Total derivatives before offset of cash collateral	12	11	(33)	(74)
Cash collateral receivable	—	—	10	2
Total derivatives as presented in the balance sheet	\$ 12	\$ 11	\$ (23)	\$ (72)

The effect of derivatives in cash flow hedging relationships on OCI and income for the years ended December 31, 2017, 2016 and 2015, respectively, consisted of:

Year Ended December 31, (Millions)	(Loss) Recognized in OCI on Derivatives Effective Portion (a)	Location of Loss Reclassified from Accumulated OCI into Income	Loss Reclassified from Accumulated OCI into Income
2017			
Interest rate contracts	\$ —	Interest expense	\$ 8
Commodity contracts	(1)	Operating expenses	1
Total	\$ (1)		\$ 9
2016			
Interest rate contracts	\$ —	Interest expense	\$ 8
Commodity contracts	—	Operating expenses	2
Total	\$ —		\$ 10
2015			
Interest rate contracts	\$ —	Interest expense	\$ 9
Commodity contracts	(3)	Operating expenses	3
Total	\$ (3)		\$ 12

- (a) Changes in OCI are reported in pre-tax dollars, the reclassified amounts of commodity contracts are included within "Purchase power, natural gas and fuel used" line item within operating expenses in the consolidated statements of income.

The net loss in accumulated OCI related to previously settled forward starting swaps and accumulated amortization is \$68.8 million and \$76.7 million, as of December 31, 2017 and 2016, respectively. We recorded \$8.0 million, \$8.0 million, and \$8.6 million in net derivative losses related to discontinued cash flow hedges for the years ended December 31, 2017, 2016 and 2015, respectively. We will amortize approximately \$8.0 million of discontinued cash flow hedges in 2018. During the years ended December 31, 2017, 2016 and 2015, there was no ineffective portion for cash flow hedges.

The unrealized loss of \$0.1 million on hedge derivatives is reported in OCI because the forecasted transaction is considered to be probable as of December 31, 2017. We expect that \$0.1 million of those losses will be reclassified into earnings within the next twelve months. The maximum length of time over which we are hedging our exposure to the variability in future cash flows for forecasted fleet fuel transactions is twelve months.

(b) Renewables and Gas activities

We sell fixed-price gas and power forwards to hedge our merchant wind assets from declining commodity prices for our Renewables business. We also purchase fixed-price gas and basis swaps and sell fixed-price power in the forward market to hedge the spark spread or heat rate of our merchant thermal assets. We also enter into tolling arrangements to sell the output of our thermal generation facilities.

Our gas business purchases and sells both fixed-price gas and basis swaps to hedge the value of contracted storage positions. The intent of entering into these swaps is to fix the margin of gas injected into storage for subsequent resale in future periods. We also enter into basis swaps to hedge the value of our contracted transport positions. The intent of buying and selling these basis swaps is to fix the location differential between the price of gas at the receipt and delivery point of the contracted transport in future periods.

Both Renewables and Gas have proprietary trading operations that enter into fixed-price power and gas forwards in addition to basis swaps. The intent is to speculate on fixed-price commodity and basis volatility in the U.S. commodity markets.

Renewables will periodically designate derivative contracts as cash flow hedges for both its thermal and wind portfolios. To the extent that the derivative contracts are effective in offsetting the variability of cash flows associated with future power sales and gas purchases, the fair value changes are recorded in OCI. Any hedge ineffectiveness is recorded in current period earnings. For thermal operations, Renewables will periodically designate both fixed price NYMEX gas contracts and natural gas basis swaps that hedge the fuel requirements of its Klamath Plant in Klamath, Oregon. Renewables will also designate fixed price power swaps at various locations in the U.S. market to hedge future power sales from its Klamath facility and various wind farms.

Gas also periodically designates NYMEX fixed price derivative contracts as cash flow hedges related to its firm storage trading activities. To the extent that the derivative contracts are effective in offsetting the variability of cash flows associated with future gas sales and purchases, the fair value changes are recorded in OCI. Any hedge ineffectiveness is recorded in current period earnings. Derivative contracts entered into to hedge the gas transport trading activities are not designated as cash flow hedges, with all changes in fair value of such derivative contracts recorded in current period earnings.

The below presented information includes derivative financial instruments associated with Gas activities, which were classified as held for sale in the consolidated balance sheet (see Note 25 - Assets Held for Sale). There were no derivative financial instruments classified as assets held for sale as of December 31, 2016.

The net notional volumes of outstanding derivative instruments associated with Renewables and Gas activities as of December 31, 2017 and 2016, respectively, consisted of:

As of December 31, (MWh/Dth in Millions)	2017	2016
Wholesale electricity purchase contracts	4	3
Wholesale electricity sales contracts	6	7
Natural gas and other fuel purchase contracts	285	329
Financial power contracts	12	8
Basis swaps - purchases	68	49
Basis swaps - sales	62	45

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

The fair values of derivative contracts associated with Renewables and Gas activities as of December 31, 2017 and 2016, respectively, consisted of:

As of December 31, (Millions)	2017	2016
Wholesale electricity purchase contracts	\$ (3)	\$ (2)
Wholesale electricity sales contracts	8	6
Natural gas and other fuel purchase contracts	19	30

Notes to Consolidated Financial Statements (Continued)

The effect of trading derivatives associated with Renewables and Gas activities for the years ended December 31, 2017, 2016 and 2015 consisted of:

<u>Years Ended December 31,</u> <u>(Millions)</u>	<u>2017</u>	<u>2016</u>	<u>2015</u>
Wholesale electricity purchase contracts	\$ (3)	\$ 3	\$ 6
Wholesale electricity sales contracts	4	(7)	(5)
Financial power contracts	(1)	4	—
Financial and natural gas contracts	(8)	(22)	(26)
Total Loss	\$ (8)	\$ (22)	\$ (25)

The effect of non-trading derivatives associated with Renewables and Gas activities for the years ended December 31, 2017, 2016 and 2015 consisted of:

<u>Years Ended December 31,</u> <u>(Millions)</u>	<u>2017</u>	<u>2016</u>	<u>2015</u>
Wholesale electricity purchase contracts	\$ 1	\$ 9	\$ (8)
Wholesale electricity sales contracts	(3)	(20)	(5)
Financial power contracts	(5)	(10)	24
Natural gas and other fuel purchase contracts	(8)	34	18
Total Gain	\$ (15)	\$ 13	\$ 29

Such gains and losses are included in “Operating revenues” and in “Purchased power, natural gas and fuel used” operating expenses in the consolidated statements of income, depending upon the nature of the transaction.

The effect of derivatives in cash flow hedging relationships on OCI and income for the years ended December 31, 2017, 2016 and 2015 consisted of:

<u>Year Ended December 31,</u> <u>(Millions)</u>	<u>(Loss) Gain Recognized in OCI on Derivatives</u>	<u>Location of Gain Reclassified from Accumulated OCI into Income</u>	<u>Loss (Gain) Reclassified from Accumulated OCI into Income</u>
	<u>Effective Portion (a)</u>		<u>Effective Portion (a)</u>
2017			
Commodity contracts	\$ 41	Revenues	\$ 14
	\$ 41		\$ 14
2016			
Commodity contracts	\$ (42)	Revenues	\$ (43)
	\$ (42)		\$ (43)
2015			
Commodity contracts	\$ 57	Revenues	\$ (2)
Total	\$ 57		\$ (2)

(a) Changes in OCI are reported on a pre-tax basis.

Amounts are reclassified from accumulated OCI into income in the period during which the transaction being hedged affects earnings or when it becomes probable that a forecasted transaction being hedged would not occur. Notwithstanding future changes in prices, approximately \$20.9 million of gain included in accumulated OCI at December 31, 2017 is expected to be reclassified into earnings within the next 12 months. During the years ended December 31, 2017, 2016 and 2015, we recorded a net gain of \$2.6 million, a net loss of \$6.8 million, and a net gain \$4.8 million, respectively, in earnings as a result of ineffectiveness from cash flow hedges. We recorded \$0.5 million in net derivative loss and \$0.4 million and \$2.3 million in net derivative gain related to discontinued cash flow hedge for the years ended December 31, 2017, 2016 and 2015, respectively. The net loss in accumulated OCI of \$0.2 million as of December 31, 2017 related to a discontinued cash flow hedge will amortize through 2018.

(c) Counterparty credit risk management

NYSEG and RG&E face risks related to counterparty performance on hedging contracts due to counterparty credit default. We have developed a matrix of unsecured credit thresholds that are dependent on the counterparty's or the counterparty's guarantor's applicable credit rating, normally Moody's or Standard & Poor's. When our exposure to risk for a counterparty exceeds the unsecured credit threshold, the counterparty is required to post additional collateral or we will no longer transact with the counterparty until the exposure drops below the unsecured credit threshold.

The wholesale power supply agreements of UI contain default provisions that include required performance assurance, including certain collateral obligations, in the event that UI's credit rating on senior debt were to fall below investment grade. If such an event had occurred as of December 31, 2017, UI would have had to post an aggregate of approximately \$15.8 million in collateral.

We have various master netting arrangements in the form of multiple contracts with various single counterparties that are subject to contractual agreements that provide for the net settlement of all contracts through a single payment. Those arrangements reduce our exposure to a counterparty in the event of default on or termination of any single contract. For financial statement presentation purposes, we offset fair value amounts recognized for derivative instruments and fair value amounts recognized for the right to reclaim or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement. The amounts of cash collateral under master netting arrangements that have not been offset against net derivative positions were \$30 million and \$20 million as of December 31, 2017 and 2016, respectively. Derivative instruments settlements and collateral payments are included in "Other assets" and "Other liabilities" of operating activities in the consolidated statements of cash flows.

Certain of our derivative instruments contain provisions that require us to maintain an investment grade credit rating on our debt from each of the major credit rating agencies. If our debt were to fall below investment grade, we would be in violation of those provisions and the counterparties to the derivative instruments could request immediate payment or demand immediate and ongoing full overnight collateralization on derivative instruments in net liability positions. The aggregate fair value of all derivative instruments with credit risk related contingent features that are in a liability position as of December 31, 2017 is \$3 million, for which we have posted collateral.

U

Note 12. Commitments and Contingent Liabilities

We are party to various legal disputes arising as part of our normal business activities. We do not provide for accrual of legal costs expected to be incurred in connection with a loss contingency.

Transmission - ROE Complaint – CMP and UI

On September 30, 2011, the Massachusetts Attorney General, Massachusetts Department of Public Utilities, Connecticut Public Utilities Regulatory Authority, New Hampshire Public Utilities Commission, Rhode Island Division of Public Utilities and Carriers, Vermont Department of Public Service, numerous New England consumer advocate agencies and transmission tariff customers collectively filed a complaint (Complaint I) with the FERC pursuant to sections 206 and 306 of the Federal Power Act. The filing parties seek an order from the FERC reducing the 11.14% base return on equity used in calculating formula rates for transmission service under the ISO-New England Open Access Transmission Tariff (OATT) to 9.2%. CMP, MEPCO and UI are New England Transmission Owners (NETOs) with assets and service rates that are governed by the OATT and will thereby be affected by any FERC order resulting from the filed complaint.

On June 19, 2014, the FERC issued its decision in Complaint I, establishing a methodology and setting an issue for a paper hearing. On October 16, 2014, FERC issued its final decision in the Complaint I setting the base ROE at 10.57%, and a maximum total ROE of

11.74% (base plus incentive ROE) for the October 2011 – December 2012 period as well as prospectively from October 16, 2014 and ordered the NETOs to file a refund report. On November 17, 2014 the NETOs filed a refund report.

On March 3, 2015, the FERC issued an order on requests for rehearing of its October 16, 2014 decision. The March order upheld the FERC's June 19, 2014 decision and further clarified that the 11.74% ROE cap will be applied on a project specific basis and not on a transmission owner's total average transmission return. In June 2015 the NETOs and complainants both filed an appeal in the U.S. Court of Appeals for the District of Columbia of the FERC's final order. On April 14, 2017, the Court of Appeals (the Court) vacated FERC's decision on Complaint I and remanded it to FERC. The Court held that FERC, as directed by statute, did not determine first that the existing ROE was unjust and unreasonable before determining a new ROE. The Court ruled that FERC should have first determined that the then existing 11.14% base ROE was unjust and unreasonable before selecting the 10.57% as the new base ROE. The Court also found that FERC did not provide reasoned judgment as to why 10.57%, the point ROE at the midpoint of the upper end of the zone of reasonableness, is a just and reasonable ROE. Instead, FERC had only explained in its order that the midpoint of 9.39% was not just and reasonable and a higher base ROE was warranted. On June 5, 2017, the NETOs made a filing with FERC seeking to reinstate transmission rates to the status quo ante (effect of the Court vacating order is to return the parties to the rates in effect prior to FERC Final decision) as of June 8, 2017, the date the Court decision became effective. In that filing, the NETOs stated that they will not begin billing at the higher rates until 60 days after FERC has a quorum of commissioners. On October 6, 2017, FERC issued an order rejecting the NETOs request to collect transmission revenue requirements at the higher ROE of 11.14%, pending FERC order on remand. In reaching this decision, FERC stated that it has broad remedial authority to make whatever ROE it eventually determines to be just and reasonable effective for the Complaint I refund period and prospectively from October 2014, the effective date of the Complaint I Order. Therefore FERC reasoned that the NETOs will not be harmed financially by not immediately returning to their pre-Complaint I ROE. We anticipate FERC to address the Court decision during 2018. We cannot predict the outcome of action by FERC.

On December 26, 2012, a second, ROE complaint (Complaint II) for a subsequent rate period was filed requesting the then effective ROE of 11.14% be reduced to 8.7%. On June 19, 2014, FERC accepted Complaint II, established a 15-month refund effective date of December 27, 2012, and set the matter for hearing using the methodology established in the Complaint I.

On July 31, 2014, a third, ROE complaint (Complaint III) was filed for a subsequent rate period requesting the then effective ROE of 11.14% be reduced to 8.84%. On November 24, 2014, FERC accepted the Complaint III, established a 15-month refund effective date of July 31, 2014, and set this matter consolidated with Complaint II for hearing in June 2015. Hearings relating to the refund periods and going forward period were held in June 2015 on Complaints II and III before a FERC Administrative Law Judge. On July 29, 2015, post-hearing briefs were filed by parties and on August 26, 2015 reply briefs were filed by parties. On July 13, 2015, the NETOs filed a petition for review of FERC's orders establishing hearing and consolidation procedures for Complaints II and III with the U.S. Court of Appeals. The FERC Administrative Law Judge issued an Initial Decision on March 22, 2016. The Initial Decision determined that: (1) for the 15-month refund period in Complaint II, the base ROE should be 9.59% and that the ROE Cap (base ROE plus incentive ROEs) should be 10.42% and (2) for the 15 month refund period in Complaint III and prospectively, the base ROE should be 10.90% and that the ROE Cap should be 12.19%. The Initial Decision is the Administrative Law Judge's recommendation to the FERC Commissioners. The FERC is expected to make its final decision in 2018.

CMP and UI reserved for refunds for Complaints I, II and III consistent with the FERC's March 3, 2015 final decision in Complaint I. Refunds were provided to customers for Complaint I. The CMP and UI total reserve associated with Complaints II and III is \$22.5 million and \$4.4 million, respectively, as of December 31, 2017, which has not changed since December 31, 2016, except for the accrual of carrying costs. If adopted as final, the impact of the initial decision would be an additional aggregate reserve for Complaints II and III of \$17.1 million, which is based upon currently available information for these proceedings. We cannot predict the outcome of the Complaint II and III proceedings.

On April 29, 2016, a fourth ROE complaint (Complaint IV) was filed for a rate period subsequent to prior complaints requesting the then existing base ROE of 10.57% be reduced to 8.61% and the ROE Cap be set at 11.24%. The NETOs filed a response to the Complaint IV on June 3, 2016. On September 20, 2016, FERC accepted the Complaint IV, established a 15-month refund effective date of April 29, 2016, and set the matter for hearing and settlement judge procedures. In April 2017, the NETOs filed for a stay in the hearings pending FERC on the Court order described above. That request was denied by the Administrative Law Judge. On November 21, 2017, the parties submitted updates to their ROE analyses and recommendations just prior to hearings with the NETOs continuing to advocate that the existing base ROE of 10.57% should remain in effect. Hearings were held in December 2017 with an expected Initial Decision from the Administrative Law Judge by March 31, 2018. A range of possible outcomes is not able to be determined at this time due to the preliminary state of this matter. We cannot predict the outcome of the Complaint IV proceeding.

On October 5, 2017, the NETOs filed a Motion for Dismissal of Pancaked Return on Equity Complaints in light of the decision by the Court in April 2017 that became effective on June 8, 2017. The NETOs assert that all four complaints should be dismissed because the complainants have not shown that the existing ROE of 11.14% is unjust and unreasonable as the Court decision requires. In addition, the NETOs assert that Complaints II, III and IV should also be dismissed because the Court decision implicitly found that FERC's acceptance of Pancaked FPA Section 206 complaints was statutorily improper as Congress intended that the 15-month refund period under Section 206 applies whenever FERC does not complete its review of a complaint within the 15-month period. In the event FERC chooses not to dismiss the complaints, the NETOs request that FERC consolidate the complaints for decision as the evidentiary records are either closed or advanced enough for FERC to address the requirements of the Court decision and expeditiously issue a final order. FERC has not yet ruled on this Motion. We cannot predict the outcome of action by FERC.

California Energy Crisis Litigation

Two California agencies brought a complaint in 2001 against a long-term PPA entered into by Renewables, as seller, to the California Department of Water Resources, as purchaser, alleging that the terms and conditions of the PPA were unjust and unreasonable. FERC dismissed Renewables from the proceedings; however, the Ninth Circuit Court of Appeals reversed FERC's dismissal of Renewables.

Joining with two other parties, Renewables filed a petition for certiorari in the United States Supreme Court on May 3, 2007. In an order entered on June 27, 2008, the Supreme Court granted Renewables' petition for certiorari, vacated the appellate court's judgment, and remanded the case to the appellate court for further consideration in light of the Supreme Court's decision in a similar case. In light of the Supreme Court's order, on December 4, 2008, the Ninth Circuit Court of Appeals vacated its prior opinion and remanded the complaint proceedings to the FERC for further proceedings consistent with the Supreme Court's rulings. In 2014 FERC assigned an administrative law judge to conduct evidentiary hearings. Following discovery, the FERC Trial Staff recommended that the complaint against Renewables be dismissed.

A hearing was held before an administrative law judge of FERC in November and early December 2015. A preliminary proposed ruling by the administrative law judge was issued on April 12, 2016. The proposed ruling found no evidence that Renewables had engaged in any unlawful market contract that would justify finding the Renewables PPAs unjust and unreasonable. However, the proposed ruling did conclude that price of the PPAs imposed an excessive burden on customers in the amount of \$259 million. Renewables position, as presented at hearings and agreed by FERC Trial Staff, is that Renewables entered into bilateral power purchase contracts appropriately and complied with all applicable legal standards and requirements. The parties have submitted to FERC briefs on exceptions to the administrative law judge's proposed ruling. There is no specific timetable to FERC's ruling. We cannot predict the outcome of this proceeding.

New York State Department of Public Service Investigation of the Preparation for and Response to the March 2017 Windstorm

On March 11, 2017, the New York State Department of Public Service (the Department) commenced an investigation of NYSEG's and RG&E's preparation for and response to the March 2017 windstorm, which affected more than 219,000 customers. The Department investigation included a comprehensive review of NYSEG's and RG&E's preparation for and response to the windstorm, including all aspects of the companies' filed and approved emergency plan. The Department held public hearings on April 12 and 13, 2017.

On November 16, 2017, the NYPSC announced that the Department Staff had completed their investigation into the March 2017 Windstorm and the NYPSC issued an Order Instituting Proceeding and to Show Cause. The Staff's investigation found that RG&E and NYSEG violated certain parts of their emergency response plans, which makes them subject to possible financial penalties. NYSEG and RG&E responded to the order in a timely manner and have entered into settlement discussions with the Department Staff. The unprecedented weather that resulted in the March 2017 windstorm posed great challenges to the NYSEG's and RG&E's communities, employees, contractors, assisting utilities, and municipal partners who all worked tirelessly to safely restore power to all customers. NYSEG's and RG&E's priorities during any storm are the restoration of service to their respective customers and the safety of their communities, customers, employees and contractors. We cannot predict the outcome of this regulatory action.

Class Action Regarding LDC Gas Transportation Service on Algonquin Gas Transmission

On November 16, 2017, a class action lawsuit was filed in the U.S. District Court in Massachusetts on behalf of customers in New England against the Company and Eversource alleging that certain of their respective subsidiaries that take gas transportation service over the Algonquin Gas Transmission, AGT, which for AVANGRID would be its indirect subsidiaries SCG and CNG, engaged in pipeline capacity scheduling practices on AGT that resulted in artificially increased electricity prices in New England. These allegations were based on the conclusions of a White Paper issued by the Environmental Defense Fund (EDF), an environmental

advocacy organization, on October 10, 2017, purporting to analyze the relationship between the New England electricity market and the New England local gas distribution companies. The plaintiffs assert claims under federal antitrust law, state antitrust, unfair competition and consumer protection laws, and under the common law of unjust enrichment. They seek damages, disgorgement, restitution, injunctive relief, and attorney fees and costs. The Company filed a Motion to Dismiss all of the claims on January 29, 2018. On February 27, 2018, the FERC released the results of a FERC staff inquiry into the pipeline capacity scheduling practices on the AGT. The inquiry arose out of the allegations made by the EDF in its White Paper. FERC announced that, based on an extensive review of public and non-public data, it had determined that the EDF study was flawed and led to incorrect conclusions. FERC also stated that the staff inquiry revealed no evidence of anticompetitive withholding of natural gas pipeline capacity on the AGT and that it would take no further action on the matter. Nevertheless, we cannot predict the outcome of this class action lawsuit.

Leases

Operating lease expense relating to operational facilities, office building leases, and vehicle and equipment leases was \$71.5 million, \$70.6 million and \$47.7 million for the years ended December 31, 2017, 2016 and 2015, respectively. Amounts related to contingent payments predominantly linked to electricity generation at the respective facilities were \$18.6 million, \$22.2 million and \$22.2 million for the years ended December 31, 2017, 2016 and 2015, respectively. Leases for most of the land on which wind farm facilities are located have various renewal and termination clauses.

On January 16, 2014, as required by the NYPSC, NYSEG renewed a Reliability Support Services Agreement (RSS Agreement) with Cayuga Operating Company, LLC (Cayuga) for Cayuga to provide reliability support services to maintain necessary system reliability through June 2017. Cayuga owns and operates the Cayuga Generating Facility (Facility), a coal-fired generating station that includes two generating units. Cayuga operates and maintains the RSS units and manages and complies with scheduling deadlines and requirements for maintaining the Facility and the RSS units as eligible energy and capacity providers and complies with dispatch instructions. NYSEG pays Cayuga a monthly fixed price and also pays for capital expenditures for specified capital projects. NYSEG is entitled to a share of any capacity and energy revenues earned by Cayuga. We account for this arrangement as an operating lease. The net expense incurred under this operating lease was \$17.6 million, \$37.8 million and \$25.5 million for the years ended December 31, 2017, 2016 and 2015, respectively.

On October 21, 2015, RG&E, GNPP and multiple intervenors filed a joint proposal with the regulator for approval of the modified RSS Agreement for the continued operation of the Ginna Facility. On February 23, 2016, the NYPSC unanimously adopted the joint proposal, which provides for a term of the RSSA from April 1, 2015, through March 31, 2017 and RG&E monthly payments to GNPP in the amount of \$15.4 million. RG&E is entitled to 70% of revenues from GNPP's sales into the energy and capacity markets, while GNPP is entitled to 30% of such revenues. We account for this arrangement as an operating lease. The net expense incurred under this operating lease was \$5.6 million, \$114.9 million and \$79.9 million for the years ended December 31, 2017, 2016 and 2015, respectively.

Total future minimum lease payments as of December 31, 2017 consisted of:

Year	Operating Leases	Capital Leases (Millions)	Total
2018	\$ 36	\$ 7	\$ 43
2019	35	8	43
2020	36	8	44
2021	36	5	41
2022	31	2	33
Thereafter	757	47	804
Total	\$ 931	\$ 77	\$ 1,008

Power, Gas, and Other Arrangements

Power and Gas Supply Arrangements – Networks

NYSEG and RG&E are the providers of last resort for customers. As a result, the companies buy physical energy and capacity from the NYISO. In accordance with the NYPSC's February 26, 2008 Order, NYSEG and RG&E are required to hedge on behalf of non-demand billed customers. The physical electric capacity purchases we make from parties other than the NYISO are to comply with the hedge requirement for electric capacity. The companies enter into financial swaps to comply with the hedge requirement for physical electric energy purchases. Other purchases, from some Independent Power Producers (IPPs) and NYPA are from contracts entered

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

into many years ago when the companies made purchases under contract as part of their supply portfolio to meet their load requirement. More recent IPP purchases are required to comply with the companies' Public Utility Regulatory Policies Act (PURPA) purchase obligation.

NYSEG, RG&E, SCG, CNG and BGC (collectively, the Regulated Gas Companies) satisfy their natural gas supply requirements through purchases from various producers and suppliers, withdrawals from natural gas storage, capacity contracts and winter peaking supplies and resources. The Regulated Gas Companies operate diverse portfolios of gas supply, firm transportation capacity, gas storage and peaking resources. Actual gas costs incurred by each of the Regulated Gas Companies are passed through to customers through state regulated purchased gas adjustment mechanisms, subject to regulatory review.

The Regulated Gas Companies purchase the majority of their natural gas supply at market prices under seasonal, monthly or mid-term supply contracts and the remainder is acquired on the spot market. The Regulated Gas Companies diversify their sources of supply by amount purchased and location and primarily acquire gas at various locations in the US Gulf of Mexico region, in the Appalachia region and in Canada.

The Regulated Gas Companies acquire firm transportation capacity on interstate pipelines under long-term contracts and utilize that capacity to transport both natural gas supply purchased and natural gas withdrawn from storage to the local distribution system.

The Regulated Gas Companies acquire firm underground natural gas storage capacity using long-term contracts and fill the storage facilities with gas in the summer months for subsequent withdrawal in the winter months.

Winter peaking resources are primarily attached to the local distribution systems and are either owned or are contracted for by the Regulated Gas Companies, each of which is a Local Distribution Company. Each Regulated Gas Company owns or has rights to the natural gas stored in an LNG facility directly attached to its distribution system.

Other arrangements include UI's long-term contracts to purchase RECs and contractual obligations for property, plant and equipment, material and services on order but not yet delivered at December 31, 2017.

Power, Gas, and Other Arrangements – Renewables and Gas

Gas purchase commitments include multi-year contracted storage and transport capacity contracts that allow the Gas business to participate in seasonal and locational gas price differentials. The agreements contain fixed payment obligations for the use of both storage and transport capacity throughout the U.S. Power purchase commitments include the following: (i) a 55MW Biomass PPA for 12 years (four years remaining) with a guaranteed output of 34.4MW flat and a schedule of fixed price rates depending on season and time of day, (ii) long-term firm transmission agreements with fixed monthly capacity payments that allow the delivery of electricity from wind and thermal generation sources to various customers and (iii) a three year purchase of hydro capacity and energy to provide balancing services to the NW wind assets that has monthly fixed payments (one year remaining) and (iv) a five year purchase of hydro capacity and energy to provide balancing services to the NW wind assets that has monthly fixed payments (beginning in 2019 and expiring in 2023). Power sales commitments include: (i) a 55MW Biomass off-take agreement for 12 years (four years remaining) with guaranteed annual production of 34.4MW flat with a schedule of fixed price rates depending on season and time of day, (ii) fixed price, fixed volume power sales off the Klamath Cogen facility in addition to tolling arrangements that have fixed capacity charges and (iii) fixed price, fixed volume renewable energy credit sales off merchant wind facilities.

Forward purchases and sales commitments under power, gas, and other arrangements as of December 31, 2017 consisted of:

Year	Purchases				Sales			
	Gas	Power	Other	Total	Gas	Power	Other	Total
	(Millions)							
2018	\$ 280	\$ 171	\$ 528	\$ 979	\$ 26	\$ 127	\$ 4	\$ 157
2019	239	123	201	563	9	104	1	114
2020	186	102	39	327	7	71	—	78
2021	149	89	20	258	4	51	—	55
2022	120	63	12	195	—	23	—	23
Thereafter	638	443	100	1,181	—	42	—	42
Totals	\$ 1,612	\$ 991	\$ 900	\$ 3,503	\$ 46	\$ 418	\$ 5	\$ 469

Guarantee Commitments to Third Parties

As of December 31, 2017, we had approximately \$2.4 billion of standby letters of credit, surety bonds, guarantees and indemnifications outstanding. These instruments provide financial assurance to the business and trading partners of AVANGRID and its subsidiaries in their normal course of business. The instruments only represent liabilities if AVANGRID or its subsidiaries fail to deliver on contractual obligations. We therefore believe it is unlikely that any material liabilities associated with these instruments will be incurred and, accordingly, as of December 31, 2017, neither we nor our subsidiaries have any liabilities recorded for these instruments.

U

Note 13. Environmental Liabilities

Environmental laws, regulations and compliance programs may occasionally require changes in our operations and facilities and may increase the cost of electric and natural gas service. We do not provide for accruals of legal costs expected to be incurred in connection with loss contingencies.

Waste sites

The Environmental Protection Agency and various state environmental agencies, as appropriate, have notified us that we are among the potentially responsible parties that may be liable for costs incurred to remediate certain hazardous substances at twenty-five waste sites, which do not include sites where gas was manufactured in the past. Fifteen of the twenty-five sites are included in the New York State Registry of Inactive Hazardous Waste Disposal Sites; six sites are included in Maine's Uncontrolled Sites Program and one site is included on the Massachusetts Non- Priority Confirmed Disposal Site list. The remaining sites are not included in any registry list. Finally, nine of the twenty-five sites are also included on the National Priorities list. Any liability may be joint and severable for certain sites.

We have recorded an estimated liability of \$5 million related to ten of the twenty-five sites. We have paid remediation costs related to the remaining fifteen sites and do not expect to incur additional liabilities. Additionally, we have recorded an estimated liability of \$8 million related to another ten sites where we believe it is probable that we will incur remediation costs and or monitoring costs, although we have not been notified that we are among the potentially responsible parties or that we are regulated under State Resource Conservation and Recovery Act programs. It is possible the ultimate cost to remediate these sites may be significantly more than the accrued amount. Our estimate for costs to remediate these sites ranges from \$12 million to \$21 million as of December 31, 2017. Factors affecting the estimated remediation amount include the remedial action plan selected, the extent of site contamination, and the portion of remediation attributed to us.

Manufactured Gas Plants

We have a program to investigate and perform necessary remediation at our fifty-three sites where gas was manufactured in the past (Manufactured Gas Plants, or MGPs). Eight sites are included in the New York State Registry; twelve sites are included in the New York Voluntary Cleanup Program; three sites are part of Maine's Voluntary Response Action Program and with two of such sites being part of Maine's Uncontrolled Sites Program. The remaining sites are not included in any registry list. We have entered into consent orders with various environmental agencies to investigate and where necessary remediate forty-nine of the fifty-three sites.

Our estimate for all costs related to investigation and remediation of the fifty-three sites ranges from \$213 million to \$442 million as of December 31, 2017. Our estimate could change materially based on facts and circumstances derived from site investigations, changes in required remedial actions, changes in technology relating to remedial alternatives, and changes to current laws and regulations.

Certain other Connecticut and Massachusetts regulated gas companies own or have previously owned properties where MGPs had historically operated. MGP operations have led to contamination of soil and groundwater with petroleum hydrocarbons, benzene and metals, among other things, at these properties, the regulation and cleanup of which is regulated by the federal Resource Conservation and Recovery Act as well as other federal and state statutes and regulations. Each of the companies has or had an ownership interest in one or more such properties contaminated as a result of MGP-related activities. Under the existing regulations, the cleanup of such sites requires state and at times, federal, regulators' involvement and approval before cleanup can commence. In certain cases, such contamination has been evaluated, characterized and remediated. In other cases, the sites have been evaluated and characterized, but not yet remediated. Finally, at some of these sites, the scope of the contamination has not yet been fully characterized; no liability was recorded in respect of these sites as of December 31, 2017 and no amount of loss, if any, can be reasonably estimated at this time. In the past, the companies have received approval for the recovery of MGP-related remediation expenses from customers through rates and will seek recovery in rates for ongoing MGP-related remediation expenses for all of their MGP sites.

As of December 31, 2017 and 2016, the liability associated with MGP sites in Connecticut, the remediation costs of which could be significant and will be subject to a review by PURA as to whether these costs are recoverable in rates, was \$100 million and \$97 million, respectively.

The liability to investigate and perform remediation at the known inactive MGP sites and other sites was \$389 million and \$388 million as of December 31, 2017 and 2016, respectively. We recorded a corresponding regulatory asset, net of insurance recoveries and the amount collected from FirstEnergy, as described below, because we expect to recover the net costs in rates. Our environmental liability accruals are recorded on an undiscounted basis and are expected to be paid through the year 2054.

FirstEnergy

NYSEG sued FirstEnergy under the Comprehensive Environmental Response, Compensation, and Liability Act to recover environmental cleanup costs at sixteen former manufactured gas sites, which are included in the discussion above. In July 2011, the District Court issued a decision and order in NYSEG's favor. Based on past and future clean-up costs at the sixteen sites in dispute, FirstEnergy would be required to pay NYSEG approximately \$60 million if the decision were upheld on appeal. On September 9, 2011, FirstEnergy paid NYSEG \$30 million, representing their share of past costs of \$27 million and pre-judgment interest of \$3 million.

FirstEnergy appealed the decision to the Second Circuit Court of Appeals. On September 11, 2014, the Second Circuit Court of Appeals affirmed the District Court's decision in NYSEG's favor, but modified the decision for nine sites, reducing NYSEG's damages for incurred costs from \$27 million to \$22 million, excluding interest, and reducing FirstEnergy's allocable share of future costs at these sites. NYSEG refunded FirstEnergy the excess \$5 million in November 2014.

FirstEnergy remains liable for a substantial share of clean up expenses at nine MPG sites. Based on current projections, FirstEnergy's share is estimated at approximately \$22 million. This amount is being treated as a contingent asset and has not been recorded as either a receivable or a decrease to the environmental provision. Any recovery will be flowed through to NYSEG ratepayers.

Century Indemnity and OneBeacon

On August 14, 2013, NYSEG filed suit in federal court against two excess insurers, Century Indemnity and OneBeacon, who provided excess liability coverage to NYSEG. NYSEG seeks payment for clean-up costs associated with contamination at twenty-two former manufactured gas plants. Based on estimated clean-up costs of \$282 million, the carriers' allocable share is approximately \$89 million, excluding pre-judgment interest, although this amount may change substantially depending upon the determination of various factual matters and legal issues during the case.

Century Indemnity and OneBeacon have answered admitting issuance of the excess policies, but contesting coverage and providing documentation proving they received notice of the claims in the 1990s. On March 31, 2017, the District Court granted motions filed by Century Indemnity and One Beacon dismissing all of NYSEG's claims against both defendants on the grounds of late notice. NYSEG filed a motion with the District Court on April 14, 2017 seeking reconsideration of the Court's decision and is researching grounds for further appeal if the reconsideration motion is denied. We cannot predict the outcome of this matter, however, any recovery will be flowed through to NYSEG ratepayers.

English Station

In January 2012, Evergreen Power, LLC (Evergreen Power) and Asnat Realty LLC (Asnat), then and current owners of a former generation site on the Mill River in New Haven (the English Station site) that UI sold to Quinnipiac Energy in 2000, filed a lawsuit in federal district court in Connecticut against UI seeking, among other things: (i) an order directing UI to reimburse the plaintiffs for costs they have incurred and will incur for the testing, investigation and remediation of hazardous substances at the English Station site and (ii) an order directing UI to investigate and remediate the site. This proceeding had been stayed in 2014 pending resolutions of other proceedings before the DEEP concerning the English Station site. In December 2016, the court administratively closed the file without prejudice to reopen upon the filing of a motion to reopen by any party. In December 2013, Evergreen Power and Asnat filed a subsequent lawsuit in Connecticut state court seeking among other things: (i) remediation of the English Station site; (ii) reimbursement of remediation costs; (iii) termination of UI's easement rights; (iv) reimbursement for costs associated with securing the property; and (v) punitive damages. This lawsuit had been stayed in May 2014 pending mediation. Due to lack of activity in the case, the court terminated the stay and scheduled a status conference for July 6, 2017. On July 5, 2017, Asnat filed a pretrial memorandum claiming damages of \$10 million for "environmental remediation activities" and lost use of the property. In December 2017 Plaintiffs filed a Request for Leave to Amend Complaint and Motion to Cite-In Additional Parties, including former UIL officers and employees and other UI officers, which motion was approved in February 2018. We cannot predict the outcome of this matter.

On April 8, 2013, DEEP issued an administrative order addressed to UI, Evergreen Power, Asnat and others, ordering the parties to take certain actions related to investigating and remediating the English Station site. Mediation of the matter began in the fourth quarter of 2013 and concluded unsuccessfully in April 2015. This proceeding was stayed while DEEP and UI continue to work through the remediation process pursuant to the consent order described below. Status reports are periodically filed with the DEEP.

On August 4, 2016, DEEP issued a partial consent order (the consent order), that, subject to its terms and conditions, requires UI to investigate and remediate certain environmental conditions within the perimeter of the English Station site. Under the consent order, to the extent that the cost of this investigation and remediation is less than \$30 million, UI will remit to the State of Connecticut the difference between such cost and \$30 million to be used for a public purpose as determined in the discretion of the Governor of the State of Connecticut, the Attorney General of the State of Connecticut, and the Commissioner of DEEP. UI is obligated to comply with the terms of the consent order even if the cost of such compliance exceeds \$30 million. Under the terms of the consent order, the State will discuss options with UI on recovering or funding any cost above \$30 million such as through public funding or recovery from third parties; however, it is not bound to agree to or support any means of recovery or funding. UI has initiated its process to investigate and remediate the environmental conditions within the perimeter of the English Station site pursuant to the consent order.

As of December 31, 2017 we reserved \$25 million for this matter. We cannot predict the outcome of this matter.

U

Note 14. Income Taxes

The Tax Act changes significantly the federal taxation of business entities, including among other things, a federal corporate tax rate decrease from 35% to 21% for tax years beginning after December 31, 2017. We have made a reasonable estimate of the effects of the Tax Act and recorded provisional amounts for the income tax effects related to the remeasurement of our deferred tax assets and liabilities and the associated regulatory liabilities established by our regulated utility companies in our consolidated financial statements as of December 31, 2017. As we complete our analysis of the Tax Act, collect and prepare necessary data, and interpret any additional guidance issued by the U.S. Treasury Department, the IRS, and other standard-setting bodies, we may make adjustments to the provisional amounts. Those adjustments may materially impact our provision for income taxes in the period in which the adjustments are made.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Current and deferred taxes charged to (benefit) expense for the years ended December 31, 2017, 2016 and 2015 consisted of:

Years Ended December 31, (Millions)	2017	2016	2015
Current			
Federal	\$ (20)	\$ (6)	\$ (20)
State	12	8	(33)
Current taxes charged to (benefit) expense	(8)	2	(53)
Deferred			
Federal	(124)	412	131
State	(73)	2	(6)
Deferred taxes charged to (benefit) expense	(197)	414	125
Production tax credits	(53)	(38)	(42)
Investment tax credits	(1)	(1)	(1)
Total Income Tax (Benefit) Expense	\$ (259)	\$ 377	\$ 29

The differences between tax expense per the statements of income and tax expense at the 35% statutory federal tax rate for the years ended December 31, 2017, 2016 and 2015 consisted of:

Years Ended December 31, (Millions)	2017	2016	2015
Tax expense at federal statutory rate	\$ 43	\$ 353	\$ 106
Depreciation and amortization not normalized	9	61	15
Investment tax credit amortization	(1)	(1)	(1)
Tax return related adjustments	7	(2)	6
Production tax credits	(53)	(38)	(42)
Tax equity financing arrangements	(10)	(27)	(42)
Federal tax rate impact on held for sale classification	82	—	—
State tax (benefit) expense, net of federal benefit	(40)	7	(25)
Tax Act - remeasurement	(328)	—	—
Non-deductible acquisition costs	—	—	9
Other, net	32	24	3
Total Income Tax (Benefit) Expense	\$ (259)	\$ 377	\$ 29

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Deferred tax assets and liabilities as of December 31, 2017 and 2016 consisted of:

As of December 31, (Millions)	2017	2016
Non-current Deferred Income Tax Liabilities (Assets)		
Property related	\$ 3,543	\$ 5,195
Unfunded future income taxes	75	216
Federal and state tax credits	(574)	(417)
Accumulated deferred investment tax credits	14	14
Federal and state NOL's	(975)	(1,397)
Joint ventures/partnerships	302	565
Nontaxable grant revenue	(449)	(581)
Pension and other post-retirement benefits	(33)	52
Tax Act - tax on regulatory remeasurement	(401)	—
Other	(58)	(223)
Non-current Deferred Income Tax Liabilities	1,444	3,424
Add: Valuation allowance	21	31
Total Non-current Deferred Income Tax Liabilities	1,465	3,455
Less amounts classified as regulatory liabilities		
Non-current deferred income taxes	13	565
Non-current Deferred Income Tax Liabilities	\$ 1,452	\$ 2,890
Deferred tax assets	\$ 2,490	\$ 2,617
Deferred tax liabilities	3,955	6,072
Net Accumulated Deferred Income Tax Liabilities	\$ 1,465	\$ 3,455

Valuation allowances are recorded to reduce deferred tax assets when it is more likely than not that all or a portion of a tax benefit will not be realized. The valuation allowance for deferred tax assets as of December 31, 2017 and 2016 was \$21 million and \$31 million, respectively. Valuation allowances have been established on various state net operating losses and tax credit carryforwards. The Company has not recorded a valuation allowance on its federal net operating losses or tax credit carryforwards. The \$10 million decrease (net of federal benefit) in valuation allowance was primarily driven by a reduction of \$15.9 million for Connecticut general business credits resulting from a change in state tax law, an increase of \$8.5 million for additional valuation on state net operating losses, a release of \$5.3 million in Maine super credits, offset by an increase of \$3.0 million resulting from the change in corporate tax rate from 35% to 21%, reducing the federal benefit of state taxes.

The reconciliation of unrecognized income tax benefits for the years ended December 31, 2017, 2016 and 2015 consisted of:

Years ended December 31, (Millions)	2017	2016	2015
Beginning Balance	\$ 40	\$ 36	\$ 38
Increases for tax positions related to prior years	23	8	1
Decreases for tax positions related to prior years	(16)	(4)	—
Reduction for tax position related to settlements with taxing authorities	(2)	—	(3)
Ending Balance	\$ 45	\$ 40	\$ 36

Unrecognized income tax benefits represent income tax positions taken on income tax returns but not yet recognized in the consolidated financial statements. The accounting guidance for uncertainty in income taxes provides that the financial effects of a tax position shall initially be recognized when it is more likely than not based on the technical merits the position will be sustained upon examination, assuming the position will be audited and the taxing authority has full knowledge of all relevant information.

Accruals for interest and penalties on tax reserves were \$0.4 million, \$2 million, and \$2 million for the years ended December 31, 2017, 2016 and 2015, respectively. If recognized, \$14 million of the total gross unrecognized tax benefits would affect the effective tax rate.

It is estimated that no unrecognized tax benefits are anticipated to result in a net increase or decrease within 12 months of December 31, 2017.

AVANGRID and its subsidiaries, without ARHI, have been audited for the federal tax years 1998 through 2009. The results of these audits, net of reserves already provided, were immaterial. Tax years 2010 and forward are open for potential federal adjustments. All New York state returns, which were filed without ARHI, are closed through 2011 and Maine state returns are closed through 2015.

All federal tax returns filed by ARHI from the periods ended March 31, 2004, to December 31, 2009, are closed for adjustment. Generally, the adjustment period for the individual states we filed in is at least as long as the federal period.

As of December 31, 2017, UIL is subject to audit of its federal tax return for years 2013 and 2014. UIL income tax years 2010 through 2014 are open and subject to Connecticut and Massachusetts audit.

As of December 31, 2017, we had federal tax net operating losses of \$3.6 billion, federal renewable energy and investment tax credits, federal R&D tax credits and other federal credits of \$404 million, state tax net operating losses of \$231 million in several jurisdictions and miscellaneous state tax credits of \$37 million available to carry forward and reduce future income tax liabilities. For state purposes, we recognized a valuation allowance of \$21 million. The federal net operating losses begin to expire in 2028, while the federal tax credits begin to expire in 2023. The more significant state net operating losses begin to expire in 2021.

U
U

Note 15. Post-retirement and Similar Obligations

Networks has funded noncontributory defined benefit pension plans that cover the majority of Networks employees. The plans provide defined benefits based on years of service and final average salary for employees hired before 2002. Most employees hired in 2002, or later based upon the plan, are covered under a cash balance plan or formula where their benefit accumulates based on a percentage of annual salary and credited interest. During 2013, Networks announced that they would discontinue, effective December 31, 2013, the cash balance accruals for all non-union employees covered under the cash balance plans or formula. At the same time, the plans were closed to newly-hired non-union employees. The plans had been closed to newly-hired union employees in prior years. CMP's unionized employees covered under the cash balance plans ceased to receive accruals as of December 31, 2014. NYSEG's unionized employees covered under the cash balance plans ceased to receive accruals as of December 31, 2015. Their earned balances will continue to accrue interest but will no longer be increased by a flat dollar amount or percentage of pay, as defined by the plan. Instead, they will receive a contribution to their account under their respective company's defined contribution plan. There was no change to the defined benefit plans for employees covered under the plans that provide defined benefits based on years of service and final average salary. Employees not participating in a defined benefit plan are eligible to participate in an enhanced 401(k) plan.

Networks has other postretirement health care benefit plans covering the majority of Networks employees. The plans were closed to newly-hired non-union employees at the end of 2010. The plans had been closed to union employees in prior years. The pre-Medicare-eligible healthcare plans are contributory and participants' contributions are adjusted annually. Networks average contribution to these plans is limited at a level determined in prior periods. Except for a small group of "grandfathered" retirees, all Medicare eligible retirees that choose to participate are provided with a subsidy through a Health Reimbursement Account (HRA) to purchase coverage on the individual market.

With the acquisition of UIL, Networks also includes pension and other postretirement plans of UIL operating utility companies. The UI pension plans cover about one half of employees of UIL. The plan was closed to newly-hired employees in 2005. UI also has a non-qualified supplemental pension plan for certain employees.

The Regulated Gas Companies in Connecticut and Massachusetts have multiple qualified pension plans covering a majority of their union and management employees. The union plans are all closed to new hires, and the nonunion plans were closed as of December 31, 2017. These entities also have non-qualified supplemental pension plans for certain employees and retirees. The qualified pension plans are traditional defined benefit plans or cash balance plans for those hired on or after specified dates. In some cases, neither of these plans is offered to new employees and have been replaced with enhanced 401(k) plans for those hired on or after specified dates.

In addition to providing pension benefits, UI also provides other postretirement benefits, consisting principally of health care and life insurance benefits, for retired employees and their dependents. The healthcare plans are contributory and participants' contributions are adjusted annually. For Medicare eligible non-union retirees, UI provides a subsidy through a Health Reimbursement Account for retirees to purchase coverage on the individual market. Medicare eligible union retirees have the option of receiving a subsidy through an HRA or paying contributions and participating in company-sponsored retiree health plans.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

SCG and CNG also have plans providing other postretirement benefits for a majority of their employees. These benefits consist primarily of health care, prescription drug and life insurance benefits, for retired employees and their dependents. For Medicare eligible non-union retirees, SCG and CNG provide a subsidy through a HRA for retirees to purchase coverage on the individual market. Medicare eligible union retirees have the option of receiving a subsidy through an HRA or paying contributions and participating in company-sponsored retiree health plans.

ARHI has funded defined benefit pension plans for eligible employees hired prior to January 1, 2008. The benefit is based on participant's age, service, and five years average pay at the time of the freeze date of April 30, 2011. ARHI has other postretirement health care benefit plans covering eligible retirees and employees hired prior to January 1, 2008. Health and life insurance rates are based on age and service points at the time of retirement.

Obligations and funded status of Networks and ARHI as of December 31, 2017 and 2016 consisted of:

As of December 31, (Millions)	Pension Benefits		Postretirement Benefits	
	2017	2016	2017	2016
Change in benefit obligation				
Benefit obligation as of January 1,	\$ 3,448	\$ 3,509	\$ 495	\$ 525
Service cost	42	44	4	5
Interest cost	139	142	22	21

Benefit Obligation as of December 31,	3,593	3,448	491	495
Change in plan assets				
Fair value of plan assets as of January 1,	2,672	2,664	160	162
Actual return on plan assets	382	169	17	11
Employer contributions	33	43	20	30
Plan participants' contributions	—	—	7	7
Benefits paid	(219)	(204)	(39)	(39)
Reclassified to held for sale	(3)	—	—	—
Withdrawals from VEBA	—	—	—	(11)
Fair Value of Plan Assets as of December 31,	2,865	2,672	165	160
Funded Status as of December 31,	\$ (728)	\$ (776)	\$ (326)	\$ (335)

Amounts recognized as of December 31, 2017 and 2016 consisted of:

As of December 31, (Millions)	Pension Benefits		Postretirement Benefits	
	2017	2016	2017	2016
Current liabilities	\$ —	\$ —	\$ (5)	\$ (5)
Non-current liabilities	(728)	(776)	(321)	(330)
Total	\$ (728)	\$ (776)	\$ (326)	\$ (335)

Amounts recognized in OCI for ARHI for the years ended December 31, 2017, 2016 and 2015, consisted of:

Years Ended December 31, (Millions)	Pension Benefits			Postretirement Benefits		
	2017	2016	2015	2017	2016	2015
Net (gain) loss	\$ 25	\$ 23	\$ 25	\$ (4)	\$ (3)	\$ (1)

We have determined that all Networks' regulated operating companies are allowed to defer as regulatory assets or regulatory liabilities items that would have otherwise been recorded in accumulated OCI pursuant to the accounting requirements concerning defined benefit pension and other postretirement plans.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Amounts recognized as regulatory assets or regulatory liabilities for Networks for the years ended December 31, 2017, 2016 and 2015 for Networks consisted of:

Years Ended December 31, (Millions)	Pension Benefits			Postretirement Benefits		
	2017	2016	2015	2017	2016	2015
Net loss	\$ 737	\$ 860	\$ 994	\$ 35	\$ 44	\$ 76
Prior service cost (credit)	6	7	9	(31)	(40)	(49)

Our accumulated benefit obligation for all defined benefit pension plans of Networks and ARHI was \$3,363 million and \$3,214 million as of December 31, 2017 and 2016, respectively. CMP's and NYSEG's postretirement benefits were partially funded as of December 31, 2017 and 2016.

The projected benefit obligation (PBO) and the accumulated benefit obligation (ABO) exceeded the fair value of pension plan assets for all plans of Networks and ARHI as of December 31, 2017 and 2016.

The aggregate PBO and ABO and the fair value of plan assets for underfunded plans of Networks and ARHI as of December 31, 2017 and 2016 consisted of:

As of December 31, (Millions)	PBO in excess of plan assets	
	2017	2016
Projected benefit obligation	\$ 3,593	\$ 3,448
Fair value of plan assets	2,865	2,672

As of December 31, (Millions)	ABO in excess of plan assets	
	2017	2016
Accumulated benefit obligation	\$ 3,363	\$ 3,214
Fair value of plan assets	2,865	2,672

Components of Networks' net periodic benefit cost and other changes in plan assets and benefit obligations recognized in income and regulatory assets and liabilities for the years ended December 31, 2017, 2016 and 2015 consisted of:

(Millions)	Pension Benefits			Postretirement Benefits		
For the years ended December 31,	2017	2016	2015	2017	2016	2015

Amortization of net loss	(1)	(1)	(1)	—	—	—
Total Other Changes	1	(1)	3	(1)	(2)	(8)
Total Recognized	\$ 2	\$ 1	\$ 4	\$ —	\$ (1)	\$ (6)

The net periodic benefit cost for postretirement benefits represents the amount expensed for providing health care benefits to retirees and their eligible dependents. We include the net periodic benefit cost in other operating expenses net of capitalized portion.

Amounts expected to be amortized from regulatory assets or liabilities into net periodic benefit cost for the year ending December 31, 2018 consists of:

(Millions)	Pension Benefits	Postretirement Benefits
Estimated net loss	\$ 150	\$ 5
Estimated prior service cost (benefit)	1	(9)

Amounts expected to be amortized from OCI into net periodic benefit cost for the year ending December 31, 2018 consists of:

(Millions)	Pension Benefits	Postretirement Benefits
Estimated net loss	\$ 1	\$ —
Estimated prior service cost (benefit)	—	—

We expect that no pension benefit or postretirement benefit plan assets will be returned to us during the year ending December 31, 2018.

The weighted-average assumptions used to determine benefit obligations for Networks and ARHI as of December 31, 2017 and 2016 consisted of:

As of December 31,	Pension Benefits		Postretirement Benefits	
	2017	2016	2017	2016
Discount rate - Networks	3.63% / 3.80%	4.12% / 4.24%	3.63% / 3.80%	4.12% / 4.24%
Discount rate - ARHI	3.80%	3.81%	3.80%	3.81%
Rate of compensation increase - Networks	3.50% - 4.20%	3.50% - 4.20%	—	—

The discount rate is the rate at which the benefit obligations could presently be effectively settled. We determined the discount rates by developing yield curves derived from a portfolio of high grade noncallable bonds with yields that closely match the duration of the expected cash flows of our benefit obligations.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

The weighted-average assumptions used to determine net periodic benefit cost for Networks and ARHI for the years ended December 31, 2017, 2016 and 2015 consisted of:

Years Ended December 31,	Pension Benefits			Postretirement Benefits		
	2017	2016	2015	2017	2016	2015
Discount rate - Networks	4.12% / 4.24%	4.12% / 4.24%	3.80% / 4.24%	4.12% / 4.24%	4.12% / 4.24%	3.80% / 4.24%
Discount rate - ARHI	3.81%	3.90%	3.90%	3.81%	3.90%	3.90%
Expected long-term return on plan assets - Networks	7.00% / 7.50%	7.40% / 7.75%	7.50%	6.13%	7.16%	—
Expected long-term return on plan assets - ARHI	5.50%	5.50%	5.50%	5.50%	5.50%	5.75%
Expected long-term return on plan assets - nontaxable trust - Networks	—	—	—	6.50%	7.00%	7.50%
Expected long-term return on plan assets - taxable trust - Networks	—	—	—	4.25%	4.50%	5.00%
Rate of compensation increase - Networks	3.50% - 4.20%	3.50% - 4.20%	4.10%	—	—	—

We developed our expected long-term rate of return on plan assets assumption based on a review of long-term historical returns for the major asset classes, the target asset allocations, and the effect of rebalancing of plan assets discussed below. Our analysis considered current capital market conditions and projected conditions. NYSEG, RG&E and UIL amortize unrecognized actuarial gains and losses over ten years from the time they are incurred as required by the NYSPSC, PURA and DPU. Our other companies use the standard amortization methodology under which amounts in excess of ten-percent of the greater of the projected benefit obligation or market related value are amortized over the plan participants' average remaining service to retirement.

Assumed health care cost trend rates used to determine benefit obligations as of December 31, 2017 and 2016 consisted of:

As of December 31,	2017	2016
Health care cost trend rate assumed for next year - Networks	6.75%/8.50%	7.00%/9.00%
Health care cost trend rate assumed for next year - ARHI	7.50%/8.50%	6.75%/8.50%
Rate to which cost trend rate is assumed to decline (ultimate trend rate) - Networks	4.50%	4.50%
Rate to which cost trend rate is assumed to decline (ultimate trend rate) - ARHI	4.50%	4.50%
Year that the rate reaches the ultimate trend rate - Networks	2026 / 2028	2026 / 2028
Year that the rate reaches the ultimate trend rate - ARHI	2028 / 2030	2026 / 2028

The effects of a one-percent change in the assumed health care cost trend rates would have the following effects:

(Millions)	1% Increase	1% Decrease
Effect on total of service and interest cost	\$ 1	\$ (1)
Effect on postretirement benefit obligation	\$ 15	\$ (12)

Contributions

We make annual contributions in accordance with our funding policy of not less than the minimum amounts as required by applicable regulations. Networks expect to contribute \$48 million to the pension benefit plans during 2018.

Estimated Future Benefit Payments

Expected benefit payments and Medicare Prescription Drug, Improvement and Modernization Act of 2003 subsidy receipts reflecting expected future service for Networks and ARHI as of December 31, 2017 consisted of:

(Millions)	Pension Benefits	Postretirement Benefits	Medicare Act Subsidy Receipts
2018	\$ 234	\$ 33	\$ —
2019	215	33	—
2020	218	33	—
2021	221	33	—
2022	225	33	—
2023 - 2027	1,122	165	4

Non-Qualified Pension Plans

Networks and ARHI also sponsor various unfunded pension plans for certain current employees, former employees and former directors. The total liability for these plans, which is included in Other current and Other Non-current Liabilities, was \$55 million and \$57 million at December 31, 2017 and 2016, respectively.

Plan Assets

Our pension benefits plan assets for Networks and ARHI are held in three master trusts. This provides for a uniform investment manager lineup and an efficient, cost effective means of allocating expenses and investment performance to each plan. Our primary investment objective is to ensure that current and future benefit obligations are adequately funded and with volatility commensurate with our risk tolerance. Preservation of capital and achievement of sufficient total return to fund accrued and future benefits obligations are of highest concern. Our primary means for achieving capital preservation is through diversification of the trusts' investments while avoiding significant concentrations of risk in any one area of the securities markets. Further diversification is achieved within each asset group through utilizing multiple asset managers and systematic allocation to various asset classes and providing broad exposure to different segments of the equity, fixed income, and alternative investment markets.

Networks' asset allocation policy is the most important consideration in achieving our objective of superior investment returns while minimizing risk. We have established a target asset allocation policy within allowable ranges for our pension benefits plan assets within broad categories of asset classes made up of Return-Seeking and Liability-Hedging investments. Within the Return-Seeking category, we have targets of 35%-54% in equity securities and 3%-20% in equity alternative investments. The Liability-Hedging asset class has a target allocation percentage of 43%-45%. Return-Seeking investments generally consist of domestic, international, global, and emerging market equities invested in companies across all market capitalization ranges. Return-Seeking assets also include investments in real estate, absolute return, and strategic markets. Liability-Hedging investments generally consist of long-term corporate bonds, annuity contracts, long-term treasury STRIPS, and opportunistic fixed income investments. Systematic rebalancing within the target ranges increases the probability that the annualized return on the investments will be enhanced, while realizing lower overall risk, should any asset categories drift outside their specified ranges.

ARHI's investment portfolio contains a diversified blend of equity, fixed income, and other investments. In ARHI's asset allocation policy we have established targets of 33% for equity investments, 50% for fixed income investments and 17% for other assets classes. Equity investments are diversified across U.S. and non-U.S. stocks, investment styles, and market capitalization ranges. Fixed income investments are primarily invested in U.S. bonds and may also include some non-U.S. bonds. Other asset classes, including real estate, absolute return, and real return, are used to enhance long-term returns while improving portfolio diversification. We primarily minimize the risk of large losses through diversification but also through monitoring and managing other aspects of risk through quarterly investment portfolio reviews, annual liability measurements, and periodic asset and liability studies.

Valuation Techniques

We value our pension benefits plan assets as follows:

- Cash and cash equivalents - Level 1: at cost, plus accrued interest, which approximates fair value. Level 2: proprietary cash associated with other investments, based on yields currently available on comparable securities of issuers with similar credit ratings.
- U.S. government securities, common stocks and registered investment companies - at the closing price reported in the active market in which the security is traded.
- Corporate bonds - based on yields currently available on comparable securities of issuers with similar credit ratings.
- Preferred stocks - at the closing price reported in the active market in which the individual investment is traded.
- Equity commingled funds – the fair value is primarily derived from the quoted prices in active markets of the underlying securities. Because the fund shares are offered to a limited group of investors, they are not considered to be traded in an active market.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

- Other investments, principally annuity and fixed income - Level 1: at the closing price reported in the active market in which the individual investment is traded. Level 2: based on yields currently available on comparable securities of issuers with similar credit ratings. Level 3: when quoted prices are not available for identical or similar instruments, under a discounted cash flows approach that maximizes observable inputs such as current yields of similar instruments but includes adjustments for certain risks that may not be observable such as credit and liquidity risks.
- Other investments measured at net asset value (NAV) – alternative investments, such as private equity and real estate oriented investments, partnership/joint ventures and hedge funds are valued using the NAV as a practical expedient.

Our postretirement benefits plan assets are held with trustees in multiple voluntary employees' beneficiary association (VEBA) and 401(h) arrangements and are invested among and within various asset classes to achieve sufficient diversification in accordance with our risk tolerance. This is achieved for our postretirement benefits plan assets through the utilization of multiple institutional mutual and money market funds, providing exposure to different segments of the fixed income, equity and short-term cash markets. Approximately 37% of the postretirement benefits plan assets are invested in VEBA and 401(h) arrangements that are not subject to income taxes with the remainder being invested in arrangements subject to income taxes.

Networks has established a target asset allocation policy within allowable ranges for postretirement benefits plan assets of 46%-66% for equity securities, 30%-31% for fixed income, and 3%-23% for all other investment types. In ARHI's asset allocation policy we have established targets of 48% in equity securities, 49% in fixed income and 3% in all other investment types. The target allocations within allowable ranges are further diversified into 27%-66% large cap domestic equities, 5% small cap domestic equities, 8% international developed market, and 6% emerging market equity securities. Fixed income investment targets and ranges are segregated into core fixed income at 24%-31%, global high yield fixed income at 4%, and international developed market debt at 3%. Other alternative investment targets are 6% for real estate, 6% for tangible assets, and 3%-11% for other funds. Systematic rebalancing within target ranges increases the probability that the annualized return on investments will be enhanced, while realizing lower overall risk, should any asset categories drift outside their specified ranges.

The fair value of other postretirement benefits plan assets, by asset category, as of December 31, 2017 consisted of:

As of December 31, 2017 (Millions)	Total	Fair Value Measurements

Total	\$ 160	\$ 118	\$ 42	\$ —

Valuation Techniques

We value our postretirement benefits plan assets as follows:

- Money market funds and mutual funds - based upon quoted market prices in active markets.
- Government bonds, and common stocks - at the closing price reported in the active market in which the security is traded.
- Corporate bonds - based on yields currently available on comparable securities of issuers with similar credit ratings.

Pension and postretirement benefit plan equity securities did not include any Iberdrola common stock as of both December 31, 2017 and 2016.

Defined contribution plans

We also have defined contribution plans defined as 401(k)s. The annual contributions made through these plans for Networks and ARHI amounted to \$36 million, \$34 million and \$17 million for 2017, 2016, and 2015 respectively.

Note 16. Equity

u

As of December 31, 2017, our share capital consisted of 500,000,000 shares of common stock authorized, 309,670,932 shares issued and 309,005,272 shares outstanding, 81.5% of which is owned by Iberdrola, each having a par value of \$0.01, for a total value of common stock of \$3 million and additional paid in capital of \$13,653 million. As of December 31, 2016, our share capital consisted of 500,000,000 shares of common stock authorized, 309,600,439 shares issued and 308,993,149 shares outstanding, 81.5% of which was owned by Iberdrola, each having a par value of \$0.01, for a total value of common stock capital of \$3 million and additional paid in of \$13,653 million. We had 485,810 and 491,459 shares of common stock held in trust and no convertible preferred shares outstanding as of December 31, 2017 and December 31, 2016, respectively. During the year ended December 31, 2017, we issued 70,493 shares of common stock and released 5,649 shares of common stock held in trust each having a par value of \$0.01. During the year ended December 31, 2016, we issued 109,357 shares of common stock and released 135,014 shares of common stock held in trust each having a par value of \$0.01.

On April 28, 2016, we entered into a repurchase agreement with J.P. Morgan Securities, LLC. (JPM), pursuant to which JPM will, from time to time, acquire, on behalf of AVANGRID, shares of common stock of AVANGRID. The purpose of the stock repurchase program is to allow AVANGRID to maintain the relative ownership percentage of Iberdrola at 81.5%. The stock repurchase program may be suspended or discontinued at any time upon notice. Out of a total of 179,850 treasury shares of common stock of AVANGRID as of December 31, 2017, 115,831 shares were repurchased during 2016 and 64,019 shares were repurchased in May 2017, all in the open market. The total cost of repurchases, including commissions, was \$8 million as of December 31, 2017.

On December 15, 2015, the board of directors approved our common stock dividend, accounted for as a stock split. The stock split, effected through a stock dividend, resulted in the issuance of 252,234,989 shares, which in addition to the 243 previously existing shares increased the total shares outstanding to 252,235,232. The stock dividend was effective upon the board of directors' approval. All share and per share information included in the consolidated financial statements has been retroactively adjusted to reflect the impact of the stock dividend.

U

Note 17. Earnings Per Share

Basic earnings per share is computed by dividing net income attributable to AVANGRID by the weighted-average number of shares of our common stock outstanding. In 2017, 2016 and 2015, while we did have securities that were dilutive, these securities did not result in a change to our earnings per share calculations for the years ended December 31, 2017, 2016 and 2015. In accordance with Accounting Standards Codification (ASC) Topic 260, Earnings per Share, we retroactively applied the stock split to prior periods presented.

The calculations of basic and diluted earnings per share attributable to AVANGRID for the years ended December 31, 2017, 2016 and 2015, consisted of:

Years Ended December 31,	2017	2016	2015
(Millions, except for number of shares and per share data)			
Numerator:			
Net income attributable to AVANGRID	\$ 381	\$ 632	\$ 273
Denominator:

Weighted average number of shares outstanding - diluted	309,661,883	309,817,322	254,605,111
<i>Earnings per share attributable to AVANGRID</i>			
Earnings Per Common Share, Basic	\$ 1.23	\$ 2.04	\$ 1.07
Earnings Per Common Share, Diluted	\$ 1.23	\$ 2.04	\$ 1.07

Note 18. Variable Interest Entities

We participate in certain partnership arrangement that qualify as variable interest entities (VIEs). These arrangements consist of tax equity financing arrangements (TEFs) and partnerships in which an investor holds a noncontrolling interest and the investor does not have substantive kick-out or participating rights.

The sale of a membership interest in the TEFs represents the sale of an equity interest in a structure that is considered in substance real estate. Under existing guidance for real estate financings, the membership interests in the TEFs we sold to the third-party investors are reflected as a financing obligation in the consolidated balance sheets. We continue to fully consolidate the TEFs' assets and liabilities in the consolidated balance sheets and to report the results of the TEFs' operations in the consolidated statements of income. The presentation reflects revenues and expenses from the TEFs' operations on a fully consolidated basis. We consolidate the TEFs based on being the primary beneficiary for these VIEs. The liabilities are increased for cash contributed by the third-party investors, interest accrued, and the federal income tax impact to the third-party investors of the allocation of taxable income. Interest is accrued on the balance using the effective interest method and the third-party investors' targeted rate of return. The balance accrued interest at an average rate of 8.4% and 5.4% as of December 31, 2017 and 2016, respectively. The liabilities are reduced by cash distributions to the third-party investors, the allocation of production tax credits to the third-party investors, and the federal income tax impact to the third-party investors of the allocation of taxable losses.

The assets and liabilities of the VIEs totaled approximately \$1,441 million and \$185 million, respectively, at December 31, 2017. As of December 31, 2016 the assets and liabilities of VIEs totaled approximately \$1,343 million and \$244 million, respectively. At December 31, 2017 and 2016, the assets and liabilities of the VIEs consisted primarily of property, plant and equipment, equity method investments and other liabilities. At December 31, 2017 and 2016, equity method investments of VIEs were approximately \$107 million and \$161 million, respectively.

At December 31, 2017, we consider Aeolus Wind Power II LLC and Aeolus Wind Power IV LLC, (collectively, Aeolus) to be TEFs. In February and November 2017, we acquired the tax equity investor's interest in other TEFs, Locust Ridge Wind Farm, LLC and Aeolus Wind Power III LLC, for \$5 million and \$15 million, respectively. These acquisitions converted the partnerships to single member limited liability companies and they no longer qualify as VIEs. Lastly, at December 31, 2017, we consider El Cabo Wind, LLC to be a VIE.

We retain a class of membership interest and day-to-day operational and management control of Aeolus, subject to investor approval of certain major decisions. The third-party investors do not receive a lien on any Aeolus assets and have no recourse against us for their upfront cash payments.

Wind power generation is subject to certain favorable tax treatments in the U.S. In order to monetize the tax benefits generated by Aeolus, we have entered into the Aeolus structured institutional partnership investment transactions related to certain wind farms. Under the Aeolus structures, we contribute certain wind assets, relating both to existing wind farms and wind farms that are being placed into operation at the time of the relevant transaction, and other parties invest in the share equity of the Aeolus limited liability holding company. As consideration for their investment, the third parties make either an upfront cash payment or a combination of upfront cash and issuance of fixed and contingent notes.

The third party investors receive a disproportionate amount of the profit or loss, cash distributions and tax benefits resulting from the wind farm energy generation until the investor recovers its investment and achieves a cumulative annual after-tax return. Once this target return is met, the relative sharing of profit or loss, cash distributions and taxable income or loss between the Company and the third party investor flips, with the Company taking a disproportionate share of such amounts thereafter. We also have a call option to acquire the third party investors' membership interest within a defined time period after this target return is met.

Our Aeolus interests are not subject to any rights of investors that may restrict our ability to access or use the assets or to settle any existing liabilities associated with the interests.

Note 19. Grants, Government Incentives and Deferred Income

The changes in deferred income as of December 31, 2017 and 2016 consisted of:

(Millions)	Government grants	Other deferred income	Total
As of December 31, 2015	\$ 1,529	\$ 24	\$ 1,553
Additions	—	—	—
Recognized in income	(68)	(2)	(70)
As of December 31, 2016	\$ 1,461	\$ 22	\$ 1,483
Additions	33	2	35
Reclassified to held for sale	—	(2)	(2)
Recognized in income	(67)	(3)	(70)
As of December 31, 2017	\$ 1,427	\$ 19	\$ 1,446

Within deferred income we classify grants we received under Section 1603 of the American Recovery and Reinvestment Act of 2009, where the United States Department of Treasury (DOT) provides eligible parties the option of claiming grants for specified energy property in lieu of tax credits, which we claimed for the majority of our qualifying properties. Deferred income has been recorded for the grant amounts and is amortized as an offset against depreciation expense using the straight-line method over the estimated useful life of the associated property to which the grants apply. We recognize a net deferred tax asset for the book to tax basis differences related to the property for income tax purposes within the nontaxable grant revenue deferred income tax liabilities (see Note 14 – Income Taxes).

We are required to comply with certain terms and conditions applicable to each grant and, if a disqualifying event should occur as specified in the grant's terms and conditions, we are required to repay the grant funds to the DOT. We believe we are in compliance with each grant's terms and conditions as of December 31, 2017 and 2016.

Other deferred income relates predominantly to gas storage transactions where revenues are recognized as services are provided. As of December 31, 2017, we reclassified \$2 million of other deferred income to liabilities held for sale in the consolidated balance sheet (see Note 25 - Assets Held for Sale). There was no amount classified as liabilities held for sale as of December 31, 2016.

U

Note 20. Equity method investments

We have a 50-50 joint venture with Shell Wind Energy, Inc., which owns and operates a 162- megawatt (MW) wind farm located in southeast Colorado (Colorado Wind Ventures LLC), which commenced operations in January 2004. We account for this venture under the equity method of accounting. The carrying amount of this investment was \$18 million and \$45 million as of December 31, 2017 and 2016, respectively. During the year ended December 31, 2017 we recorded an OTTI of \$49 million on this investment. The fair value for OTTI calculation purposes was determined using Level 3 inputs and was estimated based on a discounted cash flows valuation technique utilizing the net amount of estimated future cash inflows and outflows related to the respective PPA.

We have two 50-50 joint ventures with Horizon Wind Energy, LLC, which own and operate the Flat Rock Windpower LLC and the Flat Rock Wind Power II LLC wind farms located in upstate New York. Flat Rock Wind Power LLC, which commenced operations in January 2006, has a 231-MW capacity. Flat Rock Wind Power II LLC commenced operations in September 2007 and has a 91-MW capacity. We account for the Flat Rock joint ventures under the equity method of accounting. The carrying amount of these investments was \$120 million and \$128 million for Flat Rock Wind Power LLC, and \$57 million and \$64 million for Flat Rock Wind Power II LLC, as of December 31, 2017 and 2016, respectively.

In 2017 we also acquired a 50% ownership in Vineyard Wind, LLC joint venture from Copenhagen Infrastructure Partners to build and operate the offshore wind facility to be developed off of Martha's Vineyard with a nameplate capacity of approximately 1,600 MW. We account for this venture under the equity method of accounting. The carrying amount of this investment was \$10 million as of December 31, 2017.

Through UI, we are party to a 50-50 joint venture with NRG affiliates in GenConn, which operates two peaking generation plants in Connecticut. The investment in GenConn is being accounted for as an equity investment, the carrying value of which was \$124 million and \$128 million as of December 31, 2017 and 2016, respectively.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Networks holds an approximate 20% ownership interest in New York TransCo. New York TransCo was established by the New York transmission utilities to develop, own, and operate electric transmission in New York. The investment in New York TransCo is being accounted for as an equity investment, the carrying value of which was \$23 million and \$22 million as of December 31, 2017 and 2016, respectively (See also Note 23).

None of our joint ventures have any contingent liabilities or capital commitments. Distributions received from equity method investments amounted to \$20 million, \$20 million, and \$12 million for the years ended December 31, 2017, 2016, and 2015 respectively, which are reflected as either distributions of earnings or as returns of capital in the operating and investing sections of the consolidated statements of cash flows, respectively. In addition, during the year ended December 31, 2017, we received \$3.5 million of distributions in RECs from our equity method investments. As of December 31, 2017, there was an immaterial amount of undistributed earnings from our equity method investments.

During the year ended December 31, 2016, we completed the sale of our interest in Iroquois Gas Transmission System L.P. (Iroquois) to an unaffiliated third party for proceeds of \$53.8 million and an impact to net income of \$19.0 million. The carrying value of this equity method investment was \$22 million.

U

Note 21. Other Financial Statements Items

Other income

Other income for the years ended December 31, 2017, 2016 and 2015 consisted of:

Years ended December 31, (Millions)	2017	2016	2015
Allowance for funds used during construction	\$ 36	\$ 26	\$ 21
Carrying costs on regulatory assets	11	14	28
Other	11	36	7
Total Other Income	\$ 58	\$ 76	\$ 56

In 2016 included in "Other" is a gain of \$33 million resulted from the sale of our interest in Iroquois in 2016 (See Note 20).

Accounts Receivable

Accounts receivable as of December 31, 2017 and 2016 consisted of:

As of December 31, (Millions)	2017	2016
Trade receivables	\$ 1,104	\$ 1,183
Allowance for bad debts	(64)	(64)
Total Accounts Receivable	\$ 1,040	\$ 1,119

The allowance for bad debts relates entirely to gas and electricity consumers and comprises an amount that has been reserved following historical averages of loss percentages.

The change in the allowance for bad debts as of December 31, 2017 and 2016 consisted of:

(Millions)	
As of December 31, 2014	\$ 49
Current period provision	46
Write-off as uncollectible	(33)
As of December 31, 2015	\$ 62
Current period provision	48
Write-off as uncollectible	(46)
As of December 31, 2016	\$ 64
Current period provision	69
Write-off as uncollectible	(69)
As of December 31, 2017	\$ 64

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

DPA receivable balances were \$55 million and \$54 million as of December 31, 2017 and 2016, respectively.

Prepayments and Other Current Assets

Prepayments and other current assets as of December 31, 2017 and 2016 consisted of:

As of December 31, (Millions)	2017	2016
Prepaid other taxes	\$ 194	\$ 153
Broker margin and collateral accounts	32	32
Loans to third parties	2	3
Fixed-term deposits	—	3
Other pledged deposits	9	8
Prepaid expenses	33	53
Other	3	3
Total	\$ 273	\$ 255

Other Non-current Assets

Included in “Other non-current assets” as of December 31, 2016, are \$186 million of safe harbor turbine payments made for production tax credit qualification purposes.

Other current liabilities

Other current liabilities as of December 31, 2017 and 2016 consisted of:

As of December 31, (Millions)	2017	2016
Advances received	\$ 113	\$ 107
Accrued salaries	87	84
Short-term environmental provisions	69	34
Collateral deposits received	43	45
Pension and other postretirement	5	5
Other	13	4
Total	\$ 330	\$ 279

Note 22. Segment Information

Our segment reporting structure uses our management reporting structure as its foundation to reflect how AVANGRID manages the business internally and is organized by type of business. We report our financial performance based on the following three reportable segments:

- Networks: including all the energy transmission and distribution activities, and any other regulated activity originating in New York and Maine, and regulated electric distribution, electric transmission and gas distribution activities originating in Connecticut and Massachusetts. The Networks reportable segment includes eight rate regulated operating segments. These operating segments generally offer the same services distributed in similar fashions, have the same types of customers, have similar long-term economic characteristics and are subject to similar regulatory requirements, allowing these operations to be aggregated into one reportable segment.
- Renewables: activities relating to renewable energy, mainly wind energy generation and trading related with such activities.
- Gas: including gas trading and storage businesses carried on by the AVANGRID Group

Products and services are sold between reportable segments and affiliate companies at cost. The chief operating decision maker evaluates segment performance based on segment adjusted EBITDA (Earnings Before Interest, Taxes, Depreciation and Amortization) defined as net income adding back net income attributable to other non-controlling interests, income tax expense, impairment, depreciation and amortization and interest expense net of capitalization, and then subtracting other income and (expense) and earnings

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

from equity method investments per segment. Segment income, expense, and assets presented in the accompanying tables include all intercompany transactions that are eliminated in the consolidated financial statements.

Segment information as of and for the year ended December 31, 2017 consisted of:

For the year ended December 31, 2017 (Millions)	Networks	Renewables	Gas	Other(a)	AVANGRID Consolidated
Revenue - external	\$ 4,950	\$ 1,038	\$ (26)	\$ 1	\$ 5,963
Revenue - intersegment	11	9	41	(61)	—
Impairment	—	—	642	—	642
Depreciation and amortization	474	325	25	—	824
Operating income (loss)	994	92	(701)	—	385
Adjusted EBITDA	1,468	417	(34)	—	1,851
Earnings (loss) from equity method investments	15	(55)	—	—	(40)
Interest expense, net of capitalization	244	28	24	(16)	280
Income tax expense (benefit)	316	(320)	(212)	(43)	(259)
Capital expenditures	1,305	1,097	7	7	2,416
As of December 31, 2017					
Property, plant and equipment	13,876	8,786	—	7	22,669
Equity method investments	147	205	—	—	352
Total assets	\$ 21,411	\$ 11,308	\$ 383	\$ (1,431)	\$ 31,671

(a) Does not represent a segment. It mainly includes Corporate and intercompany eliminations.

Included in revenue-external for the year ended December 31, 2017 are: \$3,585 million from regulated electric operations, \$1,375 million from regulated gas operations and \$(10) million from other operations of Networks; \$1,038 million from renewable energy generation of Renewables; \$(25) million from gas storage services and \$1 million from gas trading operations of Gas.

AVANGRID made a net non-cash capital contribution of \$921 million in Renewables in 2017, which was used by Renewables to settle outstanding intercompany debt payables of Gas segment accumulated prior to August 2017. The elimination of this activity between Renewables and Gas is included in Other at December 31, 2017.

Segment information as of and for the year ended December 31, 2016 consisted of:

For the year ended December 31, 2016 (Millions)	Networks	Renewables	Gas	Other(a)	AVANGRID Consolidated
Revenue - external	\$ 5,027	\$ 1,000	\$ (7)	\$ (2)	\$ 6,018
Revenue - intersegment	3	15	39	(57)	—
Depreciation and amortization	466	313	25	—	804

Total assets	\$ 20,753	\$ 9,884	\$ 1,124	\$ (452)	\$ 31,309

(a) Does not represent a segment. It mainly includes Corporate and intercompany eliminations.

Included in revenue-external for the year ended December 31, 2016 are: \$3,686 million from regulated electric operations, \$1,306 million from regulated gas operations and \$35 million from other operations of Networks; \$1,000 million from renewable energy generation of Renewables; \$7 million from gas storage services and \$(14) million from gas trading operations of Gas.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Segment information as of and for the year ended December 31, 2015 consisted of:

For the year ended December 31, 2015 (Millions)	Networks	Renewables	Gas	Other(a)	AVANGRID Consolidated
Revenue - external	\$ 3,386	\$ 1,051	\$ (71)	\$ 1	\$ 4,367
Revenue - intersegment	—	16	52	(68)	—
Impairment	—	12	—	—	12
Depreciation and amortization	328	344	23	—	695
Operating income (loss) from continuing operations	537	100	(85)	(39)	513
Adjusted EBITDA	865	456	(62)	(39)	1,220
Earnings from equity method investments	1	(5)	—	4	—
Interest expense, net of capitalization	227	54	31	(45)	267
Income tax expense (benefit)	146	8	(44)	(81)	29
Capital expenditures	773	304	5	—	1,082
As of December 31, 2015					
Property, plant and equipment	12,363	7,835	513	—	20,711
Equity method investments	110	253	—	22	385
Total assets	\$ 20,126	\$ 10,685	\$ 1,265	\$ (1,333)	\$ 30,743

(a) Does not represent a segment. It mainly includes Corporate and intercompany eliminations.

Included in revenue-external for the year ended December 31, 2015 are: \$2,779 million from regulated electric operations, \$605 million from regulated gas operations and \$2 million from other operations of Networks; \$1,051 million from renewable energy generation of Renewables; \$21 million from gas storage services and \$(92) million from gas trading operations of Gas.

Reconciliation of consolidated Adjusted EBITDA to the AVANGRID consolidated Net Income for the years ended December 31, 2017, 2016 and 2015, respectively, is as follows:

Years Ended December 31, (Millions)	2017	2016	2015
Consolidated Adjusted EBITDA	\$ 1,851	\$ 1,998	\$ 1,220
Less:			
Impairment	642	—	12
Depreciation and amortization	824	804	695
Interest expense, net of capitalization	280	268	267
Income tax expense	(259)	377	29
Add:			
Other income	58	76	56
Earnings from equity method investments	(40)	7	—
Consolidated Net Income	\$ 382	\$ 632	\$ 273

Note 23. Related Party Transactions

We engage in related party transactions that are generally billed at cost and in accordance with applicable state and federal commission regulations.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Related party transactions for the years ended December 31, 2017, 2016 and 2015, respectively, consisted of:

Years Ended December 31,	2017		2016		2015	
(Millions)	Sales To	Purchases From	Sales To	Purchases From	Sales To	Purchases From
Iberdrola Financiación, S.A.	\$ —	\$ (2)	\$ —	\$ (2)	\$ —	\$ (1)
Iberdrola Renovables Energía, S.L.	—	(9)	—	(8)	—	(9)
Iberdrola Canada Energy Services, Ltd	—	(33)	—	(37)	—	(55)
Iberdrola, S.A.	1	(36)	—	(31)	—	(35)
Iberdrola Energía Monterrey, S.A. de C.V.	46	—	18	—	—	—
Other	1	(1)	3	(1)	3	(2)

In addition to the statements of income items above we made purchases of turbines for wind farms from Siemens-Gamesa, in which Iberdrola has an 8.1% ownership. The amounts capitalized for these transactions were \$266 million and \$269 million for the years ended December 31, 2017 and 2016, respectively. In addition, included in “Other non-current assets” were \$92 million of safe harbor turbine payments we made to Siemens-Gamesa as of December 31, 2016 (see Note 21).

Related party balances as of December 31, 2017 and 2016, respectively, consisted of:

As of December 31,	2017		2016	
(Millions)	Owed By	Owed To	Owed By	Owed To
Iberdrola Canada Energy Services, Ltd	\$ —	\$ (31)	\$ —	\$ (14)
Siemens-Gamesa	2	(51)	1	(181)
Iberdrola, S.A.	1	(32)	—	(30)
Iberdrola Renovables Energía, S.L.	—	—	2	—
Iberdrola Energía Monterrey, S.A. de C.V.	1	—	11	—
Other	6	(4)	11	(3)

Transactions with our parent company, Iberdrola, relate predominantly to the provision and allocation of corporate services and management fees. Also included within the Purchases From category are charges for credit support relating to guarantees Iberdrola has provided to third parties guaranteeing our performance. All costs that can be specifically allocated, to the extent possible, are charged directly to the company receiving such services. In situations when Iberdrola corporate services are provided to two or more companies of AVANGRID any costs remaining after direct charge are allocated using agreed upon cost allocation methods designed to allocate those costs. We believe that the allocation method used is reasonable.

Transactions with Iberdrola Canada Energy Services (ICES) predominantly relate to the purchase of gas for ARHI’s gas-fired generation facility at Klamath, Oregon. Included in the amounts owed to ICES is the balance of notes payable of \$29 million and \$10 million as of December 31, 2017 and December 31, 2016, respectively.

Transactions with Iberdrola Energía Monterrey predominantly relate to the sale of gas by Gas for the power generation plant in Monterrey, Mexico.

There have been no guarantees provided or received for any related party receivables or payables. These balances are unsecured and are typically settled in cash. Interest is not charged on regular business transactions but is charged on outstanding loan balances. There have been no impairments or provisions made against any affiliated balances, other than a \$10 million write-off related to an arrangement to purchase turbines from Siemens-Gamesa, which was recorded in impairment in the consolidated statements of income for the year ended December 31, 2015.

Networks holds an approximate 20% ownership interest in the regulated New York TransCo. Through New York TransCo, Networks has formed a partnership with Central Hudson Gas and Electric Corporation, Consolidated Edison, Inc., National Grid, plc and Orange and Rockland Utilities, Inc. to develop a portfolio of interconnected transmission lines and substations to fulfill the objectives of the New York energy highway initiative, which is a proposal to install up to 3,200 MW of new electric generation and transmission capacity in order to deliver more power generated from upstate New York power plants to downstate New York. In 2016, Networks has increased its equity method investment in the New York TransCo by approximately \$21 million (included in “Other investments and equity method investments, net” of investing activities in the consolidated statements of cash flows) for a total equity method investment of \$22 million. Additionally, in 2016, Networks received approximately \$67 million from the New York TransCo in the form of \$43 million for assets constructed and transferred to the New York TransCo (included in “Proceeds from sale of property,

plant and equipment” of investing activities in the consolidated statements of cash flows), \$22 million in contributions in aid of construction and approximately \$2 million in advanced lease payments for a 99 year lease of land and attachment rights. As of December 31, 2017 and 2016, the amount receivable from New York TransCo was \$6 million and \$11 million, respectively.

