Management Staff:** This group manages the Project on a day-to-day basis (e.g., the site manager, assistant site manager, engineers, planners, and warehouse staff) and is generally based at a nearby shore location to the Project, preferably a location with good transportation access and marine infrastructure such as New Bedford.
- **Offshore Wind Technicians:** This group is comprised of technical staff that primarily work offshore and is responsible for inspection and maintenance activities. [REDACTED]

[REDACTED] These numbers reflect operational efficiencies resulting from Vineyard Wind 1, which reduce the cost of O&M for the Project. The Project will also require seasonal workers for various offshore campaigns and inspections provided by local suppliers.

Service and Warranty Strategy

Preventive Maintenance

[REDACTED]

Scheduled maintenance will include visual inspections, mechanical and electrical checks and tests, tightening of mechanical connections, if required, and the exchange of consumable products such as filters, oil, grease, and coolant. Equipment testing will occur concurrently with scheduled maintenance but, depending on maintenance requirements, [REDACTED]

To ensure the good working condition of all WTGs, sensors will be installed on the WTGs to detect potential faults at an early stage. This is particularly advantageous in the case of complex replacements of large components, in which case Vineyard Wind will proactively plan a replacement campaign and execute works in a safe and efficient manner.

Corrective Intervention

The O&M logistics setup optimized for the Project will ensure that technicians can be deployed quickly to the WTGs year-round to minimize production losses caused by faults.

[REDACTED]

[REDACTED]

[REDACTED]

Extraordinary Maintenance Campaigns

O&M workloads often increase during the summer months or during major repair and replacements events. In the event of a significant increase in workload, Vineyard Wind would procure additional staff to support the Project. Bringing in additional staff on a short-term basis, including offshore technicians and onshore site management staff, to supplement existing O&M capacity is common practice in the offshore wind industry. Any jobs created during an extraordinary maintenance campaign would be in addition to the FTE positions noted above.

Health and Safety Strategy

[REDACTED]

During the operational phase, safe systems of work such as risk assessments, method statements, lifting plans, and a permit to work system will be developed and implemented before work begins. The safe systems of work will be based on regulatory HSE requirements, Project requirements, and best practice, and adopt international standards to the extent possible and beneficial.

11.2 Please provide documentation to demonstrate site control for all marine terminals and other waterfront facilities that will be used for O&M.

- i. If available, evidence that the bidder or the equipment/service provider have right(s) to use a marine terminal and/or waterfront facility for O&M of the offshore wind energy project (e.g., by virtue of ownership or land development rights obtained from the owner).*
-

MARINE TERMINAL FACILITIES

A project's requirements for marine terminals and waterfront facilities during the operations phase are largely determined by the [REDACTED]

[REDACTED]

-
- ii. *If not available, describe the status of acquisition of real property rights for necessary marine terminal and/or waterfront facilities, any options in place for the exercise of these rights and describe the plan for securing the necessary real property rights, including the proposed timeline. Include these plans and the timeline in the overall project schedule.*
-
- [REDACTED]
- [REDACTED]

-
- iii. *Identify any joint use of existing or proposed real property rights for marine terminal or waterfront facilities.*
-
- [REDACTED]

11.3 Describe in detail the proposed O&M funding mechanism and funding levels to support planned and unplanned O&M requirements.

O&M FUNDING MECHANISM

To estimate O&M funding requirements, Vineyard Wind prepared an initial Operational Expenditure (OPEX) budget,

As a result, Vineyard Wind is highly confident in its estimate of the funding levels required for the Project's O&M.

11.4 Describe the terms (or expected terms) of the warranties and/or guarantees on major equipment that the bidder is utilizing or proposing to utilize.

MAJOR EQUIPMENT WARRANTIES

As part of equipment supply agreements, Vineyard Wind will negotiate industry standard warranty periods on all major Project components. The warranties will be those that are typically available for offshore wind projects and aligned with industry best practice. The anticipated details of the warranties are summarized in the following tables.

Wind Turbine Generators

Wind Turbine Generators

Vineyard Wind will enter into a full-service agreement with the WTG OEM prior to the commencement of the operational phase. The service agreement will be procured simultaneously with the WTG supply agreement. [REDACTED]

***Balance of Plant***

With respect to the BOP O&M, Vineyard Wind plans to use [REDACTED]

[REDACTED]

[REDACTED]

All required maintenance contracts will be in place in advance of the commencement of operations.

11.6 Provide examples of the bidder's experience with O&M services for other similar projects.

O&M EXPERIENCE***Copenhagen Infrastructure Partners***

Copenhagen Infrastructure Partners (CIP) is active in the development and operation of offshore wind projects across the globe, and is currently involved in the operation, together with project partners, of the 402 MW Veja Mate offshore wind project in the German North Sea. The experience gained in developing this offshore wind project, as well as the ongoing experience from operating it, will be leveraged to the benefit of the Project.

CIP is also a shareholder in the 588 MW Beatrice offshore wind project in the UK North Sea, which is currently under construction. The Beatrice project exported first power in July 2018 and is expected to be fully operational in 2019. The experience and lessons learned from developing this project and preparing the site for operations will also be available to the Project. CIP is currently developing offshore wind projects in the US, Taiwan, Atlantic Canada, South Korea, Japan, and Australia, including O&M preparation activities similar to the activities described above. Finally, CIP also operates a portfolio of onshore wind projects in Texas and the UK (see **Section 12**).