AVANGRID manages its overall liquidity position as part of the broader Iberdrola Group and is a party to a liquidity agreement with a financial institution, along with certain members of the Iberdrola Group. Cash surpluses remaining after meeting the liquidity requirements of AVANGRID and its subsidiaries may be deposited at the financial institution. Deposits, or credit balances, serve as collateral against the debit balances of other parties to the liquidity agreement. The balance at both December 31, 2017 and 2016, was zero.

U

Note 24. Stock-Based Compensation

Under the Avangrid, Inc. Omnibus Incentive Plan 1,298,683 performance stock units (PSUs) were granted to certain officers and employees of AVANGRID in July 2016. In March and October 2017 an additional 85,759 PSUs were granted to officers and employees of AVANGRID under this plan. The PSUs will vest upon achievement of certain performance and market-based metrics related to the 2016 through 2019 plan and will be payable in three equal installments in 2020, 2021 and 2022. As of December 31, 2017, the total number of shares authorized for stock-based compensation plans was 2,500,000.

The fair value of the PSUs on the grant date was \$31.80 per share, which is expensed on a straight-line basis over the requisite service period of approximately seven years based on expected achievement. The fair value of the PSUs was determined using valuation techniques to forecast possible future stock prices, applying a weighted average historical stock price volatility of AVANGRID and industry companies, a risk-free rate of interest that is equal, as of the grant date, to the yield of the zero-coupon U.S. Treasury bill and a reduction for the respective dividend yield calculated based on the most recent quarterly dividend payment and the stock price as of the grant date.

In connection with the acquisition of UIL, certain PSUs granted under the UIL 2008 Stock and Incentive Compensation Plan are outstanding, which are payable in our shares in 2018 and vest based upon the achievement of certain pre-determined performance objectives.

The total stock-based compensation expense, which is included in operations and maintenance of the consolidated statements of income for the years ended December 31, 2017, 2016 and 2015 was \$1.2 million, \$0.6 million and \$6.0, respectively. The total income tax benefit recognized for stock-based compensation arrangements for the years ended December 31, 2017, 2016 and 2015, was \$0.5 million, \$0.2 million and \$2.4 million, respectively.

Before 2016, AVANGRID's historical stock-based compensation expense and liabilities were based on shares of Iberdrola and not on shares of AVANGRID. These Iberdrola shares-based awards were early terminated at the end of 2015, and the remaining liability will be settled in March 30, 2018. The total liability relating to those awards, which is included in other current and non-current liabilities, was \$5.5 million and \$9.5 million as of December 31, 2017 and 2016, respectively.

A summary of the status of the AVANGRID's nonvested PSUs as of December 31, 2017, and changes during the fiscal year ended December 31, 2017, is presented below:

	Number of PSUs	Weighted Average Grant Date Fair Value
Nonvested Balance – December 31, 2016	1,523,981	\$ 33.01
Granted	94,509	\$ 32.89
Forfeited	(113,256)	\$ 31.91
Vested	(120,975)	\$ 40.07
Nonvested Balance – December 31, 2017	1,384,259	\$ 32.57

As of December 31, 2017, total unrecognized costs for non-vested PSUs were \$5.1 million. The weighted-average period over which the PSU costs will be recognized is approximately 4 years.

The weighted-average grant date fair value of PSUs granted during the year was \$32.89 per share for the year ended December 31, 2017.

Note 25. Assets Held For Sale

In December 2017, our management committed to a plan to sell the gas trading and storage businesses because they represent non-core businesses that are not aligned with our strategic objectives. As a result, we determined that the assets and liabilities associated with our gas trading and storage businesses met the criteria for classification as assets held for sale, but did not meet the criteria for classification as discontinued operations. The gas trading and storage businesses are being marketed for sale, and it is the Company's intention to complete the sales of these assets and liabilities within twelve months following their initial classification as held for sale. On March 1, 2018, the Company closed a transaction to sell Enstor Energy Services, LLC, which operated AVANGRID's gas trading business, to CCI U.S. Asset Holdings LLC, a subsidiary of Castleton Commodities International, LLC (CCI) for \$64.5 million, subject to working capital, cash, and other adjustments. The transaction price does not differ materially from the estimated fair value of our gas trading business at December 31, 2017, subject to adjustment based on closing and other contract provisions, including certain transition services. On February 16, 2018, the Company entered into a definitive agreement to sell Enstor Gas, LLC, which operates AVANGRID's gas storage business, to Amphora Gas Storage USA, LLC for \$75 million, subject to working capital, cash, and other adjustments. The agreement to sell Enstor Gas, LLC contains, among other things, a transition services agreement which obligates ARHI to provide certain transition services for up to one year after the closing date and includes a guarantee that the Company will release certain obligations to Amphora Gas Storage USA, LLC, along with representations, warranties, and covenants customary for a transaction of this nature. The transaction, which is subject to the satisfaction of customary closing conditions, is expected to be completed during the second quarter of 2018. The transaction price differs from the estimated fair value of our gas storage business at December 31, 2017 by approximately \$11 million, in which we expect to recognize an additional after-tax loss of \$8.1 million in 2018, subject to additional adjustment based on closing and other contract provisions. In connection with the held for sale classification, we recorded a loss on held for sale measurement of \$642 million, which is included in "Impairment" in the consolidated statements of income. Loss before income tax, adjusted for corporate overhead, attributed to the gas businesses was \$715 million, \$58 million and \$108 million for the years ended December 31, 2017, 2016, and 2015, respectively. The current assets and current liabilities held for sale relating to our gas trading and storage businesses consisted of the following:

As of December 31, (Millions)	2017
Accounts receivable, net	\$ 137
Derivative assets	25
Fuel and gas in storage	77
Prepayments and other current assets	19
Property, plant and equipment	71
Intangible assets	28
Assets held for sale	\$ 357
Accounts payable and accrued liabilities	107
Derivative liabilities	14
Other liabilities	16
Liabilities held for sale	\$ 137

The fair values of the assets held for sale were determined using Level 3 inputs and were estimated based on recent market analysis studies, recent offers, and management has performed its own fair valuation modeling using discounted cash flows updated for market participant assumptions as completed by third party valuation firms. Unobservable inputs obtained from third parties were adjusted as necessary for the condition and attributes of the specific assets.

Note 26. Restructuring and Severance Related Expenses

In the second and third quarters of 2017, we announced targeted voluntary workforce reductions, predominantly within the Networks segment. Those actions primarily include: reducing our workforce through voluntary programs in various other areas to better align our people resources with business demands and priorities; reorganizing our human resources function to substantially consolidate in Connecticut, as well as related costs to vacate a lease and relocate employees; and reducing our information technology (IT) workforce to make increasing use of external services for operations, support, and development of systems. Those decisions and transactions resulted in restructuring charges recorded in the year ended December 31, 2017 for: severance expenses of \$15.2 million and lease termination expenses of \$4.0 million, which are included in "Operations and maintenance", and approximately \$1.2 million of accelerated amortization of leasehold improvements, which are included in "Depreciation and amortization" in the consolidated statements of income. The remaining costs for severance agreements are being accrued ratably over the service periods, which span

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

intermittent periods through December 2018. Accordingly, the Company expects additional costs to be incurred in 2018 related to the remaining employee service periods under the severance plans. For the year ended December 31, 2017, the severance and lease restructuring charges reserves, which are recorded in “Other current liabilities” and “Other liabilities”, consisted of:

Year Ended December 31,	2017 (Millions)
Beginning Balance	\$ —
Restructuring and severance related expenses	19
Payments	(14)
Ending Balance	<u>\$ 5</u>

Note 27. Quarterly financial data (unaudited)

Selected quarterly financial data for 2017 and 2016 are set forth below:

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
(Millions, except per share data)				
2017				
Operating revenues	\$ 1,758	\$ 1,331	\$ 1,341	\$ 1,533
Operating Income	\$ 398	\$ 223	\$ 189	\$ (425)
Net Income	\$ 239	\$ 120	\$ 100	\$ (77)
Net Income attributable to Avangrid, Inc.	\$ 239	\$ 120	\$ 99	\$ (77)
Earnings Per Common Share, Basic and Diluted: (1)	\$ 0.77	\$ 0.39	\$ 0.32	\$ (0.25)
2016				
Operating revenues	\$ 1,670	\$ 1,439	\$ 1,418	\$ 1,491
Operating Income	\$ 349	\$ 322	\$ 217	\$ 306
Net Income	\$ 213	\$ 101	\$ 109	\$ 209
Net Income attributable to Avangrid, Inc.	\$ 213	\$ 101	\$ 109	\$ 209
Earnings Per Common Share, Basic and Diluted: (1)	\$ 0.69	\$ 0.33	\$ 0.35	\$ 0.67

- (1) Based on weighted average number of 309.5 million and 309.8 million shares outstanding each quarter in 2017 and 2016 for basic and diluted earnings per share, respectively.

The first quarter of 2017 includes an adjustment of \$14 million to unfunded future income tax to reflect the change from a flow through to normalization method, which was recorded as an increase to income tax expense and an offsetting increase to revenue. The third and fourth quarters of 2017 include severance and lease restructuring charges of, respectively, \$2.1 million and \$17.1 million. Additionally the fourth quarter includes a loss of \$642 million associated with measurement of held for sale assets of gas trading and storage business, \$463 million after income taxes, and an impact of \$328 million from measurement of deferred income tax balances as a result of the Tax Act enacted on December 22, 2017 by the U.S. federal government.

The first quarter of 2016 includes a \$19.0 million impact to net income from the sale of our interest in Iroquois to an unaffiliated third party for proceeds of \$53.8 million. The second quarter of 2016 includes an adjustment of \$126 million to unfunded future income tax to reflect the change from a flow through to normalization method following the approval of the Joint Proposal by the NYPSC, which was recorded as an increase to income tax expense and an offsetting increase to revenue.

U

Note 28. Subsequent events

On February 15, 2018, the board of directors of AVANGRID declared a quarterly dividend of \$0.432 per share on its common stock. This dividend is payable on April 2, 2018 to shareholders of record at the close of business on March 9, 2018.

On March 7, 2018, we issued 81,208 shares of common stock, each having a par value of \$0.01, which was approved by the board of directors of AVANGRID on February 15, 2018.

Note 1. Basis of Presentation

Avangrid, Inc. (AVANGRID), formerly Iberdrola USA, Inc., is a holding company and conducts substantially all of its business through its subsidiaries. Substantially all of its consolidated assets are held by such subsidiaries. Accordingly, its cash flow and its ability to meet its obligations are largely dependent upon the earnings of these subsidiaries and the distribution of other payment of such earnings to in the form of dividends, loans or advances or repayment of loans and advances from it. These condensed financial statements and related footnotes have been prepared in accordance with regulatory statute 210.12-04 of Regulation S-X. These statements should be read in conjunction with the consolidated financial statements and notes thereto of AVANGRID and subsidiaries (AVANGRID Group).

AVANGRID indirectly or directly owns all of the ownership interests of its significant subsidiaries. AVANGRID relies on dividends or loans from its subsidiaries to fund dividends to its primary shareholder.

AVANGRID's significant accounting policies are consistent with those of the AVANGRID Group. For the purposes of these condensed financial statements, AVANGRID's wholly owned and majority owned subsidiaries are recorded based upon its proportionate share of the subsidiaries net assets.

AVANGRID will file a consolidated federal income tax return that includes the taxable income or loss of all its subsidiaries for the 2017 tax period. Each subsidiary company is treated as a member of the consolidated group and determines its current and deferred taxes separately and settles its current tax liability or benefit each year directly with AVANGRID pursuant to a tax sharing agreement between AVANGRID and its members.

Immaterial Corrections to Prior Periods

During the year ended December 31, 2017, a correction necessary to certain subsidiary's deferred income tax liabilities associated with tax equity financing arrangements that originated in prior periods was identified. AVANGRID assessed the materiality and determined that the cumulative impact of the amount was not material to the results of operation, financial position or cash flows in the previously issued financial statements and therefore, amendments of previously filed condensed financial information of AVANGRID are not required. However, management has determined to revise the prior periods included within these financial statements to reflect these updated amounts. Accordingly, the correction of these prior period amounts has been reflected in the periods in which they originated and the statements of income for the years ended December 31, 2016 and 2015 and the balance sheet as of December 31, 2016 have been revised. The correction resulted in a \$2 million and \$6 million increase in equity earnings and net income in the statements of income for the years ended December 31, 2016 and 2015, respectively, and an \$86 million increase in retained earnings and investments in subsidiaries in the balance sheet as of December 31, 2016. The revision had no net impact on the net cash provided by operating activities for the years ended December 31, 2016 and 2015.

Note 2. Acquisition of UIL and Issuance of Common Stock

On December 16, 2015 (acquisition date), UIL Holdings Corporation, a Connecticut corporation (UIL), became a wholly-owned subsidiary of AVANGRID as a result of the merger of Green Merger Sub, Inc., a Connecticut corporation and a wholly-owned subsidiary of AVANGRID (Merger Sub), with UIL, with Merger Sub surviving as a wholly-owned subsidiary of AVANGRID (the acquisition). The acquisition was effected pursuant to the Agreement and Plan of Merger, dated as of February 25, 2015, by and among AVANGRID, Merger Sub, and UIL. Following the completion of the acquisition, Merger Sub was renamed "UIL Holdings Corporation." In connection with the acquisition, AVANGRID issued 309,490,839 shares of its common stock, out of which 252,234,989 shares were issued to Iberdrola through a stock dividend, accounted for as a stock split, with no change to par value, at par value of \$0.01 per share, and 57,255,850 shares (including held in trust as treasury stock) were issued to UIL shareowners in addition to payment of \$10.50 in cash per each share of the common stock of UIL issued and outstanding at the acquisition date. Following the completion of the acquisition, former UIL shareowners owned 18.5% of the outstanding shares of common stock of AVANGRID and Iberdrola owned the remaining shares.

AVANGRID had 485,810 and 491,459 shares of common stock held in trust and no convertible preferred shares outstanding as of December 31, 2017 and December 31, 2016, respectively. During the year ended December 31, 2017, AVANGRID issued 70,493 shares of common stock and released 5,649 shares of common stock held in trust each having a par value of \$0.01. During the year ended December 31, 2016, AVANGRID issued 109,357 shares of common stock and released 135,014 shares of common stock held in trust each having a par value of \$0.01.

On April 28, 2016, AVANGRID entered into a repurchase agreement with J.P. Morgan Securities, LLC. (JPM), pursuant to which JPM will, from time to time, acquire, on behalf of AVANGRID, shares of common stock of AVANGRID. The purpose of the stock repurchase program is to allow AVANGRID to maintain the relative ownership percentage of Iberdrola at 81.5%. The stock repurchase program may be suspended or discontinued at any time upon notice. Out of 179,850 treasury shares of common stock of AVANGRID as of December 31, 2017, 115,831 shares were repurchased during 2016 and 64,019 shares were repurchased in May 2017, all in the open market. The total cost of repurchase, including commissions, was \$8 million as of December 31, 2017.

On February 15, 2018, the board of directors of AVANGRID declared a quarterly dividend of \$0.432 per share on its common stock. This dividend is payable on April 2, 2018 to shareholders of record at the close of business on March 9, 2018.

Note 3. Non-current Debt

Supplemental Indenture

On December 19, 2016, AVANGRID, its subsidiary, UIL, and The Bank of New York Mellon, entered into a supplemental indenture, pursuant to which AVANGRID assumed from UIL all the obligations under the indenture dated as of October 7, 2010 between UIL and The Bank of New York Mellon and all obligations relating to \$450 million in aggregate principal amount of 4.625% notes due 2020 issued by the predecessor company to UIL in 2010. For the purpose of the supplemental indenture a capital contribution of \$483 million was made by AVANGRID to UIL in December 2016.

On November 21, 2017, AVANGRID issued \$600 million aggregate principal amount of its 3.150% notes maturing in 2024. Proceeds of the offering were used to reduce short-term debt incurred to fund capital expenditures associated with development of renewable energy generation facilities. Net proceeds of the offering after the price discount and issuance-related expenses were \$594 million.

Note 4. Cash Dividends Paid by Subsidiaries

Cash dividends paid by subsidiaries are as follows:

Years ended December 31, (In millions)	2017	2016	2015
AVANGRID Networks	\$ 308	\$ 220	\$ 59
AVANGRID Renewables	—	200	750
Other AVANGRID subsidiaries	—	—	302
	<u>\$ 308</u>	<u>\$ 420</u>	<u>\$ 1,111</u>

In December 2016, AVANGRID made a capital contribution of \$50 million to its subsidiary, CMP. During 2017 and 2016, AVANGRID recorded a net non-cash contribution and dividend of \$1,318 million and \$(827) million, respectively, to and from its subsidiaries to zero out their account balances of notes receivables and payables.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

None.

U

Item 9A. Controls and Procedures.

Evaluation of Disclosure Controls and Procedures

Our management, with the participation of our Chief Executive Officer, or CEO, and our Chief Financial Officer, or CFO, has evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended, or the Exchange Act), as of the end of the period covered by this Annual Report on Form 10-K. Based on such evaluation, our CEO and CFO have concluded that as of such date, our disclosure controls and procedures were not effective, due to a material weakness in internal control over financial reporting described below.

To address the material weakness described below, management completed additional procedures prior to filing this Annual Report on Form 10-K. Based on these procedures, notwithstanding the 2017 material weakness, management believes that our consolidated financial statements included in this Annual Report on Form 10-K have been prepared in accordance with generally accepted accounting principles. Our CEO and CFO have certified that, based on such officer's knowledge, the financial statements, and other financial information included in this Annual Report on Form 10-K, fairly present in all material respects the financial condition, results of operations and cash flows of the Company as of, and for, the periods presented in this Annual Report on Form 10-K.

Report of Management on Internal Control Over Financial Reporting

The management of AVANGRID is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act. AVANGRID's internal control system over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles. AVANGRID's internal control over financial reporting includes those policies and procedures that:

- (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company;
- (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and
- (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in condition, or that the degree of compliance with the policies or procedures may deteriorate.

AVANGRID's management assessed the effectiveness of AVANGRID's internal control over financial reporting as of December 31, 2017. In making this assessment, management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) ("COSO") in Internal Control—Integrated Framework. Based upon that assessment and those criteria, management has identified certain deficiencies that rose to the level of a material weakness in controls related to the measurement and disclosure of income taxes, or the 2017 material weakness.

A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our annual or interim financial statements will not be prevented or detected on a timely basis.

Control deficiencies that aggregated to a material weakness in 2016 contributed to immaterial corrections of prior period amounts as disclosed in the Company's Form 10-K in Note 2 of the Company's 2017 consolidated financial statements.

AVANGRID's independent registered public accounting firm, KPMG LLP, has expressed an adverse report on the effectiveness of AVANGRID's internal control over financial reporting as of December 31, 2017, which appears in Part II, Item 8, "Financial Statements and Supplementary Data – Report of Independent Registered Public Accounting Firm," of this Annual Report on Form 10-K.

Changes in Internal Control

Other than the control deficiencies discussed above in connection with the 2017 material weakness and the remediation efforts identified below to remediate the first and second of the 2016 material weaknesses disclosed in the 2016 Form 10-K, there were no changes in our internal control over financial reporting identified in connection with the evaluation required by Rules 13a-15(d) and 15d-15(d) of the Exchange Act during the period covered by this Annual Report on Form 10-K that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Remediation Efforts Related to the 2016 Material Weaknesses

As disclosed in Part II, Item 9A, Controls and Procedures in our Annual Report on Form 10-K for the year ended December 31, 2016, we identified three material weaknesses in internal control over financial reporting, or the 2016 material weaknesses, related to (1) the accounting for the change in the estimated useful life of certain elements of the wind farms at Renewables and other smaller deficiencies related to documentation of internal controls procedures, and enhancement of review controls at Renewables, (2) the preparation of the consolidated financial statements, specifically the classification and disclosure of financial information, and (3) the measurement and disclosure of income taxes.

Our management, with oversight from the Audit and Compliance Committee of the Board of Directors, conducted the following remediation efforts that effectively remediated items 1 and 2 of the 2016 material weaknesses as of December 31, 2017:

- Educated and re-trained internal control employees regarding internal control processes to mitigate identified risks and maintain adequate documentation to evidence the effective design and operation of such processes;
- Implemented and enhanced controls to monitor the effectiveness of the underlying business process controls that depend on the data and financial reports generated from the relevant information systems;
- Increased accounting personnel and internal control resources in order to devote additional time to accounting and reporting processes and controls;
- Implemented and enhanced additional management review controls for the Renewables business and in the preparation of the consolidated financial statements;
- Finalized implementation of controls previously designed during the third and fourth quarters of 2016 and further enhanced during 2017;
- Implemented specific enhanced review procedures in the property, plant and equipment area at Renewables, including the estimation of useful lives; and
- Identified and implemented internal control activities where control activities related to certain financial statement assertions could be performed at lower levels of management (e.g., completeness and accuracy of data) to allow senior management to focus their review on higher risk and technical areas.

Remediation Plans for the 2017 Material Weakness

Our management, with oversight from the Audit and Compliance Committee of the Board of Directors, is actively engaged in remediation efforts to address the 2017 material weakness. The remediation plans for the 2017 material weakness include the following:

- Further acceleration of the deadline of key activities to allow sufficient time for the execution of consolidated deferred income tax controls that were newly designed during the third and fourth quarter of 2017 that management has determined through testing are more precise;
- Further increase of capabilities of income tax accounting resources to devote additional time and internal control resources to consolidated income tax accounting and reporting processes and controls; and
- Enhancing the automation of income tax processes and controls to allow for the more timely completion and enhanced review of internal controls surrounding consolidated deferred income tax financial information and disclosures.

These improvements are targeted at strengthening the Company's internal control over financial reporting and remediating the material weakness. The remediation efforts that had been previously initiated were impacted by the required implementation of the Tax Cuts and Jobs Act of 2017 enacted by the U.S. federal government on December 22, 2017.

Nevertheless, the Company remediated a number of aspects of the material weakness for the measurement and disclosure of income taxes disclosed within Part II, Item 9A, Controls and Procedures in our Annual Report on Form 10-K for the year ended December 31, 2016 including the following:

- Implemented enhanced review procedures through the completion of a full risk assessment for income taxes and enhanced the design of controls for an increased level of precision;
- Accelerated all key activities within the income tax accounting and reporting process and controls;
- Educated and re-trained income tax employees regarding internal controls;
- Increased certain capabilities of income tax accounting resources to devote additional time and internal control resources; and

- Identified areas where income tax control activities could be performed at lower levels of management to allow senior management to focus their review on higher risk and technical areas.

The Company remains committed to an effective internal control environment and management believes that these actions, and the improvements management expects to achieve as a result, will remediate the material weakness. However, the material weakness in our internal control over financial reporting will not be considered remediated until the controls operate for a sufficient period of time and management has concluded, through testing that these controls operate effectively. We currently expect that the remediation of this material weakness will be completed by December 31, 2018.

PART 2

Master Terms and Conditions

1. Introduction

- 1.1 This Agreement, including these Master Terms and Conditions and the relevant Service Terms and Conditions, governs the Services between the Customer, each Company (if any), the Bank and each Affiliate Bank, as those Services may be added to, terminated or amended from time to time in accordance with this Agreement.
- 1.2 These Master Terms and Conditions are supplemented by the Service Terms and Conditions applicable to each Service provided to the Customer and the Companies and, in the event of any conflict between these Master Terms and Conditions and those Service Terms and Conditions, those Service Terms and Conditions shall prevail over the Master Terms and Conditions to the extent of that inconsistency. Each party acknowledges that the Master Terms and Conditions and the applicable Service Terms and Conditions must be read together and shall constitute a single agreement between the Customer, the Companies, the Bank and each Affiliate Bank.
- 1.3 The parties agree that (i) the Service Terms and Conditions for each Service are written in terms of a single arrangement between the relevant parties, (ii) more than one arrangement may be entered into between the Bank and/or any Affiliate Bank and all or some of the other parties wishing to use that Service and (iii) the relevant Service Terms and Conditions shall govern the relationship between the parties with respect to each such arrangement. Each such arrangement shall be incorporated into and form part of this Agreement, but need not be disclosed to a Company which is not a party to such arrangement.
- 1.4 Each Company authorises the Customer to negotiate and agree and enter into any Set Up Form, any additional Service or any change in or termination of any Service provided by the Bank and/or any Affiliate Bank or any amendment to this Agreement or any Set Up Form, and to agree to the accession or withdrawal and release of any Company or Account to or from this Agreement or any Service, and to execute any document setting out such agreement for itself and on behalf of each Company.
- 1.5 Notwithstanding Clause 1.4 and subject to any applicable law, the Bank and/or any Affiliate Bank may on 30 days' notice change any Service provided by the Bank and/or any Affiliate Bank or amend any terms of this Agreement or a Set Up Form, and such change or amendment shall take effect as between (i) the Customer and the Companies and (ii) the Bank and each Affiliate Bank by the Bank and/or any Affiliate Bank giving notice of such change by notice sent to the Customer by post and/or e-mail (the "Amendment Notice"), in which case:
- (a) any change or amendment notified by the Amendment Notice which is required for any legislative, legal or regulatory reason or which affects all of the Bank's or any Affiliate Bank's account holding customers from time to time or all of the Bank's or any Affiliate Bank's customers from time to time using any Service or any other cash concentration, interest optimization service, notional cash pooling or related liquidity product service provided by the Bank and/or any Affiliate Bank, will take effect as notified by the Amendment Notice. By continuing to operate the Accounts and use the Service(s) after the Amendment Notice, the Customer and the Companies are also deemed to have accepted such change or amendment; and
- (b) any change or amendment notified by the Amendment Notice which is not of a type referred to in (a) above, will take effect as notified by the Amendment Notice. By continuing to operate the Accounts and use the Service(s), after the Amendment Notice, the Customer

and the Companies are also deemed to have accepted such change or amendments. If the Customer objects in writing (the "**Objection Notice**") within 30 days of receiving the Amendment Notice, the Amendment Notice will not take effect as notified, and the Bank or any Affiliate Bank (as the case may be) shall, in good faith negotiate the proposed change or amendment as notified in the Amendment Notice for a further period of thirty (30) days, or such other time period as may be agreed, commencing on the date that the Bank or any Affiliate Bank (as the case may be) receives the Objection Notice (the "**Negotiation Period**"). Any mutually acceptable changes resulting from the conclusion of these negotiations will take effect when agreed by the parties in writing, and in any event by no later than the expiry of the Negotiation Period. In the event that the parties are not able to achieve a satisfactory agreement in writing by the expiry of the Negotiation Period, then the arrangements contemplated by this Agreement may be terminated by the Bank or the Affiliate Bank (as the case may be) in accordance with Clause 8.1.

2. Interpretation

2.1 In this Agreement, the following definitions have the following meanings:

"Acceding Company" means a company or other registered trading entity accepted by the Bank and/or any Affiliate Bank which, in accordance with the provisions of Clause 5, is to become a Company.

"Accession Instrument" means an accession instrument in, or substantially in, the form of, Schedule 2 or in such form as may be approved by the Bank and/or any Affiliate Bank for an Acceding Company.

"Account" means, in relation to a Company, each of the accounts (including the balances on those accounts and whether in debit or credit) maintained by that Company with the Bank or any Affiliate Bank at any of its Bank Units.

"Account Operating Terms" means the relevant written agreement(s) between the Bank and/or any Affiliate Bank and a Company governing the terms and conditions of operation of such Company's Accounts.

"Affiliate Bank" means Bank of America Merrill Lynch International Limited and any other subsidiary bank of Bank of America Corporation which provides any of the Services from time to time.

"Bank Unit" means the branch of the Bank and/or any Affiliate Bank (as applicable), or a sub-division of that branch, as determined by the Bank and/or any Affiliate Bank (as applicable).

"Company" means the Customer and each other party identified as such in Part 1 of this Agreement and each other company which hereafter becomes a party to this Agreement as a Company in the manner set forth in Clause 5 or, for the purposes of each Service Terms and Conditions, each such party or company whose Accounts are subject to the relevant Service.

"Customer" means the Customer which is identified as such in Part 1 of this Agreement.

"Customer Affiliate" means, in relation to the Customer, any entity controlled, directly or indirectly, by the Customer, any entity that controls, directly or indirectly, the Customer or any entity directly or indirectly under common control with the Customer. For this purpose,

U
U
U

"control" of any entity or the Customer means ownership of a majority of the voting power of that entity or the Customer.

"Damages" means any liability, expense, claim, loss, damage or cost of any nature.

"Service" means each of the services that is selected in Part 1 of this Agreement under "Services Required" (as added to, terminated or amended from time to time in accordance with this Agreement) or selected pursuant to the terms of those Services.

"Service Terms and Conditions" means the relevant terms and conditions (including any schedules or other attachments to them) set out in an Annex to this Agreement which govern the provision of a specific Service.

"Set Up Form" means, in relation to a Service, the set up form, workbook or other document or spreadsheet, completed in agreement from time to time between (i) the Bank and/or any Affiliate Bank (as applicable) and (ii) the Customer, which identifies or describes the nature of that Service.

"Tax" means all present and future income and other taxes and any levies, assessments, imposts, deductions, charges, compulsory loans and withholdings in the nature of tax together with any interest and penalties and fines thereon, and any payments made on or in respect thereof.

2.2 Unless otherwise expressly stated or the context otherwise requires:

- (i) headings are for convenience of reference only;
- (ii) references in these Master Terms and Conditions to Clauses, Schedules and Annexes are references to Clauses of and Schedules and Annexes to these Master Terms and Conditions and references in Service Terms and Conditions to Clauses, Schedules and Annexes are references to Clauses of and Schedules and Annexes to those Service Terms and Conditions;
- (iii) references to a provision of law is a reference to that provision as may be amended or re-enacted from time to time;
- (iv) references to this Agreement, a Set Up Form or any other agreement or document, include any amendments, supplements or novations thereto; and
- (v) references to a person includes references to its successors and permitted assigns.

3. Conditions precedent

Any obligation of the Bank and/or any Affiliate Bank under this Agreement are conditional upon it having received, or waived the requirement for, the documents listed in Schedule 1 from each of the Companies (all in form and substance satisfactory to the Bank or any Affiliate Bank (as applicable)).

4. Representations, warranties and undertakings

4.1 Each Company warrants on each date on which it is a party to this Agreement that:

- (i) this Agreement constitutes legal, valid and binding obligations of the Company in accordance with its terms;

U
U

- (ii) this Agreement is within the powers of the Company;
U
- (iii) this Agreement has been duly authorised by the Company;
U
- (iv) this Agreement does not breach the constitutional documents of the Company, any deed or agreement by which the Company is bound or any law or regulation applicable to the Company; and
U
- (v) all necessary consents and authorisations in relation to this Agreement have been obtained and are in force.

4.2 Each Company:

- (i) represents and warrants to the Bank and each Affiliate Bank that it is solely and absolutely entitled to its Accounts which are now subject to, or which at any time after the date of this Agreement may become subject to, this Agreement free from any mortgage, charge, lien, assignment, encumbrance or other security interest and free of interests, rights or claims of third parties of any kind whatsoever (except for, in each case, those arising by operation of law or the rights of the Bank and any Affiliate Bank under this Agreement);
U
- (ii) undertakes not to create or permit to subsist any mortgage, charge, lien, assignment, encumbrance or other security interest or any interest, right or claim of third parties of any kind whatsoever on, over, with respect to or otherwise affecting the whole or any part of its Accounts (except for, in each case, those arising by operation of law or the rights of the Bank and any Affiliate Bank under this Agreement); and
U
- (iii) undertakes not to assign or transfer all or any of its right, title or interest in or to the Accounts to any other person except to the extent that such transfer represents a permitted withdrawal from its Accounts in the normal course of business of the Company.

5. Additional Companies

- 5.1 Any Customer Affiliate which is not a Company may, with the Customer's consent and the Bank's and the Affiliate Bank's agreement, become a Company by executing and delivering to the Bank and the Affiliate Banks an Accession Instrument together with the documents referred to in Schedule 1, all in form and substance satisfactory to the Bank or an Affiliate Bank.
- 5.2 Upon such execution and delivery to the Bank and the Affiliate Banks by such Customer Affiliate referred to in Clause 5.1 and execution of that Accession Instrument by the Bank and the Affiliate Banks and by the Customer (for itself and on behalf of the Companies), the Customer Affiliate will become a Company and the Accounts detailed by such Customer Affiliate in that Accession Instrument to be included as Accounts within the applicable Services shall become such Accounts and the applicable Service Term and Conditions shall be deemed to be amended accordingly.
- 5.3 Subject to Clause 5.1, the consent of the existing Companies for the accession by a Customer Affiliate as a Company to this Agreement shall not be required.

6. Exclusions and limitations of liability

- 6.1 Neither the Bank nor any Affiliate Bank will be liable for any Damages arising out of or relating to its performance under this Agreement other than those Damages actually incurred

by a Company or the Customer which result directly from the Bank's or the relevant Affiliate Bank's negligence or wilful misconduct.

- 6.2 Under or in connection with this Agreement, neither the Bank and the Affiliate Banks nor the Customer and the Companies shall be liable for any Damages arising from or in relation to economic loss, loss of business, profits, revenue, goodwill and anticipated savings, special damages, loss of or corruption to data, loss of operation time, loss of contracts or any indirect, consequential, exemplary or punitive loss.
- 6.3 The Bank and the Affiliate Banks will not be responsible for the acts or omissions of any of the Companies or the Customer or their respective officers, employees or agents (including, but not limited to, the amount, accuracy, timeliness of delivery or due authorisation of any instructions from any of the Companies or the Customer) or the acts or omissions of any other person or entity, including, but not limited to, any clearing house association or processor, any funds transfer system, any jurisdiction's central reserve bank or any other financial institution, and no such person or entity will be deemed the Bank's or any Affiliate Bank's agent.
- 6.4 The Bank and the Affiliate Banks will not be liable for and will be excused from any failure or delay in performing their respective obligations under this Agreement if:
- (i) such failure or delay is caused by circumstances beyond the Bank's or the Affiliate Bank's reasonable control (including, without limitation, any legal constraint, emergency conditions, action or inaction of governmental, civil or military authority, fire, labour dispute, war, riot, natural disaster or act, omission, negligence or fault of any of the Companies or the Customer); or
 - (ii) the Bank or the Affiliate Bank believed that its actions would have violated any law, guideline, rule or regulation of any governmental authority.

No such failure or delay will constitute a breach of this Agreement.

- 6.5 Neither the Bank nor any Affiliate Bank shall be under any obligation to comply with a request or instruction under any Service if to do so would or might infringe or be contrary to its policy (being a policy generally applicable to the Bank's or any Affiliate Bank's account holding customers from time to time), any law or regulation (which shall include any direction or request, whether or not having the force of law) of any regulatory authority or any court order to which any part of the Bank or any Affiliate Bank is subject, or if to do so would result in the balance on an Account falling below zero, or, if applicable, exceeding the limit of any borrowing limit separately agreed between the Bank or any Affiliate Bank and the Customer or any Company.

7. Protection from third parties

With respect to each arrangement entered into between one or more Companies (each a "**Participating Company**") and the Bank and/or any Affiliate Bank under a Service, that Participating Company hereby indemnifies (or, if there is more than one Participating Company in the arrangement, each of the Participating Companies hereby jointly and severally indemnifies) the Bank and the Affiliate Banks against and shall hold each of them harmless from any and all direct and documented Damages (including without limitation reasonable legal fees, allocated costs of staff counsel, reasonably incurred and documented expenses of litigation and any fees and expenses incurred in enforcing this Clause) arising out of or relating to disputes or legal actions with respect to the relevant arrangement brought by parties other than the Participating Company/ies. This Clause does not apply to any Damages attributable to the negligence or intentional misconduct of the Bank or any Affiliate

U
U

Bank. The obligations of the Companies under this Clause shall survive the termination of this Agreement for a period of eight (8) years from such termination or, if longer, until the expiration of the applicable statute of limitations.

8. Termination

8.1 Unless provided otherwise by this Agreement, the arrangements contemplated by this Agreement may be terminated by the Bank and/or any Affiliate Bank, in whole or in part, in relation to any of the Customer or the Companies or any of their respective Accounts, in its absolute discretion at any time upon giving not less than 30 days' written notice to the Customer.

8.2 The arrangements contemplated by this Agreement may be terminated by the Bank and/or any Affiliate Bank, in whole or in part, in relation to any of the Customer or the Companies, or any of their respective Accounts, in its absolute discretion at any time upon notice given to the Customer following the occurrence of any of the following events:

(i) the Customer or any of the Companies are dissolved, become insolvent or are unable to pay their debts, or admit any inability to pay their debts, as they become due;

U

(ii) the Customer or any of the Companies make an assignment, compromise, arrangement or composition with or for the benefit of their creditors;

U

(iii) the Customer or any of the Companies institute or have instituted against any of them a proceeding seeking a judgment of insolvency or bankruptcy or any other relief under any bankruptcy or insolvency law or other similar law affecting creditors' rights, or a petition is presented to the Customer or any of the Companies for winding—up or liquidation or administration;

U

(iv) a judgment or order of insolvency or bankruptcy or any other relief under any other bankruptcy or insolvency law or other similar law affecting creditors' rights is made against the Customer or any of the Companies, or an order is made for their winding-up, liquidation or administration;

U

(v) a resolution is passed for winding up, official management, administration or liquidation of the Customer or any of the Companies;

U

(vi) the Customer or any of the Companies become subject to the appointment of an administrator, liquidator, provisional liquidator, conservator, receiver, administrative receiver, compulsory manager, trustee, custodian or other similar officer for all or any part of their assets;

U

(vii) a moratorium is declared in respect of any of the indebtedness of the Customer or any of the Companies;

U

(viii) any corporate action, legal proceedings or other procedure or step is taken in relation to:

(a) the suspension of payments, a moratorium of any indebtedness, winding-up, dissolution, administration or reorganisation (by way of voluntary arrangement, scheme of arrangement or otherwise) of the Customer or any of the Companies;

(b) a composition, compromise, assignment or arrangement with any of the creditors of the Customer or any of the Companies;

U
U

- (c) the appointment of a liquidator, provisional liquidator, receiver, administrative receiver, administrator, compulsory manager, conservator, trustee, custodian or other similar officer in respect of the Customer or any of the Companies, or all or any of their assets;

or any analogous procedure or step is taken in any jurisdiction;

- (ix) the Customer or any of the Companies cause or are subject to any event which under the applicable laws of any jurisdiction has an analogous effect to any of the events specified in sub clauses (i) to (viii) (inclusive) above;

U

- (x) the Customer or the Companies breach any provision of this Agreement, or any other agreement they have with the Bank or any Affiliate Bank (including but not limited to any non-payment)

U

- (xi) the Bank and/or any Affiliate Bank terminates the Account Operating Terms relating to the Accounts;

U

- (xii) the Bank and/or any Affiliate Bank exercises its right of set-off pursuant to Clause 13 of this Agreement, Clause 2 of the Single Party Notional Cash Pooling Service Terms and Conditions and/or Clause 3 of the Multi Party Notional Cash Pooling Service Terms and Conditions;

U

- (xiii) it is or becomes unlawful for the Customer or any of the Companies to perform any of their obligations under this Agreement; or

U

- (xiv) the Bank or any Affiliate Bank determines in its sole discretion that continuing to provide any or all of the Accounts or the services set out in this Agreement would cause it to violate any law, guideline, decree, rule or regulation of any governmental authority or its policy (such policy being a policy generally applicable to its account holding customers from time to time) or to, in its opinion, suffer or incur reputational damage or loss.

8.3 The arrangements contemplated by this Agreement may be terminated in whole or in part by the Customer at any time upon giving not less than 10 days' notice to the Bank and/or any Affiliate Bank, subject to the Bank's and/or any Affiliate Bank's receipt of notice from the Customer, signed by duly authorised signatories.

8.4 The Bank and/or any Affiliate Bank shall at the request of a Company with the consent of the Customer release any Company or its Accounts from this Agreement and/or any of the Services and, in the event that any Account is closed, the Bank and/or the relevant Affiliate Bank shall remit the relevant Company's Credit Balances in accordance with that Company's instructions and the provisions of the Account Operating Terms relevant to that Company's Accounts.

8.5 Any termination of any of the arrangements contemplated by this Agreement shall be without prejudice to any accrued rights and obligations of the parties existing as at the effective date of the termination. Clauses 6, 7, 10, 11, 12, 13, 14, 15, 17 and 18 shall continue to apply notwithstanding any such termination.

U
U
U

9. Illegality and invalidity

- 9.1 Notwithstanding anything contained in this Agreement, where the introduction, imposition or variation of any law, rule, regulation or accounting policy ("Law") or any change in the interpretation or application of any Law makes it unlawful or impractical, in the Bank's or any Affiliate Bank's reasonable opinion, without breaching that Law for the Bank or the relevant Affiliate Bank to continue to perform its obligations under this Agreement, then at the Bank's or Affiliate Bank's discretion and without liability on the part of the Bank or the relevant Affiliate Bank to the Companies, the Bank or the relevant Affiliate Bank may at any time and without prior notice suspend its performance under, and/or terminate, this Agreement.
- 9.2 Subject to the provisions of Clause 9.1, if at any time any provision of this Agreement is or becomes illegal, invalid or unenforceable in any respect under the law of any jurisdiction, that shall not affect or impair (i) the legality, validity or enforceability in that jurisdiction of any other provision of this Agreement; or (ii) the legality, validity or enforceability under the law of any other jurisdiction of that or any other provision of this Agreement.

10. Notices

10.1 Any notice or other communication under, or in connection with, this Agreement:

- (i) shall be given in writing or by e-mail in the English language;
- (ii) in the case of the Companies, or any of them, need only be sent to the Customer; and
- (iii) shall be sent to the address or e-mail address of the Customer or the Bank and/or any Affiliate Bank, as the case may be, set out on the first page of this Agreement or such other address or e-mail address as may be notified to the Bank and/or any Affiliate Bank or the Customer (as the case may be) from time to time in writing.

10.2 Any such notice or such communication is deemed to be effective as follows:

- (i) if in writing, when delivered;
- (ii) if by e-mail, when sent.

However, a notice given in accordance with the above but received on a non-working day or after business hours in the place of receipt is deemed to be given on the next working day in that place.

11. Fees, costs and expenses

- 11.1 Each Company shall pay and the Bank and each Affiliate Bank is authorised to debit from any of such Company's Accounts all the Bank's and each Affiliate Bank's fees, charges, costs (including for non-receipt of monies advised to be receivable by the Bank and the Affiliate Bank), out of pocket expenses and commissions at the rates and in accordance with the arrangements agreed between the Bank or the Affiliate Bank (as applicable), and such Company or the Customer (as applicable), from time to time and in the absence of express agreement at the rates and in accordance with the arrangements generally applied by the Bank or the Affiliate Bank in the relevant jurisdiction as notified to each Company or the Customer from time to time.
- 11.2 Each Company and the Customer hereby jointly and severally agree to pay all reasonably incurred and documented costs and expenses (including all legal fees) incurred by the Bank

and each Affiliate Bank in connection with the protection, preservation and enforcement of the Bank's and the Affiliate Bank's rights under this Agreement.

- 11.3 Each Company and the Customer hereby jointly and severally agree to pay all present and future stamp, documentary and other like duties and taxes to which this Agreement and the arrangements contemplated hereby give rise.

12. Disclosure

Each Company hereby consents to and authorises the Bank and each Affiliate Bank, and their respective officials, employees and agents, at any time and from time to time to release and disclose, subject to the confidentiality obligations in the Account Operating Terms, to the head office of the Bank or the relevant Affiliate Bank, its branches, offices, subsidiaries, affiliates and any related corporations and their respective employees and agents or any governmental body or any other third party for any of the following purposes including but not limited to:

- (i) internal management reporting function;
- (ii) account servicing and related functions;
- (iii) data processing;
- (iv) generally for carrying on, protecting or furthering of the Companies', the Bank's or the Affiliate Banks' business and interests; and
- (v) to comply with the laws, government rules and regulations applicable from time to time and for audit purposes,

any and all information concerning it and its accounts and relationship with the Bank and the Affiliate Banks in all respects (including without limitation, particulars of its Account(s)) and the status and account balance thereof and its transactions and relationship with the Bank and the Affiliate Banks) as the Bank and each Affiliate Bank, and their officials, employees and agents may in their absolute discretion think fit.

13. Set-off

- 13.1 In addition to any other right of set-off or general right of combination of accounts to which the Bank and/or the Affiliate Banks may be entitled, the Bank and/or any Affiliate Bank may without prior notice to or demand of any Company set off any obligation owed by a Company to the Bank and/or any Affiliate Bank under this Agreement against any credit balances standing to the credit of any account of such Company with the Bank and/or any Affiliate Bank at any branch of the Bank and/or any Affiliate Bank, in each case regardless of the currency, place of payment or booking office of those obligations.

Customer Liquidity Agreement/OCT2017

U

- 13.2 For the purpose of cross-currency set-off, the Bank and/or any Affiliate Bank may convert any obligation at a market rate determined by the Bank and/or any Affiliate Bank. If any obligation is unascertained, the Bank and/or any Affiliate Bank may in good faith estimate that obligation and set off in respect of the estimate, subject to the relevant party accounting to the other when the obligation is ascertained.

14. Currency indemnity

If the Bank or an Affiliate Bank receives an amount in respect of a sum owing to it by a Company or if any amount owing by a Company is converted into a claim, proof, judgment or order in a currency other than the currency (the "**contractual currency**") in which the amount is expressed to be payable:

- (i) that Company will indemnify the Bank or that Affiliate Bank (as applicable) as an independent obligation against any loss arising out of or as a result of such conversion;
U
- (ii) if the amount received by the Bank or Affiliate Bank, when converted into the contractual currency, at a prevailing market rate determined by the Bank or that Affiliate Bank is less than the amount owed in the contractual currency, that Company will, forthwith on demand, pay to the Bank or that Affiliate Bank (as applicable) an amount in the contractual currency equal to the deficit; and
U
- (iii) that Company will pay to the Bank or that Affiliate Bank (as applicable) on demand any exchange costs and taxes payable in connection with any such conversion.

15. Remedies and waivers

- 15.1 No delay or omission on the part of the Bank or an Affiliate Bank in exercising any right, power or remedy provided by law or under this agreement shall impair or operate as a waiver of such right, power or remedy.
- 15.2 The single or partial exercise of any right, power or remedy provided by law or under this agreement shall not preclude any other or further exercise thereof or the exercise of any other right, power or remedy.

16. Further assurance

Each of the Customer and the Companies undertakes to do all acts as required by the Bank and/or any Affiliate Bank at any time in order to give full effect to this Agreement and to secure to the Bank and each Affiliate Bank the full benefit of the rights, powers and remedies conferred upon the Bank and each Affiliate Bank in this Agreement.

17. Assignment

Neither the Customer nor any Company shall assign all or any part of its rights or benefits of or under this Agreement, except with the prior written consent of the Bank and/or any Affiliate Bank.

18. Governing law and jurisdiction

- 18.1 This Agreement, and any non-contractual obligations arising out of or in connection with it, shall be governed by and construed in accordance with English law.

U

18.2 For the exclusive benefit of the Bank and the Affiliate Banks, each of the Customer and the Companies irrevocably agrees that the courts of England are to have jurisdiction to settle any disputes which may arise out of, or in connection with, this Agreement (including a dispute relating to any non-contractual obligations arising out of or in connection with this Agreement) and that accordingly any proceeding, suit or action arising out of, or in connection with, this Agreement ("**Proceedings**") may be brought in such courts. Nothing contained in this Clause shall limit the right of the Bank or the Affiliate Banks to take Proceedings against the Customer or a Company in any other court of competent jurisdiction, nor shall the taking of Proceedings in one or more jurisdictions preclude the taking of Proceedings in any other jurisdiction, whether concurrently or not, to the extent permitted by the law of such other jurisdiction.

18.3 Each of the Customer and the Companies:

- (i) irrevocably waives (and irrevocably agrees not to cause) any objection to the English courts and any claim *of forwn non conveniens*; and
- (ii) further irrevocably agrees that a judgment or order of an English court in any Proceedings shall be conclusive and binding on it and may be enforced against it in the courts of any other jurisdiction.

18.4 If requested to do so by the Bank and/or any Affiliate Bank, each of the Customer and the Companies shall immediately appoint, and notify to the Bank or the relevant Affiliate Bank the name and address of, an agent for service of process for documents and proceedings in any jurisdiction and thereafter it shall undertake to maintain at all times an agent for services of process in such jurisdiction.

19. Counterparts

19.1 This Agreement may be executed in any number of counterparts, and by the parties on separate counterparts, but shall not be effective until each party has executed at least one counterpart.

19.2 Each counterpart shall constitute an original of this Agreement but all the counterparts shall together constitute but one and the same instrument.

20. Third parties

A person who is not a party to this Agreement has no right under the Contracts (Rights of Third Parties) Act 1999 or otherwise to enforce or to enjoy the benefit of any term of this Agreement.

21. Currency Event

If a new currency is introduced and/or substituted in place of an existing currency as the lawful currency of any country relevant from time to time to the arrangements provided under this Agreement, (including without limitation any country of incorporation, organisation or place of business of the Bank, any Bank Units, any Affiliate Banks or any agent of the Bank through which the Services are provided, or the country where any Account is held, or any country in which any Company is incorporated or organised or has a place of business), or if the government of any such relevant country announces such an introduction and/or substitution (any such event, the "**Currency Event**"), then:

- (i) the Bank and the Affiliate Banks may, at their respective sole and absolute discretion, make such operational changes to the Services, modify, delay or suspend

U
U
U
U

the performance of the Services, and the operation of the Accounts, as they think fit in order to comply with any applicable New Currency Law, or other law and protect themselves against any Damages which may arise in relation to the Currency Event;

- (ii) the Bank and the Affiliate Banks shall not be liable to any Company or any other person for any action or inaction taken in accordance with sub clause (i) above, or for any Damages, which may arise to any Company out of or in relation to the Currency Event;

U

- (iii) each Company shall indemnify the Bank and the Affiliate Banks, on demand against, and hold the Bank and the Affiliate Banks, harmless against, any Damages which may arise to the Bank and the Affiliate Banks and any of their directors, agents, employees or officers, out of or in relation to the Currency Event related to the Services and the arrangements contemplated by this Agreement (including, but not limited to, any conversion costs or shortfall on conversion arising out of any amounts being tendered for payment or recovered following any judgment or court order other than that in which such amounts were contractually payable) and, if demanded, place the Bank and the Affiliate Banks in freely transferable funds in advance of any action or determination in relation to the Services and the arrangements contemplated by this Agreement;

U

- (iv) each Company shall be responsible for the payment on demand (and in the currency demanded) of any increased costs arising to the Bank and the Affiliate Banks in relation to the continued performance of the Services, whether or not modified, delayed or suspended in accordance with sub clause (i) above as a result of the Currency Event;

U

- (v) the Bank and the Affiliate Banks may, at their respective sole and absolute discretion, make any currency conversions deemed to be necessary as a result of the Currency Event, in relation to any payments to be made or received under this Agreement, such currency conversions to be made at the prevailing spot rate at the relevant time as determined by the Bank (or the relevant Affiliate Bank) in its sole and absolute discretion, and may debit or credit any account of any Company maintained by them in order to effect such currency conversion; and

U

- (vi) the Bank and the Affiliate Banks may, at their respective sole and absolute discretion, modify any of the terms of this Agreement, apply any right of set-off or combination of accounts or similar right to the maximum extent permitted by any applicable law and/or terminate the Services by notice in order to adjust for and/or minimise the impact of the Currency Event.

For the purposes of this clause "**New Currency Law**" means any law, regulation, rule, official or central bank pronouncement or statement of guidance introduced in order to effect or in connection with the introduction of a new currency and/or the substitution of an existing currency in any jurisdiction.

SCHEDULE 2

Form of Accession Instrument

To: Bank and the Affiliate Banks (as defined in the Agreement)

From:

Customer Liquidity Agreement dated [(the "Agreement")

Reference is hereby made to Clause 5 of the Agreement. Terms defined in the Agreement shall, unless otherwise defined herein, have the same meaning in this Accession Instrument.

We, *[Name of the Acceding Company]* incorporated in *[Country of Incorporation]* with a *[Registered Office/Principal Office]* located at ("**we**" or the "**Acceding Company**") agree to become a Company and to be bound by the terms of the Agreement as a Company in accordance with Clause 5 of the Agreement.

We hereby irrevocably appoint:

- (a) the Customer (as defined in the Agreement) as our agent for the purposes of the Agreement; and
- (b) the same Process Agent (as defined in any applicable Service Terms and Conditions) for service of process in England and Wales.

We wish to accede to the following Services: [Physical Cash Concentration Service/Multi Bank Cash Concentration Service/Single Party Notional Cash Pooling Service/Multi Party Notional Cash Pooling Service Pool Benefit Distribution Service/Interest Reallocation Service].

This Accession Instrument, and any non-contractual obligations arising out of or in connection with it, shall be governed by and construed in accordance with English law.

If it is incorporated in Italy, the Acceding Company further declares hereby that it is fully aware of the contents of the Agreement and specifically confirms and approves Clauses 4.1 and 4.2 (Representations, warranties and undertakings), Clause 5 (Additional Companies) and Clause 18 (Governing law and jurisdiction) of the Agreement and, if applicable to it, Clause 2 (Guarantee and indemnity), Clause 3 (Set-off) and Clause 4 (Account operation) of the Service Terms relating to the Multi Party Notional Cash Pooling Service.

IN WITNESS of which this Accession Instrument has been executed and entered into on _____ 20_____.

ANNEX TO CUSTOMER LIQUIDITY AGREEMENT

Multi Party Notional Cash Pooling Service Terms and Conditions

1. MP Pooling Service

1 .1 These terms and conditions (the "**MP Pooling Terms**") apply where more than one Company wishes the credit and debit balances on its Accounts specified in the applicable Set Up Form (the "**MP Pooled Accounts**") to be notionally combined with each other, so that the Companies overall will earn more interest and pay less overdraft charges (the "**MP Pooling Service**"). The MP Pooling Service may be used in relation to MP Pooled Accounts denominated in a single

U
U
U
U

currency (the "**MPSC Pooling Service**") or in relation to MP Pooled Accounts denominated in more than one currency (the "**MPCC Pooling Service**").

- 1.2 Certain terms defined in Clause 7 are used in this Annex. Where a Company falls within a category identified in Schedule 2 to this Annex, this Annex shall apply to that Company as amended or supplemented by the relevant provision(s) of that Schedule 2.
- 1.3 For the purpose of paragraph (iii) of Schedule 1 to the Master Terms and Conditions, each Company using the MP Pooling Service is required to provide a board resolution substantially in the form of Schedule 1 to this Annex (as appropriate to the relevant jurisdiction of incorporation and the circumstances of the Company's participation in the MP Pooling Service), with English translation:
- (i) approving the terms of the Agreement (and the Accession Instrument, if applicable);
 - (ii) resolving that it execute the Agreement (or the Accession Instrument, if applicable);
 - (iii) stating that corporate benefit accrues to the Company from the provision by it of the guarantee in these MP Pooling Terms; and
 - (iv) appointing the Customer its agent for purposes of the MP Pooling Service.

2. Guarantee and indemnity

- 2.1 In consideration of the Bank making financial accommodation available to, for or for the account of any one or more of the Companies or for other sufficient consideration (receipt whereof each Company hereby acknowledges), including the Bank's allocation of interest to the MP Pooled Accounts of each Company from time to time in accordance with Clause 4, each Company hereby jointly and severally, irrevocably and unconditionally:
- (i) guarantees to the Bank, as principal obligor and not merely as surety, payment by each other Company of all such other Company's Liabilities and of sums payable now or in the future to the Bank by that other Company in connection with that Company's Liabilities when and as the same shall become due; and
 - (ii) undertakes with the Bank that if and each time that any other Company shall be in default in the payment of any of such other Company's Liabilities or of any sum in connection with that Company's Liabilities the Company will make good the default and pay such Liabilities or sums as if the Company instead of the other Company were expressed to be the primary obligor, together with interest thereon at the rate per annum from time to time payable by the other Company on such Liabilities or sums from the date when such Liabilities or sums become payable by the Company hereunder until payment of such Liabilities or sums in full.
- 2.2 This is a guarantee and indemnity granted by each Company in respect of all the Liabilities of each other Company but the maximum amount for which each Company shall be liable under this guarantee and indemnity in respect of the Liabilities of each other Company shall not at any time exceed the aggregate of the Credit Balances on all of its MP Pooled Accounts with the Bank at that time.
- 2.3 Neither the illegality, invalidity or unenforceability of any provision of this Agreement nor the winding-up, liquidation, dissolution or any other disability or circumstance whatsoever and howsoever arising in relation to any Company shall affect, determine the guarantee, indemnity and undertakings granted by each Company under this Clause 2.

- 2.4 This guarantee and indemnity is and will remain the property of the Bank.
- 2.5 The guarantee and indemnity set forth in this Clause 2 shall be a continuing guarantee and indemnity, shall extend to the ultimate balance of the Total Liabilities and shall continue in force notwithstanding any intermediate payment in whole or in part of the Total Liabilities. If for any reason the guarantee and indemnity ceases to be a continuing guarantee and indemnity in respect of any Company, the Bank may open a new account with or continue any existing account with that Company and the liability of the Companies in respect of the Liabilities at the date of such cessation shall remain regardless of any payments in or out of any such account.
- 2.6 Where any discharge (whether in respect of the Total Liabilities, this guarantee and indemnity, or any other security therefor or otherwise) is made in whole or in part or any arrangement is made on the faith of any payment, security or other disposition which is avoided or must be repaid on bankruptcy, liquidation or otherwise without limitation, the liability of each Company under the guarantee and indemnity set forth in this Clause 2 shall continue as if there had been no such discharge or arrangement. The Bank shall be entitled to concede or compromise any claim that any such payment, security or other disposition is liable to avoidance or repayment.
- 2.7 The liability of each Company hereunder and the right of set-off conferred on the Bank under Clause 3:
- (i) shall continue to apply to each Company until such time as the Bank consents in writing to the Company ceasing to be a party to this Agreement;
 - (ii) shall apply, on the same basis, to any Customer Affiliate, upon it becoming a party to this Agreement; and
 - (iii) shall not be prejudiced, affected or diminished by any act, omission, circumstance, matter or thing which but for this provision might operate to release or otherwise exonerate it from its obligations hereunder in whole or in part, including without limitation and whether or not known to it or the Bank:
 - (a) any time or waiver granted to or composition with any other Company or any other person;
 - (b) any failure by any Company named herein to execute properly this Agreement;
 - (c) the taking, variation, compromise, renewal or release or refusal of or neglect to perfect or enforce any rights, remedies or securities against any other Company, another guarantor or any other person;
 - (d) any legal limitation, disability, incapacity or other circumstances relating to any other Company or the liquidation or change in the name or constitution of any other Company, another guarantor or any other person;
 - (e) the accession or removal of any Company to or from this Agreement;
 - (f) any variation of, or extension of the due date for performance of any of the Total Liabilities or any term of any agreement between any other Company and the Bank or any other document or security so that references to such documents in this guarantee shall include each such variation or extension or any increase, exchange, acceleration, renewal, surrender, release or loss of or

U
U
U
U
U

failure to perfect any security or of any non-presentment or non-observance of any formality in respect of any instruments; and

- (g) any irregularity, unenforceability, invalidity or frustration of any of the Total Liabilities or any obligations of any other Company or any other person under any document or security, to the intent that the Company's obligations hereunder shall remain in full force and the guarantee and indemnity set forth in Clause 2 be construed accordingly as if there were no such irregularity, unenforceability, invalidity or frustration.

- 2.8 As between each of the Companies and the Bank, each of the Companies shall be liable under this Agreement as if it were the sole principal debtor and not merely a guarantor. Accordingly, it shall not be discharged, nor shall its liability be affected, by anything which would not discharge it or affect its liability if it were the sole principal debtor, including without limitation and whether or not known to it or the Bank anything referred to in sub-Clauses 2.7(iii)(a)-(g) above.
- 2.9 Each Company waives any right it may have of first requiring the Bank to proceed against or enforce any other rights or security of or claim payment from any other Company or any other person before claiming from the Company hereunder and any right it may have of requiring the Liabilities to be apportioned between any of the other Companies.
- 2.10 The guarantee and indemnity set forth in this Clause 2 shall be in addition to and shall not in any way be prejudiced by any other security now or hereafter held by the Bank as security for the obligations of the Companies. The Bank's rights, powers and remedies hereunder are cumulative and not exclusive of any rights, powers and remedies provided by law.

3. Set-off

- 3.1 All of the MP Pooled Accounts of each Company, irrespective of their nature, type, currency or terms, or the location of the branch of the Bank where the MP Pooled Accounts are held, will constitute accounting sub-divisions of a single, indivisible account with the Bank, the Debit Balances and Credit Balances of which are liable to mutual set-off. In any event, the Bank and each Company agree that their mutual debits and credits shall be debited and credited on each side of the MP Pooled Accounts on a daily basis. The gross amounts corresponding to the mutual debits and to the mutual credits between them shall be replaced with the single debit or credit arising from the net balance of the corresponding MP Pooled Account. The Bank is hereby at all times authorised to effect the necessary accounting entries so as to combine the distinct Credit Balances and Debit Balances into a single net balance. In addition to the foregoing and to any general right of combination of accounts to which the Bank may be entitled by the general banking conditions of the relevant branch of the Bank and/or by law, the Bank may without prior notice to or demand of the Companies or any of them:

- (i) set-off the Liabilities of each Company to the Bank against any obligation owed by the Bank to that Company (whether or not matured) including against the Credit Balances, regardless of the currency, place of payment or booking office of those Liabilities or those obligations; and/or
- (ii) combine or consolidate any MP Pooled Account in the name of each Company (whether sole or joint) in any currency with any Credit Balance or any other MP Pooled Account of that Company; and/or
- (iii) apply or appropriate any Credit Balance of a Company in or towards the payment or discharge of the Liabilities of that Company in such order as the Bank sees fit.

U
U
U

- 3.2 For the purpose of cross-currency set-off, the Bank may convert either the relevant Liabilities or the obligation of the Bank at a market rate determined by the Bank.
- 3.3 If any part of the Liabilities or an obligation is unascertained, the Bank may in good faith estimate in accordance with its usual practice that Liability or obligation and set-off in respect of the estimate, subject to the relevant party accounting to the other when the Liability or obligation is ascertained.
- 3.4 For the purposes of Clause 3.1, the Bank shall be entitled to break or determine each Credit Balance of each Company in whole or in part and notwithstanding any other term or condition applying to such MP Pooled Account, any costs incurred by the Bank in connection with such breaking or determination shall form part of the Liabilities owing by that Company.

4. Account operation

- 4.1 Each Company may withdraw amounts from any of its MP Pooled Accounts, provided that the sum of the Pooled Balance following such withdrawal, should not go below zero or (if applicable) exceed any overdraft limit made available by the Bank.
- 4.2 Unless otherwise agreed in writing, all facilities extended to the Companies by the Bank under these MP Account Pooling Terms are not committed facilities and are immediately repayable by the Companies on demand from the Bank.
- 4.3 At the request of the Companies, which request is hereby made, and in consideration of each of the Companies giving the guarantee and indemnity set forth in Clause 2, the Bank will, unless and until notice of release or notice of termination for the respective purposes of Clause 1.4 or Clause 8 of this Agreement has been given, determine interest and charges payable on the MP Pooled Accounts in accordance with Clause 4.4.
- 4.4 With respect to each period of a duration agreed between the Bank and the Agent in the applicable Set-Up Form, for each group of MP Pooled Accounts domiciled with the same Bank Unit (the **"Pooled Accounts"**), the Bank will:
- (i) for each day of that period, calculate the pool benefit in accordance with the applicable Set-Up Form (the **"Pool Benefit"**);
 - (ii) if the applicable Set-Up Form indicates that the Offset Ratio is "On", at the end of that period post to the Pooled Account specified by the Agent an amount equal to (A) 100% of the Pool Benefit for any day on which the Offset Ratio was equal to or greater than 100%; and (B) the Offset Ratio multiplied by the Pool Benefit for any day on which the Offset Ratio was below 100%; and
 - (iii) if the applicable Set-Up Form indicates that the Offset Ratio is "Off", at the end of that period post to the Pooled Account specified by the Agent the aggregate of the Pool Benefit for each day of that period (in the case of the MPCC Pooling Service, in the Base Currency).
- 4.5 Without prejudice to any other limits and restrictions that may be agreed between any of the Companies and the Bank from time to time, and without prejudice to the Bank's other rights under this Agreement, the Customer shall ensure that:
- (i) the Pooled Balance will not be continuously overdrawn; and

U
U
U
U
U

- (ii) No MP Pooled Account shall be overdrawn for any period of time in excess of the period notified by the Bank to the Customer from time to time, and upon request by the Bank from time to time and in any event at least once in each calendar month, each MP Pooled Account shall be funded to completely remove and eliminate all overdrawn amounts.

5. Release

A Company may only be released from this Agreement if:

- (i) the Liabilities of the Companies then remaining, in aggregate, to the Bank would not exceed the aggregate of the remaining Credit Balances and (if applicable) any limit made available by the Bank (whether or not advised to any Company) in respect of the relevant MP Pooled Accounts as a result of or following any such release; and
- (ii) the creditworthiness of the Companies then remaining, in aggregate, is satisfactory to the Bank.

6. Process agent

Without prejudice to any other mode of service, each of the Companies (unless incorporated in England and Wales):

- (i) irrevocably appoints the Process Agent as its agent for service of process relating to any Proceedings in England and Wales in connection with this Agreement or such other agent in England as has been notified to the Bank;
- (ii) agrees that failure by the Process Agent to notify the Company of the process shall not invalidate the Proceedings concerned; and
- (iii) consents to the service of process relating to any such Proceedings by prepaid posting of a copy of the process to its address for the time being applying under Clause 9 of this Agreement.

7. Definitions

In this Annex and unless the context otherwise requires:

"Agent" means the Company specified as such in the applicable Set Up Form, acting for itself and in its capacity as agent for and on behalf of each of the other Companies who use the MP Pooling Service;

"Base Currency" means, in relation to the MPCC Pooling Service, the currency specified as the Base Currency by the Agent to the Bank which currency must be a currency in which an MP Pooled Account specified by the Agent is denominated and, in the absence of such specification, United States dollars;

"Base Currency Equivalent" means, as at the time calculated, (i) for any amount denominated in the Base Currency, that amount, and (ii) for any amount denominated in any other currency, such amount notionally converted into the Base Currency at a market rate determined by the Bank on a daily basis;

"Credit Balance" means, in relation to each Company, the aggregate of all sums which are from time to time deposited in and standing to the credit of any MP Pooled Account in the

U
U
U

U
U

name of, or on behalf of the Company together with all interest accruing from time to time in respect of such sums;

"Debit Balance" means, in relation to each Company, the debit balance, if any, shown in any of its MP Pooled Accounts;

"Liabilities" means, in relation to each Company, all present and future obligations and liabilities of that Company to the Bank arising in connection with the MP Pooled Accounts, whether:

- (i) arising under or on account of any overdraft facility provided by the Bank to that Company including all Debit Balances on that Company's MP Pooled Accounts; or
- (ii) arising under this Agreement, including in particular (without limitation) the guarantee and indemnity obligations contemplated in Clause 2,

and all expenses incurred by the Bank in connection with seeking to recover any of the above on a full indemnity basis;

"Offset Ratio" means, in respect of each group of MP Pooled Accounts domiciled with the same Bank Unit (i) with respect to the Pooled Balance on any day in the case of the MPSC Pooling Service, the aggregate Credit Balances domiciled with the Bank Unit as a percentage of the aggregate Debit Balances domiciled with the Bank Unit at the end of that day; and (ii) with respect to the Pooled Balance on any day in the case of the MPCC Pooling Service, the aggregate Credit Balances domiciled with the Bank Unit (as notionally converted by the Bank into its Base Currency Equivalent) as a percentage of the aggregate Debit Balances domiciled with the Bank Unit (as notionally converted by the Bank into its Base Currency Equivalent) at the end of that day;

"Pooled Balance" means, in respect of each group of MP Pooled Accounts domiciled with the same Bank Unit (i) in the case of the MPSC Pooling Service, the notional net balance obtained by adding together the Credit Balances and the Debit Balances on MP Pooled Accounts denominated in the same currency and domiciled with the Bank Unit, and (ii) in the case of the MPCC Pooling Service, the notional net balance expressed in the Base Currency obtained by adding together the Base Currency Equivalents of the Credit Balances and the Debit Balances on MP Pooled Accounts denominated in different currencies and domiciled with the Bank Unit;

"Process Agent" means the Process Agent which is identified as such in the applicable Set Up Form; and

"Total Liabilities" means the aggregate Liabilities of all the Companies.

SCHEDULE 2 TO MULTI PARTY NOTIONAL CASH POOLING

SERVICE TERMS AND CONDITIONS ANNEX

Country specific provisions

1. Each Company that is a limited liability company registered in Norway further undertakes to the Bank and each of the Affiliate Banks that:
 - (a) it shall during the tenor of this Agreement take reasonable steps in order to ascertain its compliance with the Norwegian Company Acts section 8-7-4, specifically concerning the requirement that it belongs to the group in accordance with such Acts section 1-3, and that the funds in its Accounts are solely employed for group operations;
 - (b) if it becomes aware that the requirements of the said section 8-7-4 are no longer being complied with, then it will notify the Bank in writing without delay, and if possible try to cure any such non-compliance; and
 - (c) it shall indemnify the Bank and each of the Affiliate Banks against and hold them harmless from any Damages incurred or suffered by the Bank or that Affiliate Bank arising out of or relating to any breach by it of its above undertakings in this paragraph 1.
2. Each Company that is incorporated or established under Swiss law further undertakes to the Bank and each of the Affiliate Banks that:
 - (a) it shall ensure that the aggregate of all sums which are from time to time deposited in and standing to the credit of any of its Accounts (together with all interest accruing from time to time in respect of such sums) will not at any time exceed the amount of the profits and reserves of the Company available for distribution (in each case in accordance with the Swiss Code of Obligations) at that time; and
U
 - (b) it shall indemnify the Bank and each of the Affiliate Banks against and hold them harmless from any Damages incurred or suffered by the Bank or that Affiliate Bank arising out of or relating to any breach by such Company of its undertaking in subparagraph (a) above.
3. Notwithstanding the terms of Clause 2.2 of this Annex, the maximum amount for which each Company registered in Italy shall be liable under that Clause in respect of the Liabilities of each other Company shall not at any time exceed an amount equal to the lower of (i) the aggregate of the Credit Balances on all of its Accounts with the Bank at that time; and (ii) USD Dollars ten billion (USD \$10,000,000,000). Each such Company registered in Italy further undertakes to the Bank and each of the Affiliate Banks that:
 - (a) it shall ensure at all times during the tenor of this Agreement that its Credit Balances are less than the amount designated in sub-paragraph (ii) above; and
U
 - (b) it shall indemnify the Bank and each of the Affiliate Banks against and hold them harmless from any Damages incurred or suffered by the Bank arising out of or relating to any breach by it of its undertaking in sub-paragraph (a) above.

U
U
U
U

4. Each Company that is incorporated or established under Hungarian law further undertakes to the Bank and each of the Affiliate Banks that:
- (a) it shall ensure that the aggregate of all sums which are from time to time deposited in and standing to the credit of any of its Accounts (together with all interest accruing from time to time in respect of such sums) will not at any time exceed the amount of the profits and reserves of the Company available for distribution (in each case in accordance with the applicable Hungarian laws and regulations) at that time; and
U
 - (b) it is a Customer Affiliate and undertakes to inform the Bank through the Customer if it ceases to exist being a Customer Affiliate; and
U
 - (c) it has not instigated any insolvency related proceedings, nor have any insolvency related proceedings been taken, started or threatened against it; and
U
 - (d) it shall indemnify the Bank and each of the Affiliate Banks against and hold them harmless from any Damages incurred or suffered by the Bank or that Affiliate Bank arising out of or relating to any breach by such Company of its undertaking in this clause 4.
5. Each Company that is incorporated or established under Slovakian law further undertakes to the Bank and each of the Affiliate Banks that:
- (a) it shall ensure that its Liabilities, in addition to all its other liabilities, are limited to the value of its net assets;
 - (b) it has not instigated any insolvency related proceedings, nor have any insolvency related proceedings been taken, started or threatened against it, and it is not insolvent (*platobne neschopna*) or indebted (*predlzena*) as these terms are defined in the Slovak Bankruptcy Act; and
 - (c) it shall indemnify the Bank and each of the Affiliate Banks against and hold them harmless from any Damages incurred or suffered by the Bank or that Affiliate Bank arising out of or relating to any breach by such Company of its undertaking in this clause 5.

Pool Benefit Distribution Service Terms and Conditions

These terms and conditions (the **"Pool Benefit Distribution Terms"**) relate to each pool benefit distribution arrangement (each, as may from time to time be amended, a **"Pool Benefit Distribution Arrangement"**) which the Bank may from time to time agree with the Customer in connection with the Account specified in the applicable Set Up Form (each, a **"Pool Benefit Distribution Account"**) which are maintained with the Bank by the relevant Company/ies specified in the applicable Set Up Form.

The Bank will distribute the pool benefit calculated at a notional pool level to the Pool Benefit Distribution Accounts in accordance with the applicable Set Up Form.

Consent of Independent Registered Public Accounting Firm

The Board of Directors

Avangrid, Inc.:

We consent to the incorporation by reference in the registration statement (No. 333-221502) on Form S-3 and registration statements (No. 333-212606 and No. 333-208571) on Form S-8 of Avangrid, Inc. of our reports dated March 26, 2018, with respect to the consolidated balance sheet of Avangrid, Inc. as of December 31, 2017, and the related consolidated statements of income, comprehensive income, changes in equity, and cash flows for the year ended December 31, 2017, and the related notes and financial statement schedule I (collectively, the “consolidated financial statements”), and the effectiveness of internal control over financial reporting as of December 31, 2017, which reports appear in the December 31, 2017 annual report on Form 10-K of Avangrid, Inc.

Our report dated March 26, 2018, on the effectiveness of internal control over financial reporting as of December 31, 2017, expresses our opinion that Avangrid, Inc. did not maintain effective internal control over financial reporting as of December 31, 2017 because of the effect of a material weakness on the achievement of the objectives of the control criteria and contains an explanatory paragraph that states that management has identified certain deficiencies that rose to the level of a material weakness in controls related to the measurement and disclosure of income taxes.

CERTIFICATION

I, James P. Torgerson, certify that:

1. I have reviewed this annual report on Form 10-K of Avangrid, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes ☒ No ☐

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Act. Yes ☐ No ☒

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for shorter period that the registrant was required to submit and post such files).
Yes ☒ No ☐

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of "large accelerated filer," "accelerated filer," and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☒ Accelerated filer ☐
Non-accelerated filer ☐ (Do not check if a smaller reporting company) Smaller reporting company ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☒

The aggregate market value of the Avangrid, Inc.'s voting stock held by non-affiliates, computed by reference to the price at which the common equity was last sold as of the last business day of Avangrid, Inc.'s most recently completed second fiscal quarter (June 30, 2016) was \$2,576 million based on a closing sales price of \$46.06 per share.

Indicate the number of shares outstanding of each of the registrant's classes of common stock, as of the latest practicable date: 309,068,730 shares of common stock, par value \$0.01, were outstanding as of March 9, 2017.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the documents listed below have been incorporated by reference into the indicated parts of this report, as specified in the responses to the item numbers involved.

Designated portions of the Proxy Statement relating to the 2017 Annual Meeting of the Shareholders are incorporated by reference into Part III to the extent described therein.

GLOSSARY OF TERMS AND ABBREVIATIONS

Unless the context indicates otherwise, the terms “we,” and “our” are used to refer to AVANGRID and its subsidiaries.

Consent order refers to the partial consent order issued by DEEP in August 2016.

English station site refers to the former generation site on the Mill River in New Haven, Connecticut.

GenConn Devon refers to GenConn’s peaking generating plant in Devon, Connecticut.

GenConn Middletown refers to GenConn’s peaking generating plant in Middletown, Connecticut.

Ginna refers to the Ginna Nuclear Power Plant, LLC and the R.E. Ginna Nuclear Power Plant.

Iberdrola Group refers to the group of companies controlled by Iberdrola, S.A.

Iberdrola refers to Iberdrola, S.A., which owns 81.5% of the outstanding shares of Avangrid, Inc.

Installed capacity refers to the production capacity of a power plant or wind farm based either on its rated (nameplate) capacity or actual capacity.

Joint Proposal refers to the proposal, filed with the NYPSC on February 19, 2016 by NYSEG, RG&E and other signatory parties for a three-year rate plan for electric and gas service at NYSEG and RG&E commencing May 1, 2016.

Klamath Plant refers to the Klamath gas-fired cogeneration facility located in the city of Klamath, Oregon.

Merger Agreement refers to the Agreement and Plan of Merger, dated as of February 25, 2015, by and among Avangrid, Inc., Green Merger Sub, Inc. and UIL Holdings Corporation.

NED pipeline refers to TGP’s proposed Northeast Energy Direct project.

Non-GAAP refers to the financial measures that are not prepared in accordance with U.S. GAAP, including adjusted gross margin, adjusted EBITDA, adjusted net income and adjusted earnings per share.

Yankee Companies refers to the Maine Yankee Atomic Power Company, the Connecticut Yankee Power Corporation, and the Yankee Atomic Energy Corporation.

CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING STATEMENTS

References in this Annual Report on Form 10-K to "AVANGRID," "the Company," "we," "our," and "us" refer to Avangrid, Inc. and its consolidated subsidiaries. This Annual Report on Form 10-K contains a number of forward-looking statements. Forward-looking statements may be identified by the use of forward-looking terms such as "may," "will," "should," "can," "expects," "believes," "anticipates," "intends," "plans," "estimates," "projects," "assumes," "guides," "targets," "forecasts," "is confident that" and "seeks" or the negative of such terms or other variations on such terms or comparable terminology. Such forward-looking statements include, but are not limited to, statements about our plans, objectives and intentions, outlooks or expectations for earnings, revenues, expenses or other future financial or business performance, strategies or expectations, or the impact of legal or regulatory matters on business, results of operations or financial condition of the business and other statements that are not historical facts. Such statements are based upon the current beliefs and expectations of our management and are subject to significant risks and uncertainties that could cause actual outcomes and results to differ materially. Important factors that could cause actual results to differ materially from those indicated by such forward-looking statements include, without limitation:

- the future financial performance, anticipated liquidity and capital expenditures of the Company;
- actions or inactions of local, state or federal regulatory agencies;
- success in retaining or recruiting, our officers, key employees or directors;
- changes in levels or timing of capital expenditures;
- adverse developments in general market, business, economic, labor, regulatory and political conditions;
- fluctuations in weather patterns;
- technological developments;
- the impact of any cyber-breaches, grid disturbances, acts of war or terrorism or natural disasters; and
- the impact of any change to applicable laws and regulations affecting operations, including those relating to environmental and climate change, taxes, price controls, regulatory approval and permitting; and
- other presently unknown unforeseen factors.

Additional risks and uncertainties are set forth under Part I, Item 1A, "Risk Factors" in this report. Should one or more of these risks or uncertainties materialize, or should any of the underlying assumptions prove incorrect, actual results may vary in material respects from those expressed or implied by these forward-looking statements. You should not place undue reliance on these forward-looking statements. We do not undertake any obligation to update or revise any forward-looking statements to reflect events or circumstances after the date of this report, whether as a result of new information, future events or otherwise, except as may be required under applicable securities laws. Other risk factors are detailed from time to time in our reports filed with the Securities and Exchange Commission, or SEC, and we encourage you to consult such disclosures.

PART I

Item 1. Business

Overview

Avangrid, Inc., or AVANGRID, formerly Iberdrola USA, Inc., is a New York corporation headquartered in New Haven, Connecticut. AVANGRID is a diversified energy and utility company with more than \$30 billion in assets and operations in 26 states. The company operates regulated utilities and electricity generation through two primary lines of business. Avangrid Networks includes eight electric and natural gas utilities, serving 3.1 million customers in New York and New England. Avangrid Renewables operates 6.5 gigawatts of electricity capacity, primarily through wind power, in states across the United States. AVANGRID employs approximately 7,000 people. The company was formed by a merger between Iberdrola USA, Inc. and UIL Holdings Corporation, or UIL, in 2015. Iberdrola S.A., a corporation (*sociedad anónima*) organized under the laws of the Kingdom of Spain, a worldwide leader in the energy industry, directly owns 81.5% of outstanding shares of AVANGRID common stock. Our primary business is ownership of our operating businesses, which are described below.

Our direct, wholly-owned subsidiaries include Avangrid Networks, Inc., or Networks, and Avangrid Renewables Holdings, Inc., or ARHI. ARHI in turn holds subsidiaries including Avangrid Renewables LLC, or Renewables. Networks, owns and operates our regulated utility businesses through its subsidiaries, including electric transmission and distribution and natural gas distribution, transportation and sales. Renewables operates a portfolio of renewable energy generation facilities primarily using onshore wind power and also solar, biomass and thermal power. The following chart depicts our current organizational structure.

Through Networks, we own electric generation, transmission and distribution companies and natural gas distribution, transportation and sales companies in New York, Maine, Connecticut and Massachusetts, delivering electricity to approximately 2.2 million electric utility customers and delivering natural gas to approximately 992,000 natural gas public utility customers as of December 31, 2016. The interstate transmission and wholesale sale of electricity by these regulated utilities is regulated by the Federal Energy Regulatory Commission, or FERC, under the Federal Power Act, or FPA, including with respect to transmission rates. Further, Networks' electric and gas distribution utilities in New York, Maine, Connecticut and Massachusetts are subject to regulation by the New York State Public Service Commission, or NYPSC, the Maine Public Utilities Commission, or MPUC, the Connecticut Public Utilities Regulatory Authority, or PURA, and the Massachusetts Department of Public Utilities, or DPU, respectively. Networks strives to be a leader in safety, reliability and quality of service to its utility customers.

Through Renewables, we had a combined wind, solar and thermal installed capacity of 6,538 megawatts, or MW, as of December 31, 2016, including Renewables' share of joint projects, of which 5,852 MW was installed wind capacity. Approximately 62% of the capacity was contracted as of December 31, 2016, for an average period of 9.5 years. As the second largest wind operator in the United States based on installed capacity as of December 31, 2016, Renewables strives to lead the transformation of the U.S. energy industry to a competitive, clean energy future. Renewables currently operates 54 wind farms in 19 states across the United States.

ARHI also holds a subsidiary, Enstor Gas, LLC, or Gas, which owns non-core natural gas storage and gas trading businesses (Gas) through Enstor Energy Services LLC (gas trading) and Enstor Inc. (gas storage). Through Gas, as of December 31, 2016, we own approximately 67.5 billion cubic feet, or Bcf, of net working gas storage capacity. Gas operates 52.4 Bcf of contracted or managed natural gas storage capacity in North America through Enstor Energy Services, LLC, as of December 31, 2016.

Further information regarding the amount of revenues from external customers, including revenues by products and services, a measure of profit or loss and total assets for each segment for each of the last three fiscal years is provided in Note 23 to our audited consolidated financial statements contained in this Annual Report on Form 10-K.

History

We were incorporated in 1997 as a New York corporation under the name NGE Resources, Inc. and subsequently changed our name to Energy East Corporation. The stock of Energy East Corporation was publicly traded on the New York Stock Exchange, or the NYSE. In 2007, Iberdrola, S.A. acquired Scottish Power Ltd., or Scottish Power, including ScottishPower Holdings, Inc., or SPHI, the parent company of Scottish Power's U.S. subsidiaries. Through this acquisition, Iberdrola, S.A. acquired PPM Energy, a subsidiary that operated SPHI's U.S. wind business, thermal generation operations and the gas storage and energy management businesses and changed PPM Energy's name to Renewables. In 2008, Iberdrola, S.A. acquired Energy East Corporation and we changed our name to Iberdrola USA, Inc. in December 2009. In 2013, we completed an internal corporate reorganization to create a unified corporate presence for the Iberdrola brand in the United States, bringing all of its U.S. energy companies under one single holding company, Iberdrola USA, Inc. The internal reorganization, completed in November 2013, resulted in the concentration of our principal businesses in two major subsidiaries: Networks, which holds all of our regulated utilities; and Renewables, which holds our renewable and thermal generation businesses, and gas storage and marketing businesses.

We were the corporate parent of The Southern Connecticut Gas Company, or SCG, Connecticut Natural Gas Corporation, or CNG and The Berkshire Gas Company, or BGC, prior to UIL acquiring those companies in 2010.

On December 16, 2015, we completed an acquisition of UIL, pursuant to which UIL merged with and into our wholly-owned subsidiary, Green Merger Sub, Inc., or Merger Sub, with Merger Sub surviving as our wholly-owned subsidiary. The acquisition was effected pursuant to the Agreement and Plan of Merger, dated as of February 25, 2015, or the Merger Agreement, by and among us, Merger Sub, and UIL. Following the completion of the acquisition, Merger Sub was renamed "UIL Holdings Corporation" and we were renamed Avangrid, Inc. Immediately following the completion of the acquisition, former UIL shareowners owned 18.5% of the outstanding shares of common stock of AVANGRID, and Iberdrola owned the remaining shares. Effective as of April 30, 2016, UIL and its subsidiaries were transferred to a wholly-owned subsidiary of Networks.

Networks

Overview

Networks, holds our regulated utility businesses, including electric generation, transmission and distribution and natural gas distribution, transportation and sales. Networks serves as a super-regional energy services and delivery company through eight regulated utilities it owns directly:

- New York State Electric & Gas Corporation, or NYSEG, which serves electric and natural gas customers across more than 40% of the upstate New York geographic area;
- Rochester Gas and Electric, or RG&E, which serves electric and natural gas customers within a nine-county region in western New York, centered around Rochester;
- The United Illuminating Company, or UI, which serves electric customers in southwestern Connecticut;
- Central Maine Power Company, or CMP, which serves electric customers in central and southern Maine;
- SCG, which serves natural gas customers in Connecticut;
- CNG, which serves natural gas customers in Connecticut;
- BGC, which serves natural gas customers in western Massachusetts; and
- Maine Natural Gas Corporation, or MNG, which serves natural gas customers in several communities in central and southern Maine.

For the year ended December 31, 2016, Networks distributed approximately 37,027,000 megawatt-hours, or MWh, of electricity. As of December 31, 2016, Networks provided electric service to its approximately 2.2 million customers in the states of New York, Maine and Connecticut. In total, the electric system of Networks' regulated utilities consisted of 8,482 miles of transmission lines, 70,916 miles of distribution lines and 826 substations as of December 31, 2016. Furthermore, for the year ended December 31, 2016, Networks delivered approximately 182 million dekatherms, or DTh, of natural gas, to approximately 992,000 customers, providing service in the states of New York, Maine, Connecticut and Massachusetts.

The demand for electric power and natural gas is affected by seasonal differences in the weather. Demand for electricity in each of the states in which Networks operates tends to increase during the summer months to meet cooling load or in winter months for heating load while statewide demand for natural gas tends to increase during the winter to meet heating load.