Avangrid Renewables

Avangrid Renewables has more than 7,100 MW of owned and controlled renewable generation capacity, primarily wind and solar, across 22 US states. Avangrid Renewables' ultimate shareholder company, Iberdrola S.A. (Iberdrola), is a Forbes Global 2000 company. (see **Section 12**).

Iberdrola

Iberdrola has one of the largest renewable energy asset bases of any company in the world with over 29,00 MW of installed capacity globally. Iberdrola therefore has significant expertise operating both onshore and offshore wind projects across multiple continents (see **Section 12**). The company's key areas of focus are:

- Spain: onshore wind—5,508 MW
- US: onshore wind—5,693 MW
- Mexico: onshore wind—367 MW
- UK: onshore wind—1,796 MW
- UK: offshore wind—194 MW
- Brazil: onshore wind—187 MW

Iberdrola is currently developing, constructing, and operating several offshore wind projects, including:

- The up to 1,200 MW East Anglia Three wind project in the UK, which has been permitted and is now pending financial close. Iberdrola is the owner of this project..
- 476 MW Baltic Eagle and 10 MW Wikinger Süd wind projects in the German Baltic Sea, which have won a competitive auction and are heading towards financial close. Iberdrola is the owner of these projects.
- 496 MW St Brieuc wind project off the coast of Brittany in France, which is currently under development. Iberdrola is 70% owner of this project.
- 714 MW East Anglia ONE wind project in the UK North Sea. Iberdrola is currently constructing this 102-turbine project, which is due to be operational in 2020.
- 350 MW Wikinger offshore wind project in the German Baltic Sea. Iberdrola is the owner and operator of this 70-turbine project.
- 389 MW West of the Duddon Sands offshore wind project. Iberdrola is 50% owner of this operational 108-turbine project.

Iberdrola is also pursuing several development opportunities globally, including the further development of the East Anglia Zone in the UK (East Anglia ONE North – up to 800 MW – and East Anglia TWO projects – up to 900 MW), Baltic Sea area in Germany (Windanker project – up to 250 MW), and the Kitty Hawk offshore wind project proposed in North Carolina (up to 2,400 MW).

SECTION 12 OF APPENDIX A TO RFP

PROJECT MANAGEMENT/EXPERIENCE

OVERVIEW

This section demonstrates the strong offshore wind project experience and management capability of Vineyard Wind, the most experienced US offshore wind development company. With more than 100 full-time equivalent positions covering all key positions, Vineyard Wind has the resources, capacity, and experience required to successfully shepherd Vineyard Wind 2 (the “Project”) through development to construction and operations. The Project also benefits from the global offshore wind expertise and management capabilities of Vineyard Wind’s shareholder companies- Avangrid Renewables LLC (Avangrid Renewables), and Copenhagen Infrastructure Partners (CIP). Together, these companies and their affiliates have experience across 32 offshore wind projects totaling more than 11,000 megawatts (MW) of capacity in the US, Europe, and Southeast Asia. What’s more, the Project’s development schedule complements that of Vineyard Wind’s first 800 MW project (“Vineyard Wind 1”). This provides the opportunity to transfer trained and experienced staff from the first project to the second as they transition to different stages of development and operation. Finally, the Project’s ultimate success is further assured through the support of key project consultants, partners, and personnel who possess the experience and skills required to deliver the Project.

12.1 Provide an organizational chart for the project that lists the project participants and identifies the corporate structure, including general and limited partners.

ORGANIZATIONAL CHART

Vineyard Wind LLC (Vineyard Wind) was established in 2009 (at the time called Offshore MW). The company is a 50-50 partnership of CIP (through two investment funds CI II and CI III) and Avangrid Renewables, a subsidiary of Avangrid Inc. (Avangrid). Vineyard Wind’s ownership structure allows the company to take advantage of the substantial experience and capability that each shareholder company has to offer. An organizational chart for Vineyard Wind is provided in **Figure 12.1-1**.

12.2 Provide statements that list the specific experience of the bidder and each of the project participants (including, when applicable, the bidder, partners, and proposed contractors), in developing, financing, owning, and operating generating and delivery facilities, other projects of similar type, size and technology, and any evidence that the project participants have worked jointly on other projects.

BIDDER AND PROJECT PARTICIPANT EXPERIENCE

Vineyard Wind

Vineyard Wind's team of industry experts has a long track record of developing offshore and onshore wind projects throughout the US, Europe, and Southeast Asia. The Vineyard Wind team is comprised of local staff with expertise in offshore wind, permitting and local infrastructure, personnel provided by the shareholder companies, and expert consultants to ensure a well-rounded team with the skillset required to develop and operate offshore wind projects in Massachusetts. **Table 12.2-1** provides an overview of the Project team's offshore wind experience. Vineyard Wind also has unique local experience gained while developing, permitting, and financing Massachusetts' first offshore wind project.

Vineyard Wind's corporate structure allows the company to draw heavily on key resources and experience gained from the successful development, permitting, financing, construction, and/or operation of more than 11,500 MW of offshore wind capacity across 32 projects in the US, Europe, and Southeast Asia. For example, CIP and Avangrid Renewables each have recent experience in the construction of offshore wind projects of a similar type, size, and technology as the Project, including the following projects:

- West of Duddon Sands, UK- 389 MW
- Veja Mate, Germany- 402 MW
- Beatrice, UK- 588 MW
- Wikinger, Germany- 350 MW
- East Anglia ONE, UK- 714 MW (currently under construction)
-

[illegible]

CIP has gained market-leading competencies and experience developing a number of offshore wind projects in Europe. CIP's senior partners have been involved in a significant proportion of offshore wind projects and transactions globally, which represent some of the largest and most complex projects within the energy infrastructure investment universe. Today, CIP is the only offshore wind developer in the world to have projects in development on four continents- North America, Europe, Asia and Australia.