The following table sets forth certain information relating to the, rate base, number of customers and the amount of electricity or natural gas provided by each of Networks' regulated utilities for the year ended December 31, 2016:

Utility	Rate Base ⁽¹⁾ (in billions)	Electricity Customers	Electricity Delivered (in MWh)	Natural Gas Customers	Natural Gas Delivered (in DTh)
	December 31, 2016	December 31, 2016	For the year ended December 31, 2016	December 31, 2016	For the year ended December 31, 2016
NYSEG	\$ 2.3	890,258	15,461,000	264,825	53,446,000
RG&E	\$ 1.5	375,912	7,187,000	310,621	49,373,000
CMP	\$ 2.2	619,312	9,045,000	—	—
MNG	\$ 0.1	—	—	4,456	1,204,000
UI	\$ 1.5	332,998	5,334,000	—	—
SCG	\$ 0.5	—	—	196,232	33,146,000
CNG	\$ 0.4	—	—	176,420	35,673,000
BGC	\$ 0.1	—	—	39,813	9,528,000

(1) "Rate base" means the net assets upon which a utility can receive a specified return, based on the value of such assets. The rate base is set by the relevant regulatory authority and typically represents the value of specified property, such as plants, facilities and other investments of the utility. These rate base values have been calculated using the best estimates as of December 31, 2016.

During the last five years, Networks has invested nearly \$5.8 billion in creating a delivery network with greater capacity and improved reliability, environmental security and sustainability, efficiency and automation. Networks continuously improves its grid to accommodate new requirements for advanced metering, demand response and enhanced outage management, while improving its flexibility for the integration and management of distributed energy resources, or DER.

New York

As of December 31, 2016, NYSEG served approximately 890,000 electricity customers and 265,000 natural gas customers across more than 40% of upstate New York's geographic area, while RG&E served approximately 375,000 electricity customers and 310,000 natural gas customers in a nine-county region centered around Rochester, in western New York.

In 2016, nine hydroelectric plants owned by NYSEG and RG&E generated nearly 327 million kilowatt-hours, or kWh, of clean hydropower, which is enough energy to power 45,000 homes across New York State, assuming an average electricity consumption of 600 kWh per month per customer. See "— Properties—Networks" for more information regarding Networks' electric generation plants.

Networks also holds an approximate 20% ownership interest in the regulated New York TransCo, LLC, or New York TransCo. Through New York TransCo, Networks has formed a partnership with Central Hudson Gas and Electric Corporation, Consolidated Edison, Inc., National Grid, plc, and Orange and Rockland Utilities, Inc. to develop a portfolio of interconnected transmission lines and substations to fulfill the objectives of the New York energy highway initiative, a proposal to install up to 3,200 MW of new electric generation and transmission capacity in order to deliver more power generated from upstate New York power plants to downstate New York.

Maine

As of December 31, 2016, CMP delivered electricity to more than 619,000 customers in an 11,000 square-mile service area in central and southern Maine. CMP completed a \$1.4 billion investment plan for the construction of upgrades to the bulk power transmission grid in Maine, the largest transmission investment in the history of Maine, which includes the construction of five new

345-kilovolt, or kV, substations and related facilities linked by approximately 440 miles of new transmission lines (refers to the Maine Power Reliability Program, or MPRP).

CMP also owns 78% of the Maine Electric Power Corporation, or MEPCO, a single-asset 182 mile 345kV electric transmission line from the Maine/New Brunswick border to Wiscasset, Maine.

MNG delivers natural gas to 4,456 customers in central and southern Maine. MNG continues to build out in 12 communities.

Connecticut

As of December 31, 2016, UI served more than 332,000 residential, commercial and industrial customers in a service area of approximately 335 square miles in the southwestern part of Connecticut. The service area includes Bridgeport and New Haven and is home to a diverse array of business sectors including aerospace manufacturing, healthcare, biotech, financial services, precision manufacturing, retail and education. UI's retail electric revenues vary by season, with the highest revenues typically in the third quarter of the year reflecting seasonal rates, hotter weather and air conditioning use.

UI is also a party to a joint venture with certain affiliates of NRG Energy, Inc., pursuant to which UI holds 50% of the membership interests in GCE Holding LLC, whose wholly owned subsidiary, GenConn Energy LLC, or GenConn, operates peaking generation plants in Devon, Connecticut, or GenConn Devon, and Middletown, Connecticut, or GenConn Middletown.

As of December 31, 2016, SCG and CNG provided local gas distribution services to approximately 373,000 customers in the greater Hartford-New Britain area, Greenwich and the southern Connecticut coast from Westport to Old Saybrook, including the cities of Bridgeport and New Haven.

Massachusetts

As of December 31, 2016, BGC provided local gas distribution services to approximately 40,000 customers in a service area in western Massachusetts, which includes the cities of Pittsfield, North Adams and Greenfield.

Rate Base

These rate base values have been calculated using the best estimates as of December 31, 2016. The rate base of Networks' regulated utilities for the years indicated below have been as follows:

Rate base	2014	2015	2016
	<i>(in millions)</i>		
NYSEG Electric	\$ 1,796	\$ 1,825	\$ 1,828
NYSEG Gas	508	531	490
RG&E Electric	1,111	1,175	1,061
RG&E Gas	444	446	407
Subtotal New York	<u>3,859</u>	<u>3,977</u>	<u>3,786</u>
CMP Dist	739	781	790
CMP Trans	1,467	1,472	1,447
MNG	64	60	69
Subtotal Maine	<u>2,270</u>	<u>2,313</u>	<u>2,306</u>
UI Dist	823	942	972
UI Trans	500	508	544
SCG	461	477	510
CNG	382	396	429
Subtotal Connecticut	<u>2,166</u>	<u>2,323</u>	<u>2,456</u>
BGC	<u>72</u>	<u>91</u>	<u>91</u>
Total	<u>\$ 8,367</u>	<u>\$ 8,704</u>	<u>\$ 8,638</u>

Earnings Sharing Mechanisms

The regulated utilities' rate plans approved by State regulators often include earnings sharing mechanisms, or ESM, that are intended to encourage regulated utilities to operate efficiently. Pursuant to ESMs, if certain of the regulated utilities of Networks earn more than certain threshold amounts, they must share with customers a specified percentage of these earnings. Below is a history of ESMs over the past three years:

	2014	2015	2016
NYSEG Electric	50% / 50%: 10.90% - 11.65% 85% / 15%: over 11.65%; Based on Actual Equity Ratio up to 50%	50% / 50%: 10.90% - 11.65% 85% / 15%: over 11.65%; Based on Actual Equity Ratio up to 50%	50% / 50%: 9.50% - 10.00% 75% / 25%: 10.00% - 10.50% 90% / 10%: over 10.50%; Based on Actual Equity Ratio up to 50% *
NYSEG Gas	Same as above	Same as above	Same as above

BGC	No ESM	No ESM	No ESM

*No ESM from January through April 2016.

Merger Settlement Agreement – Connecticut and Massachusetts

As part of the process of seeking and obtaining regulatory approval of the acquisition of UIL in Connecticut and Massachusetts, AVANGRID and UIL reached settlement agreements with the Office of Consumer Counsel, or OCC, in Connecticut and with the Attorney General of the Commonwealth of Massachusetts and the Department of Energy Resources in Massachusetts, which included commitments of certain actions to be taken after the transaction closed. See Part II, Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations – Networks" for more information.

In connection with the acquisition proceeding, UI signed a proposed partial consent order, or the consent order, that was issued by the Connecticut Department of Energy and Environmental Protection, or DEEP, in August 2016. The consent order requires UI to investigate and remediate certain environmental conditions within the perimeter of a former generation site on the Mill River in New Haven, the English Station site, that UI sold to Quinnipiac Energy in 2000 and which is currently owned by Evergreen Power, LLC and Asnat Realty LLC. Under the terms of the consent order, to the extent that costs of the investigation and remediation are less than \$30 million, UI is required to remit to the State of Connecticut the difference between such costs and \$30 million, to be applied to a public purpose as determined in the discretion of the Governor, the Attorney General of Connecticut and the Commissioner of DEEP. However, UI is obligated to comply with the consent order, even if the cost of such compliance exceeds \$30 million. See Part I, Item 1, "Business – Environmental, Health and Safety - Management, Disposal and Remediation of Hazardous Substances" for more information.

Renewables

The Renewables business, based in Portland Oregon, is engaged primarily in the design, development, construction, management and operation of generation plants that produce electricity using renewable resources and, with more than 50 renewable energy projects, is one of the leaders in renewable energy production in the United States based on installed capacity. Renewables' primary business is onshore wind energy generation, which represents approximately 90% of Renewables' combined installed capacity as of December 31, 2016. For the year ended December 31, 2016, Renewables produced approximately 14,167,000 MWh of energy through wind power generation. Renewables had a pipeline of approximately 5,900 MW of future renewable energy projects in various stages of development as of December 31, 2016.

Typically, Renewables enters into long-term lease agreements with property owners who lease their land for renewable projects. Electricity generated at a wind project is then transmitted to customers through long-term agreements with purchasers. There are a limited number of turbine suppliers in the market. Renewables' largest turbine suppliers, Gamesa Wind US and GE Wind, in the aggregate supplied turbines which accounted for 70% of its installed wind capacity as of December 31, 2016. In June 2016, Siemens

AG and Gamesa Corporación Tecnológica, S.A. signed a binding agreement to merge their wind power businesses. After completion of the merger, which is expected in the first quarter of 2017, Iberdrola will have 8.1% ownership of the new combined company.

Renewables currently operates 54 wind farms in 19 states across the United States. To monetize the tax benefits resulting from production tax credits and accelerated tax depreciation available to qualifying wind energy projects, Renewables has entered into “tax equity” financing structures with third party investors for a portion of its wind farms. Renewables holds 12 operating wind farms under these structures through limited liability companies jointly owned by one or more third party investors. These investors generally provide an up-front investment or, in some cases, enter into fixed and contingent notes for their membership interests in the financing structures. In return, the investors receive substantially all of the cash flows and tax benefits generated by the wind farms until such benefits achieve a negotiated return on their investment. Upon attainment of this target return, the sharing of the cash flows and tax benefits flip, with Renewables receiving substantially all of these amounts thereafter. We also have an option to repurchase the investor’s interest within a certain timeframe after the target return is met. Renewables maintains operational and management control over the wind farm businesses, subject to investor approval of certain major decisions. See “—Properties—Renewables” for more information regarding Renewables’ wind power generation properties.

Additionally, as part of the Renewables portfolio, Renewables operates two thermal generation facilities in the United States, with 636 MW of combined capacity as of December 31, 2016. Renewables worked closely with the City of Klamath Falls, Oregon to develop the Klamath Plant, which has a current capacity of 536 MW. The Klamath Plant operates by creating two useful forms of energy, electricity and process steam, from a single fuel source of natural gas. In addition, Renewables operates a highly flexible 100 MW Klamath Peaking Plant adjacent to the Klamath Plant, providing customers of Renewables additional capability to meet their peak summer and winter power needs.

In addition to its wind assets, Renewables operates two solar photovoltaic facilities with an installed capacity of 50 MW. The solar photovoltaic facilities produced over 132,000MWh of renewable energy for the year ended December 31, 2016. Solar accounted for 0.9% of the total renewable energy generation from Renewables in these same periods.

Renewables is pursuing the continued development of a large pipeline of wind energy projects in various regions across the United States. Each site features a range of different atmospheric characteristics that ultimately drive the selection of turbine technology for the proposed project. As part of Renewables’ wind resource assessment investigation, critical atmospheric parameters such as mean wind speed, extreme wind speed, turbulence intensity, and mean air density are characterized to represent long-term conditions, for over 20 years. The summary wind characteristics are then combined with a terrain, or orography, analysis to assess siting risks in order to mitigate any future operations and maintenance concerns that may arise due to improper turbine siting.

Renewables maintains close relationships with key turbine suppliers, including Gamesa, GE, Vestas, Siemens, and others in order to identify the turbine technology that safely delivers the lowest cost of energy for each candidate project in its portfolio. Renewables has deployed the following mix of turbines under this strategy. See “—Properties—Renewables” for more information regarding Renewables’ turbine technology.

MFG	Model	Rating	Turbines	MW
Gamesa	G83	2.0	61	122
Gamesa	G87	2.0	643	1,286
Gamesa	G90	2.0	237	474
Gamesa	G97	2.0	101	202

Vestas	V47	0.7	34	22
Vestas	V82	1.7	97	160
Total			3,209	5,852

The Renewables meteorology team supports the commercial development of wind energy projects in Renewables’ pipeline by performing a wide variety of detailed investigations to characterize the expected wind energy production from a proposed wind farm in its pre-construction phase of development. These investigations include measuring the wind resource with several well-equipped meteorological masts, utilizing state of the art laser-based and acoustic-based remote sensing equipment, computational fluid

dynamics modeling software, and energy modeling software packages that characterize wake losses from any upwind turbines that may be present. The Renewables fleet of measurement masts consists of over 160 towers that are currently in operation. Additionally, a total of 8 light detecting and ranging, and 5 sonic detecting and ranging, remote sensing devices are deployed at sites across the United States. These remote sensing devices allow hub-height wind speed measurement from a ground-based sensor that can be rapidly deployed and moved as the project matures or changes in nature. The resulting pre-construction energy production estimates that utilize these measurements have been shown to be accurate in a multi-year internal study that compares results to actual, operational data in a benchmarking analysis. This study provides a critical feedback loop that is used to define methodology requirements for future pre-construction energy production estimates to ensure confidence in project investment. Renewables' commitment to obtaining robust atmospheric measurement is driven by a company culture that values business case confidence and understands the role that accurate meteorological data play in the pursuit of this goal.

Gas

The Gas business, based in Houston, Texas, operates a natural gas storage and natural gas trading business through its wholly-owned direct subsidiaries, Enstor, Inc., an Oregon corporation (natural gas storage) and Enstor Energy Services, LLC, a Delaware limited liability company (natural gas trading). Gas owns and operates four natural gas storage facilities, with a total storage capacity of 88.5 Bcf and a net working gas storage capacity of 67.5 Bcf. Enstor Operating Company, LLC, a Texas limited liability company and wholly-owned direct subsidiary of Enstor, Inc., manages all four natural gas storage facilities. The demand for natural gas storage is dependent upon the seasonal differences in the weather. Since market prices and temporal price spreads for natural gas reflect the demand for these products and their availability at a given time, the overall operating results of Gas' business may fluctuate substantially on a seasonal basis. Severe weather, such as ice and snow storms, hurricanes and other natural disasters may cause outages, bodily injury or property damage, which may require Gas to incur additional costs, such as operation and maintenance expenses, which may not be recoverable from customers. See "—Properties—Gas" for more information regarding Gas' natural gas storage facilities. Enstor Energy Services, LLC also contracts and manages natural gas storage and pipeline capacity throughout the United States and parts of Canada. Gas operates 52.4 Bcf of contracted or managed natural gas storage capacity in North America through Enstor Energy Services, LLC, as of December 31, 2016.

Regulatory Environment and Principal Markets

Federal Energy Regulatory Commission

Among other things, the FERC regulates the transmission and wholesale sales of electricity in interstate commerce and the transmission and sale of natural gas for resale in interstate commerce. Certain aspects of Networks' businesses, Renewables' competitive generation and Gas' natural gas storage and energy trading businesses are subject to regulation by the FERC.

Pursuant to the FPA, electric utilities must maintain tariffs and rate schedules on file with the FERC, which govern the rates, terms and conditions for the provision of the FERC-jurisdictional wholesale power and transmission services. Unless otherwise exempt, any person that owns or operates facilities used for the wholesale sale or transmission of power in interstate commerce is a public utility subject to the FERC's jurisdiction. The FERC regulates, among other things, the disposition of certain utility property, the issuance of securities by public utilities, the rates, the terms and conditions for the transmission or wholesale sale of power in interstate commerce, interlocking officer and director positions, and the uniform system of accounts and reporting requirements for public utilities.

With respect to Networks' regulated electric utilities in Maine, New York and Connecticut, the FERC governs the return on equity, or ROE, on all transmission assets in Maine and Connecticut and certain Transco assets in New York; FERC also oversees the rates, terms and conditions of transmission of electric energy in interstate commerce, interconnection service in interstate commerce (which applies to independent power generators, for example), and the rates, terms and conditions of wholesale sales of electric energy in interstate commerce, which includes cost-based rates, market-based rates and the operations of regional capacity and electric energy markets in New England administered by an independent entity, ISO New England, Inc., or ISO-NE, and in New York, administered by another independent entity, the New York Independent System Operator, Inc., or NYISO. The FERC approves CMP, UI and NY Transco regulated electric utilities' transmission revenue requirements. Wholesale electric transmission revenues are recovered through formula rates that are approved by the FERC. CMP's, MEPCO's and UI's electric transmission revenues are recovered from New England customers through charges that recover costs of transmission and other transmission-related services provided by all regional transmission owners. NYSEG's and RG&E's electric transmission revenues are recovered from New York customers through charges that recover the costs of transmission, and other transmission-related services provided by all transmission owners in New York. Several of our affiliates have been granted authority to engage in sales at market-based rates and blanket authority to issue securities, and have also been granted certain waivers of the FERC reporting and accounting regulations available to non-traditional public utilities; however, we cannot be assured that such authorizations or waivers will not be revoked for these affiliates or will be granted in the future to other affiliates.

Pursuant to a series of orders involving the ROE for regionally planned New England electric transmission projects, the FERC established a base-level transmission ROE of 11.14%, as well as providing a 50 basis point ROE adder on Pool Transmission Facilities, or PTF, for participation in the RTO for New England and a 100 basis point ROE incentive for projects included in the ISO-NE Regional System Plan that were completed and on line as of December 31, 2008. Certain other transmission projects received authorization for incentives up to 125 basis points.

Since 2011, several parties have filed four separate complaints with the FERC against ISO-NE and several New England transmission owners, including UI and CMP, claiming that the current approved base ROE of 11.14% was not just and reasonable, seeking a reduction of the base ROE and a refund to customers for the 15-month refund periods beginning October 1, 2011, December 27, 2012, July 31, 2014 and April 29, 2016, respectively.

In 2014, the FERC determined that the base ROE should be set at 10.57% for the first complaint refund period and that a utility's total or maximum ROE should not exceed 11.74%. The FERC issued an order consolidating the second and third complaints and establishing hearing procedures. The administrative law judge issued an initial decision in the second and third complaints on March 22, 2016. The initial decision determined that: (1) for the 15 month refund period in the second complaint, the base ROE should be 9.59% and the ROE Cap (base ROE plus incentive ROEs) should be 10.42% and (2) for the 15 month refund period in the third complaint and prospectively, the base ROE should be 10.90% and that the ROE Cap should be 12.19%. The initial decision in the second and third complaints is the administrative law judge's recommendation to the FERC Commissioners. The FERC is expected to make its final decision on the second and third complaints in mid-2017. The FERC has set the fourth complaint for settlement proceedings and hearing, with a final decision expected in 2018.

On March 3, 2015, the FERC issued an Order on Rehearing in the first complaint denying all rehearing requests from the complainants and the New England transmission owners. Appeals of the FERC's decisions on the first complaint are currently pending before the United States Court of Appeals for the D.C. Circuit.

On December 28, 2015, the FERC issued an order instituting section 206 proceedings and establishing hearing and settlement judge procedures. Pursuant to section 206 of the FPA, the FERC instituted proceedings because it found that ISO-NE Transmission, Markets, and Services Tariff is unjust, unreasonable, and unduly discriminatory or preferential. The FERC stated that ISO-NE's Tariff lacks adequate transparency and challenge procedures with regard to the formula rates for ISO-NE Participating Transmission Owners, including UI, MEPCO and CMP. The FERC also found that the current Regional Network Service, or RNS and Local Network Service, or LNS, formula rates appear to be unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful as the formula rates appear to lack sufficient detail in order to determine how certain costs are derived and recovered in the formula rates. A settlement judge has been appointed and a settlement conference has convened. We are unable to predict the outcome of this proceeding at this time.

The FERC has the right to review books and records of "holding companies," as defined in the Public Utility Holding Company Act of 2005, or PUHCA 2005, that are determined by FERC to be relevant to the companies' respective FERC-jurisdictional rates. We are a holding company, as defined in PUHCA 2005.

The FERC has civil penalty authority over violations of any provision of Part II of the FPA, as well as any rule or order issued thereunder. FERC is authorized to assess a maximum civil penalty of \$1.0 million per violation for each day that the violation continues. The FPA also provides for the assessment of criminal fines and imprisonment for violations under Part II of the FPA. Pursuant to the Energy Policy Act of 2005, or EPCA 2005, the North American Electric Reliability Corporation, or NERC, has been certified by the FERC as the Electric Reliability Organization for North America responsible for developing and overseeing the enforcement of electric system reliability standards applicable throughout the United States. FERC-approved reliability standards may be enforced by the FERC independently, or, alternatively, by NERC and the regional reliability organizations with frontline responsibility for auditing, investigating and otherwise ensuring compliance with reliability standards, subject to the FERC oversight.

Gas' current natural gas storage operations in the United States are subject to the jurisdiction of the FERC under the Natural Gas Act of 1938, or NGA, as a Section 7(c) natural gas storage provider and by providing interstate storage and storage related services under Section 311 of the Natural Gas Policy Act of 1978, at market based rates. Gas' interstate and intrastate high-deliverability multi-cycle natural gas storage service projects and operations are subject to FERC regulation under the NGA for rates and terms of service.

The gas distribution operations of NYSEG, RG&E, SCG, CNG and BGC, similar to Gas, are also subject to the FERC regulation with respect to their gas purchases/sales and contracted transportation/storage capacity. FERC has civil penalty authority under the NGA to impose penalties for certain violations of up to \$1.0 million per day for violations. FERC also has the authority to order the disgorgement of profits from transactions deemed to violate the NGA and EPCA 2005.

Market Anti-Manipulation Regulation

The FERC and the Commodity Futures Trading Commission, or CFTC, monitor certain segments of the physical and futures energy commodities market pursuant to the FPA and the Commodity Exchange Act, including our businesses' energy transactions and operations in the United States. In July 2010, Congress passed the Dodd-Frank Wall Street Reform and Consumer Protection Act, or the Dodd-Frank Act, which incorporated an expansion of the authority of the CFTC to prohibit market manipulation in the markets regulated by the CFTC. With regard to the physical purchases and sales of electricity and natural gas, the gathering storage, transmission and delivery of these energy commodities and any related trading or hedging transactions that some of our operating subsidiaries undertake, our operating subsidiaries are required to observe these anti-market manipulation laws and related regulations enforced by the FERC and CFTC. The FERC and CFTC hold substantial enforcement authority, including the ability to assess civil penalties of up to \$1.0 million per day per violation, to order disgorgement of profits and to recommend criminal penalties.

State Regulation

Networks' regulated utilities in New York, Maine, Connecticut and Massachusetts are subject to regulation by the applicable state public utility commissions, including with regard to their rates, terms and conditions of service, issuance of securities, purchase or sale of utility assets and other accounting and operational matters. NYSEG and RG&E are subject to regulation by the NYPSC; CMP and MNG are subject to regulation by the MPUC; UI, SCG and CNG are subject to regulation by the PURA; and BGC is subject to regulation by the DPU. The NYPSC, MPUC and the Connecticut Siting Council, or CSC, exercise jurisdiction over the siting of electric transmission lines in their respective states, and each of the NYPSC, MPUC, PURA and DPU exercise jurisdiction over the approval of certain mergers or other business combinations involving Networks' regulated utilities. In addition, each of the utility commissions has the authority to impose penalties on these regulated utilities, which could be substantial, for violating state utility laws and regulations and their orders.

Networks' regulated distribution utilities deliver electricity and/or natural gas to all customers in their service territory at rates established under cost of service regulation. Under this regulatory structure, Networks' regulated distribution utilities recover the cost of providing distribution service to their customers based on its costs, and earn a return on their capital investment in utility assets.

The following provides a summary of Networks regulated utilities' most recent rate cases:

- *New York.* On May 20, 2015 NYSEG and RG&E initiated a distribution rate case to ensure that the companies are able to continue to provide safe, adequate and reliable service, continue to make investments to modernize infrastructure, enhance low income programs and improve both gas and electric reliability, while maintaining the Companies' financial integrity. On February 19, 2016, NYSEG, RG&E and other signatory parties filed a joint proposal, or the proposal, with the NYPSC for a three-year rate plan for electric and gas service at NYSEG and RG&E commencing May 1, 2016. The proposal was approved on June 15, 2016 by the NYPSC. The proposal balanced the varied interests of the signatory parties including but not limited to maintaining the companies' credit quality and mitigating the rate impacts to customers. The proposal reflects many customer benefits including acceleration of the companies' natural gas leak prone main replacement programs and increased funding for electric vegetation management to provide continued safe and reliable service. The allowed rate of return on common equity for NYSEG Electric, NYSEG Gas, RG&E Electric and RG&E Gas is 9.00%. The equity ratio for each company is 48%. The proposal includes an ESM applicable to each company. The customer share of earnings would increase at higher ROE levels, with customers receiving 50%, 75% and 90% of earnings over 9.5%, 10.0% and 10.5% of ROE, respectively, in the first rate year. Earnings are based on the lower of the actual equity ratio or 50%. Earnings thresholds increase in subsequent rate years. The proposal reflects the recovery of deferred NYSEG Electric storm costs of approximately \$262 million, of which \$123 million will be amortized over ten years and the remaining \$139 million will be amortized over five years. The proposal also continues reserve accounting for qualifying Major Storms (\$21.4 million annually for NYSEG Electric and \$2.5 million annually for RG&E Electric). Incremental maintenance costs incurred to restore service in qualifying divisions will be chargeable to the Major Storm Reserve provided they meet certain thresholds.
- *Maine.* On May 1, 2013, CMP filed a distribution service rate case in order to recover past and future investments and provide safe and adequate service. On August 25, 2014, MPUC approved a stipulation agreement that provided for a distribution rate increase of approximately \$24.3 million, effective July 1, 2014, with an allowed ROE of 9.45% and an allowed equity ratio of 50%.

On March 5, 2015, MNG filed a rate case in order to further recover future investments and provide safe and adequate service.

On May 3, 2016, all active parties to the case filed a stipulation that settled all matters at issue in the case and reflected a 10-year rate plan through April 30, 2026. The MPUC approved the stipulation on May 17, 2016, for new rates effective June 1, 2016. The settlement structure for non-Augusta customers includes a 34.6% delivery revenue increase over five years with an allowed 9.55% ROE and 50% common equity ratio. The settlement structure for Augusta customers includes a 10-year rate plan with existing Augusta customers being charged rates equal to non-Augusta customers plus a surcharge that increases annually for five years. New Augusta customers will have rates set based on an alternate fuel market model. In year seven of the rate plan MNG will submit a cost of service filing for the Augusta area to determine if the rate plan should continue. This cost of service filing will exclude \$15 million of initial 2012/2013 gross plant investment, however the stipulation allows for accelerated depreciation of these assets. If the Augusta area's cost of service filing illustrates results above a 14.55% ROE then the rate plan may cease, otherwise the rate plan would continue. A disallowance for the initial 2012/2013 gross plant investment is not part of the approved stipulation.

- *Connecticut.* In December 2016, PURA approved distribution rate schedules for UI for three years that became effective January 1, 2017 and which, among other things, provides for \$57 million of cumulative distribution rate increases, an allowed ROE of 9.10% based on 50% equity, continued UI's existing earnings sharing mechanism, continued the existing decoupling mechanism (under which the actual energy delivery revenues are compared on a periodic basis with the authorized delivery revenues and the difference accrued, for refund to or recovery from customers, as applicable), and approved the continuation of the requested storm reserve

The allowed ROEs established by PURA for CNG and SCG, are 9.18% and 9.36%, respectively. SCG and CNG each have purchased gas adjustment clauses that enable them to pass their reasonably incurred cost of gas purchases through to customers. These clauses allow utilities to recover costs associated with changes in the market price of purchased natural gas, substantially eliminating exposure to natural gas price risk.

On January 22, 2014, PURA approved base delivery rates for CNG, with an effective date of January 10, 2014, which, among other things, approved an allowed ROE of 9.18%, continued the purchased gas adjustment clause, instituted a revenue decoupling mechanism, established two separate ratemaking mechanisms that reconcile actual revenue requirements related to CNG's cast iron and bare steel replacement program and system expansion and an earnings sharing mechanism by which CNG and customers share on a 50/50 basis all earnings above the allowed ROE in a calendar year. In accordance with the approval by PURA of the acquisition, SCG and CNG agreed not to file rate cases for new rates effective before January 1, 2018.

- *Massachusetts.* BGC's rates are established by the DPU. BGC's 10-year rate plan, which was approved by the DPU and included an approved ROE of 10.5%, expired on January 31, 2012. BGC continues to charge the rates that were in effect at the end of the rate plan. In accordance with the approval by the DPU of the acquisition, BGC agreed not to file a rate case for new rates effective before June 1, 2018.

In addition, as a result of a restructuring of the utility industry in New York, Maine, Connecticut and Massachusetts, most of Networks' distribution utilities' customers have the opportunity to purchase their electricity or natural gas supplies from third-party energy supply vendors. Most customers in New York, however, continue to purchase such supplies through the distribution utilities under regulated energy rates and tariffs. In Maine, CMP customers can also purchase electric supply from competitive providers but the majority receives baseline standard offer service that is provided through a MPUC procurement process. Networks' regulated utilities in New York, Connecticut and Massachusetts and MNG purchase electricity or natural gas from unaffiliated wholesale suppliers and recover the actual approved costs of these supplies on a pass-through basis, as well as certain costs associated with industry restructuring, through reconciling rate mechanisms that are periodically adjusted.

In April 2014 the NYSPSC instituted its Reforming the Energy Visions, or REV, proceeding, the goals of which are to improve electric system efficiency and reliability, encourage renewable energy resources, support DER, and empower customer choice. In this proceeding, the NYSPSC is examining the establishment of a Distributed System Platform, or DSP, to manage and coordinate DER, and provide customers with market data and tools to manage their energy use. The NYSPSC has determined distribution utilities should be the DSP providers. The NYSPSC also is examining how its regulatory practices should be modified to incentivize utility practices to promote REV proceeding objectives. The REV proceeding involves a two-phased schedule with an initial order relating to policy determinations for DSP and related matters issued in February 2015 and an initial order for regulatory design and regulatory matters issued in May 2016. All electric utilities were ordered to file an initial Distributed System Implementation Plan, or DSIP, by June 30, 2016. The DSIP was filed by NYSEG and RG&E and included information regarding the potential deployment of Automated Metering Infrastructure, or AMI. A separate petition for the cost recovery associated with full deployment of AMI was filed by NYSEG and RG&E in December 2016.

State public utility commissions may also have jurisdiction over certain aspects of Renewables' competitive generation businesses. For example, in New York, certain Renewables' generation subsidiaries are electric corporations subject to "lightened" regulation by the NYSPSC. As such, the NYSPSC exercises its jurisdictional authority over certain non-rate aspects of the facilities,

including safety, retirements, and the issuance of debt secured by recourse to those generation assets located in New York. In Texas, Renewables' operations within the Electric Reliability Council of Texas, or ERCOT, footprint are not subject to regulation by FERC, as they are deemed to operate solely within the ERCOT market and not in interstate commerce. These operations are subject to regulation by the Public Utility Commission of Texas, or PUCT. In California, Renewables' generation subsidiaries are subject to regulation by the California Public Utilities Commission with regard to certain non-rate aspects of the facilities, including health and safety, outage reporting and other aspects of the facilities' operations. Furthermore, Gas' natural gas storage operations are subject to certain state regulations, such as the Railroad Commission of Texas for its facilities located in Texas.

RTOs and ISOs

Networks' regulated electric utilities in New York, Connecticut and Maine, as well as some of Renewables' generation fleet, operate in or have access to organized energy markets, known as regional transmission organizations, or RTOs, or independent system operators, or ISOs, particularly NYISO and ISO-NE. Each organized market administers centralized bid-based energy, capacity and ancillary services markets pursuant to tariffs approved by FERC, or in the case of ERCOT, market rules approved by the PUCT. These tariffs and rules dictate how the energy, capacity and ancillary service markets operate, how market participants bid, clear, are dispatched, make bilateral sales with one another, and how entities with market-based rates are compensated. Certain of these markets set prices, referred to as Locational Marginal Prices that reflect the value of energy, capacity or certain ancillary services, based upon geographic locations, transmission constraints, and other factors. Each market is subject to market mitigation measures designed to limit the exercise of market power. Some markets limit the prices of the bidder based upon some level of cost justification. These market structures impact the bidding, operation, dispatch and sale of energy, capacity and ancillary services.

The RTOs and ISOs are also responsible for transmission planning and operations within their respective regions. Each of Networks' transmission-owning subsidiaries in New York, Connecticut and Maine has transferred operational control over certain of its electric transmission facilities to its respective ISOs, such as ISO-NE and NYISO.

New Renewable Source Generation

Under Connecticut law Public Act 11-80, or PA 11-80, Connecticut electric utilities are required to enter into long-term contracts to purchase Connecticut Class I Renewable Energy Certificates, or RECs, from renewable generators located on customer premises. Under this program, UI is required to enter into contracts totaling approximately \$200 million in commitments over approximately 21 years. The obligations will phase in over a six-year solicitation period, and are expected to peak at an annual commitment level of about \$13.6 million per year after all selected projects are online. Upon purchase, UI accounts for the RECs as inventory. UI expects to partially mitigate the cost of these contracts through the resale of the RECs. PA 11-80 provides that the remaining costs (and any benefits) of these contracts, including any gain or loss resulting from the resale of the RECs, are fully recoverable from (or credited to) customers through electric rates.

On October 23, 2013, PURA approved UI's renewable connections program filed in accordance with PA 11-80, pursuant to which UI will develop up to 10 MW of renewable generation. The costs for this program will be recovered on a cost of service basis. PURA established a base ROE to be calculated as the greater of: (A) the current UI authorized distribution ROE (currently 9.10%) plus 25 basis points and (B) the current authorized distribution ROE for The Connecticut Light and Power Company, or CL&P, (currently 9.17%), less target equivalent market revenues (reflected as 25 basis points). In addition, UI will retain a percentage of the market revenues from the project, which percentage is expected to equate to approximately 25 basis points on a levelized basis over the life of the project. UI expects the cost of this program, a planned 2.8 MW fuel cell facility in New Haven, solar photovoltaic and fuel cell facilities totaling 5 MW in Bridgeport, and a 2.2 MW fuel cell facility in Woodbridge, to be approximately \$47 million.

Pursuant to Section 8 of Connecticut Public Act 13-303, "An Act Concerning Connecticut's Clean Energy Goals," in January 2014, at DEEP's direction, UI entered into three contracts for the purchase of RECs associated with an aggregate of 5.7 MW of energy production from biomass plants in New England. The costs of these agreements will be fully recoverable through electric rates.

Pursuant to Connecticut statute, in January 2017, UI entered into a master agreement with the Connecticut Green Bank to procure Connecticut Class I RECs produced by residential solar installations in 15 year tranches, with a final tranche to commence no later than 2022. UI's contractual obligation is to procure 20% of RECs produced by about 255 MW of residential solar installations. Connecticut statutes provides that the net costs (and any benefits) of these contracts, including any gain or loss resulting from the resale of the RECs, are fully recoverable from (or credited to) customers through electric rates.

Under Maine law 35-A.M.R.S.A §§ 3210-C, 3210-D, the MPUC is authorized to conduct periodic requests for proposals seeking long-term supplies of energy, capacity or RECs, from qualifying resources. The MPUC is further authorized to order Maine Transmission and Distribution Utilities to enter into contracts with sellers selected from the MPUC's competitive solicitation process. Pursuant to a MPUC Order dated October 8, 2009, CMP entered into a 20-year agreement with Evergreen Wind Power III, LLC, on

March 31, 2010, to purchase capacity and energy from Evergreen's 60 MW Rollins wind farm in Penobscot County, Maine. CMP's purchase obligations under the Rollins contract are approximately \$7 million per year. In accordance with subsequent MPUC orders, CMP periodically auctions the purchased Rollins energy to wholesale buyers in the New England regional market. Under applicable law, CMP is assured recovery of any differences between power purchase costs and achieved market revenues through a reconcilable component of its retail distribution rates. Although the MPUC has conducted multiple requests for proposals under M.R.S.A §3210-C and has tentatively accepted long-term proposals from other sellers, these selections have not yet resulted in additional currently effective contracts with CMP.

Pursuant to Maine Law 35-A M.R.S.A §3604, the MPUC is authorized to direct Maine Transmission and Distribution Utilities to enter into long-term contracts to purchase capacity, energy and renewable energy credits from up to 50 MW of qualifying Community-Based Renewable Energy facilities. In accordance with §3604, on October 22, 2016, CMP commenced purchases from Athens Energy LLC for a contract term of three years. CMP purchase obligations under the Athens contract are approximately \$6 million per year. Under the provisions of §3604 and MPUC implementing orders, CMP will periodically auction the purchased products from Athens for resale to wholesale market purchasers and recover any differences between power purchase costs and resale revenues through a reconcilable component of its retail distribution rates. Although the MPUC has certified several additional Community - Based Renewable Energy generation projects under §3604 and authorized similar power purchase agreements between these sellers and CMP, no additional facilities have advanced to operational status.

Environmental, Health and Safety

Permitting and Other Regulatory Requirements

Networks. Similar to Renewables and Gas, Networks' distribution utilities in New York, Maine, Connecticut and Massachusetts are subject to various federal, state and local laws and regulations in connection with the environmental, health and safety effects of its operations. The distribution utilities of Networks are subject to regulation by the applicable state public utility commission with respect to the siting and approval of electric transmission lines, with the exception of UI, the siting of whose transmission lines is subject to the jurisdiction of the CSC, and with respect to pipeline safety regulations for intrastate gas pipeline operators.

The National Environmental Policy Act, or NEPA, requires that detailed statements of the environmental effect of Networks' facilities be prepared in connection with the issuance of various federal permits and licenses. Federal agencies are required by NEPA to make an independent environmental evaluation of the facilities as part of their actions during proceedings with respect to these permits and licenses.

Under the federal Toxic Substances Control Act, the Environmental Protection Agency, or EPA, has issued regulations that control the use and disposal of Polychlorinated Biphenyls, or PCBs. PCBs were widely used as insulating fluids in many electric utility transformers and capacitors manufactured before the federal Toxic Substances Control Act prohibited any further manufacture of such PCB equipment. Fluids with a concentration of PCBs higher than 500 parts per million and materials (such as electrical capacitors) that contain such fluids must be disposed of through burning in high temperature incinerators approved by the EPA. For our gas distribution companies, PCBs are sometimes found in the distribution system. Networks tests any distribution piping being removed or repaired for the presence of PCBs and comply with relevant disposal procedures, as needed.

Under the federal Resource Conservation and Recovery Act, or RCRA, the generation, transportation, treatment, storage and disposal of hazardous wastes are subject to regulations adopted by the EPA. All of Networks' subsidiaries have complied with the notification and application requirements of present regulations, and the procedures by which the subsidiaries handle, store, treat and dispose of hazardous waste products comply with these regulations.

Prior to the last quarter of the 20th century, when environmental best practices laws and regulations were implemented, utility companies, including Networks' subsidiaries, often disposed of residues from operations by depositing or burying them on-site or disposing of them at off-site landfills or other facilities. Typical materials disposed of include coal gasification byproducts, fuel oils, ash, and other materials that might contain PCBs or that otherwise might be hazardous. In recent years it has been determined that such disposal practices, under certain circumstances, can cause groundwater contamination.

Renewables. Renewables' projects are subject to a variety of state environmental review and permitting requirements. Many states where Renewables' projects are located, or may be located in the future, have laws that require state agencies to evaluate a broad array of environmental impacts before granting state permits. Generally, State agencies evaluate similar issues as federal agencies, including the project's impact on wildlife, historic sites, aesthetics, wetlands and water resources, agricultural operations and scenic areas. States may impose different or additional monitoring or mitigation requirements than federal agencies. Additional approvals may be required for specific aspects of a project, such as stream or wetland crossings, impacts to designated significant

wildlife habitats, storm water management and highway department authorizations for oversize loads and state road closings during construction. Permitting requirements related to transmission lines may be required in certain cases.

Renewables' projects also are subject to local environmental and regulatory requirements, including county and municipal land use, zoning, building and transportation requirements. Permitting at the local municipal or county level often consists of obtaining a special use or conditional use permit under a land use ordinance or code, or, in some cases, rezoning is required for a project. Obtaining a permit usually requires that Renewables demonstrates that the project will conform to certain development standards specified under the ordinance so that the project is compatible with existing land uses and protects natural and human environments. Local or state regulatory agencies may require modeling and measurement of permissible sound levels in connection with the permitting and approval of Renewables' projects. Local or state agencies also may require Renewables to develop decommissioning plans for dismantling the project at the end of its functional life and establish financial assurances for carrying out the decommissioning plan.

In addition to permits required under state and local laws, Renewables' projects may be subject to permitting and other regulatory requirements arising under federal law. For example, if a project is located near wetlands, a permit may be required from the U.S. Army Corps of Engineers, or Army Corps, with respect to the discharge of dredged or fill material into the waters of the United States. The Army Corps may also require the mitigation of any loss of wetland functions and values that accompanies the project's activities. In addition, Renewables may be required to obtain permits under the federal Clean Water Act for water discharges, such as storm water runoff associated with construction activities, and to follow a variety of best management practices to ensure that water quality is protected and impacts are minimized. Renewables' projects also may be located, or partially located, on lands administered by the U.S. Bureau of Land Management, or BLM. Therefore, Renewables may be required to obtain and maintain BLM right-of-way grants for access to, or operations on, such lands. To obtain and maintain a grant, there must be environmental reviews conducted, a plan of development implemented and a demonstration that there has been compliance with the plan to protect the environment, including measures to protect biological, archeological and cultural resources encountered on the grant.

Renewables' projects may be subject to requirements pursuant to the Endangered Species Act, or ESA, and analogous state laws. For example, federal agencies granting permits for Renewables' projects consider the impact on endangered and threatened species and their habitat under the ESA, which prohibits and imposes stringent penalties for harming endangered or threatened species and their habitats. Renewables' projects also need to consider the Migratory Bird Treaty Act, or MBTA, and the Bald and Golden Eagle Protection Act, or BGEPA, which protect migratory birds and bald and golden eagles and are administered by the U.S. Fish and Wildlife Service. Criminal liability can result from violations of the MBTA and the BGEPA, even for incidental takings of migratory birds. For example, the U.S. Department of Justice, or DOJ, has recently entered into settlements with two large wind farm operators, pursuant to which those operators pled guilty to criminal violations of the MBTA and agreed to substantial penalties and mitigation measures.

In addition to regulations, voluntary wind turbine siting guidelines established by the U.S. Fish and Wildlife Service set forth siting, monitoring and coordination protocols that are designed to support wind development in the United States while also protecting both birds and bats and their habitats. These guidelines include provisions for specific monitoring and study conditions which need to be met in order for projects to be in adherence with these voluntary guidelines. Most states also have similar laws. Because the operation of wind turbines may result in injury or fatalities to birds and bats, federal and state agencies often recommend or require that Renewables conduct avian and bat risk assessments prior to issuing permits for its projects. They may also require ongoing monitoring or mitigation activities as a condition to approving a project.

Gas. Gas' natural gas storage operations are regulated by the U.S. Department of Transportation Office of Pipeline Safety through the Pipeline and Hazardous Materials Safety Administration, or PHMSA, under the Natural Gas Pipeline Safety Act of 1968, or NGPSA, as amended by Pipeline Safety Act of 1979, and the Hazardous Liquids Pipeline Safety Act of 1979, or HLPESA. PHMSA, through the NGPSA and HLPESA, regulates the design, installation, testing, construction, operation, maintenance, repair, inspection, replacement and management of interstate and certain intrastate natural gas pipeline facilities. PHMSA has also developed regulations that require transportation pipeline operators to implement integrity management programs to comprehensively evaluate certain high risk areas along Gas' natural gas pipelines and take additional measures to protect natural gas pipeline segments located in highly populated areas.

Gas' natural gas storage operations are also regulated by the EPA, and equivalent state environmental agencies, with respect to the environmental effects of its operations, including air and water quality control, solid and hazardous waste disposal, greenhouse gas emissions, noise and limitations on land use.

Global Climate Change and Greenhouse Gas Emission Issues

Global climate change and greenhouse gas emission issues continue to receive an increased focus from state governments and the federal government. In November 2010, the EPA published final rules for monitoring and reporting requirements for petroleum and natural gas systems that emit greenhouse gases under the authority of the Clean Air Act beginning in 2011. These regulations apply to facilities that emit greenhouse gases above the threshold level of 25,000 metric tons equivalent per year. SCG and CNG both exceed this threshold and are subject to reporting requirements. The LNG facilities owned and/or contracted by SCG and CNG are also subject to the monitoring and reporting requirements under the regulations. Similarly, Networks is subject to reporting requirements under provisions of the greenhouse gases regulations, which regulate electric transmission and distribution equipment that emit sulfur hexafluoride.

We are continuously evaluating the regulatory risks and regulatory uncertainty presented by climate change and greenhouse gas emission. Such concerns could potentially lead to additional rules and regulations that impact how we operate our business. We expect that any costs of these rules and regulations would be recovered from customers.

OSHA and Certain Other Federal Safety Laws

Our operating subsidiaries are subject to the requirements of the federal Occupational Safety and Health Act, as amended, or OSHA, and comparable state laws that regulate the protection of the health and safety of employees. In addition, OSHA's hazard communication standard and standards administered by other federal as well as state agencies, including the Emergency Planning and Community Right to Know Act and the related implementing regulations require that information be maintained about hazardous materials used or produced in operations of our subsidiaries and that this information be provided to employees, state and local government authorities and citizens.

Management, Disposal and Remediation of Hazardous Substances

Our operating subsidiaries own or lease real property and may be subject to federal, state and local requirements regarding the storage, use, transportation and disposal of petroleum products and toxic or hazardous substances, including spill prevention, control and counter-measure requirements. Project properties and materials stored or disposed thereon may be subject to the federal RCRA, the Toxic Substances Control Act, the Comprehensive Environmental Response, Compensation and Liability Act and analogous state laws. If any operating subsidiary's owned or leased properties are contaminated, whether during or prior to their ownership or operation, the operating subsidiary could be responsible for the costs of investigation and cleanup and for any related liabilities, including claims for damage to property, persons or natural resources. Such responsibility may arise even if the operating subsidiary was not at fault and did not cause the contamination. In addition, waste generated by our operating subsidiaries is at times sent to third party disposal facilities. If such facilities become contaminated, the operating subsidiary and any other persons who arranged for the disposal or treatment of hazardous substances at those sites may be jointly and severally responsible for the costs of investigation and remediation, as well as for any claims of damages to third parties, their property or natural resources.

On September 16, 2015, UI signed the consent order that was issued by DEEP in August 2016 related to the investigation and remediation of the English Station site. The consent order requires UI to investigate and remediate certain environmental conditions within the perimeter of the English Station site. Under the consent order, to the extent that the cost of this investigation and remediation is less than \$30 million, UI is required to remit to the State of Connecticut the difference between such cost and \$30 million to be applied to a public purpose as determined in the discretion of the Governor of the State of Connecticut, the Attorney General of the State of Connecticut, and the Commissioner of DEEP. However, UI is obligated to comply with the consent order even if the cost of such compliance exceeds \$30 million. The State may discuss options with UI on recovering or funding any cost above \$30 million, such as through public funding or recovery from third parties, however it is not bound to agree to or support any means of recovery or funding.

Customers

Networks delivers natural gas and electricity to residential, commercial and institutional customers through its regulated utilities in New York, Maine, Connecticut and Massachusetts. Networks' customer payment terms are regulated by the states of New York, with respect to NYSEG and RG&E; Maine, with respect to CMP and MNG; Connecticut, with respect to UI, SCG and CNG; and Massachusetts, with respect to BGC, and each of the regulated utilities must provide extended payment arrangements to customers for past due balances. See "—Networks" for more information relating to the customers of Networks.

Renewables sells the majority of its output to large investor-owned utilities, public utilities and other credit-worthy entities. Additionally, Renewables generates and provides power, among other services, to federal and state agencies, institutional retail and joint action agencies. Offtakers typically purchase renewable energy from Renewables through long-term power purchase agreements,

or PPAs, allowing Renewables to limit its exposure to market volatility. Approximately 62% of Renewables' wind generating capacity is fully committed under PPAs as of December 31, 2016, with an average duration of 9.5 years. Renewables also delivers thermal output to wholesale customers in the Western United States.

Gas' natural gas storage and management services customers include a diversified mix of natural gas distribution companies, power generators, natural gas marketers and producers, utilities using gas as fuel, gas storage customers, financial institutions and energy marketers.

Competition

Networks' regulated public utilities in New York, Maine, Connecticut and Massachusetts do not generally face competition from other companies that transmit and distribute electricity and natural gas. However, demand for electricity and natural gas may be negatively impacted by federal and state legislation mandating that certain percentages of power delivered to end users be produced from renewable resources, such as wind, thermal and solar energy.

Networks faces competition from self-contained micro-grids that integrate renewable energy sources in the areas served by Networks. However, there has been limited development of these micro-grids in Networks' service areas to date, and Networks expects that growth in distributed generation of renewable energy will continue due to financial incentives being provided by federal and state legislation. Networks has experienced significant growth in alternative distribution sources of generation on its network over the past ten years, with approximately 90% of the growth coming from solar photovoltaic facilities.

Renewables has competitive advantages, including a robust development pipeline, a management team with extensive experience, strong relationships with suppliers and clients, expert regulatory knowledge and brand awareness. However, Renewables faces competition throughout the life cycles of its energy facilities, including during the development phase, in the identification and procurement of suitable sites with high wind resource availability, grid connection capacity and land availability. Renewables also competes with other suppliers in securing long-term PPAs with power purchasers and participates in competitive bilateral and organized energy markets with other energy sources for power that is not sold under PPAs. Competitive conditions may be substantially affected by various forms of energy legislation and regulation considered from time to time by federal, state and local legislatures and administrative agencies.

Gas, through its subsidiaries, Enstor, Inc. and Enstor Energy Services, LLC, faces competition from others in the natural gas market. Enstor, Inc. encounters regional competition, such as in the Gulf South region, from other independent natural gas storage providers, a combination of interstate and intrastate pipeline companies and local distribution companies. Furthermore, Enstor Energy Services, LLC competes with various entities, ranging from natural gas marketing companies, to financial institutions and producer/marketers.

Properties

Networks

The following table sets forth certain information relating to Networks' electricity generation facilities and their respective locations, type and installed capacity as of December 31, 2016. Unless noted otherwise, Networks owns each of these facilities.

Operating Company	Facility Location	Facility Type	Installed Capacity (in MW)	Year(s) Commissioned
NYSEG	Newcomb, NY	Diesel Turbine	1.7	1967
NYSEG	Auburn, NY(1)	Natural Gas Turbine	7.3	2000
NYSEG	Eastern New York (6 locations)	Hydroelectric	61.4	1921—1983
RG&E	Rochester, NY (3 locations)	Hydroelectric	57.1	1917—1960

(1) The Auburn, NY natural gas turbine generating unit is leased.

UI is also party to a 50-50 joint venture with certain affiliates of NRG Energy, Inc. in GCE Holding LLC, whose wholly owned subsidiary, GenConn, operates two 188 MW peaking generation plants, GenConn Devon and GenConn Middletown, in Connecticut.

The following table sets forth certain operating data relating to the electricity transmission and distribution activities of each of Networks' regulated utilities as of December 31, 2016.

Utility	State	Substations	Transmission Lines (in miles)	Overhead Distribution Lines (in pole miles)	Underground Lines (in miles)	Total Distribution (in miles)	Electricity Customers
NYSEG	New York	435	4,463	32,319	2,702	35,021	885,000
RG&E	New York	153	1,025	6,091	2,834	8,925	375,000
CMP	Maine	209	2,856	21,056	1,428	22,484	616,979
UI	Connecticut	29	138	3,284	202	3,486	331,216

The following table sets forth certain operating data relating to the natural gas transmission and distribution activities of each of Networks' regulated utilities, as of December 31, 2016.

Utility	State	Natural Gas Customers	Transmission Pipeline (in miles)	Distribution Pipeline (in miles)
NYSEG	New York	265,000	20	8,151
RG&E	New York	310,000	105	10,592
MNG	Maine	4,588	2	199
SCG	Connecticut	196,232	—	2,391
CNG	Connecticut	176,420	—	2,118
BGC	Massachusetts	39,813	—	763

CNG owns and operates a liquefied natural gas, or LNG, plant which can store up to 1.2 Bcf of natural gas and can vaporize up to 97,000 Mcf per day of LNG to meet peak demand. SCG has contract rights to and operates a similar plant with the same capabilities to store up to 1.2 Bcf of natural gas. SCG's LNG facilities can vaporize up to 82,500 Mcf per day of LNG to meet peak demand. SCG and CNG have also contracted for 21 Bcf of storage with a maximum peak day delivery capability of 209,000 Mcf per day.

Renewables

The following table sets forth Renewables' portfolio of wind projects as of December 31, 2016. Unless noted otherwise, Renewables wholly owns each of these facilities.

Location	Wind Project	Turbines	Total Installed Capacity (MW)	Commercial Operation Date	North American Electric Reliability Corporation ("NERC") Region
Arizona	Dry Lake I	30 (Suzlon S88, 2.1 MW)	63	2009	WECC
	Dry Lake II	31 (Suzlon, 2.1 MW)	65	2010	
California	Dillon	45 (Mitsubishi, 1 MW)	45	2008	WECC
	Manzana	126 (GE, 1.5 MW)	189	2011	WECC
	Mountain View III	34 (Vestas V47, 0.66 MW)	22	2003	WECC
	Phoenix Wind Power	3 (Neg Micon (Vestas), 0.66 MW)	2	1999	WECC
	Shiloh	100 (GE, 1.5 MW)	150	2006	
Colorado	Colorado Green(1)	54 (GE, 1.5 MW)	81	2003	WECC
	Twin Buttes	50 (GE, 1.5 MW)	75	2007	
Illinois	Providence Heights	36 (Gamesa G87, 2.0 MW)	72	2008	MRO
	Streator Cayuga Ridge South	150 (Gamesa, 2.0MW)	300	2010	
Iowa	Barton	80 (Gamesa, 2.0 MW)	160	2009	MRO
	Flying Cloud	29 (GE, 1.5 MW)	44	2004	MRO
	New Harvest	50 (Gamesa G87, 2.0W)	100	2012	MRO
	Top of Iowa II	40 (Gamesa G87, 2.0 MW)	80	2008	MRO
	Winnebago I	10 (Gamesa G83, 2.0 MW)	20	2008	MRO
Kansas	Elk River	100 (GE, 1.5 MW)	150	2005	MRO
Massachusetts	Hoosac	19 (GE, 1.5 MW)	29	2012	NPCC
Minnesota	Elm Creek	66 (GE, 1.5 MW)	99	2008	MRO
	MinnDakota	100 (GE, 1.5 MW)	150	2008	MRO
	Trimont	67 (GE, 1.5 MW)	100	2005	MRO
	Elm Creek II	62 (Mitsubishi, 2.4)	149	2010	MRO
	Moraine I	34 (GE, 1.5 MW)	51	2003	MRO
	Moraine II	33 (GE, 1.5 MW)	50	2009	MRO
Missouri	Farmers City	73 (Gamesa G87, 2.0 MW)	146	2009	MRO
New Hampshire	Groton	24 (Gamesa G87, 2.0 MW)	48	2012	NPCC
	Lempster	12 (Gamesa, 2 MW)	24	2008	NPCC
New York	Hardscrabble	37 (Gamesa G90, 2MW)	74	2011	NPCC
	Maple Ridge I(2)	70 (Vestas V82, 1.65 MW)	116	2006	NPCC
	Maple Ridge II(2)	27 (Vestas V82, 1.65 MW)	45	2006	NPCC
North Carolina	Amazon Wind Farm US - East	104 (Gamesa G114, 2.0 MW)	208	2016	SERC
North Dakota	Rugby	71 (Suzlon S88, 2.1 MW)	149	2009	MRO
Ohio	Blue Creek	152 (Gamesa G90 – 2.0 MW)	304	2012	RFC
Oregon	Hay Canyon	48 (Suzlon S88, 2.1 MW)	101	2009	WECC
	Klondike I	16 (GE, 1.5 S – 1.5 MW)	24	2001	WECC
	Klondike II	50 (GE, 1.5 S – 1.5 MW)	75	2005	WECC
		44 (Siemens, 2.3 MW); 80 (GE, 1.5 SLE, 1.5 MW); 1 (Mitsubishi, 2.4 MW)	224	2007	WECC
	Klondike III	51 (GE, 1.5 MW)	77	2008	WECC
	Leaning Juniper II	74 (GE, 1.5 MW); 43 (Suzlon, 2.1 MW)	201	2011	WECC
	Pebble Springs	47 (Suzlon S88/2100, 2.1 MW)	99	2009	WECC
	Star Point	47 (Suzlon, 2.1 MW)	99	2010	WECC
Pennsylvania	Casselman	23 (GE, 1.5 MW)	35	2008	RFC
	Locust Ridge I	13 (Gamesa G87, 2.0)	26	2006	RFC
	Locust Ridge II	51 (Gamesa G83, 2.0 MW)	102	2009	RFC
	South Chestnut	23 (Gamesa, 2.0 MW)	46	2012	RFC
South Dakota	Buffalo Ridge I	24 (Suzlon, 2.1 MW)	50	2009	MRO
	Buffalo Ridge II	105 (Gamesa G87, 2.0 MW)	210	2010	MRO
Texas	Baffin	101 (Gamesa G97, 2.0 MW)	202	2015	TRE
	Barton Chapel	60 (Gamesa, 2.0 MW)	120	2009	TRE
	Peñascal I	84 (Mitsubishi, 2.4 MW)	202	2009	TRE
	Peñascal II	84 (Mitsubishi, 2.4 MW)	202	2010	TRE
Washington	Big Horn I	133 (GE, 1.5 MW)	200	2006	WECC
	Big Horn II	25 (Gamesa, 2.0 MW)	50	2010	WECC
	Juniper Canyon	63 (Mitsubishi, 2.4 MW)	151	2011	WECC

(1) Jointly owned with Shell Wind Energy; capacity amounts represent only Renewables' share of the wind farm.

(2) Jointly owned with Horizon Wind Energy; capacity amounts represent only Renewables' share of the wind farm.

Additionally, set forth below are the solar and thermal facilities operated by Renewables as of December 31, 2016. Unless otherwise noted, Renewables owns each such facility.

Facility	Location	Type of Facility	Installed Capacity (MW)	Commercial Operation Date
Copper Crossing Solar Ranch	Pinal County, Arizona	Solar	20	2011
San Luis Valley Solar Ranch(1)	Alamosa County, Colorado	Solar	30	2012
Klamath Cogeneration	Klamath Falls, Oregon	Thermal	536	2001
Klamath Peakers	Klamath Falls, Oregon	Thermal	100	2009

(1) Operated pursuant to a sale-and-leaseback agreement.

Gas

Gas owns and operates four natural gas storage facilities, all near key trading hubs. The following table provides an overview of these storage facilities as of December 31, 2016. Unless noted otherwise, Enstor, Inc., a wholly-owned direct subsidiary of Gas, owns and operates each of these facilities.

Facility	Type of Facility	Storage capacity (Bcf)	Max Injection (MMcfd)/ Max Withdrawal (MMcfd)	Pipeline Connections	Commercial Operation Date
Caledonia Energy Partners, L.L.C., Mississippi	Depleted gas reservoir	18.5	558/550	Tennessee Gas Pipeline 500	2005
Freebird Gas Storage, LLC, Alabama(1)	Depleted gas reservoir	9.8	350/305	Tennessee Gas Pipeline 500	2001
Enstor Grama Ridge Storage and Transportation, LLC, New Mexico	Depleted gas reservoir	15.7	200/200	El Paso Natural Gas, Natural Gas Pipeline Company of America and the DCP Midstream Raptor Pipeline	1973
Enstor Katy Storage and Transportation, L.P., Texas	Depleted gas reservoir	23.5	750/700	Connected to 14 different pipelines	1992

(1) 13% owned by Northwest Alabama Gas District.

Infrastructure Protection and Cyber Security Measures

We have risk based security measures in place designed to protect our facilities, assets and cyber-infrastructure, such as our transmission and distribution system.

While we have not had any significant security breaches, a physical security intrusion could potentially lead to theft and the release of critical operating information. In addition to physical security intrusions, a cyber breach could potentially lead to theft and the release of critical operating information or confidential customer information.

To manage these operational risks, pursuant to the AVANGRID Cybersecurity Risk Policy approved by the AVANGRID board and the Corporate Security Policy of Iberdrola, S.A. adopted by our board, we have implemented cyber and physical security measures and continue to strengthen our security posture by improving and expanding our physical and cyber security capabilities to protect critical assets.

In an effort to reduce our vulnerability to cyber attacks, we have appointed an officer responsible for Security and established a dedicated Corporate Security Office, responsible for improving and coordinating security and NERC Compliance across the company. We have adopted a comprehensive company-wide physical and cyber security program, which is supported by a governance program to manage, oversee and assist us in meeting our corporate, legal, and regulatory responsibilities with regard to the protection of our cyber, physical and information assets.

However, as threats evolve and grow increasingly more sophisticated, we cannot ensure that a potential security breach may not occur or quantify the potential impact of such an event. We continue to invest in technology, processes, security measures and services to predict, detect, mitigate and protect our assets, both physical and cyber. These investments include upgrades to our cyber-

infrastructure assets, network architecture and physical security measures, and compliance with emerging industry best practice and regulation.

Employees

As of December 31, 2016, we had 6,801 employees excluding 15 international assignees. Of these 6,801 employees, 47.6% are represented by a union. The following table provides an overview of the number of employees at each business segment as of December 31, 2016:

Business Segment	Number of Employees (excluding International Assignees)	% of Union Workforce Subject to Collective Bargaining Agreement
Networks	5,737	56.4%
Renewables	731	—
Gas	107	—
Corporate	226	—
Total	6,801	47.6%

We have not experienced any work stoppages in the last five years and enjoy good relations with our labor unions. Virtually all of our employees work full-time.

Available Information

Copies of our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and any amendments to these reports filed with the SEC may be requested, viewed, or downloaded on-line, free of charge, on our website www.avangrid.com. Printed copies of these reports may be obtained free of charge by writing to our Investor Relations Department at 157 Church Street, New Haven, Connecticut, 06506.

Item 1A. Risk Factors

Risks Relating to Our Regulatory Environment

Our businesses are subject to substantial regulation by federal, state and local regulatory agencies and our businesses, results of operations and prospects may be materially adversely affected by legislative or regulatory changes, as well as liability under, or any future inability to comply with, existing or future regulations or requirements.

The operations of our businesses are subject to, and influenced by, complex and comprehensive federal, state and local regulation and legislation, including regulations promulgated by state utility commissions and the FERC. This extensive regulatory and legislative framework, portions of which are more specifically identified in the following risk factors, regulates, among other things and to varying degrees, the industries in which our subsidiaries operate, our business segments, rates for our products and services, financings, capital structures, cost structures, construction, environmental obligations (including in respect of, among others, air emissions, water consumption, water discharge, protections for wildlife and humans, nuisance prohibitions and allowances, and regulation of gas infrastructure operations, and associated environmental and facility permitting), development and operation of electric generation facilities and electric and gas transmission and distribution facilities, natural gas transportation, processing and storage facilities, acquisition, disposal, depreciation and amortization of facilities and other assets, service reliability, hedging, derivatives transactions and commodities trading.

In our business planning and in the management of our subsidiaries' operations, we must address the effects of regulation on our businesses, including the significant and increasing compliance costs imposed on our operations as a result of such regulation, and any inability or failure to do so timely and adequately could have a material adverse effect on our businesses, results of operations, financial condition and cash flows. The federal, state and local political and economic environment has had, and may in the future have, an adverse effect on regulatory decisions with negative consequences for our businesses. These decisions may require, for example, our businesses to cancel or delay planned development activities, to reduce or delay other planned capital expenditures or investments or otherwise incur costs that we may not be able to recover through rates, any of which could have a material adverse effect on the business, results of operations, financial condition and cash flows of our businesses. In addition, changes in the nature of the regulation of our business could have a material adverse effect on our business, results of operations, financial condition and cash flows. We are unable to predict future legislative or regulatory changes, initiatives or interpretations, and there can be no assurance that we will be able to respond adequately or sufficiently quickly to such changes, although any such changes, initiatives or interpretations may increase costs and competitive pressures on us, which could have a material adverse effect on our business, results of operations, financial condition and cash flows. There can be no assurance that we will be able to respond adequately or sufficiently quickly to such rules and developments, or to any other changes that reverse or restrict the competitive restructuring of the energy industry in those jurisdictions in which such restructuring has occurred. Any of these events could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Our businesses are subject to the jurisdiction of various federal, state and local regulatory agencies including, but not limited to, the FERC, the CFTC, the DOE, and the EPA. Further, Networks' regulated utilities in New York, Maine, Connecticut and Massachusetts are subject to the jurisdiction of the NYPSC, the MPUC, the New York State Department of Environmental Conservation, the Maine Department of Environmental Protection, the PURA, the CSC, the DEEP, and the DPU. These regulatory agencies cover a wide range of business activities, including, among other items, the retail and wholesale rates for electric energy, capacity and ancillary services, and for the transmission and distribution of these products, the costs charged to Networks' customers through tariffs including cost recovery clauses, the terms and conditions of Networks' services, procurement of electricity for Networks' customers, issuances of securities, the provision of services by affiliates and the allocation of those service costs, certain accounting matters, and certain aspects of the siting, construction and transmission and distribution systems. The FERC has the authority to impose penalties, which could be substantial, for violations of the FPA, the NGA, or related rules, including reliability and cyber security rules as described in further detail below. The Financial Accounting Standards Board, or FASB, or the SEC, may enact new accounting standards that could impact the way we are required to record revenue, expenses, assets and liabilities. Certain regulatory agencies have the authority to review and disallow recovery of costs that they consider excessive or imprudently incurred and to determine the level of return that our businesses are permitted to earn on invested capital.

The regulatory process, which may be adversely affected by the political, regulatory and economic environment in New York, Maine, Connecticut and Massachusetts, as applicable, may limit our ability to increase earnings and does not provide any assurance as to achievement of authorized or other earnings levels. The disallowance of the recovery of costs incurred by us or a decrease in the rate of return that we are permitted to earn on our invested capital could have a material adverse effect on our business, results of operation, financial condition and cash flows. Certain of these regulatory agencies also have the authority to audit the management and operations of our businesses in New York, Maine, Connecticut and Massachusetts and require or recommend operational changes. Such audits and post-audit work requires the attention of our management and employees and may divert their attention from other regulatory, operational or financial matters. The last management audit of UI by PURA was completed in 2015. This audit resulted in 64 recommendations. The last management audit of CNG and SCG was completed in 2016. This audit resulted in approximately 94 recommendations. The

NYPSC completed an operations staffing audit of all NY utilities in January 2017. The audit is under review and we expect it will result in approximately 17 specific recommendations for NYSEG and RG&E and one general recommendation for all NY utilities. The NYPSC plans to conduct a management audit of NYSEG and RG&E in 2017. The audit is expected to be completed in early 2018. We cannot predict the outcome of these audits.

As previously described, we are subject to a variety of federal, state, local laws and regulations. The introduction of new laws or regulations or changes in existing laws or regulations, or the interpretation thereof, may alter the environment in which we do business and could increase the costs of doing business for us or restrict our actions and adversely affect our financial condition, operating results and cash flows.

Any failure to meet the reliability standards mandated by NERC could have a material adverse effect on our business, results of operation, financial condition and cash flows.

As a result of the EAct 2005, owners, operators and users of bulk electric systems are subject to mandatory reliability standards developed by NERC and are subject to oversight by the FERC in the U.S. and governmental authorities in Canada. The standards are based on the functions that need to be performed to ensure that the bulk electric system operates reliably. Networks' and Renewables' businesses have been, and will continue to be, subject to routine audits and monitoring with respect to compliance with applicable NERC reliability standards, including standards approved by the FERC that could result in an increase in the number of assets (including cyber-security assets) designated as "critical assets," which would subject such assets to NERC cyber-security standards. NERC and the FERC can be expected to continue to refine existing reliability standards as well as develop and adopt new reliability standards. Compliance with modified or new reliability standards may subject Networks' and/or Renewables' businesses to new requirements resulting in higher operating costs and/or increased capital expenditures. If Networks' and/or Renewables' businesses were found not to be in compliance with the mandatory reliability standards, it could be subject to penalties of up to \$1.0 million per day per violation. Both the costs of regulatory compliance and the costs that may be imposed as a result of any actual or alleged compliance failures could have a material adverse effect on our business, results of operation, financial condition and prospects. NYSEG and RG&E will have onsite NERC operational audit and NYSEG, RG&E and CMP will have onsite CIP audit in 2017. We cannot predict the outcome of these audits.

The NYPSC has initiated a proceeding that may result in the alteration of the public utility model in New York State and could materially and adversely impact our business and operations in New York State.

In April 2014, the NYPSC commenced a proceeding titled REV, which is an initiative to reform New York State's energy industry and regulatory practices. REV has followed several simultaneous paths, including a formal Track 1 dealing with market design and platform technology and Track 2 dealing with regulatory reform. REV's objectives include the promotion of more efficient use of energy, increased utilization of renewable energy resources such as wind and solar in support of New York State's renewable energy goals, and wider deployment of "distributed" energy resources, such as micro grids, on-site power supplies, and storage. Track 1 of the REV initiative involves the examination of the role that distribution utilities will have in the enablement of market-based deployment of DER to promote load management, system efficiency, and peak load reductions. NYSEG and RG&E are participating in all aspects of the REV initiative with other New York utilities as well as providing their unique perspective. PSC staff has conducted public statement hearings across New York State regarding REV.

Various other REV-related proceedings have also been initiated by the PSC, each of which is following its own schedule. These proceedings include the Clean Energy Fund, Demand Response Tariffs, Community Choice Aggregation, Large Scale Renewables, and Community Distributed Generation. As part of this initiative, NYSEG and RG&E entered into agreements with NYSEDA for Renewable Energy Credits (RECs) and Zero-Emission Credits (ZECs) in 2017 and have prepared updated tariffs for collection and payment.

Track 2 of the REV initiative is also underway, and through a NYPSC Staff Whitepaper review process, is examining potential changes in current regulatory, tariff, market design and incentive structures which could better align utility interests with achieving New York State and NYPSC policy objectives. New York utilities will also be addressing related regulatory issues in their individual rate cases. A Track 2 order was issued in May 2016, and includes guidance related to the potential for Earnings adjustment mechanisms (EAMs), platform service revenues, innovative rate designs, and data utilization and security. The companies, in December 2016, filed a proposal for the implementation of EAMs in the areas of system efficiency, energy efficiency, interconnections, and clean air. A collaborative process to review the companies' petition is expected to begin in the first quarter of 2017.

We are not able to predict the outcome of the REV proceeding or its impact on our business, results of operations, financial condition and cash flows. While the end result of the REV process at the NYPSC remains unclear, it could alter the utility model in New York in a manner that could create material adverse impacts on our businesses and operations in New York.

Changes in regulatory and/or legislative policy could negatively impact Networks' transmission planning and cost allocation.

The existing FERC-approved ISO-NE, transmission tariff allocates the costs of transmission facilities that provide regional benefits to all customers of participating transmission-owning utilities in New England. As new investment in regional transmission infrastructure occurs in any one state, its cost is shared across New England in accordance with a FERC-approved formula found in the transmission tariff. Participating New England transmission owners' agreement to this regional cost allocation is set forth in the transmission operating agreement. This agreement can be modified with the approval of a majority of the transmission-owning utilities and approval by the FERC. In addition, other parties, such as state regulators, may seek certain changes to the regional cost allocation formula, which could have adverse effects on the rates Networks' distribution companies in New England charge their retail customers. FERC has found that the New England rate protocols lacked transparency and have established a hearing and settlement procedures. We cannot predict the outcome of this proceeding.

The FERC has issued rules requiring all RTOs, and transmission owning utilities to make compliance changes to their tariffs and contracts in order to further encourage the construction of transmission for generation, including renewable generation. This compliance will require RTOs (such as ISO-NE and NYISO) and the transmission owners in New England and New York to develop methodologies that allow for regional planning and cost allocation for transmission projects chosen in the regional plan that are designed to meet public policy goals such as reducing greenhouse gas emissions or encouraging renewable generation. Such compliance may also allow non-incumbent utilities and other entities to participate in the planning and construction of new projects in Networks' service areas and regionally.

Changes in RTO tariffs, transmission owners' agreements, or legislative policy, or implementation of these new FERC planning rules, could adversely affect our transmission planning, results of operations, financial condition and cash flows.

We are subject to numerous environmental laws, regulations and other standards, including rules and regulations with respect to climate change, which could result in capital expenditures, increased operating costs and various liabilities, and could require us to cancel or delay planned projects or limit or eliminate certain operations.

Our businesses are subject to environmental laws and regulations, including, but not limited to, extensive federal, state and local environmental statutes, rules and regulations relating to air quality, water quality and usage, climate change, emissions of greenhouse gases (including, but not limited to carbon dioxide), waste management, hazardous wastes (including the clean-up of former manufactured gas and electric generation facilities), marine, avian and other wildlife mortality and habitat protection, historical artifact preservation, natural resources and health and safety (including, but not limited to, electric and magnetic fields from power lines and substations, and ice throw, shadow flicker and noise related to wind turbines) that could, among other things, prevent or delay the development of power generation, power or natural gas transmission, or other infrastructure projects, restrict the output of some existing facilities, limit the availability and use of some fuels required for the production of electricity, require additional pollution control equipment, and otherwise increase costs, increase capital expenditures and limit or eliminate certain operations. There are significant capital, operating and other costs associated with compliance with these environmental statutes, rules and regulations, and those costs could be even more significant in the future as a result of new legislation, the current trend toward more stringent standards, and stricter and more expansive application and enforcement of existing environmental regulations. For example, new laws, regulations or treaties relating to climate change could mandate new or increased requirements to control or reduce the emission of greenhouse gases, such as carbon dioxide, taxes or fees on fossil fuels or emissions, cap and trade programs, emission limits and clean or renewable energy standards or mandates that require curtailment of operations for certain periods of time due to potential electromagnetic interference. Violations of current or future laws, rules, regulations or other standards could expose our subsidiaries to regulatory and legal proceedings, disputes with, and legal challenges by, third parties, and potentially significant civil fines, criminal penalties and other sanctions, which could have an adverse effect on our operations, financial condition and cash flows.

Our regulated utility operations may not be able to recover costs in a timely manner or at all or obtain a return on certain assets or invested capital through base rates, cost recovery clauses, other regulatory mechanisms or otherwise.

Our regulated utilities in New York, Maine, Connecticut and Massachusetts are subject to periodic review of their rates by the NYPSC, MPUC, PURA and DPU, respectively, and the retail rates charged to our regulated utilities' customers through base rates and cost recovery clauses are subject to the jurisdiction of the NYPSC, MPUC, PURA and DPU, as applicable. New rates may be proposed by Network's businesses, which are then subject to review, modification and final authorization and implementation by regulators. Alternatively, regulators may review the rates of Networks' regulated utilities on their own motion. Networks' regulated utilities' rate plans cover specified periods, but rates determined pursuant to a plan generally continue in effect until a new rate plan is approved by the state utility regulator. Networks' regulated utilities' business rate plans approved by state utility regulators limit the rates Networks' regulated utilities can charge their customers. The rates are generally designed for, but do not guarantee, the recovery of Networks' regulated utilities' respective cost of service and the opportunity to earn a reasonable rate of return (ROE). Actual costs may increase due to inflation or other factors and exceed levels provided for such costs in the rate plans for Networks' regulated

utilities. Utility regulators can initiate proceedings to prohibit Networks' regulated utilities from recovering from their customers the cost of service (including energy costs) that the regulators determine to have been imprudently incurred. Networks' regulated utilities defer for future recovery certain costs including major storm costs and environmental costs. In a number of proceedings in recent years, Networks' regulated subsidiaries have been denied recovery, or deferred recovery pending the next general rate case, including denials or deferrals related to major storm costs and construction expenditures. In some instances, denial of recovery may cause the regulated subsidiaries to record an impairment of assets. If Networks' regulated utilities' costs are not fully and timely recovered through the rates ultimately approved by regulators, our cash flows, results of operations and financial condition, and our ability to earn a return on investment and meet financial obligations, could be adversely affected.

Certain of the current electric and gas rate plans of Networks' regulated utilities include revenue decoupling mechanisms, or RDMs, and the provisions for the recovery of energy costs, including reconciliation of the actual amount paid by such regulated utilities. There is no guarantee that such decoupling mechanisms or recovery and reconciliation mechanism will remain part of the rate plan of Networks in future rate proceedings.

In addition, there are pending challenges at the FERC against New England transmission owners (including UI and CMP) seeking to lower the ROE that these transmission owners are allowed by the FERC to receive for wholesale transmission service pursuant to the ISO-NE Open Access Transmission Tariff. Reductions to ROE adversely impact the revenues that Networks' regulated utilities receive from wholesale transmission customers and could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Harming of protected species can result in curtailment of wind project operations and could have a material adverse effect on our business, results of operation, financial condition and cash flows.

The operation of energy projects and transmission of energy can adversely affect endangered, threatened or otherwise protected animal species under federal and state statutes, laws, rules and regulations. Wind projects involve a risk that protected flying species, such as birds and bats, will be harmed due to collision. Transmission and distribution lines are another source of potential avian collision as well as electrocution. Energy generation and transmission facilities can result in impacts to protected wildlife, including death caused by collision, electrocution and poisoning. Energy infrastructure occasionally affects endangered or protected species. Our businesses observe industry guidelines and government-recommended best practices to avoid, minimize and mitigate harm to protected species, but complete avoidance is not possible and subsequent penalties may result. Where appropriate, our businesses can apply for an "incidental take" permit for some protected species, which may be conditioned upon the institution of costly avoidance and remediation measures.

Violations of wildlife protection laws in certain jurisdictions may result in civil or criminal penalties, including violations of certain laws protecting migratory birds, endangered species and eagles. The ESA and analogous state laws restrict activities without a permit that may adversely affect endangered and threatened species or their habitat. The ESA also provides for private causes of actions against a development project, an operating facility, or the agency that oversees the alleged violation of law. Similar protections are offered to migratory birds under the MBTA, which implements various treaties and conventions between the United States and certain other nations for the protection of migratory birds and, pursuant to which the taking, killing or possessing of migratory birds is unlawful. Complying with the state and federal laws protecting migratory birds, endangered species and eagles may require implementation of operating restrictions or a temporary, seasonal, or permanent ban on operations in affected areas, which can have a material adverse effect on the revenue of those projects. For example, there have been recent sightings of the protected California condor at Renewables' Manzana wind facility. Any incidental taking of a California condor could result in substantial financial, legal and reputational harm to us. The DOJ is currently investigating Renewables for potential violations under the MBTA and the ESA at its Blue Creek facility. We cannot predict the outcome of this investigation.

Renewables relies in part on governmental policies that support utility-scale renewable energy. Any reductions to, or the elimination of, governmental incentives that support utility-scale renewable energy or the imposition of additional taxes or other assessments on renewable energy, could result in a material adverse effect on our business, results of operations, financial condition and cash flows.

Renewables relies, in part, upon government policies that support utility-scale renewable energy projects and enhance the economic feasibility of developing and operating wind energy projects in regions in which Renewables operates or plans to develop and operate renewable energy facilities. The federal government and many states and local jurisdictions have policies or other mechanisms, such as tax incentives or renewable portfolio standards, or RPS, that support the sale of energy from utility-scale renewable energy facilities, such as wind energy facilities. As a result of budgetary constraints, political factors or otherwise, federal, state and local governments from time to time may review their policies and other mechanisms that support renewable energy and consider actions that would make them less conducive to the development or operation of renewable energy facilities. Any reductions to, or the elimination of, governmental policies or other mechanisms that support renewable energy or the imposition of additional

taxes or other assessments on renewable energy, could result in, among other items, the lack of a satisfactory market for the development of new renewable energy projects, Renewables abandoning the development of new renewable energy projects, a loss of Renewables' investments in the projects and reduced project returns, any of which could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Our businesses may face risks related to obtaining governmental approvals and permits in respect of project siting, financing, construction, operation and the negotiation of project development agreements which could cause delay a project and could materially adversely affect our businesses, results of operations or financial condition.

Renewables owns, develops, constructs and/or operates electricity generation, including renewable and thermal generators, and associated transmission facilities. Networks develops, constructs, manages and operates transmission and distribution facilities to meet customer needs. As part of these operations, our businesses must periodically apply for licenses and permits from various local, state, federal and other regulatory authorities and abide by their respective conditions. In particular, with respect to Renewables, over the past two years noise standards and siting criteria in the Northeast, where population density is higher compared to the Northwest, where Renewables also operates, have grown more restrictive. If our businesses are unsuccessful in obtaining necessary licenses or permits on acceptable terms, there is a delay in obtaining or renewing necessary licenses or permits or regulatory authorities initiate any associated investigations or enforcement actions or impose related penalties or disallowances on us, having a material adverse effect on our businesses, results of operations, financial condition and cash flows.

Our operating subsidiaries' purchases and sales of energy commodities and related transportation and services expose us to potential regulatory risks that could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Under the EPCA 2005 and the Dodd-Frank Act, our businesses are subject to enhanced FERC and CFTC statutory authority to monitor certain segments of the physical and financial energy commodities markets. These agencies have imposed broad regulations prohibiting fraud and manipulation of the electricity and gas markets. Under these laws, the FERC and CFTC have promulgated new regulations that have increased compliance costs and imposed new reporting requirements on our businesses. For example, the Dodd-Frank Act substantially increased regulation of the over-the-counter derivative contracts market and futures contract markets, which impacts our businesses. The new regulations require our operating subsidiaries to comply with certain margin requirements for our over-the-counter derivative contracts with certain CFTC- or SEC-registered entities and if the rules implementing the new regulations require us to post significant amounts of cash collateral with respect to swap transactions, this could have a material adverse effect on our liquidity. We cannot predict the impact these new regulations will have on our businesses' ability to hedge their commodity and interest rate risks or on over-the-counter derivatives markets as a whole, but they could potentially have a material adverse effect on our businesses' risk exposure, as well as reduce market liquidity and further increase the cost of hedging activities.

With regard to the physical purchases and sales of energy commodities, the physical trading of energy commodities and any related transportation and/or hedging activities that some of our operating subsidiaries undertake, our operating subsidiaries are required to observe the market-related regulations and certain reporting and other requirements enforced by the FERC, the CFTC and the SEC. Additionally, to the extent that the operating subsidiaries enter into transportation contracts with natural gas pipelines or transmission contracts with electricity transmission providers that are subject to FERC regulation, the operating subsidiaries are subject to FERC requirements related to the use of such transportation or transmission capacity. Any failure on the part of our operating subsidiaries to comply with the regulations and policies of the FERC, the CFTC or the SEC relating to the physical or financial trading and sales of natural gas or other energy commodities, transportation or transmission of these energy commodities or trading or hedging of these commodities could result in the imposition of significant civil and criminal penalties. Failure to comply with such regulations, as interpreted and enforced, could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Renewables' ability to generate revenue from certain utility-scale wind energy power plants depends on having continuing interconnection arrangements, PPAs, or other market mechanisms and depends upon interconnecting utility and RTO rules, policies, procedures and FERC tariffs that do not present restrictions to current and future wind project operations.

The electric generation facilities owned by Renewables rely on interconnection and/or transmission agreements and transmission networks in order to sell the energy generated by such facility. If the interconnection and/or transmission agreement of an electric generating facility Renewables owns is terminated for any reason, Renewables may not be able to replace it with an interconnection or transmission arrangement on terms as favorable as the existing arrangement, or at all, or it may experience significant delays or costs in securing a replacement. If a transmission network to which one or more of Renewables' electric generating facilities is connected experiences outages or curtailments, the affected projects may lose revenue. These factors could materially affect Renewables' ability to forecast operations and negatively affect our business, results of operations, financial condition and cash flow. In addition, certain of Renewables' operating facilities' generation of electricity may be physically or

economically curtailed, and offtakers or transmission or interconnection providers may be permitted to restrict wind project operations without paying full compensation to Renewables pursuant to PPAs or interconnection agreements or FERC tariff provisions or rules, policies or procedures of RTOs, which may reduce our revenues and impair our ability to capitalize fully on a particular facility's generating potential. Such curtailments or operational limitations could have a material adverse effect on our business, financial condition, results of operations and cash flows. Furthermore, economic congestion on the transmission grid (for instance, a negative price difference between the location where power is put on the grid by a project and the location where power is taken off the grid by the project's customer) in certain of the bulk power markets in which Renewables operates may occur and its businesses may be responsible for those congestion costs. Similarly, negative congestion costs may require that the wind projects either not participate in the energy markets or bid and clear at negative prices which may require the wind projects to pay money to operate each hour in which prices are negative. If such businesses were liable for such congestion costs or if the wind projects are required to pay money to operate in any given hour when prices are negative, then our financial results could be adversely affected.

Risks Relating to Our Business and Operations

Disruptions, uncertainty or volatility in the credit and capital markets may negatively affect our liquidity and capital needs and our ability to meet our growth objectives and can also materially adversely affect our results of operations and financial condition.

A credit crisis affecting the banking system and the financial markets and the resultant deterioration of macroeconomic conditions, including a global reduction in credit and liquidity in the financial markets and severe volatility in stock and bond markets could impact our financial operating conditions, our day-to-day activities, our liquidity and cash positions, the loss of significant investment opportunities, the value of our business and our financial condition. In addition, during periods of slow or little economic growth, energy conservation efforts often increase and the amount of uncollectible customer accounts increases. These factors may also reduce earnings and cash flow.

Increases in interest rates or reductions in credit ratings could have an adverse impact on our cash flows, results of operations and financial condition.

Trends in the general level of interest rates and in the debt capital and credit markets could increase the cost of our borrowings. Borrowings from our credit facilities and on our auction rate bonds are set by reference to the London Interbank Offer Rate, or LIBOR, and the cost of new long-term debt can be affected by the level of US treasury rates and conditions in the debt capital markets that affect credit spreads.

In addition, AVANGRID and certain of its subsidiaries are parties to revolving credit facilities that contain facility fees and borrowing spread pricing that are a function of the credit rating of the borrower. A lower credit rating automatically increases the cost of these facilities. A downgrade to the lowest investment grade rating of the borrower would likely preclude access to the commercial paper market for NYSEG and CMP, which each have commercial paper programs. Lower credit ratings would also increase the cost of debt and equity capital and, depending on the rating and market conditions, can preclude access to the debt and equity capital markets. Any of these events could have a materially adverse effect on our business, results of operations, financial condition and cash flows.