A New Course for Offshore Wind

Recent and notable offshore wind achievements include delivery of the Veja Mate project in record time. The project was completed four months ahead of schedule despite the installation of 67 foundations and 6 MW wind turbine generators (WTG) under challenging conditions almost 60 miles (mi) from shore and in water depths of up to 135 feet (ft). In the process, the team set several other world records, including the first use of the world's largest installation vessel (*Seajacks Scylla*) and installing a 1,300-ton monopile – the largest monopile foundation ever installed.

Other notable experience includes financing the construction of the 900 MW DolWin3 Offshore Wind Farm Connection in Germany, an offshore high-voltage direct current (HVDC) transmission platform that was successfully completed in September 2018 when it began exporting power from two offshore wind farms. The platform is one of nine HVDC systems in the German North Sea, constructed and operated by TenneT, which exports more than 6,000 MW into the onshore grid. The converter platform is located approximately 31 mi offshore in the German North Sea.

Avangrid Renewables

Avangrid Renewables is the third largest developer of onshore wind projects in the US. Avangrid Renewables has successfully completed four onshore wind projects in New England and has extensive experience operating wind projects in ISO-NE as a Lead Market Participant. The company is also in full compliance with North American Electric Reliability Corporation and ISO-NE requirements for maintaining the security and reliability of its operations in its National Control Center (NCC) in Portland, Oregon.

Avangrid Renewables is a wholly owned subsidiary of Avangrid Inc., whose majority shareholder is Iberdrola SA. This enables Avangrid Renewables to draw on resources and benefit from the experience of numerous affiliates, such as Avangrid Networks and ScottishPower Renewable Energy Ltd. (ScottishPower Renewables). These affiliates have substantial expertise in offshore and onshore wind development, transmission project development, finance, construction, and operations (including market participant experience) in ISO-NE. Further details on the corporate relationship between Avangrid Renewables and its affiliates are provided in **Section 5**, and Avangrid Renewables' capabilities are further detailed below.

Development and Construction

Avangrid Renewables is a leading renewable energy developer in the US, pursuing greenfield projects, repowering projects, and acquisitions. The company currently has more than 25,000 MW of both wind and solar projects under active development. In ISO-NE, Avangrid Renewables has developed, constructed, and currently operates four wind projects in Vermont, Massachusetts, and New Hampshire (see **Table 12.4-1**).

Origination

Avangrid Renewables has a wide and varied customer base that includes commercial and industrial end-use customers, public utility districts, investor-owned utilities, electric cooperatives, and federal power marketing administrations. In ISO-NE, the company has long-term Power Purchase Agreements (PPAs) with NSTAR, Public Service of New Hampshire, and Green Mountain Power.

Operations and Maintenance

Avangrid Renewables' operations and maintenance (O&M) group currently operates 24/7 to oversee the operation of the company's 7,100 MW of installed renewable capacity in the US. The company has also developed in-house expertise for the maintenance of its project fleet; staff is present at each facility, providing balance-of-plant O&M, substation oversight, and maintaining an inventory of spare parts and equipment.

National Control Center

In early 2010, Avangrid Renewables launched its 24/7 NCC in Portland, Oregon. Avangrid Renewables uses the most sophisticated technology available to lead the industry in asset-monitoring and system control and has the ability to control every turbine under its management across North America. The company's expert technicians can troubleshoot 24/7, adjust turbine activity to comply with local grid demands, shut down individual turbines for safety or reliability concerns, and manage turbine output to maximize efficiency.

Diverse Asset Base

The map in **Figure 12.2-1** depicts Avangrid Renewables' wind, solar, biomass, gas-fired power plants, and natural gas storage facilities. The portfolio's geographic diversity allows the company to optimize lessons learned across the country and maximize each project's generation capabilities.

Figure 12.2-1 Map of Avangrid Renewables Assets in the US (May 2019)

U.S. Power Assets

Avangrid Networks

Avangrid Networks is focused on the transmission and distribution of electricity and natural gas principally through eight regulated electric and natural gas utilities, serving approximately 3.2 million customers in New York and New England, as well as an unregulated business focused on transmission development. Vineyard Wind will be supported by Avangrid Networks through its shared service employees.

12.3 Provide a management chart that lists the key personnel dedicated to this project and provide resumes of the key personnel. Key personnel of the bidder's development team having substantial project management responsibilities must have:

- 1. Successfully developed and/or operated one or more projects of similar size or complexity or requiring similar skill sets; and*
- 2. Experience in financing power generation projects (or have the financial means to finance the project on the bidder's balance sheet).*

KEY PROJECT PERSONNEL

Vineyard Wind has assembled a highly qualified and experienced team for the Project. The company's leadership team is based in the US and the full resources of the shareholder companies are available to support the team in successfully executing the Project. **Figure 12.3-1** provides an overview of the positions and teams supporting the Project.

12.4 Provide a listing of all projects the project sponsor has successfully developed or that are currently under construction. Provide the following information as part of the response:

- i. Name of the project*
 - ii. Location of the project*
 - iii. Project type, size and technology*
 - iv. Commercial operation date*
 - v. Estimated and actual capacity factor of the project for the past three years*
 - vi. Availability factor of the project for the past three years*
 - vii. References, including the names and current addresses and telephone numbers of individuals to contact for each reference.*
-

RELEVANT PROJECTS

The projects listed in **Tables 12.4-1 and 12.4-2** include ISO-NE land-based projects in operation or under construction by Avangrid Renewables as well as offshore generation and offshore transmission projects operating, in pre-construction, or in construction for ScottishPower Renewables, and CIP. The remainder of Avangrid Renewables' 7,100 MW of operating onshore projects are provided in **Attachment 12.4-1**.