If Networks' electricity and natural gas transmission, transportation and distribution systems do not operate as expected, they could require unplanned expenditures, including the maintenance and refurbishment of Networks' facilities, which could adversely affect our business, results of operations, financial position and cash flows.

Networks' ability to operate its electricity and natural gas transmission, transportation and distribution systems is critical to the financial performance of our business. The ongoing operation of Networks' facilities involves risks customary to the electric and natural gas industry that include the breakdown, failure, loss of use or destruction of Networks' facilities, equipment or processes or the facilities, equipment or processes of third parties due to war or acts of terrorism, operational and safety performance below expected levels, errors in the operation or maintenance of these facilities and the inability to transport electricity or natural gas to customers in an efficient manner. These and other occurrences could reduce potential earnings and cash flows and increase the costs of repairs and replacement of assets. Losses incurred by Networks in respect of such occurrences may not be fully recoverable through insurance or customer rates. Further, certain of Networks' facilities require periodic upgrading and improvement. In addition, unplanned outages typically increase Networks' operation and maintenance expenses. Any unexpected failure, including failure associated with breakdowns, forced outages or any unanticipated capital expenditures, accident, failure of major equipment, shortage of or inability to acquire critical replacement or spare parts could result in reduced profitability or regulatory penalties. For more information, see "Risks Relating to Our Regulatory Environment" above.

Our businesses' operations and power production may fall below expectations due to the impact of severe weather or other natural events, which could adversely affect our cash flows, results of operations and financial position.

Weather conditions directly influence the demand for electricity and natural gas and other fuels and affect the price of energy and energy-related commodities. Severe weather, such as ice and snow storms, hurricanes and other natural disasters, such as floods and earthquakes, can be destructive and cause power outages, bodily injury and property damage or affect the availability of fuel and water, which may require additional costs or loss of revenues, for example, the costs incurred to restore service and repair damaged facilities, to obtain replacement power and to access available financing sources, may not be recoverable from customers, and could adversely affect our cash flows, results of operations and financial position. Many of our facilities could be placed at greater risk of damage should changes in the global climate produce unusual variations in temperature and weather patterns, resulting in more intense, frequent and extreme weather events, abnormal levels of precipitation and a change in sea level. A disruption or failure of electric generation, transmission or distribution systems or natural gas production, transmission, transportation, storage or distribution systems in the event of ice and snow storms, long periods of severe weather, hurricane, tornado or other severe weather event, or otherwise, could prevent us from operating our business in the normal course and could result in any of the adverse consequences described above. Because utility companies, including our regulated utilities, have large customer bases, they are subject to adverse publicity focused on the reliability of their distribution services and the speed with which they are able to respond to electric outages, natural gas leaks and similar interruptions caused by storm damage or other unanticipated events. Adverse publicity of this nature could harm our reputations and the reputations of our subsidiaries.

Furthermore, Renewables can incur damage to wind turbine equipment, either through natural events such as lightning strikes that damage blades or in-ground electrical systems used to collect electricity from turbines. Many of the operating facilities of Networks and Enstor, Inc., Gas' wholly-owned direct subsidiary, are located either in, or close to, densely populated public places. A failure of, or damage to, these facilities, could result in bodily injury or death, property damage, the release of hazardous substances or extended service interruptions. The cost of repairing damage to Networks' and Gas' facilities and the potential disruption of their operations due to storms, natural disasters or other catastrophic events could be substantial. In respect of our businesses where cost recovery is available, recovery of costs to restore service and repair damaged facilities is or may be subject to regulatory approval, and any determination by the regulator not to permit timely and full recovery of the costs incurred could have a material adverse effect on our business, results of operations, financial condition and cash flows.

If wind conditions are unfavorable or below Renewables' production forecasts, or Renewables' wind turbines are not available for operation, Renewables projects' electricity generation and the revenue generated from its projects may be substantially below our expectations.

Changing wind patterns or lower than expected wind resource could cause reductions in electricity generation at Renewables' projects, which could affect the revenues produced by these wind generating facilities. Renewables' wind projects are sited, developed and operated to maximize wind performance. Prior to siting a wind facility, detailed studies are conducted to measure the wind resource in order to estimate future production. However, wind patterns or wind resource in the future might deviate from historical patterns and are difficult to predict. These events could negatively impact the results of operations of Renewables, which may vary significantly from period to period, depending on the level of available resources. To the extent that resources are not available at planned levels, the financial results from these facilities may be less than expected. Changing wind patterns or lower than expected wind resources could also degrade equipment or components and the interconnection and transmission facilities' lives or maintenance costs. Replacement and spare parts for wind turbines and key pieces of electrical equipment may be difficult or costly to acquire or may be unavailable. The loss of any suppliers or service providers or inability to find replacement suppliers or service providers or to purchase turbines at rates currently offered by Renewables' existing suppliers or a change in the terms of Renewables' supply or operations and maintenance agreements, such as increased prices for maintenance services or for spare parts, could have a material adverse effect on Renewables' ability to construct and maintain wind farms or the profitability of wind farm development and operation.

The revenues generated by Renewables' facilities depend upon Renewables' ability to maintain the working order of its wind turbines. A natural disaster, severe weather, accident, failure of major equipment, shortage of or inability to acquire critical replacement or spare parts, failure in the operation of any future transmission facilities that Renewables may acquire, including the failure of interconnection to available electricity transmission or distribution networks, could damage or require Renewables to shut down its turbines or related equipment and facilities, leading to decreases in electricity generation levels and revenues. Additionally, Renewables' operating projects generally do not hold spare substation main transformers in inventory. These transformers are designed specifically for each wind power project, and order lead times can be lengthy. If one of Renewables' projects had to replace any of its substation main transformers, it would be unable to sell all of its power until a replacement is installed.

If Renewables experiences a prolonged interruption at one of its operating projects due to natural events or operational problems and such events are not fully covered by insurance, Renewables' electricity generation levels could materially decrease, which could

have a material adverse effect on its business, results of operation and financial condition and could adversely affect our cash flows, results of operations and financial position.

Cyber breaches, acts of war or terrorism, grid disturbances or security breaches involving the misappropriation of confidential and proprietary customer, employee, financial or system operating information could negatively impact our business.

Cyber breaches, acts of war or terrorism or grid disturbances resulting from internal or external sources could target our generation, transmission and distribution facilities or our information technology systems. In the regular course of business, we maintain sensitive customer, employee, financial and system operating information and are required by various federal and state laws to safeguard this information. Cyber or physical security intrusions could potentially lead to disabling damage to our generation, transmission and distribution facilities and to theft and the release of critical operating information or confidential customer or employee information, which could adversely affect our operations or adversely impact our reputation, and could result in significant costs, fines and litigation. Additionally, because our generation and transmission facilities are part of an interconnected regional grid, we face the risk of blackout due to a disruption on a neighboring interconnected system. As threats evolve and grow increasingly more sophisticated, we cannot ensure that a potential security breach may not occur or quantify the potential impact of such an event. Any such cyber breaches could result in a significant decrease in revenues, significant expense to repair system damage or security breaches, adversely impact our reputation, regulatory penalties and liability claims, which could have a material adverse effect on our cash flows, results of operations and financial condition.

Risks including but not limited to any physical security breach involving unauthorized access, electricity or equipment theft and vandalism could adversely affect our business operations and adversely impact our reputation.

A physical attack on our transmission and distribution infrastructure could interfere with normal business operations and affect our ability to control our transmission and distribution assets. A physical security intrusion could potentially lead to theft and the release of critical operating information, which could adversely affect our operations or adversely impact our reputation, and could result in significant costs, fines and litigation. Additionally, certain of our power generation and transmission and distribution assets and equipment are at risk for theft and damage. For example, Networks is at risk for copper wire theft, especially, due to an increased demand for copper in the United States and internationally. Theft of copper wire or solar panels can cause significant disruption to Networks' and Renewables' operations, respectively, and can lead to operating losses at those locations. Furthermore, Renewables can incur damage to wind turbine equipment through vandalism, such as gunshots into towers or other generating equipment. Such damage can cause disruption of operations for unspecified periods which may lead to operating losses at those locations.

Our risk management policies cannot fully eliminate the risk associated with some of our operating subsidiaries' commodity trading and hedging activities, which may result in significant losses.

Renewables has exposure to commodity price movements through their "natural" long positions in electricity and natural gas storage in addition to proprietary trading and hedging activities. Since market prices and temporal price spreads for natural gas reflect the demand for these products and their availability at a given time, the overall operating results of Gas' business may fluctuate substantially on a seasonal basis.

Networks and Renewables manage the exposure to risks of commodity price movements through internal risk management policies, enforcement of established risk limits and risk management procedures. These risk policies, risk limits and risk management procedures may not work as planned and cannot eliminate all risks associated with these activities. Even when these risk policies and procedures are followed, and decisions are made based on projections and estimates of future performance, results of operations may be diminished if the judgments and assumptions underlying those decisions prove to be incorrect. Our risk management tools and metrics associated with our hedging and trading procedures, such as daily value at risk, stop loss limits and liquidity guidelines, are based on historical price movements. Due to the inherent uncertainty involved in price movements and potential deviation from historical pricing behavior, we are unable to assure that our risk management tools and metrics will be effective to protect against material adverse effects on our business, financial condition, results of operations and prospects. Factors, such as future prices and demand for power and other energy-related commodities, become more difficult to predict and the calculations become less reliable the further into the future estimates are made. As a result, we cannot fully predict the impact that some of our subsidiaries' commodity trading and hedging activities and risk management decisions may have on our business, results of operations, financial condition and cash flows.

We expect to invest in development opportunities in all segments of our business, but such opportunities may not be successful, projects may not commence operation as scheduled and/or within budget or at all, which could have a material adverse effect on our business prospects.

We are pursuing broader development investment opportunities related to all segments of our business, particularly in respect of additional opportunities related to electric transmission, renewable energy generation, interconnections to generating resources and other development investment opportunities. The development, construction and expansion of such projects involve numerous risks. Various factors could result in increased costs or result in delays or cancellation of these projects. Risks include regulatory approval processes, permitting, new legislation, economic events, environmental and community concerns, negative publicity, design and siting issues, difficulties in obtaining required rights of way, construction delays and cost overruns, including delays in equipment deliveries, particularly of wind turbines or transformers, severe weather, competition from incumbent facilities and other entities, and actions of strategic partners. For example, there may be delays or unexpected developments in completing current and future construction projects. While most of Renewables' construction projects are constructed under fixed-price and fixed-schedule contracts with construction and equipment suppliers, these contracts provide for limitations on the liability of these contractors to pay liquidated damages for cost overruns and construction delays. These circumstances could prevent Renewables' construction projects from commencing operations or from meeting original expectations about how much electricity it will generate or the returns it will achieve. In addition, for Renewables' projects that are subject to PPAs, substantial delays could cause defaults under the PPAs, which generally require the completion of project construction by a certain date at specified performance levels. A delay resulting in a wind project failing to qualify for federal production tax credits could result in losses that would be substantially greater than the amount of liquidated damages paid to Renewables. In December 2015, the Consolidated Appropriations Act, 2016 extended the expiration date for this tax credit to December 31, 2019, for wind facilities commencing construction, with a phase-down beginning for wind projects commencing construction after December 31, 2016. Furthermore, as required by Connecticut's Comprehensive Energy Strategy, CNG and SCG filed, jointly with Yankee Gas Services Company, a comprehensive natural gas expansion plan ("Expansion Plan") outlining a structured approach to add approximately 280,000 new gas heating customers (approximately 200,000 of which relate to SCG and CNG) state-wide over the next 10 years. In order to serve new customers to comply with the Expansion Plan, SCG and CNG need to lay significant miles of new pipeline, maintain, expand and potentially upgrade their existing distribution and/or storage infrastructure, and build new gate stations. Various factors may prevent or delay SCG and CNG from completing such projects or make completion more costly, such as the inability to obtain required approval from local or state regulatory and governmental bodies, public opposition to the project, lack of potential customers as a result of reduced economic benefits for switching to gas, inability to obtain adequate financing, construction delays, cost overruns, and inability to negotiate acceptable agreements relating to rights-of-way, construction or other material development components. As a result, SCG and CNG may not be able to adequately support the proposed customer growth, which would negatively impact their businesses, cash flows, results of operations and financial condition. Additionally, RG&E's Rochester Area Reliability Project, which includes the development of a new substation and transmission lines and was approved by the NYPSC, has encountered significant delays due to the concerns of landowners. Should any of these factors result in such delays or cancellations, our growth projections, financial position, results of operations, and cash flows could be adversely affected or our future growth opportunities may not be realized as anticipated.

Advances in technology and rate design initiatives could impair or eliminate the competitive advantage of our business or could result in customer defection, which could have a material adverse effect on our growth, business, financial condition and results of operations.

The emergence of technology and initiatives designed to reduce greenhouse gas emissions or limit the effects of global warming and overall climate change has increased the development of new technologies for power generation, energy efficiency, and for investment in research and development to make those technologies more efficient and cost effective. There is a potential that new technology or rate design incentives could adversely affect the demand for services of our regulated subsidiaries thus impacting our revenues, which could adversely affect our cash flows, results of operations and financial concerns. For example, net energy metering allows electricity customers who supply their own electricity from on-site generation to pay only for the net energy obtained from the utility. Further, the behind-the-meter storage systems and grid integration components such as inverters or electronics could result in electricity delivery customers abandoning the grid system or replacing part of grid services with self-supply or self-balancing, which could impact the return on current or future Networks' assets deployed and designed to serve projected load. Such emergence of alternative sources of energy supply can result in customers relying on the power grid for limited use, such as in the case of a deficit or an emergency, or completely abandoning the grid, which is known as customer defection. While certain of the regulated utilities of Networks are subject to RDMs, they are either legislatively or regulatory in nature and there is no assurance such mechanisms will always be available. The progressive reduction in the costs of distributed energy assets, as a result of technological improvements, large scale deployment in certain jurisdictions and constructive support regimes could result in customer defection (individually or integrated in micro-grids) when a net benefit analysis of investing in self-supply and storage of energy compared to energy provided by utility service appears attractive for certain customer classes. Similarly, future investments in Networks could be impacted if adequate rate making does not fully contemplate the characteristics of an integrated reliable grid from a unified perspective, regardless of customer disconnection. Further, the interoperability, integration and standard connection of these distributed energy devices and

systems could place a burden on the system of Networks' operating subsidiaries, without adequately compensating them. Furthermore, the technologies used in the renewable energy sector change and evolve rapidly. Techniques for the production of electricity from renewable sources are constantly improving and becoming more complex. In order to maintain Renewables' competitiveness and expand its business, Renewables must adjust effectively to changes in technology. If Renewables fails to react effectively to current and future technological changes in the sector in a timely manner, Renewables' future business growth, results of operations and financial condition could be materially adversely affected.

Renewables' revenue may be reduced significantly upon expiration or early termination of PPAs if the market price of electricity decreases and Renewables is otherwise unable to negotiate favorable pricing terms.

Renewables' portfolio of PPAs is made up of PPAs that primarily have fixed or otherwise predetermined electricity prices for the life of the PPA. A decrease in the market price of electricity, including lower prices for traditional fossil fuels, could result in a decrease in revenues once a PPA has expired or upon a renewal of a PPA. Any decrease in the price payable to Renewables under new PPAs could have a material adverse effect on our business, results of operations, financial conditions and cash flows. For the majority of Renewables' wind energy generation projects, upon the expiration of a PPA, the project becomes a merchant project subject to market risks, unless Renewables can negotiate a renewal of the PPA. If Renewables is not able to replace an expiring PPA with a contract on equivalent terms and conditions or otherwise obtain prices that permit operation of the related facility on a profitable basis, the affected site may temporarily or permanently cease operations. The majority of the Renewables PPAs are fixed price contracts. An early termination of any may result in economic losses.

There are a limited number of purchasers of utility-scale quantities of electricity, which exposes Renewables' utility-scale projects to additional risk that could have a material adverse effect on its business.

Since the transmission and distribution of electricity is highly concentrated in most jurisdictions, there are a limited number of possible purchasers for utility-scale quantities of electricity in a given geographic location, including transmission grid operators, state and investor-owned power companies, public utility districts and cooperatives. As a result, there is a concentrated pool of potential buyers for electricity generated by Renewables' businesses, which may restrict our ability to negotiate favorable terms under new PPAs and could impact our ability to find new customers for the electricity generated by our generation facilities should this become necessary. Renewables' PPA portfolio is mostly contracted with low risk regulated utility companies. In the past few years, there has been increased participation from commercial and industrial businesses. The higher long term business risk profile of these companies results in increased credit risk. Furthermore, if the financial condition of these utilities and/or power purchasers deteriorated or the RPS programs, climate change programs or other regulations to which they are currently subject and that compel them to source renewable energy supplies change, demand for electricity produced by Renewables' businesses could be negatively impacted.

Lower prices for other fuel sources may reduce the demand for wind and solar energy development, which could have a material adverse effect on Renewables' ability to grow its business.

Wind and solar energy demand is affected by the price and availability of other fuels, including nuclear, coal, natural gas and oil, as well as other sources of renewable energy. To the extent renewable energy, particularly wind energy, becomes less cost-competitive due to reduced government targets, increases in the cost of wind energy, as a result of new regulations, and incentives that favor alternative renewable energy, cheaper alternatives or otherwise, demand for wind energy and other forms of renewable energy could decrease. Slow growth or a long-term reduction in the demand for renewable energy could have a material adverse effect on Renewables' ability to grow its business.

Volatility in the price of natural gas and home heating oil could adversely impact the demand for gas conversions and could have a material adverse effect on our regulated gas utilities' ability to grow their businesses.

Conversion from home heating oil to natural gas requires a significant investment by customers. If the price of natural gas does not remain sufficiently below the prices of home heating oil, current oil heating customers may elect not to convert to natural gas. Volatility in oil prices demonstrates the difficulty to predict future home heating costs. In addition, any new regulations imposed on natural gas, particularly on extraction of natural gas from shale formations, could lead to substantial increases in the price of natural gas. Reduced prices for heating oil or increases in in prices for natural gas may cause potential natural gas customers to forgo converting their heating systems to natural gas and as a result, could negatively impact the forecasted growth of the CNG, SCG and BGC businesses, and their cash flows, results of operations and financial condition.

Our subsidiaries do not own all of the land on which their projects are located and their use and enjoyment of real property rights for their projects may be adversely affected by the rights of lienholders and leaseholders that are superior to those of the grantors of those real property rights to our subsidiaries' projects, which could have a material adverse effect on their business, results of operations, financial condition and cash flows.

Our subsidiaries do not own all of the land on which their projects are located. For example, Renewables does not own all of the land on which its wind projects are located and Gas does not own all of the land on which its natural gas storage projects are located. Such projects generally are, and future projects may be, located on land occupied under long-term easements, leases and rights of way. The ownership interests in the land subject to these easements, leases and rights of way may be subject to mortgages securing loans or other liens and other easements, lease rights and rights of way of third parties that were created previously. As a result, some of the rights under such easements, leases or rights of way held by our operating subsidiaries may be subject to the rights of these third parties, and the rights of our operating subsidiaries to use the land on which their projects are or will be located and their projects' rights to such easements, leases and rights of way could be lost or curtailed. Any such loss or curtailment of the rights of our operating subsidiaries to use the land on which their projects are or will be located could have a material adverse effect on their business, results of operations, financial condition and cash flows.

We and our subsidiaries are subject to litigation or administrative proceedings, the outcome or settlement of which could adversely affect our business, results of operations, financial condition and cash flows.

Our operating subsidiaries have been and continue to be involved in legal proceedings, administrative proceedings, claims and other litigation that arise in the ordinary course of business. These actions may include environmental claims, employment-related claims and contractual disputes or claims for personal injury or property damage that occur in connection with services performed relating to the operation of our businesses, or actions by regulatory or tax authorities. Unfavorable outcomes or developments relating to these proceedings or future proceedings, such as judgments for monetary damages, injunctions or denial or revocation of permits, could have a material adverse effect on our business, financial condition and results of operations. In addition, settlement of claims could adversely affect our business, results of operations, financial condition and cash flows.

Storing, transporting and distributing natural gas involves inherent risks that could cause us to incur significant financial losses.

There are inherent hazards and operation risks in gas distribution activities, such as leaks, accidental explosions and mechanical problems that could cause the loss of human life, significant damage to property, environmental pollution and impairment of operations. The location of pipelines and storage facilities near populated areas, including residential areas, commercial business centers and industrial sites, could increase the level of damages resulting from these risks. These activities may subject us to litigation and administrative proceedings that could result in substantial monetary judgments, fines or penalties. To the extent that the occurrence of any of these events is not fully covered by insurance or natural gas hedges, they could adversely affect our revenue, earnings and cash flow.

We are not able to insure against all potential risks and may become subject to higher insurance premiums, and our ability to obtain insurance and the terms of any available insurance coverage could be materially adversely affected by international, national, state or local events and company-specific events, as well as the financial condition of insurers.

Our businesses and activities are exposed to the risks inherent in the construction and operation of our respective assets, such as electrical power plants, wind power plants and other renewable energy projects and natural gas storage facilities, including breakdowns, manufacturing defects, natural disasters, terrorist attacks, cyber attacks and sabotage. Our subsidiaries are also exposed to third party liability risks and environmental risks. While our operating subsidiaries maintain insurance coverage, such insurance may not continue to be offered on an economically feasible basis and may not cover all events that could give rise to a loss or claim involving the assets or operations of our subsidiaries. For example, Renewables currently has 409 megawatts, or MW, of installed capacity in California subject to known earthquake risks and approximately 600 MW of installed capacity on the Texas Gulf Coast subject to known hurricane and windstorm risks. Further, while insurance coverage applies to property damages and business interruptions, this coverage is limited as a result of severe insurance market restrictions and we are generally not fully insured against all significant losses. In addition, our subsidiaries' insurance policies are subject to annual review by their insurers. Our ability to obtain insurance and the terms of any available insurance coverage could be materially adversely affected by international, national, state or local events and company-specific events, as well as the financial condition of insurers. If insurance coverage is not available or obtainable on acceptable terms, we may be required to pay costs associated with adverse future events. If one of our operating subsidiaries were to incur a serious uninsured loss or a loss significantly exceeding the limits of their insurance policies, the results could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Furthermore, Networks' gas distribution and transportation activities involve a variety of inherent hazards and operating risks, such as leaks, accidents, explosions, and mechanical problems and could result in serious injury to employees and non-employees, loss of human life, significant damage to property, environmental pollution and impairment of our subsidiaries' operations. In accordance with customary industry practice, our subsidiaries maintain insurance against some, but not all, of these risks and losses. The location of natural gas pipelines and natural gas storage facilities near populated areas, including residential areas, commercial business centers and industrial sites, could increase the level of damages that could potentially result from these risks. The occurrence of any of these events not fully covered by insurance could adversely affect our business, results of operations, financial position and cash flows.

The benefits of any warranties provided by the suppliers of equipment for Networks and Renewables' projects may be limited by the ability of a supplier to satisfy its warranty obligations, or if the term of the warranty has expired or has liability limits which could have a material adverse effect on our business, results of operation, financial condition and cash flows.

Networks and Renewables expect to benefit from various warranties, including product quality and performance warranties, provided by suppliers in connection with the purchase of equipment. The suppliers of our operating subsidiaries may fail to fulfill their warranty obligations or a particular defect may not be covered by a warranty. Even if a supplier fulfills its obligations, the warranty may not be sufficient to compensate the operating subsidiary for all of its losses. In addition, these warranties generally expire within two to five years after the date each equipment item is delivered or commissioned and are subject to liability limits. If installation is delayed, the operating subsidiaries may lose all or a portion of the benefit of a warranty. If Networks or Renewables seeks warranty protection and a supplier is unable or unwilling to perform its warranty obligations, whether as a result of its financial condition or otherwise, or if the term of the warranty has expired or a liability limit has been reached, there may be a reduction or loss of warranty protection for the affected equipment, which could have a material adverse effect on our business, results of operation, financial condition and cash flows.

A disruption in the wholesale energy markets or failure by an energy supplier could adversely affect our business and results of operation.

Almost all the electricity and gas that Networks sells to full-service customers is purchased through the wholesale energy markets or pursuant to contracts with energy suppliers. A disruption in the wholesale energy markets or a failure on the part of energy suppliers or operators of energy delivery systems that connect to Networks' energy facilities could adversely affect Networks' ability to meet its customers' energy needs and adversely affect our business and results of operation.

The increased cost of purchasing natural gas during periods in which natural gas prices are rising significantly could adversely impact our earnings and cash flow.

The rates that are permitted to be charged by our regulated natural gas utilities that allow for rate recovery generally allow such businesses to recover their cost of purchasing natural gas. In general, the various regulatory agencies allow our regulated utilities to recover the costs of natural gas purchased for customers on a dollar-for-dollar basis (in the absence of disallowances), without a profit component. Networks' regulated natural gas utilities periodically adjust customer rates for increases and decreases in the cost of gas purchased by such regulated utilities for sale to its customers. Under the regulatory body-approved gas cost recovery pricing mechanisms, the gas commodity charge portion of gas rates charged to customers may be adjusted upward on a periodic basis. If the cost of purchasing natural gas increases and Networks' regulated natural gas utilities is unable to recover these costs from its customers immediately, or at all, Networks may incur increased costs associated with higher working capital requirements and/or realize increased costs. In addition, any increases in the cost of purchasing natural gas may result in higher customer bad debt expense for uncollectible accounts and reduced sales volume and related margins due to lower customer consumption.

Pension and post-retirement benefit plans could require significant future contributions to such plan that could adversely impact our business, results of operations, financial condition and cash flows.

We provide defined benefit pension plans and other post-retirement benefits administered by our subsidiaries for a significant number of employees, former employees and retirees. Financial market disruptions and significant declines in the market values of the investments held to meet the pension and post-retirement obligations, discount rate assumptions, participant demographics and increasing longevity, and changes in laws and regulations may require us to make significant contributions to the plans. Large funding requirements or significant increases in expenses could adversely impact our business, results of operations, financial condition and cash flows.

Long-term low natural gas prices and/or seasonal or locational variation in natural gas price spreads could have a negative impact on the natural gas business and gas storage services.

The natural gas business benefits from price volatility and temporal price spreads. Variation in price spreads can impact the level of demand and the rates that can be charged for natural gas storage services. If natural gas prices and volatility remain low, or prices decline further, then the natural gas business could generate less revenue and lower demand for natural gas storage services. A sustained decline in these prices and volatility could have an adverse impact on gas business, results of operation, financial condition and cash flows.

Our existing credit facilities contain, and agreements that we may enter into in the future may contain, covenants that could restrict our financial flexibility.

Our existing credit facilities, and the credit facilities of our subsidiaries, contain covenants imposing certain requirements on our business including covenants regarding the ratio of indebtedness to total capitalization. Furthermore, our subsidiaries periodically issue long-term debt, historically consisting of both secured and unsecured indebtedness. These third-party debt agreements also contain covenants, including covenants regarding the ratio of indebtedness to total capitalization. These requirements may limit our ability and the ability of our subsidiaries to take advantage of potential business opportunities as they arise and may adversely affect our conduct and our operating subsidiaries' current business, including restricting our ability to finance future operations and capital needs and limiting the subsidiaries' ability to engage in other business activities. Other covenants place or could place restrictions on our ability and the ability of our operating subsidiaries to, among other things, incur additional debt, create liens, and sell or transfer assets.

Agreements we and our operating subsidiaries enter into in the future may also have similar or more restrictive covenants, especially if the general credit market deteriorates. A breach of any covenant in the existing credit facilities or the agreements governing our other indebtedness would result in an event of default. Certain events of default may trigger automatic acceleration of payment of the underlying obligations or may trigger acceleration of payment if not remedied within a specified period. Events of default under one agreement may trigger events of default under other agreements, although our regulated utilities are not subject to the risk of default of affiliates. Should payments become accelerated as the result of an event of default, the principal and interest on such borrowing would become due and payable immediately. If that should occur, we may not be able to make all of the required payments or borrow sufficient funds to refinance the accelerated debt obligations. Even if new financing is then available, it may not be on terms that are acceptable to us.

We may be unable to meet our financial obligations and to pay dividends on our common stock if our subsidiaries are unable to pay dividends or repay loans from us.

We are a holding company and, as such, have no revenue-generating operations of our own. We are dependent on dividends and the repayment of loans from our subsidiaries and on external financings to provide the cash that is necessary to make future investments, service debt we have incurred, pay administrative costs and pay dividends. Our subsidiaries are separate legal entities and have no independent obligation to pay us dividends. Prior to paying us dividends, the subsidiaries have financial obligations that must be satisfied, including among others, their operating expenses and obligations to creditors. Furthermore, our regulated utilities are restricted by regulatory decision from paying us dividends unless a minimum equity-to-total capital ratio is maintained. The future enactment of laws or regulations may prohibit or further restrict the ability of our subsidiaries to pay upstream dividends or to repay funds. In addition, in the event of a subsidiary's liquidation or reorganization, our right to participate in a distribution of assets is subject to the prior claims of the subsidiary's creditors. As a result, our ability to pay dividends on our common stock and meet our financial obligations is reliant on the ability of our subsidiaries to generate sustained earnings and cash flows and pay dividends to and repay loans from us.

Our investments and cash balances are subject to the risk of loss.

Our cash balances and the cash balances at our subsidiaries may be deposited in banks, may be invested in liquid securities such as commercial paper or money market funds or may be deposited in a notional cash pooling account in which we are a participant along with other affiliates of the Iberdrola Group. Bank deposits in excess of federal deposit insurance limits would be subject to risks in the counterparty bank. Liquid securities and money market funds are subject to loss of principal, more likely in an adverse market situation, and to the risk of illiquidity. Moreover, under the agreement governing the notional cash pooling account mentioned above, credit balances in the cash pooling account are pledged as collateral for the debit balances of other cash pooling participants. We are therefore subject to the credit risk of the affiliated parties to the cash pooling agreement and to Iberdrola's ability to manage the overall liquidity of the Iberdrola Group.

We have identified a material weakness in our internal control over financial reporting which, if not remediated, could adversely affect our reputation, business or stock price.

In connection with the preparation of our consolidated financial statements for the year ended December 31, 2016, management along with our independent registered public accounting firm identified a material weakness in the internal control over financial

reporting. Management identified deficiencies related to: (1) the accounting for the change in the estimated useful life of certain elements of the wind farms at Renewables and other smaller deficiencies related to documentation of internal controls procedures, and enhancement of review controls at Renewables, (2) the preparation of the consolidated financial statements, specifically the classification and disclosure of financial information, and (3) the measurement and disclosure of income taxes. A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our annual or interim consolidated financial statements will not be prevented or detected on a timely basis.

We are actively engaged in remediation efforts to address the material weakness in the internal control over financial reporting, including, among other things, (i) improving general internal control activities and policies, including processes to maintain sufficient documentation evidencing execution of these policies; (ii) increasing accounting personnel to devote additional time and resources related to financial reporting; (iii) educating and re-training internal control employees regarding internal control processes to mitigate identified risks and maintaining adequate documentation to evidence the effective design and operation of such processes; and (iv) implementing enhanced controls to monitor the effectiveness of the underlying business process controls. We believe, based on our evaluation to date, that this material weakness will be remediated by December 31, 2017. However, we cannot assure you that this will occur within the contemplated timeframe.

If our remediation efforts are insufficient to address the identified material weakness or if additional material weaknesses in internal controls are discovered in the future, they may adversely affect our ability to record, process, summarize and report financial information timely and accurately and, as a result, our financial statements may contain material misstatements or omissions. The occurrence of or failure to remediate the material weakness may adversely affect our reputation and business and the market price of shares of our common stock.

We and our subsidiaries may suffer the loss of key personnel or the inability to hire and retain qualified employees, which could result in a material adverse effect on our business, financial condition, results of operations and prospects.

The operations of our operating subsidiaries depend on the continued efforts of our employees and our subsidiaries' employees. Retaining key employees and maintaining the ability to attract new employees are important to our financial performance and for our subsidiaries' operations and financial performance. We cannot guarantee that any member of our management or of our subsidiaries' management will continue to serve in any capacity for any particular period of time. In addition, a significant portion of our and our subsidiaries' workforce, including many workers with specialized skills maintaining and servicing the electrical infrastructure, will be eligible to retire over the next five to ten years. Such highly skilled individuals cannot be quickly replaced due to the technically complex work they perform. If a significant amount of such workers retire and are not replaced, the subsequent loss in productivity and increased recruiting and training costs could result in a material adverse effect on our business, financial condition, results of operations and prospects.

We and our subsidiaries face the risk of strikes, work stoppages or an inability to negotiate future collective bargaining agreements on commercially reasonable terms which could have a material adverse effect on our business, results of operations, financial condition and cash flows.

A majority of the employees at Networks' facilities are subject to collective bargaining agreements with various unions. Additionally, unionization activities, including votes for union certification, could occur among non-union employees. If union employees strike, participate in a work stoppage or slowdown or engage in other forms of labor strike or disruption, our subsidiaries could experience reduced power generation or outages if replacement labor is not procured. The ability to procure such replacement labor is uncertain, though risks are reduced by rigorous contingency planning. Strikes, work stoppages or an inability to negotiate future collective bargaining agreements on commercially reasonable terms could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Changes in tax laws, as well as judgments and estimates used in the determination of tax-related asset and liability amounts, could materially adversely affect our business, results of operations, financial condition and cash flows.

Our provision for income taxes and reporting of tax-related assets and liabilities require significant judgments and the use of estimates. Amounts of tax-related assets and liabilities involve judgments and estimates of the timing and probability of recognition of income, deductions and tax credits, including, but not limited to, estimates for potential adverse outcomes regarding tax positions that have been taken and the ability to utilize tax benefit carryforwards, such as net operating loss, or NOL, and tax credit carryforwards. Actual income taxes could vary significantly from estimated amounts due to the future impacts of, among other things, changes in tax laws, regulations and interpretations, our financial condition and results of operations.

The success of our business depends on achieving our strategic objectives, which may be through acquisitions, joint ventures, dispositions and restructurings.

We are continuously reviewing the alternatives available to ensure that we meet our strategic objectives, which include, among other things, acquisitions, joint ventures, dispositions and restructuring. With respect to potential acquisitions, joint ventures and restructuring actions, we may not achieve expected returns and other benefits as a result of various factors, including integration and collaboration challenges, such as personnel and technology. In addition, we may not achieve anticipated cost savings from restructuring actions. We also may participate in joint ventures with other companies or enterprises in various markets, including joint ventures where we may have a lesser degree of control over the business operations, which may expose us to additional operational, financial, legal or compliance risks. We also continue to evaluate the potential disposition of assets and businesses that may no longer help us meet our objectives. When we decide to sell assets or a business, we may encounter difficulty in finding buyers or executing alternative exit strategies on acceptable terms in a timely manner, which could delay the accomplishment of our strategic objectives. Alternatively, we may dispose of a business at a price or on terms that are less than we had anticipated. Failure to achieve our strategic objectives could have a material adverse effect on our business, results of operations, financial condition and cash flows.

Risks Relating to Ownership of Our Common Stock

The trading price and volume of our common stock may be volatile and the value of your investment could decline.

The trading price of and demand for shares of our common stock could fluctuate and will depend on a number of conditions, including:

- the risk factors described in this Annual Report on Form 10-K;
- general economic conditions internationally and within the U.S., including changes in interest rates;
- changes in electricity and natural gas prices;
- actual or anticipated fluctuations in our quarterly and annual results and those of its competitors;
- the businesses, operations, results and prospects of us;
- future mergers and strategic alliances;
- market conditions in the energy industry;
- changes in government regulation, taxes, legal proceedings or other developments;
- shortfalls in our operating results from levels forecasted by securities analysts;
- investor sentiment toward the stock of energy companies in general;
- announcements concerning us or its competitors;
- maintenance of acceptable credit ratings or credit quality; and
- the general state of the securities markets.

These and other factors may impair the development or sustainability of a liquid market for shares of our common stock and the ability of investors to sell shares at an attractive price. These factors also could cause the market price and demand for shares of our common stock to fluctuate substantially, which may negatively affect the price and liquidity of shares of our common stock. These fluctuations could cause you to lose all or part of your investment in shares of our common stock. Many of these factors and conditions are beyond our control and may not be related to our operating performance.

If securities or industry analysts do not publish research or publish inaccurate or unfavorable research about us or our businesses, the price and trading volume of our common stock could decline.

The trading market for our common stock will, to some extent, depend on the research and reports that securities or industry analysts publish about us or our business. We do not have any control over these analysts. If one or more of the analysts who cover us should downgrade our shares or change their opinion of our business prospects, our share price would likely decline. If one or more of these analysts cease coverage of us or fail to publish reports on us regularly, demand for our common stock could decrease, which might cause our stock price and trading volume to decline.

Iberdrola exercises significant influence over us, and its interests may be different than yours. Additionally, future sales or issuances of our common stock by Iberdrola, S.A. could have a negative impact on the price of our common stock.

Iberdrola owns approximately 81.5% of outstanding shares of our common stock and will be able to exercise significant influence over our business policies and affairs, including the composition of our board of directors and any action requiring the approval of our shareholders, including the adoption of amendments to the certificate of incorporation and bylaws and the approval of a merger or sale of substantially all of our assets, subject to applicable law and the limitations set forth in the shareholder agreement. The directors designated by Iberdrola will have significant authority to effect decisions affecting our capital structure, including the issuance of additional capital stock, incurrence of additional indebtedness, the implementation of stock repurchase programs and the decision of whether or not to declare dividends.

The interests of Iberdrola may conflict with the interests of our other shareholders. For example, Iberdrola may support certain long-term strategies or objectives for us that may not be accretive to shareholders in the short term. The concentration of ownership may also delay, defer or even prevent a change in control, even if such a change in control would benefit our other shareholders, and may make some transactions more difficult or impossible without the support of Iberdrola. This significant concentration of share ownership may adversely affect the trading price for shares of our common stock because investors may perceive disadvantages in owning stock in companies with shareholders who own significant percentages of a company's outstanding stock.

Further, sales of our common stock by Iberdrola or the perception that sales may be made by it could significantly reduce the market price of shares of our common stock. We and Iberdrola are parties to a shareholder agreement pursuant to which Iberdrola will be generally restricted from transferring shares of our common stock, subject to certain exceptions. Iberdrola will also be restricted, for a period of three years after the completion of the proposed merger, from transferring more than an aggregate of 10% of the outstanding shares of our common stock in any transaction or series of transactions, unless all of our shareholders are entitled to participate in such transaction (on a *pro rata* basis) and are entitled to the same per share consideration to be received in such transaction as Iberdrola. In addition, even if Iberdrola does not sell a large number of shares of our common stock into the market, its right to transfer such shares may depress the price of our common stock. Furthermore, pursuant to the shareholder agreement and subject to the terms and conditions therein, Iberdrola will be entitled to customary registration rights of our common stock, including the right to choose the method by which the common stock are distributed, a choice as to the underwriter and fees and expenses to be borne by us. Iberdrola will also retain preemptive rights to protect against dilution in connection with issuances of equity by us. If Iberdrola exercises its registration rights and/or its preemptive rights, the market price of shares of our common stock may be adversely affected.

We have elected to take advantage of the “controlled company” exemption to the corporate governance rules for NYSE-listed companies, which could make shares of our common stock less attractive to some investors or otherwise harm our stock price.

Under the rules of the NYSE, a company in which over 50% of the voting power is held by an individual, a group or another company is a “controlled company” and is not required to have:

- a majority of its board of directors be independent directors;
- a compensation committee, or to have such committees be composed entirely of independent directors; and
- a nominating and corporate governance committee, or to have such committee composed entirely of independent directors.

In October 2016, our board determined that it was in the best interests of the company to establish a compensation, nominating and corporate governance committee. In light of our status as a controlled company, we currently rely on the NYSE exemptions with respect to board, compensation committee and nominating and corporate governance committee independence.

Because we are a controlled company, you will not have the same protections afforded to shareholders of companies that are subject to all of the corporate governance requirements of the NYSE without regard to the exemptions available for “controlled companies.” Our status as a controlled company could make our shares of common stock less attractive to some investors or otherwise harm our stock price.

Our dividend policy is subject to the discretion of our board of directors and may be limited by our debt agreements and limitations under New York law.

Although we currently anticipate paying a regular quarterly dividend, any such determination to pay dividends is at the discretion of our board of directors and dependent on conditions such as our financial condition, earnings, legal requirements, including limitations under New York law, restrictions in our debt agreements that limit our ability to pay dividends to shareholders and other factors the board of directors deem relevant. Our board of directors may, in its sole discretion, change the amount or

frequency of dividends or discontinue the payment of dividends entirely. For these reasons, you will not be able to rely on dividends to receive a return on your investment.

If we are unable to implement and maintain effective internal control over financial reporting in the future, investors may lose confidence in the accuracy and completeness of our financial reports and the trading price of our common stock may be negatively affected.

As a public company, we are subject to reporting, disclosure control and other obligations under the Exchange Act, the Sarbanes-Oxley Act, or SOX, the Dodd-Frank Act, as well as rules adopted, and to be adopted, by the SEC and the NYSE. For example, beginning with this Annual Report on Form 10-K, Section 404 of SOX requires our management to report on the effectiveness of our internal control over financial reporting and our independent registered public accounting firm to attest to the effectiveness of our internal controls. Our management and other personnel will continue to devote a substantial amount of time to these compliance activities. If we are not able to comply with the requirements of Section 404 in a timely manner or if we are unable to conclude that our internal control over financial reporting is effective, our ability to accurately report our cash flows, results of operations or financial condition could be inhibited and additional financial and management resources could be required. Any failure to maintain internal control over financial reporting or if our independent registered public accounting firm determines that we have a material weakness or significant deficiency in our internal control over financial reporting, could cause investors to lose confidence in the accuracy and completeness of our financial reports, a decline in the market price of our common stock, or subject us to sanctions or investigations by the NYSE, the SEC or other regulatory authorities. Failure to remedy any material weakness or significant deficiency in our internal control over financial reporting, or to implement or maintain other effective control systems required of public companies, could also restrict our future access to the capital markets and reduce or eliminate the trading market for our common stock. Further, as a result of becoming a public company, we have incurred and will continue to incur higher legal, accounting and other expenses than we did as a private company, and these expenses may increase even more in the future.

Item 1B. Unresolved Staff Comments.

None

Item 2. Properties.

We have included descriptions of the location and general character of our principal physical operating properties by segment in “Item 1. Business”, which is incorporated herein by reference. The principal offices of AVANGRID and Networks are located in New Gloucester, Maine, Rochester, New York and New Haven and Orange, Connecticut. Renewables’ headquarters is located in Portland, Oregon, while Gas is principally located in Houston, Texas. In addition, AVANGRID and its subsidiaries have various administrative offices located throughout the United States. AVANGRID leases part of its administrative and local offices.

The following table sets forth the principal properties of AVANGRID, by location, type, lease or ownership and size as of December 31, 2016:

Location	Type of Facility	Lease/Owned	Size (square feet)
New Haven, Connecticut	Office	Leased	51,307
Orange, Connecticut	Office	Owned	337,586
Augusta, Maine	Office	Leased	220,400
New Gloucester, Maine	Office	Leased	60,913
Rochester, New York	Office	Owned	122,494
Portland, Oregon	Office	Leased	57,082
Houston, Texas	Office	Leased	21,571

We believe that our office facilities are adequate for our current needs and that additional office space can be obtained if necessary.

Item 3. Legal Proceedings.

We are involved in various proceedings, legal actions and claims arising in the normal course of our respective businesses. The outcomes of these matters will generally not be known for an extended period of time. In certain of the legal proceedings, the claimants seek damages, as well as other compensatory relief, which could result in the payment of significant claims and settlements.

While the ultimate outcome and impact of any proceeding cannot be predicted with certainty, management believes that the resolution of its pending proceedings will not have a material adverse effect on its financial condition or results of operations.

FirstEnergy

NYSEG sued FirstEnergy under the Comprehensive Environmental Response, Compensation, and Liability Act to recover environmental cleanup costs at sixteen former manufactured gas sites, which are included in the discussion above. In July 2011, the District Court issued a decision and order in NYSEG's favor. Based on past and future clean-up costs at the sixteen sites in dispute, FirstEnergy would be required to pay NYSEG approximately \$60 million if the decision were upheld on appeal. On September 9, 2011, FirstEnergy paid NYSEG \$30 million, representing their share of past costs of \$27 million and pre-judgment interest of \$3 million.

FirstEnergy appealed the decision to the Second Circuit Court of Appeals. On September 11, 2014, the Second Circuit Court of Appeals affirmed the District Court's decision in NYSEG's favor, but modified the decision for nine sites, reducing NYSEG's damages for incurred costs from \$27 million to \$22 million, excluding interest, and reducing FirstEnergy's allocable share of future costs at these sites. NYSEG refunded FirstEnergy the excess \$5 million in November 2014.

FirstEnergy remains liable for a substantial share of clean up expenses at nine MPG sites. In January 2015, NYSEG sent FirstEnergy a demand for \$16 million representing FirstEnergy's share of clean-up expenses incurred by NYSEG at the nine sites from January 2010 to November 2014 while the District Court appeal was pending. Nearly all of this amount has been paid by FirstEnergy. FirstEnergy would also be liable for a share of post 2014 costs, which, based on current projections, would be \$26 million. This amount is being treated as a contingent asset and has not been recorded as either a receivable or a decrease to the environmental provision. Any recovery will be flowed through to NYSEG ratepayers.

Century Indemnity and OneBeacon

NYSEG filed suit in federal court on August 14, 2013 against two excess insurers, Century Indemnity and OneBeacon, who provided excess liability coverage to NYSEG. NYSEG seeks payment for clean-up costs associated with contamination at twenty-two former manufactured gas plants. Based on estimated clean-up costs of \$282 million, the carriers' allocable share is approximately \$89 million, excluding pre-judgment interest. Any recovery will be flowed through to NYSEG ratepayers.

Century Indemnity and One Beacon have answered admitting issuance of the excess policies, but contesting coverage and providing documentation proving they received notice of the claims in the 1990s. We cannot predict the outcome of this matter; however, any recovery will be flowed through to NYSEG ratepayers.

Shareholder Derivative Action

On February 27, 2015, a complaint was filed in Connecticut state court against us, UIL, its board of directors and others related to our acquisition of UIL. The complaint is a class action filed on behalf of all UIL shareowners. The complaint generally alleges that UIL's directors breached their fiduciary duties by failing to maximize shareowner value in negotiating and approving the acquisition, and that we, UIL, and/or Morgan Stanley aided and abetted the UIL Board's alleged breaches.

On November 30, 2015, the plaintiffs and the defendants executed a binding Memorandum of Understanding, or MOU, that sets forth the terms on which the parties have agreed to settle the consolidated action. The settlement terms do not include any change in the acquisition consideration but only additional disclosures relating to information included in our Registration Statement on Form S-4 filed with the SEC, which was declared effective on November 12, 2015, additional confirmatory discovery, and plaintiffs' counsel fees. The parties have agreed on the fees and submitted the unopposed settlement and dismissal to the Court on August 26, 2016. On November 4, 2016, the Court issued its preliminary approval of the settlement, there were no objections to the settlement, and on January 30, 2017, the Court held a final settlement hearing. A final decision is pending. We cannot predict the ultimate outcome of this matter.

Avangrid Renewables, LLC and Northern Indiana Public Service Company

Renewables has a contractual dispute with the Northern Indiana Public Service Company, or NIPSCO, concerning the interpretation of two November 2007 PPAs, entered into between two subsidiaries of Renewables and NIPSCO. Renewables and NIPSCO disagree regarding how, if at all, NIPSCO's response to a March 2013 change in the regulations of the Midcontinent Independent System Operator, or MISO, which administers the energy markets in which NIPSCO participates, affects their rights and obligations under the PPAs. Because of the disagreement, NIPSCO has refused to pay, and denied any obligation to pay, certain invoices Renewables' affiliates have issued to NIPSCO. These invoices seek compensation for periods during which Renewables' affiliates' power plants were not permitted to produce power as a result of NIPSCO's bids submitted under the new MISO regulations.

To resolve this dispute, on July 25, 2013, Renewables filed a complaint against NIPSCO in the Federal District Court for the Northern District of Illinois. Fact discovery and expert discovery in that action is complete. The parties to the dispute are seeking dismissal of the case through summary judgment. The court is initially denied both summary judgment motions in early 2016, but in January 2017, the parties requested reconsideration of this ruling in light of a December 16, 2016, ruling by the Seventh Circuit Court of Appeals in another dispute arising out under the new MISO rules. No trial date has been set. We cannot predict the ultimate outcome of this matter.

California Energy Crisis Litigation

Two California agencies brought a complaint in 2001 against a long-term power purchase agreement entered into by Renewables, as seller, to the California Department of Water Resources, as purchaser, alleging that the terms and conditions of the power purchase agreement were unjust and unreasonable. FERC dismissed Renewables from the proceedings; however, the Ninth Circuit Court of Appeals reversed FERC's dismissal of Renewables.

Joining with two other parties, Renewables filed a petition for certiorari in the United States Supreme Court on May 3, 2007. In an order entered on June 27, 2008, the Supreme Court granted Renewables' petition for certiorari, vacated the appellate court's judgment, and remanded the case to the appellate court for further consideration in light of the Supreme Court's decision in a similar case. In light of the Supreme Court's order, on December 4, 2008, the Ninth Circuit Court of Appeals vacated its prior opinion and remanded the complaint proceedings to the FERC for further proceedings consistent with the Supreme Court's rulings. In 2014 FERC assigned an administrative law judge to conduct evidentiary hearings. Following discovery, the FERC Trial Staff recommended that the complaint against Renewables be dismissed.

A hearing was held before an administrative law judge of the FERC in November and early December 2015. A preliminary proposed ruling by the administrative law judge was issued on April 12, 2016. The proposed ruling found no evidence that Renewables had engaged in any unlawful market contract that would justify finding the Renewables power purchase agreements unjust and unreasonable. However, the proposed ruling did conclude that price of the power purchase agreements imposed an excessive burden on customers in the amount of \$259 million. Renewables position, as presented at hearings and agreed by the FERC Trial Staff, is that Renewables entered into bilateral power purchase contracts appropriately and complied with all applicable legal standards and requirements. The parties have submitted to the FERC briefs on exceptions to the administrative law judge's proposed ruling. There is no specific timetable to the FERC's ruling. We cannot predict the outcome of this proceeding.

Yankee Nuclear Spent Fuel Disposal Claim

CMP has an ownership interest in Maine Yankee Atomic Power Company, Connecticut Yankee Atomic Power Company, and Yankee Atomic Electric Company (the Yankee Companies), three New England single-unit decommissioned nuclear reactor sites, and UI has an ownership interest in Connecticut Yankee Atomic Power Company. Every six years, pursuant to the statute of limitations, the Yankee Companies file a lawsuit to recover damages from the Department of Energy (DOE) for breach of the Nuclear Spent Fuel Disposal Contract to remove spent nuclear fuel (SNF) and Greater than Class C Waste as required by contract and the Nuclear Waste Policy Act beginning in 1998. The damages are the incremental costs for the DOE's failure to take the spent nuclear fuel.

In 2012, the U.S. Court of Appeals issued a favorable decision in the Yankee Companies' claim for the first six year period (Phase I). Total damages awarded to the Yankee Companies were nearly \$160 million. CMP's share of the award was approximately \$36.5 million which was credited back to customers. UI's share of the award was \$3.8 million which was credited back to customers.

In November 2013 the U.S. Court of Claims issued its decision in the Phase II case (the second six-year period, 2002-2008). The court's decision awarded the Yankee Companies a combined \$235.4 million (Connecticut Yankee \$126.3 million, Maine Yankee \$37.7 million, and Yankee Atomic \$73.3 million). In January 2014, the DOE informed the Yankee Companies it would not appeal the court's decision. As a result the Yankee Companies received full payment in April 2014. CMP's share of the award was approximately \$28.2 million which was credited back to customers. UI received approximately \$12 million of such award which was applied, in part, against its remaining storm regulatory asset balance. The remaining regulatory liability balance was applied to UI's generation service charge (GSC) "working capital allowance" and was returned to customers through the non-by-passable federally mandated congestion charge.

In March 2016 the U.S. Court of Claims issued its decision in the Phase III case (the third six-year period, 2009-2014), awarding the Yankee Companies a combined \$76.8 million (Connecticut Yankee \$32.6 million, Maine Yankee \$24.6 million and Yankee Atomic \$19.6 million). The damage awards, less any amount retained to reduce future customer charges, will potentially flow through the Yankee Companies to shareholders, including CMP and UI, upon FERC approval, and will reduce retail customer charges or otherwise as specified by law. CMP and UI will receive their proportionate share of the awards that flow through based on

percentage ownership. On July 18, 2016, the notice of appeal period expired and the Phase III trial award became final. On October 14, 2016, the Yankee Companies received the DOE's payment of the damage award. We cannot predict the timing or amount of damage awards that may ultimately flow through to customers.

English Station

In January 2012, Evergreen Power, LLC (Evergreen Power) and Asnat Realty LLC (Asnat), then and current owners of a former generation site on the Mill River in New Haven (the English Station site) that UI sold to Quinnipiac Energy in 2000, filed a lawsuit in federal district court in Connecticut against UI seeking, among other things: (i) an order directing UI to reimburse the plaintiffs for costs they have incurred and will incur for the testing, investigation and remediation of hazardous substances at the English Station site and (ii) an order directing UI to investigate and remediate the site. This proceeding had been stayed in 2014 pending resolution of other proceedings before the Connecticut Department of Energy and Environmental Protection, or DEEP, concerning the English Station site. In December 2016, the court administratively closed the file without prejudice to reopen upon the filing of a motion to reopen by any party. In December 2013, Evergreen and Asnat filed a subsequent lawsuit in Connecticut state court seeking among other things: (i) remediation of the property; (ii) reimbursement of remediation costs; (iii) termination of UI's easement rights; (iv) reimbursement for costs associated with securing the property; and (v) punitive damages. This lawsuit had been stayed in May 2014 pending mediation. Due to lack of activity in the case, the court terminated the stay and scheduled a status conference on or before August 1, 2017.

On April 8, 2013, DEEP issued an administrative order addressed to UI, Evergreen Power, Asnat and others, ordering the parties to take certain actions related to investigating and remediating the English Station site. Mediation of the matter began in the fourth quarter of 2013 and concluded unsuccessfully in April 2015. This proceeding was stayed while DEEP and UI continue to work through the remediation process pursuant to the consent order described below. A status report was filed with the court in December 2016 and the next status report is due in May 2017.

On August 4, 2016, DEEP issued the consent order that, subject to its terms and conditions, requires UI to investigate and remediate certain environmental conditions within the perimeter of the English Station site. Under the consent order, to the extent that the cost of this investigation and remediation is less than \$30 million, UI is required to remit to the State of Connecticut the difference between such cost and \$30 million, to be applied to a public purpose as determined in the discretion of the Governor of the State of Connecticut, the Attorney General of the State of Connecticut, and the Commissioner of DEEP. However, UI is obligated to comply with the terms of the consent order even if the cost of such compliance exceeds \$30 million. Under the terms of the consent order, the State will discuss options with UI on recovering or funding any cost above \$30 million, such as through public funding or recovery from third parties; however, it is not bound to agree to or support any means of recovery or funding.

In connection with the consent order, on August 4, 2016, DEEP also issued a consent order to Evergreen Power, Asnat, and certain related parties that provides UI access to investigate and remediate the English Station site consistent with the terms of the August 2016 consent order. UI has initiated its process to investigate and remediate the environmental conditions within the perimeter of the English Station site pursuant to the consent order.

Other Legal Proceedings

We have included descriptions of the regulatory environment and environmental, health and safety in "Item 1. *Business*," general information about several significant risks in "Item 1A. *Risk Factors*" and other legal proceedings that we believe could be material to us in Notes 13 and 14 of our audited consolidated financial statements for the three years ended December 31, 2016, which are incorporated herein by reference.

Item 4. *Mine Safety Disclosures.*

Not Applicable.

Executive Officers of AVANGRID

The names and ages of all executive officers of AVANGRID as of March 10, 2017 and a brief account of the business experience during the past five years of each executive officer are as follows:

Name	Age*	Title
James P. Torgerson	64	Chief Executive Officer
Richard J. Nicholas	61	Senior Vice President – Chief Financial Officer
Daniel Alcain	43	Senior Vice President – Controller
Frank Burkhartsmeier	52	Chief Executive Officer of Renewables
Sara J. Burns	61	President and Chief Executive Officer of CMP
Sheila Duncan	52	Senior Vice President – Human Resources & Corporate Administration
Ignacio Estella	47	Senior Vice President – Corporate Development
Daryl W. Gee	53	Chief Executive Officer of Gas
Robert D. Kump	55	President and Chief Executive Officer of Networks
Mark S. Lynch	63	President and Chief Executive Officer of NYSEG and RG&E
R. Scott Mahoney	51	Senior Vice President – General Counsel and Chief Compliance Officer; Secretary
Anthony Marone	53	President and Chief Executive Officer of UIL

(*) Age as of December 31, 2016.

James P. Torgerson. Mr. Torgerson was appointed Chief Executive Officer of AVANGRID on December 16, 2015, upon consummation of the acquisition of UIL. Previously, Mr. Torgerson served as president and chief executive officer of UIL since 2006. Prior to 2006, Mr. Torgerson was president and chief executive officer of MISO. He is a trustee of the Yale-New Haven Hospital and a Director of Yale New Haven Health System. Mr. Torgerson is the chairman of the Connecticut Institute for the 21st Century. He is the former chairman and a director of the Connecticut Business and Industry Association and is a member of the board of the Edison Electric Institute and the American Gas Association. Mr. Torgerson is a trustee of the Hartford Bishops' Foundation for the Archdiocese of Hartford. Mr. Torgerson holds a bachelor's of business administration degree in accounting from Cleveland State University.

Richard J. Nicholas. Mr. Nicholas was appointed Chief Financial Officer of AVANGRID on December 17, 2015, upon consummation of the acquisition of UIL. Previously, Mr. Nicholas served as executive vice president and chief financial officer of two subsidiaries of AVANGRID, UIL and UI, from March 2005 until December 2015. Effective November 16, 2010, Mr. Nicholas was appointed chief financial officer of BGC, CNG and SCG, all of which are subsidiaries of AVANGRID. Mr. Nicholas earned his undergraduate degree in business and administration with a concentration in finance from Duquesne University and holds a M.B.A. from the University of New Haven.

Daniel Alcain. Mr. Alcain was appointed Senior Vice President – Controller of AVANGRID on December 17, 2015. Previously, Mr. Alcain was chief financial officer of Scottish Power, from April 2012 until December 2015, and Iberdrola USA, Inc., from December 2009 until March 2012. Mr. Alcain joined the Iberdrola Group in 2001 and worked for four years in Latin America within the Control area. He holds two degrees in economy and law from the University of Valladolid.

Frank Burkhartsmeier. Mr. Burkhartsmeier was appointed Chief Executive Officer of Renewables in April 2015. Mr. Burkhartsmeier previously served as senior vice president of finance of ARHI from July 2012 until March 2015, and as vice president of strategy, planning and market fundamentals at Renewables from July 2006 until June 2012, both subsidiaries of AVANGRID. He also served as managing director of corporate strategy of Scottish Power between June 2004 and September 2005. Mr. Burkhartsmeier earned a B.A. from the University of Montana and a M.B.A. from the University of Oregon.

Sara J. Burns. Ms. Burns was appointed President and Chief Executive Officer of CMP in 2005. She has served as President of CMP since 1998. Ms. Burns is the chairman of the board of directors of Maine & Company and serves on the board of directors of the Mitchell Institute and the Maine State Chamber of Commerce. She holds a B.A. in Political Science and Government from Colby College.

Sheila Duncan. Ms. Duncan was appointed Senior Vice President – Human Resources & Corporate Administration of AVANGRID on December 17, 2015. She previously served as human resources and shared services director of Scottish Power from March 2009 until December 2015. She holds a Master of Arts (Hons) from the University of Glasgow and is a chartered fellow of the Institute of Personnel & Development in the UK.

Ignacio Estella. Mr. Estella was appointed Senior Vice President – Corporate Development of AVANGRID on December 17, 2015. Previously, Mr. Estella served as corporate vice president of business origination of Iberdrola from May 2009 until November 2013 and vice president – corporate development of Iberdrola USA, Inc., from December 2013 to December 16, 2015. He served as gas markets development director of Iberdrola between February 2007 and April 2009. Mr. Estella holds a degree in law and business administration from the Universidad Pontificia Comillas and a master of public administration, with concentration in regulation and industry analysis and negotiation and conflict resolution from Harvard University.

Daryl W. Gee. Mr. Gee was appointed Chief Executive Officer of Gas in May, 2014. He has also served as Chief Executive Officer and President of Enstor Energy Services LLC and Enstor, Inc. since 2014, both subsidiaries of AVANGRID. Previously, Mr. Gee served as chief compliance officer and vice president of Gas, Enstor Energy Services LLC and Enstor, Inc. between March, 2013 and May, 2014. From 2002 through March 2013, Mr. Gee served as director of regulatory affairs and director of business development for Enstor, Inc. Mr. Gee holds a bachelor of applied arts and sciences in petroleum land management /petroleum technology and marketing from the Stephen F. Austin State University.

Robert D. Kump. Mr. Kump was appointed Chief Executive Officer of Networks in November 2010. Mr. Kump served as AVANGRID's Chief Corporate Officer in January 2014. Mr. Kump also has served as a director of AVANGRID's subsidiaries CMP, NYSEG, and RG&E since 2009, as the President of the Avangrid Management Company, LLC since March 2012 and as the Chief Executive Officer of AVANGRID Service Company since October 2009. Mr. Kump held various positions from February 1997 to October 2009 as AVANGRID's senior vice president and chief financial officer, vice president, controller and chief accounting officer, treasurer and secretary. Mr. Kump also previously held a number of positions at NYSEG from 1986 to 1997, including senior accountant-external financial reporting, director-investor relations, director-financial services, and treasurer. Mr. Kump earned a B.A. in accounting from Binghamton University and is a C.P.A. in New York.

Mark S. Lynch. Mr. Lynch was appointed President of NYSEG and RG&E in January 2010 and Chief Executive Officer in January, 2014, and serves on the board of directors of NYSEG and RG&E. Mr. Lynch also served as president and chief executive officer of NYISO from 2005 to 2008. Mr. Lynch earned a bachelor of electrical engineering from Villanova University.

R. Scott Mahoney. Mr. Mahoney was appointed Senior Vice President – General Counsel and Chief Compliance Officer of AVANGRID on December 17, 2015. He was appointed Secretary of AVANGRID on January 27, 2016, and previously served as vice president-general counsel and secretary of Networks. Mr. Mahoney has served as AVANGRID's General Counsel since June 2012. Mr. Mahoney previously served as Deputy General Counsel and Chief FERC Compliance Officer for AVANGRID from January 2007 to June 2012, and previously served in legal and senior executive positions at AVANGRID subsidiaries from October 1996 until January 2007. Mr. Mahoney also serves on the board of directors of the Gulf of Maine Research Institute. Mr. Mahoney earned a B.A. from St. Lawrence University, a J.D. from the University of Maine, a master's degree in environmental law from the Vermont Law School, and a postgraduate diploma in business administration from the University of Warwick. He has received bar admission to the State of Maine, the State of New York, the U.S. Court of Appeals, the U.S. District Court and the U.S. Court of Military Appeals.

Anthony Marone. Mr. Marone was appointed President and Chief Executive Officer of UIL on September 9, 2016. In this role, he has overall responsibility for Avangrid Networks' electric and natural gas operating companies in Connecticut and Massachusetts. Mr. Marone also serves as President – Connecticut and Massachusetts Operations and senior vice president of gas operations of Avangrid Service Company, overseeing the natural gas operations of Networks. Previously Mr. Marone served as senior vice president of customer and business services of UIL since May 14, 2013. Mr. Marone served as senior vice president – business services of UI and vice president of business services of UIL from November 16, 2010 to May 2013. Mr. Marone received his master's degree in engineering and business management from the University of New Haven and a bachelor's degree in mechanical engineering from the New York Institute of Technology.

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

Market Information and Holders

Our shares of common stock began trading on the New York Stock Exchange, or NYSE, on December 17, 2015, under the symbol "AGR." Prior to that time, there was no public market for shares of our common stock. The following table sets forth on a per share basis, for the periods indicated, the high and low sale prices of our common stock as reported by the NYSE.

	2016 Sales Price		2015 Sales Price	
	High	Low	High	Low
First Quarter	\$ 42.40	\$ 36.01	—	—
Second Quarter	\$ 46.49	\$ 37.07	—	—
Third Quarter	\$ 46.74	\$ 40.71	—	—
Fourth Quarter	\$ 41.88	\$ 35.42	\$ 38.90	\$ 32.45

As of March 9, 2017, there were 3,463 shareholders of record.

Dividends

The quarterly cash dividends declared in 2016 were at a rate of \$0.432 per share.

AVANGRID expects to continue paying quarterly cash dividends, although there is no assurance as to the amount of future dividends which depends on future earnings, capital requirements, and financial condition.

Further information regarding payment of dividends is provided in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" of this Annual Report on Form 10-K.

Performance Graph

The line graph appearing below compares the change in AVANGRID's total shareholder return on its shares of common stock with the return on the S&P Composite-500 Stock Index, the S&P Electric Utilities Index and the S&P Utilities Index for the period December 17, 2015 through December 31, 2016.

Cumulative Total Return Comparison
December 17, 2015 – December 31, 2016

	December 17, 2015		December 31, 2015		December 31, 2016	
AVANGRID	\$	100	\$	106.30	\$	109.46
S&P 500	\$	100	\$	100.70	\$	112.13
S&P Electric Utilities Index	\$	100	\$	100.50	\$	116.32
S&P Utilities Index	\$	100	\$	100.10	\$	117.02

The above information assumes that the value of the investment in shares of AVANGRID's common stock and each index was \$100 on December 17, 2015, including dividend reinvestment during this time period. The changes displayed are not necessarily indicative of future returns.

Recent Sales of Unregistered Securities

None.

Issuer Repurchases of Equity Securities

AVANGRID repurchased 18,352 shares of common stock in open market transactions within the fourth quarter of the year ended December 31, 2016, to maintain the relative ownership percentage of Iberdrola at 81.5% as follows:

Period	Total Number of Shares Purchased*	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs
October 1-31	—	—	—	—
November 1-30	18,352	\$ 37.14	None	None
December 1-31	—	—	—	—
Total	18,352	\$ 37.14	None	None

* All shares were purchased in open market transactions. The effects of these transactions did not change the number of outstanding shares of AVANGRID common stock.

Equity Compensation Plan Information

For information regarding securities authorized for issuance under equity compensation plans, see Part III, Item 12 of this Annual Report on Form 10-K.

Item 6. Selected Financial Data

Consolidated and Combined Statements of Operations Data: *	Year Ended December 31, (millions, except per share data)				
	2016	2015	2014	2013	2012
Operating Revenues	\$ 6,018	\$ 4,367	\$ 4,594	\$ 4,313	\$ 4,055

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

You should read the following discussion of our financial condition and results of operations in conjunction with the consolidated financial statements and the notes thereto included elsewhere in this Annual Report on Form 10-K. In addition to historical consolidated financial information, the following discussion contains forward-looking statements that reflect our plans, estimates, and beliefs. Our actual results could differ materially from those discussed in the forward-looking statements. Factors that could cause or contribute to these differences include those discussed below and elsewhere in this Annual Report on Form 10-K, particularly in Part I, Item 1A, "Risk Factors."

AVANGRID is a diversified energy and utility company with more than \$30 billion in assets and operations in 26 states. The company operates regulated utilities and electricity generation through two primary lines of business. Avangrid Networks includes eight electric and natural gas utilities, serving 3.1 million customers in New York and New England. Avangrid Renewables operates 6.5 gigawatts of electricity capacity, primarily through wind power, in states across the United States. AVANGRID employs approximately 7,000 people. The company was formed by a merger between Iberdrola USA, Inc. and UIL Holdings Corporation in 2015. Iberdrola S.A., or Iberdrola, a corporation (*sociedad anónima*) organized under the laws of the Kingdom of Spain, a worldwide leader in the energy industry, directly owns 81.5% of the outstanding shares of AVANGRID common stock. Our primary business is ownership of our operating businesses, which are described below.

Our direct, wholly-owned subsidiaries include Avangrid Networks, Inc., or Networks, and Avangrid Renewables Holdings, Inc., or ARHI. ARHI in turn holds subsidiaries including Avangrid Renewables LLC, or Renewables, and Enstor Gas, LLC, or Gas. Networks, owns and operates our regulated utility businesses through its subsidiaries, including electric transmission and distribution and natural gas distribution, transportation and sales. Renewables operates a portfolio of renewable energy generation facilities primarily using onshore wind power and also solar, biomass and thermal power. Gas operates our natural gas storage facilities and gas trading businesses through Enstor Energy Services LLC (gas trading) and Enstor Inc. (gas storage).

On December 16, 2015, we completed our acquisition of UIL Holdings Corporation, or UIL. Immediately following the completion of the acquisition, former UIL shareowners owned 18.5% of the outstanding shares of common stock of AVANGRID, and Iberdrola owned the remaining shares. The acquisition was accounted for as a business combination. The results of operations of UIL since December 16, 2015, the acquisition date, have been included in the consolidated results of AVANGRID. Effective as of April 30, 2016, UIL and its subsidiaries were transferred to a wholly-owned subsidiary of Networks. Further information regarding the accounting for the acquisition is provided in Note 4 of our audited consolidated financial statements for the three years ended December 31, 2016, which are incorporated herein by reference.

Through Networks, we own electric generation, transmission and distribution companies and natural gas distribution, transportation and sales companies in New York, Maine, Connecticut and Massachusetts, delivering electricity to approximately 2.2 million electric utility customers and delivering natural gas to approximately 992,000 natural gas public utility customers as of December 31, 2016.

Networks, a Maine corporation, holds our regulated utility businesses, including electric transmission and distribution and natural gas distribution, transportation and sales. Networks serves as a super-regional energy services and delivery company through eight regulated utilities it owns directly:

- New York State Electric & Gas Corporation, or NYSEG, which serves electric and natural gas customers across more than 40% of the upstate New York geographic area;
- Rochester Gas and Electric, or RG&E, which serves electric and natural gas customers within a nine-county region in western New York, centered around Rochester;
- The United Illuminating Company, or UI, which serves electric customers in southwestern Connecticut;
- Central Maine Power Company, or CMP, which serves electric customers in central and southern Maine;
- The Southern Connecticut Gas Company, or SCG, which serves natural gas customers in Connecticut;
- Connecticut Natural Gas Corporation, or CNG, which serves natural gas customers in Connecticut;

- The Berkshire Gas Company, or BGC, which serves natural gas customers in western Massachusetts; and
- Maine Natural Gas Corporation, or MNG, which serves natural gas customers in several communities in central and southern Maine.

Through Renewables, we had a combined wind, solar and thermal installed capacity of 6,538 megawatts, or MW, as of December 31, 2016, including Renewables' share of joint projects, of which 5,852 MW was installed wind capacity. Approximately 62% of the capacity was contracted as of December 31, 2016, for an average period of 9.5 years. As the second largest wind operator in the United States based on installed capacity as of December 31, 2016, Renewables strives to lead the transformation of the U.S. energy industry to a competitive, clean energy future. Renewables currently operates 54 wind farms in 19 states across the United States.

Through Gas, as of December 31, 2016, we own approximately 67.5 billion cubic feet, or Bcf, of net working gas storage capacity. Gas operates 52.4 Bcf of contracted or managed natural gas storage capacity in North America through Enstor Energy Services, LLC, as of December 31, 2016.

Summary of Results of Operations

Our operating revenues increased by 38%, from \$4.4 billion for the year ended December 31, 2015, to \$6.0 billion for the year ended December 31, 2016.

The increase in operating revenues was largely due to the inclusion of UIL, which was not in the comparable period, adding \$1.6 billion in revenues for the year ended December 31, 2016. The Networks and Gas business revenues increased on the impact of favorable operating conditions partially offset by unfavorable mark-to-market, or MtM, changes on derivatives at Renewables.

Net income increased by 136% from \$267 million for the year ended December 31, 2015, to \$630 million for the year ended December 31, 2016, primarily due to the additional contribution of UIL. Other Networks businesses' net income also significantly improved as higher electricity and gas revenues and rate case impacts occurred offset by increases in costs resulting from higher transmission support expense. Renewables net income decreased as a result of lower average prices and unfavorable MtM changes on derivatives offset by favorable changes from the revision of estimated useful lives of wind power station assets. Gas net loss decreased due to favorable MtM changes on derivatives and transport contracts.

Adjusted earnings before interest, tax, depreciation and amortization, or adjusted EBITDA (a non-GAAP financial measure), increased by 64% from \$1.2 billion for the year ended December 31, 2015, to \$1.9 billion for the year ended December 31, 2016, primarily as a result of a 113% increase in adjusted EBITDA at Networks due to the addition of UIL. Renewables increased by 1%, primarily due to lower operations and maintenance expenses, related to reductions in bad debt and asset retirement obligation expenses. Adjusted gross margin (a non-GAAP financial measure) increased by 38%, from \$3.2 billion for the year ended December 31, 2015, to \$4.5 billion for the year ended December 31, 2016, primarily as a result of the addition of UIL, which added \$1.0 billion to adjusted gross margin in 2016. For additional information and reconciliation of the non-GAAP adjusted EBITDA to net income and the non-GAAP adjusted gross margin to net income, see "*—Non-GAAP Financial Measures*".

See "*—Results of Operations*" for further analysis of our operating results for the year.

Our financial condition and financing capability will be dependent on many factors, including the level of income and cash flow of its subsidiaries, conditions in the bank and capital markets, economic conditions, interest rates and legislative and regulatory developments.

Networks

Electric Transmission and Distribution and Natural Gas Distribution

The operating subsidiaries of Networks are regulated electric distribution and transmission and natural gas transportation and distribution utilities whose structure and operations are significantly affected by legislation and regulation. The FERC regulates, under the FPA, the interstate transmission and wholesale sale of electricity by these regulated utilities, including transmission rates and allowed ROE on transmission assets. Further, the distribution rates and allowed ROEs for Networks' regulated utilities in New York, Maine, Connecticut and Massachusetts are subject to regulation by the NYPSC, the MPUC, PURA and DPU, respectively. Legislation and regulatory decisions implementing legislation establish a framework for Networks' operations. Other factors affecting Networks' financial results are operational matters, such as the ability to manage expenses, uncollectibles and capital expenditures, in addition to major weather disturbances and environmental regulation. Networks expects to continue to make significant capital investments in its distribution and transmission infrastructure.

Pursuant to Maine law, CMP earns revenue for the delivery of energy to its retail customers, but is prohibited from selling power to them. CMP generally does not enter into purchase or sales arrangements for power with ISO-NE, the New England power pool, or any other ISO or similar entity. CMP generally sells all of its power entitlements under its nonutility generator and other PPAs to unrelated third parties under bilateral contracts. If the MPUC does not approve the terms of bilateral contracts, it can direct CMP to sell power entitlements that it receives from those contracts on the spot market through ISO-NE. NYSEG and RG&E enter into power purchase and sales transactions with the NYISO to have adequate supplies for their customers who choose to purchase energy directly from them. Customers may also choose to purchase energy from other energy supply companies.

Under Connecticut law, UI's retail electricity customers are able to choose their electricity supplier while UI remains their electric distribution company. UI purchases power for those of its customers under standard service rates who do not choose a retail electric supplier and have a maximum demand of less than 500 kilowatts and its customers under supplier of last resort service for those who are not eligible for standard service and who do not choose to purchase electric generation service from a retail electric supplier. The cost of the power is a "pass-through" to those customers through the generation services charge on their bills.

UI has wholesale power supply agreements in place for its entire standard service load for the first half of 2017, 80% of its standard service load for the second half of 2017, and 20% of its standard service load for the first half of 2018. Supplier of last resort service is procured on a quarterly basis, however, from time to time there are no bidders in the procurement process for supplier of last resort service and in such cases UI manages the load directly.

For additional information regarding Networks, including a comprehensive overview of our regulated businesses, please see the section entitled, "Business—Networks" in Part I, Item 1 in this report.

Revenues

Networks utilizes regulatory deferrals to evaluate its financial condition and operating performance by reconciling differences between actual revenue received or cost incurred with the rate allowances provided under the tariffs set by the state utilities commissions and FERC. Regulatory deferrals create regulatory assets and liabilities under FERC, consistent with U.S. GAAP financial accounting standards. Regulatory deferrals in New York include electric and gas supply costs, PPAs, downward net plant reconciliations, revenue decoupling, system benefit charges, renewable portfolio standards, energy efficiency portfolio standards, economic development programs, low income programs, gross receipt taxes, pension costs, other post-employment benefits costs, environmental remediation costs, major storm costs, downward adjustments for vegetation management, research and development, incremental maintenance initiatives, property taxes, REV initiatives, NEIL credits, credit and debit card fees, exogenous costs and certain legislative, accounting, regulatory and tax related actions. Regulatory deferrals in Maine include stranded costs, revenue decoupling, power tax regulatory asset, environmental remediation, storm reserve accounting, electric thermal storage pilot costs, standard offer retainage costs, AMI opt-out program costs, AMI deferral costs, AMI legal / health proceeding costs, conservation program costs, demand side management costs, low income program costs, electric lifeline program costs, make-ready line extension costs, electric vehicle pilot program costs and transmission planning and related cost allocation.

Regulatory deferrals in Connecticut include electric and gas supply costs, PPAs, revenue decoupling, system benefit charges, certain hardship bad debt expense, transmission revenue requirements, gas distribution integrity management program costs, gas system expansion costs, certain public policy costs, certain environmental remediation costs, major storm costs, and certain legislative, accounting, regulatory and tax related actions.

Regulatory deferrals in Massachusetts include gas supply costs, gas supply-related bad debt costs, environmental remediation costs, arrearage management program costs, gas system enhancement program costs, energy efficiency program costs and certain other public policy costs.

NYSEG's and RG&E's electric and natural gas rate plans and CMP's and UI's electric rates and CNG's gas rates, each contain a RDM under which their actual energy delivery revenues are compared on a periodic basis with the authorized delivery revenues and the difference accrued, with interest, for refund to or recovery from customers, as applicable.

NYSEG, RG&E and UI are energy delivery companies and provide energy supply as providers of last resort. Energy costs that are set on the wholesale markets are passed on to consumers. The difference between actual energy costs that are incurred and those that are initially billed are reconciled in a process that results in either immediate or deferred tariff adjustments. These procedures apply to other costs, which are in most cases exceptional, such as the effects of extreme weather conditions, environmental factors, regulatory and accounting changes, and treatment of vulnerable customers, that are offset in the tariff process.

Pursuant to agreements with, or decisions of the NYPSC and, the MPUC, Networks' Maine and New York regulated utilities are each subject to a minimum equity ratio requirement that is tied to the capital structure assumed in establishing revenue requirements.

Pursuant to these requirements, each of NYSEG, RG&E, CMP and MNG must maintain a minimum equity ratio equal to the ratio in its currently effective rate plan or decision measured using a trailing 13-month average. On a monthly basis, each utility must maintain a minimum equity ratio of no less than 300 basis points below the equity ratio used to set rates. The minimum equity ratio requirement has the effect of limiting the amount of dividends that can be paid if the minimum equity ratio is not maintained and can, under certain circumstances, require that AVANGRID contribute equity capital. For CMP and MNG, equity distributions that would result in equity falling below the minimum level are prohibited. For NYSEG and RG&E, equity distributions that would result in a 13-month average common equity less than maximum equity ratio, utilized for the earnings sharing mechanism, are prohibited if the credit rating of NYSEG, RG&E, AVANGRID or Iberdrola are downgraded by a nationally recognized rating agency to the lowest investment grade with a negative watch or downgraded to noninvestment grade. UI, SCG, CNG and BGC may not pay dividends if paying such dividend would result in a common equity ratio lower than 300 basis points below the equity percentage used to set rates in the most recent distribution rate proceeding as measured using a trailing 13-month average calculated as of the most recent quarter end. In addition, UI, SCG, CNG and BGC are prohibited from paying dividend to their parent if the utility's credit rating as rated by any of the three major credit rating agencies, falls below investment grade, or if the utility's credit rating, as determined by two of the three major credit rating agencies falls to the lowest investment grade and there is a negative watch or review downgrade notice. We believe that these minimum equity ratio requirements do not present any material risk with respect to our performance, cash flow or ability to pay quarterly dividends. In the ordinary course, Networks utilities manage their capital structures to allow the maximum level of returns consistent with the levels of equity authorized to set rates, and accordingly, compliance with these requirements does not alter ordinary equity level management. Additionally, the lower monthly minimum equity ratio requirement (a cushion of 300 basis points) provides flexibility to have short-term fluctuations that result in temporary shortfalls of the maximum equity ratio in any given month. The regulated utility subsidiaries are also prohibited by regulation from lending to unregulated affiliates.

Rates

On May 20, 2015, NYSEG and RG&E initiated a distribution rate case to ensure that the companies are able to continue to provide safe, adequate and reliable service, continue to make investments to modernize infrastructure, enhance low income programs and improve both gas and electric reliability, while maintaining the Companies' financial integrity. On February 19, 2016, the NYSEG, RG&E and other signatory parties filed a joint proposal, or the proposal, with the NYPSC for a three-year rate plan for electric and gas service at NYSEG and RG&E commencing May 1, 2016, which was approved on June 15, 2016 by the NYPSC. The proposal balanced the varied interests of the signatory parties including but not limited to maintaining the companies' credit quality and mitigating the rate impacts to customers. The proposal reflects many customer attributes including acceleration of the companies' natural gas leak prone main replacement programs and increased electric vegetation management to provide continued safe and reliable service. The delivery rate increase in the proposal can be summarized as follows:

Utility	May 1, 2016		May 1, 2017		May 1, 2018	
	Rate Increase (Millions)	Delivery Rate Increase %	Rate Increase (Millions)	Delivery Rate Increase %	Rate Increase (Millions)	Delivery Rate Increase %
NYSEG Electric	\$ 29.6	4.10%	\$ 29.9	4.10%	\$ 30.3	4.10%
NYSEG Gas	13.1	7.30%	13.9	7.30%	14.8	7.30%
RG&E Electric	3.0	0.70%	21.6	5.00%	25.9	5.70%
RG&E Gas	8.8	5.20%	7.7	4.40%	9.5	5.20%

The allowed rate of return on common equity for NYSEG Electric, NYSEG Gas, RG&E Electric and RG&E Gas is 9.00%. The equity ratio for each company is 48%. The proposal includes an ESM applicable to each company. The customer share of earnings would increase at higher ROE levels, with customers receiving 50%, 75% and 90% of earnings over 9.5%, 10.0% and 10.5% of ROE, respectively, in the first rate year. Earnings are based on the lower of the actual equity ratio or 50%. Earnings thresholds increase in subsequent rate years. The proposal reflects the recovery of deferred NYSEG Electric storm costs of approximately \$262 million, of which \$123 million will be amortized over ten years and the remaining \$139 million will be amortized over five years. The proposal also continues reserve accounting for qualifying Major Storms (\$21.4 million annually for NYSEG Electric and \$2.5 million annually for RG&E Electric). Incremental maintenance costs incurred to restore service in qualifying divisions will be chargeable to the Major Storm Reserve provided they meet certain thresholds.

On August 25, 2014, the MPUC approved a stipulation agreement for a CMP rate change which provided for a distribution rate increase of approximately \$24.3 million effective July 1, 2014 with an allowed ROE of 9.45% and an allowed equity ratio of 50%. On December 22, 2009, MPUC approved a stipulation which provided for a rate increase to MNG's base distribution rates for a three year period, with a 12% increase effective January 1, 2010, a 10% increase effective December 1, 2010 and another 10% increase effective December 1, 2011.

On March 5, 2015, MNG filed a rate case in order to further recover future investments and provide safe and adequate service. On May 3, 2016, all active parties to the case filed a stipulation which settled all matters at issue in the case and reflected a 10-year rate plan through April 30, 2026. The MPUC approved the stipulation on May 17, 2016, for new rates effective June 1, 2016. The settlement structure for non-Augusta customers includes a 34.6% delivery revenue increase over five years with an allowed 9.55% ROE and 50% common equity ratio. The settlement structure for Augusta customers includes a ten-year rate plan with existing Augusta customers being charged rates equal to non-Augusta customers plus a surcharge which increases annually for five years. New Augusta customers will have rates set based on an alternate fuel market model. In year seven of the rate plan MNG will submit a cost of service filing for the Augusta area to determine if the rate plan should continue. This cost of service filing will exclude \$15 million of initial 2012/2013 gross plant investment, however the stipulation allows for accelerated depreciation of these assets. If the Augusta area's cost of service filing illustrates results above a 14.55% ROE then the rate plan may cease, otherwise the rate plan would continue. A disallowance for the initial 2012/2013 gross plant investment is not part of the approved stipulation. The reserve of \$6 million for this case was reversed in May 2016.

In December 2016, PURA approved distribution rate schedules for UI for three years that became effective January 1, 2017, and which, among other things, provides for \$57 million of cumulative distribution rate increases, an allowed ROE of 9.10% based on 50% equity, continued UI's existing earnings sharing mechanism, continued the existing decoupling mechanism, and approved the continuation of the requested storm reserve.

On January 22, 2014, PURA approved base delivery rates for CNG, with an effective date of January 10, 2014, which, among other things, approved an allowed ROE of 9.18%, a decoupling mechanism, two separate ratemaking mechanisms that reconcile actual revenue requirements related to CNG's cast iron and bare steel replacement program and system expansion and an earnings sharing mechanism by which CNG and customers share on a 50/50 basis all earnings above the allowed ROE in a calendar year. In accordance with the approval by PURA of the acquisition, SCG and CNG agreed not to file a rate case for new rates effective before January 1, 2018.

BGC's rates are established by the DPU. BGC's ten-year rate plan, which was approved by the DPU and included an approved ROE of 10.5%, expired on January 31, 2012. BGC continues to charge the rates that were in effect at the end of the rate plan. In accordance with the approval by the DPU of the acquisition, BGC agreed not to file a rate case for new rates effective before June 1, 2018.

CMP's and UI's electric transmission rates are determined by a tariff regulated by the FERC and administered by ISO-NE. Transmission rates are set annually pursuant to a FERC authorized formula that allows for recovery of direct and allocated transmission operating and maintenance expenses, including return of and on investment in assets. The FERC currently provides an initial base ROE of 10.57% and additional incentive adders applicable to assets based upon vintage, voltage, and other factors.

In September 2011, several New England governmental entities, including PURA, the Connecticut Attorney General and the OCC, filed a joint complaint with the FERC against ISO-NE and several New England transmission owners (including CMP and UI) claiming that the current approved base ROE used in calculating formula rates for transmission service under the ISO-NE Open Access Transmission Tariff by the New England transmission owners of 11.14% was not just and reasonable and seeking a reduction of the base ROE with refunds to customers for the refund period of October 1, 2011 through December 31, 2012, or the refund period. The FERC issued an order in 2014 to reset the base ROE at 10.57% and capped the incentive rate at 11.74% for applicable projects for the refund period. Two additional complaints have also been filed for subsequent periods. The complaints have been consolidated and the administrative law judge issued an initial decision on March 22, 2016. The initial decision determined that, (1) for the fifteen month refund period in the second complaint, the base ROE should be 9.59% and that the ROE Cap (base ROE plus incentive ROEs) should be 10.42% and (2) for the fifteen month refund period in the third complaint and prospectively, the base ROE should be 10.90% and that the ROE Cap should be 12.19%. The initial decision is the administrative law judge's recommendation to the FERC commissioners. The FERC is expected to make its final decision in early 2017. The results of the decision in the initial complaint, as well as the results of any future decisions, will be reconciled in future transmission rates. On April 29, 2016, a fourth, related, complaint was filed for a subsequent rate period requesting the base ROE be 8.61% and ROE Cap be 11.24%. CMP and UI, as part of the NETOs group, filed a response on June 3, 2016. On September 20, 2016, the FERC accepted the fourth complaint, established a refund effective date of April 29, 2016, and set the matter for hearing. We cannot predict the outcome of the fourth complaint proceeding.

On December 28, 2015, the FERC issued an order instituting section 206 proceedings and establishing hearing and settlement judge procedures. Pursuant to section 206 of the FPA, the FERC found that ISO-NE Transmission, Markets, and Services Tariff is unjust, unreasonable, and unduly discriminatory or preferential. The FERC stated that ISO-NE's Tariff lacks adequate transparency and challenge procedures with regard to the formula rates for ISO-NE participating transmission owners, including UI and CMP. The FERC also found that the current Regional network service, or RNS, and Local Network Service, or LNS, formula rates appear to be

unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful as the formula rates appear to lack sufficient detail in order to determine how certain costs are derived and recovered in the formula rates.

Merger Settlement Agreement – Connecticut and Massachusetts

As part of the process of seeking and obtaining regulatory approval of the acquisition in Connecticut and Massachusetts, AVANGRID and UIL reached settlement agreements with the Office of Consumer Counsel, or OCC, in Connecticut and with the Attorney General of the Commonwealth of Massachusetts and the Department of Energy Resources in Massachusetts, which settlement agreements included commitments of actions to be taken after the transaction closed.

As a result, the following commitments were made in Connecticut:

- A one-time, \$20 million rate credit to customers in 2016, allocated among UI, SCG and CNG customers based on the total number of retail customers.
- Additional rate credits of \$1.25 million/year for ten years (2018-2027) to CNG customers.
- Additional rate credits of \$0.75 million/year for ten years (2018-2027) to SCG customers.
- \$1.6 million in savings to SCG customers, associated with SCG making additional infrastructure capital investments over a three-year period without seeking recovery until the next SCG rate case.
- Agreement not to seek to increase UI distribution base rates effective before January 1, 2017, and agreement not to seek to increase CNG and SCG distribution base rates effective before January 1, 2018.
- Contribution of \$2 million/year for three years to the DEEP, to stimulate investment in energy efficiency and clean energy technologies.
- \$5 million in benefits to customers resulting from UI recovering only the debt rate rather than the equity return for two years, on an increased \$50 million of investment in storm resiliency programs.
- Contribution of \$1 million for disaster relief entities.
- Maintaining charitable contribution at historical contribution levels (between \$500,000 and \$800,000) for at least four years.
- Upon the resolution of all appeals of the PURA decision approving the acquisition, UI will withdraw its appeals of two PURA dockets relating to PURA's disallowance of certain reconciliation amounts. The appeals were withdrawn by UI in June 2016.

In connection with the acquisition proceeding, UI signed the partial consent order related to the investigation and remediation of the English Station site. To the extent that the investigation and remediation is less than \$30 million, UI is required to remit to the State of Connecticut the difference between such costs and \$30 million, to be applied to a public purpose as determined in the discretion of the Governor the Attorney General of Connecticut and the Commissioner of DEEP. However, UI is obligated to comply with the consent order even if the cost of such compliance exceeds \$30 million. The state may discuss options with UI on recovering or funding any cost above \$30 million, such as through public funding or recovery from third parties, however it is not bound to agree to or support any means of recovery or funding.

The following commitments were made in Massachusetts:

- Customers of BGC will receive a total of \$4.0 million in rate credits, to be spread over the months of November through April 2016-2017 and November through April 2017-2018.
- BGC will contribute \$1 million to alternative heating programs.
- BGC will not seek to increase distribution base rates effective before June 1, 2018.

As a result of the merger settlement agreement we have recorded \$44 million as regulatory liabilities relating to the rate credits and an additional \$19.8 million as liabilities.

New England Clean Energy Request for Proposals

DEEP, Eversource Energy, National Grid Plc and Unitil Corporation conducted a request for proposals, or RFP, for clean energy and transmission in order to identify projects that will advance the clean energy goals of Connecticut, Massachusetts and

Rhode Island. The RFP was issued in November 2015, and bids were received on January 28, 2016. AVANGRID companies offered two transmission projects and three wind projects as components of various joint bids with other parties. None of AVANGRID's bids were selected as winning bids. Any contracts negotiated with chosen projects would require regulatory approvals in the contracting utilities' states and the projects will need various regulatory and permitting approvals, including FERC approval for transmission tariffs. DEEP selected eight bids for Connecticut. DEEP has directed UI to negotiate and enter into contracts with the selected projects.

Reforming the Energy Vision

In April 2014, the NYPSC instituted its REV proceeding, the goals of which are to improve electric system efficiency and reliability, encourage renewable energy resources, support DER, and empower customer choice. In this proceeding, the NYPSC is examining the establishment of a DSP, to manage and coordinate DER, and provide customers with market data and tools to manage their energy use. The NYPSC is also examining how its regulatory practices should be modified to incentivize utility practices to promote REV objectives. REV has been divided into two tracks, Track 1 for market design and technology, and Track 2 for regulatory reform. REV proposes regulatory changes that are intended to promote more efficient use of energy, deeper penetration of renewable energy resources such as wind and solar, and wider deployment of DER, such as micro grids, on-site power supplies and storage. The NYPSC order on Track 1 affirmed that utilities would serve as the DSP and required utilities to file implementation plans before the end of 2015. Track 2 is undertaken in parallel with the Track 1, and examines changes in current regulatory, tariff, and market designs, and incentive structures to better align utility interests with achieving NYPSC's policy objectives. New York utilities will also be addressing related regulatory issues in their individual rate cases. A Track 2 order was issued in May 2016, and includes guidance related to the potential for earnings adjustment mechanisms, or EAMs, platform service revenues, innovative rate designs, and data utilization and security. The companies, in December 2016, filed a proposal for the implementation of EAMs in the areas of system efficiency, energy efficiency, interconnections, and clean air. A collaborative process to review the companies' petition is expected to begin in the first quarter of 2017.

Ginna Reliability Support Service Agreement

Ginna Nuclear Power Plant, LLC, or GNPP, which is a subsidiary of Constellation Energy Nuclear Group, LLC, or CENG, owns and operates the R.E. Ginna Nuclear Power Plant, or Ginna Facility, and together with GNPP, Ginna, a 581 MW single-unit pressurized water reactor located in Ontario, New York. In May 2014, NYISO produced a reliability study, confirming that the Ginna Facility needs to remain in operation to avoid bulk transmission and non-bulk local distribution system reliability violations in 2015 and 2018. In July 2014, GNPP filed a petition requesting that the NYPSC initiate a proceeding to examine a proposal for the continued operation of the Ginna Facility.

In November 2014, the NYPSC ruled that GNPP had demonstrated that the Ginna Facility is required to maintain system reliability and that its actions with respect to meeting the relevant retirement notice requirements were satisfactory. The NYPSC also accepted the findings of the 2014 reliability study and stated that it established "the reliability need for continued operation of the Ginna Facility that is the essential prerequisite to negotiating a Reliability Support Service Agreement, or RSSA." As such, the NYPSC ordered RG&E and GNPP to negotiate an RSSA.

On February 13, 2015, RG&E submitted to the NYPSC an executed RSSA between RG&E and GNPP. RG&E requested that the NYPSC accept the RSSA and approve cost recovery by RG&E from its customers of all amounts payable to GNPP under the RSSA utilizing the cost recovery surcharge mechanism.

On October 21, 2015, RG&E, GNPP, New York Department of Public Service, Utility Intervention Unit and Multiple Intervenors filed a joint proposal with the NYPSC for approval of the RSSA, as modified. The joint proposal provides a term of the RSSA from April 1, 2015, through March 31, 2017. RG&E shall make monthly payments to Ginna in the amount of \$15.4 million. RG&E will be entitled to 70% of revenues from Ginna's sales into the NYISO energy and capacity markets, while Ginna will be entitled to 30% of such revenues. The signatory parties recommend that the NYPSC authorize RG&E to implement a rate surcharge effective January 1, 2016, to recover amounts paid to Ginna pursuant to the RSSA. RG&E's payment obligation to Ginna did not begin until the rate surcharge was in effect and the FERC issued an order authorizing the FERC settlement agreement in the Settlement Docket. RG&E will use deferred rate credit amounts (regulatory liabilities) to offset the full amount of the deferred collection amount (including carrying costs), plus credit amounts to offset all RSSA costs that exceed \$2.3 million per month, not to exceed a total use of credits in the amount of \$110 million, applicable through June 30, 2017. To the extent that the available credits are insufficient to satisfy the final payment from RG&E to Ginna then the RSSA surcharge would continue past March 31, 2017, to recover up to \$2.3 million per month until the final payment has been recovered by RG&E from ratepayers. In the month following the expiration of the term on March 31, 2017, Ginna shall prepare and issue an invoice to RG&E for, and RG&E shall pay to Ginna, a one-time payment in the amount of \$11.5 million. This amount is being accrued pro-rata over the term of the agreement and will be recovered from ratepayers. If Ginna continues to deliver energy to the NYISO transmission system or makes available capacity to the

NYISO markets after seventy-five days following March 31, 2017, Ginna shall pay RG&E a capital recovery balance in eight quarterly installments as long as Ginna is continuing to deliver energy or making available capacity throughout this period. The estimated capital recovery balance that is expected to be in place on March 31, 2017 is \$20.1 million and will accrue interest unless amounts are prepaid by Ginna. The capital recovery balance will be refunded to ratepayers, to the extent collected, which is based on the term of the delivery of energy or capacity being made available by Ginna. On February 23, 2016, the NYPSC unanimously adopted the joint proposal in the Ginna RSSA proceeding as in the public interest. On March 1, 2016, the FERC issued an order approving the contested settlement agreement, subject to conditions.

New York TransCo

Networks holds an approximately 20% ownership interest in New York TransCo, LLC. New York TransCo was established by the New York transmission utilities to develop, own, and operate electric transmission in New York. In December 2014, New York TransCo filed for regulatory approval of its rates, terms, and conditions with the FERC. The filing requests a formula base ROE of 10.6%, 150 basis points ROE incentives, construction work in progress, a formula rate mechanism, and a proposed cost allocation. Various parties, including the NYPSC, have protested the filing with the FERC, including the base ROE, the ROE incentives, and the cost allocation. New York TransCo will not make final decisions on transmission project development until the FERC decision.

On April 2, 2015, the FERC issued an order granting, inter alia, New York TransCo's owners' request for a 50 basis point adder for New York TransCo's membership in the NYISO RTO, subject to the adder being capped within the zone of reasonableness after a determination of where within that zone its base level ROE should be set. The FERC also set the formula rate and base ROE issue for hearing and settlement judge procedures. In addition, the FERC rejected New York TransCo's owners' cost allocation method for the transmission owner transmission solutions, or TOTS, projects because it would allocate costs to Power Supply Long Island and New York Power Authority that they did not voluntarily agree to pay.

On November 5, 2015, New York TransCo's owners, filed the settlement with the FERC to resolve all outstanding issues associated with the TOTS projects, including issues related to the TOTS Projects that were set for hearing and issues pending on rehearing. The issues regarding certain other projects remain pending. The Settlement addressed the financial terms that are components of New York TransCo's revenue requirement for the proposed TOTS projects, including the base ROE of 9.50%, and a 50-basis point ROE adder, the capital structure of 53%, and the cost allocation under the NYISO Open Access Transmission Tariff (OATT) for the TOTS projects. On March 17, 2016, the FERC approved the settlement.

Weather Impact

The demand for electric power and natural gas is affected by seasonal differences in the weather. Statewide demand for electricity in New York, Connecticut and Maine tends to increase during the summer months to meet cooling load or in winter months for heating load while statewide demand for natural gas tends to increase during the winter to meet heating load. Market prices for both electricity and natural gas reflect the demand for these products and their availability at that time. Overall operating results of Networks do not fluctuate due to commodity costs as the regulated utilities generally recover those costs coincident with their expense or defer any differences for future recovery. Networks has historically sold less power when weather conditions are milder and may also be affected by severe weather, such as ice and snow storms, hurricanes and other natural disasters which may result in additional cost or loss of revenues that may not be recoverable from customers. However, Networks' regulated utilities, other than MNG, SCG and BGC, have approved revenue decoupling mechanisms, or RDMs, as part of the NYPSC, PURA and MPUC rate plans. The RDM allows the regulated utilities to defer for future recovery and shortfall from projected revenues whether due to weather, economic conditions, conservation or other factors.

New Renewable Source Generation

Under Connecticut law Public Act 11-80, or PA 11-80, Connecticut electric utilities are required to enter into long-term contracts to purchase Connecticut Class I RECs, from renewable generators located on customer premises. Under this program, UI is required to enter into contracts totaling approximately \$200 million in commitments over an approximate 21-year period. The obligations will phase in over a six-year solicitation period, and are expected to peak at an annual commitment level of about \$13.6 million per year after all selected projects are online. Upon purchase, UI accounts for the RECs as inventory. UI expects to partially mitigate the cost of these contracts through the resale of the RECs. PA 11-80 provides that the remaining costs (and any benefits) of these contracts, including any gain or loss resulting from the resale of the RECs, are fully recoverable from (or credited to) customers through electric rates.

On October 23, 2013, PURA approved UI's renewable connections program filed in accordance with PA 11-80, through which UI will develop up to 10 MW of renewable generation. The costs for this program will be recovered on a cost of service basis. PURA established a base ROE to be calculated as the greater of: (A) the current UI authorized distribution ROE (currently 9.10%) plus 25

basis points and (B) the current authorized distribution ROE for CL&P, (currently 9.17%), less target equivalent market revenues (reflected as 25 basis points). In addition, UI will retain a percentage of the market revenues from the project, which percentage is expected to equate to approximately 25 basis points on a levelized basis over the life of the project. UI expects the cost of this program, a planned 2.8 MW fuel cell facility in New Haven, solar photovoltaic and fuel cell facilities totaling 5 MW in Bridgeport, and a 2.2 MW fuel cell facility in Woodbridge, to be approximately \$47 million. Pursuant to Section 8 of Public Act 13-303, "An Act Concerning Connecticut's Clean Energy Goals," in January 2014, at the DEEP's direction, UI entered into three contracts for the purchase of RECs associated with an aggregate of 5.7 MW of energy production from biomass plants in New England. The costs of these agreements will be fully recoverable through electric rates.

Pursuant to Connecticut statute, in January 2017, UI entered into a master agreement with the Connecticut Green Bank to procure Connecticut Class I RECs produced by residential solar installations in 15 year tranches, with a final tranche to commence no later than 2022. UI's contractual obligation is to procure 20% of RECs produced by about 255 MW of residential solar installations. Connecticut statutes provides that the net costs (and any benefits) of these contracts, including any gain or loss resulting from the resale of the RECs, are fully recoverable from (or credited to) customers through electric rates.

Under Maine law 35-A M.R.S.A §§ 3210-C, 3210-D, the MPUC is authorized to conduct periodic requests for proposals seeking long-term supplies of energy, capacity or RECs, from qualifying resources. The MPUC is further authorized to order Maine transmission and distribution utilities to enter into contracts with sellers selected from the MPUC's competitive solicitation process. Pursuant to a MPUC Order dated October 8, 2009, CMP entered into a 20-year agreement with Evergreen Wind Power III, LLC, or Evergreen Power, on March 31, 2010, to purchase capacity and energy from Evergreen Power's 60 MW Rollins wind farm in Penobscot County, Maine. CMP's purchase obligations under the Rollins contract are approximately \$7 million per year. In accordance with subsequent MPUC orders, CMP periodically auctions the purchased Rollins energy to wholesale buyers in the New England regional market. Under applicable law, CMP is assured recovery of any differences between power purchase costs and achieved market revenues through a reconcilable component of its retail distribution rates. Although the MPUC has conducted multiple requests for proposals under M.R.S.A §3210-C and has tentatively accepted long-term proposals from other sellers, these selections have not yet resulted in additional currently effective contracts with CMP.

Pursuant to Maine law 35-A M.R.S.A §3604, the MPUC is authorized to direct Maine transmission and distribution utilities to enter into long-term contracts to purchase capacity, energy and renewable energy credits from up to 50 MW of qualifying community-based renewable energy facilities. In accordance with §3604, on October 22, 2016, CMP commenced purchases from Athens Energy LLC for a contract term of three years. CMP purchase obligations under the Athens contract are approximately \$6 million per year. Under the provisions of §3604 and MPUC implementing orders, CMP will periodically auction the purchased products from Athens for resale to wholesale market purchasers and recover any differences between power purchase costs and resale revenues through a reconcilable component of its retail distribution rates. Although the MPUC has certified several additional community-based renewable energy generation projects under §3604 and authorized similar power purchase agreements between these sellers and CMP, no additional facilities have advanced to operational status.

Renewables

Renewable Energy Incentives

Renewables relies, in part, upon government policies that support utility-scale renewable energy and enhance the economic feasibility of development and operating wind energy projects in regions in which Renewables operates or plans to develop and operate renewable energy facilities. In support of this, on December 18, 2015, Congress passed and President Obama signed into law the Consolidated Appropriations Act, Public Law 114-113. This law extends the qualifying dates for the production tax credit available to wind energy generating facilities (Internal Revenue Code Section 45) and the investment tax credit available to commercial solar generating facilities (Internal Revenue Code Section 48). The law also extends an option for wind generation facilities to elect to receive an investment tax credit in lieu of the production tax credit. In general, both provisions allow new wind and solar facilities to qualify for the respective credits at full value over the next several years, with reductions in the value of the authorized tax credits for facilities phased in during subsequent periods. Production tax credits will be reduced to 80% for facilities commencing construction in 2017, reduced to 60% for facilities commencing construction in 2018, and reduced to 40% for facilities commencing construction in 2019. Investment tax credits will be 30% for projects commencing construction through 2019, then reduce to 26%, 22% and 10% for projects commencing construction in 2020, 2021 and 2022, respectively. The Internal Revenue Service, or IRS, updated its guidance related to which projects will qualify for the production tax credits, including criteria for the beginning of construction for a project and the continuous program of construction or the continuous efforts to advance the project to completion. Multi-year extension of these credits provides opportunities for Renewables to develop, construct, and market new renewable generating facilities and partially repower existing renewable generating facilities in several U.S. markets.

Additionally, the federal government and many states and local jurisdictions have policies or other mechanisms, such as tax incentives or RPS that support the sale of energy from utility-scale renewable energy facilities, such as wind and solar energy facilities. As a result of budgetary constraints, political factors or otherwise, U.S., state or local governments from time to time may review their policies and other mechanisms that support renewable energy and consider actions that would make them less conducive to the development and operation of renewable energy facilities. Any reductions to, or the elimination of, governmental policies or other mechanisms that support renewable energy or the imposition of additional taxes or other assessments on renewable energy, could result in, among other items, the lack of a satisfactory market for the development of new renewable energy projects, Renewables abandoning the development of new renewable energy projects, a loss of Renewables' investments in the projects and reduced project returns, any of which could have a material adverse effect on Renewables' business, financial condition, results of operations and prospects.

Renewable Energy Demand

Since the transmission and distribution of electricity is highly concentrated in most jurisdictions, there are a limited number of possible purchasers for utility-scale quantities of electricity in a given geographic location, including transmission grid operators, state and investor-owned power companies, public utility districts, cooperatives, and large commercial and industrial customers. As a result, there is a concentrated pool of potential buyers for electricity generated by Renewables' business, which may restrict their ability to negotiate favorable terms under new PPAs, and could impact their ability to find new customers for the electricity generated by their generation facilities should this become necessary. Furthermore, if the financial condition of these utilities and/or power purchasers deteriorated or the RPS programs, climate change programs or other regulations to which they are currently subject and that compel them to source renewable energy supplies change, demand for electricity produced by Renewables' businesses could be negatively impacted.

Energy Prices

Renewables has exposure to commodity price movements through its "natural" long positions in electricity from its generation. Renewables manages the exposure to risks of commodity price movements through internal risk management policies, enforcement of established risk limits and risk management procedures.

A portion of Renewables' fuel and energy output arrangements qualify as derivative contracts. Such derivative contracts are carried at fair value, with changes in fair value recognized to earnings as the changes occur. In 2015, Renewables began designating certain qualifying derivatives contracts as hedges. These hedge designations result in deferral of changes in fair value, to the extent the hedge is effective, to accumulated other comprehensive income until the contract settles, at which point the deferred amount is recognized to earnings.

Wind Conditions

If wind conditions are unfavorable, or if Renewables' wind turbines are not available for operation, Renewables electricity generation and related revenue may be substantially below our expectations. Renewables' wind projects are sited, developed and operated to maximize wind performance. Prior to siting a wind facility, detailed studies are conducted to measure the wind resource in order to estimate future production. However, wind patterns or wind resource in the future might deviate from historical patterns. These events could also degrade equipment or components and the interconnection and transmission facilities' lives or maintenance costs. Historically, Renewables wind production is greater in the first, second and fourth quarters.

Wind Turbine Supply

Replacement and spare parts for wind turbines and key pieces of electrical equipment may be difficult or costly to acquire or may be unavailable. Although Renewables has expanded and diversified its supplier base, the loss of any of these suppliers or service providers or inability to find replacement suppliers or service providers or to purchase turbines at rates currently offered by Renewables' existing suppliers or a change in the terms of Renewables' supply or operations and maintenance agreements, such as increased prices for maintenance services or for spare parts, could have a material adverse effect on Renewables' ability to construct and maintain wind farms or the profitability of wind farm development and operation.

Gas

Gas benefits from price volatility and temporal price spreads, which impacts the level of demand for services and the rates that can be charged for natural gas storage services. On a system-wide basis, natural gas is typically injected into storage between April and October when natural gas prices are generally lower and withdrawn during the winter months of November through March when natural gas prices are typically higher. Largely due to the abundant supply of natural gas made available by hydraulic fracturing

techniques, natural gas prices have dropped significantly to levels that are near historic lows. If prices and volatility remain low or declines further, then the demand for natural gas storage services, and the prices that Gas will be able to charge for those services, may decline or be depressed for a prolonged period of time. Conversely, if prices and volatility remain high or increase then the demand for natural gas storage services and the prices that Gas will be able to charge for these services may increase for a period of time. In 2015 we began designating those derivatives contracts at Gas that qualify as hedges. This designation was made prospectively, and in accordance with all the requirements of hedge accounting.

Results of Operations

The following table sets forth our operating revenues and expenses items for each of the periods indicated and as a percentage of operating revenues:

	Year Ended December 31, 2016				
	Total	Networks	Renewables	Gas	Other(1)
	(in millions)				
Operating Revenues	\$ 6,018	\$ 5,030	\$ 1,015	\$ 32	\$ (59)
Operating Expenses					
Purchased power, natural gas and fuel used	1,286	1,174	152	—	(40)
Operations and maintenance	2,206	1,839	351	44	(28)

Operating expenses %		75%	25%	2%	(2)%

(1) Other amounts represent corporate and company eliminations.

Comparison of Period to Period Results of Operations

Our operating revenues increased by 38%, from \$4.4 billion for the year ended December 31, 2015, to \$6.0 billion for the year ended December 31, 2016.

Our purchased power, natural gas and fuel used increased by 32%, from \$972 million for the year ended December 31, 2015, to \$1,286 million for the year ended December 31, 2016.

Our operations and maintenance increased by 22%, from \$1.8 billion for the year ended December 31, 2015, to \$2.2 billion for the year ended December 31, 2016.

Details of the period to period comparison are described below at the segment level.

Year Ended December 31, 2016 Compared to the Year Ended December 31, 2015

Networks

Operating revenues for the year ended December 31, 2016, increased by \$1.6 billion, or 49%, from \$3.4 billion for the year ended December 31, 2015, to \$5.0 billion. The addition of UIL increased revenues by \$1.6 billion, for an underlying increase of \$77 million. The milder winter weather in 2016 lowered demand for both electricity and gas, with a corresponding revenue impact of \$48 million. Wholesale electricity revenues also declined by \$28 million due to a combination of lower volumes and wholesale market prices, which were down in 2016 as a result of the reduced demand due to milder weather. An increase of \$36 million was due primarily to higher retail rates for electricity during the period. Regulatory recoveries increased by \$117 million primarily due to an adjustment of \$126 million to unfunded future income tax to reflect the change from a flow through to normalization method, which has been recorded as an increase to revenue, with an offsetting and equal increase to income tax expense, an increase of \$17 million relating to recoveries on the Ginna RSSA together with other decreases in the amount of \$26 million for items such as revenue decoupling mechanisms, nonbypassable wires charges and rate case impacts.

Purchased power, natural gas and fuel increased used for the year ended December 31, 2016, increased by \$353 million, or 43%, from \$821 million for the year ended December 31, 2015, to \$1,174 million. UIL contributed \$463 million in additional expense, resulting in underlying expense being \$110 million lower. Purchase volume requirements were 3% lower for electricity and 3% lower for gas for the same reasons outlined under Networks revenues, that is, the milder weather in winter 2016. In addition, market prices were down 25% for electricity and 17% for gas.

Operations and maintenance during the year ended December 31, 2016, increased by \$450 million or 32% from approximately \$1.4 billion for the year ended December 31, 2015, to approximately \$1.8 billion. UIL accounts for \$463 million of this increase, with the remaining \$13 million decrease attributable to the underlying business. The regulatory adjustment for the Ginna RSSA, which has offsets in revenue, accounts for a \$35 million increase. Offsetting this are reductions relating to \$22 million refunds received from the Spent Fuel Nuclear Trust from Maine Yankee, which will be refunded to customers, \$8 million due to lower-write-offs in the current year due to lower commodity prices in the current year, \$7 million due to reduced recovery of storm costs as compared to higher levels in prior years and of \$11 million from lower expenditures on various state mandated energy efficiency programs, lower insurance claim expenses, and renewable energy credit purchases and adjustments to regulatory deferrals based on changes to rate plans.

Renewables

Operating revenues for the year ended December 31, 2016, decreased by \$52 million, or 5% from approximately \$1.1 billion for the year ended December 31, 2015, to approximately \$1.0 billion. Revenues from wind and solar facilities increased by \$7 million due to 5% increase in wind generation on favorable wind resource and full year of operation in 2016 of a wind farm completed in 2015, offset in part by 4% lower average prices. New wind capacity added in 2016 did not contribute significantly to the increase in revenues or production for 2016. The decrease in average price results from general market conditions and mild weather in 2016 compared to 2015 and proportionately more output sold merchant due to expiring contracts. Revenues decreased by \$46 million due to unfavorable MtM changes on energy derivative transactions entered into for economic hedging purposes and thermal revenues decreased by \$13 million due to lower merchant prices.

Purchased power, natural gas and fuel used for the year ended December 31, 2016, decreased by \$50 million, or 25%, from \$202 million for the year ended December 31, 2015, to \$152 million. Klamath power plant expense was \$11 million lower due to lower production and reduced fuel costs, MtM changes on derivatives were favorable \$41 million due to market price changes in the current period and transmission and energy purchases were higher by \$2 million.

Operations and maintenance for the year ended December 31, 2016, decreased by \$12 million or 3% from \$363 million for the year ended December 31, 2015, to \$351 million. Bad debt expense decreased by \$7 million due to a specific reserve recorded in 2015 that did not occur in 2016. Asset retirement related expenses were \$5 million lower, as a result of the extension of the windfarm useful life in combination with revisions to expense estimates.

Gas

Operating revenues for the year ended December 31, 2016, increased by \$51 million, or 268%, from negative \$19 million for the year ended December 31, 2015, to \$32 million. The increase in operating revenues was due to \$19 million of improved performance in the owned and contracted storage businesses, with both capturing higher spreads relative to previous year, \$6 million favorable transportation contract, \$15 million favorable MtM change and the remainder relating to various items including contract adjustments in the prior year.

The gas business had no purchased power, natural gas and fuel used for the year ended December 31, 2016, and insignificant amount for the year ended December 31, 2015. As a predominantly trading business, such expenses are required to be netted with revenues.

Operations and maintenance for the year ended December 31, 2016, increased by \$6 million, or 16%, from \$38 million for the year ended December 31, 2015, to \$44 million. Increases in credit guarantee expenses and third party services account for the increase in 2016.

Depreciation, Amortization and Impairment of Non-Current Assets

Depreciation, amortization and impairment expenses for the year ended December 31, 2016, increased by \$97 million or 14% from \$707 million for the year ended December 31, 2015, to \$804 million. The primary movements were UIL contributing \$160 million, with the underlying business \$63 million lower. Networks depreciation expense was \$22 million lower, mainly as a result of updates to asset lives from the rate case activities. Renewables expense was \$43 million lower primarily as a result of lower project impairment expenses in 2016, as compared to that in 2015, and \$52 million lower depreciation expense due to revision of useful lives of wind farm assets offset by \$21 million due to increases from the Baffin Bay wind asset only being operational for part of the prior year, combined with additional expense from salvage values and from asset retirement obligation estimations.

Other Income and (Expense) and Equity Earnings

Other income and (expense) and equity earnings for the year ended December 31, 2016, increased by \$28 million, or 49%, from \$55 million other income for the year ended December 31, 2015, to \$83 million. UIL contributed \$22 million of income. Of the remaining \$6 million, \$31 million was as a result of the sale of the Iroquois equity investment, and \$3 million was as a result of the sale of other investment. An additional \$12 million of income results from the reversal of the Maine Natural Gas provision in the current period that was initially recorded at the end of 2015. Offsetting these amounts were a \$13 million decrease primarily from interest income on regulatory deferrals, due to updates from the rate case activities, \$5 million for reduced allowance for funds used during construction in Networks, \$6 million for reduced earnings on equity method investments and \$5 million due to a gain from tax equity financing arrangements' buyback recorded in 2015 that did not occur in 2016. Other various items caused a decrease of approximately \$11 million in the period.

Interest Expense, Net of Capitalization

Interest expense for the year ended December 31, 2016, increased by \$1 million or less than 1% from \$267 million for the year ended December 31, 2015, to \$268 million. Excluding the impact of UIL, which added \$79 million of expense, underlying expense was \$78 million favorable. Networks was \$53 million favorable, mainly as a result of lower interest expense on regulatory deferrals, and Other was favorable by \$18 million as a result of a reduction to the interest rate on outstanding debt and reduced outstanding debt.

Income Tax Expense

The effective tax rate for the year ended December 31, 2016, was 37.6%, which is slightly higher than the 35% statutory federal income tax rate due to offsetting income tax matters. Increases were predominantly due to the impact of an adjustment of \$126 million to unfunded future income tax to reflect the change from a flow through to normalization method following the approval of the proposal by the NYPSC, which was recorded in the second quarter of 2016 as an increase to income tax expense and an offsetting increase to revenue. This was offset by the recognition of production tax credits associated with wind and state income tax amounts including unitary filing amounts for our various states of operations. Income tax expense for the year ended December 31, 2015, was

\$71 million lower than it would have been at the statutory federal income tax rate of 35%, primarily due to production tax credits, filing of amended returns in the State of New York and the impact of tax equity financing arrangements. This resulted in an effective tax rate of 11.30% for 2015.

Year Ended December 31, 2015 Compared to the Year Ended December 31, 2014

Networks

Operating revenues for the year ended December 31, 2015, decreased by \$11 million or less than 1% from \$3,397 million for the year ended December 31, 2014, to \$3,386 million. UIL contributed \$36 million in additional revenue, offset by underlying revenue being \$47 million lower due to lower gas rates in 2015 as compared to 2014. There were also lower gas sales volumes, as consumption declined due to milder weather.

Purchased power, natural gas and fuel used for the year ended December 31, 2015, decreased by \$235 million, or 22%, from \$1.1 billion for the year ended December 31, 2014, to \$821 million. UIL contributed \$34 million in additional expense, resulting in underlying expense being \$269 million lower. Purchased power decreased by \$189 million, resulting from a decrease in the market price of electricity in 2015, with 2014 prices being higher due to colder temperatures causing less efficient generation to be used, increasing the marginal price of electricity. Additionally, gas purchase expenses decreased by \$80 million due to a decrease in gas market prices, with prices lower in 2015 due to continuing shale gas production increasing supply, and a decline in oil prices, which are closely correlated with gas prices.

Operations and maintenance during the year ended December 31, 2015, increased by \$206 million or 17% from approximately \$1.2 billion for the year ended December 31, 2014, to approximately \$1.4 billion. Excluding the impact of UIL, underlying expense increased by \$153 million, with the main drivers being increased spending in 2015 on reliability support services of \$80 million, combined with regulatory refunds received from the DOE in 2014 for the Phase II of the Yankee Companies Case of \$28 million together with smaller increases in energy efficiency programs and corporate recharges.

Renewables

Operating revenues for the year ended December 31, 2015 decreased \$122 million or 10% from approximately \$1.2 billion for the year ended December 31, 2014, to approximately \$1.1 billion. In 2015, revenues increased by \$17 million due to the addition of a 202 MW newly constructed wind farm. Revenues decreased \$87 million from existing wind farms on lower wind generation due to poor wind resource (amount of wind in actual weather lower than the prior year) and lower revenues from merchant wind farms due to lower prices of approximately 6%. The decrease in prices is attributed to general market conditions and milder weather in 2015 as compared to 2014. Power trading revenues were \$34 million lower due to reduced trading opportunities created by lower price volatility in the northwest markets and a decrease of \$9 million attributable to unfavorable MtM changes on derivative transactions entered into for economic hedging purposes.

Purchased power, natural gas and fuel used for the year ended December 31, 2015, increased by \$9 million, or 5%, from \$193 million for the year ended December 31, 2014, to \$202 million. The increase is attributable to costs for our thermal power plant.

Operations and maintenance for the year ended December 31, 2015, increased by \$27 million or 8% from \$336 million for the year ended December 31, 2014, to \$363 million, primarily as a result of higher corporate recharges, combined with several non-recurring expenses and lower capitalization of expenses.

Gas

Operating revenues for the year ended December 31, 2015 decreased by \$103 million, or 123%, from \$84 million for the year ended December 31, 2014 to negative \$19 million. The decrease in operating revenues was due to \$105 million unfavorable MtM changes on derivatives, with unrealized losses in 2015 compared to unrealized gains in 2014. The unrealized MtM change recorded within operating revenues is related to the change in average prices for storage derivatives. The 2015 losses resulted primarily from the settlement of 2014 MtM gains on short-term derivatives that rolled-off in 2015 based on the Company's derivative strategies as disclosed in Note 12, Derivative Instruments and Hedging. In 2014, a decrease in average prices for storage derivatives resulted in significant MtM gains.

Purchased power, natural gas and fuel used for the year ended December 31, 2015, remained consistent over the periods at \$1 million.

Operations and maintenance for the year ended December 31, 2015, decreased by \$2 million, or 4%, from \$40 million for the year ended December 31, 2014, to \$38 million. The decrease is mainly due to reduction in operational expense in the trading and storage businesses.

Depreciation, Amortization and Impairment of Non-Current Assets

Depreciation, amortization and impairment expenses for the year ended December 31, 2015, increased by \$53 million or 8% from \$654 million for the year ended December 31, 2014, to \$707 million. The depreciation expense for Gas, Renewables and Networks increased by \$67 million. Asset increases at Networks accounted for \$43 million and a further \$10 million at Renewables, and UIL accounts for a further \$6 million. Partially offsetting this is a reduction of \$12 million on impairment expense related to renewable development projects.

Other Income and (Expense) and Equity Earnings

Other income and (expense) and equity earnings for the year ended December 31, 2015, decreased by \$9 million, or 14%, from \$64 million other income for the year ended December 31, 2014, to \$55 million. The decrease in other income is associated with lower equity earnings of \$11 million due to the impact of lower power prices and production on the joint venture windfarms of Renewables.

Interest Expense, Net of Capitalization

Interest expense for the year ended December 31, 2015, increased by \$24 million or 10% from \$243 million for the year ended December 31, 2014 to \$267 million. Networks expense increased by \$30 million, consistent with the change in debt and UIL contributed \$4 million in additional expense. Renewables expense decreased corresponding with a decrease as their debt amortized.

Income Tax Expense

Income tax expense for the year ended December 31, 2015, was \$71 million lower than it would have been at the statutory federal income tax rate of 35% due predominately to production tax credits, filing of amended returns in the State of New York and the impact of tax equity financing arrangements. This resulted in an effective tax rate of 11.30%. Income tax expense for the year ended December 31, 2014, was \$35 million higher than it would have been at the statutory federal income tax rate of 35% due predominately to remeasurement of the deferred income tax liability caused by the imposition of a unitary tax regime in New York effective January 1, 2015, production tax credits, and the impact of tax equity financing arrangements. This resulted in an effective tax rate of 39.94%.

Non-GAAP Financial Measures

To supplement our consolidated financial statements presented in accordance with U.S. GAAP, we consider certain non-GAAP financial measures that are not prepared in accordance with U.S. GAAP, including adjusted gross margin, adjusted EBITDA, adjusted net income and adjusted earnings per share, or adjusted EPS. The non-GAAP financial measures we use are specific to AVANGRID and the non-GAAP financial measures of other companies may not be calculated in the same manner. We use these non-GAAP financial measures, in addition to U.S. GAAP measures, to establish operating budgets and operational goals to manage and monitor our business, evaluate our operating and financial performance and to compare such performance to prior periods and to the performance of our competitors. We believe that presenting such non-GAAP financial measures is useful because such measures can be used to analyze and compare profitability between companies and industries because it eliminates the impact of financing and certain non-cash charges. In addition, we present non-GAAP financial measures because we believe that they and other similar measures are widely used by certain investors, securities analysts and other interested parties as supplemental measures of performance.

We define adjusted EBITDA as net income attributable to AVANGRID, adding back income tax expense, depreciation, amortization, impairment of non-current assets and interest expense, net of capitalization, and then subtracting other income and earnings from equity method investments. We define adjusted net income as net income adjusted to reflect the full 12-month period of results for UIL and to exclude gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, mark-to-market adjustments to reflect the effect of mark-to-market changes in the fair value of derivative instruments used by AVANGRID to economically hedge market price fluctuations in related underlying physical transactions for the purchase and sale of electricity and adjustments for the non-core Gas storage business, for which we are exploring strategic options. We believe adjusted net income is more useful in understanding and evaluating actual and projected financial performance and contribution of AVANGRID core lines of business and to more fully compare and explain our results. Additionally, we evaluate the nature of our revenues and expenses and adjust to reflect classification by nature for evaluation of our non-GAAP financial measures

as opposed to by function. The most directly comparable U.S. GAAP measure to adjusted EBITDA and adjusted net income is net income. We also define adjusted gross margin as adjusted EBITDA adding back operations and maintenance and taxes other than income taxes and then subtracting transmission wheeling. We also define adjusted EPS as adjusted net income converted to an earnings per share amount.

The use of non-GAAP financial measures is not intended to be considered in isolation or as a substitute for, or superior to, AVANGRID's U.S. GAAP financial information, and investors are cautioned that the non-GAAP financial measures are limited in their usefulness, may be unique to AVANGRID, and should be considered only as a supplement to AVANGRID's U.S. GAAP financial measures. The non-GAAP financial measures may not be comparable to other similarly titled measures of other companies and have limitations as analytical tools.

Non-GAAP financial measures are not primary measurements of our performance under U.S. GAAP and should not be considered as alternatives to operating income, net income or any other performance measures determined in accordance with U.S. GAAP.

Reconciliation of the Net Income attributable to AVANGRID to adjusted EBITDA (non-GAAP) and adjusted gross margin (non-GAAP) before reflecting the full 12-month period of results for UIL, excluding gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, impact from mark-to-market activities in Renewables and Gas storage business, and before adjustments to reflect the classification of revenues and expenses by nature for the years ended December 31, 2016, 2015 and 2014, respectively, is as follows:

Years Ended December 31, (Millions)	2016	2015	2014
Net Income Attributable to Avangrid, Inc.	\$ 630	\$ 267	\$ 424
Add: Income tax expense	379	34	282
Depreciation and amortization	804	695	629
Impairment of non-current assets	—	12	25
Interest expense, net of capitalization	268	267	243
Less: Other income	76	55	52
Earnings from equity method investments	7	—	12
Adjusted EBITDA (2)	\$ 1,998	\$ 1,220	\$ 1,539
Add: Operations and maintenance (1)	2,206	1,808	1,560
Taxes other than income taxes	528	367	314
Less: Transmission wheeling (1)	260	149	143
Adjusted gross margin (2)	\$ 4,472	\$ 3,246	\$ 3,270

- (1) Transmission wheeling is a component of operations and maintenance and is considered a component of adjusted gross margin because it is directly associated with the power supply costs included in the cost of sales.
- (2) Adjusted EBITDA and adjusted gross margin are non-GAAP financial measures and are presented before reflecting the full 12-month period of results for UIL results, excluding gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, impact from mark-to-market activities in Renewables and Gas storage business, and before adjustments to reflect the classification of revenues and expenses by nature. For additional details of these adjustments and reconciliation of net income to adjusted EBITDA and adjusted gross margin that reflect these adjustments see the table on pages 70-71 of this Annual Report on Form 10-K.

The following tables set forth our adjusted EBITDA and adjusted gross margin by segment for each of the periods indicated and as a percentage of operating revenues:

Year Ended December 31, 2016

	Total	Networks	Renewables	Gas	Other(1)
			(in millions)		
Adjusted gross margin (2)	\$ 4,472	\$ 3,596	\$ 863	\$ 33	\$ (20)
Adjusted gross margin %		71 %	85 %	103 %	34 %
Adjusted EBITDA (2)	\$ 1,998	\$ 1,551	\$ 462	\$ (15)	\$ —
Adjusted EBITDA %		31 %	46 %	(47) %	58 %

Year Ended December 31, 2015

	Total	Networks	Renewables	Gas	Other(1)
	(in millions)				
Adjusted gross margin (2)	\$ 3,246	\$ 2,417	\$ 865	\$ (20)	\$ (16)
Adjusted gross margin %		71%	81%	105%	24%
Adjusted EBITDA (2)	\$ 1,220	\$ 865	\$ 456	\$ (62)	\$ (39)
Adjusted EBITDA %		26%	43%	326%	59%

Year Ended December 31, 2014

	Total	Networks	Renewables	Gas	Other(1)
	(in millions)				
Adjusted gross margin (2)	\$ 3,270	\$ 2,199	\$ 997	\$ 83	\$ (9)
Adjusted gross margin %		65%	84%	99%	12%
Adjusted EBITDA (2)	\$ 1,539	\$ 891	\$ 613	\$ 38	\$ (3)
Adjusted EBITDA %		26%	52%	45%	4%

(1) Other amounts represent corporate and company eliminations.

(2) Adjusted EBITDA and adjusted gross margin are non-GAAP financial measures and are presented before reflecting the full 12-month period of results for UIL results, excluding gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, impact from mark-to-market activities in Renewables and Gas storage business, and before adjustments to reflect the classification of revenues and expenses by nature. For additional details of these adjustments and reconciliation of net income to adjusted EBITDA and adjusted gross margin that reflect these adjustments see the table on pages 70-71 of this Annual Report on Form 10-K.

Comparison of Period to Period Results of Operations

Our adjusted gross margin increased by \$1.3 billion, or 39%, from \$3.2 billion for the year ended December 31, 2015, to \$4.5 billion for the year ended December 31, 2016.

Our adjusted EBITDA increased by \$778 million, or 64%, from \$1.2 billion for the year ended December 31, 2015 to \$1.9 billion for the year ended December 31, 2016.

Details of the period to period comparison are described below at the segment level.

Year Ended December 31, 2016 Compared to the Year Ended December 31, 2015

Networks

Adjusted gross margin for the year ended December 31, 2016, increased by \$1.2 billion from \$2.4 billion for the year ended December 31, 2015, to \$3.6 billion. The increase is associated primarily with the addition of UIL, which added \$1.0 billion of gross margin. Underlying margins increased by \$172 million. Although volume of both sales and purchased power were lower due to the mild winter in 2016, purchased power rates decreased comparatively more, due to declines in market prices in 2016, which, combined with increases in regulatory recoveries including the \$126 million unfunded future income tax adjustment and impacts of the rate case activities, increased margins in 2016, partly offset by increases in the cost of transmission wheeling year over year.

Adjusted EBITDA for the year ended December 31, 2016, increased by \$686 million or 79% from \$865 million for the year ended December 31, 2015, to \$1.6 billion. UIL added \$493 million of adjusted EBITDA in 2016, with underlying business adjusted EBITDA increasing by \$193 million for the year ended December 31, 2016, as compared to the same period of 2015. The increase was due to the same reasons discussed above for adjusted gross margin, partly offset by an increase in operations and maintenance expenses for transmission system reliability support.

Renewables

Adjusted gross margin for the year ended December 31, 2016, decreased by \$2 million or less than 1% from \$865 million for the year ended December 31, 2015, to \$863 million. The decrease was primarily due to \$5 million in unfavorable MtM changes on derivatives in 2016 compared to 2015 and a \$2 million decrease in thermal results on lower merchant prices not offset by lower fuel

costs. Underlying gross margin on wind and solar increased by \$4 million due to increased production of 642 GWh or 5% with average prices 4% lower due to expiring contracts resulting in more generation being sold merchant.

Adjusted EBITDA for the year ended December 31, 2016, increased by \$6 million or 1% from \$456 million for the year ended December 31, 2015, to \$462 million. The increase was due primarily to lower operations and maintenance expenses, related to reductions in bad debts expense recorded in 2015 not recurring in 2016 and lower asset retirement obligation expenses.

Gas

Adjusted gross margin for the year ended December 31, 2016, increased by \$53 million, or 265%, from negative \$20 million for the year ended December 31, 2015, to \$33 million. The increase is associated with the increase in operating revenues due to favorable movement in spreads in the owned storage and gas transportation areas in 2016 as compared to 2015.

Adjusted EBITDA for the year ended December 31, 2016 increased by \$47 million, or 76%, from negative \$62 million for the year ended December 31, 2015, to negative \$15 million. The increase was due primarily to the same reasons discussed above for adjusted gross margin offset by operations and maintenance expense increases in 2016 resulting from higher credit support costs and external services.

Year Ended December 31, 2015 Compared to the Year Ended December 31, 2014

Networks

Adjusted gross margin for the year ended December 31, 2015, increased by \$218 million, from \$2.2 billion for the year ended December 31, 2014, to \$2.4 billion. The increase is associated primarily with the decrease of purchased power by \$189 million due to a decrease in the market price of electricity in 2015, with 2014 prices being higher due to colder temperatures causing less efficient generation to be used, increasing the marginal price of electricity. The remaining difference represents the cost of transmission wheeling year over year.

Adjusted EBITDA for the year ended December 31, 2015, decreased by \$26 million or 3% from \$891 million for the year ended December 31, 2014, to \$865 million. The decrease is primarily due to the reasons discussed above regarding adjusted gross margin and increase in operations and maintenance with the main drivers being increased spending in 2015 on reliability support services.

Renewables

Adjusted gross margin for the year ended December 31, 2015, decreased by \$132 million or 13% from \$997 million for the year ended December 31, 2014, to \$865 million. The decrease was due primarily to a reduction in output from our renewable generation facilities, which were 592 GWh lower, and lower merchant prices with a resulting reduction of \$70 million, unfavorable results from power trading activities of \$34 million, due to reduced trading opportunities created by lower price volatility in the northwest markets and a decrease of \$9 million attributable to unrealized losses from changes in fair value of energy derivative transactions entered into for economic hedging purposes.

Adjusted EBITDA for the year ended December 31, 2015, decreased by \$157 million or 26% from \$613 million for the year ended December 31, 2014, to \$456 million. The increase was due primarily to the same reasons discussed above for adjusted gross margin.

Gas

Adjusted gross margin for the year ended December 31, 2015, decreased by \$103 million, or 124%, from \$83 million for the year ended December 31, 2014, to negative \$20 million. The decrease is associated with the decrease in operating revenues due to \$105 million in changes relating to change in value of derivatives, with unrealized losses in 2015 compared to unrealized gains in 2014.

Adjusted EBITDA for the year ended December 31, 2015 decreased by \$100 million, or 263%, from \$38 million for the year ended December 31, 2014 to negative \$62 million. The decrease was due primarily to the same reasons discussed above for adjusted gross margin.

The following table provides a reconciliation between Net Income attributable to AVANGRID and adjusted gross margin (non-GAAP) and adjusted EBITDA (non-GAAP) by segment after the full 12-month period of results for UIL, excluding gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, impact from mark-to-market

activities in Renewables and Gas storage business, and after adjustments to reflect the classification of revenues and expenses by nature for the years ended December 31, 2016, 2015 and 2014, respectively:

- (1) Income tax impact of adjustments: \$14 million from sale of equity method investment, \$1 million from sale of other investment, \$(1) million on impairment of investment and \$8 million from MtM adjustment for the year ended December 31, 2016. Income tax impact of \$54 million and \$3 million relate to merger costs for the years ended December 31, 2015 and 2014, respectively. Income tax impact of \$9 million and \$13 million relate to MtM adjustment for the years ended December 31, 2015 and 2014, respectively.
- (2) In addition to adjustments to include a full 12-month period of results for UIL, adjustments have been made for production tax credit for the amount of \$34 million, \$33 million and \$28 million for the years ended December 31, 2016, 2015 and 2014, as they have been included in operating revenues in Renewables based on the by nature classification. Additionally, \$126 million for unfunded future income taxes have been reclassified from revenues based on the by nature classification in Networks for the year ended December 31, 2015.
- (3) In addition to adjustments to include a full 12-month period of results for UIL, adjustments have been made for the inclusion of vehicle depreciation of \$22 million, \$14 million and \$16 million and bad debt provision of \$50 million, \$48 million and \$87 million in Networks within depreciation and amortization from operations and maintenance based on the by nature classification for the years ended December 31, 2016, 2015 and 2014, respectively. Additionally, government grants of \$6.6 million and \$6.8 million in Networks and investment tax credits amortization of \$91 million and \$103 million in Renewables have been presented within other operating income and not within depreciation and amortization based on the by nature classification for the years ended December 31, 2016 and 2015, respectively.
- (4) In addition to adjustments to include a full 12-month period of results for UIL, adjustments have been made for allowance for funds used during construction, debt portion, to reflect these amounts within other income and expenses in Networks for the years ended December 31, 2016, 2015 and 2014, respectively.
- (5) In addition to adjustments to include a full 12-month period of results for UIL, adjustments have been made for regulatory amounts to reflect amounts in revenues based on the by nature classification of these items. In addition, the vehicle depreciation and bad debt provision have been reflected within depreciation and amortization in Networks.
- (6) Adjusted EBITDA and adjusted gross margin are non-GAAP financial measures and are presented after reflecting the full 12-month period of results for UIL, excluding gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, impact from mark-to-market activities in Renewables and Gas storage business, and after adjustments to reflect the classification of revenues and expenses by nature explained in notes (1)-(5) above.

* Includes corporate and other non-regulated entities.

The following tables provide a reconciliations between Net Income attributable to AVANGRID and Adjusted Net Income (non-GAAP), and EPS attributable to AVANGRID and adjusted EPS (non-GAAP) after reflecting the full 12- month period of results for UIL, excluding gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, impact from mark-to-market activities in Renewables and Gas storage business, for the years ended December 31, 2016, 2015 and 2014, respectively:

(1) Includes corporate and other non-regulated entities.

(2) Mark-to-market adjustments relate to changes in the fair value of derivative instruments used by AVANGRID to economically hedge market price fluctuations in related underlying physical transactions for the purchase and sale of electricity and gas.

(3) Adjusted net income and adjusted earnings per share are non-GAAP financial measures and are presented after reflecting the full 12-month period of results for UIL, excluding gain on the sale of equity method and other investment, impairment of investment, costs related to the merger with UIL, impact from mark-to-market activities in Renewables and Gas storage business.

Liquidity and Capital Resources

Our operations, capital investment and business development require significant short-term liquidity and long-term capital resources. Historically, we have used cash from operations, and borrowings under our credit facilities and commercial paper programs as our primary sources of liquidity. Our long-term capital requirements have been met primarily through retention of earnings, equity contributions from Iberdrola and borrowings in the investment grade debt capital markets. Continued access to these sources of liquidity and capital are critical to us. Risks may increase due to circumstances beyond our control, such as a general disruption of the financial markets and adverse economic conditions.

Liquidity Resources

At December 31, 2016, we had cash and cash equivalents of \$91 million, as compared to \$427 million at December 31, 2015. In addition to cash on hand, we and our subsidiaries have access to committed credit facilities totaling \$1.5 billion. See discussion of AVANGRID commercial paper program and AVANGRID credit facility below.

We optimize our liquidity within the United States through a series of arms'-length intercompany lending arrangements with our subsidiaries and among our regulated utilities to provide for lending of surplus cash to subsidiaries with liquidity needs, subject to the limitation that the regulated utilities may not lend to unregulated affiliates.

We manage our overall liquidity position as part of the group of companies controlled by Iberdrola, or the Iberdrola Group, and are a party to a notional cash pooling agreement with Bank Mendes Gans, N.V., BMG, along with other members of the Iberdrola Group. The notional cash pooling agreement aids the Iberdrola Group in efficient cash management and reduces the need for external borrowing by the pool participants. Parties to the agreement, including us, may deposit funds with or borrow from BMG, provided that the net balance of funds deposited or borrowed by all pool participants in the aggregate is not less than zero. Deposits are available for next day withdrawal. Deposit in the cash pooling account was \$353 million at December 31, 2015. In advance of the United Kingdom "BREXIT" vote, we took steps to reposition our liquidity and our deposits with BMG were withdrawn and reinvested in money market accounts. The BMG balance at December 31, 2016 was zero. The deposit amounts are reflected in our consolidated balance sheet under cash and cash equivalents because our deposited surplus funds under the cash pooling agreement are highly-liquid short-term investments. We also have a bi-lateral demand note agreement with a Canadian affiliate of the Iberdrola Group under which we had notes payable balance outstanding of \$10 million at December 31, 2016.

AVANGRID Commercial Paper Program

On May 13, 2016, AVANGRID established a commercial paper program with a limit of \$1 billion that is backstopped by the AVANGRID credit facility (described below). As of December 31, 2016 and March 9, 2017, there was \$150 million and \$300 million of commercial paper outstanding, respectively.

AVANGRID Credit Facility

On April 5, 2016, AVANGRID and its subsidiaries, NYSEG, RG&E, CMP, UI, CNG, SCG and BGC entered into a revolving credit facility with a syndicate of banks, or the AVANGRID Credit Facility, that provides for maximum borrowings of up to \$1.5 billion in the aggregate. Since the facility is a backstop to the AVANGRID commercial paper program, the amounts available under the facility at December 31, 2016 and March 9, 2017, were \$1,350 million and \$1,200 million, respectively.

Under the terms of the AVANGRID Credit Facility, each joint borrower has a maximum borrowing entitlement, or sublimit, which can be periodically adjusted to address specific short-term capital funding needs, subject to the maximum limit established by the banks. AVANGRID's maximum sublimit is \$1 billion, NYSEG, RG&E, CMP and UI have maximum sublimits of \$250 million, CNG, and SCG have maximum sublimits of \$150 million and BGC has a maximum sublimit of \$25 million. Under the AVANGRID credit facility, each of the borrowers will pay an annual facility fee that is dependent on their credit rating. The facility fees will range from 10.0 to 17.5 basis points. The maturity date for the AVANGRID credit facility is April 5, 2021.

As a condition of closing on the AVANGRID credit facility, three existing credit facilities were terminated: i) the AVANGRID revolving credit facility which provided for maximum borrowings of up to \$300 million and had a scheduled termination date in May 2019; ii) a joint utility revolving credit facility, to which NYSEG, RG&E and CMP were parties, which provided for borrowings of up to \$600 million and which had a scheduled termination date in July 2018; iii) the UIL credit facility, to which UIL, UI, SCG, CNG and BGC were parties, which provided for maximum borrowings of \$400 million and which had a scheduled termination date in November 2016. At December 31, 2015, no amounts were outstanding under the AVANGRID revolving credit facility, and the joint utility revolving credit facility, and there was \$160 million outstanding under the UIL credit facility.

Long-Term Capital Resources

We expect to meet our long-term capital requirements through the use of our cash balances, credit facilities, cash from operations, and long-term borrowing. We have investment grade ratings from Standard and Poor's, Moody's and Fitch and we believe that we can raise capital on competitive terms in the investment grade debt capital and/or bank markets.

In November 2016, NYSEG issued \$500 million principal amount of senior unsecured notes bearing a coupon of 3.25% and a December 1, 2026 maturity date. The notes were priced at a discount to yield 3.335%. Net proceeds of the offering after the price discount and underwriters' discount were \$493 million.

At December 31, 2016, we had \$4,307 million of long-term debt (including the current portion thereof) outstanding in the Networks segment consisting of first mortgage bonds, senior unsecured notes, tax-exempt bonds and various other forms of debt. Network's regulated utilities are required by regulatory order to maintain a minimum ratio of common equity to total capital that is tied to the capital structure used in the establishment of their revenue requirements. Pursuant to these requirements, each of NYSEG, RG&E, CMP and MNG must maintain a minimum equity ratio equal to the ratio in its currently effective rate plan or decision measured using a trailing 13-month average. On a monthly basis, each utility must maintain a minimum equity ratio of no less than 300 basis points below the equity ratio used to set rates. Networks' regulated utilities were in compliance with these regulatory orders as of December 31, 2016. UI, SCG, CNG and BGC are restricted from paying dividends if paying such dividend would result in their respective common equity ratio being lower than 300 basis points below the equity percentage used to set rates in the most recent distribution rate proceeding as measured using a trailing 13-month average calculated as of the most recent quarter end. The regulated utilities periodically pay dividends to, or receive capital contributions from AVANGRID, in order to maintain the minimum equity ratio requirement. They each independently incur indebtedness by issuing investment grade debt securities.

At December 31, 2016, we had \$70 million of long-term debt (including the current portion thereof) outstanding in the Renewables segment consistently principally of a sale-leaseback arrangement on a solar generation facility. Renewables has historically been financed primarily with equity contributions from Iberdrola. The last such contribution of \$800 million was made in February 2013. Renewables has also sourced capital through tax equity financing arrangements associated with particular wind farm projects. The arrangements allocate tax losses and production tax credits to the tax equity investor in exchange for an initial contribution. The obligations created under the tax equity financing arrangements are recorded as a liability with an aggregate balance of \$199 million, of which \$96 million is current, at December 31, 2016.

At December 31, 2016, we had \$470 million and \$12 million of long-term debt (including the current portion thereof) outstanding in the corporate and Gas, respectively. Long-term debt in the corporate consists principally of \$450 million of 4.625% notes due in 2020 originally issued by UIL in 2010. The obligations relating to those notes were transferred to Avangrid, Inc. in December 2016. For further details see details Note 10 and Note 3 of Schedule I of our audited consolidated financial statements for the three years ended December 31, 2016, which are incorporated herein by reference.

In our credit facilities, long-term borrowing and tax-equity partnerships, we and our affiliates that are parties to the agreements are subject to covenants that are standard for such agreements. Affirmative covenants impose certain obligations on the borrower and negative covenants limit certain activities by the borrower. The agreements also define certain events of default, including but not limited to non-compliance with the covenants that may automatically in some circumstances, or at the option of the lenders in other circumstances, trigger acceleration of the obligations. We and our affiliates were in compliance with all such covenants at December 31, 2016.

Capital Requirements

Funding Future Common Dividend Payments

We expect to fund any quarterly shareholder dividends primarily from the cash provided by operations of our businesses in the future. We have a revolving credit facility, as described above, to fund short-term liquidity needs and we believe that we will have access to the capital markets should additional, long-term growth capital be necessary.

Capital Expenditures

The regulated utilities' capital expenditures over the last three years have been as follows:

	2016	2015	2014
	(in millions)		
NYSEG	\$ 282	\$ 259	\$ 247
RG&E	268	157	181
CMP (non-MPRP(1))	207	120	172
CMP (MPRP)	—	108	112
MNG	3	3	15
UI	170	187	142
SCG	54	62	64
CNG	73	62	55
BGC	17	16	13
Total	\$ 1,074	\$ 974	\$ 1,001

(1) MPRP refers to the Maine Power Reliability Program.

Renewables' capital expenditures for the years set forth below were as follows:

	2016	2015	2014
	(in millions)		
Wind & solar	\$ 751	\$ 58	\$ 270
Thermal	8	11	14
Corporate(1)	7	8	9
Total capital expenditures	766	77	293

(1) Includes information technology and facilities and safety (security).

Capital expenditures have remained relatively flat across Networks during the period from 2014 to 2016.

Renewables also made capital investments during this three-year period. In 2016 there were capital expenditures of \$728 million on construction of the Amazon Wind Farm US - East (formerly Desert Wind) and other wind assets, \$8 million in capital expenditures on the Klamath gas-fired cogeneration facility, or the Klamath Plant, \$10 million on improvements to operating wind assets and \$13 million in development costs.

In 2015 there were capital expenditures of \$73 million on construction of the Amazon Wind Farm US - East (formerly Desert Wind) and other wind assets, \$11 million in capital expenditures on the Klamath Plant, \$31 million on improvements to operating wind assets and \$9 million in development costs.

In 2014 there were capital expenditures of \$257 million primarily for construction of the Baffin Bay wind asset, \$14 million for capital expenditures on the Klamath gas-fired cogeneration facility, or the Klamath Plant, \$14 million on improvements to operating wind assets and \$13 million in development costs, partially offset by \$16 million in net refunds of wind turbine deposits.

Capital Improvement Projects

An important part of our business strategy involves capital improvement projects. Through Networks we plan to invest a total of approximately \$7.8 billion from 2017 to 2021 to upgrade and expand electricity and natural gas transmission and distribution infrastructure. In the next 12 months, CMP plans to invest \$204 million, including the program to complete the Lewiston Loop project, which complements the already completed MPRP, a project which enhanced the bulk power transmission grid in Maine. In addition, CMP plans to continue developing its new customer relationship management and billing system and new transmission investments in the Maine Electric Power Corporation, or MEPCO, 388 rebuild. NYSEG plans to invest \$336 million in the next 12 months, including a number of programs disclosed in Appendix P Schedule I of the proposal dated June 15, 2016, the most relevant ones: The FERC Bright Line project, Auburn transmission project, Columbia County transmission project, Gas Distribution Mains and Leak Prone Main replacement. RG&E plans to invest \$299 million in the next 12 months, including a number of programs disclosed in Appendix P Schedule I of the proposal dated June 15, 2016, the most relevant ones: The FERC Bright Line, Rochester Area Reliability Project (RARP), Ginna Retirement Transmission Alternative (GRTA), Station 23 - New Downtown 115kV source,

Gas Distribution Mains and Leak Prone Main replacement. UIL plans to invest \$393 million in the next 12 months, including a number of programs disclosed in the UI-Distribution PURA Order dated December 14 2016 related to new customers, system and corrective reliability, system resiliency, infrastructure replacement (substations and distribution system), and system operations. The most relevant investment for CNG will be the Rocky Hill Liquefied Natural Gas, or LNG, Plant Liquefaction System Replacement Project.

On July 24, 2015, UIL announced its participation in Tennessee Gas Pipeline Company LLC's, or TGP, proposed Northeast Energy Direct project, or NED pipeline, through an acquisition of a 2.5% equity interest in Northeast Expansion LLC. Northeast Expansion LLC is a joint venture between an affiliate of Kinder Morgan, Inc., or Kinder Morgan, and Liberty Utilities Corp., which had planned to construct and own the NED pipeline, a new, "market path" natural gas pipeline segment of approximately 188 miles from Wright, New York, to Dracut, Massachusetts. In addition, as a condition to making this investment, UIL entered into a 20-year precedent agreement with TGP for pipeline capacity of 70,000 DTh/day on the NED pipeline, which capacity commitment, under the terms of the precedent agreement, would be reduced in the event that TGP enters into additional precedent agreements with third parties for capacity on the NED pipeline. In April 2016, citing inadequate capacity commitments from prospective customers, TGP elected to suspend all activities on the NED pipeline.

Through Renewables we plan to invest a total of approximately \$4.0 billion from 2017 to 2021 in order to add 2,000 MWs of generation capacity. 601 MW are approved for construction in 2017 and 2018 and these projects have long-term associated PPA contracts.

We expect to fund these capital improvement projects through a combination of retained earnings, cash provided by operations, and access to the capital markets, including debt borrowings at either the subsidiary or holding company level. Additionally, we have a revolving credit facility, as described above, to fund short-term liquidity needs.

Cash Flows

Our cash flows depend on many factors, including general economic conditions, regulatory decisions, weather, commodity price movements, and operating expense and capital spending control.

The following is a summary of the cash flows by activity for the years ended December 31, 2016, 2015 and 2014:

	Year Ended December 31,		
	2016	2015	2014
	<i>(in millions)</i>		
Cash Flows			
Net cash from operating activities	\$ 1,561	\$ 1,363	\$ 1,331
Net cash used in investing activities	(1,527)	(1,518)	(888)
Net cash (used in) from financing activities	(372)	102	(180)
Net (decrease) increase in cash, cash equivalents and restricted cash	\$ (338)	\$ (53)	\$ 263

Operating Activities

Our primary sources of operating cash inflows are proceeds from transmission and distribution of electricity and natural gas, sales of wholesale energy and energy related products and services, and natural gas revenues from natural gas storage services. Our primary operating cash outflows are power and natural gas purchases and transmission operating and maintenance expenses, as well as personnel costs and other employee-related expenditures. As our business has expanded, our working capital requirements have grown. We expect our working capital to grow as we continue to grow our business.

In 2016, net cash provided by operating activities was \$1.6 billion. During the period, Renewables contributed \$420 million of operating cash flow associated with wholesale sales of energy, Networks contributed \$1.0 billion of operating cash as the result of regulated transmission and distribution sales of electricity and natural gas, and Gas used \$17 million in cash associated with losses on marketing of wholesale gas and gas storage services. Additionally, \$82 million in cash was provided in support of the operating segments and changes in working capital provided \$40 million in cash. The cash from operating activities in 2016 compared to 2015 increased by \$198 million, primarily attributable to the increased operating revenues. The \$338 million net change in operating assets and liabilities in 2016 was primarily attributable to a net increase of \$26 million in accounts receivable and payable due to impacts from sales and purchases, cash distributions from equity method investments of \$14 million, offset by net decrease of \$340 million in other assets/liabilities, decrease in inventories of \$46 million and regulatory assets/liabilities of \$81 million.

In 2015, net cash provided by operating activities was approximately \$1.4 billion. During the period, Renewables contributed \$531 million of operating cash associated with wholesale sales of energy, Networks contributed \$867 million of operating cash as the result of regulated transmission and distribution sales of electricity and natural gas, and Gas used cash of \$42 million associated with gains on marketing of wholesale gas and gas storage services. We used \$5 million in cash associated with operating expenses in support of our segments. In addition, changes in working capital contributed \$12 million in cash. The cash from operating activities for the year ended December 31, 2015, compared to the year ended December 31, 2014, increased by \$30 million and this is primarily driven by a slight increase in Networks revenues. The \$19 million net change in our net operating assets and liabilities during the year ended December 31, 2015, was primarily attributable to a decrease in inventory costs driven by a decrease in inventory levels of \$4 million, partially offset by environmental cost deferrals of \$32 million.

In 2014, net cash provided by operating activities was approximately \$1.3 billion. During the period, Renewables contributed \$724 million of operating cash associated with wholesale sales of energy, Networks contributed \$734 million of operating cash as the result of regulated transmission and distribution sales of electricity and natural gas, and Gas contributed cash of \$17 million associated with gains on marketing of wholesale gas and gas storage services. We used \$60 million in cash associated with operating expenses in support of our segments. In addition, changes in working capital used \$84 million in cash. The cash from operating activities for the year ended December 31, 2014, compared to the year ended December 31, 2013, increased by \$154 million and this is primarily driven by the increased revenues at Renewables due to increase in wind source, prices, power trading activities and abundant hydro conditions as well as Gas due to lower gas prices. The \$35 million net change in our net operating assets and liabilities during the year ended December 31, 2014, was primarily attributable to a decrease in inventory costs driven by a decrease in inventory levels of \$58 million, partially offset by storm cost deferrals of \$20 million.

Investing Activities

Our investing activities have primarily focused on enhancing, automating, and reinforcing the asset base to support safety, reliability, and customer growth in accordance with the regulatory markets within which we operate, as well as constructing solar and wind assets and spending on gas generation assets. The increase in cash outflows related to capital expenditures in 2016 was largely due to the inclusion of UIL, which was not in the comparable period, adding \$356 million. The cost of investments has been offset, partially, by contributions in aid of construction and proceeds from the sale of equity investments in 2016.

In 2016, net cash used in investing activities was \$1.5 billion, which was comprised of \$1.1 billion associated with capital expenditures at Networks and \$561 million of capital expenditures at Renewables primarily associated with payments in support of the Amazon Wind Farm US - East (formerly Desert Wind) construction project and safe harbor payments for turbines. This was offset by \$69 million of contributions in aid of construction, proceeds of \$57 million from the sale of our equity method investment in Iroquois and other investment, \$43 million from asset sale to the New York TransCo and \$7 million from sale of property.

In 2015, the cash used in investing activities was \$1.5 billion, compared to \$888 million in 2014. The increase in 2015 compared to 2014 is primarily related to cash paid for acquisition of UIL (net of cash acquired) of \$547 million. The cash outflows related to capital expenditures for Networks were \$773 million in 2015 and \$775 million in 2014. The remaining capital expenditure related cash outflows in 2015 represent principally capital expenditures in Renewables of \$304 million. This amount is driven by significant progress in construction of the Baffin Bay wind asset in 2014. Under a turbine supply agreement, with Gamesa, payment for the supplied turbines did not take place until first quarter of 2015.

Financing Activities

Our financing activities have primarily consisted of using our credit facilities and long-term debt issued or redeemed by our regulated Networks subsidiaries.

In 2016, cash used in financing activities was \$372 million reflecting primarily an increase in non-current notes payable of \$493 million less maturities and redemptions of \$355 million, \$88 million in payments on the tax equity financing arrangements, repurchase of common stock of \$5 million and dividends of \$401 million.

In 2015, cash provided by financing activities was \$102 million reflecting primarily a net increase in non-current notes payable of \$350 million less maturities of \$141 million and \$102 million in payments on the tax equity financing arrangements.

In 2014, cash used in financing activities was \$180 million reflecting primarily maturities of notes payable and \$119 million in payments on the tax equity financing arrangements.

Contractual Obligations

As of December 31, 2016, our contractual obligations (excluding any tax reserves) were as follows:

	Total	2017	2018	2019	2020	2021	Thereafter
	<i>(in millions)</i>						
Operating leases(1)	\$ 703	\$ 106	\$ 28	\$ 28	\$ 26	\$ 28	\$ 487
Projected future pension benefit plan contributions(2)	151	33	51	54	13	—	—
Long-term debt (including current maturities)(3)	4,859	349	180	358	723	308	2,941
Interest payments(4)	2,371	222	205	186	169	141	1,448
Material purchase commitments(5)	2,587	487	376	287	238	191	1,008
Total Contractual Obligations	\$ 10,671	\$ 1,197	\$ 840	\$ 913	\$ 1,169	\$ 668	\$ 5,884

- (1) Represents lease contracts relating to operational facilities, office building leases, and vehicle and equipment leases. These amounts represent our expected portion of the costs to pay as amounts related to contingent payments are predominantly linked to electricity generation at the respective facilities. Obligations under operating lease significantly decrease from 2016 onwards as commitments on Cayuga and Ginna facilities are scheduled to terminate from 2017.
- (2) The qualified pension plans' contributions are generally based on the estimated minimum pension contributions required under the Employee Retirement Income Security Act of 1974, as amended, and the Pension Protection Act of 2006, as well as contributions necessary to avoid benefit restrictions and at-risk status and agreements with state regulatory agencies. These amounts represent estimates that are based on assumptions that are subject to change. The minimum required contributions for years after 2020 are not included as projection beyond 2020 are not available.
- (3) Includes obligations under capital leases. See debt payment discussion in "Long-term Capital Resources."
- (4) Interest payments are estimated based on final maturity dates of debt securities outstanding at December 31, 2016, and do not reflect anticipated future refinancing, early redemptions or debt issuances. Variable rate interest obligations are estimated based on rates as of December 31, 2016
- (5) Represents forward purchase commitments under power, gas, and other arrangements.

Critical Accounting Policies and Estimates

The financial statements provided herein have been prepared in accordance with U.S. GAAP and include the accounts of AVANGRID.

In preparing the accompanying financial statements, our management has made certain estimates and assumptions that affect the reported amounts of assets, liabilities, shareholder's equity, revenues and expenses, and the disclosures thereof. Our management recorded the net assets of ARHI in these consolidated financial statements at the historical accounting basis of AVANGRID. The historical accounting basis of AVANGRID includes purchase accounting adjustments related to AVANGRID's acquisition of ARHI in 2007. Prior to the 2013 reorganization of AVANGRID, Networks was not considered to be a substantive operating entity as it did not hold any direct operations and had always been a part of AVANGRID. As a result, the net assets of Networks in these consolidated financial statements are recorded at the historical accounting basis of AVANGRID, which do not include purchase accounting adjustments related to Iberdrola, S.A.'s acquisition of AVANGRID in 2008.

Revision of estimated useful lives of wind power station assets at Renewables

Renewables' wind power station assets in service less salvage value, if any, are depreciated using the straight-line method over their estimated useful lives. Renewables' effective depreciation rate, excluding decommissioning, was 4.0% in both 2015 and 2014. Renewables reviews the estimated useful lives of its fixed assets on an ongoing basis. In the first quarter of 2016, this review indicated that the actual lives of certain assets at wind power stations are expected to be longer than the previously estimated useful lives used for depreciation purposes. As a result, effective January 1, 2016, Renewables changed the estimates of the useful lives of certain assets from 25 years to 40 years, capped at the lease term if lower, to better reflect the estimated periods during which these assets are expected to remain in service. The weighted average useful life of our wind farm assets is now approximately 31 years. We are continuing to assess lease extensions with leaseholders to potentially increase the average useful life of our wind farm assets to more than 31 years. The effect of this change in estimate was to reduce depreciation and amortization expense by approximately \$52 million, reduce asset retirement obligation accretion expense recorded within operations and maintenance by approximately \$3 million, increase earnings from equity method investments by approximately \$4 million, increase income before income tax and net income by approximately \$59 million and approximately \$36 million, respectively, and increase basic and diluted earnings per share by approximately \$0.12 for the year ended December 31, 2016.

Accounting for Regulated Public Utilities

U.S. GAAP allows regulated entities to give accounting recognition to the actions of regulatory authorities. In order to apply such regulatory accounting treatment and record regulatory assets and liabilities, certain criteria must be met. In determining whether

the criteria are met for our operations, our management makes significant judgments, which involve (i) determining whether rates for services provided to customers are subject to approval by an independent, third-party regulator, (ii) determining whether the regulated rates are designed to recover specific costs of providing the regulated service, (iii) considering relevant historical precedents and recent decisions of the regulatory authorities and (iv) considering the fact that decisions made by regulatory commissions or legislative changes at a later date could vary from earlier interpretations made by management and that the impact of such variations could be material. Our regulated subsidiaries have deferred recognition of costs (a regulatory asset) or have recognized obligations (a regulatory liability) if it is probable that such costs will be recovered or obligations relieved in the future through the ratemaking process. Management regularly reviews our regulatory assets and liabilities to determine whether adjustments to its previous conclusions are necessary based on the current regulatory environment as well as recent rate orders. If our regulated subsidiaries, or a portion of their assets or operations, were to cease meeting the criteria for application of these accounting rules, accounting standards for businesses in general would become applicable and immediate recognition of any previously deferred costs would be required in the year in which such criteria are no longer met.

Accounting for Pensions and Other Post-retirement Benefits

We provide pensions and other post-retirement benefits for a significant number of employees, former employees and retirees. We account for these benefits in accordance with the accounting rules for retirement benefits. In accounting for its pension and other post-retirement benefit plans, or the AVANGRID plans, assumptions are made regarding the valuation of benefit obligations and the performance of plan assets. Delayed recognition of differences between actual results and those assumed allows for a smoother recognition of changes in benefit obligations and plan performance over the working lives of the employees who benefit under the AVANGRID plans. The primary assumptions include the discount rate, the expected return on plan assets, health care cost trend rate, mortality assumptions and demographic assumptions. We apply consistent estimation techniques regarding our actuarial assumptions, where appropriate, across the AVANGRID plans of our operating subsidiaries. The estimation technique utilized to develop the discount rate for the AVANGRID plans is based upon the settlement of such liabilities as of December 31, 2016, utilizing a hypothetical portfolio of actual, high quality bonds, which would generate cash flows required to settle the liabilities. We believe such an estimate of the discount rate accurately reflects the settlement value for plan obligations and results in cash flows which closely match the expected payments to participants.

We reflect all unrecognized prior service costs and credits and unrecognized actuarial gains and losses for the regulated utilities of Networks as regulatory assets or liabilities as it is probable that such items will be recovered through the ratemaking process in future periods.

During 2016, the Society of Actuaries issued updated mortality tables and projection scales. AVANGRID, in conjunction with its actuaries, performed an analysis to determine the appropriateness of adopting these tables and the related mortality projections. As a result, our pension and post-retirement plan liabilities as of December 31, 2016, reflect updated mortality assumptions.

Business Combinations

We apply the acquisition method of accounting to account for business combinations. The consideration transferred for an acquisition is the fair value of the assets transferred, the liabilities incurred by the acquirer to former owners of acquiree and the equity interests issued by the acquirer. Acquisition related costs are expensed as incurred. Identifiable assets acquired and liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date. The excess of the consideration transferred over the fair value of the identifiable net assets acquired is recorded as goodwill. We recognize adjustments to provisional amounts relating to a business combination that are identified during the measurement period in the reporting period in which the adjustment amounts are determined.

Goodwill

Goodwill is not amortized, but is subject to an assessment for impairment at least annually or more frequently if events occur or circumstances change that will more likely than not reduce the fair value of the reporting unit below its carrying amount. A reporting unit is an operating segment or one level below an operating segment and is the level at which goodwill is tested for impairment.

In assessing goodwill for impairment, we have the option of first performing a qualitative assessment to determine whether a quantitative assessment is necessary, or step zero. If it is determined, on the basis of qualitative factors, that the fair value of the reporting unit is more likely than not greater than the carrying amount, no further testing is required. If we bypass step zero or perform the qualitative assessment but determine that it is more likely than not that its fair value is less than its carrying amount, a quantitative two step, fair value based test is performed. Step one compares the fair value of the reporting unit to its carrying amount, including goodwill. If the carrying amount of the reporting unit exceeds its fair value, step two is performed. Step two requires an allocation of fair value to the individual assets and liabilities using business combination accounting guidance to determine the implied fair value of

goodwill. If the implied fair value of goodwill is less than its carrying amount, an impairment loss is recorded as a reduction to goodwill and a charge to operating expense.

Our step zero qualitative assessment involves evaluating key events and circumstances that could affect the fair value of our reporting units, as well as other factors. Events and circumstances evaluated include macroeconomic conditions, industry, regulatory and market considerations, cost factors and their effect on earnings and cash flows, overall financial performance as compared with projected results and actual results of relevant prior periods, other relevant entity specific events, and events affecting a reporting unit.

Our step one impairment testing, and step two if required, includes various assumptions, primarily the discount rate, which is based on an estimate of our marginal, weighted average cost of capital, and forecasted cash flows. We test the reasonableness of the conclusions of our step one impairment testing using a range of discount rates and a range of assumptions for long term cash flows.

Networks

Provided recent relevant events, such as acquisition of UIL in December 2015 and approval of the proposal by the NYPSC, we conducted a quantitative analysis (step one) in 2016. Based on the results of our step one impairment test the estimated fair value of each of the Networks reporting units was substantially in excess of their respective carrying values.

Renewables

Based on the results of our step one impairment test for the Renewables reporting unit conducted in 2016, its estimated fair value was in excess of the carrying value. The assumptions used to estimate fair value were based on projections incorporated in our current operating plans as well as other available information. The current operating plans included significant assumptions and estimates associated with sales growth, profitability and related cash flows, along with cash flows associated with taxes and capital spending. The discount rate used to estimate fair value was risk adjusted in consideration of the economic conditions of the reporting unit. We also considered other assumptions that market participants may use. By their nature, projections are uncertain. Potential events and circumstances, such as declining wind energy output and prices obtained per MWh, changes in incentives established to promote renewable energies and increases in capital expenditures per MW could have an adverse effect on our assumptions.

Impairment of Long Lived Assets

We evaluate property, plant, and equipment and other long lived assets for impairment when events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is required to be recognized if the carrying amount of the asset exceeds the undiscounted future net cash flows associated with that asset.

We determine the fair value of a long-lived asset (asset group) by applying the approaches prescribed under the fair value measurement accounting framework. Generally, the market approach and income approach are most relevant in the fair value measurement of our long-lived assets; however, due to the lack of available relevant observable market information in many circumstances, we often rely on the income approach. We develop the underlying assumptions consistent with our internal budgets and forecasts for such valuations. We use an internal discounted cash flow valuation model, or the DCF model, based on the principles of present value techniques, to estimate the fair value of our long-lived assets under the income approach. The DCF model estimates fair value by discounting AVANGRID's cash flow forecasts at an appropriate discount rate. Management applies considerable judgment in selecting several input assumptions during the development of our internal budgets and cash flow forecasts. Examples of the input assumptions that our budgets and forecasts are sensitive to include macroeconomic factors such as growth rates, industry demand, inflation, power prices and commodity prices. Whenever appropriate, management obtains these input assumptions from observable market data sources and extrapolates the market information if an input assumption is not observable for the entire forecast period. Many of these input assumptions are dependent on other economic assumptions, which are often derived from statistical economic models with inherent limitations such as estimation differences. Further, several input assumptions are based on historical trends which often do not recur. The input assumptions most significant to our budgets and cash flows are based on expectations of macroeconomic factors which may be volatile. The use of a different set of input assumptions could produce significantly different budgets and cash flow forecasts.

A considerable amount of judgment is also applied in the estimation of the discount rate used in the DCF model. To the extent practical, inputs to the discount rate are obtained from market data sources.

Fair value of a long-lived asset (asset group) is sensitive to both input assumptions related to our budgets and cash flow forecasts and the discount rate. Further, estimates of long-term growth and terminal value are often critical to the fair value determination. As part of the impairment evaluation process, management analyzes the sensitivity of fair value to various underlying

assumptions. The level of scrutiny increases as the gap between fair value and carrying amount decreases. Changes in any of these assumptions could result in management reaching a different conclusion regarding the potential impairment, which could be material. Our impairment evaluations inherently involve uncertainties from uncontrollable events that could positively or negatively impact the anticipated future economic and operating conditions.

Capitalization and Recovery of Project Development Costs

Development and construction of our various facilities are carried out in stages. Project costs are expensed during early stage development activities. Once certain development milestones are achieved and it is probable that we can obtain future economic benefits from a project, salaries and wages for persons directly involved in the project, and engineering, permits, licenses, wind measurement and insurance costs are capitalized.

Development projects in construction are reviewed periodically for any indications of impairment. Furthermore, we assess the recoverability of development costs that have been capitalized using several criteria to assess economic recoverability and probability of future economic benefit including energy prices, government regulation, and the internal rate of return to be earned on the project. If based on these factors, we conclude that we will not proceed with the related project, or that the project is no longer viable, the cost of the project is expensed in full.

Fair Value Measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants as of the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place in either the principal market for the asset or liability, or, in the absence of a principal market, in the most advantageous market for the asset or liability.

We use valuation techniques and methodologies that maximize the use of observable inputs and minimize the use of unobservable inputs. Where available, fair value is based on observable market prices or parameters or derived from such prices or parameters. Where observable prices are not available, valuation models are applied to estimate the fair value using the available observable inputs. The valuation techniques involve some level of management estimation and judgment, the degree of which is dependent on the price transparency for the instruments or market and the instruments' complexity.

To increase consistency and enhance disclosure of the fair value of financial instruments, the fair value measurement standard includes a fair value hierarchy to prioritize the inputs used to measure fair value into three categories. An asset or liability's level within the fair value hierarchy is based on the lowest level of input significant to the fair value measurement, where Level 1 is the highest and Level 3 is the lowest.

Income Tax

AVANGRID will file a consolidated federal income tax return that includes the taxable income or loss of all its subsidiaries for the 2016 tax period.

For the 2015 tax year, AVANGRID filed a consolidated federal income tax return, which included the UIL taxable income or loss for the period from December 17, 2015 to December 31, 2015. UIL filed a separate consolidated federal income tax return for the period from January 1, 2015 to December 16, 2015.

AVANGRID filed a consolidated federal income tax return that includes the taxable income or loss of all its subsidiaries (excluding UIL), including ARHI, which are 80% or more owned for the 2014 tax period. UIL filed separate consolidated federal income tax returns including the income or loss of its subsidiaries for all tax years including the most recently filed 2014 return.

AVANGRID (excluding ARHI and UIL), and ARHI filed separate consolidated federal income tax returns that included the taxable income or loss of all their respective subsidiaries, which are 80% or more owned, for all tax periods prior to 2013.

We use the liability method of accounting for income taxes. Deferred tax assets and liabilities reflect the expected future tax consequences based on enacted tax law of temporary differences between the tax basis of assets and liabilities and their financial reporting amounts. In accordance with U.S. GAAP for regulated industries, our regulated subsidiaries have established a regulatory asset for the net revenue requirements to be recovered from customers for the related future tax expense associated with certain of these temporary differences. The investment tax credits are deferred when used and amortized over the estimated lives of the related assets.

Deferred tax assets and liabilities are measured at the expected tax rate for the period in which the asset or liability will be realized or settled, based on legislation enacted as of the balance sheet date. Changes in deferred income tax assets and liabilities that are associated with components of other comprehensive income, or OCI, are charged or credited directly to OCI. Significant judgment is required in determining income tax provisions and evaluating tax positions. Our tax positions are evaluated under a more-likely-than-not recognition threshold before they are recognized for financial reporting purposes. Valuation allowances are recorded to reduce deferred tax assets when it is not more-likely-than-not that all or a portion of a tax benefit will be realized.

The excess of state franchise tax computed as the higher of a tax based on income or a tax based on capital is recorded in “Taxes other than income taxes” and “Taxes accrued” in the accompanying consolidated financial statements.