References

Vineyard Wind is providing the following client references from the shareholder companies' similar wind energy projects that have been developed, executed, and are currently in operation. Additional references will be provided upon request.

Avangrid Renewables

[Redacted text block containing client references for Avangrid Renewables, consisting of multiple lines of blacked-out text.]

- i. *Construction Period Lender*
- ii. *Operating Period Lender and/or Tax Equity Provider*
- iii. *Financial Advisor*
- iv. *Environmental Consultant*
- v. *Facility Operator and Manager*
- vi. *Owner's Engineer*
- vii. *Transmission/Delivery Consultant*
- viii. *Legal Counsel*

Vineyard Wind and the shareholder companies have extensive contacts and access to all of the firms required to satisfy the financing, environmental assessment, operation, engineering, transmission, and legal counsel requirements of the Project.

SECTION 13 OF APPENDIX A TO THE RFP

EMISSIONS

OVERVIEW

Vineyard Wind 2 (the “Project”) is a large-scale, zero-emissions offshore wind project. This section describes how the Project will generate a host of environmental benefits and contribute significantly to the Commonwealth’s emissions reduction targets mandated by the Global Warming Solutions Act (GWSA).

13.1 Provide emissions estimates based on available data from the unit manufacturer. Alternatively, provide actual emissions data determined in accordance with the paragraph above for a similar facility built within the past 3 years. Include copies of supporting documentation for all emissions estimates.

PROJECT EMISSIONS

Vineyard Wind 2 is an offshore wind facility. The Project’s units are wind turbine generators (WTGs) that do not generate greenhouse gas emissions or other air pollutants. Rather, electricity generated by the WTGs will displace electricity generated by fossil fuel power stations and significantly reduce emissions from the ISO-NE power grid over the lifespan of the Project. Emissions estimates for the facility are therefore not applicable.

Table 13.1-1 **Project Anticipated Emissions, pounds/megawatt-hour (lbs/MWh)**

Source of Information	Date of Test (if applicable)	Greenhouse Gases (all except methane) Expressed as Carbon Dioxide equivalent (CO2e)	Nitrogen Oxides (NOx)	Sulfur Oxides (SOx)	Carbon Monoxide (CO)	Particulate Matter (PM 2.5)	Methane (CH4)
N/A	N/A	0	0	0	0	0	0

13.2 Describe any past investments that will or have been made to your facility to improve its emissions profile or any planned future investments made to your facility in order to improve its emissions profile.

INVESTMENTS TO IMPROVE THE PROJECT'S EMISSIONS PROFILE

The Project is a zero-emission renewable energy resource. As such, no investments are required or will be made to improve the emissions profile of the Project's WTGs.

[REDACTED]

13.3 Describe how your project will contribute to the Massachusetts 2008 Global Warming Solutions Act (GWSA) and the 2010 Clean Energy and Climate Plan for 2020, updated in 2015. Describe how your project will contribute to the Commonwealth's 2030, 2040 and 2050 GHG emission targets and any benefits associated with an earlier operational date.

CONTRIBUTION TO THE COMMONWEALTH'S EMISSION REDUCTION TARGETS

Vineyard Wind 2 will generate approximately [REDACTED]. [REDACTED], the Project will make significant contributions to the Commonwealth's 2030, 2040, and 2050 greenhouse gas (GHG) emission reduction targets.

Global Warming Solutions Act Emission Reduction Mandate

The GWSA commits Massachusetts to GHG emission reduction targets of between 10% and 25% below 1990 levels by 2020 and at least 80% below 1990 levels by 2050. Achieving these goals will require the deployment of a suite of renewable energy, energy efficiency, demand response, and storage solutions. It is also widely recognized that a key element in any path to achieving the GWSA's

¹ The avoided emissions analysis assumes a [REDACTED]. The analysis is based on NPCC New England subregion annual non-baseload output CO₂ emission rate of 975.1 lbs/MWh from EPA's Emissions & Generation Resource Integrated Database eGRID2016 released February 15, 2018. Available at: <https://www.epa.gov/energy/emissions-generation-resource-integrated-database-egrid>.

emission reduction goals is electrification of heating, cooling, and transport demand, which will increase the need for emission-free electric generation.

Massachusetts' electric grid has become significantly cleaner from a GHG perspective in recent years due in large part to energy efficiency, policies that support renewable energy, the retirement of coal- and oil-fired generation units, and increased reliance on natural gas. Emissions from the electricity sector were almost cut by half between 1990 – 2012. However, as recognized by the “2015 Update to the Massachusetts Clean Energy and Climate Plan for 2020”², most of these reductions were achieved through closures of existing large fossil fuel (particularly coal-fired) generators.

The opportunity for additional emission rate reductions within the fossil fuel fleet are limited, given that coal fired generation has been virtually eliminated from the region and oil-burning units are also retiring or generating at very low levels. Additional use of natural gas would not reduce the CO₂ emissions rate in the Massachusetts electricity sector.³ Further progress towards lowering emissions in the electricity sectors therefore hinges on Massachusetts reducing its reliance on natural gas and dramatically increasing the installed capacity of zero emission renewable energy resources like offshore wind. Projects like Vineyard Wind 2 are therefore essential to meet GWSA targets.

Emission Reductions to 2050

The GWSA's 80% by 2050 emission reduction mandate requires overall GHG reductions of 83.2 million US tons from all sectors relative to 1990 levels.⁴ Although the Commonwealth has yet to establish specific targets for 2030 or 2040, a linear decrease in GHG emissions between 2020 and 2050 would require additional reductions relative to 2020 levels of approximately 19, 38, and 57 million US tons by 2030, 2040, and 2050, respectively.⁵

² Massachusetts Executive Office of Energy and Environmental Affairs (2015). 2015 Update to the Massachusetts Clean Energy and Climate Plan for 2020. December 31, 2015. Available at: <http://www.mass.gov/eea/docs/eea/energy/cecp-for-2020.pdf>.

³ The current CO₂ emissions rate in the Massachusetts electricity sector currently stands at 846 lbs/MWh. See US Energy Information Administration (2019). Massachusetts Electricity Profile 2017. January 18, 2019. Available at: <https://www.eia.gov/electricity/state/massachusetts/>. This is less than the average CO₂ emission rate for natural gas combined cycle power stations, which stands at 895 lbs/MWh. See US Department of Energy (2016). Environment Baseline, Volume 1: Greenhouse Gas Emissions from the U.S. Power Sector. June 2016. Available at: <https://www.energy.gov/sites/prod/files/2017/01/f34/Environment%20Baseline%20Vol.%201--Greenhouse%20Gas%20Emissions%20from%20the%20U.S.%20Power%20Sector.pdf> (406.6 kg/MWh from Section 2.1.2, units converted).

⁴ Massachusetts annual GHG emissions in 1990 were 104 million US tons (94.4 million metric tons) of CO₂-equivalent (CO₂e). Achieving the 80% by 2050 target would require annual emissions to decrease to 20.8 million US tons (18.9 million metric tons) of CO₂e. See Mass.gov (n.d.). MA GHG Emission Trends. Available at: <https://www.mass.gov/service-details/ma-ghg-emission-trends> (accessed August 1, 2019).

⁵ Assumes a 2020 emission reduction of 25% below 1990 levels (or annual GHG emissions of 78 million US tons CO₂e), a 2030 emission reduction target of 43% below 1990 levels (or annual GHG emissions of 59 million US tons CO₂e), and a 2040 emission reduction of 62% below 1990 levels (or annual GHG emissions of 40 million US tons CO₂e).

These are substantial contributions – from a single project – to Massachusetts’ emissions reduction goals.

Benefits of an Earlier Operations Date

The Project’s early operations date provides significant GHG emissions reduction benefits and cost savings relative to later projects.

⁶ These savings were estimated by on behalf of Vineyard Wind (see **Attachment 13.3-1**).

OVERVIEW

VINEYARD WIND 2 – MAKING MASSACHUSETTS THE HUB FOR THE REGION’S OFFSHORE WIND INDUSTRY

The Vineyard Wind 2 800 megawatt (MW) proposals build on the momentum of the offshore wind industry’s growth spurred by Massachusetts’ first Section 83C solicitation by accelerating the rapid development of the offshore industry in Massachusetts and New England, and generating jobs and economic development benefits across the Commonwealth. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] and infrastructure investments. The Base Proposal will also include \$12 million (Nominal) in direct funding for supply chain, workforce development, and low-income ratepayer initiatives.

[REDACTED]

FIRM COMMITMENTS TO DELIVER ECONOMIC BENEFITS TO THE COMMONWEALTH

Massachusetts can count on Vineyard Wind 2's economic benefits being realized. Vineyard Wind has substantial experience developing and implementing local supply chain and workforce development initiatives and integrating local businesses into its projects. Vineyard Wind has also demonstrated its commitment to delivering economic growth and job creation to the Commonwealth, not the least including the project offices for the company's first 800 MW project ("Vineyard Wind 1") in New Bedford and Boston where a team of over 100 highly skilled engineers, project managers, contract managers, and analysts are working diligently to deliver on Vineyard Wind's promise to make Massachusetts home to the nation's first utility-scale offshore wind farm.

[REDACTED]

The economic development benefits package of Vineyard Wind 2, including directly funded initiatives, is described in this Section 14, demonstrating how Vineyard Wind 2 will deliver substantial incremental economic benefits to Massachusetts covering all components and phases of an offshore wind project. [REDACTED]

[REDACTED] These economic benefits packages are designed to support Massachusetts' efforts to further build the offshore wind industry, centered here in Massachusetts, and create substantial lasting benefits that are in addition to those provided directly by the Project.

14.1 Please provide an estimate of the number of jobs to be created directly during project development and construction, and during operations, and a general description of the types of jobs created, estimated annual compensation, the employer(s) for such jobs, and the location. Employment impacts should be broken out by state and the region as a whole and highlight any impacts in economically distressed areas. Please treat the development, construction, and operation and maintenance periods separately in your response. All information provided must be measurable.

Please describe the status of any contractual commitments with respect to direct job creation and provide any pertinent agreements that have been executed.

Enter appropriate explanation in this space or reference applicable attachment(s)

JOB ESTIMATES

The Project will create jobs throughout all the project phases both at the offshore site, on the harbor sites, and in the already established Massachusetts offices in New Bedford and Boston. [REDACTED]

[REDACTED] as well as additional

benefits resulting from establishing permanent infrastructure capable of serving future offshore wind projects and facilitating other commercial activities.