Positions taken or expected to be taken on tax returns, including the decision to exclude certain income or transactions from a return, are recognized in the financial statements when it is more likely than not the tax position can be sustained based solely on the technical merits of the position. The amount of a tax return position that is not recognized in the financial statements is disclosed as an unrecognized tax benefit. Changes in assumptions on tax benefits may also impact interest expense or interest income and may result in the recognition of tax penalties. Interest and penalties related to unrecognized tax benefits are recorded within “Interest expense, net of capitalization” and “Other income and (expense)” of the consolidated statements of income.

Uncertain tax positions have been classified as noncurrent unless expected to be paid within one year. Our policy is to recognize interest and penalties on uncertain tax positions as a component of interest expense in the consolidated statements of income.

Federal production tax credits applicable to our renewable facilities, that are not part of a tax equity financing arrangement, are shown in the financial statements as a reduction in Income tax expense and as a reduction in deferred income tax liabilities.

Our income tax expense, deferred tax assets and liabilities, and liabilities for unrecognized tax benefits reflect management’s best assessment of estimated current and future taxes to be paid. Significant judgments and estimates are required in determining the consolidated income tax components of the financial statements.

Off-Balance Sheet Arrangements

As of December 31, 2016, we had approximately \$2.6 billion of standby letters of credit, surety bonds, guarantees and indemnifications outstanding. These instruments provide financial assurance to the business and trading partners of AVANGRID and its subsidiaries in their normal course of business. The instruments only represent liabilities if AVANGRID or its subsidiaries fail to deliver on contractual obligations. We therefore believe it is unlikely that any material liabilities associated with these instruments will be incurred and, accordingly, as of December 31, 2016, neither we nor our subsidiaries have any liabilities recorded for these instruments.

New Accounting Standards

Revenue from Contracts with Customers - In May 2014 the FASB issued an amendment related to the recognition of revenue from contracts with customers and required disclosures.

Fair Value Measurement Disclosures for Certain Investments - In May 2015 the FASB issued amendments that affect reporting entities that elect to estimate the fair value of certain investments within scope using the net asset value, or NAV, per share (or its equivalent) practical expedient, as specified.

Simplifying the Measurement of Inventory - In July 2015 the FASB issued amendments that require entities to measure inventory at the lower of cost and net realizable value, rather than the lower of cost or market.

Classifying and Measuring Financial Instruments - In January 2016 the FASB issued final guidance on the classification and measurement of financial instruments.

Simplifying the Accounting for Measurement-Period Adjustments - In September 2015 the FASB issued amendments that require an acquirer to recognize adjustments to provisional amounts relating to a business combination that are identified during the measurement period in the reporting period in which the adjustment amounts are determined.

Leases - In February 2016 the FASB issued new guidance that affects all companies and organizations that lease assets, and requires them to record on their balance sheet assets and liabilities for the rights and obligations created by those leases.

Derivative contract novations - In March 2016 the FASB issued amendments concerning the effect of derivative contract novations on existing hedge accounting relationships.

Improvements to Employee Share-Based Payment Accounting - In March 2016 the FASB issued amendments regarding the simplification of several aspects of accounting for share-based payment transactions.

Measurement of credit losses on financial instruments - In June 2016 the FASB issued an accounting standards update that requires more timely recording of credit losses on loans and other financial instruments.

Certain classifications in the statement of cash flows - In August 2016 the FASB issued the amendments to address existing diversity in practice concerning eight cash flows issues.

Presentation of restricted cash in the statement of cash flows - In November 2016 the FASB issued the amendment to address existing diversity in the classification and presentation of changes in restricted cash on the statement of cash flows.

For further discussion of new accounting pronouncements affecting AVANGRID refer to Note 3 of our audited consolidated financial statements for the three years ended December 31, 2016, which are incorporated herein by reference.

U
U

Item 7A. Quantitative and Qualitative Disclosures About Market Risk.

We are exposed to risks associated with adverse changes in commodity prices, interest rates and equity prices. Financial instruments and positions affecting our financial statements described below are held primarily for purposes other than trading. Market risk is measured as the potential loss in fair value resulting from hypothetical reasonably possible changes in commodity prices, interest rates or equity prices over the next year. Management has established risk management policies to monitor and manage such market risks, as well as credit risks.

Commodity Price Risk

Renewables and Gas face a number of energy market risk exposures, including fixed price, basis (both location and time), and heat rate risk.

Long-term supply contracts reduce our exposure to market fluctuations. We have electricity commodity purchases and sales contracts for energy (physical contracts) that have been designated and qualify for the normal purchase normal sale exemption in accordance with the accounting requirements concerning derivative instruments and hedging activities.

Renewables merchant wind facilities are subject to fixed price power risk, which is hedged with fixed price power trades. Its combined cycle power plant is subject to heat rate risk, which is hedged with fixed price power and fixed price gas and basis positions. Contracted natural gas storage exposures are affected by gas price differentials across time. We manage this exposure with fixed price, basis, and index gas derivatives. In addition, contracted transport positions are subject to gas price risk across location (i.e., the price differentials between the receipt and delivery points associated with the leased pipelines). We hedge this exposure with basis swaps. Those measures mitigate our commodity price exposure, but do not completely eliminate it. Some long term hedges do not qualify for hedge accounting. This introduces some Mark to Market volatility into yearly profit and losses accounts.

Renewables and Gas use a Monte Carlo simulation value-at-risk, or VaR, technique to measure and control the level of risk it undertakes. VaR is a statistical technique used to measure and quantify the level of risk within a portfolio over a given timeframe and within a specified level of confidence. VaR is primarily composed of three variables: the measured amount of potential loss, the probability of not exceeding the amount of potential loss, and the portfolio holding period.

Renewables and Gas use a 99% probability level over a five-day holding period, indicating that it can be 99% confident that losses over five days would not exceed that value. The average VaR for 2016 was \$17.7 million compared to a 2015 average of \$14.0 million.

As noted above, VaR is a statistical technique and is not intended to be a guarantee of the maximum loss ARHI may incur.

Networks also experiences commodity price risk, due to volatility in the wholesale energy markets. Networks manages that risk through a combination of regulatory mechanisms, such as the pass-through of the market price of electricity and natural gas to customers, and through comprehensive risk management processes. Those measures mitigate our commodity price exposure, but do not completely eliminate it. Networks also uses electricity contracts as deemed appropriate, both physical and financial, to manage

fluctuations in electricity commodity prices in order to provide price stability to customers. It also uses natural gas futures and forwards to manage fluctuations in natural gas commodity prices in order to provide price stability to customers. It includes the cost or benefit of those contracts in the amount expensed for electricity or natural gas purchased when the related electricity is sold.

Because all gains or losses on Networks' commodity contracts will ultimately be passed on to retail customers, no sensitivity analysis is performed for Networks. Further information regarding the derivative financial instruments and sensitivity analysis is provided in Notes 11 and 12 of our audited consolidated financial statements for the three years ended December 31, 2016, which are incorporated herein by reference.

Interest Rate Risk

Total debt outstanding, including tax equity of \$199 million and commercial paper of \$150 million, was \$5.2 billion at December 31, 2016, of which \$212 million had a floating interest rate; a change of 25 basis points in this interest rate would result in an interest expense fluctuation of approximately \$0.5 million annually. The estimated fair value of our debt excluding the debt associated with capital leases and tax equity at December 31, 2016 was \$5.1 billion, in comparison to a book value of \$4.7 billion.

There are no interest rate derivative contracts outstanding at December 31, 2016 and 2015.

Pension and Post-Retirement Plans

We provide pensions and other post-retirement benefits for a significant number of employees, former employees and retirees. In applying relevant accounting policies, we have made critical estimates related to actuarial assumptions, including assumptions of expected returns on plan assets, discount rates, health care cost trends and future compensation. The cost of pension and other post-retirement benefits in future periods will depend on actual returns on plan assets, assumptions for future periods, contributions and benefit experience. In 2016, we contributed \$44 million to our pension plans. Our contribution to the pension plans in 2017 is expected to be approximately \$33 million.

The discount rate used in accounting for pension and other benefit obligations in 2016 ranged from 3.90% to 4.24%. The expected rate of return on plan assets for qualified pension benefits in 2016 ranged from 5.50% to 7.75%. The following tables reflect the estimated sensitivity associated with a change in certain significant actuarial assumptions (each assumption change is presented mutually exclusive of other assumption changes):

	Change in Assumption	Impact on 2016 Pension Expense Increase (Decrease)	
		Pension Benefits	Post Retirement
		<i>(in millions)</i>	
Increase in discount rate	50 basis points	\$ (18)	\$ (3)
Decrease in discount rate	50 basis points	18	3
Increase in return on plan asset	50 basis points	(13)	(1)
Decrease in return on plan asset	50 basis points	13	1

Credit Risk

This risk is defined as the risk that a third party will not fulfill its contractual obligations and, therefore, generate losses for AVANGRID. Networks is exposed to nonpayment of customer bills. Standard debt recovery procedures are in place, in accordance with best practices and in compliance with applicable state regulations and embedded tariff mechanisms to manage uncollectable expense. Our credit department, based on guidelines approved by our board, establishes and manages its counterparty credit limits. We have developed a matrix of unsecured credit thresholds that are dependent on a counterparty's or the counterparty guarantor's applicable credit rating. Credit risk is mitigated by contracting with multiple counterparties and limiting exposure to individual counterparties or counterparty families to clearly defined limits based upon the risk of counterparty default. At the counterparty level, we employ specific eligibility criteria in determining appropriate limits for each prospective counterparty and supplement this with netting and collateral agreements, including margining, guarantees, letters of credit, and cash deposits, where appropriate.

Renewables and Gas are also exposed to credit risk through their energy management and gas storage operations. We manage counterparty credit risk for our subsidiaries with energy management and gas storage operations through established policies, including counterparty credit limits, and in some cases credit enhancements, such as cash prepayments, letters of credit, cash and other collateral and guarantees.

Some relevant considerations when assessing the credit risk exposure of the energy management and gas storage operations follows:

- Operations are primarily concentrated in the energy industry.
- Trade receivables and other financial instruments are predominately with energy, utility and financial services related companies, as well as municipalities, cooperatives and other trading companies in the U.S.
- Overall credit risk is managed through established credit policies by a Credit Risk Management group that is independent of the energy management and gas storage functions.
- Prospective and existing customers are reviewed for creditworthiness based upon established standards, with customers not meeting minimum standards providing various credit enhancements or secured payment terms, such as guarantees, letters of credit or the posting of margin cash collateral.
- Master netting agreements are used, where appropriate, to offset cash and non-cash gains and losses arising from derivative instruments with the same counterparty.

Based on our policies and risk exposures related to credit risk from its management and gas storage operations in ARHI, we do not anticipate a material adverse effect on our financial statements as a result of counterparty nonperformance. As of December 31, 2016, approximately 92% of our energy management and gas storage counterparty credit risk exposure is associated with companies that have investment grade credit ratings.

The following table displays the credit quality of our energy management and gas storage counterparties as of December 31, 2016:

	Credit Exposure Before Cash Collateral	Cash Collateral	Net Credit Exposure
	<i>(in millions)</i>		
A- and Greater	\$ 2,201	\$ —	\$ 2,201
BBB+ and BBB	636	—	636
BBB-	4	—	4
Total Investment Grade(1)	2,841	—	2,841
Non-investment grade(2) (3) (4) (5)	252	12	240
Total	\$ 3,093	\$ 12	\$ 3,081

- (1) This category includes counterparties with minimum credit ratings of Baa3 assigned by Moody's and BBB- assigned by Standard & Poor's, if rated by both agencies. The five largest counterparty exposures, combined, for this category represented approximately 32.7% of the total gross credit exposure.
- (2) This category includes counterparties with credit ratings that are below investment grade. The five largest counterparty exposures, combined, for this category represented approximately 5.2% of the total gross credit exposure.
- (3) This category includes counterparties that have not been rated by Moody's or Standard & Poor's, but are considered investment grade based on our evaluation of the counterparty's creditworthiness. The five largest counterparty exposures, combined, for this category represented approximately 0.8% of the total gross credit exposure.
- (4) This category includes counterparties that have not been rated by Moody's or Standard & Poor's, and are considered non-investment grade based on our evaluation of the counterparty's creditworthiness. The five largest counterparty exposures, combined, for this category represented approximately 1.7% of the total gross credit exposure.
- (5) This category includes exposure under two separate PPA agreements, the counterparty of which was downgraded to non-investment grade by Moody's and Standard & Poor's following their announcement to complete a strategic review of its competitive operations and alternatives for the certain generation assets. The targeted implementation of changes in connection with such strategic review could result in, among other things, material asset impairments or a potential bankruptcy filing. The current combined estimated exposure under the two PPAs represents approximately 5% of the total gross credit exposure

Treasury Management (including Liquidity Risk)

We manage our overall liquidity position as part of the broader Iberdrola Group and are a party to a notional cash pooling agreement with Bank Mendes Gans, N.V., or BMG, along with other members of the Iberdrola Group. We optimize our liquidity within the United States through a series of arms'-length intercompany lending arrangements with our subsidiaries and among the regulated utilities to provide for lending of surplus cash to subsidiaries with liquidity needs, subject to the limitation that the regulated utilities may not lend to unregulated affiliates. These arrangements minimize overall short-term funding costs and maximize returns on the temporary cash investments of the subsidiaries. We also have a bi-lateral demand note agreement with a Canadian affiliate of the Iberdrola Group. We have the capacity to borrow from third parties through Commercial Paper program and the \$1.5 billion AVANGRID Credit Facility which backstops the Commercial Paper program. For more information, see the section entitled "—Liquidity and Capital Resources—Liquidity Resources" of this Annual Report on Form 10-K.

Networks

Networks' regulated utilities fund their operations independently, except to the extent that they borrow on a short-term basis from unregulated affiliates and from each other when circumstances warrant in order to minimize short-term funding costs and maximize returns on temporary cash investments. The regulated utilities are prohibited by regulatory order from lending to unregulated affiliates. Networks' regulated utilities each independently access the investment grade debt capital markets for long-term funding and each are borrowers under the AVANGRID Credit Facility described in "—Liquidity and Capital Resources—Liquidity Resources" of this Annual Report on Form 10-K.

Networks' regulated utilities are subjected by regulatory order to certain credit quality maintenance measures, including minimum equity ratios, that are linked to the level of equity assumed in the establishment of revenue requirements. The companies maintain their equity ratios at or above the minimum through dividend declarations or, when necessary, capital contributions from AVANGRID.

Renewables

Prior to becoming a subsidiary of AVANGRID in November 2013, Renewables was principally funded by equity contributions from Iberdrola, S.A. The last such equity contribution of \$800 million was made in February 2013. Renewables has also raised a small percentage of its capital through tax equity partnerships, project loans and sale-leaseback arrangements. The balance of the outstanding tax equity financing arrangement at December 31, 2016, was \$199 million and the balance of leases and project financing was \$70 million. Presently, Renewables is a party to a cash pooling arrangement with Avangrid, Inc. All Renewables revenues are concentrated in and all Renewables disbursements are made from Avangrid, Inc. Net cash surpluses or deficits at Renewables are recorded as intercompany receivables or payables and these balances are periodically reduced to zero through dividends or capital contributions. In June 2016, Renewables recorded a net dividend of \$962 million to Avangrid, Inc. to zero out account balances that had principally accumulated prior to November 2013.

Item 8. Financial Statements and Supplementary Data

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Avangrid, Inc.

We have audited the accompanying consolidated balance sheets of Avangrid, Inc. and subsidiaries (the “Company”) as of December 31, 2016 and 2015, and the related consolidated statements of income, comprehensive income, changes in equity and cash flows for each of the three years in the period ended December 31, 2016. Our audits also included the financial statement schedule listed in the Index at Item 15(a). These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits. We did not audit the consolidated balance sheet of UIL Holdings Corporation, a wholly-owned subsidiary acquired in 2015, which statement reflects total assets of \$5,270 million as of December 31, 2015. That balance sheet was audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the balance sheet amounts included for UIL Holdings Corporation, is based solely on the report of other auditors.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits and the report of other auditors provide a reasonable basis for our opinion.

In our opinion, based on our audits and, as to the balance sheet at December 31, 2015, the report of other auditors, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Avangrid, Inc. and subsidiaries at December 31, 2016 and 2015, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 31, 2016, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule, when considered in relation to the basic financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Avangrid, Inc. and subsidiaries' internal control over financial reporting as of December 31, 2016, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) and our report dated March 10, 2017 expressed an adverse opinion thereon.

/s/ Ernst & Young LLP

New York, New York
March 10, 2017

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Avangrid, Inc.

We have audited Avangrid, Inc. and subsidiaries' internal control over financial reporting as of December 31, 2016, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) (the COSO criteria). Avangrid, Inc. and subsidiaries' management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Report of Management on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the company's annual or interim financial statements will not be prevented or detected on a timely basis. The following material weaknesses have been identified and included in management's assessment. Management has identified material weaknesses in controls related to: (a) the accounting for the change in the estimated useful lives of certain components of the wind farms and with deficiencies in the documentation and execution of internal control procedures, specifically management review controls, within Avangrid Renewables, LLC, (b) the preparation of the consolidated financial statements, including disclosures within those consolidated financial statements, and (c) the recognition and measurement of income taxes. These control deficiencies resulted in part from ineffective training and oversight of process owners and the complexities associated with maintaining accounting records for numerous legal entities and jurisdictions. We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Avangrid, Inc. and subsidiaries as of December 31, 2016 and 2015 and the related consolidated statements of income, comprehensive income, changes in equity and cash flows for each of the three years in the period ended December 31, 2016. These material weaknesses were considered in determining the nature, timing and extent of audit tests applied in our audit of the 2016 financial statements, and this report does not affect our report dated March 10, 2017, which expressed an unqualified opinion on those financial statements.

In our opinion, because of the effect of the material weaknesses described above on the achievement of the objectives of the control criteria, Avangrid, Inc. and subsidiaries has not maintained effective internal control over financial reporting as of December 31, 2016, based on the COSO criteria.

New York, New York
March 10, 2017

Independent Auditor's Report

To the Board of Directors of UIL Holdings Corporation.

In our opinion, the consolidated balance sheet (not presented herein) presents fairly, in all material respects, the financial position of UIL Holdings Corporation and its subsidiaries at December 31, 2015 in conformity with accounting principles generally accepted in the United States of America. The balance sheet is the responsibility of the Company's management. Our responsibility is to express an opinion on the balance sheet based on our audit. We conducted our audit of this statement in accordance with the standards of the Public Company Accounting Oversight Board (United States) and in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the balance sheet is free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the balance sheet, assessing the accounting principles used and significant estimates made by management, and evaluating the overall balance sheet presentation. We believe that our audit of the balance sheet provides a reasonable basis for our opinion.

Note 1. Background and Nature of Operations

Avangrid, Inc., formerly Iberdrola USA, Inc. (AVANGRID, we or the Company), is an energy services holding company engaged in the regulated energy distribution business through its principal subsidiary Avangrid Networks, Inc. (Networks). Effective as of April 30, 2016, UIL Holdings Corporation and its subsidiaries (UIL) were transferred to a wholly-owned subsidiary of Networks. AVANGRID is also in the renewable energy generation and gas storage and trading businesses through its principal subsidiary, Avangrid Renewables Holding, Inc. (ARHI). ARHI in turn holds subsidiaries including Avangrid Renewables LLC (Renewables) and Enstor Gas, LLC (Gas). Iberdrola, S.A. (Iberdrola), a corporation organized under the laws of the Kingdom of Spain, owns 81.5% of the outstanding common stock of AVANGRID. The remaining outstanding shares are publicly traded on the New York Stock Exchange and owned by various shareholders. AVANGRID was organized in 1997 as NGE Resources, Inc. under the laws of New York as the holding company for its principal operating utility companies.

Reorganization

On November 20, 2013, we completed a series of reorganizations (Reorganization) of entities under common control. The Reorganization included the transfer of ARHI from an affiliate of Iberdrola to AVANGRID, and the transfer of the principal operating utility companies from AVANGRID to Networks.

AVANGRID and ARHI were acquired by Iberdrola in 2008 and 2007, respectively, and they have been under common control of Iberdrola for all periods presented. Networks was formed as part of the Reorganization in November 2013. Networks is a public utility sub-holding company operating under the Public Utility Holding Company Act of 2005 with operations in New York, Maine, Connecticut and Massachusetts. The wholly owned subsidiaries and the operating utility companies of Networks include: CMP Group - Central Maine Power Company (CMP), RGS - New York State Electric & Gas Corporation (NYSEG), Rochester Gas and Electric Corporation (RG&E), Maine Natural Gas Company (MNG), The United Illuminating Company (UI), The Southern Connecticut Gas Company (SCG), Connecticut Natural Gas Corporation (CNG) and The Berkshire Gas Company (BGC). UI is also a party to a joint venture with certain affiliates of NRG Energy, Inc. (NRG affiliates) pursuant to which UI holds 50% of the membership interests in GCE Holding LLC, whose wholly owned subsidiary, GenConn Energy LLC (collectively with GCE Holding LLC, GenConn) operates peaking generation plants in Devon, Connecticut (GenConn Devon) and Middletown, Connecticut (GenConn Middletown). ARHI is the sub-holding company of the unregulated energy business that includes the renewable energy and the gas trading and storage businesses.

The transfer of a business among entities under common control is accounted for at carrying amount with retrospective adjustment of prior period financial statements similar to the manner in which a pooling-of-interest was accounted for under accounting principles generally accepted in the United States of America (U.S. GAAP).

Acquisition of UIL

On December 16, 2015 (acquisition date), UIL Holdings Corporation, a Connecticut corporation (UIL), became a wholly-owned subsidiary of AVANGRID as a result of the merger of Green Merger Sub, Inc., a Connecticut corporation and a wholly-owned subsidiary of AVANGRID (Merger Sub), with UIL, with Merger Sub surviving as a wholly-owned subsidiary of AVANGRID (the acquisition). The acquisition was effected pursuant to the Agreement and Plan of Merger, dated as of February 25, 2015, by and among AVANGRID, Merger Sub, and UIL. Following the completion of the acquisition, Merger Sub was renamed "UIL Holdings Corporation." In connection with the acquisition, we issued 309,490,839 shares of common stock of AVANGRID, out of which 252,234,989 shares were issued to Iberdrola through a stock dividend, accounted for as a stock split, with no change to par value, at par value of \$0.01 per share, and 57,255,850 shares (including those held in trust as treasury stock) were issued to UIL shareowners in addition to payment of \$10.50 in cash per each share of the common stock of UIL issued and outstanding at the acquisition date. Following the completion of the acquisition, former UIL shareowners owned 18.5% of the outstanding shares of common stock of AVANGRID and Iberdrola owned the remaining shares. See Note 4, Acquisition of UIL, for further details.

The regulated utility businesses of UIL consist of the electric distribution and transmission operations of UI and the natural gas transportation, distribution and sales operations of SCG, CNG and BGC.

UI is also a party to a joint venture with certain affiliates of NRG Energy, Inc. (NRG affiliates) pursuant to which UI holds 50% of the membership interests in GCE Holding LLC, whose wholly owned subsidiary, GenConn Energy LLC (collectively with GCE Holding

LLC, GenConn) operates peaking generation plants in Devon, Connecticut (GenConn Devon) and Middletown, Connecticut (GenConn Middletown).

Note 2. Basis of Presentation

The accompanying consolidated financial statements have been prepared in accordance with U.S. GAAP and are presented on a consolidated basis, and therefore include the accounts of AVANGRID and its consolidated subsidiaries Networks and ARHI. Consolidated accounts of UIL have been included in the consolidated financial statements of AVANGRID since December 16, 2015, the date of acquisition of UIL. All intercompany transactions and accounts have been eliminated in all periods presented. All share and per share information included in the consolidated financial statements have been retroactively adjusted to reflect the impact of the stock dividend.

Revision of estimated useful lives of wind power station assets at Renewables

Renewables' wind power station assets in service less salvage value, if any, are depreciated using the straight-line method over their estimated useful lives. Renewables' effective depreciation rate, excluding decommissioning, was 4.0% in both 2015 and 2014. Renewables reviews the estimated useful lives of its fixed assets on an ongoing basis. In the first quarter of 2016, this review indicated that the actual lives of certain assets at wind power stations are expected to be longer than the previously estimated useful lives used for depreciation purposes. As a result, effective January 1, 2016, Renewables changed the estimates of the useful lives of certain assets from 25 years to 40 years, capped at the lease term if lower, to better reflect the estimated periods during which these assets are expected to remain in service. The weighted average useful life of our wind farm assets is now approximately 31 years. The effect of this change in estimate was to reduce depreciation and amortization expense by approximately \$52 million, reduce asset retirement obligation accretion expense recorded within operations and maintenance by approximately \$3 million, increase earnings from equity method investments by approximately \$4 million, increase income before income tax and net income by approximately \$59 million and approximately \$36 million, respectively, and increase basic and diluted earnings per share by approximately \$0.12 for the year ended December 31, 2016.

U Note 3. Summary of Significant Accounting Policies, New Accounting Pronouncements, and Use of Estimates

Significant Accounting Policies

We consider the following policies to be the most critical in understanding the judgments that are involved in preparing our consolidated financial statements:

(a) Principles of consolidation

We consolidate the entities in which we have a controlling financial interest, after the elimination of intercompany transactions. Investments in common stock where we have the ability to exercise significant influence, but not control, are accounted for using the equity method of accounting.

(b) Revenue recognition

Revenue from the sale of energy by our regulated utilities is recognized in the period during which the sale occurs. The calculation of revenue earned but not yet billed is based on the number of days not billed in the month, the estimated amount of energy delivered during those days and the estimated average price per customer class for that month. Differences between actual and estimated unbilled revenue are usually immaterial.

Revenues on sales of wholesale energy and energy related products and natural gas are recognized either when the service is provided or the product is delivered.

We also provide natural gas storage services to customers. The natural gas remains the property of these customers at all times. Customers pay a two part rate that includes (i) a fixed fee reserving the right to store natural gas in our facilities and, (ii) a per unit rate for volumes actually injected into or withdrawn from storage. The fixed fee component of the overall rate is recognized as revenue in the period the service is provided. The per-unit charge is recognized as revenue when the volumes are injected into or withdrawn from our storage facilities.

(c) Regulatory accounting

We account for our regulated utilities operations in accordance with the authoritative guidance applicable to entities with regulated operations that meet the following criteria: (i) rates are established or approved by a third-party regulator; (ii) rates are designed to recover the entity's cost of providing regulated services or products, and; (iii) there is a reasonable expectation that rates are set at levels that will recover the entity's costs and be collected from customers. Regulatory assets represent incurred costs that have been deferred because of their probable future recovery from customers through regulated rates. Regulatory liabilities represent: (i) the excess recovery of costs or accrued credits that have been deferred because it is probable such amounts will be returned to customers through future regulated rates; or (ii) billings in advance of expenditures for approved regulatory programs.

Regulatory assets and liabilities are amortized and the related expense or revenue is recognized in the consolidated statements of income consistent with the recovery or refund included in customer rates. We believe that it is probable that our currently recorded regulatory assets and liabilities will be recovered or settled in future rates.

(d) Business combinations

We apply the acquisition method of accounting to account for business combinations. The consideration transferred for an acquisition is the fair value of the assets transferred, the liabilities incurred by the acquirer to former owners of acquiree and the equity interests issued by the acquirer. Acquisition related costs are expensed as incurred. Identifiable assets acquired and liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date. The excess of the consideration transferred over the fair value of the identifiable net assets acquired is recorded as goodwill. We recognize adjustments to provisional amounts relating to a business combination that are identified during the measurement period in the reporting period in which the adjustment amounts are determined.

(e) Equity method investments

Joint ventures that do not meet consolidation criteria are accounted for using the equity method. Earnings (losses) recognized under the equity method are reflected in the consolidated statements of income as "Earnings (losses) from equity method investments." Dividends received from joint ventures are recognized as a reduction in the carrying amount of the investment and are not recognized as dividend income.

(f) Goodwill and other intangible assets

Goodwill represents future economic benefits arising from other assets acquired in a business combination that are not individually identified and separately recognized. Goodwill is initially measured at cost, being the excess of the aggregate of the consideration transferred, the fair value of any noncontrolling interest and the acquisition date fair value of any previously held equity interest in the acquiree over the fair value of the net identifiable assets acquired and liabilities assumed.

Goodwill is not amortized, but is subject to an assessment for impairment at least annually or more frequently if events occur or circumstances change that will more likely than not reduce the fair value of the reporting unit to which goodwill is assigned below its carrying amount. A reporting unit is an operating segment or one level below an operating segment and is the level at which goodwill is tested for impairment. In assessing goodwill for impairment we have the option of first performing a qualitative assessment to determine whether a quantitative assessment is necessary (step zero). If it is determined, on the basis of qualitative factors, that the fair value of the reporting unit is more likely than not greater than the carrying amount, no further testing is required. If we bypass step zero or perform the qualitative assessment, but determine that it is more likely than not that its fair value is less than its carrying amount, a quantitative two step fair value based test is performed. Step one compares the fair value of the reporting unit to its carrying amount, including goodwill. If the carrying amount of the reporting unit exceeds its fair value, step two is performed. Step two requires an allocation of fair value to the individual assets and liabilities using business combination accounting guidance to determine the implied fair value of goodwill. If the implied fair value of goodwill is less than its carrying amount, an impairment loss is recorded as a reduction to goodwill and a charge to operating expense.

Intangible assets acquired separately are measured on initial recognition at cost. The cost of intangible assets acquired in a business combination is their fair value at the date of acquisition. Following initial recognition, intangible assets are carried at cost less any accumulated amortization and impairment losses. The useful lives of intangible assets are assessed as either finite or indefinite.

Intangible assets with finite lives are amortized on a straight-line basis over the useful economic life, which ranges from four to forty years, and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortization

expense on intangible assets with finite lives is recognized in the consolidated statements of income as the expense category that is consistent with the function of the intangible assets.

(g) Property, plant and equipment

Property, plant and equipment are accounted for at historical cost. In cases where we are required to dismantle installations or to recondition the site on which they are located, the estimated cost of removal or reconditioning is recorded as an asset retirement obligation (ARO) and an equal amount is added to the carrying amount of the asset.

Development and construction of our various facilities are carried out in stages. Project costs are expensed during early stage development activities. Once certain development milestones are achieved and it is probable that we can obtain future economic benefits from a project, salaries and wages for persons directly involved in the project, and engineering, permits, licenses, wind measurement and insurance costs are capitalized. Development projects in construction are reviewed periodically for any indications of impairment.

Assets are transferred from “Construction work in progress” to “Property, plant and equipment” when they are available for service.

Wind turbine and related equipment costs, other project construction costs, and interest costs related to the project are capitalized during the construction period through substantial completion. AROs are recorded at the date projects achieve commercial operation.

The cost of plant, and equipment in use is depreciated on a straight-line basis, less any estimated residual value. The main asset categories are depreciated over the following estimated useful lives:

Major class	Asset Category	Estimated Useful Life (years)
Plant	Combined cycle plants	35
	Hydroelectric power stations	35-90
	Wind power stations	25-40
	Gas storage	25-40
	Transport facilities	40-56
	Distribution facilities	30-54
Equipment	Conventional meters and measuring devices	15-27
	Computer software	3-5
Other	Buildings	50-75
	Operations offices	4-50

Networks determines depreciation expense using the straight-line method, based on the average service lives of groups of depreciable property, which include estimated cost of removal, in service at each operating company. Consistent with FERC accounting requirements, Networks charges the original cost of utility plant retired or otherwise disposed of to accumulated depreciation.

We charge repairs and minor replacements to operating expenses, and capitalize renewals and betterments, including certain indirect costs.

(h) Impairment of long lived assets

We evaluate property, plant, and equipment and other long lived assets for impairment when events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is required to be recognized if the carrying amount of the asset exceeds the undiscounted future net cash flows associated with that asset.

The impairment loss to be recognized is the amount by which the carrying amount of the long lived asset exceeds the asset’s fair value. Depending on the asset, fair value may be determined by use of a discounted cash flow model.

(i) Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants as of the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place in either the principal market for the asset or liability, or, in the absence of a principal market, in the most advantageous market for the asset or liability.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest. A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset according to its highest and best use, or by selling it to another market participant that would use the asset according to its highest and best use.

We use valuation techniques that are appropriate in the circumstances and for which sufficient data is available to measure fair value, maximizing the use of relevant observable inputs and minimizing the use of unobservable inputs. All assets and liabilities for which fair value is measured or disclosed in the consolidated financial statements are categorized within the fair value hierarchy based on the transparency of input to the valuation of an asset or liability as of the measurement date.

The three input levels of the fair value hierarchy are as follows:

- Level 1 - inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.
- Level 2 - inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability either directly or indirectly, for substantially the full term of the contract.
- Level 3 - one or more inputs to the valuation methodology are unobservable or cannot be corroborated with market data.

Categorization within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement.

(j) Available for sale securities

Securities that do not qualify as either securities held-to-maturity or trading securities, and which have a readily available fair value, are classified as securities available-for-sale and reported at fair value, with unrealized gains and losses excluded from earnings and reported, net of taxes, in other comprehensive income or loss.

(k) Derivatives and hedge accounting

Derivatives are recognized on the balance sheets at their fair value, except for certain electricity commodity purchases and sales contracts for both capacity and energy (physical contracts) that qualify for, and are elected under, the normal purchases and normal sales exception. To be a derivative under the accounting standards for derivatives and hedging, an agreement would need to have a notional and an underlying, require little or no initial net investment and could be net settled. Changes in the fair value of a derivative contract are recognized in earnings unless specific hedge accounting criteria are met.

Derivatives that qualify and are designated for hedge accounting are classified as cash flow hedges. For cash flow hedges, the portion of the derivative gain or loss that is effective in offsetting the change in the hedged cash flows of the underlying exposure is deferred in Other Comprehensive Income (OCI) and later reclassified into earnings when the underlying transaction occurs. For all designated and qualifying hedges, we maintain formal documentation of the hedge and effectiveness testing in accordance with the accounting standards for derivatives and hedging. If we determine that the derivative is no longer highly effective as a hedge, hedge accounting will be discontinued prospectively. For cash flow hedges of forecasted transactions, we estimate the future cash flows of the forecasted transactions and evaluate the probability of the occurrence and timing of such transactions. If we determine it is probable that the forecasted transaction will not occur, hedge gains and losses previously recorded in OCI are immediately recognized in earnings.

Changes in conditions or the occurrence of unforeseen events could require discontinuance of the hedge accounting or could affect the timing of the reclassification of gains or losses on cash flow hedges from OCI into earnings. Gains and losses from the ineffective portion of any hedge are recognized in earnings immediately. Changes in the fair value of electric and natural gas hedge contracts are recorded to derivative assets or liabilities with an offset to regulatory assets or regulatory liabilities for our regulated operations.

We offset fair value amounts recognized for derivative instruments and fair value amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement.

(l) Cash and cash equivalents

Cash and cash equivalents comprises cash, bank accounts, and other highly-liquid short-term investments. We consider all highly liquid investments with a maturity date of three months or less when acquired to be cash equivalents and those investments are

included in “Cash and cash equivalents.” Restricted cash represents cash legally set aside for a specified purpose or as part of an agreement with a third party. Restricted cash is included in “Other non-current assets” on the consolidated balance sheets.

(m) Accounts receivable and unbilled revenue, net

We record accounts receivable at amounts billed to customers. Certain accounts receivable and payable related to our wholesale activities associated with generation and delivery of electric energy and associated environmental attributes, origination and marketing, natural gas storage, hub services, and energy management, are subject to master netting agreements with counterparties, whereby we have the legal right to offset the balances, which are settled on a net basis. Receivables and payables subject to such agreements are presented in our consolidated balance sheets on a net basis.

Accounts receivable include amounts due under Deferred Payment Arrangements (DPA). A DPA allows the account balance to be paid in installments over an extended period of time without interest, which generally exceeds one year, by negotiating mutually acceptable payment terms. The utility companies generally must continue to serve a customer who cannot pay an account balance in full if the customer (i) pays a reasonable portion of the balance; (ii) agrees to pay the balance in installments; and (iii) agrees to pay future bills within thirty days until the DPA is paid in full. Failure to make payments on a DPA results in the full amount of a receivable under a DPA being due. These accounts are part of the regular operating cycle and are classified as short term.

The allowance for bad debts account is established by using both historical average loss percentages to project future losses, and a specific allowance is established for known credit issues. Amounts are written off when we believe that a receivable will not be recovered.

(n) Tax equity financing arrangements-VIEs

We have undertaken several structured institutional partnership investment transactions that bring in external investors in certain of our wind farms in exchange for cash and notes receivable. Following an analysis of the economic substance of these transactions, we classify the consideration received at the inception of the arrangement as a liability in the consolidated balance sheets. Subsequently, this liability is amortized based on the cash and tax benefits provided to the tax equity investors.

We evaluate whether an entity is a variable interest entity (VIE) whenever reconsideration events as defined by the accounting guidance occur (See Note 19). An entity is considered to be a VIE when its total equity investment at risk is not sufficient to permit the entity to finance its activities without additional subordinated financial support, or its equity investors, as a group, lack the characteristics of having a controlling financial interest. A reporting company is required to consolidate a VIE as its primary beneficiary when it has both the power to direct the activities of the VIE that most significantly impact the VIE's economic performance, and the obligation to absorb losses or the right to receive benefits from the VIE that could potentially be significant to the VIE.

(o) Debentures, bonds and bank borrowings

Bonds, debentures and bank borrowings are recorded as a liability equal to the proceeds of the borrowings. The difference between the proceeds and the face amount of the issued liability is treated as discount or premium and is amortized as interest expense or income over the life of the instrument. Incremental costs associated with issuance of the debt instruments are deferred and amortized over the same period as debt discount or premium. Bonds, debentures and bank borrowings are presented net of unamortized discount, premium and debt issuance costs on the consolidated balance sheets.

(p) Inventory

Inventory comprises fuel and gas in storage and materials and supplies. Through our gas trading operations, we own natural gas that is stored in both self-owned and third-party owned underground storage facilities. This gas is recorded as inventory. Injections of inventory into storage are priced at the market purchase cost at the time of injection, and withdrawals of working gas from storage are priced at the weighted-average cost in storage. We continuously monitor the weighted-average cost of gas value to ensure it remains at, or below market value. Inventories to support gas operations are reported on the balance sheet within “Fuel and gas in storage.”

We also have materials and supplies inventories that are used for construction of new facilities and repairs of existing facilities. These inventories are carried and withdrawn at cost and reported on the balance sheets within “Materials and supplies.”

Inventory items are combined for the statement of cash flow presentation purposes.

(q) Government grants

Our unregulated subsidiaries record government grants related to depreciable assets within deferred income and subsequently amortize them to earnings consistent with the useful life of the related asset. Our regulated subsidiaries record government grants as a reduction to utility plant to be recovered through rate base, in accordance with the prescribed FERC accounting.

In accounting for government grants related to operating and maintenance costs, amounts receivable are recognized as an offset to expenses in the consolidated statements of income in the period in which the expenses are incurred.

(r) Deferred income

Apart from government grants, we occasionally receive revenues from transactions in advance of the resulting obligations arising from the transaction. It is our policy to defer such revenues on the consolidated balance sheets and amortize them to earnings consistent with the obligations.

(s) Asset retirement obligations

The fair value of the liability for an ARO and a conditional ARO is recorded in the period in which it is incurred, capitalizing the cost by increasing the carrying amount of the related long lived asset. The ARO is associated with our long lived assets and primarily consists of obligations related to removal or retirement of asbestos, polychlorinated biphenyl-contaminated equipment, gas pipeline, cast iron gas mains, and electricity generation facilities. The liability is adjusted periodically to reflect revisions to either the timing or amount of the original estimated undiscounted cash flows over time. The liability is accreted to its present value each period and the capitalized cost is depreciated over the useful life of the related asset. Upon settlement, the obligation will be either settled at its recorded amount or a gain or a loss will be incurred. Our regulated utilities defer any timing differences between rate recovery and depreciation expense and accretion as either a regulatory asset or a regulatory liability.

The term conditional ARO refers to an entity's legal obligation to perform an asset retirement activity in which the timing or method of settlement are conditional on a future event that may or may not be within the entity's control. If an entity has sufficient information to reasonably estimate the fair value of the liability for a conditional ARO, it must recognize that liability at the time the liability is incurred.

Our regulated utilities meet the requirements concerning accounting for regulated operations and we recognize a regulatory liability for the difference between removal costs collected in rates and actual costs incurred. These are classified as accrued removal obligations.

(t) Environmental remediation liability

In recording our liabilities for environmental remediation costs the amount of liability for a site is the best estimate, when determinable; otherwise it is based on the minimum liability or the lower end of the range when there is a range of estimated losses. Our environmental liabilities are recorded on an undiscounted basis. Our environmental liability accruals are expected to be paid through the year 2053.

(u) Post employment and other employee benefits

We sponsor defined benefit pension plans that cover the majority of our employees. We also provide health care and life insurance benefits through various postretirement plans for eligible retirees.

We evaluate our actuarial assumptions on an annual basis and consider changes based on market conditions and other factors. All of our qualified defined benefit plans are funded in amounts calculated by independent actuaries, based on actuarial assumptions proposed by management.

We account for defined benefit pension or other postretirement plans, recognizing an asset or liability for the overfunded or underfunded plan status. For a pension plan, the asset or liability is the difference between the fair value of the plan's assets and the projected benefit obligation. For any other postretirement benefit plan, the asset or liability is the difference between the fair value of the plan's assets and the accumulated postretirement benefit obligation. Our utility operations reflect all unrecognized prior service costs and credits and unrecognized actuarial gains and losses as regulatory assets rather than in other comprehensive income, as

management believes it is probable that such items will be recoverable through the ratemaking process. We use a December 31st measurement date for our benefits plans.

We amortize prior service costs for both the pension and other postretirement benefits plans on a straight-line basis over the average remaining service period of participants expected to receive benefits. For NYSEG, RG&E and UIL, we amortize unrecognized actuarial gains and losses over ten years from the time they are incurred as required by the NYPSC, PURA and DPU. For our other companies we use the standard amortization methodology under which amounts in excess of ten percent of the greater of the projected benefit obligation or market related value are amortized over the plan participants' average remaining service to retirement. Our policy is to calculate the expected return on plan assets using the market related value of assets. That value is determined by recognizing the difference between actual returns and expected returns over a five year period.

(v) Income tax

AVANGRID will file a consolidated federal income tax return that includes the taxable income or loss of all its subsidiaries for the 2016 tax period.

For the 2015 tax year, AVANGRID filed a consolidated federal income tax return, which included the UIL taxable income or loss for the period from December 17, 2015 to December 31, 2015. UIL filed a separate consolidated federal income tax return for the period from January 1, 2015 to December 16, 2015.

AVANGRID filed a consolidated federal income tax return that includes the taxable income or loss of all its subsidiaries (excluding UIL), which are 80% or more owned for the 2014 tax period. UIL filed separate consolidated federal income tax returns including the income or loss of its subsidiaries for all tax years including the filed 2014 return.

AVANGRID (excluding ARHI and UIL), and ARHI filed separate consolidated federal income tax returns that included the taxable income or loss of all their respective subsidiaries, which are 80% or more owned, for all tax periods prior to 2013.

We use the asset and liability method of accounting for income taxes. Deferred tax assets and liabilities reflect the expected future tax consequences, based on enacted tax laws, of temporary differences between the tax basis of assets and liabilities and their financial reporting amounts. In accordance with generally accepted accounting principles for regulated industries, certain of our regulated subsidiaries have established a regulatory asset for the net revenue requirements to be recovered from customers for the related future tax expense associated with certain of these temporary differences. The investment tax credits are deferred when used and amortized over the estimated lives of the related assets.

Deferred tax assets and liabilities are measured at the expected tax rate for the period in which the asset or liability will be realized or settled, based on legislation enacted as of the balance sheet date. Changes in deferred income tax assets and liabilities that are associated with components of OCI are charged or credited directly to OCI. Significant judgment is required in determining income tax provisions and evaluating tax positions. Our tax positions are evaluated under a more-likely-than-not recognition threshold before they are recognized for financial reporting purposes. Valuation allowances are recorded to reduce deferred tax assets when it is not more-likely-than-not that all or a portion of a tax benefit will be realized. Deferred tax assets and liabilities are classified as non-current in the consolidated balance sheets.

The excess of state franchise tax computed as the higher of a tax based on income or a tax based on capital is recorded in "Taxes other than income taxes" and "Taxes accrued" in the accompanying consolidated financial statements.

Positions taken or expected to be taken on tax returns, including the decision to exclude certain income or transactions from a return, are recognized in the financial statements when it is more likely than not the tax position can be sustained based solely on the technical merits of the position. The amount of a tax return position that is not recognized in the financial statements is disclosed as an unrecognized tax benefit. Changes in assumptions on tax benefits may also impact interest expense or interest income and may result in the recognition of tax penalties. Interest and penalties related to unrecognized tax benefits are recorded within "Interest expense, net of capitalization" and "Other income and (expense)" of the consolidated statements of income.

Uncertain tax positions have been classified as non-current unless expected to be paid within one year. Our policy is to recognize interest and penalties on uncertain tax positions as a component of interest expense in the consolidated statements of income.

Federal production tax credits applicable to our renewable energy facilities, that are not part of a tax equity financing arrangement, are recognized as a reduction in income tax expense with a corresponding reduction in deferred income tax liabilities.

Our income tax expense, deferred tax assets and liabilities, and liabilities for unrecognized tax benefits reflect management's best assessment of estimated current and future taxes to be paid. Significant judgments and estimates are required in determining the consolidated income tax components of the financial statements.

(w) Stock-based compensation

Stock-based compensation represents costs related to stock-based awards granted to employees. In the third quarter of 2016 we early adopted all the amendments to ASC 718, Compensation - Stock Compensation, issued in March 2016, to account for our stock based awards. We account for stock-based payment transactions based on the estimated fair value of awards reflecting forfeitures when they occur. The recognition period for these costs begin at either the applicable service inception date or grant date and continues throughout the requisite service period, or until the employee becomes retirement eligible, if earlier.

Reclassifications

Certain amounts have been reclassified in the consolidated statements of cash flow to conform to the 2016 presentation as well as in connection with retrospective adoption of amendments in the accounting standard related to presentation of restricted cash in the statement of cash flow.

New Accounting Standards and Interpretations

(a) Revenue from contracts with customers

In May 2014 the Financial Accounting Standards Board (FASB) issued ASC 606, Revenue from Contracts with Customers (ASC 606), replacing the existing accounting standard and industry specific guidance for revenue recognition with a five-step model for recognizing and measuring revenue from contracts with customers. The core principle is for an entity to recognize revenue to represent the transfer of goods or services to customers in amounts that reflect the consideration to which the entity expects to be entitled in exchange for those goods or services. The new standard also requires enhanced disclosures regarding the nature, amount, timing, and uncertainty of revenue and the related cash flows arising from contracts with customers. The original effective date for public entities was for annual reporting periods beginning after December 15, 2016, including interim periods within that reporting period. In August 2015 the FASB issued an accounting standards update that defers by one year the original effective date of the revenue standard for all entities. Thus, the standard is now effective for annual reporting periods beginning after December 15, 2017, and interim periods therein, with early adoption as of the original effective date permitted. We do not plan to early adopt. Entities may apply the amendment retrospectively to each prior reporting period presented (full retrospective method) or retrospectively with a cumulative effect adjustment to retained earnings for initial application of the guidance at the date of initial adoption (modified retrospective method). We will apply the modified retrospective method. We are currently evaluating how our adoption of the amendments will affect our results of operations, financial position, cash flows, and disclosures. We are considering the effects of the amendments on our ability to recognize revenue for certain contracts for our regulated utilities where collectability is in question and our accounting for contributions in aid of construction for our regulated utilities. In addition, the amendments will require us to capitalize, rather than expense, any costs to acquire new contracts. Additionally, classification differences are also expected to result, including recording our tax equity investments as noncontrolling interests. Some revenue arrangements, such as alternative revenue programs, are expected to be excluded from the scope of ASC 606 and therefore, be accounted for and presented separately from revenues under ASC 606 on our consolidated financial statements. The FASB has issued various additional accounting standards updates, with the same deferred effective date, as follows: in March 2016 to amend and clarify the implementation guidance on principal versus agent considerations for reporting revenue gross rather than net, in April 2016 to address implementation questions on identifying performance obligations and accounting for licenses of intellectual property. We do not expect significant effects as a result of those updates. In May 2016 the FASB issued a final update concerning narrow-scope improvements and practical expedients. We are currently evaluating the effects of that update.

(b) Fair value measurement disclosures for certain investments

In May 2015 the FASB issued amendments that affect reporting entities that elect to estimate the fair value of certain investments within scope using the net asset value (NAV) per share (or its equivalent) practical expedient, as specified. The amendments remove the requirement to categorize within the fair value hierarchy all investments for which the fair value is measured at NAV using the practical expedient. They also remove certain disclosure requirements for eligible investments and limit the required disclosures to investments for which the entity has elected to measure the fair value using the practical expedient. Assets that calculate NAV per share (or its equivalent), but for which the practical expedient is not applied will continue to be included in the fair value hierarchy.

The amendments are effective for public entities for fiscal years beginning after December 15, 2015, and interim periods within those fiscal years. The amendments permit early application, and require retrospective application to all periods presented. Retrospective application requires investments for which fair value is measured at NAV using the practical expedient to be removed from the fair value hierarchy in all periods presented. Our adoption of the amendments in 2016 did not affect our results of operations, financial position, or cash flows.

(c) Simplifying the measurement of inventory

In July 2015 the FASB issued amendments that require entities to measure inventory at the lower of cost and net realizable value, rather than the lower of cost or market. The amendments do not apply to inventory measured using last-in, first-out or the retail inventory method but apply to all other inventory, including inventory measured using first-in, first-out or average cost. Prior to this update, market value could be replacement cost, net realizable value, or net realizable value less an approximately normal profit margin. Net realizable value is the “estimated selling prices in the ordinary course of business, less reasonably predictable costs of completion, disposal, and transportation.” The amendments do not change the methods of estimating the cost of inventory under U.S. GAAP. The amendments are effective for public entities for fiscal years beginning after December 15, 2016, including interim periods within those fiscal years. The amendments require prospective application and permit earlier application. We expect our adoption of the amendments will not affect our results of operations, financial position, or cash flows.

(d) Classifying and measuring financial instruments

In January 2016 the FASB issued final guidance on the classification and measurement of financial instruments. The new guidance requires that all equity investments in unconsolidated entities (other than those accounted for using the equity method of accounting) to be measured at fair value through earnings. There will no longer be an available-for-sale classification (changes in fair value reported in other comprehensive income) for equity securities with readily determinable fair values. For equity investments without readily determinable fair values, the cost method is also eliminated. However, entities (other than those following “specialized” accounting models, such as investment companies and broker-dealers) are able to elect to record equity investments without readily determinable fair values at cost, less impairment, and plus or minus subsequent adjustments for observable price changes. Changes in the basis of these equity investments will be reported in current earnings. That election only applies to equity investments that do not qualify for the NAV practical expedient. When the fair value option has been elected for financial liabilities, changes in fair value due to instrument-specific credit risk will be recognized separately in other comprehensive income. The accumulated gains and losses due to those changes will be reclassified from accumulated other comprehensive income to earnings if the financial liability is settled before maturity. Public entities are required to use the exit price notion when measuring the fair value of financial instruments measured at amortized cost for disclosure purposes. In addition, the new guidance requires financial assets and financial liabilities to be presented separately in the notes to the financial statements, grouped by measurement category (e.g., fair value, amortized cost, lower of cost or market) and form of financial asset (e.g., loans, securities).

The classification and measurement guidance is effective for public entities in fiscal years beginning after December 15, 2017, including interim periods within those fiscal years. An entity will record a cumulative-effect adjustment to beginning retained earnings as of the beginning of the first reporting period in which the guidance is adopted, with two exceptions. The amendments related to equity investments without readily determinable fair values (including disclosure requirements) will be effective prospectively. The requirement to use the exit price notion to measure the fair value of financial instruments for disclosure purposes will also be applied prospectively. We expect our adoption of the guidance will not materially affect our results of operations, financial position, or cash flows.

(e) Business combinations: simplifying the accounting for measurement-period adjustments

In September 2015 the FASB issued amendments that require an acquirer to recognize adjustments to provisional amounts relating to a business combination that are identified during the measurement period in the reporting period in which the adjustment amounts are determined. As a result, the acquirer is required to record, in the same period’s financial statements, the effect on earnings of changes in depreciation, amortization, or other income effects, if any, as a result of the change to the provisional amounts, calculated as if the accounting had been completed at the acquisition date. The entity is required to present separately on the face of the income statement or disclose in the notes the portion of the amount recorded in current-period earnings by line item that would have been recorded in previous reporting periods if the adjustment to the provisional amounts had been recognized as of the acquisition date. The amendments are effective for public entities for fiscal years beginning after December 15, 2015, including interim periods within those fiscal years. The amendments require prospective application to provisional amounts that occur after the effective date of the amendment and permit earlier application. The effects of our adoption of the amendments on our results of operation, financial position, or cash flows as it relates to the business combination with UIL have been disclosed in Note 4, Acquisition of UIL.

(f) Leases

In February 2016 the FASB issued new guidance that affects all companies and organizations that lease assets, and requires them to record on their balance sheet assets and liabilities for the rights and obligations created by those leases. A lease is an arrangement that conveys the right to control the use of an identified asset for a period of time in exchange for consideration. Concerning lease expense recognition, after extensive consultation, the FASB has ultimately concluded that the economics of leases can vary for a lessee, and those economics should be reflected in the financial statements. As a result, the amendments retain a distinction between finance leases and operating leases, while requiring both types of leases to be recognized on the balance sheet. The classification criteria for distinguishing between finance leases and operating leases are substantially similar to the criteria for distinguishing between capital leases and operating leases in current GAAP. By retaining a distinction between finance leases and operating leases, the effect of leases on the statement of comprehensive income and the statement of cash flows is largely unchanged from previous GAAP. Lessor accounting will remain substantially the same as current GAAP, but with some targeted improvements to align lessor accounting with the lessee accounting model and with the revised revenue recognition guidance issued in 2014. The updated guidance is effective for public entities for fiscal years beginning after December 15, 2018, including interim periods within those fiscal years, and early application is permitted. We are currently reviewing our contracts and are in the process of determining the proper application of the standard to these contracts in order to determine the impact that the adoption will have on our consolidated financial statements. We expect our adoption of the new guidance will materially affect our financial position through the recording of operating leases on the balance sheet as a right-of-use asset.

(g) Derivative contract novations

In March 2016 the FASB issued amendments concerning the effect of derivative contract novations on existing hedge accounting relationships. As it relates to derivative instruments, novation refers to replacing one of the parties to a derivative instrument with a new party, which may occur for a variety of reasons such as: financial institution mergers, intercompany transactions, an entity exiting a particular derivatives business or relationship, or because of laws or regulatory requirements. The amendments clarify that a change in the counterparty to a derivative instrument that has been designated as the hedging instrument under the guidance for Derivatives and Hedging (Topic 815) does not, in and of itself, require dedesignation of that hedge accounting relationship provided that all other hedge accounting criteria continue to be met. The amendments are effective for public entities for financial statements issued for fiscal years beginning after December 15, 2016, and interim periods within those fiscal years. The amendments may be applied on either a prospective basis or a modified retrospective basis and early application is permitted. We expect our adoption will not materially affect our results of operations, financial position, and cash flows.

(h) Improvements to employee share-based payment accounting

The FASB issued amendments in March 2016 regarding the simplification of several aspects of accounting for share-based payment transactions, including income tax consequences, classification of awards as either equity or liabilities, policy election on accounting for forfeitures and classification on the statement of cash flows. Some areas of simplification apply only to nonpublic entities. The amendments are effective for public entities for fiscal years beginning after December 15, 2016, and interim periods within those fiscal years. Early adoption permitted in any interim or annual period, but must adopt all of the amendments in the same period. For the purpose of accounting for the stock-based compensation plans, in the third quarter of 2016 we early adopted all the above amendments and elected to account for forfeitures when they occur. Our adoption of the amendments did not materially affect our results of operations, financial position, or cash flows.

(i) Measurement of credit losses on financial instruments

The FASB issued an accounting standards update in June 2016 that requires more timely recording of credit losses on loans and other financial instruments. The amendments affect entities that hold financial assets and net investment in leases that are not accounted for at fair value through net income (loans, debt securities, trade receivables, net investments in leases, off-balance-sheet credit exposures, etc.). They require an entity to present a financial asset (or group of financial assets) that is measured at amortized cost basis at the net amount expected to be collected. The allowance for credit losses is a valuation account that is deducted from the amortized cost basis of the financial asset(s) to present the net carrying value at the amount expected to be collected on the financial asset. The income statement reflects the measurement of credit losses for newly recognized financial assets, as well as the expected increases or decreases of expected credit losses that have taken place during the period. The measurement of expected credit losses is based on relevant information about past events, including historical experience, current conditions, and reasonable and supportable forecasts that affect the collectibility of the reported amount. An entity must use judgment in determining the relevant information and estimation methods appropriate in its circumstances. The amendments are effective for public entities that are SEC filers for fiscal years beginning after December 15, 2019, including interim periods within those fiscal years, with early adoption permitted. Entities are to apply the amendments on a modified retrospective basis for most instruments. We expect our adoption will not materially affect our results of operations, financial position, and cash flows.

(j) Certain classifications in the statement of cash flows

The FASB issued the amendments in August 2016 to address existing diversity in practice concerning eight cash flows issues. The guidance addresses classification as operating, investing or financing activities in the statement of cash flows for these issues: 1) Debt prepayment or debt extinguishment costs (financing), 2) Settlement of zero-coupon bonds (interest is operating, principal is financing), 3) Contingent consideration payments made after a business combination (investing or financing based on timing, or operating, as specified), 4) Proceeds from the settlement of insurance claims (based on the nature of the loss), 5) Proceeds from the settlement of corporate-owned life insurance policies (COLI) (investing; with cash payments for COLI premiums as investing, operating or a combination of investing/operating), 6) Distributions received from equity method investees (based on an entity's accounting policy election: either cumulative earnings or nature of distribution), 7) Beneficial interests in securitization transactions (noncash or investing as specified), 8) Separately identifiable cash flows and application of the predominance principle (cash receipts/payments with aspects of more than one classification by applying specific GAAP guidance; or if there is no guidance, based on the nature of the related activity or the activity that is the predominant source or use of the cash flows). The amendments are effective for public entities for fiscal years beginning after December 15, 2017, and interim periods within those fiscal years, with early adoption permitted. The amendments are to be applied retrospectively to each prior period presented, unless impracticable for some issues and then the application would be prospective for those affected issues. We expect our adoption will not materially affect cash flows.

(k) Presentation of restricted cash in the statement of cash flows

The FASB issued the amendment in November 2016 to address existing diversity in the classification and presentation of changes in restricted cash on the statement of cash flows. The amendment requires that a statement of cash flows explain the change during the period in the total of cash, cash equivalents, and amounts generally described as restricted cash or restricted cash equivalents. Therefore, amounts generally described as restricted cash and restricted cash equivalents should be included with cash and cash equivalents when reconciling the beginning-of-period and end-of-period total amounts shown on the statement of cash flows. The amendment does not provide a definition of restricted cash or restricted cash equivalents. The amendment is effective for public entities for fiscal years beginning after December 15, 2017, and interim periods within those fiscal years, with early adoption permitted. The amendment should be applied using a retrospective transition method to each period presented. As permitted, we have early adopted the amendment as of the beginning of the fourth quarter of 2016 and have applied it retrospectively to all periods presented. Accordingly, the changes in restricted cash and restricted cash equivalents, presented previously in other assets of operating activities, were included in cash and cash equivalents when reconciling the beginning-of-period and end-of-period total amounts shown on the statement of cash flows, which increased by \$2 million and had no change in net cash provided by operating activities in the consolidated statements of cash flow, for both of the years ended December 31, 2015 and 2014, respectively.

Use of Estimates and Assumptions

The preparation of our consolidated financial statements in conformity with U.S. GAAP requires the use of estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the consolidated financial statements, and the reported amounts of revenues and expenses during the reporting periods. Significant estimates and assumptions are used for, but not limited to: (1) allowance for doubtful accounts and unbilled revenues; (2) asset

impairments, including goodwill; (3) depreciable lives of assets; (4) income tax valuation allowances; (5) uncertain tax positions; (6) reserves for professional, workers' compensation, and comprehensive general insurance liability risks; (7) contingency and litigation reserves; (8) fair value measurements; (9) earnings sharing mechanisms; (10) environmental remediation liabilities; and (11) AROs. Future events and their effects cannot be predicted with certainty; accordingly, our accounting estimates require the exercise of judgment. The accounting estimates used in the preparation of our consolidated financial statements will change as new events occur, as more experience is acquired, as additional information is obtained and as our operating environment changes. We evaluate and update our assumptions and estimates on an ongoing basis and may employ outside specialists to assist in our evaluations, as necessary. Actual results could differ from those estimates.

Union collective bargaining agreements

We have approximately 48% of the employees covered by a collective bargaining agreement. Agreements which will expire within the coming year apply to approximately 6% of our employees.

U
U

Note 4. Acquisition of UIL

On December 16, 2015 (acquisition date), we completed our acquisition of UIL, a diversified energy company with its portfolio of regulated utility companies in Connecticut and Massachusetts that is expected to provide us with a greater flexibility to grow the combined regulated businesses through project development and create an enhanced platform to develop transmission and distribution projects in the Northeastern United States. In connection with the consummation of the acquisition we issued 309,490,839 shares of common stock of AVANGRID, out of which 252,234,989 shares were issued to Iberdrola through a stock dividend, accounted for as a stock split, with no change to par value, at par value of \$0.01 per share, and 57,255,850 shares (including those held in trust as treasury stock) were issued to UIL shareowners in addition to payment of \$595 million in cash. Following the completion of the acquisition, former UIL shareowners owned 18.5% of the outstanding shares of common stock of AVANGRID, and Iberdrola owned the remaining shares.

The acquisition was accounted for as a business combination. This method requires, among other things, that assets acquired and liabilities assumed in a business combination, with certain exceptions, be recognized at their fair values as of the acquisition date.

As UIL's common stock was publicly traded in an active market until the acquisition date, we determined that UIL's common stock is more reliably measurable than the common stock of AVANGRID to determine the fair value of the consideration transferred in the transaction.

The purchase consideration for UIL under the acquisition method is based on the stock price of UIL on the acquisition date multiplied by the number of shares issued by AVANGRID to the UIL shareowners after applying an equity exchange factor to the shares of vested restricted common stock of UIL (other than those UIL restricted shares that vest by their terms upon the consummation of the acquisition), performance shares and other shares awards under UIL 2008 Stock and Incentive Compensation Plan and the UIL Deferred Compensation Plan. The "equity exchange factor" is the sum of one plus a fraction, (i) the numerator of which is the cash consideration and (ii) the denominator of which is the average of the volume weighted averages of the trading prices of UIL common stock on each of the ten consecutive trading days ending on (and including) the trading day that immediately precedes the closing date of the acquisition minus \$10.50. The determination of the purchase price is based on a UIL stock price of \$50.10 per share, which represents the closing stock price on the acquisition date.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

The fair value of shares of AVANGRID common stock issued to the UIL shareowners in the business combination represents the purchase consideration in the business combination, which was computed as follows:

	(millions, except share and unit data)
Common shares ⁽¹⁾	56,629,377
Price per share of UIL common stock as of the acquisition date	\$ 50.10
Subtotal value of common shares	\$ 2,837
Restricted stock units ⁽²⁾	476,198
Other shares ⁽³⁾	12,999
Equity exchange factor	1.2806
Total restricted and other shares ⁽³⁾ after applying an equity exchange factor	626,473
Price per share used ⁽⁵⁾	\$ 39.60
Subtotal value of restricted and other shares	\$ 25
Total shares of AVANGRID common stock issued to UIL shareowners (including held in trust as treasury stock)	57,255,850
Performance shares ⁽⁴⁾	211,904
Equity exchange factor	1.2806
Total performance shares after applying an equity exchange factor	271,368
Price per share used ⁽⁵⁾	\$ 39.60
Subtotal value of performance shares	\$ 11
Total consideration	\$ 2,873

(1) Based on UIL's common shares outstanding on December 16, 2015.

(2) Based on UIL's shares of vested restricted stock.

(3) Based on UIL's restricted shares that vested upon the change in control.

(4) Based on UIL's vested performance shares award.

(5) Based on the closing share price of UIL common stock on December 16, 2015, less the cash component of \$10.50, which is not applicable to restricted shares (other than those UIL restricted shares that vest by their terms upon the consummation of the acquisition), performance shares and other awards under the UIL 2008 Stock and Incentive Compensation Plan and the UIL Deferred Compensation Plan.

The following is a summary of the components of the consideration transferred to UIL's shareowners:

	(millions, except share data)
Cash (\$10.50 x number of UIL common shares outstanding at the acquisition date - 56,629,377)	\$ 595
Equity	2,278
Total consideration	\$ 2,873

We also paid \$37.5 million for transaction costs incurred in this business combination, which are recorded in "Operations and maintenance" in the consolidated statements of income for the year ended December 31, 2015.

The following unaudited pro forma financial information presents the combined results of operations as if the acquisition had been completed on January 1, 2014, the beginning of the comparable prior annual reporting period. The unaudited pro forma results include: (i) merger credit adjustments to operating revenue (see Merger Settlement Agreement below for further details); (ii) elimination of accrued transaction costs representing non-recurring expenses directly related to the transaction, and (iii) the associated tax impact on these unaudited pro forma adjustments.

The unaudited pro forma results do not reflect any cost saving synergies from operating efficiencies or the effect of the incremental costs incurred in integrating the two companies. Accordingly, these unaudited pro forma results are presented for informational

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

purpose only and are not necessarily indicative of what the actual results of operations of the combined company would have been if the acquisition had occurred at the beginning of the period presented, nor are they indicative of future results of operations:

	Year Ended December 31,	
	2015	2014
	(millions)	
Revenue	\$ 5,958	\$ 6,226
Net income	\$ 468	\$ 539

The revenue and net (loss) of UIL since the acquisition date included in the consolidated statements of income for the year ended December 31, 2015 were \$36 million and \$(36) million, respectively (see Merger Settlement Agreement below for further details).

We finalized the valuation of the assets acquired and liabilities assumed within the measurement period during 2016. For the majority of UIL's assets and liabilities, primarily property, plant and equipment, fair value was determined to be the respective carrying amounts of the predecessor entity. UIL's operations are conducted in a regulated environment where the regulatory authority allows an approved rate of return on the carrying amount of the regulated asset base. Measurement period adjustments that were recognized in the year ended December 31, 2016 relate to the adjustments of the allocation of the purchase price to the following: equity method investments; contracts; debt; contingent liabilities, including those related to certain environmental sites; income taxes; non-regulated property, plant and equipment and goodwill.

The following is a summary of the allocation of the purchase price as of the acquisition date and measurement period adjustments recognized in the year ended December 31, 2016:

	Provisional amounts reported in 2015	Measurement period adjustments (millions)	Finalized amounts
Current assets, including cash of \$48 million	\$ 500	\$ (7)	\$ 493
Other investments	114	22	136
Property, plant and equipment	3,552	(5)	3,547
Regulatory assets	966	36	1,002
Other assets	52	—	52
Current liabilities	(493)	—	(493)
Regulatory liabilities	(493)	—	(493)
Non-current debt	(1,878)	(27)	(1,905)
Other liabilities	(1,201)	(30)	(1,231)
Total net assets acquired at fair value	1,119	(11)	1,108
Goodwill – consideration transferred in excess of fair value assigned	1,754	11	1,765
Total consideration	\$ 2,873		\$ 2,873

Goodwill generated from the acquisition of UIL increased by \$11 million to the total amount of \$1,765 million as of the acquisition date as a result of the finalization of the purchase price allocation. Goodwill generated from the acquisition of UIL has been assigned to the reporting units under the Networks reportable segment and is primarily attributable to expected future growth of the combined regulated businesses and enhanced platform to develop transmission and distribution projects in the Northeastern United States. The goodwill generated from this acquisition is not deductible for tax purposes.

Merger Settlement Agreement

As part of the process of seeking and obtaining regulatory approval for the acquisition in Connecticut and Massachusetts, Iberdrola, S.A., AVANGRID and UIL reached settlement agreements with the Office of Consumer Counsel in Connecticut and with the Attorney General of the Commonwealth of Massachusetts and the Department of Energy Resources in Massachusetts, which settlement agreements included commitments of actions to be taken after the transaction closed.

As a result, the following commitments have been made in Connecticut, recognized in the period subsequent to the acquisition in 2015 unless otherwise noted, each of which is reasonably expected to be at a cost of \$500,000 or more:

- A one-time, \$20 million rate credit to customers in 2016, allocated among UI, SCG and CNG customers based on the total number of retail customers.
- Additional rate credits of \$1.25 million/year for ten years (2018-2027) to CNG customers.
- Additional rate credits of \$0.75 million/year for ten years (2018-2027) to SCG customers.
- \$1.6 million in savings to SCG customers, associated with SCG making additional infrastructure capital investments over a three-year period without seeking recovery until the next SCG rate case. These amounts will be recorded by the Company as incurred in future periods.
- Agreement not to seek to increase UI distribution base rates effective before January 1, 2017, and agreement not to seek to increase CNG and SCG distribution base rates effective before January 1, 2018.
- Contribution of \$2 million/year for three years to the DEEP, to stimulate investment in energy efficiency and clean energy technologies.
- \$5 million in benefits to customers resulting from UI recovering only the debt rate rather than the equity return for two years, on an increased \$50 million of investment in storm resiliency programs. These amounts will be recorded by the Company as incurred in future periods.
- Contribution of \$1 million for disaster relief entities.
- Maintaining charitable contribution at historical contribution levels (between \$500,000 and \$800,000) for at least four years.
- Upon the resolution of all appeals of the PURA decision approving the acquisition, UI will withdraw its appeals of two PURA dockets relating to PURA's disallowance of certain reconciliation amounts. The appeals were withdrawn by UI in June 2016.

In connection with the acquisition proceeding, UI signed the consent order that, pursuant to the terms and conditions in the consent order, requires UI to investigate and remediate certain environmental conditions within the perimeter of the English Station site. To the extent that the investigation and remediation is less than \$30 million, UI would remit to the State of Connecticut the difference between such costs and \$30 million for a public purpose as determined in the discretion of the Governor the Attorney General of Connecticut and the Commissioner of DEEP. Pursuant to the consent order UI is obligated to comply with the consent order, even if the cost of such compliance exceeds \$30 million. The state will discuss options with UI on recovering or funding any cost above \$30 million such as through public funding or recovery from third parties, however it is not bound to agree to or support any means of recovery or funding (See Note 14, Environmental Liabilities – English Station, for further details).

As of December 31, 2016 and 2015 we reserved \$28.3 million and \$20.5 million, respectively, for this matter and have accrued the remaining \$1.7 million and \$9.5 million in accordance with the settlement with PURA approving the acquisition. The difference of \$7.8 million pre-tax has been reflected as the reversal of an expense in our 2016 results, reversing the amounts recorded in 2015, to adjust the allocation of the purchase price as a measurement period adjustment from the acquisition of UIL. The adjustment to the reserve during 2016 was recorded in the "Operations and maintenance" line of the consolidated statement of income as a measurement period adjustment based on additional information obtained for the site regarding circumstances of the site as of the acquisition date of UIL.

As part of the final allocation of the purchase price we have determined a fair value of contingent liabilities of approximately \$46.0 million relating to certain environmental sites.

The following commitments have been made in Massachusetts, recognized in the period subsequent to the acquisition in 2015 unless otherwise noted, each of which is reasonably expected to be at a cost of \$500,000 or more:

- Customers of BGC will receive a total of \$4.0 million in rate credits, to be spread over the months of November through April 2016-2017 and November through April 2017-2018.
- BGC will contribute \$1 million to alternative heating programs.
- BGC will not seek to increase distribution base rates effective before June 1, 2018.

As a result of the merger settlement agreement we have recorded \$44 million as regulatory liabilities relating to the rate credits and an additional \$19.8 million as liabilities, which primarily resulted in the net loss for UIL in the period following the acquisition date in 2015.

U

Note 5. Industry Regulation

Electricity and Natural Gas Distribution – Maine and New York

The Maine distribution rate stipulation, the Maine transmission Federal Energy Regulatory Commission (FERC) Return on Equity (ROE) case, the New York rate plans, Reforming Energy Vision (REV), and the New York Transmission Company (New York TransCo) filings are some of the most important specific regulatory processes that affect Networks.

The revenues of Networks companies are essentially regulated, being based on tariffs established in accordance with administrative procedures set by the various regulatory bodies. The tariffs applied to regulated activities in the U.S. are approved by the regulatory commissions of the different states and are based on the cost of providing service. The revenues of each regulated utility are set to be sufficient to cover all its operating costs, including energy costs, finance costs, and the costs of equity, the last of which reflect our capital ratio and a reasonable ROE.

Energy costs that are set on the New York and New England wholesale markets are passed on to consumers. The difference between energy costs that are budgeted and those that are actually incurred by the utilities is offset by applying compensation procedures that result in either immediate or deferred tariff adjustments. These procedures apply to other costs, which are in most cases exceptional, such as the effects of extreme weather conditions, environmental factors, regulatory and accounting changes, and treatment of vulnerable customers, that are offset in the tariff process. Any New York revenues that allow a utility to exceed target returns, usually the result of better than expected cost efficiency, are generally shared between the utility and its customers, resulting in future tariff reductions.

Each of the four Networks' New York and Maine supply companies must comply with regulatory procedures that differ in form but in all cases conform to the basic framework outlined above. Generally, tariff reviews cover various years and provide for a reasonable ROE, protection, and automatic adjustments for exceptional costs incurred and efficiency incentives.

CMP Distribution Rate Stipulation and New Renewable Source Generation

On May 1, 2013, CMP submitted its required distribution rate request with the Maine Public Utilities Commission (MPUC). On July 3, 2014, after a fourteen month review process, CMP filed a rate stipulation agreement on the majority of the financial matters with the MPUC. The stipulation agreement was approved by the MPUC on August 25, 2014. The stipulation agreement also noted that certain rate design matters would be litigated, which the MPUC ruled on October 14, 2014.

The rate stipulation agreement provided for an annual CMP distribution tariff increase of 10.7% or \$24.3 million. The rate increase was based on a 9.45% ROE and 50% equity capital. CMP was authorized to implement a Rate Decoupling Mechanism (RDM) which protects CMP from variations in sales due to energy efficiency and weather. CMP also adjusted its storm costs recovery mechanism whereby it is allowed to collect in rates a storm allowance and to defer actual storm costs when such storm event costs exceed \$3.5 million. CMP and customers share storm costs that exceed a certain balance on a fifty-fifty basis, with CMP's exposure limited to \$3.0 million annually.

CMP has made a separate regulatory filing for a new customer billing system replacement. In accordance with the stipulation agreement, a new billing system is needed and CMP made its filing on February 27, 2015 to request a separate rate recovery mechanism. On October 20, 2015, the MPUC issued an order approving a stipulation agreement authorizing CMP to proceed with the customer billing system investment. The approved stipulation allows CMP to recover the system costs effective with its implementation, currently expected in mid-2017.

The rate stipulation does not have a predetermined rate term. CMP has the option to file for new distribution rates at its own discretion. The rate stipulation does not contain service quality targets or penalties. The rate stipulation also does not contain any earning sharing requirements.

Under Maine law 35-A M.R.S.A §§ 3210-C, 3210-D, the MPUC is authorized to conduct periodic requests for proposals seeking long-term supplies of energy, capacity or Renewable Energy Certificates, or RECs, from qualifying resources. The MPUC is further authorized to order Maine Transmission and Distribution Utilities to enter into contracts with sellers selected from the MPUC's competitive solicitation process. Pursuant to a MPUC Order dated October 8, 2009, CMP entered into a 20-year agreement with Evergreen Wind Power III, LLC, on March 31, 2010, to purchase capacity and energy from Evergreen's 60 MW Rollins wind farm in Penobscot County, Maine. CMP's purchase obligations under the Rollins contract are approximately \$7 million per year. In accordance with subsequent MPUC orders, CMP periodically auctions the purchased Rollins energy to wholesale buyers in the New England regional market. Under applicable law, CMP is assured recovery of any differences between power purchase costs and achieved market revenues through a reconcilable component of its retail distribution rates. Although the MPUC has conducted multiple requests for proposals under M.R.S.A §3210-C and has tentatively accepted long-term proposals from other sellers, these selections have not yet resulted in additional currently effective contracts with CMP.

Transmission - FERC ROE Proceeding

See Note 13, Commitments and Contingent Liabilities, for a further discussion.

CMP's and UI's transmission rates are determined by a tariff regulated by the FERC and administered by ISO New England, Inc. (ISO-NE). Transmission rates are set annually pursuant to a FERC authorized formula that allows for recovery of direct and allocated transmission operating and maintenance expenses, and for a return of and on investment in assets.

On December 28, 2015, the FERC issued an order instituting section 206 proceedings and establishing hearing and settlement judge procedures. Pursuant to section 206 of the FPA, the FERC instituted proceedings because it found that ISO-NE Transmission, Markets, and Services Tariff is unjust, unreasonable, and unduly discriminatory or preferential. The FERC stated that ISO-NE's Tariff lacks adequate transparency and challenge procedures with regard to the formula rates for ISO-NE Participating Transmission Owners, including UI, Maine Electric Power Corporation (MEPCO) and CMP. The FERC also found that the current Regional Network Service, or RNS and Local Network Service, or LNS, formula rates appear to be unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful as the formula rates appear to lack sufficient detail in order to determine how certain costs are derived and recovered in the formula rates. A settlement judge has been appointed and a settlement conference has convened. We are unable to predict the outcome of this proceeding at this time.

NYSEG and RG&E Rate Plans

On September 16, 2010, the New York Public Service Commission (NYPSC) approved a new rate plan for electric and natural gas service provided by NYSEG and RG&E effective from August 26, 2010 through December 31, 2013. The rate plans contain continuation provisions beyond 2013 if NYSEG and RG&E do not request new rates to go into effect and the current base rates will stay in place. The rates stayed effective until May 1, 2016, at which time a newly approved rate plan became effective.

The 2010 revenue requirements were based on a 10% allowed ROE applied to an equity ratio of 48%. If annual earnings exceed the allowed return, a tiered Earnings Sharing Mechanism (ESM) will capture a portion of the excess for the ratepayers' benefit. The ESM is subject to specified downward adjustments if NYSEG and RG&E fail to meet certain reliability and customer service measures. Key components of the rate plan include electric reliability performance mechanisms, natural gas safety performance measures, customer service quality metrics and targets, and electric distribution vegetation management programs that establish threshold performance targets. There will be downward revenue adjustments if NYSEG and RG&E fail to meet the targets.

The 2010 rate plans established revenue decoupling mechanism (RDM), intended to remove company disincentives to promote increased energy efficiency. Under RDM, electric revenues are based on revenue per customer class rather than billed revenue, while natural gas revenues are based on revenue per customer. Any shortfalls or excesses between billed revenues and allowed revenues will be accrued for future recovery or refund.

In August 2010, NYSEG began amortizing \$15.2 million per year of its \$303.9 million theoretical excess depreciation reserve. On September 1, 2012, RG&E began amortizing \$5.3 million per year of its \$105 million theoretical excess depreciation reserve. Both amortization amounts reflect a twenty year amortization period. Theoretical excess depreciation is the difference between actual

accumulated depreciation taken to date and a theoretical reserve. The actual accumulated depreciation is the result of depreciation rates allowed in prior rate orders based on estimates of useful lives and net salvage values as determined in those cases. The theoretical reserve is the amount that would have accumulated if the depreciation rates in the new rate plan had been in place for the entire useful lives of the affected assets. Differences between the actual reserve and the theoretical reserve are normal aspects of utility ratemaking. The usual treatment is to flow any excess or deficiency back as an adjustment to depreciation expense over the remaining life of the property. However, in accordance with the new rate plan, NYSEG and RG&E moderate electric rates by recording the theoretical reserve amortization as a debit to accumulated depreciation and a credit to other revenues, and normalize a portion of the amortization from a tax perspective.

On May 20, 2015, NYSEG and RG&E filed electric and gas rate cases with the NYPSC. The companies requested rate increases for NYSEG electric, NYSEG gas and RG&E gas. RG&E electric proposed a rate decrease.

On February 19, 2016, NYSEG, RG&E and other signatory parties filed a Joint Proposal (proposal) with the NYPSC for a three-year rate plan for electric and gas service at NYSEG and RG&E commencing May 1, 2016. The proposal, which was approved by the NYPSC on June 15, 2016, balanced the varied interests of the signatory parties including but not limited to maintaining the companies' credit quality and mitigating the rate impacts to customers. The proposal reflects many customer benefits including: acceleration of the companies' natural gas leak prone main replacement programs and increased funding for electric vegetation management to provide continued safe and reliable service. The delivery rate increase in the proposal can be summarized as follows:

Utility	May 1, 2016		May 1, 2017		May 1, 2018	
	Rate Increase (Millions)	Delivery Rate Increase %	Rate Increase (Millions)	Delivery Rate Increase %	Rate Increase (Millions)	Delivery Rate Increase %
NYSEG Electric	\$ 29.6	4.10%	\$ 29.9	4.10%	\$ 30.3	4.10%
NYSEG Gas	13.1	7.30%	13.9	7.30%	14.8	7.30%
RG&E Electric	3.0	0.70%	21.6	5.00%	25.9	5.70%
RG&E Gas	8.8	5.20%	7.7	4.40%	9.5	5.20%

The allowed rate of return on common equity for NYSEG Electric, NYSEG Gas, RG&E Electric and RG&E Gas is 9.00%. The equity ratio for each company is 48%. The proposal includes an Earnings sharing mechanism (ESM) applicable to each company. The customer share of earnings would increase at higher ROE levels, with customers receiving 50%, 75% and 90% of earnings over 9.5%, 10.0% and 10.5% of ROE, respectively, in the first rate year. Earnings sharing is based on the lower of actual equity of 50%. Earnings thresholds increase in subsequent rate years.

The proposal reflects the recovery of deferred NYSEG Electric storm costs of approximately \$262 million, of which \$123 million is being amortized over ten years and the remaining \$139 million is being amortized over five years. The proposal also continues reserve accounting for qualifying Major Storms (\$21.4 million annually for NYSEG Electric and \$2.5 million annually for RG&E Electric). Incremental maintenance costs incurred to restore service in qualifying divisions will be chargeable to the Major Storm Reserve provided they meet certain thresholds.

The proposal maintains NYSEG's and RG&E's current electric reliability performance measures (and associated potential negative revenue adjustments for failing to meet established performance levels) which include the system average interruption frequency index (SAIFI) and the customer average interruption duration index (CAIDI). The Proposal also modifies certain gas safety performance measures at the companies, including those relating to the replacement of leak prone main, leak backlog management, emergency response, and damage prevention. The proposal establishes threshold performance levels for designated aspects of customer service quality and continues and expands NYSEG's and RG&E's bill reduction and arrears forgiveness Low Income Programs with increased funding levels included in the proposal. The proposal provides for the implementation of NYSEG's Energy Smart Community ("ESC") Project in the Ithaca region which will serve as a test-bed for implementation and deployment of Reforming the Energy Vision (REV) initiatives. The ESC Project will be supported by NYSEG's planned Distribution Automation upgrades and Advanced Metering Infrastructure (AMI) implementation for customers on circuits in the Ithaca region. The companies will also pursue Non-Wires Alternative projects as described in the proposal. Other REV-related incremental costs and fees will be included in the Rate Adjustment Mechanism (RAM) to the extent cost recovery is not provided for elsewhere. Under the proposal, each company will implement the RAM, which will be applicable to all customers, to return or collect RAM Eligible Deferrals and Costs, including: (1) property taxes; (2) Major Storm deferral balances; (3) gas leak prone pipe replacement; (4) REV costs and fees which are not covered by other recovery mechanisms; and (5) NYSEG Electric Pole Attachment revenues.

The proposal provides for partial or full reconciliation of certain expenses including, but not limited to: pensions, other postretirement benefits; property taxes; variable rate debt and new fixed rate debt; gas research and development; environmental remediation costs; Major Storms; nuclear electric insurance limited credits; economic development; and Low Income Programs. The proposal also includes a downward-only Net Plant reconciliation. In addition, the proposal includes downward-only reconciliations for the costs of: electric distribution and gas vegetation management; pipeline integrity; and incremental maintenance. The proposal provides that NYSEG and RG&E continue their electric RDMs on a total revenue per class basis and their gas RDMs on a revenue per customer basis.

Electric and Gas regulated utilities – Connecticut and Massachusetts

The distribution rates and allowed ROEs for Networks' regulated utilities in Connecticut and Massachusetts are subject to regulation by the Connecticut Public Utilities Regulatory Authority (PURA) and the Massachusetts Department of Public Utilities (DPU), respectively.

Under Connecticut law, UI's retail electricity customers are able to choose their electricity supplier while UI remains their electric distribution company. UI purchases power for those of its customers under standard service rates who do not choose a retail electric supplier and have a maximum demand of less than 500 kilowatts and its customers under supplier of last resort service for those who are not eligible for standard service and who do not choose to purchase electric generation service from a retail electric supplier. The cost of the power is a "pass-through" to those customers through the GSC charge on their bills.

UI has wholesale power supply agreements in place for its entire standard service load for the first half of 2017, 80% of its standard service load for the second half of 2017 and 20% of its standard service load for the first half of 2018. Supplier of last resort service is procured on a quarterly basis, however, from time to time there are no bidders in the procurement process for supplier of last resort service and in such cases UI manages the load directly.

In December 2016, PURA approved new distribution rate schedules for UI for three years which became effective January 1, 2017 and which, among other things, decreased the UI distribution and CTA allowed ROE from 9.15% to 9.10%, continued UI's existing earnings sharing mechanism by which UI and customers share on a 50/50 basis all distribution earnings above the allowed ROE in a calendar year, continued the existing decoupling mechanism, and approved the continuation of the requested storm reserve.

On January 22, 2014, PURA approved new base delivery rates for CNG, with an effective date of January 10, 2014, which, among other things, approved an allowed ROE of 9.18%, a decoupling mechanism, and two separate ratemaking mechanisms that reconcile actual revenue requirements related to CNG's cast iron and bare steel replacement program and system expansion. Additionally, the final decision requires the establishment of an earnings sharing mechanism by which CNG and customers share on a 50/50 basis all earnings above the allowed ROE in a calendar year. In accordance with the approval by PURA of the acquisition, SCG and CNG agreed not to initiate a rate case for new rates effective before at least January 1, 2018.

BGC's rates are established by the DPU. BGC's 10-year rate plan, which was approved by the DPU and included an approved ROE of 10.5%, expired on January 31, 2012. BGC continues to charge the rates that were in effect at the end of the rate plan. In accordance with the approval by the DPU of the acquisition, BGC agreed not to initiate a rate case for new rates effective before at least June 1, 2018.