Pre-Construction Development Direct Jobs

Vineyard Wind's has already made contributions to the Massachusetts economy through Vineyard Wind 1, with the company's offices in New Bedford and Boston a total of 110 full-time employees are currently working on developing the Vineyard Wind 1 project's design, permitting, and financing in Massachusetts. In addition, hundreds of consultants and professionals in the region are working daily on the project, creating hundreds of millions in economic activity. Almost all of these jobs are highly-skilled, professional positions, and include engineers and scientists focused on permitting and project design along with lawyers and executives managing the project and project financing. The Project will benefit from the work and experiences already developed by Vineyard Wind's local team while at the same time creating new job opportunities and providing longer-term employment opportunities for some of the existing project development positions.

The jobs benefits of the Project extend beyond the positions that will be created within Vineyard Wind. As detailed in **Section 12**, Vineyard Wind's team draws support from a host of local companies, local consultancies, advisors, and specialists to develop, permit, and finance offshore wind projects. Examples of the wide range of job opportunities that will be available in Massachusetts during the pre-construction of Vineyard Wind 2 are provided in **Table 14.1-1**.

Table 14.1-1 ***Examples of Jobs in the Pre-Construction and Development Phase***

Category	Types of jobs
Permitting	Environmental engineer, civil engineer, field ecologist, GIS specialists, graphic designer, visual analyst, lawyer and paralegal, public communications, editor, acoustic modeler, archeologist, subject matter expert
Geological Surveys and Analysis	Acoustical engineer, vessel captain and crew, ocean engineer, protected species observers, geologist, archeologist, marine ecologist, meteorologist
Engineering and Design	Civil engineer, structural engineer, electrical engineer, mechanical engineer, risk and schedule analyst, CAD and GIS specialist, meteorologist, oceanographer
Procurement and Financing	Lawyer, procurement professional, investment specialist
Legal	Lawyer, paralegal
Management and Administrative	Management executive, office and business manager, IT specialist, contracts manager, HR specialists

Construction Phase Direct Jobs

Local construction will be centered around the harbor sites for infrastructure upgrades, facilities improvements, and construction and installation activities for turbine and foundation components. Substantial additional short-term construction jobs will be created for the Project's onshore transmission system and network upgrades. Typically, these positions are with engineering and construction management firms, construction firms utilizing building and maritime trades, and vessel and port operations companies. Examples of the wide range of job opportunities that will be available in Massachusetts during construction of Vineyard Wind 2 are provided in **Table 14.1-2**.

Table 14.1-2 *Examples of Jobs in the Construction Phase*

Category	Types of jobs
Wind Turbines	Rigging & Lifting Engineer, Company Representative, Vessel Manager, Marine Coordinator, Yard Supervisor, Marine Warranty Surveyor, Welders and Welding Supervisors, Coaters and Coating Inspectors, Quality Assurance Inspectors and Manager, Quality Assurance Representatives, IT Technicians, Project Management, Engineering Management, Construction Management, Commissioning Manager, Site Manager, Controller, Health & Safety Representatives, Structural Engineer, Permit Coordinator, General Supervision and Management, Administrators
Foundation	Plater, Welder, Pipefitter, Electrician, Riggers, Crane Driver, Scaffolder, Painter, Rigging & Lifting Engineers, Welders, Supervisors, Quality Assurance Representatives, Quality Assurance Manager, Health & Safety Representatives, Structural Engineer, CAD Technicians, Coating Inspectors, Electrical Inspector, Welding Inspector Project Management, Engineering Management, Construction Management, Site Representative, Fabrication Manager, Quality Assurance Manager, Health & Safety Manager, Heavy Lift Specialist, Dimensional Controller, Supply Chain & Procurement Management, Contract Managers, Administrators, Vessel Manager, Vessel Master, Marine Coordinator, Marine Warranty Surveyor
Cables	Site Representative, Rigging & Lifting Engineers, Network Controller, Permit Coordinator, Quality Assurance Manager, Quality Assurance Representatives, Health & Safety Representatives, Structural Engineer, CAD Technicians, Vessel Manager, Vessel Masters, Marine Coordinator, Yard Supervisor, Marine Warranty Surveyor, Project Management, Cable Installation Manager, Commissioning Manager, Engineering Management, Construction Management, Supply Chain & Procurement Management, Contract Managers, Administrators
Electric Service Platform	Plater, Welder, Pipefitter, Electrician, Riggers, Crane Driver, Scaffolder, Painter, Supervisors, Heavy Lift Specialist, Rigging & Lifting Engineer, Yard Supervisor Quality Assurance Representatives, Health & Safety Representatives, Welding Inspector, Coating Inspector, Electrical Inspector, Project Management, Commissioning Manager, Network Controller, Permits Coordinator, Platform Design Manager, Grid Manager, Interface Manager, Certification Manager, Insurance Liaison, Engineering Management, Construction Management, Site Representative, Vessel Manager, Vessel Master, Marine Coordinator, Marine Warranty Surveyor, Mate

[REDACTED]

[REDACTED]

Sustainable Job Creation and Economic Development for the Commonwealth

Vineyard Wind 2 is as much an offshore wind project as it is a comprehensive, long-term strategy of economic development and job creation, building on the momentum the industry has gained since of Massachusetts' first offshore wind procurement as well as the efforts to-date under Vineyard Wind 1 to develop and integrate local businesses and workers into Vineyard Wind's activities and the regional industry as a whole.

Credible Economic Benefit Estimates

[REDACTED]

Beyond Direct Jobs and Economic Expenditure

[REDACTED]

14.2 Please describe and quantify any other economic activity or development expected to result directly from the proposed project. Impacts should be broken out by state and the region as a whole and highlight any impacts in economically distressed areas. Direct economic activity/development will be evaluated based on scale, credibility and firmness. Commitments that secure long-term

¹ See https://www.bls.gov/oes/current/oes_ma.htm#00-0000

benefits are preferred. Commitments will be evaluated by the degree or extent to which the asserted benefits are contractually committed to by the bidder. Specific commitments to economic activity or development should include (but are not limited to):

- Investment in supply chain and infrastructure improvements to support the offshore wind industry, for example, commitment to contribute to the Offshore Wind Accelerator Fund that supports the economic development activities for the offshore wind industry;*
- Investment in workforce development and environmental research facilities to support the offshore wind industry;*
- Commitment to utilize port facilities and office space during project development, deployment during construction, and operation and maintenance of the project.*

Please describe the status of any contractual commitments with respect to economic development and provide any pertinent agreements that have been executed.

ECONOMIC ACTIVITY AND DEVELOPMENT

Vineyard Wind 2 is more than just a second phase to the first utility-scale offshore wind project in the nation. The Project builds on the local investments, supply chain growth, and workforce development spurred by the industry's growth to date and expands both the scope and scale of investments in and commitments to improving and utilizing local infrastructure, businesses, and workers as well as fostering substantial and sustainable economic benefits and job creation [REDACTED]

Economic Development Benefit Categories

In order to best describe the economic development benefits of Vineyard Wind 2, this section will examine economic benefits in the following categories::

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

These categories will be utilized to describe and quantify economic activity and development expected to result directly from the Project, including specific binding commitments and any associated agreements.

Reliability Benefits

The report also qualitatively assessed the reliability benefits of Vineyard Wind 1, concluding that the project would provide the Commonwealth with enhanced electric reliability benefits in several ways. First, the project enhances fuel diversity of the region's generation mix. To the extent that resources face risks to their output that are correlated by resource type – such as natural gas generators being susceptible to pipeline interruptions or congestion, or solar generators not producing output at night – increased fuel diversity can enhance reliability. Offshore wind provides the highest capacity factor of intermittent generation and tends to have a different production profile than solar and even onshore wind.

The Vineyard Wind 1 project would also enhance reliability by injecting power to the regional grid in the capacity constrained SEMA zone, very close to New England's largest load center of Greater Boston. The SEMA zone is seeing significant retirements of baseload generation resources with the recent closure of 1,600 MW Brayton Point Station and the announced closure of 670 MW Pilgrim Nuclear Power Station in May 2019. Other large resources, including the 1,165 MW Canal Station Units 1 and 2 are considered at risk for retirement. In the forward capacity auction for 2018/2019 the SEMA/Rhode Island zone was determined to have inadequate supply to meet local sourcing requirements. The addition of a significant generation resource here will ease some of the most significant potential transmission constraints currently facing the region, enhancing reliability. The Vineyard Wind 2 project, interconnecting in the same capacity zone, will augment these benefits for Massachusetts ratepayers. Additional reliability benefits for Vineyard Wind 2 are described in **Section 3** and **Section 6**.

14.5 Please demonstrate any benefits to low-income ratepayers in the Commonwealth, and the impact, if any, those benefits will have on the cost to the project. Please provide any agreements to effectuate those benefits.

**Building Pathways South
475 Myles Standish Boulevard
Taunton, MA 02780**

To Whom It May Concern:

On behalf of Building Pathways South, I am writing to support the second bid of the Southeastern Massachusetts-based Vineyard Wind Project.

Building Pathways South (BPS) is a new Pre-apprenticeship program with a mission of helping low-income individuals gain entrance into registered union apprenticeship programs, and ultimately, careers in the Building Trades. As Vineyard Wind is committed to signing Project Labor Agreements for its projects, we hope to be able to provide individuals with career opportunities in the offshore wind industry in Southeastern Massachusetts.

Building Pathways South is a collaboration between the Brockton & Vicinity Building Trades Council, the Southeastern Massachusetts Building Trades Council, The Women's Fund of Southeastern Massachusetts and is fiscally sponsored by the Coalition for Social Justice Education Fund.

Vineyard Wind has demonstrated its commitment to offshore wind bringing good union jobs to Southeastern Mass through signing PLAs for both its first and second projects.

Vineyard Wind's second project will allocate funding to partner with Building Pathways to help recruit minority and low-income communities in Southeastern Mass into this new industry. Building Pathways South welcomes the opportunity to expand on its present curriculum to include the necessary skills to work on the Vineyard Wind project. Building Pathways South looks forward to building a partnership between Building Pathways and Vineyard Wind to ensure access to opportunities in the years to come.

Sincerely,

Yvonne Marie Tobey
Project Coordinator
Building Pathways South

August 21, 2019

Erich Stephens,
Chief Development Officer
Vineyard Wind LLC

Dear Erich,

Pile Drivers and Divers Local 56 represents 500 skilled marine construction workers in Massachusetts. We are proud members of the United Brotherhood of Carpenters, and we strongly support the Vineyard Wind 2 development of 800 MW of offshore wind energy at the proposed on the remainder of the BOEM OCS-A 05 01 Lease Site. We provided the majority of the offshore workforce for the nation's first offshore wind installation- Block Island Wind_ and are more than ready to step up and speak out in favor of Vineyard Wind.

We see this very clearly as a win- win- win opportunity, and we are glad to tell you why.