REV

In April 2014, the NYPSC commenced a proceeding entitled REV, which is a wide ranging initiative to reform New York state's energy industry and regulatory practices. REV has been divided into two tracks, Track 1 for Market Design and Technology, and Track 2 for Regulatory Reform. REV and its related proceedings have and will continue to propose regulatory changes that are intended to promote more efficient use of energy, deeper penetration of renewable energy resources such as wind and solar and wider deployment of distributed energy resources, such as micro grids, on-site power supplies and storage.

REV is also intended to promote greater use of advanced energy management products to enhance demand elasticity and efficiencies. Track 1 of this initiative involves a collaborative process to examine the role of distribution utilities in enabling market based deployment of distributed energy resources to promote load management and greater system efficiency, including peak load reductions. NYSEG and RG&E are participating in the initiative with other New York utilities and are providing their unique perspective. The NYPSC issued a 2015 order in Track 1, which acknowledges the utilities' role as a Distribution System Platform (DSP) provider, and required the utilities to file an initial Distribution System Implementation Plan (DSIP) by June 30, 2016. The

companies filed the DSIP, which also included information regarding the potential deployment of Automated Metering Infrastructure (AMI) across its entire service territory. The companies, in December 2016, filed a petition to the NYPSC requesting approval for cost recovery associated with the full deployment of AMI, and a collaborative associated with this petition is expected to begin in the first quarter of 2017.

Other various proceedings have also been initiated by the NYPSC which are REV related, and each proceeding has its own schedule. These proceedings include the Clean Energy Standard, Value of DER and Net Energy Metering, Demand Response Tariffs, and Community Choice Aggregation. As part of the Clean Energy Standard proceeding, all electric utilities were ordered to begin payments to NYSERDA for Renewable Energy Credits and Zero Emissions Credits beginning in 2017.

Track 2 of the REV initiative is also underway, and through a NYPSC Staff Whitepaper review process, is examining potential changes in current regulatory, tariff, market design and incentive structures which could better align utility interests with achieving New York state and NYPSC's policy objectives. New York utilities will also be addressing related regulatory issues in their individual rate cases. A Track 2 order was issued in May 2016, and includes guidance related to the potential for Earnings Adjustment Mechanisms (EAMs), Platform Service Revenues, innovative rate designs, and data utilization and security. The companies, in December 2016, filed a proposal for the implementation of EAMs in the areas of System Efficiency, Energy Efficiency, Interconnections, and Clean Air. A collaborative process to review the companies' petition is expected to begin in the first quarter of 2017.

Ginna Reliability Support Service Agreement

Ginna Nuclear Power Plant, LLC (GNPP), which is a subsidiary of Constellation Energy Nuclear Group, LLC (CENG), owns and operates the R.E. Ginna Nuclear Power Plant (Ginna Facility and together with GNPP, Ginna), a 581 MW single-unit pressurized water reactor located in Ontario, New York. In May 2014, the New York Independent System Operator (NYISO) produced a Reliability Study, confirming that the Ginna Facility needs to remain in operation to avoid bulk transmission and non-bulk local distribution system reliability violations in 2015 and 2018. In July, 2014, GNPP filed a petition requesting that the NYPSC initiate a proceeding to examine a proposal for the continued operation of the Ginna Facility.

In November 2014, the NYPSC ruled that GNPP had demonstrated that the Ginna Facility is required to maintain system reliability and that its actions with respect to meeting the relevant retirement notice requirements were satisfactory. The NYPSC also accepted the findings of the 2014 Reliability Study and stated that it established "the reliability need for continued operation of the Ginna Facility that is the essential prerequisite to negotiating a Reliability Support Services Agreement (RSSA)." As such, the NYPSC ordered RG&E and GNPP to negotiate an RSSA.

On February 13, 2015, RG&E submitted to the NYPSC an executed RSSA between RG&E and GNPP. RG&E requested that the NYPSC accept the RSSA and approve cost recovery by RG&E from its customers of all amounts payable to GNPP under the RSSA utilizing the cost recovery surcharge mechanism.

On October 21, 2015, RG&E, GNPP, New York Department of Public Service, Utility Intervention Unit and Multiple Intervenors filed a Joint Proposal with the NYPSC for approval of the RSSA, as modified. The Joint Proposal provides a term of the RSSA from April 1, 2015 through March 31, 2017. RG&E shall make monthly payments to Ginna in the amount of \$15.4 million. RG&E will be entitled to 70% of revenues from Ginna's sales into the NYISO energy and capacity markets, while Ginna will be entitled to 30% of such revenues. The signatory parties recommend that the NYPSC authorize RG&E to implement a rate surcharge effective January 1, 2016, to recover amounts paid to Ginna pursuant to the RSSA. RG&E's payment obligation to Ginna did not begin until the rate surcharge was in effect and FERC issued an order authorizing the FERC Settlement agreement in the Settlement Docket. RG&E will use deferred rate credit amounts (regulatory liabilities) to offset the full amount of the Deferred Collection Amount (including carrying costs), plus credit amounts to offset all RSSA costs that exceed \$2.3 million per month, not to exceed a total use of credits in the amount of \$110 million, applicable through June 30, 2017. To the extent that the available credits are insufficient to satisfy the final payment from RG&E to Ginna then the RSSA surcharge would continue past March 31, 2017, to recover up to \$2.3 million per month until the final payment has been recovered by RG&E from ratepayers. In the month following the expiration of the term on March 31, 2017, Ginna shall prepare and issue an invoice to RG&E for, and RG&E shall pay to Ginna, a one-time payment in the amount of \$11.5 million, which will be recovered from ratepayers. If Ginna continues to deliver energy to the NYISO transmission system or makes available capacity to the NYISO markets after seventy-five days following March 31, 2017, Ginna shall pay RG&E a capital recovery balance in eight quarterly installments as long as Ginna is continuing to deliver energy or making available capacity throughout this period. The estimated capital recovery balance that is expected to be in place on March 31, 2017 is \$20.1 million and will accrue interest unless amounts are prepaid by Ginna. The capital recovery balance will be refunded to ratepayers, to the extent collected, which is based on the term of the delivery of energy or capacity being made available by Ginna. On February 23, 2016, the

NYPSC unanimously adopted the Joint Proposal in the Ginna RSSA proceeding as in the public interest. On March 1, 2016, FERC issued an Order approving the contested Settlement agreement, subject to conditions.

New York TransCo

Networks holds an approximately 20% ownership interest in the New York TransCo, LLC (New York TransCo). New York TransCo was established by the New York transmission utilities to develop, own, and operate electric transmission in New York. In December 2014, New York TransCo filed for regulatory approval of its rates, terms, and conditions with the FERC. The filing requests a formula base ROE of 10.6%, one-hundred fifty basis points ROE incentives, construction work in progress, a formula rate mechanism, and a proposed cost allocation. Various parties, including the NYPSC, have protested the filing with the FERC, including the base ROE, the ROE incentives, and the cost allocation. New York TransCo will not make final decisions on transmission project development until a FERC decision.

On April 2, 2015, the FERC issued an order granting, inter alia, New York TransCo's owners' request for a 50 basis point adder for New York TransCo's membership in the NYISO regional transmission organization (RTO), subject to the adder being capped within the zone of reasonableness after a determination of where within that zone its base level ROE should be set. The FERC also set the formula rate and base ROE issue for hearing and settlement judge procedures. In addition, the FERC rejected New York TransCo's owners' cost allocation method for the Transmission Owner Transmission Solutions (TOTS) Projects because it would allocate costs to Power Supply Long Island (LIPA) and New York Power Authority (NYPA) that they did not voluntarily agree to pay.

On November 5, 2015, the New York Transco's owners, filed the Settlement with the FERC to resolve all outstanding issues associated with the TOTS Projects, including issues related to the TOTS Projects that were set for hearing and issues pending on rehearing. The issues regarding certain other projects remain pending. The Settlement addressed the financial terms that are components of New York TransCo's revenue requirement for the proposed TOTS Projects, including the base ROE of 9.50%, and a 50-basis point ROE adder, the capital structure of 53%, and the cost allocation under the New York Independent System Operator, Inc. (NYISO) Open Access Transmission Tariff (OATT) for the TOTS Projects. On March 17, 2016, the FERC approved the Settlement.

Minimum Equity Requirements for Regulated Subsidiaries

Our regulated utility subsidiaries of Maine and New York (NYSEG, RG&E, CMP and MNG) are each subject to a minimum equity ratio requirement that is tied to the capital structure assumed in establishing revenue requirements. Pursuant to these requirements, each of NYSEG, RG&E, CMP and MNG must maintain a minimum equity ratio equal to the ratio in its currently effective rate plan or decision measured using a trailing 13-month average. On a monthly basis, each utility must maintain a minimum equity ratio of no less than 300 basis points below the equity ratio used to set rates. The minimum equity ratio requirement has the effect of limiting the amount of dividends that may be paid and may, under certain circumstances, require that the parent contribute equity capital. The regulated utility subsidiaries are prohibited by regulation from lending to unregulated affiliates. The regulated utility subsidiaries have also agreed to minimum equity ratio requirements in certain borrowing agreements. These requirements are lower than the regulatory requirements.

Pursuant to agreements with the relevant utility commission, UI, SCG, CNG and BGC are restricted from paying dividends if paying such dividend would result in a common equity ratio lower than 300 basis points below the equity percentage used to set rates in the most recent distribution rate proceeding as measured using a trailing 13-month average calculated as of the most recent quarter end. In addition, UI, SCG, CNG and BGC are prohibited from paying dividends to their parent if the utility's credit rating as rated by any of the three major credit rating agencies, falls below investment grade, or if the utility's credit rating, as determined by two of the three major credit rating agencies falls to the lowest investment grade and there is a negative watch or review downgrade notice.

We had restricted net assets of approximately \$4,291 million associated with the minimum equity requirements as of December 31, 2016.

Movement of capital from our wholly owned unregulated subsidiaries is unrestricted.

New Renewable Source Generation

Under Connecticut law Public Act (PA 11-80), Connecticut electric utilities are required to enter into long-term contracts to purchase Connecticut Class I Renewable Energy Certificates, or RECs, from renewable generators located on customer premises. Under this

program, UI is required to enter into contracts totaling approximately \$200 million in commitments over an approximate 21-year period. The obligations will phase in over a six-year solicitation period, and are expected to peak at an annual commitment level of about \$13.6 million per year after all selected projects are online. Upon purchase, UI accounts for the RECs as inventory. UI expects to partially mitigate the cost of these contracts through the resale of the RECs. PA 11-80 provides that the remaining costs (and any benefits) of these contracts, including any gain or loss resulting from the resale of the RECs, are fully recoverable from (or credited to) customers through electric rates.

On October 23, 2013, PURA approved UI's renewable connections program filed in accordance with PA 11-80, through which UI will develop up to 10 MW of renewable generation. The costs for this program will be recovered on a cost of service basis. PURA established a base ROE to be calculated as the greater of: (A) the current UI authorized distribution ROE (currently 9.10%) plus 25 basis points and (B) the current authorized distribution ROE for Connecticut Light and Power Company, or CL&P (currently 9.17%), less target equivalent market revenues (reflected as 25 basis points). In addition, UI will retain a percentage of the market revenues from the project, which percentage is expected to equate to approximately 25 basis points on a levelized basis over the life of the project. UI expects the cost of this program, a planned 2.8 MW fuel cell facility in New Haven, solar photovoltaic and fuel cell facilities totaling 5 MW in Bridgeport, and a 2.2 MW fuel cell facility in Woodbridge to be approximately \$47 million.

Pursuant to Section 8 of Public Act 13-303, "An Act Concerning Connecticut's Clean Energy Goals," (PA 13-303), in January 2014, at DEEP's direction, UI entered into three contracts for the purchase of RECs associated with an aggregate of 5.7 MW of energy production from biomass plants in New England. The costs of these agreements will be fully recoverable through electric rates.

Equity Investment in Peaking Generation

UI is party to a 50-50 joint venture with NRG affiliates in GenConn, which operates two peaking generation plants in Connecticut. The two peaking generation plants, GenConn Devon and GenConn Middletown, are both participating in the ISO-New England markets. PURA has approved revenue requirements for the period from January 1, 2017 through December 31, 2017 of \$28.8 million and \$35.7 million for GenConn Devon and GenConn Middletown, respectively. PURA has ruled previously that GenConn project capital costs incurred were prudently incurred. Such costs are included in the 2017 approved revenue requirements.

Note 6. Regulatory Assets and Liabilities

Pursuant to the requirements concerning accounting for regulated operations, our utilities capitalize, as regulatory assets, incurred and accrued costs that are probable of recovery in future electric and natural gas rates. We base our assessment of whether recovery is probable on the existence of regulatory orders that allow for recovery of certain costs over a specific period, or allow for reconciliation or deferral of certain costs. When costs are not treated in a specific order we use regulatory precedent to determine if recovery is probable. Our operating utilities also record, as regulatory liabilities, obligations to refund previously collected revenue or to spend revenue collected from customers on future costs. Substantially all assets or liabilities for which funds have been expended or received are either included in the rate base or are accruing a carrying cost until they will be included in the rate base. The primary items that are not included in the rate base or accruing carrying costs are the regulatory assets for qualified pension and other postretirement benefits, which reflect unrecognized actuarial gains and losses, debt premium, environmental remediation costs which is primarily the offset of accrued liabilities for future spending, unfunded future income taxes, which are the offset to the unfunded future deferred income tax liability recorded, asset retirement obligations, hedge losses and contracts for differences. The total amount of these items is approximately \$2,357 million.

Regulatory assets and other regulatory liabilities shown in the tables below result from various regulatory orders that allow for the deferral and/or reconciliation of specific costs. Regulatory assets and regulatory liabilities are classified as current when recovery or refund in the coming year is allowed or required through a specific order or when the rates related to a specific regulatory asset or regulatory liability are subject to automatic annual adjustment.

On June 15, 2016, the NYPSC approved the proposal in connection with a three-year rate plan for electric and gas service at NYSEG and RG&E effective May 1, 2016. Following the approval of the proposal most of these items related to NYSEG are amortized over a five-year period, except the portion of storm costs to be recovered over ten years, and plant related tax items which are amortized over the life of associated plant. Annual amortization expense for NYSEG is approximately \$16.5 million per rate year. RG&E items that are being amortized are plant related tax items, which are amortized over the life of associated plant, and unfunded deferred taxes being amortized over a period of fifty years. A majority of the other items related to RG&E, which net to a regulatory liability, remains deferred and will not be amortized until future proceedings or will be used to recover costs of the Ginna RSSA. Following the approval of the proposal by the NYPSC, unfunded future income taxes were adjusted for the amount of \$126 million to reflect the

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

change from a flow through to normalization method, which has been recorded as an increase to income tax expense and an offsetting increase to revenue, during the year ended December 31, 2016. The amounts will be collected over a period of fifty years.

Current and non-current regulatory assets as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	2016	2015
Current		
Pension and other post-retirement benefits cost deferrals	\$ 22	\$ 8
Pension and other post-retirement benefits	7	13
Storm costs	40	8
Temporary supplemental assessment surcharge	4	7
Reliability support services	27	—
Revenue decoupling mechanism	15	6
Transmission revenue reconciliation mechanism	12	5
Electric supply reconciliation	13	—
Hedges losses	10	37
Contracts for differences	14	18
Hardship programs	16	13
Deferred property tax	10	—
Plant decommissioning	6	—
Deferred purchased gas	14	12
Deferred transmission expense	13	12
Environmental remediation costs	14	37
Other	48	43
Total Current Regulatory Assets	285	219
Non-current		
Pension and other post-retirement benefits cost deferrals	134	151
Pension and other post-retirement benefits	1,320	1,509
Storm costs	187	251
Deferred meter replacement costs	32	34
Unamortized losses on reacquired debt	20	23
Environmental remediation costs	287	271
Unfunded future income taxes	542	549
Asset retirement obligations	18	24
Deferred property tax	33	45
Federal tax depreciation normalization adjustment	161	158
Merger capital expense target customer credit	11	15
Debt premium	151	141
Plant decommissioning	14	7
Contracts for differences	61	50
Hardship programs	18	29
Other	102	57
Total Non-current Regulatory Assets	\$ 3,091	\$ 3,314

“Pension and other post-retirement benefits” represent the actuarial losses on the pension and other post-retirement plans that will be reflected in customer rates when they are amortized and recognized in future pension expenses. “Pension and other post-retirement benefits cost deferrals” include the difference between actual expense for pension and other post-retirement benefits and the amount provided for in rates for certain of our regulated utilities. The recovery of these amounts will be determined in future proceedings.

“Storm costs” for CMP, NYSEG, and RG&E are allowed in rates based on an estimate of the routine costs of service restoration. The companies are also allowed to defer unusually high levels of service restoration costs resulting from major storms when they meet certain criteria for severity and duration. The portion of storm costs for the amount of \$123 million is being recovered over ten-year period and the remaining portion is being amortized over five years following the approval of the proposal by the NYPSC. CMP’s total deferral, including carrying costs, was \$2 million and \$12 million as of December 31, 2016 and 2015, respectively. UI is allowed to defer costs associated with any storm totaling \$1 million or greater for future recovery. UI’s storm regulatory asset balance was \$0 as of December 31, 2016.

“Deferred meter replacement costs” represent the deferral of the book value of retired meters which were replaced by advanced metering infrastructure meters. This amount is being amortized over the initial depreciation period of related retired meters.

“Unamortized losses on reacquired debt” represent deferred losses on debt reacquisitions that will be recovered over the remaining original amortization period of the reacquired debt.

“Environmental remediation costs” includes spending that has occurred and is eligible for future recovery in customer rates. Environmental costs are currently recovered through a reserve mechanism whereby projected spending is included in rates with any variance recorded as a regulatory asset or a regulatory liability. The amortization period will be established in future proceedings and will depend upon the timing of spending for the remediation costs. It also includes the anticipated future rate recovery of costs that are recorded as environmental liabilities since these will be recovered when incurred. Because no funds have yet been expended for the regulatory asset related to future spending, it does not accrue carrying costs and is not included within rate base.

“Unfunded future income taxes” represent unrecovered federal and state income taxes primarily resulting from regulatory flow through accounting treatment and are the offset to the unfunded future deferred income tax liability recorded. The income tax benefits or charges for certain plant related timing differences, such as removal costs, are immediately flowed through to, or collected from, customers. This amount is being amortized as the amounts related to temporary differences that give rise to the deferrals are recovered in rates. Following the approval of the proposal by the NYPSC, these amounts will be collected over a period of fifty years and the NYPSC Staff will perform an audit of the unfunded future income taxes and other tax assets to verify the balances.

“Asset retirement obligations” (ARO) represents the differences in timing of the recognition of costs associated with our AROs and the collection of such amounts through rates. This amount is being amortized at the related depreciation and accretion amounts of the underlying liability.

“Deferred property taxes” represents the customer portion of the difference between actual expense for property taxes and the amount provided for in rates. The New York (NY) amount is being amortized over a five year period following the approval of the proposal by the NYPSC.

“Federal tax depreciation normalization adjustment” represents the revenue requirement impact of the difference in the deferred income tax expense required to be recorded under the IRS normalization rules and the amount of deferred income tax expense that was included in cost of service for rates years covering 2011 forward. The recovery period in NY is from 27 to 39 years and for CMP this will be determined in future Maine Public Utility Commission (MPUC) rate proceedings.

“Debt premium” represents the regulatory asset recorded to offset the fair value adjustment to the regulatory component of the non-current debt of UIL at the acquisition date. This amount is being amortized to interest expense over the remaining term of the related outstanding debt instruments.

“Hardship Programs” represent hardship customer accounts deferred for future recovery to the extent they exceed the amount in rates.

“Deferred Purchased Gas” represents the difference between actual gas costs and gas costs collected in rates.

“Contracts for Differences” represent the deferral of unrealized gains and losses on contracts for differences derivative contracts. The balance fluctuates based upon quarterly market analysis performed on the related derivatives. The amounts, which do not earn a return, are fully offset by a corresponding derivative asset/liability.

“Deferred Transmission Expense” represents deferred transmission income or expense and fluctuates based upon actual revenues and revenue requirements.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Current and non-current regulatory liabilities as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	2016	2015
Current		
Reliability support services (Cayuga)	\$ 3	\$ 16
Non by-passable charges	22	7
Energy efficiency portfolio standard	45	33
Gas supply charge and deferred natural gas cost	6	6
Transmission revenue reconciliation mechanism	5	16
Pension and other post-retirement benefits	3	3
Pension and other post-retirement benefits cost deferrals	14	—
Carrying costs on deferred income tax bonus depreciation	15	—
Carrying costs on deferred income tax - Mixed Services 263(a)	5	—
Yankee DOE refund	24	5
Merger-related rate credits	3	20
Revenue decoupling mechanism	9	14
Other	38	27
Total Current Regulatory Liabilities	192	147
Non-current		
Accrued removal obligations	1,117	1,084
Asset sale gain account	9	8
Carrying costs on deferred income tax bonus depreciation	95	116
Economic development	35	36
Merger capital expense target customer credit account	15	17
Pension and other post-retirement benefits	76	90
Positive benefit adjustment	42	51
New York state tax rate change	9	17
Post term amortization	3	25
Theoretical reserve flow thru impact	24	31
Deferred property tax	19	15
Net plant reconciliation	10	10
Variable rate debt	28	32
Carrying costs on deferred income tax - Mixed Services 263(a)	25	31
Rate refund – FERC ROE proceeding	22	21
Transmission congestion contracts	18	—
Merger-related rate credits	21	24
Accumulated deferred investment tax credits	15	10
Asset retirement obligation	13	13
Earning sharing provisions	12	—
Middletown/Norwalk local transmission network service collections	19	19
Excess generation service charge	—	21
Low income programs	46	42
Unfunded future income taxes	—	27
Non-firm margin sharing credits	7	8
Deferred income taxes regulatory	565	519
Other	73	93
Total Non-current Regulatory Liabilities	\$ 2,318	\$ 2,360

“Reliability support services (Cayuga)” represents the difference between actual expenses for reliability support services and the amount provided for in rates. This will be refunded to customers within the next year.

“Non by-passable charges” represent the non by-passable charge paid by all customers. An asset or liability is recognized resulting from differences between actual revenues and the underlying cost being recovered. This liability will be refunded to customers within the next year.

“Energy efficiency portfolio standard” represents the difference between revenue billed to customers through an energy efficiency charge and the costs of our energy efficiency programs as approved by the state authorities. This may be refunded to customers within the next year.

“Accrued removal obligations” represent the differences between asset removal costs recorded and amounts collected in rates for those costs. The amortization period is dependent upon the asset removal costs of underlying assets and the life of the utility plant.

“Asset sale gain account” represents the gain on NYSEG’s 2001 sale of its interest in Nine Mile Point 2 nuclear generating station. The net proceeds from the Nine Mile Point 2 nuclear generating station were placed in this account and will be used to benefit customers. The amortization period is five years following the approval of the proposal by the NYPSC.

“Carrying costs on deferred income tax bonus depreciation” represent the carrying costs benefit of increased accumulated deferred income taxes created by the change in tax law allowing bonus depreciation. The amortization period is five years following the approval of the proposal by the NYPSC.

“Economic development” represents the economic development program which enables NYSEG and RG&E to foster economic development through attraction, expansion, and retention of businesses within its service territory. If the level of actual expenditures for economic development allocated to NYSEG and RG&E varies in any rate year from the level provided for in rates, the difference is refunded to ratepayers. The amortization period is five years following the approval of the proposal by the NYPSC.

“Merger capital expense target customer credit” account was created as a result of NYSEG and RG&E not meeting certain capital expenditure requirements established in the order approving the purchase of Energy East by Iberdrola. The amortization period is five years following the approval of the proposal by the NYPSC.

“Pension and other postretirement benefits” represent the actuarial gains on other postretirement plans that will be reflected in customer rates when they are amortized and recognized in future expenses. Because no funds have yet been received for this a regulatory liability is not reflected within rate base. They also represent the difference between actual expense for pension and other postretirement benefits and the amount provided for in rates. Recovery of these amounts will be determined in future proceedings.

“Positive benefit adjustment” resulted from Iberdrola’s 2008 acquisition of Energy East. This is being used to moderate increases in rates. The amortization period is five years following the approval of the proposal by the NYPSC and included in the Ginna RSSA settlement.

“New York state tax rate change” represents excess funded accumulated deferred income tax balance caused by the 2014 New York state tax rate change from 7.1% to 6.5%. The amortization period is five years following the approval of the proposal by the NYPSC.

“Post term amortization” represents the revenue requirement associated with certain expired joint proposal amortization items. The amortization period is five years following the approval of the proposal by the NYPSC.

“Theoretical reserve flow thru impact” represents the differences from the rate allowance for applicable federal and state flow through impacts related to the excess depreciation reserve amortization. It also represents the carrying cost on the differences. The amortization period is five years following the approval of the proposal by the NYPSC.

“Merger-related rate credits” resulted from the acquisition of UIL. This is being used to moderate increases in rates. See Merger Settlement Agreement in Note 4 for further details. In the year ended December 31, 2016, \$20 million of rate credits was applied against customer bills.

“Excess generation service charge” represents deferred generation-related and non by-passable federally mandated congestion costs or revenues for future recovery from or return to customers. The amount fluctuates based upon timing differences between revenues collected from rates and actual costs incurred.

“Low Income Programs” represent various hardship and payment plan programs approved for recovery.

“Other” includes cost of removal being amortized through rates and various items subject to reconciliation including variable rate debt, Medicare subsidy benefits and stray voltage collections.

U

Note 7. Goodwill and Intangible assets

Goodwill by reportable segment as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	2016	2015
Networks	\$ 2,744	\$ 2,733
Renewables	380	380
Gas	—	—
Other (a)	—	2
Total	\$ 3,124	\$ 3,115

(a) Does not represent a reportable segment. It includes Corporate.

As of December 31, 2016, the gross amounts of goodwill were \$2,744 million, for Networks reportable segment, \$3,340 million for Renewables and Gas reportable segments and no goodwill for Corporate, (which does not represent a segment), with accumulated impairment losses of \$2,960 million for Renewables and Gas reporting segments. As of December 31, 2015, the gross amounts of goodwill were \$2,733 million, for Networks reportable segment, \$3,340 million for Renewables and \$2 million for Corporate, with accumulated impairment losses of \$2,960 million for Renewables and Gas reporting segments. During the year ended December 31, 2015 goodwill in Networks reportable segment increased by \$1,754 million due to acquisition of UIL based on preliminary allocation of the purchase price. During the year ended December 31, 2016, upon finalization of the valuation of assets acquired and liabilities assumed, goodwill in Networks reportable segment related to the acquisition of UIL increased by \$11 million to a total amount of \$1,765 million as of December 31, 2016 (See Note 4 – Acquisition of UIL – for further details).

During the year ended December 31, 2016, we reversed \$2 million of goodwill in Corporate as a result of the sale of our interest in equity investment (See Note 21).

Goodwill Impairment Assessment

For impairment testing purposes our reporting units are the same as operating segments, except for Networks, which contained three reporting units, Maine, New York and UIL. The goodwill for the Maine reporting unit resulted from the purchase of CMP by Energy East in 2000 and amounted to \$325 million. Separately, the goodwill for the New York reporting unit resulted primarily from the purchase of RG&E by Energy East in 2002 and amounted to \$654 million. The goodwill for the UIL reporting unit was generated from the acquisition of UIL on December 16, 2015 and amounted to \$1,765 million as of December 31, 2016, based on the finalized valuation of assets acquired and liabilities assumed.

Our annual impairment testing takes place as of October 1. Our step zero qualitative assessment involves evaluating key events and circumstances that could affect the fair value of our reporting units, as well as other factors. Events and circumstances evaluated include macroeconomic conditions, industry, regulatory and market considerations, cost factors and their effect on earnings and cash flows, overall financial performance as compared with projected results and actual results of relevant prior periods, other relevant entity specific events, and events affecting a reporting unit.

Our step one impairment testing includes various assumptions, primarily the discount rate, which is based on an estimate of our marginal, weighted average cost of capital, and forecasted cash flows. We test the reasonableness of the conclusions of our step one impairment testing using a range of discount rates and a range of assumptions for long term cash flows.

2016

We had no impairment of goodwill in 2016 as a result of our impairment testing.

Networks

Provided recent relevant events (acquisition of UIL in December 2015 and approval of the proposal by the NYPSC, see Note 4 and 5, respectively) we conducted a quantitative analysis (step one) in 2016. Based on the results of our step one impairment test the estimated fair value of each of the Networks reporting units was in excess of their respective carrying values.

Renewables

Based on the results of our step one impairment test for the Renewables reporting unit conducted in 2016, its estimated fair value was in excess of the carrying value. The assumptions used to estimate fair value were based on projections incorporated in our current operating plans as well as other available information. The current operating plans included significant assumptions and estimates associated with sales growth, profitability and related cash flows, along with cash flows associated with taxes and capital spending. The discount rate used to estimate fair value was risk adjusted in consideration of the economic conditions of the reporting unit. We also considered other assumptions that market participants may use. By their nature, projections are uncertain. Potential events and circumstances, such as declining wind energy output and prices obtained per MWh, changes in incentives established to promote renewable energies and increases in capital expenditures per MW could have an adverse effect on our assumptions.

2015

We had no impairment of goodwill in 2015 as a result of our impairment testing.

Networks

As a result of our step zero qualitative assessment, it was not more likely than not that the fair value of each of the Networks reporting units was less than its carrying amount and it was not necessary to perform the two-step goodwill impairment test. The step zero qualitative assessment was performed in 2015 considering the substantial excess of fair value over the carrying value that was demonstrated in the 2014 impairment test. The qualitative assessment considered key factors such as the level of interest rates, the regulatory environment including the allowed rate of return, and projections of future sales and capital spending. In 2015 the impairment testing of goodwill for Networks includes Maine and New York reporting units.

Renewables

Based on the results of our step one impairment test for the Renewables reporting unit conducted in 2015, its estimated fair value exceeded carrying value. The assumptions used to estimate fair value were based on projections incorporated in our current operating plans as well as other available information. The current operating plans included significant assumptions and estimates associated with sales growth, profitability and related cash flows, along with cash flows associated with taxes and capital spending. The discount rate used to estimate fair value was risk adjusted in consideration of the economic conditions of the reporting unit. We also considered other assumptions that market participants may use. By their nature, projections are uncertain. Potential events and circumstances, such as declining wind energy output and prices obtained per MWh, changes in incentives established to promote renewable energies and increases in capital expenditures per MW could have an adverse effect on our assumptions.

Intangible assets

Intangible assets include those assets acquired in business acquisitions and intangible assets acquired and developed from external third parties and from affiliated companies. Following is a summary of intangible assets:

As of December 31, 2016	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
(Millions)			
Gas Storage rights	\$ 319	\$ (120)	\$ 199
Wind development	587	(254)	333
Other	17	(11)	6
Total Intangible Assets	\$ 923	\$ (385)	\$ 538

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

As of December 31, 2015	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
(Millions)			
Gas Storage rights	\$ 324	\$ (116)	\$ 208
Wind development	584	(243)	341
Other	15	(8)	7
Total Intangible Assets	\$ 923	\$ (367)	\$ 556

Gas Storage rights are being amortized on a straight-line basis over a 40-year estimated life. Wind development costs, with the exception of future 'pipeline' development costs, are amortized on a straight-line basis in accordance with the life of the related assets. Amortization expense for the years ended December 31, 2016, 2015 and 2014 amounted to \$25 million, \$54 million and \$66 million, respectively. We believe our future cash flows will support the recoverability of our intangible assets.

We expect amortization expense for the five years subsequent to December 31, 2016, to be as follows:

Year ending December 31,	
(Millions)	
2017	\$ 16
2018	16
2019	18
2020	17
2021	21

As a result of writing off fully amortized intangible assets relating to Gas Storage rights, \$4.1 million and \$6.5 million were removed from both cost and accumulated amortization during the years ended December 31, 2016 and 2015, respectively.

U
U

Note 8. Property, Plant and Equipment

Property, plant and equipment as of December 31, 2016, consisted of:

As of December 31, 2016	Regulated	Nonregulated	Total
(Millions)			
Electric generation, distribution, transmission and other	\$ 10,343	\$ 10,384	\$ 20,727
Natural gas transportation, distribution and other	4,803	613	5,416
Other common operating property	877	43	920
Total Property, Plant and Equipment in Service (a)	16,023	11,040	27,063
Total accumulated depreciation (b)	(3,970)	(3,016)	(6,986)
Total Net Property, Plant and Equipment in Service	12,053	8,024	20,077
Construction work in progress	979	492	1,471
Total Property, Plant and Equipment	\$ 13,032	\$ 8,516	\$ 21,548

- (a) Includes capitalized leases of \$208 million primarily related to electric generation, distribution, transmission and other.
(b) Includes accumulated amortization of capitalized leases of \$60 million.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Property, plant and equipment as of December 31, 2015, consisted of:

As of December 31, 2015 (Millions)	Regulated	Nonregulated	Total
Electric generation, distribution, transmission and other	\$ 11,506	\$ 10,058	\$ 21,564
Natural gas transportation, distribution and other	2,673	651	3,324
Other common operating property	817	40	857
Total Property, Plant and Equipment in Service (a)	14,996	10,749	25,745
Total accumulated depreciation (b)	(3,727)	(2,645)	(6,372)
Total Net Property, Plant and Equipment in Service	11,269	8,104	19,373
Construction work in progress	1,094	244	1,338
Total Property, Plant and Equipment	\$ 12,363	\$ 8,348	\$ 20,711

(a) Includes capitalized leases of \$178 million primarily related to electric generation, distribution, transmission and other.

(b) Includes accumulated amortization of capitalized leases of \$53 million.

Capitalized interest costs were \$20 million, \$13 million, and \$12 million for the years ended December 31, 2016, 2015 and 2014, respectively.

There was no impairment or write off recorded during the year ended December 31, 2016. We impaired or wrote off amounts of \$12 million and \$24 million for the years ended December 31, 2015 and 2014, respectively, resulting from reassessment of the economic feasibility of our various Renewables development projects in construction.

Depreciation expense for the years ended December 31, 2016, 2015 and 2014, amounted to \$779 million, \$641 million and \$563 million, respectively.

U
U

Note 9. Asset retirement obligations

AROs are intended to meet the costs for dismantling and restoration work that we have committed to carry out at our operational facilities.

The reconciliation of ARO carrying amounts for the years ended December 31, 2016 and 2015 consisted of:

(Millions)	
As of December 31, 2014	\$ 234
Liabilities settled during the year	(16)
Liabilities incurred during the year	—
Accretion expense	14
Revisions in estimated cash flows	(48)
As of December 31, 2015	\$ 184
Liabilities settled during the year	(7)
Liabilities incurred during the year	3
Accretion expense	10
Revisions in estimated cash flows	(29)
As of December 31, 2016	\$ 161

Several of the wind generation facilities have restricted cash for purposes of settling AROs. Restricted cash related to AROs was \$2.0 million and \$1.8 million as of December 31, 2016 and 2015, respectively. These amounts have been included as other non-current assets in the consolidated balance sheets. Accretion expenses are included in "Operations and maintenance" in the consolidated statements of income.

We have AROs for which a liability has not been recognized because the fair value cannot be reasonably estimated due to indeterminate settlement dates, including for the removal of hydroelectric dams due to structural inadequacy or for decommissioning;

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

the removal of property upon termination of an easement, right-of-way or franchise; and costs for abandonment of certain types of gas mains.

As a result of the revision of the estimated useful lives of wind power station assets in 2016 updated weighted average lease terms were used to value AROs. This revision resulted in lower discounted AROs, which we estimate will result in approximately \$3 million annual reduction in expense going forward.

U
U

Note 10. Debt

Long-term debt as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	Maturity Dates	2016		2015	
		Balances	Interest Rates	Balances	Interest Rates
First mortgage bonds - fixed (a)	2018-2045	\$ 1,752	3.07%-10.60%	\$ 1,815	3.07%-10.60%
Unsecured pollution control notes - fixed	2020	200	2.00%-2.375%	200	2.00%-2.375%
Unsecured pollution control notes – variable	2032	62	1.32%	219	0.195%-1.181%
Other various non-current debt - fixed	2017-2045	2,772	2.89%-10.48%	2,440	2.89%-10.48%
Obligations under capital leases	2017-2023	104	4%-4.44%	87	4%-4.44%
Unamortized debt issuance costs and discount		(31)		(25)	
Total Debt		4,859		4,736	
Less: debt due within one year, included in current liabilities		349		206	
Total Non-current Debt		\$ 4,510		\$ 4,530	

(a) The first mortgage bonds have pledged collateral of substantially all the respective utility's in service properties of approximately \$5,886 million.

In November 2016, NYSEG issued \$500 million in aggregate principal amount of 3.25% notes maturing in 2026. The proceeds of the offering were used to reduce balances owed to AVANGRID under an intercompany revolving demand note agreement, to refinance \$100 million of NYSEG debt that matured on December 15, 2016, and to repurchase, at par value, \$96 million of outstanding auction rate securities on December 19, 2016.

On December 19, 2016, AVANGRID, its subsidiary, UIL, and The Bank of New York Mellon, entered into a supplemental indenture, pursuant to which AVANGRID assumed from UIL all the obligations under the indenture dated as of October 7, 2010 between UIL and The Bank of New York Mellon and all obligations relating to \$450 million in aggregate principal amount of 4.625% notes due 2020 issued by the predecessor company to UIL in 2010.

On December 27, 2016, UI repurchased, at par value, \$64 million of auction rate securities using cash on hand and borrowing under an intercompany demand note agreement with AVANGRID.

Non-current debt, including sinking fund obligations and capital lease payments, due over the next five years consists of:

(Millions)	2017	2018	2019	2020	2021	Total
\$	349	\$ 180	\$ 358	\$ 723	\$ 308	\$ 1,918

We make certain standard covenants to lenders in our third-party debt agreements, including, in certain agreements, covenants regarding the ratio of indebtedness to total capitalization. A breach of any covenant in the existing credit facilities or the agreements governing our other indebtedness would result in an event of default. Certain events of default may trigger automatic acceleration. Other events of default may be remedied by the borrower within a specified period or waived by the lenders and, if not remedied or waived, give the lenders the right to accelerate. Neither we nor any of our subsidiaries were in breach of covenants or of any obligation that could trigger the early redemption of our debt as of December 31, 2016 and 2015.

Fair Value of Debt

The estimated fair value of debt amounted to \$5,204 million and \$4,985 million as of December 31, 2016 and 2015, respectively. The estimated fair value was determined, in most cases, by discounting the future cash flows at market interest rates. The interest rate curve used to make these calculations takes into account the risks associated with the electricity industry and the credit ratings of the borrowers in each case. The fair value hierarchy pertaining to the fair value of debt is considered as Level 2, except for unsecured pollution control notes-variable with a fair value of \$61 million and \$204 million as of December 31, 2016 and 2015, respectively, which are considered Level 3. The fair value of these unsecured pollution control notes-variable are determined using unobservable interest rates as the market for these notes is inactive.

Short-term Debt

Outstanding Notes Payable

AVANGRID had \$161 million and \$163 million of notes payable as of December 31, 2016 and 2015, respectively. As of December 31, 2015, the balance consisted of \$160 million of borrowings under the UIL credit facility and \$3 million in other notes payable. As of December 31, 2016 the balance consisted of \$150 million of commercial paper, \$10 million in notes payable to affiliates and \$1 million in other notes payable. AVANGRID's commercial paper program was established on May 13, 2016, has a limit of \$1 billion and is backstopped by the AVANGRID credit facility described below.

AVANGRID Credit Facility

On April 5, 2016, AVANGRID and its subsidiaries, NYSEG, RG&E, CMP, UI, CNG, SCG and BGC entered into a revolving credit facility with a syndicate of banks, or the AVANGRID credit facility, that provides for maximum borrowings of up to \$1.5 billion in the aggregate.

Under the terms of the AVANGRID credit facility, each joint borrower has a maximum borrowing entitlement, or sublimit, which can be periodically adjusted to address specific short-term capital funding needs, subject to the maximum limit established by the banks. AVANGRID's maximum sublimit is \$1 billion, NYSEG, RG&E, CMP and UI have maximum sublimits of \$250 million, CNG, and SCG have maximum sublimits of \$150 million and BGC has a maximum sublimit of \$25 million. Under the AVANGRID credit facility, each of the borrowers will pay an annual facility fee that is dependent on their credit rating. The facility fees will range from 10.0 to 17.5 basis points. The maturity date for the AVANGRID credit facility is April 5, 2021.

As a condition of closing on the AVANGRID credit facility, three existing credit facilities were terminated: the AVANGRID revolving credit facility, which provided for maximum borrowings of up to \$300M and had a scheduled termination date in May 2019; the joint utility revolving credit facility, to which NYSEG, RG&E and CMP were parties, which provided for borrowings of up to \$600 million and which had a scheduled termination date in July 2018; the UIL credit facility, to which UIL, UI, SCG, CNG and BG were parties, which provided for maximum borrowings of \$400 million and which had a scheduled termination date in November 2016.

As of December 31, 2016 the AVANGRID credit facility is undrawn, but the capacity to borrow under the facility is reduced by the amount of outstanding commercial paper, leaving available credit of \$1,350 million.

U

Note 11. Fair Value of Financial Instruments and Fair Value Measurements

We determine the fair value of our derivative assets and liabilities and available for sale non-current investments associated with Networks' activities utilizing market approach valuation techniques:

- We measure the fair value of our noncurrent investments using quoted market prices in active markets for identical assets and include the measurements in Level 1. The available for sale investments which are Rabbi Trusts for deferred compensation plans primarily consist of money market funds and are included in Level 1 fair value measurement.
- NYSEG and RG&E enter into electric energy derivative contracts to hedge the forecasted purchases required to serve their electric load obligations. They hedge their electric load obligations using derivative contracts that are settled based upon Locational Based Marginal Pricing published by the New York Independent System Operator (NYISO). RG&E hedges all its electric load obligations using contracts for a NYISO location where an active market exists. The forward market prices used to value RG&E's open electric energy derivative contracts are based on quoted prices in active markets for identical assets or liabilities with no adjustment required and therefore we include the fair value in Level 1. NYSEG has a combination of Level 1 and Level 2 fair values for its electric energy derivative contracts. A portion of its electric load obligations are exchange traded contracts in a NYISO location where an active market exists. The forward market prices used to value NYSEG's open electric energy derivative contracts are based on quoted prices in active markets for identical assets or liabilities with no adjustment required and therefore we include the fair value in Level 1. A portion of NYSEG's electric energy derivative contracts are non-exchange traded contracts that are valued using inputs that are directly observable for the asset or liability, or indirectly observable through corroboration with observable market data and therefore we include the fair value in Level 2.
- NYSEG and RG&E enter into natural gas derivative contracts to hedge their forecasted purchases required to serve their natural gas load obligations. The forward market prices used to value open natural gas derivative contracts are exchange-based prices for the identical derivative contracts traded actively on the New York Mercantile Exchange (NYMEX). Because we use prices quoted in an active market we include the fair value measurements in Level 1.
- NYSEG, RG&E and CMP enter into fuel derivative contracts to hedge their unleaded and diesel fuel requirements for their fleet vehicles. Exchange-based forward market prices are used but because an unobservable basis adjustment is added to the forward prices we include the fair value measurement for these contracts in Level 3.
- Contracts for differences (CfDs) entered into by UI are marked-to-market based on a probability-based expected cash flow analysis that is discounted at risk-free interest rates and an adjustment for non-performance risk using credit default swap rates. We include the fair value measurement for these contracts in Level 3 (See Note 12 for further discussion on CfDs).

We determine the fair value of our derivative assets and liabilities associated with Renewables and Gas activities utilizing market approach valuation techniques. Exchange-traded transactions, such as NYMEX futures contracts, that are based on quoted market prices in active markets for identical product with no adjustment are included in the Level 1 fair value. Contracts with delivery periods of two years or less which are traded in active markets and are valued with or derived from observable market data for identical or similar products such as over-the-counter NYMEX, foreign exchange swaps, and fixed price physical and basis and index trades are included in Level 2 fair value. Contracts with delivery periods exceeding two years or that have unobservable inputs or inputs that cannot be corroborated with market data for identical or similar products are included in Level 3 fair value. The unobservable inputs include historical volatilities and correlations for tolling arrangements and extrapolated values for certain power swaps. The valuation for this category is based on our judgments about the assumptions market participants would use in pricing the asset or liability since limited market data exists.

The carrying amounts for cash and cash equivalents, accounts receivable, accounts payable, notes payable and interest accrued approximate their estimated fair values and are considered as Level 1.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

The financial instruments measured at fair value as of December 31, 2016 and 2015 consisted of:

As of December 31, 2016 (Millions)	Level 1	Level 2	Level 3	Netting	Total
Securities portfolio (available for sale)	\$ 40	\$ —	\$ —	\$ —	\$ 40
Derivative assets

The reconciliations of changes in the fair value of financial instruments based on Level 3 inputs for the years ended December 31, 2016, 2015 and 2014 consisted of:

(Millions)	2016	2015	2014
Fair value as of January 1,	\$ (19)	\$ 57	\$ 53
Gains for the year recognized in operating revenues	67	33	11
Losses for the year recognized in operating revenues	—	(8)	(1)
Total gains or losses for the period recognized in operating revenues	67	25	10
Gains recognized in OCI	1	2	—
Losses recognized in OCI	—	(3)	(3)
Total gains or losses recognized in OCI	1	(1)	(3)
Net change recognized in regulatory assets and liabilities	(8)	—	—
Purchases	3	(73)	14
Settlements	(9)	(14)	(26)
Transfers out of Level 3 (a)	(4)	(13)	9
Fair value as of December 31,	\$ 31	\$ (19)	\$ 57
Gains for the year included in operating revenues attributable to the change in unrealized gains relating to financial instruments still held at the reporting date	\$ 67	\$ 25	\$ 10

(a) Transfers out of Level 3 were the result of increased observability of market data.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

For assets and liabilities that are recognized in the consolidated financial statements at fair value on a recurring basis, we determine whether transfers have occurred between levels in the hierarchy by re-assessing categorization based on the lowest level of input that is significant to the fair value measurement as a whole at the end of each reporting period. There have been no transfers between Level 1 and Level 2 during the years reported.

Level 3 Fair Value Measurement

The tables below illustrate the significant sources of unobservable inputs used in the fair value measurement of our Level 3 derivatives, and the variability in prices for those transactions classified as Level 3 derivatives.

As of December 31, 2016							
Instruments	Instrument Description	Valuation Technique	Valuation Inputs	Index	Avg.	Max.	Min.
Fixed price power and gas swaps with delivery period > two years	Transactions with delivery periods exceeding two years	Transactions are valued against forward market prices on a discounted basis	Observable and extrapolated forward gas and power prices not all of which can be corroborated by market data for identical or similar products	NYMEX (\$/MMBtu) SP15 (\$/MWh) Mid C (\$/MWh) Cinergy (\$/MWh)	\$ 4.27 \$ 44.23 \$ 35.44 \$ 36.40	\$ 7.37 \$ 80.28 \$ 83.93 \$ 77.49	\$ 1.64 \$ 14.25 \$ 3.60 \$ 18.53

Our Level 3 valuations primarily consist of NYMEX gas and fixed price power swaps with delivery periods extending through 2024 and 2032, respectively. The gas swaps are used to hedge both gas inventory in firm storage and merchant wind positions. The power swaps are used to hedge merchant wind production in the West and Midwest.

We performed a sensitivity analysis around the Level 3 gas and power positions to changes in the valuation inputs. Given the nature of the transactions in Level 3, the only material input to the valuation is the market price of gas or power for transactions with delivery periods exceeding two years. The fixed price power swaps are economic hedges of future power generation, with decreases in power prices resulting in unrealized gains and increases in power prices resulting in unrealized losses. The gas swaps are economic hedges of gas storage inventory and merchant generation, with decreases in gas prices resulting in unrealized gains and increases in gas prices resulting in unrealized losses. As all transactions are economic hedges of the underlying position, any changes in the fair value of these transactions will be offset by changes in the anticipated purchase/sales price of the underlying commodity.

Two elements of the analytical infrastructure employed in valuing transactions are the price curves used in calculation of market value and the models themselves. We maintain and document authorized trading points and associated forward price curves, and we develop and document models used in valuation of the various products.

Transactions are valued in part on the basis of forward price, correlation, and volatility curves. We maintain and document descriptions of these curves and their derivations. Forward price curves used in valuing the transactions are applied to the full duration of the transaction.

The determination of fair value of the CfDs (see Note 12 for further details on CfDs) was based on a probability-based expected cash flow analysis that was discounted at risk-free interest rates, as applicable, and an adjustment for non-performance risk using credit default swap rates. Certain management assumptions were required, including development of pricing that extended over the term of the contracts. We believe this methodology provides the most reasonable estimates of the amount of future discounted cash flows associated with the CfDs. Additionally, on a quarterly basis, we perform analytics to ensure that the fair value of the derivatives is consistent with changes, if any, in the various fair value model inputs. Significant isolated changes in the risk of non-performance, the discount rate or the contract term pricing would result in an inverse change in the fair value of the CfDs. Additional quantitative information about Level 3 fair value measurements of the CfDs is as follows:

Unobservable Input	Range at December 31, 2016
Risk of non-performance	0.68% - 0.81%
Discount rate	1.47% - 2.45%
Forward pricing (\$ per MW)	\$3.15 - \$9.55

Note 12. Derivative Instruments and Hedging

Our Networks, Renewables and Gas activities are exposed to certain risks, which are managed by using derivative instruments. All derivative instruments are recognized as either assets or liabilities at fair value on the consolidated balance sheets in accordance with the accounting requirements concerning derivative instruments and hedging activities.

(a) Networks activities

NYSEG and RG&E have an electric commodity charge that passes through rates costs for the market price of electricity. They use electricity contracts, both physical and financial, to manage fluctuations in electricity commodity prices in order to provide price stability to customers. We include the cost or benefit of those contracts in the amount expensed for electricity purchased when the related electricity is sold. We record changes in the fair value of electric hedge contracts to derivative assets and / or liabilities with an offset to regulatory assets and / or regulatory liabilities, in accordance with the accounting requirements concerning regulated operations.

The amount recognized in regulatory assets for electricity derivatives was a loss of \$12.3 million and \$34.3 million as of December 31, 2016 and 2015, respectively. The loss reclassified from regulatory assets into income, which is included in electricity purchased, was \$66.7 million, \$46.9 million, and \$21.3 million for the years ended December 31, 2016, 2015 and 2014, respectively.

NYSEG and RG&E have purchased gas adjustment clauses that allow them to recover through rates any changes in the market price of purchased natural gas, substantially eliminating their exposure to natural gas price risk. NYSEG and RG&E use natural gas futures and forwards to manage fluctuations in natural gas commodity prices to provide price stability to customers. We include the cost or benefit of natural gas futures and forwards in the commodity cost that is passed on to customers when the related sales commitments are fulfilled. We record changes in the fair value of natural gas hedge contracts to derivative assets and or liabilities with an offset to regulatory assets and or regulatory liabilities in accordance with the accounting requirements for regulated operations.

The amount recognized in regulatory assets for natural gas hedges was a gain of \$3.5 million and a loss of \$3.1 million as of December 31, 2016 and 2015, respectively. The loss reclassified from regulatory assets into income, which is included in natural gas purchased, was \$1.9 million, \$6.3 million, and \$2.2 million for the years ended December 31, 2016, 2015 and 2014, respectively.

Pursuant to PURA, UI and Connecticut's other electric utility, CL&P, each executed two long-term CfDs with certain incremental capacity resources, each of which specifies a capacity quantity and a monthly settlement that reflects the difference between a forward market price and the contract price. The costs or benefits of each contract will be paid by or allocated to customers and will be subject to a cost-sharing agreement between UI and CL&P pursuant to which approximately 20% of the cost or benefit is borne by or allocated to UI customers and approximately 80% is borne by or allocated to CL&P customers.

PURA has determined that costs associated with these CfDs will be fully recoverable by UI and CL&P through electric rates, and UI has deferred recognition of costs (a regulatory asset) or obligations (a regulatory liability). For those CfDs signed by CL&P, UI records its approximate 20% portion pursuant to the cost-sharing agreement noted above. As of December 31, 2016, UI has recorded a gross derivative asset of \$19 million (\$0 of which is related to UI's portion of the CfD signed by CL&P), a regulatory asset of \$75 million, a gross derivative liability of \$95 million (\$70 million of which is related to UI's portion of the CfD signed by CL&P) and a regulatory liability of \$0. As of December 31, 2015, UI has recorded a gross derivative asset of \$29 million (\$1 million of which is

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

related to UI's portion of the CfD signed by CL&P), a regulatory asset of \$68 million, a gross derivative liability of \$96 million (\$61 million of which is related to UI's portion of the CfD signed by CL&P) and a regulatory liability of \$1 million.

The unrealized gains and losses from fair value adjustments to these derivatives, which are recorded in regulatory assets or regulatory liabilities, for the year ended December 31, 2016 and for the period from December 17, 2015 to December 31, 2015, respectively, were as follows:

(Millions)	Year Ended December 31, 2016	Period from December 17, 2015 to December 31, 2015
Regulatory Assets - Derivative liabilities	\$ 7	\$ 1
Regulatory Liabilities - Derivative assets	\$ 1	\$ —

The net notional volumes of the outstanding derivative instruments associated with Networks activities as of December 31, 2016 and 2015, respectively, consisted of:

As of December 31, (Millions)	2016	2015
Wholesale electricity purchase contracts (MWh)	5.6	6.7
Natural gas purchase contracts (Dth)	5.8	4.8
Fleet fuel purchase contracts (Gallons)	2.3	3.8

The offsetting of derivatives, location in the consolidated balance sheet and amounts of derivatives associated with Networks activities as of December 31, 2016 and 2015, respectively, consisted of:

As of December 31, 2016 (Millions)	Current Assets	Noncurrent Assets	Current Liabilities	Noncurrent Liabilities
Not designated as hedging instruments				
Derivative assets	\$ 19	\$ 16	\$ 7	\$ 5
Derivative liabilities	(7)	(5)	(40)	(79)
	12	11	(33)	(74)
Designated as hedging instruments				
Derivative assets	—	—	—	—
Derivative liabilities	—	—	—	—
	—	—	—	—
Total derivatives before offset of cash collateral	12	11	(33)	(74)
Cash collateral receivable	—	—	10	2
Total derivatives as presented in the balance sheet	\$ 12	\$ 11	\$ (23)	\$ (72)
As of December 31, 2015 (Millions)	Current Assets	Noncurrent Assets	Current Liabilities	Noncurrent Liabilities
Not designated as hedging instruments				
Derivative assets	\$ 11	\$ 18	\$ —	\$ —
Derivative liabilities	—	—	(28)	(68)
	11	18	(28)	(68)

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

The effect of derivatives in cash flow hedging relationships on OCI and income for the years ended December 31, 2016, 2015 and 2014, respectively, consisted of:

Year Ended December 31, (Millions)	(Loss) Recognized in OCI on Derivatives Effective Portion (a)	Location of Loss Reclassified from Accumulated OCI into Income Effective Portion (a)	Loss Reclassified from Accumulated OCI into Income
2016			
Interest rate contracts	\$ —	Interest expense	\$ 8
Commodity contracts	—	Operating expenses	2
Total	\$ —		\$ 10
2015			
Interest rate contracts	\$ —	Interest expense	\$ 9
Commodity contracts	(3)	Operating expenses	3
Total	\$ (3)		\$ 12
2014			
Interest rate contracts	\$ —	Interest expense	\$ 9
Commodity contracts	(4)	Operating expenses	1
Total	\$ (4)		\$ 10

(a) Changes in OCI are reported in pre-tax dollars, the reclassified amounts of commodity contracts are included within "Purchase power, natural gas and fuel used" line item within operating expenses in the consolidated statements of income.

The net loss in accumulated OCI related to previously settled forward starting swaps and accumulated amortization is \$76.7 million, \$84.9 million, and \$93.5 million for the years ended December 31, 2016, 2015 and 2014, respectively. We recorded \$8.0 million, \$8.6 million, and \$8.9 million in net derivative losses related to discontinued cash flow hedges for the years ended December 31, 2016, 2015 and 2014, respectively. We will amortize approximately \$8.0 million of discontinued cash flow hedges in 2017. During the years ended December 31, 2016, 2015 and 2014, there was no ineffective portion for cash flow hedges.

The unrealized loss of \$0.4 million on hedge derivatives is reported in OCI because the forecasted transaction is considered to be probable as of December 31, 2016. We expect that \$0.4 million of those losses will be reclassified into earnings within the next twelve months. The maximum length of time over which we are hedging our exposure to the variability in future cash flows for forecasted fleet fuel transactions is twelve months.

(b) Renewables and Gas activities

We sell fixed-price gas and power forwards to hedge our merchant wind assets from declining commodity prices for our Renewables business. We also purchase fixed-price gas and basis swaps and sell fixed-price power in the forward market to hedge the spark spread or heat rate of our merchant thermal assets. We also enter into tolling arrangements to sell the output of our thermal generation facilities.

Our gas business purchases and sells both fixed-price gas and basis swaps to hedge the value of contracted storage positions. The intent of entering into these swaps is to fix the margin of gas injected into storage for subsequent resale in future periods. We also enter into basis swaps to hedge the value of our contracted transport positions. The intent of buying and selling these basis swaps is to fix the location differential between the price of gas at the receipt and delivery point of the contracted transport in future periods.

Both Renewables and Gas have proprietary trading operations that enter into fixed-price power and gas forwards in addition to basis swaps. The intent is to speculate on fixed-price commodity and basis volatility in the U.S. commodity markets.

Renewables will periodically designate derivative contracts as cash flow hedges for both its thermal and wind portfolios. To the extent that the derivative contracts are effective in offsetting the variability of cash flows associated with future power sales and gas purchases, the fair value changes are recorded in OCI. Any hedge ineffectiveness is recorded in current period earnings. For thermal operations, Renewables will periodically designate both fixed price NYMEX gas contracts and AECO basis swaps that hedge the fuel requirements of its Klamath facility. Renewables will also designate fixed price power swaps at various locations in the U.S. market to hedge future power sales from its Klamath facility and various wind farms.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Gas also periodically designates NYMEX fixed price derivative contracts as cash flow hedges related to its firm storage trading activities. To the extent that the derivative contracts are effective in offsetting the variability of cash flows associated with future gas sales and purchases, the fair value changes are recorded in OCI. Any hedge ineffectiveness is recorded in current period earnings. Derivative contracts entered into to hedge the gas transport trading activities are not designated as cash flow hedges, with all changes in fair value of such derivative contracts recorded in current period earnings.

The net notional volumes of outstanding derivative instruments associated with Renewables and Gas activities as of December 31, 2016 and 2015, respectively, consisted of:

As of December 31, (MWh/Dth in Millions)	2016	2015
Wholesale electricity purchase contracts	3	3
Wholesale electricity sales contracts	7	6
Foreign exchange forward purchase contracts	—	4
Natural gas and other fuel purchase contracts	329	332
Financial power contracts	8	7
Basis swaps - purchases	49	67
Basis swaps - sales	45	80

The fair values of derivative contracts associated with Renewables and Gas activities as of December 31, 2016 and 2015, respectively, consisted of:

As of December 31, (Millions)	2016	2015
Wholesale electricity purchase contracts	\$ (2)	\$ (13)
Wholesale electricity sales contracts	6	35
Foreign exchange forward purchase contracts	—	(1)
Natural gas and other fuel purchase contracts	30	10
Financial power contracts	56	32
Basis swaps- purchases	3	1
Basis swaps- sales	(2)	(2)
Total	\$ 91	\$ 62

The offsetting of derivatives, location in the consolidated balance sheet and amounts of derivatives associated with Renewables and Gas activities as of December 31, 2016 and 2015, respectively, consisted of:

As of December 31, 2016 (Millions)	Current Assets	Noncurrent Assets	Current Liabilities	Noncurrent Liabilities
Not designated as hedging instruments				
Derivative assets	\$ 198	\$ 108	\$ 78	\$ 7
Derivative liabilities	(118)	(4)	(132)	(16)
	80	104	(54)	(9)
Designated as hedging instruments				
Derivative assets	25	4	—	—
Derivative liabilities	(1)	—	(39)	(21)
	24	4	(39)	(21)
Total derivatives before offset of cash collateral	104	108	(93)	(30)
Cash collateral receivable (payable)	(17)	(46)	41	24
Total derivatives as presented in the balance sheet	\$ 87	\$ 62	\$ (52)	\$ (6)

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

As of December 31, 2015 (Millions)	Current Assets	Noncurrent Assets	Current Liabilities	Noncurrent Liabilities
Not designated as hedging instruments				
Derivative assets	\$ 186	\$ 113	\$ 117	\$ 4
Derivative liabilities	(85)	(14)	(169)	(29)
	101	99	(52)	(25)
Designated as hedging instruments				
Derivative assets	56	13	—	—
Derivative liabilities	—	—	(9)	—
	56	13	(9)	—
Total derivatives before offset of cash collateral	157	112	(61)	(25)
Cash collateral receivable (payable)	(80)	(41)	—	—
Total derivatives as presented in the balance sheet	\$ 77	\$ 71	\$ (61)	\$ (25)

The effect of trading and non-trading derivatives, respectively, associated with Renewables and Gas activities for the years ended December 31, 2016, 2015 and 2014 consisted of:

Years Ended December 31, (Millions)	2016	2015	2014
Wholesale electricity purchase contracts	\$ 3	\$ 6	\$ (9)
Wholesale electricity sales contracts	(7)	(5)	9
Financial power contracts	4	—	(2)
Financial and natural gas contracts	(22)	(26)	125
Total (Loss) Gain	\$ (22)	\$ (25)	\$ 123

Years Ended December 31, (Millions)	2016	2015	2014
Wholesale electricity purchase contracts	\$ 9	\$ (8)	\$ (8)
Wholesale electricity sales contracts	(20)	(5)	15
Financial power contracts	(10)	24	30
Natural gas and other fuel purchase contracts	34	18	(1)
Total Gain	\$ 13	\$ 29	\$ 36

Such gains and losses are included in “Operating revenues” and in “Purchased power, natural gas and fuel used” operating expenses in the consolidated statements of income, depending upon the nature of the transaction.

In 2015 we began designating those derivatives contracts at Renewables and Gas businesses that qualify as hedges. This designation was made prospectively, and in accordance with all the requirements of hedge accounting. The effect of derivatives in cash flow hedging relationships on OCI and income for the years ended December 31, 2016 and 2015 consisted of:

Year Ended December 31, (Millions)	(Loss) Gain Recognized in OCI on Derivatives Effective Portion (a)	Location of Gain Reclassified from Accumulated OCI into Income Effective Portion (a)	(Gain) Reclassified from Accumulated OCI into Income
2016			
Commodity contracts	\$ (42)	Revenues	\$ (43)
	\$ (42)		\$ (43)
2015			
Commodity contracts	\$ 57	Revenues	\$ (2)
Total	\$ 57		\$ (2)

(a) Changes in OCI are reported on a pre-tax basis.

Amounts will be reclassified from accumulated OCI into income in the period during which the transaction being hedged affects earnings or when it becomes probable that a forecasted transaction being hedged would not occur. Notwithstanding future changes in prices, approximately \$13.6 million of losses included in accumulated OCI at December 31, 2016 is expected to be reclassified into earnings within the next 12 months. During the years ended December 31, 2016 and 2015, we recorded a net loss of \$6.8 million and a net gain \$4.8 million, respectively, in earnings as a result of ineffectiveness from cash flow hedges. We recorded \$0.4 million and \$2.3 million in net derivative gain related to discontinued cash flow hedge for the years ended December 31, 2016 and 2015.

(c) Counterparty credit risk management

NYSEG and RG&E face risks related to counterparty performance on hedging contracts due to counterparty credit default. We have developed a matrix of unsecured credit thresholds that are dependent on the counterparty's or the counterparty's guarantor's applicable credit rating, normally Moody's or Standard & Poor's. When our exposure to risk for a counterparty exceeds the unsecured credit threshold, the counterparty is required to post additional collateral or we will no longer transact with the counterparty until the exposure drops below the unsecured credit threshold.

The wholesale power supply agreements of UI contain default provisions that include required performance assurance, including certain collateral obligations, in the event that UI's credit rating on senior debt were to fall below investment grade. If such an event had occurred as of December 31, 2016, UI would have had to post an aggregate of approximately \$12.8 million in collateral.

We have various master netting arrangements in the form of multiple contracts with various single counterparties that are subject to contractual agreements that provide for the net settlement of all contracts through a single payment. Those arrangements reduce our exposure to a counterparty in the event of default on or termination of any single contract. For financial statement presentation purposes, we offset fair value amounts recognized for derivative instruments and fair value amounts recognized for the right to reclaim or the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement. The amounts of cash collateral under master netting arrangements that have not been offset against net derivative positions were \$20 million and \$11 million as of December 31, 2016 and 2015, respectively. Derivative instruments settlements and collateral payments are included in "Other assets" and "Other liabilities" of operating activities in the consolidated statements of cash flows.

Certain of our derivative instruments contain provisions that require us to maintain an investment grade credit rating on our debt from each of the major credit rating agencies. If our debt were to fall below investment grade, we would be in violation of those provisions and the counterparties to the derivative instruments could request immediate payment or demand immediate and ongoing full overnight collateralization on derivative instruments in net liability positions. The aggregate fair value of all derivative instruments with credit risk related contingent features that are in a liability position as of December 31, 2016 is \$12 million, for which we have posted collateral.

U

U

Note 13. Commitments and Contingent Liabilities

We are party to various legal disputes arising as part of our normal business activities. We do not provide for accrual of legal costs expected to be incurred in connection with a loss contingency.

MNG Rate Case

On March 5, 2015, MNG filed a rate case in order to further recover future investments and provide safe and adequate service.

On May 3, 2016, all active parties to the case filed a stipulation that settled all matters at issue in the case and reflected a 10-year rate plan through April 30, 2026. The MPUC approved the stipulation on May 17, 2016, for new rates effective June 1, 2016. The settlement structure for non-Augusta customers includes a 34.6% delivery revenue increase over five years with an allowed 9.55% ROE and 50% common equity ratio. The settlement structure for Augusta customers includes a 10-year rate plan with existing Augusta customers being charged rates equal to non-Augusta customers plus a surcharge that increases annually for five years. New Augusta customers will have rates set based on an alternate fuel market model. In year seven of the rate plan MNG will submit a cost of service filing for the Augusta area to determine if the rate plan should continue. This cost of service filing will exclude \$15 million of initial 2012/2013 gross plant investment, however the stipulation allows for accelerated depreciation of these assets. If the Augusta area's cost of service filing illustrates results above a 14.55% ROE then the rate plan may cease, otherwise the rate plan would continue. A disallowance for the initial 2012/2013 gross plant investment is not part of the approved stipulation. The reserve of \$6 million for this case was reversed in May 2016.

Transmission - ROE Complaint – CMP and UI

On September 30, 2011, the Massachusetts Attorney General, Massachusetts Department of Public Utilities, Connecticut Public Utilities Regulatory Authority, New Hampshire Public Utilities Commission, Rhode Island Division of Public Utilities and Carriers, Vermont Department of Public Service, numerous New England consumer advocate agencies and transmission tariff customers collectively filed a complaint (Complaint I) with the FERC pursuant to sections 206 and 306 of the Federal Power Act. The filing parties seek an order from the FERC reducing the 11.14% base return on equity used in calculating formula rates for transmission service under the ISO-New England Open Access Transmission Tariff (OATT) to 9.2%. CMP and UI are New England Transmission Owners (NETOs) with assets and service rates that are governed by the OATT and will thereby be affected by any FERC order resulting from the filed complaint.

On June 19, 2014, the FERC issued its decision in Complaint I, establishing a methodology and setting an issue for a paper hearing. On October 16, 2014, FERC issued its final decision in the Complaint I setting the base ROE at 10.57%, and a maximum total ROE of 11.74% (base plus incentive ROE) for the October 2011 – December 2012 period as well as prospectively from October 16, 2014 and ordered the NETOs to file a refund report. On November 17, 2014 the NETOs filed a refund report.

On March 3, 2015, the FERC issued an order on requests for rehearing of its October 16, 2014 decision. The March order upheld the FERC's June 19, 2014 decision and further clarified that the 11.74% ROE cap will be applied on a project specific basis and not on a transmission owner's total average return. In June 2015 the NETOs filed an appeal in the U.S. Court of Appeals for the District of Columbia of the FERC's final order. The appeal is currently pending, and we cannot predict the outcome of this appeal.

On December 26, 2012, a second, ROE complaint (Complaint II) for a subsequent rate period was filed requesting the ROE be reduced to 8.7%. On June 19, 2014, FERC accepted Complaint II, established a 15-month refund effective date of December 27, 2012, and set the matter for hearing using the methodology established in the Complaint I.

On July 31, 2014, a third, ROE complaint (Complaint III) was filed for a subsequent rate period requesting the ROE be reduced to 8.84%. On November 24, 2014, FERC accepted the Complaint III, established a 15-month refund effective date of July 31, 2014, and set this matter consolidated with Complaint II for hearing in June 2015. Hearings were held in June 2015 on Complaints II and III before a FERC Administrative Law Judge, relating to the refund periods and going forward period. On July 29, 2015, post-hearing briefs were filed by parties and on August 26, 2015 reply briefs were filed by parties. On July 13, 2015, the NETOs filed a petition for review of FERC's orders establishing hearing and consolidation procedures for Complaints II and III with the U.S. Court of Appeals. The FERC Administrative Law Judge issued an Initial Decision on March 22, 2016. The Initial Decision determined that: (1) for the 15-month refund period in Complaint II, the base ROE should be 9.59% and that the ROE Cap (base ROE plus incentive ROEs) should be 10.42% and (2) for the 15 month refund period in Complaint III and prospectively, the base ROE should be 10.90% and that the ROE Cap should be 12.19%. The Initial Decision is the Administrative Law Judge's recommendation to the FERC Commissioners. The FERC is expected to make its final decision in mid-2017.

CMP and UI reserved for refunds for Complaints I, II and III consistent with the FERC's March 3, 2015 final decision in Complaint I. The CMP and UI total reserve associated with Complaints I, II and III is \$21.6 million and \$4.4 million, respectively, as of December 31, 2016. If adopted as final, the impact of the initial decision would be an additional aggregate reserve for Complaints II and III of \$17.1 million, which is based upon currently available information for these proceedings. We cannot predict the outcome of the Complaint II and III proceedings.

On April 29, 2016, a fourth ROE complaint (Complaint IV) was filed for a rate period subsequent to prior complaints requesting the base ROE be 8.61% and ROE Cap be 11.24%. The NETOs filed a response to the Complaint IV on June 3, 2016. On September 20, 2016, FERC accepted the Complaint IV, established a 15-month refund effective date of April 29, 2016, and set the matter for hearing and settlement judge procedures. A range of possible outcomes is not able to be determined at this time due to the preliminary state of this matter. We cannot predict the outcome of the Complaint IV proceeding. Hearings are being held later this year with an expected Initial Decision from the Administrative Law Judge in 2017.

Yankee Nuclear Spent Fuel Disposal Claim

CMP has an ownership interest in Maine Yankee Atomic Power Company, Connecticut Yankee Atomic Power Company, and Yankee Atomic Electric Company, (the Yankee Companies), three New England single-unit decommissioned nuclear reactor sites, and UI has an ownership interest in Connecticut Yankee Atomic Power Company. Every six years, pursuant to the statute of limitations, the Yankee Companies file a lawsuit to recover damages from the Department of Energy (DOE or Government) for breach of the Nuclear Spent Fuel Disposal Contract to remove Spent Nuclear Fuel (SNF) and Greater than Class C Waste (GTCC) as required by contract

and the Nuclear Waste Policy Act beginning in 1998. The damages are the incremental costs for the Government's failure to take the spent nuclear fuel.

In 2012, the U.S. Court of Appeals issued a favorable decision in the Yankee Companies' claim for the first six year period (Phase I). Total damages awarded to the Yankee Companies were nearly \$160 million. The Yankee Companies won on all appellate points in the U.S. Court of Appeals for the Federal Circuit's unanimous decision. The Federal Appeals Court affirmed the September 2010 U.S. Court of Federal Claims award of \$39.7 million to Connecticut Yankee Atomic Power Company; affirmed the Court of Federal Claims award of \$81.7 million to Maine Yankee Atomic Power Company; and increased Yankee Atomic Electric Company's damages award from \$21.4 million to \$38.3 million. The Phase I damage award became final on December 4, 2012. The Yankee Companies received payment from DOE in January 2013. CMP's share of the award was approximately \$36.5 million which was credited back to customers. UI's share of the award was \$3.8 million which was credited back to customers.

In November 2013 the U.S. Court of Claims issued its decision in the Phase II case (the second 6 year period). The Trial Court decision awards the Yankee Companies a combined \$235.4 million (Connecticut Yankee \$126.3 million, Maine Yankee \$37.7 million, and Yankee Atomic \$73.3 million). The Phase II period covers January 1, 2002 through December 31, 2008 for Connecticut Yankee and Yankee Atomic, and January 1, 2003 through December 31, 2008 for Maine Yankee. Maine Yankee's damage award was lower because it recovered a larger amount in the Phase I case (\$82 million) and its decommissioning was both less expensive and completed sooner than the other Yankee Companies. The damage awards flow through the Yankees to shareholders (including CMP and UI) to reduce retail customer charges. In January 2014 the government informed the Yankee Companies it would not appeal the Trial Court decision, as a result the Yankee Companies received full payment in April 2014. CMP's share of the award was approximately \$28.2 million which was credited back to customers. UI received approximately \$12 million of such award which was applied, in part, against the remaining storm regulatory asset balance. The remaining regulatory liability balance was applied to the GSC "working capital allowance" and will be returned to customers through the non-by-passable federally mandated congestion charge.

In August 2013, the Yankees filed a third round of claims against the government seeking damages for the years 2009-2014 (Phase III). The Phase III trial was completed in July 2015 and the Court has issued its decision on March 25, 2016 awarding the Yankee Companies a combined \$76.8 million (Connecticut Yankee \$32.6 million, Maine Yankee \$24.6 million and Yankee Atomic \$19.6 million). The damage awards will potentially flow through the Yankee Companies to shareholders, including CMP and UI, upon FERC approval, and will reduce retail customer charges or otherwise as specified by law. CMP and UI will receive their proportionate share of the awards that flow through based on percentage ownership. On July 18, 2016, the notice of appeal period expired and the Phase III trial award became final. On October 14, 2016, the Yankee Companies received the Government's payment of the damage award of a combined \$41.6 million (Connecticut Yankee \$18.4 million, Maine Yankee \$3.6 million and Yankee Atomic \$19.6 million). In December 2016 CMP and UI received their proportionate share of \$4.2 million of the Phase III damage awards, based on percentage ownership, and CMP received an additional \$21.5 million for SNF trust refund relating to excess funds of Maine Yankee unrelated to Phase III. All amounts will flow through to customers.

NYPSC Staff Review of Earnings Sharing Calculations and Other Regulatory Deferrals

In December 2012, the NYPS Staff (Staff) informed NYSEG and RG&E that the Staff had conducted an audit of the companies' annual compliance filings (ACF) for 2009 through August 31, 2010, and the first rate year of the current rate plan, September 1, 2010 through August 31, 2011. The Staff's preliminary findings indicated adjustments to deferred balances primarily associated with storm costs and the treatment of certain incentive compensation costs for purposes of the 2011 ACF. The Staff's findings approximate \$9.8 million of adjustments to deferral balances and customer earnings sharing accruals. NYSEG and RG&E reviewed the Staff's adjustments and work papers and provided a response in early 2013. NYSEG and RG&E disagreed with certain Staff conclusions and as a result recorded a \$3.4 million reserve in December 2012 in anticipation of settling the Staff issues. In the proposal approved by the NYPS (see Note 5) the parties agreed that in full and final resolution of all years through 2012, and in full and final resolution of storm-related deferrals through 2014, the companies will add \$2.4 million to the customer share of earnings sharing. Staff indicated in December 2016 that it had completed its review 2013 and 2014 compliance filings and no issues were identified.

California Energy Crisis Litigation

Two California agencies brought a complaint in 2001 against a long-term power purchase agreement entered into by Renewables, as seller, to the California Department of Water Resources, as purchaser, alleging that the terms and conditions of the power purchase agreement were unjust and unreasonable. FERC dismissed Renewables from the proceedings; however, the Ninth Circuit Court of Appeals reversed FERC's dismissal of Renewables.

Joining with two other parties, Renewables filed a petition for certiorari in the United States Supreme Court on May 3, 2007. In an order entered on June 27, 2008, the Supreme Court granted Renewables' petition for certiorari, vacated the appellate court's judgment, and remanded the case to the appellate court for further consideration in light of the Supreme Court's decision in a similar case. In light of the Supreme Court's order, on December 4, 2008, the Ninth Circuit Court of Appeals vacated its prior opinion and remanded the complaint proceedings to the FERC for further proceedings consistent with the Supreme Court's rulings. In 2014 FERC assigned an administrative law judge to conduct evidentiary hearings. Following discovery, the FERC Trial Staff recommended that the complaint against Renewables be dismissed.

A hearing was held before an administrative law judge of FERC in November and early December 2015. A preliminary proposed ruling by the administrative law judge was issued on April 12, 2016. The proposed ruling found no evidence that Renewables had engaged in any unlawful market contract that would justify finding the Renewables power purchase agreements unjust and unreasonable. However, the proposed ruling did conclude that price of the power purchase agreements imposed an excessive burden on customers in the amount of \$259 million. Renewables position, as presented at hearings and agreed by FERC Trial Staff, is that Renewables entered into bilateral power purchase contracts appropriately and complied with all applicable legal standards and requirements. The parties have submitted to FERC briefs on exceptions to the administrative law judge's proposed ruling. There is no specific timetable to FERC's ruling. We cannot predict the outcome of this proceeding.

Leases

Operating lease expense relating to operational facilities, office building leases, and vehicle and equipment leases was \$70.6 million, \$47.7 million and \$48.7 million for the years ended December 31, 2016, 2015 and 2014, respectively. Amounts related to contingent payments predominantly linked to electricity generation at the respective facilities was \$22.2 million, \$22.2 million and \$20.4 million for the years ended December 31, 2016, 2015 and 2014, respectively. Leases for most of the land on which wind farm facilities are located have various renewal and termination clauses.

On January 16, 2014, as required by the NYPSC, NYSEG renewed a Reliability Support Services Agreement (RSS Agreement) with Cayuga Operating Company, LLC (Cayuga) for Cayuga to provide reliability support services to maintain necessary system reliability through June 2017. Cayuga owns and operates the Cayuga Generating Facility (Facility), a coal-fired generating station that includes two generating units. Cayuga will operate and maintain the RSS units and manage and comply with scheduling deadlines and requirements for maintaining the Facility and the RSS units as eligible energy and capacity providers and will comply with dispatch instructions. NYSEG will pay Cayuga a monthly fixed price and will also pay for capital expenditures for specified capital projects. NYSEG will be entitled to a share of any capacity and energy revenues earned by Cayuga. We account for this arrangement as an operating lease. The net expense incurred under this operating lease was \$37.8 million, \$25.5 million and \$19.8 million for the years ended December 31, 2016, 2015 and 2014, respectively.

On December 31, 2014, we concluded the sale of our ten-percent undivided interest in Unit 1 of the Springville power plant to Tucson Electric Power for \$19.6 million. We had previously accounted for this plant as an operating lease. This transaction was recorded in "Other income and (expense)."

On October 21, 2015, RG&E, GNPP and multiple intervenors filed a Joint Proposal with the regulator for approval of the modified RSS Agreement for the continued operation of the Ginna Facility through March 2017. RG&E shall make monthly payments to GNPP in the amount of \$15.4 million. RG&E will be entitled to 70% of revenues from GNPP's sales into the energy and capacity markets, while GNPP will be entitled to 30% of such revenues. We account for this arrangement as an operating lease. The net expense incurred under this operating lease was \$114.9 million and \$79.9 million for the years ended December 31, 2016 and 2015, respectively.

Total future minimum lease payments as of December 31, 2016 consisted of:

Year	Operating Leases	Capital Leases (Millions)	Total
2017	\$ 106	\$ 30	\$ 136
2018	28	6	34
2019	28	7	35
2020	26	7	33
2021	28	4	32
2022 and thereafter	487	50	537
Total	\$ 703	\$ 104	\$ 807

Power, Gas, and Other Arrangements

Power and Gas Supply Arrangements – Networks

NYSEG and RG&E are the providers of last resort for customers. As a result, the companies buy physical energy and capacity from the NYISO. In accordance with the NYPSC's February 26, 2008 Order, NYSEG and RG&E are required to hedge on behalf of non-demand billed customers. The physical electric capacity purchases we make from parties other than the NYISO are to comply with the hedge requirement for electric capacity. The companies enter into financial swaps to comply with the hedge requirement for physical electric energy purchases. Other purchases, from some Independent Power Producers (IPPs) and NYPA are from contracts entered into many years ago when the companies made purchases under contract as part of their supply portfolio to meet their load requirement. More recent IPP purchases are required to comply with the companies' Public Utility Regulatory Policies Act (PURPA) purchase obligation.

NYSEG, RG&E, SCG, CNG and BGC (collectively the Regulated Gas Companies) satisfy their natural gas supply requirements through purchases from various producers and suppliers, withdrawals from natural gas storage, capacity contracts and winter peaking supplies and resources. The Regulated Gas Companies operate diverse portfolios of gas supply, firm transportation capacity, gas storage and peaking resources. Actual gas costs incurred by each of the Regulated Gas Companies are passed through to customers through state regulated purchased gas adjustment mechanisms, subject to regulatory review.

The Regulated Gas Companies purchase the majority of their natural gas supply at market prices under seasonal, monthly or mid-term supply contracts and the remainder is acquired on the spot market. The Regulated Gas Companies diversify their sources of supply by amount purchased and location and primarily acquire gas at various locations in the US Gulf of Mexico region, in the Appalachia region and in Canada.

The Regulated Gas Companies acquire firm transportation capacity on interstate pipelines under long-term contracts and utilize that capacity to transport both natural gas supply purchased and natural gas withdrawn from storage to the local distribution system.

The Regulated Gas Companies acquire firm underground natural gas storage capacity using long-term contracts and fill the storage facilities with gas in the summer months for subsequent withdrawal in the winter months.

Winter peaking resources are primarily attached to the local distribution systems and are either owned or are contracted for by the Regulated Gas Companies, each of which is a Local Distribution Company. Each Regulated Gas Company owns or has rights to the natural gas stored in an LNG facility directly attached to its distribution system.

Other arrangements include UI's long-term contracts to purchase RECs.

Power, Gas, and Other Arrangements – Renewables and Gas

Gas purchase commitments include multi-year contracted storage and transport capacity contracts that allow the Gas business to participate in seasonal and locational gas price differentials. The agreements contain fixed payment obligations for the use of both storage and transport capacity throughout the U.S. Power purchase commitments include the following: (i) a 55MW Biomass Power Purchase Agreement (PPA) for 12 years (five years remaining) with a guaranteed output of 34.4MW flat and a schedule of fixed price rates depending on season and time of day, (ii) long-term firm transmission agreements with fixed monthly capacity payments that allow the delivery of electricity from wind and thermal generation sources to various customers and (iii) a three year purchase of hydro capacity and energy to provide balancing services to the NW wind assets that has monthly fixed payments (two years remaining). Power sales commitments include: (i) a 55MW Biomass off-take agreement for 12 years (five years remaining) with guaranteed annual production of 34.4MW flat with a schedule of fixed price rates depending on season and time of day, (ii) fixed price, fixed volume power sales off the Klamath Cogen facility in addition to tolling arrangements that have fixed capacity charges and (iii) fixed price, fixed volume renewable energy credit sales off merchant wind facilities.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Forward purchases and sales commitments under power, gas, and other arrangements as of December 31, 2016 consisted of:

Year	Purchases				Sales			
	Gas	Power	Other	Total	Gas	Power	Other	Total
	(Millions)							
2017	\$ 284	\$ 168	\$ 35	\$ 487	\$ 23	\$ 132	\$ 4	\$ 159

Thereafter	520	379	109	1,008	—	26	—	26
Totals	\$ 1,542	\$ 840	\$ 205	\$ 2,587	\$ 37	\$ 362	\$ 9	\$ 408

Guarantee Commitments to Third Parties

As of December 31, 2016, we had approximately \$2.6 billion of standby letters of credit, surety bonds, guarantees and indemnifications outstanding. These instruments provide financial assurance to the business and trading partners of AVANGRID and its subsidiaries in their normal course of business. The instruments only represent liabilities if AVANGRID or its subsidiaries fail to deliver on contractual obligations. We therefore believe it is unlikely that any material liabilities associated with these instruments will be incurred and, accordingly, as of December 31, 2016, neither we nor our subsidiaries have any liabilities recorded for these instruments.

Property, Plant and Equipment

We have made future commitments to purchase property, plant, and equipment in order to continue to develop and grow our business. The amount of such future commitments was \$493 million as of December 31, 2016.

U
U

Note 14. Environmental Liabilities

Environmental laws, regulations and compliance programs may occasionally require changes in our operations and facilities and may increase the cost of electric and natural gas service. We do not provide for accruals of legal costs expected to be incurred in connection with loss contingencies.

Waste sites

The Environmental Protection Agency and various state environmental agencies, as appropriate, have notified us that we are among the potentially responsible parties that may be liable for costs incurred to remediate certain hazardous substances at twenty-five waste sites, which do not include sites where gas was manufactured in the past. Fifteen of the twenty-five sites are included in the New York State Registry of Inactive Hazardous Waste Disposal Sites; six sites are included in Maine's Uncontrolled Sites Program and one site is included on the Massachusetts Non- Priority Confirmed Disposal Site list. The remaining sites are not included in any registry list. Finally, nine of the twenty-five sites are also included on the National Priorities list. Any liability may be joint and severable for certain sites.

We have recorded an estimated liability of \$6 million related to ten of the twenty-five sites. We have paid remediation costs related to the remaining fifteen sites and do not expect to incur additional liabilities. Additionally, we have recorded an estimated liability of \$8 million related to another ten sites where we believe it is probable that we will incur remediation costs and or monitoring costs, although we have not been notified that we are among the potentially responsible parties or that we are regulated under State Resource Conservation and Recovery Act programs. It is possible the ultimate cost to remediate these sites may be significantly more than the accrued amount. Our estimate for costs to remediate these sites ranges from \$12 million to \$22 million as of December 31, 2016. Factors affecting the estimated remediation amount include the remedial action plan selected, the extent of site contamination, and the portion of remediation attributed to us.

Manufactured Gas Plants

We have a program to investigate and perform necessary remediation at our fifty-three sites where gas was manufactured in the past (Manufactured Gas Plants, or MGPs). Eight sites are included in the New York State Registry; eleven sites are included in the New York Voluntary Cleanup Program; three sites are part of Maine's Voluntary Response Action Program and with two of such sites being part of Maine's Uncontrolled Sites Program. The remaining sites are not included in any registry list. We have entered into consent orders with various environmental agencies to investigate and where necessary remediate forty-nine of the fifty-three sites.