1. Energy Independence

Vineyard wind will help Massachusetts produce its own clean renewable energy. For generations, the citizens of the Commonwealth have been dependent on imported fossil fuels to power our homes and economy, and always sending a sizeable portion of our earnings to out-of-state power generators. Wind energy will reverse that outward cash flow, and reduce carbon emissions as well.

2. Careers in a Changing Economy

The Vineyard Wind 2 project offers lifelong careers with excellent wages and benefits as our national job market is undergoing fundamental changes. As a trade union, we know that offshore wind is not about "a job"- it's a career in a growing industry. Today, apprenticeships and technical certificate programs are the entry points , and Vineyard Wind LLC has already demonstrated meaningful commitment to workforce development with its Windward Force Fund. The company has contributed more than \$200,000 to Mass Clean Energy Center Workforce Grant program. We will be utilizing some of those funds this fall , with a grant award from Mass CEC enabling us to train 40 marine construction

workers in Global Wind Organisation (GWO) Basic Offshore Safety practices. Vineyard Wind both “talks the talk” *and* “walks the walk” in its commitment to growing the workforce.

3. Real-time Meaningful Response to Climate Change

Climate change is having immediate impacts on our families and our communities, especially coastal communities. There are many ways to respond, but inaction is not a choice. Wind energy substantially reduces the amount of heat-trapping gases we put into the atmosphere. The Vineyard Wind 2 project offers us the opportunity to make a difference in our own lives, but more importantly, in the lives of our children and grandchildren.

The men and women of Pile Drivers and Divers Local 56 believe in the offshore wind industry and wholly support the Vineyard Wind 2 proposed development of the OCS- A 0501 lease site.

Sincerely,

David Borrus
Business Manager

ATTACHMENT 14.2-4 Admiral McDonald Support Letter

Office of the President

21 August 2019

Mr. Lars Thaaning Pedersen, CEO
Vineyard Wind
75 Arlington Street, 7th Floor
Boston, MA 02116

Subj: Letter of Support

Dear Mr. Pedersen:

I am writing to express Massachusetts Maritime Academy's support for Vineyard Wind's bid to build a second wind farm.

As you may know, we have been in discussions with several members of the Vineyard Wind team over the last year and a half regarding workforce development training and employment opportunities for our Cadets. Additionally, the Academy is poised to become the first provider of GWO training in the Northeast. We believe that an award of a second bid to Vineyard Wind would only mean more opportunities for our Cadets and the local workforce as a whole to become part of this exciting industry.

Vineyard Wind has already made a difference in the lives of twelve middle school students living on Cape Cod, Martha's Vineyard and the South Coast of Massachusetts by sponsoring scholarships for them to attend our three week Advanced Studies & Leadership Program (ASLP) this past summer. These high academic achievers would not have otherwise been able to attend this college-like residential experience at Massachusetts Maritime Academy. ASLP emphasizes leadership and development, and project oriented instruction in Science, Technology, Engineering, Math (STEM) areas and the humanities. With these scholarships and other community outreach efforts, Vineyard Wind has successfully begun the first step in the pipeline of opening up opportunities to the future workforce of Massachusetts.

We greatly appreciate all of the efforts Vineyard Wind has put forth to advance offshore wind in the Northeast and look forward to strengthening our collaboration in the future.

Kindest Regards,

Francis X. McDonald, LPD
RADM, USMS
President

ATTACHMENT 14.2-5 Cape Cod Community College Support Letter

2240 Iyannough Road
West Barnstable, MA 02668
508-362-2131

August 21, 2019

To Whom It May Concern:

On behalf of Cape Cod Community College (CCCC), I offer our support of Vineyard Wind's submission for the Massachusetts' 83C solicitation, its second project, Vineyard Wind 2. CCCC stands behind this project and is ready to further solidify ourselves as the hub for Offshore Wind education and workforce training for the Cape and Islands.

CCCC is grateful for Vineyard Wind's selection to deliver clean offshore wind power to our nation. Their efforts offer clean energy, economic, and environmental benefits that truly align with Cape Cod's Blue Economy, steeped in maritime tradition and dedicated to innovation. The construction will increase the reliability and diversity of the regional and statewide energy supply. The economic benefits include local job opportunities offering sustainable wages.

Vineyard Wind is a good partner in supporting workforce development on the Cape and Islands. Curriculum was developed in collaboration involving educators from CCCC, local technical high schools, Massachusetts Maritime Academy, Bristol Community College and others. The funding granted to CCCC from the Massachusetts Clean Energy Center (CEC) and Vineyard Wind's Windward Workforce supports our Renewable Energy courses and expansion of the programming to support workforce development. The investment will help educate students, workers, and professionals in Offshore Wind technologies. The programming will start this fall and bring students, both high school-aged and adult learners, into this field of emerging careers.

CCCC is excited to support the opportunities that Vineyard Wind and future projects offer to spur the innovations necessary to build and advance the clean energy industry. As we work to create Massachusetts' preeminent role in clean energy development, as a center for offshore wind production and education, I ask for your support of Vineyard Wind's second project, Vineyard Wind 2.

Yours sincerely,

John L. Cox, Ed.D., CPA

Please attach an explanation of any exceptions to the Form PPA set forth in Appendices B-1 and B-2. Comments to the proposed Form PPA must include any specific alternative provisions in a redline format to the Form PPA. If the bidder is proposing a two-phased project with each phase covered by a separate contract, the bidder should provide two separate contracts with specific alternative provisions to the Form PPA in redline format.

The Draft Contract (PPA) redline, included as **Attachments 15.0-1 and 15.0-2**, details certain requested changes to be negotiated between the parties.