Our estimate for all costs related to investigation and remediation of the fifty-three sites ranges from \$221 million to \$465 million as of December 31, 2016. Our estimate could change materially based on facts and circumstances derived from site investigations, changes in required remedial actions, changes in technology relating to remedial alternatives, and changes to current laws and regulations.

As of December 31, 2016 and 2015, the liability associated with MGP sites in Connecticut, the remediation costs of which could be significant and will be subject to a review by PURA as to whether these costs are recoverable in rates, was \$97 million and \$99 million, respectively.

The liability to investigate and perform remediation at the known inactive MGP sites was \$388 million and \$397 million as of December 31, 2016 and 2015, respectively. We recorded a corresponding regulatory asset, net of insurance recoveries and the amount collected from FirstEnergy, as described below, because we expect to recover the net costs in rates. Our environmental liability accruals are recorded on an undiscounted basis and are expected to be paid through the year 2053.

Certain other Connecticut and Massachusetts regulated gas companies own or have previously owned properties where MGPs had historically operated. MGP operations have led to contamination of soil and groundwater with petroleum hydrocarbons, benzene and metals, among other things, at these properties, the regulation and cleanup of which is regulated by the federal Resource Conservation and Recovery Act as well as other federal and state statutes and regulations. Each of the companies has or had an ownership interest in one or more such properties contaminated as a result of MGP-related activities. Under the existing regulations, the cleanup of such sites requires state and at times, federal, regulators' involvement and approval before cleanup can commence. In certain cases, such contamination has been evaluated, characterized and remediated. In other cases, the sites have been evaluated and characterized, but not yet remediated. Finally, at some of these sites, the scope of the contamination has not yet been fully characterized; no liability was recorded in respect of these sites as of December 31, 2016 and no amount of loss, if any, can be reasonably estimated at this time. In the past, the companies have received approval for the recovery of MGP-related remediation expenses from customers through rates and will seek recovery in rates for ongoing MGP-related remediation expenses for all of their MGP sites.

FirstEnergy

NYSEG sued FirstEnergy under the Comprehensive Environmental Response, Compensation, and Liability Act to recover environmental cleanup costs at sixteen former manufactured gas sites, which are included in the discussion above. In July 2011, the District Court issued a decision and order in NYSEG's favor. Based on past and future clean-up costs at the sixteen sites in dispute, FirstEnergy would be required to pay NYSEG approximately \$60 million if the decision were upheld on appeal. On September 9, 2011, FirstEnergy paid NYSEG \$30 million, representing their share of past costs of \$27 million and pre-judgment interest of \$3 million.

FirstEnergy appealed the decision to the Second Circuit Court of Appeals. On September 11, 2014, the Second Circuit Court of Appeals affirmed the District Court's decision in NYSEG's favor, but modified the decision for nine sites, reducing NYSEG's damages for incurred costs from \$27 million to \$22 million, excluding interest, and reducing FirstEnergy's allocable share of future costs at these sites. NYSEG refunded FirstEnergy the excess \$5 million in November 2014.

FirstEnergy remains liable for a substantial share of clean up expenses at nine MPG sites. In January 2015, NYSEG sent FirstEnergy a demand for \$16 million representing FirstEnergy's share of clean-up expenses incurred by NYSEG at the nine sites from January 2010 to November 2014 while the District Court appeal was pending. Nearly all of this amount has been paid by FirstEnergy. FirstEnergy would also be liable for a share of post 2014 costs, which, based on current projections, would be \$26 million. This amount is being treated as a contingent asset and has not been recorded as either a receivable or a decrease to the environmental provision. Any recovery will be flowed through to NYSEG ratepayers.

Century Indemnity and OneBeacon

On August 14, 2013, NYSEG filed suit in federal court against two excess insurers, Century Indemnity and OneBeacon, who provided excess liability coverage to NYSEG. NYSEG seeks payment for clean-up costs associated with contamination at twenty-two former manufactured gas plants. Based on estimated clean-up costs of \$282 million, the carriers' allocable share is approximately \$89 million, excluding pre-judgment interest, although this amount may change substantially depending upon the determination of various factual matters and legal issues during the case.

Century Idemnity and One Beacon have answered admitting issuance of the excess policies, but contesting coverage and providing documentation proving they received notice of the claims in the 1990s. We cannot predict the outcome of this matter, however, any recovery will be flowed through to NYSEG ratepayers.

English Station

In January 2012, Evergreen Power, LLC (Evergreen Power) and Asnat Realty LLC (Asnat), then and current owners of a former generation site on the Mill River in New Haven (the English Station site) that UI sold to Quinnipiac Energy in 2000, filed a lawsuit in federal district court in Connecticut against UI seeking, among other things: (i) an order directing UI to reimburse the plaintiffs for costs they have incurred and will incur for the testing, investigation and remediation of hazardous substances at the English Station site and (ii) an order directing UI to investigate and remediate the site. This proceeding had been stayed in 2014 pending resolutions of other proceedings before DEEP concerning the English Station site. In December 2016, the court administratively closed the file without prejudice to reopen upon the filing of a motion to reopen by any party. In December 2013, Evergreen and Asnat filed a subsequent lawsuit in Connecticut state court seeking among other things: (i) remediation of the property; (ii) reimbursement of remediation costs; (iii) termination of UI's easement rights; (iv) reimbursement for costs associated with securing the property; and (v) punitive damages This lawsuit had been stayed in May 2014 pending mediation. Due to lack of activity in the case, the court terminated the stay and scheduled a status conference on or before August 1, 2017.

On April 8, 2013, DEEP issued an administrative order addressed to UI, Evergreen Power, Asnat and others, ordering the parties to take certain actions related to investigating and remediating the English Station site. Mediation of the matter began in the fourth quarter of 2013 and concluded unsuccessfully in April 2015. This proceeding was stayed while DEEP and UI continue to work through the remediation process pursuant to the consent order described below. A status report was filed with the court in December 2016 and the next status report is due in May 2017.

On August 4, 2016, DEEP issued the consent order that, subject to its terms and conditions, requires UI to investigate and remediate certain environmental conditions within the perimeter of the English Station site. Under the consent order, to the extent that the cost of this investigation and remediation is less than \$30 million, UI will remit to the State of Connecticut the difference between such cost and \$30 million to be used for a public purpose as determined in the discretion of the Governor of the State of Connecticut, the Attorney General of the State of Connecticut, and the Commissioner of DEEP. UI is obligated to comply with the terms of the consent order even if the cost of such compliance exceeds \$30 million. Under the terms of the consent order, the State will discuss options with UI on recovering or funding any cost above \$30 million such as through public funding or recovery from third parties; however, it is not bound to agree to or support any means of recovery or funding.

In connection with the consent order, on August 4, 2016, DEEP also issued a Consent Order to Evergreen Power, Asnat, and certain related parties that provides UI access to investigate and remediate the English Station site consistent with the consent order. UI has initiated its process to investigate and remediate the environmental conditions within the perimeter of the English Station site pursuant to the consent order.

As of December 31, 2016 and 2015 we reserved \$28.3 million and \$20.5 million, respectively, for this matter and have accrued the remaining \$1.7 million and \$9.5 million in accordance with the settlement with PURA approving the acquisition. The difference of \$7.8 million pre-tax has been reflected as the reversal of an expense in our 2016 results, reversing the amounts recorded in 2015, to adjust the allocation of the purchase price as a measurement period adjustment from the acquisition of UIL. The adjustment to the reserve during 2016 was recorded in the "Operations and maintenance" line of the consolidated statement of income as a measurement period adjustment based on additional information obtained for the site regarding circumstances of the site as of the acquisition date of UIL.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Deferred tax assets and liabilities as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	2016	2015
Non-current Deferred Income Tax Liabilities (Assets)		
Property related	\$ 5,195	\$ 4,763
Unfunded future income taxes	216	211
Federal and state tax credits	(417)	(367)
Accumulated deferred investment tax credits	14	15
Federal and state NOL's	(1,397)	(1,367)
Joint ventures/partnerships	651	655
Nontaxable grant revenue	(581)	(595)
Other	(171)	(17)
Non-current Deferred Income Tax Liabilities	3,510	3,298
Add: Valuation allowance	31	19
Total Non-current Deferred Income Tax Liabilities	3,541	3,317
Less amounts classified as regulatory liabilities		
Non-current deferred income taxes	565	519
Non-current Deferred Income Tax Liabilities	\$ 2,976	\$ 2,798
Deferred tax assets	\$ 2,565	\$ 2,346
Deferred tax liabilities	6,106	5,663
Net Accumulated Deferred Income Tax Liabilities	\$ 3,541	\$ 3,317

Valuation allowances are recorded to reduce deferred tax assets when it is not more-likely-than not that all or a portion of a tax benefit will be realized. A valuation allowance for the entire \$9 million (net of federal benefit) carryforward of Maine Research and Development Super credits generated in tax years 2007 through 2012 was established as of December 31, 2012 with no change in this balance as of December 31, 2015. A valuation allowance of \$10 million was established on various state NOLs as of December 31, 2015 and 2016, respectively. The \$12 million increase in valuation allowances established in 2016 represents a full valuation allowance of \$15 million (net of federal benefit) on Connecticut state tax credits, partially offset by a reduction of \$3 million related to the Maine Research and Development Super credits.

The reconciliation of unrecognized income tax benefits for the years ended December 31, 2016, 2015 and 2014 consisted of:

Years ended December 31, (Millions)	2016	2015	2014
Beginning Balance	\$ 36	\$ 38	\$ 41
Increases for tax positions related to prior years	8	1	20
Decreases for tax positions related to prior years	(4)	—	—
Reduction for tax position related to settlements with taxing authorities	—	(3)	(23)
Ending Balance	\$ 40	\$ 36	\$ 38

Unrecognized income tax benefits represent income tax positions taken on income tax returns but not yet recognized in the consolidated financial statements. The accounting guidance for uncertainty in income taxes provides that the financial effects of a tax position shall initially be recognized when it is more likely than not based on the technical merits the position will be sustained upon examination, assuming the position will be audited and the taxing authority has full knowledge of all relevant information.

Accruals for interest and penalties on tax reserves were \$2 million, \$2 million, and \$3 million for the years ended December 31, 2016, 2015 and 2014, respectively. If recognized, \$8 million of the total gross unrecognized tax benefits would affect the effective tax rate.

The total amount of unrecognized tax benefits anticipated to result in a net decrease to unrecognized tax benefits within 12 months of December 31, 2016 is estimated to be \$9 million primarily relating to anticipation of additional guidance to be released by the IRS.

On December 29, 2014, the Joint Committee on Taxation approved the examination of AVANGRID and its subsidiaries, without ARHI, for the tax years 1998 through 2009. The results of these audits, net of reserves already provided, were immaterial. All New York and Maine state returns, which were filed without ARHI, are closed through 2011.

All federal tax returns filed by ARHI from the periods ended March 31, 2004, to December 31, 2009, are closed for adjustment. Generally, the adjustment period for the individual states we filed in is at least as long as the federal period.

As of December 31, 2016, UIL is subject to audit of its federal tax return for years 2013 and 2014. UIL income tax years 2010 through 2014 are open and subject to Connecticut and Massachusetts audit.

As of December 31, 2016, we had federal tax net operating losses of \$3.6 billion, federal renewable energy and investment tax credits, federal R&D tax credits and other federal credits of \$394 million, state tax net operating losses of \$241 million in several jurisdictions and miscellaneous state tax credits of \$32 million available to carry forward and reduce future income tax liabilities. For state purposes, we recognized a valuation allowance of \$31 million. The federal net operating losses begin to expire in 2028, while the federal tax credits begin to expire in 2023. The more significant state net operating losses begin to expire in 2021.

U
U

Note 16. Post-retirement and Similar Obligations

Networks has funded noncontributory defined benefit pension plans that cover the majority of Networks employees. The plans provide defined benefits based on years of service and final average salary for employees hired before 2002. Most employees hired in 2002, or later based upon the plan, are covered under a cash balance plan or formula where their benefit accumulates based on a percentage of annual salary and credited interest. During 2013, Networks announced that they would discontinue, effective December 31, 2013, the cash balance accruals for all non-union employees covered under the cash balance plans or formula. At the same time, the plans were closed to newly-hired non-union employees. The plans had been closed to newly-hired union employees in prior years. CMP's unionized employees covered under the cash balance plans ceased to receive accruals as of December 31, 2014. NYSEG's unionized employees covered under the cash balance plans ceased to receive accruals as of December 31, 2015. Their earned balances will continue to accrue interest but will no longer be increased by a flat dollar amount or percentage of pay, as defined by the plan. Instead, they will receive a contribution to their account under their respective company's defined contribution plan. There was no change to the defined benefit plans for employees covered under the plans that provide defined benefits based on years of service and final average salary. Employees not participating in a defined benefit plan are eligible to participate in an enhanced 401(k) plan.

Networks has other postretirement health care benefit plans covering the majority of Networks employees. The plans were closed to newly-hired non-union employees at the end of 2011. The plans had been closed to union employees in prior years. The pre-Medicare-eligible healthcare plans are contributory and participants' contributions are adjusted annually. Networks average contribution to these plans is limited at a level determined in prior periods. Except for a small group of "grandfathered" retirees, all Medicare eligible retirees that choose to participate are provided with a subsidy through a Health Reimbursement Account (HRA) to purchase coverage on the individual market.

With the acquisition of UIL, Networks also includes pension and other postretirement plans of UIL operating utility companies. The UI pension plan covers the majority of employees of UI and UIL corporate. The plan was closed to newly-hired employees in 2005. UI also has a non-qualified supplemental pension plan for certain employees and a non-qualified retiree-only pension plan for certain early retirement benefits.

The Regulated Gas Companies in Connecticut and Massachusetts have multiple qualified pension plans covering a majority of their union and management employees. These entities also have non-qualified supplemental pension plans for certain employees. The qualified pension plans are traditional defined benefit plans or cash balance plans for those hired on or after specified dates. In some cases, neither of these plans is offered to new employees and have been replaced with enhanced 401(k) plans for those hired on or after specified dates.

In addition to providing pension benefits, UI also provides other postretirement benefits, consisting principally of health care and life insurance benefits, for retired employees and their dependents. The healthcare plans are contributory and participants' contributions are adjusted annually. For Medicare eligible non-union retirees, UI provides a subsidy through a Health Reimbursement Account for retirees to purchase coverage on the individual market. Medicare eligible union retirees have the option of receiving a subsidy through an HRA or paying contributions and participating in company-sponsored retiree health plans.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

SCG and CNG also have plans providing other postretirement benefits for a majority of their employees. These benefits consist primarily of health care, prescription drug and life insurance benefits, for retired employees and their dependents. For Medicare eligible non-union retirees, SCG and CNG provide a subsidy through a HRA for retirees to purchase coverage on the individual market. Medicare eligible union retirees have the option of receiving a subsidy through an HRA or paying contributions and participating in company-sponsored retiree health plans.

ARHI has funded defined benefit pension plans for eligible employees hired prior to January 1, 2008. The benefit is based on participant's age, service, and five years average pay at the time of the freeze date of April 30, 2011. ARHI has other postretirement health care benefit plans covering eligible retirees and employees hired prior to January 1, 2008. Health and life insurance rates are based on age and service points at the time of retirement.

Obligations and funded status of Networks and ARHI as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	Pension Benefits		Postretirement Benefits	
	2016	2015	2016	2015
Change in benefit obligation				
Benefit obligation as of January 1,	\$ 3,509	\$ 2,620	\$ 525	\$ 435

Benefits paid	(204)	(162)	(39)	(25)
Withdrawals from VEBA	—	—	(11)	(2)
Fair Value of Plan Assets as of December 31,	2,672	2,664	160	162
Funded Status as of December 31,	\$ (776)	\$ (845)	\$ (335)	\$ (363)

Amounts recognized as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	Pension Benefits		Postretirement Benefits	
	2016	2015	2016	2015
Current liabilities	\$ —	\$ —	\$ (5)	\$ (5)
Non-current liabilities	(776)	(845)	(330)	(358)
Total	\$ (776)	\$ (845)	\$ (335)	\$ (363)

Networks offered retired employees an option to receive their future pension benefit as a lump sum during 2014. Approximately \$118.5 million of payments were made in 2014 as a result of retired employees exercising the lump sum option. The lump sum payments did not trigger settlement accounting.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Amounts recognized in OCI for ARHI for the years ended December 31, 2016, 2015 and 2014, consisted of:

Years Ended December 31, (Millions)	Pension Benefits			Postretirement Benefits		
	2016	2015	2014	2016	2015	2014
Net (gain) loss	\$ 23	\$ 25	\$ 22	\$ (3)	\$ (1)	\$ 8

We have determined that all Networks' regulated operating companies are allowed to defer as regulatory assets or regulatory liabilities items that would have otherwise been recorded in accumulated OCI pursuant to the accounting requirements concerning defined benefit pension and other postretirement plans.

Amounts recognized as regulatory assets or regulatory liabilities for Networks for the years ended December 31, 2016, 2015 and 2014 for Networks consisted of:

Years Ended December 31, (Millions)	Pension Benefits			Postretirement Benefits		
	2016	2015	2014	2016	2015	2014
Net loss	\$ 860	\$ 994	\$ 1,045	\$ 44	\$ 76	\$ 96
Prior service cost (credit)	7	9	12	(40)	(49)	(57)

Our accumulated benefit obligation for all defined benefit pension plans of Networks and ARHI was \$3,214 million and \$3,261 million as of December 31, 2016 and 2015, respectively. CMP's and NYSEG's postretirement benefits were partially funded as of December 31, 2016 and 2015.

The projected benefit obligation and the accumulated benefit obligation exceeded the fair value of pension plan assets for all plans of Networks and ARHI as of December 31, 2016 and 2015.

The aggregate projected and accumulated benefit obligations and the fair value of plan assets for underfunded plans of Networks and ARHI as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	Projected Benefit Obligation Exceeds Fair Value of Plan Assets		Accumulated Benefit Obligation Exceeds Fair Value of Plan Assets	
	2016	2015	2016	2015
Projected benefit obligation	\$ 3,448	\$ 3,509	\$ 3,448	\$ 3,509
Accumulated benefit obligation	3,214	3,261	3,214	3,261
Fair value of plan assets	2,672	2,664	2,672	2,664

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Components of Networks' net periodic benefit cost and other changes in plan assets and benefit obligations recognized in income and regulatory assets and liabilities as of December 31, 2016, 2015 and 2014 consisted of:

(Millions)	Pension Benefits			Postretirement Benefits		
As of December 31,	2016	2015	2014	2016	2015	2014
Net Periodic Benefit Cost:						
Service cost	\$ 44	\$ 36	\$ 30	\$ 5	\$ 4	\$ 4

Total Other Changes	(1)	3	6	(2)	(8)	(7)
Total Recognized	\$ 1	\$ 4	\$ 5	\$ (1)	\$ (6)	\$ (3)

The net periodic benefit cost for postretirement benefits represents the amount expensed for providing health care benefits to retirees and their eligible dependents. We include the net periodic benefit cost in other operating expenses net of capitalized portion.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Amounts expected to be amortized from regulatory assets or liabilities into net periodic benefit cost for the year ending December 31, 2017 consists of:

Year Ended December 31, 2017 (Millions)	Pension Benefits	Postretirement Benefits
Estimated net loss	\$ 126	\$ 5
Estimated prior service cost (benefit)	2	(9)

Amounts expected to be amortized from OCI into net periodic benefit cost for the year ending December 31, 2017 consists of:

Year Ended December 31, 2017 (Millions)	Pension Benefits	Postretirement Benefits
Estimated net loss	\$ 1	\$ —
Estimated prior service cost (benefit)	—	—

We expect that no pension benefit or postretirement benefit plan assets will be returned to us during the year ending December 31, 2017.

The weighted-average assumptions used to determine benefit obligations for Networks and ARHI as of December 31, 2016 and 2015 consisted of:

As of December 31,	Pension Benefits		Postretirement Benefits	
	2016	2015	2016	2015
Discount rate - Networks	4.12% / 4.24%	4.10% / 4.24%	4.12% / 4.24%	4.10% / 4.24%
Discount rate - ARHI	3.81%	3.90%	3.81%	3.90%
Rate of compensation increase - Networks	3.50% - 4.20%	4.00%	—	—

The discount rate is the rate at which the benefit obligations could presently be effectively settled. We determined the discount rates by developing yield curves derived from a portfolio of high grade noncallable bonds with yields that closely match the duration of the expected cash flows of our benefit obligations.

The weighted-average assumptions used to determine net periodic benefit cost for Networks and ARHI for the years ended December 31, 2016, 2015 and 2014 consisted of:

Years Ended December 31,	Pension Benefits			Postretirement Benefits		
	2016	2015	2014	2016	2015	2014
Discount rate - Networks	4.12% / 4.24%	3.80% / 4.24%	4.90%	4.12% / 4.24%	3.80% / 4.24%	4.90%
Discount rate - ARHI	3.90%	3.90%	5.00%	3.90%	3.90%	5.00%
Expected long-term return on plan assets - Networks	7.40% / 7.75%	7.50%	7.50%	7.16%	—	—
Expected long-term return on plan assets - ARHI	5.50%	5.50%	6.90%	5.50%	5.75%	6.50%
Expected long-term return on plan assets - nontaxable trust - Networks	—	—	—	7.00%	7.50%	7.50%
Expected long-term return on plan assets - taxable trust - Networks	—	—	—	4.50%	5.00%	5.00%
Rate of compensation increase - Networks	3.50% - 4.20%	4.10%	4.20%	—	—	—

We developed our expected long-term rate of return on plan assets assumption based on a review of long-term historical returns for the major asset classes, the target asset allocations, and the effect of rebalancing of plan assets discussed below. Our analysis considered current capital market conditions and projected conditions. NYSEG, RG&E and UIL amortize unrecognized actuarial gains and losses over ten years from the time they are incurred as required by the NYPSC, PURA and DPU. Our other companies use the standard amortization methodology under which amounts in excess of ten-percent of the greater of the projected benefit obligation or market related value are amortized over the plan participants' average remaining service to retirement.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

Assumed health care cost trend rates used to determine benefit obligations as of December 31, 2016 and 2015 consisted of:

As of December 31,	2016	2015
Health care cost trend rate assumed for next year - Networks	7.00%/9.00%	7.50%/7.00%
Health care cost trend rate assumed for next year - ARHI	6.75%/8.50%	7.00%/9.00%
Rate to which cost trend rate is assumed to decline (ultimate trend rate) - Networks	4.50%	4.50%
Rate to which cost trend rate is assumed to decline (ultimate trend rate) - ARHI	4.50%	4.50%
Year that the rate reaches the ultimate trend rate - Networks	2026 / 2028	2027
Year that the rate reaches the ultimate trend rate - ARHI	2026 / 2028	2026

The effects of a one-percent change in the assumed health care cost trend rates would have the following effects:

(Millions)	1% Increase	1% Decrease
Effect on total of service and interest cost	\$ 1	\$ (1)
Effect on postretirement benefit obligation	\$ 14	\$ (12)

Contributions

We make annual contributions in accordance with our funding policy of not less than the minimum amounts as required by applicable regulations. Networks expect to contribute \$33 million to the pension benefit plans during 2017.

Estimated Future Benefit Payments

Expected benefit payments and Medicare Prescription Drug, Improvement and Modernization Act of 2003 subsidy receipts reflecting expected future service for Networks and ARHI as of December 31, 2016 consisted of:

(Millions)	Pension Benefits	Postretirement Benefits	Medicare Act Subsidy Receipts
2017	\$ 211	\$ 34	\$ —
2018	212	34	—
2019	216	34	—
2020	219	35	—
2021	224	35	—
2022 - 2026	1,125	169	3

Non-Qualified Pension Plans

Networks and ARHI also sponsor various unfunded pension plans for certain current employees, former employees and former directors. The total liability for these plans, which is included in Other Non-current Liabilities, was \$57 million and \$59 million at December 31, 2016 and 2015, respectively.

Plan Assets

Our pension benefits plan assets for Networks and ARHI are held in three master trusts. This provides for a uniform investment manager lineup and an efficient, cost effective means of allocating expenses and investment performance to each plan. Our primary investment objective is to ensure that current and future benefit obligations are adequately funded and with volatility commensurate with our risk tolerance. Preservation of capital and achievement of sufficient total return to fund accrued and future benefits obligations are of highest concern. Our primary means for achieving capital preservation is through diversification of the trusts'

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

investments while avoiding significant concentrations of risk in any one area of the securities markets. Further diversification is achieved within each asset group through utilizing multiple asset managers and systematic allocation to various asset classes and providing broad exposure to different segments of the equity, fixed income, and alternative investment markets.

Networks' asset allocation policy is the most important consideration in achieving our objective of superior investment returns while minimizing risk. We have established a target asset allocation policy within allowable ranges for our pension benefits plan assets within broad categories of asset classes made up of Return-Seeking and Liability-Hedging investments. Within the Return-Seeking category, we have targets of 35%-54% in equity securities and 3%-20% in equity alternative investments. The Liability-Hedging asset class has a target allocation percentage of 43%-45%. Return-Seeking investments generally consist of domestic, international, global, and emerging market equities invested in companies across all market capitalization ranges. Return-Seeking assets also include investments in real estate, absolute return, and strategic markets. Liability-Hedging investments generally consist of long-term corporate bonds, annuity contracts, long-term treasury STRIPS, and opportunistic fixed income investments. Systematic rebalancing within the target ranges increases the probability that the annualized return on the investments will be enhanced, while realizing lower overall risk, should any asset categories drift outside their specified ranges.

ARHI's investment portfolio contains a diversified blend of equity, fixed income, and other investments. In ARHI's asset allocation policy we have established targets of 33% for equity investments, 50% for fixed income investments and 17% for other assets classes. Equity investments are diversified across U.S. and non-U.S. stocks, investment styles, and market capitalization ranges. Fixed income investments are primarily invested in U.S. bonds and may also include some non-U.S. bonds. Other asset classes, including real estate, absolute return, and real return, are used to enhance long-term returns while improving portfolio diversification. We primarily minimize the risk of large losses through diversification but also through monitoring and managing other aspects of risk through quarterly investment portfolio reviews, annual liability measurements, and periodic asset and liability studies.

The fair values of pension benefits plan assets, by asset category, as of December 31, 2016 consisted of:

As of December 31, 2016 (Millions)	Fair Value Measurements

Valuation Techniques

We value our pension benefits plan assets as follows:

- Cash and cash equivalents - Level 1: at cost, plus accrued interest, which approximates fair value. Level 2: proprietary cash associated with other investments, based on yields currently available on comparable securities of issuers with similar credit ratings.
- U.S. government securities, common stocks and registered investment companies - at the closing price reported in the active market in which the security is traded.
- Corporate bonds - based on yields currently available on comparable securities of issuers with similar credit ratings.
- Mutual funds - based upon quoted market prices in active markets, which represent the Net Asset Value (NAV) of the shares held.
- Preferred stocks - at the closing price reported in the active market in which the individual investment is traded.
- Common/collective trusts and Partnership/joint ventures - using the NAV provided by the administrator of the fund. The NAV is based on the value of the underlying assets owned by the fund, minus its liabilities, and then divided by the number of shares outstanding. The NAV is classified as Level 2 if the plan has the ability to redeem the investment with the investee at NAV per share at the measurement date. Redemption restrictions or adjustments to NAV based on unobservable inputs result in the fair value measurement being classified as Level 3 if those inputs are significant to the overall fair value measurement.
- Real estate investments - based on a discounted cash flow approach that includes the projected future rental receipts, expenses and residual values because the highest and best use of the real estate from a market participant view is as rental property.
- Other investments, principally annuity and fixed income - Level 1: at the closing price reported in the active market in which the individual investment is traded. Level 2: based on yields currently available on comparable securities of issuers with similar credit ratings. Level 3: when quoted prices are not available for identical or similar instruments, under a discounted cash flows approach that maximizes observable inputs such as current yields of similar instruments but includes adjustments for certain risks that may not be observable such as credit and liquidity risks.

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

The reconciliation of changes in fair value of plan assets based on Level 3 inputs for the years ended December 31, 2016 and 2015, consisted of:

(Millions)	Common Collective Trusts	Partnership Joint Venture Interests	Real Estate Investments	Other Investments	Total
As of December 31, 2014	\$ 449	\$ 79	\$ 75	\$ 342	\$ 945
Actual return on plan assets:					
Relating to assets sold during the year	(3)	(19)	—	1	(21)
Relating to assets still held at the reporting date	(5)	19	10	(21)	3
Purchases, sales and settlements	49	5	4	(4)	54
As of December 31, 2015	\$ 490	\$ 84	\$ 89	\$ 318	\$ 981
Actual return on plan assets:					
Relating to assets sold during the year	6	(19)	—	1	(12)
Relating to assets still held at the reporting date	51	—	2	(8)	45
Purchases, sales and settlements	274	(60)	(30)	(37)	147
As of December 31, 2016	\$ 821	\$ 5	\$ 61	\$ 274	\$ 1,161

Our postretirement benefits plan assets are held with trustees in multiple voluntary employees' beneficiary association (VEBA) and 401(h) arrangements and are invested among and within various asset classes to achieve sufficient diversification in accordance with our risk tolerance. This is achieved for our postretirement benefits plan assets through the utilization of multiple institutional mutual and money market funds, providing exposure to different segments of the fixed income, equity and short-term cash markets. Approximately 37% of the postretirement benefits plan assets are invested in VEBA and 401(h) arrangements that are not subject to income taxes with the remainder being invested in arrangements subject to income taxes.

Networks have established a target asset allocation policy within allowable ranges for postretirement benefits plan assets of 46%-66% for equity securities, 30%-31% for fixed income, and 3%-23% for all other investment types. In ARHI's asset allocation policy we have established targets of 48% in equity securities, 49% in fixed income and 3% in all other investment types. The target allocations within allowable ranges are further diversified into 27%-66% large cap domestic equities, 5% small cap domestic equities, 8% international developed market, and 6% emerging market equity securities. Fixed income investment targets and ranges are segregated into core fixed income at 24%-31%, global high yield fixed income at 4%, and international developed market debt at 3%. Other alternative investment targets are 6% for real estate, 6% for tangible assets, and 3%-11% for other funds. Systematic rebalancing within target ranges increases the probability that the annualized return on investments will be enhanced, while realizing lower overall risk, should any asset categories drift outside their specified ranges.

The fair value of other postretirement benefits plan assets, by asset category, as of December 31, 2016 consisted of:

As of December 31, 2016 (Millions)	Total	Fair Value Measurements		
Asset Category		Level 1	Level 2	Level 3
Money market funds	\$ 6	\$ 4	\$ 2	\$ —
Mutual funds, fixed	41	39	2	—

Mutual funds, equity	72	43	29	—
Common stocks	23	23	—	—
Mutual funds, other	16	9	7	—
Total	\$ 160	\$ 118	\$ 42	\$ —

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

The fair values of other postretirement benefits plan assets, by asset category, as of December 31, 2015 consisted of:

As of December 31, 2015 (Millions)	Fair Value Measurements			
	Total	Level 1	Level 2	Level 3
Asset Category				
Money market funds	\$ 4	\$ 4	\$ —	\$ —
Mutual funds, fixed	36	36	—	—
Government and corporate bonds	2	—	2	—
Mutual funds, equity	46	46	—	—
Common stocks	24	24	—	—
Mutual funds, other	50	43	7	—
Total	\$ 162	\$ 153	\$ 9	\$ —

Valuation Techniques

We value our postretirement benefits plan assets as follows:

- Money market funds and mutual funds - based upon quoted market prices in active markets, which represent the NAV of shares held.
- Government bonds, and common stocks - at the closing price reported in the active market in which the security is traded.
- Corporate bonds - based on yields currently available on comparable securities of issuers with similar credit ratings.

Pension and postretirement benefit plan equity securities did not include any Iberdrola common stock as of both December 31, 2016 and 2015.

Defined contribution plans

We also have defined contribution plans defined as 401(k)s. The annual contributions made through these plans for Networks and ARHI amounted to \$34 million, \$17 million and \$20 million for 2016, 2015, and 2014 respectively.

Note 17. Equity

u

As of December 31, 2016, our share capital consisted of 500,000,000 shares of common stock authorized, 309,600,439 shares issued and 308,993,149 shares outstanding, 81.5% of which is owned by Iberdrola, each having a par value of \$0.01, for a total value of common stock of \$3 million and additional paid in capital of \$13,653 million. As of December 31, 2015, our share capital consisted of 500,000,000 shares of common stock authorized, 309,491,082 shares issued and 308,864,609 shares outstanding, 81.5% of which was owned by Iberdrola, each having a par value of \$0.01, for a total value of common stock capital of \$3 million and additional paid in of \$13,653 million. We had 491,459 and 626,473 shares of common stock held in trust and no convertible preferred shares outstanding as of December 31, 2016 and December 31, 2015, respectively. During the year ended December 31, 2016, we issued 109,357 shares of common stock and released 135,014 shares of common stock held in trust each having a par value of \$0.01.

On April 28, 2016, we entered into a repurchase agreement with J.P. Morgan Securities, LLC. (JPM), pursuant to which JPM will, from time to time, acquire, on behalf of AVANGRID, shares of common stock of AVANGRID. The purpose of the stock repurchase program is to allow AVANGRID to maintain the relative ownership percentage of Iberdrola at 81.5%. The stock repurchase program may be suspended or discontinued at any time upon notice. During the year ended December 31, 2016, we repurchased 115,831 shares of common stock of AVANGRID in the open market. The total cost of repurchase, including commissions, was \$5 million.

On December 15, 2015, the board of directors approved our common stock dividend, accounted for as a stock split. The stock split, effected through a stock dividend, resulted in the issuance of 252,234,989 shares, which in addition to the 243 previously existing shares increased the total shares outstanding to 252,235,232. The stock dividend was effective upon the board of directors' approval. All share and per share information included in the condensed consolidated financial statements have been retroactively adjusted to reflect the impact of the stock dividend.

(a) Reclassification is reflected in the operating expenses line item in the consolidated statements of income.

U
U

Note 18. Earnings Per Share

Basic earnings per share is computed by dividing net income attributable to AVANGRID by the weighted-average number of shares of our common stock outstanding. In 2016 and 2015, while we did have securities that were dilutive, these securities did not result in a change to our earnings per share calculations for the years ended December 31, 2016 and 2015. We did not have any potentially-dilutive securities for the year ended December 31, 2014. In accordance with Accounting Standards Codification (ASC) Topic 260, Earnings per Share, we retroactively applied the stock split to prior periods presented.

The calculations of basic and diluted earnings per share attributable to AVANGRID for the years ended December 31, 2016, 2015 and 2014, consisted of:

Years Ended December 31,	2016	2015	2014
(Millions, except for number of shares and per share data)			
<i>Numerator:</i>			
Net income attributable to AVANGRID	\$ 630	\$ 267	\$ 424
<i>Denominator:</i>			
Weighted average number of shares outstanding - basic	309,512,553	254,588,212	252,235,232
Weighted average number of shares outstanding - diluted	309,817,322	254,605,111	252,235,232
<i>Earnings per share attributable to AVANGRID</i>			
Earnings Per Common Share, Basic	\$ 2.04	\$ 1.05	\$ 1.68
Earnings Per Common Share, Diluted	\$ 2.04	\$ 1.05	\$ 1.68

Note 19. Tax equity financing arrangements

The sale of a membership interest in the tax equity financing arrangements (TEFs) represents the sale of an equity interest in a structure that is considered in substance real estate. Under existing guidance for real estate financings, the membership interests in the TEFs we sold to the third-party investors are reflected as a financing obligation in the consolidated balance sheets. We continue to fully consolidate the TEFs' assets and liabilities in the consolidated balance sheets and to report the results of the TEFs' operations in the consolidated statements of income. The presentation reflects revenues and expenses from the TEFs' operations on a fully consolidated basis. We consolidate the TEFs based on being the primary beneficiary for these variable interest entities (VIEs). The liabilities are increased for cash contributed by the third-party investors, interest accrued, and the federal income tax impact to the third-party investors of the allocation of taxable income. Interest is accrued on the balance using the effective interest method and the third-party investors' targeted rate of return. The balance accrued interest at an average rate of 5.4% and 8.5% as of December 31, 2016 and 2015, respectively. The liabilities are reduced by cash distributions to the third-party investors, the allocation of production tax credits to the third-party investors, and the federal income tax impact to the third-party investors of the allocation of taxable losses. This treatment is expected to remain consistent over the terms of the TEFs. The assets and liabilities of these VIEs totaled approximately \$1,343 million and \$244 million, respectively, at December 31, 2016. As of December 31, 2015 the assets and liabilities of VIEs totaled approximately \$1,401 million and \$338 million, respectively. At December 31, 2016 and 2015, the assets and liabilities of the VIEs consisted primarily of property, plant and equipment, equity method investments and TEF liabilities. At December 31, 2016 and 2015, equity method investments of VIEs were approximately \$161 million and \$169 million, respectively.

We consider the following four structures to be TEFs: (1) Aeolus Wind Power II LLC, (2) Aeolus Wind Power III LLC, (3) Aeolus Wind Power IV LLC, and (4) Locust Ridge Wind Farms, LLC, (collectively, Aeolus). We retain a class of membership interest and day-to-day operational and management control of Aeolus, subject to investor approval of certain major decisions. The third-party investors do not receive a lien on any Aeolus assets and have no recourse against us for their upfront cash payments.

Wind power generation is subject to certain favorable tax treatments in the U.S. In order to monetize the tax benefits generated by Aeolus, we have entered into the Aeolus structured institutional partnership investment transactions related to certain wind farms. Under the Aeolus structures, we contribute certain wind assets, relating both to existing wind farms and wind farms that are being placed into operation at the time of the relevant transaction, and other parties invest in the share equity of the Aeolus limited liability holding company. As consideration for their investment, the third parties make either an upfront cash payment or a combination of upfront cash and issuance of fixed and contingent notes.

The third party investors receive a disproportionate amount of the profit or loss, cash distributions and tax benefits resulting from the wind farm energy generation until the investor recovers its investment and achieves a cumulative annual after-tax return. Once this target return is met, the relative sharing of profit or loss, cash distributions and taxable income or loss between the Company and the third party investor flips, with the company taking a disproportionate share of such amounts thereafter. We also have a call option to acquire the third party investors' membership interest within a defined time period after this target return is met.

Our Aeolus interests are not subject to any rights of investors that may restrict our ability to access or use the assets or to settle any existing liabilities associated with the interests.

During 2014, the investor returns on the Aeolus I structure successfully met the investor requirements, causing the structure to flip back to us and leaving the investor with a ten-percent noncontrolling interest. In October 2015, AVANGRID purchased this remaining interest from the investor with a gain of \$5 million recorded within "Other income and (expense)" of the consolidated statements of income.

Note 20. Grants, Government Incentives and Deferred Income

The changes in deferred income as of December 31, 2016 and 2015 consisted of:

(Millions)	Government grants	Other deferred income	Total
As of December 31, 2014	\$ 1,606	\$ 15	\$ 1,621
Additions	—	—	—
Recognized in income	(77)	9	(68)
As of December 31, 2015	\$ 1,529	\$ 24	\$ 1,553
Additions	—	—	—
Recognized in income	(68)	(2)	(70)
As of December 31, 2016	\$ 1,461	\$ 22	\$ 1,483

Within deferred income we classify grants we received under Section 1603 of the American Recovery and Reinvestment Act of 2009, where the United States Department of Treasury (DOT) provides eligible parties the option of claiming grants for specified energy property in lieu of tax credits, which we claimed for the majority of our qualifying properties. Deferred income has been recorded for the grant amounts and is amortized as an offset against depreciation expense using the straight-line method over the estimated useful life of the associated property to which the grants apply. We recognize a net deferred tax asset for the book to tax basis differences related to the property for income tax purposes.

We are required to comply with certain terms and conditions applicable to each grant and, if a disqualifying event should occur as specified in the grant's terms and conditions, we are required to repay the grant funds to the DOT. We believe we are in compliance with each grant's terms and conditions as of December 31, 2016 and 2015.

Other deferred income relates predominantly to gas storage transactions where revenues are recognized as services are provided.

Government grants related to depreciable assets and contributions in aid of construction treated as credits to property, plant and equipment in accordance with FERC requirements were \$459 million and \$390 million as of December 31, 2016 and 2015, respectively.

U
U

Note 21. Equity method investments

We have a 50-50 joint venture with Shell Wind Energy, Inc., which owns and operates a 162- megawatt (MW) wind farm located in southeast Colorado (Colorado Wind Ventures LLC), which commenced operations in January 2004. We account for this venture under the equity method of accounting. The carrying amount of this investment was \$45 million and \$41 million as of December 31, 2016 and 2015, respectively.

We have two 50-50 joint ventures with Horizon Wind Energy, LLC, which own and operate the Flat Rock Windpower LLC and the Flat Rock Wind Power II LLC wind farms located in upstate New York. Flat Rock Wind Power LLC, which commenced operations in January 2006, has a 231-MW capacity. Flat Rock Wind Power II LLC commenced operations in September 2007 and has a 91-MW capacity. We account for the Flat Rock joint ventures under the equity method of accounting. The carrying amount of these investments was \$128 million and \$143 million for Flat Rock Wind Power LLC, and \$64 million and \$69 million for Flat Rock Wind Power II LLC, as of December 31, 2016 and 2015, respectively.

Through UI, we are party to a 50-50 joint venture with NRG affiliates in GenConn, which operates two peaking generation plants in Connecticut. The investment in GenConn is being accounted for as an equity investment, the carrying value of which was \$128 million and \$110 million as of December 31, 2016 and 2015.

Networks holds an approximately 20% ownership interest in New York TransCo, LLC. New York TransCo, LLC was established by the New York transmission utilities to develop, own, and operate electric transmission in New York. The investment in New York TransCo, LLC is being accounted for as an equity investment, the carrying value of which was \$22 million as of December 31, 2016 (See Note 24).

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

None of our joint ventures have any contingent liabilities or capital commitments. Distributions received from equity method investments amounted to \$20 million, \$12 million, and \$19 million for the years ended December 31, 2016, 2015, and 2014 respectively, which are reflected as either distributions of earnings or as returns of capital in the operating and investing sections of the consolidated statements of cash flows, respectively. As of December 31, 2016, there was an immaterial amount of undistributed earnings from our equity method investments.

During the year ended December 31, 2016 we completed the sale of our interest in Iroquois Gas Transmission System L.P. (Iroquois) to an unaffiliated third party for proceeds of \$53.8 million and an impact to net income of \$19.0 million. The carrying value of this equity method investment was \$22 million as of December 31, 2015.

U

Note 22. Other Financial Statements Items

Other income and (expense)

Other income and (expense) for the years ended December 31, 2016, 2015 and 2014 consisted of:

Years ended December 31, (Millions)	2016	2015	2014
Allowance for funds used during construction	\$ 26	\$ 21	\$ 17
Carrying costs on regulatory assets	14	28	29
Other	36	6	6
Total Other income and (expense)	\$ 76	\$ 55	\$ 52

Included in "Other" is a gain of \$33 million resulted from the sale of our interest in Iroquois in 2016 (See Note 21).

Accounts Receivable

Accounts receivable as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	2016	2015
Trade receivables	\$ 1,183	\$ 1,036
Allowance for bad debts	(64)	(62)
Total Accounts Receivable	\$ 1,119	\$ 974

The allowance for bad debts relates entirely to gas and electricity consumers and comprises an amount that has been reserved following historical averages of loss percentages.

The change in the allowance for bad debts as of December 31, 2016 and 2015 consisted of:

(Millions)	
As of December 31, 2013	58
Current period provision	39
Write-off as uncollectible	(48)
As of December 31, 2014	\$ 49
Current period provision	46
Write-off as uncollectible	(33)
As of December 31, 2015	\$ 62
Current period provision	48
Write-off as uncollectible	(46)
As of December 31, 2016	\$ 64

DPA receivable balances were \$54 million and \$62 million as of December 31, 2016 and 2015, respectively.

Prepayments and Other Current Assets

Prepayments and other current assets as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	2016	2015
Prepaid other taxes	\$ 153	\$ 130
Broker margin and collateral accounts	32	46
Loans to third parties	3	3
Fixed-term deposits	3	11
Other pledged deposits	8	24
Prepaid expenses	53	53
Other	3	18
Total	\$ 255	\$ 285

Other Non-current Assets

Included in “Other non-current assets” are \$186 million of safe harbor turbine payments made as of December 31, 2016 for production tax credit qualification purposes.

In addition, included in “Other non-current assets”, are \$5 million and \$7 million, which represent restricted cash as of December 31, 2016 and 2015, respectively.

Other current liabilities

Other current liabilities as of December 31, 2016 and 2015 consisted of:

As of December 31, (Millions)	2016	2015
Advances received	\$ 107	\$ 96
Accrued salaries	84	68
Short-term environmental provisions	34	35
Collateral deposits received	45	59
Pension and other postretirement	5	5
Other	4	22
Total	\$ 279	\$ 285

Note 23. Segment Information

Our segment reporting structure uses our management reporting structure as its foundation to reflect how AVANGRID manages the business internally and is organized by type of business. We report our financial performance based on the following three reportable segments:

- Networks: including all the energy transmission and distribution activities, and any other regulated activity originating in New York and Maine, and regulated electric distribution, electric transmission and gas distribution activities originating in Connecticut and Massachusetts. The Networks reportable segment includes eight rate regulated operating segments. These operating segments generally offer the same services distributed in similar fashions, have the same types of customers, have similar long-term economic characteristics and are subject to similar regulatory requirements, allowing these operations to be aggregated into one reportable segment.
- Renewables: activities relating to renewable energy, mainly wind energy generation and trading related with such activities.
- Gas: including gas trading and storage businesses carried on by the AVANGRID Group

Products and services are sold between reportable segments and affiliate companies at cost. The chief operating decision maker evaluates segment performance based on segment adjusted EBITDA (Earnings Before Interest, Taxes, Depreciation and Amortization) defined as net income adding back income tax expense, depreciation and amortization, impairment of non-current assets and interest expense net of capitalization, and then subtracting other income and earnings from equity method investments per segment. Segment

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

income, expense, and assets presented in the accompanying tables include all intercompany transactions that are eliminated in the consolidated financial statements.

Segment information as of and for the year ended December 31, 2016 consisted of:

Interest expense, net of capitalization	268	267	243
Income tax expense	379	34	282
Add:			
Other income	76	55	52
Earnings from equity method investments	7	—	12
Consolidated Net Income	\$ 630	\$ 267	\$ 424

Note 24. Related Party Transactions

We engage in related party transactions that are generally billed at cost and in accordance with applicable state and federal commission regulations.

Related party transactions for the years ended December 31, 2016, 2015 and 2014, respectively, consisted of:

Years Ended December 31, (Millions)	2016		2015		2014	
	Sales To	Purchases From	Sales To	Purchases From	Sales To	Purchases From
Iberdrola Financiación, S.A.	\$ —	\$ (2)	—	\$ (1)	—	\$ (2)

Other	21	(1)	3	(2)	12	(10)

AVANGRID, Inc. and Subsidiaries
Notes to Consolidated Financial Statements (Continued)

In addition to the statements of income items above we made purchases of turbines for wind farms from Gamesa Corporación Tecnológica, S.A. (Gamesa), in which our ultimate parent Iberdrola has a 20% ownership. The amounts capitalized for these transactions were \$269 million and \$70 million for the years ended December 31, 2016 and 2015, respectively. In addition, included in “Other non-current assets” are \$92 million of safe harbor turbine payments we made to Gamesa as of December 31, 2016 (see Note 22). In June 2016, Siemens AG and Gamesa signed a binding agreement to merge their wind power businesses. After completion of the merger, which is expected in the first quarter of 2017, Iberdrola will have 8.1% ownership of the new combined company.

Related party balances as of December 31, 2016 and 2015, respectively, consisted of:

As of December 31, (Millions)	2016		2015	
	Owed By	Owed To	Owed By	Owed To
Iberdrola Canada Energy Services, Ltd	\$ —	\$ (14)	\$ 7	\$ (5)
Gamesa Corporación Tecnológica, S.A.	1	(181)	68	(77)
Iberdrola, S.A.	—	(30)	—	(3)
Iberdrola Energy Projects, Inc.	—	—	1	(3)
Iberdrola Renovables Energía, S.L.	2	—	—	—
Other	22	(3)	—	(2)

Transactions with our parent company, Iberdrola, relate predominantly to the provision and allocation of corporate services and management fees. Also included within the Purchases From category are charges for credit support relating to guarantees Iberdrola has provided to third parties guaranteeing our performance. All costs that can be specifically allocated, to the extent possible, are charged directly to the company receiving such services. In situations when Iberdrola corporate services are provided to two or more companies of AVANGRID any costs remaining after direct charge are allocated using agreed upon cost allocation methods designed to allocate those costs. We believe that the allocation method used is reasonable.

Transactions with Iberdrola Canada Energy Services predominantly relate to the purchase of gas for ARHI’s gas-fired generation facility at Klamath.

There have been no guarantees provided or received for any related party receivables or payables. These balances are unsecured and are typically settled in cash. Interest is not charged on regular business transactions but is charged on outstanding loan balances. There have been no impairments or provisions made against any affiliated balances, other than a \$10 million write-off related to an arrangement to purchase turbines from Gamesa, which was recorded in impairment of non-current assets in the consolidated statements of income for the year ended December 31, 2015.

Networks holds an approximate 20% ownership interest in the regulated New York TransCo. Through New York TransCo, Networks has formed a partnership with Central Hudson Gas and Electric Corporation, Consolidated Edison, Inc., National Grid, plc and Orange and Rockland Utilities, Inc. to develop a portfolio of interconnected transmission lines and substations to fulfill the objectives of the New York energy highway initiative, which is a proposal to install up to 3,200 MW of new electric generation and transmission capacity in order to deliver more power generated from upstate New York power plants to downstate New York. In 2016, Networks has increased its equity method investment in the New York TransCo by approximately \$21 million (included in “Other investments and equity method investments, net” of investing activities in the consolidated statements of cash flows) for a total equity method investment of \$22 million. Additionally, in 2016, Networks received approximately \$67 million from the New York TransCo in the form of \$43 million for assets constructed and transferred to the New York TransCo (included in “Proceeds from sale of property, plant and equipment” of investing activities in the consolidated statements of cash flows), \$22 million in contributions in aid of construction and approximately \$2 million in advanced lease payments for a 99 year lease of land and attachment rights. As of December 31, 2016 the amount receivable from New York TransCo was \$11 million.

AVANGRID manages its overall liquidity position as part of the broader Iberdrola Group and is a party to a cash pooling agreement with Bank Mendes Gans, N.V., similar to other members of the Iberdrola Group. Cash surpluses remaining after meeting the liquidity requirements of AVANGRID and its subsidiaries may be deposited in the cash pooling account where such funds are available to meet the liquidity needs of other affiliates within the Iberdrola Group. Under the cash pooling agreement, affiliates with credit balances have pledged those balances to cover the debit balances of the other affiliated parties to the agreement.

Note 25. Stock-Based Compensation

Under the Avangrid, Inc. Omnibus Incentive Plan 1,298,683 performance stock units (PSUs) were granted to certain officers and employees of AVANGRID in July 2016. An additional 11,804 PSUs were granted to officers and employees of AVANGRID in December 2016. The PSUs will vest upon achievement of certain performance and market-based metrics related to the 2016 through 2019 plan and will be payable in three equal installments in 2020, 2021 and 2022. As of December 31, 2016, the total number of shares authorized for stock-based compensation plans was 2,500,000.

The fair value of the PSUs on the grant date was \$31.80 per share, which is expensed on a straight-line basis over the requisite service period of approximately seven years based on expected achievement. The fair value of the PSUs was determined using valuation techniques to forecast possible future stock prices, applying a weighted average historical stock price volatility of AVANGRID and industry companies, a risk-free rate of interest that is equal, as of the grant date, to the yield of the zero-coupon U.S. Treasury bill and a reduction for the respective dividend yield calculated based on the most recent quarterly dividend payment and the stock price as of the grant date.

In connection with the acquisition of UIL, certain PSUs granted under the UIL 2008 Stock and Incentive Compensation Plan are outstanding, which are payable in our shares in 2017 and 2018 and vest based upon the achievement of certain pre-determined performance objectives.

The total stock-based compensation expense, which is included in operations and maintenance of the consolidated statements of income for the years ended December 31, 2016, 2015 and 2014 was \$0.6 million, \$6.0 million and \$4.8, respectively. The total income tax benefit recognized for stock-based compensation arrangements for the years ended December 31, 2016, 2015 and 2014, was \$0.2 million, \$2.4 million and \$1.9 million, respectively.

The total liability relating to stock-based compensation, which is included in other non-current liabilities, was \$9.5 million and \$17.5 million as of December 31, 2016 and 2015, respectively. Before 2016 the Company's historical stock-based expense and liabilities were based on shares of Iberdrola and not on shares of the Company. These Iberdrola shares-based awards were early terminated at the end of 2015, and the liability will be settled in two equal installments no later than June 30, 2017 and March 30, 2018.

A summary of the status of the AVANGRID's nonvested PSUs as of December 31, 2016, and changes during the fiscal year ended December 31, 2016, is presented below:

	Number of PSUs	Weighted Average Grant Date Fair Value
Nonvested Balance – December 31, 2015	411,207	\$ 39.60
Granted	1,335,416	\$ 31.92
Forfeited	(36,592)	\$ 32.83
Vested	(186,050)	\$ 40.84
Nonvested Balance – December 31, 2016	<u>1,523,981</u>	<u>\$ 33.01</u>

As of December 31, 2016, total unrecognized costs for non-vested PSUs were \$22 million. The weighted-average period over which the PSU costs will be recognized is approximately 5 years.

The weighted average grant date fair value of PSUs granted during the year was \$31.92 per share for the year ended December 31, 2016.

Note 26. Quarterly financial data (unaudited)

Selected quarterly financial data for 2016 and 2015 are set forth below:

	<u>1st</u> <u>Quarter</u>	<u>2nd</u> <u>Quarter</u>	<u>3rd</u> <u>Quarter</u>	<u>4th</u> <u>Quarter</u>
(Millions, except per share data)				
2016				
Operating revenues	\$ 1,670	\$ 1,439	\$ 1,418	\$ 1,491
Operating Income	\$ 349	\$ 322	\$ 217	\$ 306
Net Income	\$ 212	\$ 102	\$ 109	\$ 207
Net Income attributable to Avangrid, Inc.	\$ 212	\$ 102	\$ 109	\$ 207
Earnings Per Common Share, Basic and Diluted: (1)	\$ 0.69	\$ 0.33	\$ 0.35	\$ 0.67
2015				
Operating revenues	\$ 1,227	\$ 939	\$ 1,048	\$ 1,153
Operating Income	\$ 196	\$ 73	\$ 161	\$ 83
Net Income	\$ 106	\$ 11	\$ 54	\$ 96
Net Income attributable to Avangrid, Inc.	\$ 106	\$ 11	\$ 54	\$ 96
Earnings Per Common Share, Basic and Diluted: (1)	\$ 0.42	\$ 0.04	\$ 0.22	\$ 0.37

- (1) Based on weighted average number of 309 million shares outstanding each quarter in 2016 and 252 million shares for each quarter of 2015, except for fourth quarter of 2015, which is based on weighted average of 262 million shares as a result of the acquisition of UIL.

The first quarter of 2016 includes a \$19.0 million impact to net income from the sale of our interest in Iroquois to an unaffiliated third party for proceeds of \$53.8 million. The second quarter of 2016 includes an adjustment of \$126 million to unfunded future income tax to reflect the change from a flow through to normalization method following the approval of the proposal by the NYPSC, which was recorded as an increase to income tax expense and an offsetting increase to revenue.

The first, second, third and fourth quarters of 2015 include \$4 million, \$8 million, \$7 million and \$18.5 million of pre-tax merger related expenses, respectively. Additionally, the fourth quarter of 2015 includes \$44 million relating to rate credits, before income taxes, and \$63 million tax benefits related to state income tax matters, including the initial impact of the merger on our consolidated tax filings.

U

Note 27. Subsequent events

In January 2017 we released 5,088 shares of common stock held in trust, each having a par value of \$0.01.

On February 16, 2017, the board of directors of AVANGRID declared a quarterly dividend of \$0.432 per share on its common stock. This dividend is payable on April 3, 2017 to shareholders of record at the close of business on March 10, 2017.

On February 16, 2017, the board of directors of AVANGRID adopted an annual cash incentive plan pursuant to the 2016 Omnibus Incentive Plan approved by the shareholders of AVANGRID.

On March 1, 2017, we issued 70,493 shares of common stock, each having a par value of \$0.01, which was approved by the board of directors of AVANGRID on February 16, 2017.

Note 1. Basis of Presentation

Avangrid, Inc. (AVANGRID), formerly Iberdrola USA, Inc., is a holding company and conducts substantially all of its business through its subsidiaries. Substantially all of its consolidated assets are held by such subsidiaries. Accordingly, its cash flow and its ability to meet its obligations are largely dependent upon the earnings of these subsidiaries and the distribution of other payment of such earnings to in the form of dividends, loans or advances or repayment of loans and advances from it. These condensed financial statements and related footnotes have been prepared in accordance with regulatory statute 210.12-04 of Regulation S-X. These statements should be read in conjunction with the consolidated financial statements and notes thereto of AVANGRID and subsidiaries (AVANGRID Group).

AVANGRID indirectly or directly owns all of the ownership interests of its significant subsidiaries. AVANGRID relies on dividends or loans from its subsidiaries to fund dividends to its primary shareholder.

AVANGRID's significant accounting policies are consistent with those of the AVANGRID Group. For the purposes of these condensed financial statements, AVANGRID's wholly owned and majority owned subsidiaries are recorded based upon its proportionate share of the subsidiaries net assets.

AVANGRID will file a consolidated federal income tax return that includes the taxable income or loss of all its subsidiaries for the 2016 tax period. Each subsidiary company is treated as a member of the consolidated group and determines its current and deferred

taxes separately and settles its current tax liability or benefit each year directly with AVANGRID pursuant to a tax sharing agreement between AVANGRID and its members.

Note 2. Acquisition of UIL and Issuance of Common Stock

On December 16, 2015 (acquisition date), UIL Holdings Corporation, a Connecticut corporation (UIL), became a wholly-owned subsidiary of AVANGRID as a result of the merger of Green Merger Sub, Inc., a Connecticut corporation and a wholly-owned subsidiary of AVANGRID (Merger Sub), with UIL, with Merger Sub surviving as a wholly-owned subsidiary of AVANGRID (the acquisition). The acquisition was effected pursuant to the Agreement and Plan of Merger, dated as of February 25, 2015, by and among AVANGRID, Merger Sub, and UIL. Following the completion of the acquisition, Merger Sub was renamed "UIL Holdings Corporation." In connection with the acquisition, AVANGRID issued 309,490,839 shares of its common stock, out of which 252,234,989 shares were issued to Iberdrola through a stock dividend, accounted for as a stock split, with no change to par value, at par value of \$0.01 per share, and 57,255,850 shares (including held in trust as treasury stock) were issued to UIL shareowners in addition to payment of \$10.50 in cash per each share of the common stock of UIL issued and outstanding at the acquisition date. Following the completion of the acquisition, former UIL shareowners owned 18.5% of the outstanding shares of common stock of AVANGRID and Iberdrola owned the remaining shares.

On April 28, 2016, AVANGRID entered into a repurchase agreement with J.P. Morgan Securities, LLC. (JPM), pursuant to which JPM will, from time to time, acquire, on behalf of AVANGRID, shares of common stock of AVANGRID. The purpose of the stock repurchase program is to allow AVANGRID to maintain the relative ownership percentage of Iberdrola at 81.5%. The stock repurchase program may be suspended or discontinued at any time upon notice. During the year ended December 31, 2016, AVANGRID repurchased 115,831 shares of its common stock in the open market. The total cost of repurchase, including commissions, was \$5 million.

On February 16, 2017, the board of directors of AVANGRID declared a quarterly dividend of \$0.432 per share on its common stock. This dividend is payable on April 3, 2017 to shareholders of record at the close of business on March 10, 2017.

Note 3. Non-current debt

Supplemental Indenture

On December 19, 2016, AVANGRID, its subsidiary, UIL, and The Bank of New York Mellon, entered into a supplemental indenture, pursuant to which AVANGRID assumed from UIL all the obligations under the indenture dated as of October 7, 2010 between UIL and The Bank of New York Mellon and all obligations relating to \$450 million in aggregate principal amount of 4.625% notes due 2020 issued by the predecessor company to UIL in 2010. For the purpose of the supplemental indenture a capital contribution of \$483 million was made by AVANGRID to UIL in December 2016.

Note 4. Cash dividends paid by subsidiaries

Cash dividends paid by subsidiaries are as follows:

Years ended December 31, (In millions)	2016	2015	2014
AVANGRID Networks	\$ 220	\$ 59	\$ 200
AVANGRID Renewables	200	750	—
Other AVANGRID subsidiaries	—	302	—
	<u>\$ 420</u>	<u>\$ 1,111</u>	<u>\$ 200</u>

In December 2016, AVANGRID made a capital contribution of \$50 million to its subsidiary, CMP. During 2016, AVANGRID recorded a net non-cash dividend of \$827 million from its subsidiaries to zero out their account balances of notes receivables and payables.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

None.

U
U

Item 9A. Controls and Procedures.

Evaluation of Disclosure Controls and Procedures

Our management, with the participation of our Chief Executive Officer, or CEO, and our Chief Financial Officer, CFO, has evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended, or the Exchange Act), as of the end of the period covered by this Annual Report on Form 10-K. Based on such evaluation, our CEO and CFO have concluded that as of such date, our disclosure controls and procedures were not effective, due to a material weakness in internal control over financial reporting described below.

Report of Management on Internal Control Over Financial Reporting

The management of AVANGRID is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act. AVANGRID's internal control system over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles. AVANGRID's internal control over financial reporting includes those policies and procedures that:

- (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company;
- (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and
- (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Also, projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in condition, or that the degree of compliance with the policies or procedures may deteriorate.

AVANGRID's management assessed the effectiveness of AVANGRID's internal control over financial reporting as of December 31, 2016. In making this assessment, management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (2013 framework) ("COSO") in Internal Control—Integrated Framework. Based upon that assessment and those criteria, management has identified certain deficiencies that rose to the level of a material weakness in controls related to: (1) the accounting for the change in the estimated useful life of certain elements of the wind farms at Renewables and other smaller deficiencies related to documentation of internal controls procedures, and enhancement of review controls at Renewables, (2) the preparation of the consolidated financial statements, specifically the classification and disclosure of financial information, and (3) the measurement and disclosure of income taxes. This material weakness did not result in any restatement of prior-period financial statements.

A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our annual or interim financial statements will not be prevented or detected on a timely basis.

As a result of the material weakness noted above, management concluded that, as of December 31, 2016, our internal control over financial reporting was not effective. We completed additional substantive procedures prior to filing this Annual Report on Form 10-K. Based on these procedures, management believes that our consolidated financial statements included in this Annual Report on Form 10-K have been prepared in accordance with generally accepted accounting principles. Our CEO and CFO have certified that, based on such officer's knowledge, the financial statements, and other financial information included in this Annual Report on Form 10-K, fairly present in all material respects the financial condition, results of operations and cash flows of the Company as of, and for, the periods presented in this Annual Report on Form 10-K. In addition, we have developed a remediation plan for this material weakness, which is described below.

AVANGRID's independent registered public accounting firm, Ernst & Young LLP, has issued an adverse audit report on the effectiveness of AVANGRID's internal control over financial reporting as of December 31, 2016, which appears in Part II, Item 8,

Changes in Internal Control

Except for the control deficiencies discussed above that have been assessed as a material weakness as of December 31, 2016, and the remediation as described within “Remediation Plans and Other Information” below, there were no other changes in our internal control over financial reporting identified in management’s evaluation pursuant to Rules 13a-15(d) or 15d-15(d) of the Exchange Act during the period covered by this Annual Report on Form 10-K that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Remediation Plans and Other Information

AVANGRID’s management, with oversight from its Audit and Compliance Committee of the Board of Directors of AVANGRID, is actively engaged in remediation efforts to address the material weakness identified above. Management has taken and will take a number of actions to remediate the material weakness including the following remediation plans:

- Implementing and enhancing additional management review controls;
- Increasing accounting personnel to devote additional time and internal control resources;
- Implementing enhanced controls to monitor the effectiveness of the underlying business process controls that are dependent on the data and financial reports generated from the relevant information systems;
- Continuing to implement controls newly designed during the third and fourth quarters of 2016 that management has determined through testing are more precise;
- Implementing specific enhanced review procedures in the property, plant and equipment area, including the estimation of useful lives, as well as within income taxes;
- Educating and re-training internal control employees regarding internal control processes to mitigate identified risks and maintaining adequate documentation to evidence the effective design and operation of such processes; and
- Enhancing the automation of processes and controls to allow for the more timely completion and enhanced review of internal controls surrounding financial information and disclosures.

These improvements are targeted at strengthening the Company’s internal control over financial reporting and remediating the material weakness. The Company remains committed to an effective internal control environment and management believes that these actions, and the improvements management expects to achieve as a result, will remediate the material weakness. However, the material weakness in our internal control over financial reporting will not be considered remediated until the controls operate for a sufficient period of time and management has concluded, through testing that these controls operate effectively. We currently plan to have our enhanced review procedures and documentation standards in place and operating in the first quarter of 2017 and expect that the remediation of this material weakness will be completed by December 31, 2017.

THIRD SUPPLEMENTAL INDENTURE

THIRD SUPPLEMENTAL INDENTURE (the “Third Supplemental Indenture”), dated as of December 19, 2016, to the Indenture dated as of October 7, 2010 (the “Base Indenture” and, as amended and supplemented to the date hereof, the “Indenture”) by and among UIL HOLDINGS CORPORATION, a Connecticut corporation (“UIL”), AVANGRID, Inc., a corporation duly organized and existing under the laws of the State of New York (“Avangrid”), and THE BANK OF NEW YORK MELLON (formerly known as The Bank of New York), a corporation organized under the laws of the State of New York authorized to conduct a banking business, as Trustee (the “Trustee”).

RECITALS

WHEREAS, the predecessor company to UIL, UIL Holdings Corporation (“Predecessor UIL”) and the Trustee have heretofore executed and delivered the Base Indenture to provide for the issuance of Predecessor UIL’s unsecured senior debt securities to be issued from time to time in one or more series as might be determined by Predecessor UIL under the Indenture;

WHEREAS, Predecessor UIL and the Trustee have heretofore executed and delivered the First Supplemental Indenture, dated as of October 7, 2010, pursuant to which Predecessor UIL issued its 4.625% Notes due 2020, in the aggregate principal amount of \$450,000,000 (the “2010 Notes”);

WHEREAS, on December 16, 2016, Predecessor UIL merged with and into Green Merger Sub, Inc., a Connecticut corporation (the “Merger”);

WHEREAS, in connection with the Merger, the surviving entity, Green Merger Sub, Inc., was renamed UIL;

WHEREAS, Predecessor UIL, Green Merger Sub, Inc. and the Trustee have heretofore entered into a Second Supplemental Indenture, dated as of December 16, 2015, pursuant to which UIL, as the surviving entity of the Merger, assumed all of the obligations of Predecessor UIL under the Indenture and the 2010 Notes;

WHEREAS, UIL is a subsidiary of Avangrid;

WHEREAS, UIL and Avangrid desire to amend the Indenture and the 2010 Notes to provide for the substitution of UIL with Avangrid as the issuer thereunder;

WHEREAS, Section 9.01(f) of the Base Indenture permits the execution of supplemental indentures without notice to or the consent of any Holders to make any change that does not materially adversely affect the rights of any Holder;

WHEREAS, the substitution of UIL with Avangrid as the issuer under the Indenture and the 2010 Notes shall not materially adversely affect the rights of any Holder;

WHEREAS, pursuant to this Third Supplemental Indenture, Avangrid shall be substituted for UIL as issuer of the 2010 Notes and assume all of the obligations and perform every covenant of the issuer in the Indenture (including every Supplemental Indenture) and the 2010 Notes (collectively, the “Obligations”);

WHEREAS, upon assumption of the Obligations by Avangrid, UIL shall be relieved of all obligations and covenants under the Indenture;

WHEREAS, in connection with the execution of this Third Supplemental Indenture, the Trustee has received Officers' Certificates and Opinion of Counsel as contemplated by Sections 9.05 and 10.03 of the Base Indenture; and

WHEREAS, all conditions necessary have been done or performed to make this Third Supplemental Indenture a valid and binding agreement of UIL and Avangrid in accordance with its terms.

NOW, THEREFORE, in consideration of the premises and the covenants and agreements contained herein, and for other good and valuable consideration the receipt of which is hereby acknowledged, UIL, Avangrid and the Trustee hereby agree as follows:

ARTICLE 1

RATIFICATION; DEFINITIONS

Section 1.01. Third Supplemental Indenture. This Third Supplemental Indenture is supplemental to, and is entered into pursuant to Section 9.01(f) of the Base Indenture, and except as expressly modified, amended or supplemented by this Third Supplemental Indenture, all the terms, conditions and provisions of the Indenture are in all respects ratified and confirmed and shall remain in full force and effect.

Section 1.02. Definitions. Unless the context shall otherwise require, all terms which are defined in the Indenture shall have the same meanings, respectively, in this Third Supplemental Indenture as such terms are given in the Indenture.

ARTICLE 2

ASSUMPTION OF OBLIGATIONS

Section 2.01 Assumption of Obligations under Indenture and 2010 Notes. As of the date hereof, Avangrid hereby expressly assumes the due and punctual payment of principal of (and premium, if any) and interest, if any, on all the 2010 Notes and the performance of every covenant of the Indenture on the part of UIL to be performed or observed.

(b) As of the date hereof, Avangrid succeeds to, is substituted for and may exercise every right and power of, UIL under the Indenture and the 2010 Notes with the same effect as if Avangrid had originally been named in the Indenture and the 2010 Notes as the "Company" and UIL shall be relieved of all obligations and covenants under the Indenture and the 2010 Notes.

ARTICLE 3

MISCELLANEOUS

Section 3.01. Effective of Supplemental Indenture. This Third Supplemental Indenture is executed and shall be construed as an indenture supplemental to the Indenture and, as provided in the Indenture, this Third Supplemental Indenture forms a part thereof.

Section 3.02. Counterparts. This Third Supplemental Indenture may be executed in any number of counterparts, each of which shall be an original; but such counterparts shall constitute but one and the same instrument.

Section 3.03. Acceptance. The Trustee accepts the Indenture, as supplemented by this Third Supplemental Indenture, and agrees to perform the same upon the terms and conditions set forth therein as so supplemented. The Trustee shall not be responsible in any manner whatsoever for or in respect of the validity or sufficiency of this Third Supplemental Indenture or the due execution hereof by UIL or Avangrid or in respect of the recitals contained herein, all of which are made solely by UIL and Avangrid. In entering into this Third Supplemental Indenture, the Trustee shall be entitled to the benefit of every provision of the Indenture and the 2010 Notes relating to the conduct or affecting the liability or affording protection to the Trustee, whether or not elsewhere herein so provided.

Section 3.04. Successors and Assigns. All covenants and agreements in this Third Supplemental Indenture by Avangrid or the Trustee shall bind their respective successors and assigns, whether so expressed or not.

Section 3.05. Severability. In case any one or more of the provisions contained in this Third Supplemental Indenture shall for any reason be held to be invalid, illegal or unenforceable in any respect, such invalidity, illegality or unenforceability shall not affect any other provisions of this Third Supplemental Indenture, but this Third Supplemental Indenture shall be construed as if such invalid or illegal or unenforceable provision had never been contained herein or therein.

Section 3.06. Governing Law. This Third Supplemental Indenture shall be construed in accordance with and governed by the laws of the State of New York.

Section 3.07. Conflict with Trust Indenture Act. If any provision hereof limits, qualifies or conflicts with another provision hereof which is required to be included in this Third Supplemental Indenture by any of the provisions of the Trust Indenture Act of 1939, as amended, such required provision shall control.

Section 3.08. No Benefit. Nothing in this Third Supplemental Indenture, express or implied, shall give to any Person other than the parties hereto and their successors or assigns, and the Holders of the 2010 Notes, any benefit or legal or equitable rights, remedy or claim under this Third Supplemental Indenture, the Indenture or the 2010 Notes.

Section 3.09. References to Supplemental Indenture. Any and all notices, requests, certificates and other instruments executed and delivered after the execution and delivery of this Third Supplemental Indenture may refer to the Indenture without making specific reference to this Third Supplemental Indenture, but nevertheless all such references shall include this Third Supplemental Indenture unless the context requires otherwise.

[Signature Page Follows]

IN WITNESS WHEREOF, the parties hereto have caused this Third Supplemental Indenture to be duly executed, all as of the day and year first above written.

Re: Offer, dated as of December 2, 2016 for a U.S.\$50,000,000 Uncommitted Line of Credit for Standby Letters of Credit

U
 Ladies and Gentlemen:

U
1. Introduction:

Crédit Agricole Corporate and Investment Bank ("Issuing Bank") is pleased to offer to negotiate with Avangrid, Inc., a New York corporation ("Account Party"), for the issuance of standby letters of credit, which shall be comprised of performance and financial letters of credit (the "Letters of Credit") on an uncommitted basis on and subject to the terms and conditions hereof and of the other Credit Documents (as defined below); provided, however, that the aggregate amount of the L/C Obligations (as defined below) outstanding at any time hereunder shall not exceed U.S.\$50,000,000 (the "Maximum Amount"); and provided, further, that there shall be a sublimit for performance Letters of Credit with a tenor of more than one (1) year up to five (5) years of U.S.\$10,000,000. The Letters of Credit issued hereunder shall be utilized by Account Party for general corporate purposes.

U
 Upon execution hereof by Account Party and the satisfaction of the conditions to effectiveness set forth herein, this Agreement shall become effective and shall remain in effect until the earlier of November 30, 2017 and the date of revocation hereof by Issuing Bank in its sole discretion (such earlier date, the "Expiration Date"). Any obligations of Account Party incurred pursuant to this Agreement shall survive its revocation or expiration.

U
Account Party understands and agrees that (a) Issuing Bank may revoke this Agreement at any time without notice to Account Party and (b) this Agreement is not a commitment by Issuing Bank to issue any Letter of Credit and no commitment fee is being paid. Notwithstanding anything herein contained to the contrary, it is hereby agreed that so long as any Letter of Credit issued pursuant to the terms hereof or any Application (as defined below) remains outstanding, the Events of Default specified herein shall remain effective and shall survive the termination of this Agreement and Issuing Bank shall be entitled to exercise any and all remedies in respect thereof.

2. Definitions:

As used herein and in the other Credit Documents (unless otherwise defined therein), the following terms have the following meanings:

U

U

"Account Party": as defined in Section 1.

U

"Affiliate": means, with respect to any specified Person, any other Person directly or indirectly controlling or controlled by or under direct or indirect common control with such specified Person. For purposes of this definition, "control," when used with respect to any specified Person, means the power to direct the management and policies of such Person, directly or indirectly, whether through the ownership of voting securities, by contract or otherwise. For purposes of this definition, the terms "controlling," "controlled by" and "under common control with" have correlative meanings.

U

"Agreement": means this Offer for a U.S.\$50,000,000 Uncommitted Line of Credit for Standby Letters of Credit, as amended, restated, amended and restated, supplemented, extended or otherwise modified from time to time.

U

"Anti-Corruption Laws": means any applicable laws, rules, or regulations relating to bribery or corruption, including (a) the United States Foreign Corrupt Practices Act of 1977; (b) the United Kingdom Bribery Act of 2010; and (c) any other similar law, rule or regulation in any applicable jurisdiction currently in force or hereafter enacted.

U

"Anti-Money Laundering Laws": means any laws or regulations relating to money laundering or terrorist financing in any applicable jurisdiction currently in force or hereafter enacted.

U

"Application": means an application, in the form attached hereto as Exhibit A or such other form as the Issuing Bank shall from time to time issue, requesting Issuing Bank to open a Letter of Credit. For the avoidance of doubt, to the extent any provision of any Application conflicts with or is otherwise inconsistent with this Agreement, the terms of this Agreement shall supersede any such Application and this Agreement shall govern.

"Base Rate": means as determined by Issuing Bank on a daily basis, the higher of (a) the rate per annum established by Issuing Bank from time to time as the reference rate for short-term commercial loans in U.S. Dollars to domestic corporate borrowers (which Account Party acknowledges is not necessarily Issuing Bank's lowest rate) and (b) the overnight cost of funds of Issuing Bank as determined solely by Issuing Bank plus 1/4 of 1% per annum.

U

"Board": means the Board of Governors of the Federal Reserve System of the U.S.

U

"Business Day": means any day, other than a Saturday or Sunday or legal holiday, on which commercial banks generally are open for business in New York, New York .

"Change of Control": means at any time Iberdrola S.A. shall cease to own, directly or indirectly, at least 51 % of the economic and voting interests in Account Party, free and clear of any Lien.

U

"Code": means the U.S. Internal Revenue Code of 1986, as amended.

U

"Collateral Account": as defined in Section 9.

U

"Contingent Obligation": means, as to any Person, any guarantee of payment by such Person of any Indebtedness or other obligation of any other Person, or any agreement to provide financial assurance with respect to the financial condition, or the payment of the obligations of, such other Person which has the effect of assuring or holding harmless any third Person against loss with respect to one or more obligations of such third Person.

U

"Credit Documents": means this Agreement, and the Applications.

U

"Currency": means U.S. Dollars and/or any Foreign Currency.

U

"Default": means any Event of Default or any condition or event which, after the giving of notice, the lapse of time, or both, or any other condition, would become an Event of Default.

U

"Dollar Equivalent": means, on any date of determination, with respect to an amount denominated in any Foreign Currency, the amount of U.S. Dollars that would be required to purchase such amount of such Foreign Currency on the date two (2) Business Days prior to such date, based upon the spot selling rate at which Issuing Bank offers to sell such Foreign Currency for U.S. Dollars in the London foreign exchange market at approximately 11:00 a.m., London time, for delivery two (2) Business Days later.

U

"Event of Default": as defined in Section 9.

U

"Expiration Date": as defined in Section 1.

U

"FATCA": means Sections 1471 through 1474 of the Code, as of the date of this Agreement (or any amended or successor version), and any current or future regulations or official interpretations thereof.

U

"Financial Statements": means the income statement, statement of cash flows and balance sheet of Account Party furnished in accordance with Section 8(a)(i).

U

"Foreign Currency": means at any time any Currency other than U.S. Dollars.

U

"GAAP": means generally accepted accounting principles in the U.S. consistent with those utilized in preparing the Financial Statements.

U

"Indebtedness": means with respect to any Person at any date: (a) all indebtedness of such Person for borrowed money or for the deferred purchase price of property or services (other than current trade liabilities incurred in the ordinary course of business and payable in accordance with customary practices), (b) any other indebtedness which is evidenced by a note, bond, debenture or similar instrument, (c) all capital lease obligations of such Person, (d) all obligations of such Person in respect of outstanding letters of credit, acceptances and similar obligations created for the account of such Person, (e) all liabilities secured by any Lien on any property owned by such Person even though such Person has not assumed or otherwise become liable for the payment thereof, (f) all Contingent Obligations of such Person and (g) net liabilities of such Person under interest rate cap agreements, interest rate swap agreements, foreign currency exchange agreements and other hedging agreements or arrangements (calculated on a basis satisfactory to Issuing Bank and in accordance with accepted industry practice). The Indebtedness of any Person shall include any Indebtedness of any partnership in which such Person is the general partner.

U

"Indemnified Liabilities": as defined in Section 12(b).

U

"Indemnitee": as defined in Section 12(b).

U

"ISP": as defined in Section 18(b).

U

"Issuing Bank": as defined in Section 1.

U

"L/C Obligations": means at any time, an amount equal to the sum of (a) the aggregate then undrawn and unexpired amount of the then outstanding Letters of Credit and (b) the aggregate amount of drawings under the Letters of Credit for which Issuing Bank has not then been reimbursed pursuant to Section 4.

U

"Letters of Credit": as defined in Section 1.

U

"Lien": means any mortgage, pledge, hypothecation, assignment, deposit arrangement, encumbrance, lien (statutory or other), other charge or security interest; or any preference, priority or other agreement or preferential arrangement of any kind or nature whatsoever (including, without limitation, any conditional sale or other title retention agreement or any capital lease obligation having substantially the same economic effect as any of the foregoing).

U

"Material Adverse Effect": means a material adverse effect on (a) the business, operations, property, condition (financial or otherwise) or prospects of Account Party, (b) the ability of Account Party to perform

U

its obligations under any Credit Document or (c) the validity or enforceability of (i) any of the Credit Documents or (ii) the rights or remedies of Issuing Bank thereunder.

U

"Maximum Amount": as defined in Section 1.

U

"OFAC": means the Office of Foreign Assets Control of the U.S. Department of the Treasury.

U

"Person": means an individual, partnership, corporation, limited liability company, business trust, joint stock company, trust, unincorporated association, joint venture, governmental authority or other entity of whatever nature.

U

"Reimbursement Amounts": as defined in Section 4(b).

U

"Requirement of Law": means as to any Person, the certificate of incorporation and by-laws or other comparable organizational or governing documents of such Person, and any law, treaty, rule, restriction or regulation or determination of an arbitrator or a court or other governmental authority (including, without limitation, any federal, state or local environmental and employee benefit laws and regulations), in each case applicable to or binding upon such Person or any of its property or to which such Person or any of its property is subject.

U

"Sanctioned Jurisdiction" means any country or territory that is the subject of comprehensive Sanctions broadly restricting or prohibiting dealings with, in or involving such country or territory (currently, Iran, Cuba, Syria, Sudan, North Korea and the Crimea region of Ukraine).

U

"Sanctioned Person" means any individual or entity (a) identified on a Sanctions List, (b) organized, domiciled or resident in a Sanctioned Jurisdiction, or (c) otherwise the subject or target of any Sanctions, including by reason of ownership or control by one or more individuals or entities described in clauses (a) or (b).

U

"Sanctions" shall mean any economic or financial sanctions or trade embargoes imposed, administered or enforced by (a) the U.S. (including OFAC and U.S. Department of State), (b) the United Nations Security Council, (c) the European Union or any member state, (d) the United Kingdom (including Her Majesty's Treasury), or (e) any other applicable jurisdiction.

U

"Sanctions List" shall mean any list of designated individuals or entities that are the subject of Sanctions, including (a) the Specially Designated Nationals and Blocked Persons List maintained by OFAC, (b) the Consolidated United Nation Security Council Sanctions List, (c) the consolidated list of persons, groups and entities subject to EU financial sanctions maintained by the European Union or any member state and (d) the Consolidated List of Financial Sanctions Targets in the United Kingdom maintained by Her Majesty's Treasury.

U

"SEC": means the Securities and Exchange Commission.

U

"Subsidiary": means as to any Person, a corporation, partnership or other entity of which shares of stock or other ownership interests having ordinary voting power (other than stock or such other ownership interests having such power only by reason of the happening of a contingency) to elect a majority of the board of directors or other managers of such corporation, partnership or other entity are at the time owned, or the management of which is otherwise controlled, directly or indirectly through one or more intermediaries, or both, by such Person. Unless otherwise qualified, all references to a "Subsidiary" or to "Subsidiaries" in this Agreement shall refer to a Subsidiary or Subsidiaries of Account Party.

U

"Taxes": as defined in Section 5.

U

"UCP": as defined in Section 18(b).

U

"U.S.": means the United States of America.

U

"U.S. Dollars" or "U.S.\$": means the lawful currency of the U.S.

U

"USA Patriot Act": means the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 (USA PATRIOT Act, Title III of Pub. L. 107-56 (signed into law October 26, 2001)).

3. Issuance and Terms of Letters of Credit; Fees;

U

(a) At any time after the date hereof, Account Party may request Issuing Bank to issue a Letter of Credit by issuing a written request to Issuing Bank at its address specified on its signature page hereto, together with an Application therefor, completed to the satisfaction of Issuing Bank (which request and Application must be received by Issuing Bank prior to 10:00 A.M. (New York time) on the proposed date of utilization (which must be a Business Day on or prior to the Expiration Date)). Issuing Bank shall inform Account Party of its decision in its sole discretion to accept or reject such request within three (3) Business Days. If Issuing Bank does not respond within such period of time, the request will be considered to be rejected.

U

(b) Each Letter of Credit shall (i) be governed by the provisions hereof and of the relevant Application, (ii) be issued in either U.S. Dollars or an Agreed Foreign Currency and in a face amount to be mutually agreed, and (iii) expire on a Business Day (A) no later than twelve (12) months after the date of the issuance in the case of a financial Letter of Credit and (B) no later than five (5) years in the case of a performance Letter of Credit; provided that the aggregate amount of all L/C Obligations outstanding at any time hereunder shall not exceed the Maximum Amount; and provided, further, that the aggregate amount of performance Letters of Credit with a tenor greater than twelve (12) months to be issued hereunder may not exceed U.S.\$10,000,000.

U

(c) Account Party shall pay to Issuing Bank a commission on each individual Letter of Credit at a rate to be agreed upon at issuance of each individual Letter of Credit, quarterly and payable in arrears. In addition, Account Party shall pay to Issuing Bank a non-refundable amendment fee with respect to each amendment to any Letter of Credit in the amount of U.S.\$250 payable in advance on the date of such amendment.

U

(d) With respect to any obligation of Account Party to Issuing Bank under this Agreement payable in any Foreign Currency: (i) Account Party shall indemnify, defend and hold Issuing Bank harmless from all loss arising from any fluctuation in the value of such Foreign Currency from the date such obligation is payable to Issuing Bank by the terms hereof until paid in full; and (ii) upon the failure or inability of Account Party to pay Issuing Bank immediately upon demand the full amount of such obligation in such Foreign Currency, Account Party shall immediately upon Issuing Bank's demand pay to Issuing Bank the Dollar Equivalent of such amount in same day funds which shall be sufficient to fully compensate Issuing Bank for all amounts paid and all changes, costs and expenses incurred by Issuing Bank in acquiring the full amount of such Foreign Currency and Account Party shall pay interest accrued thereon at the highest rate permitted to be charged by Issuing Bank under applicable law, in U.S. Dollars, from the date such obligation is payable to Issuing Bank by the terms hereof until the date of receipt by Issuing Bank of full payment. For purposes of this Agreement the amount of any Letter of Credit denominated in any Foreign Currency shall be deemed to be the Dollar Equivalent of the amount of the Foreign Currency of such Letter of Credit.

U

4. Reimbursements; Overdue Amounts:

U

(a) Account Party will reimburse Issuing Bank (in same day funds without set-off, counterclaim or any other deduction of any nature whatsoever and in the Currency of the applicable Letter of Credit), on the date of any drawing under a Letter of Credit, if such drawing is made prior to 11:00 A.M. (New York time), or the next Business Day after the date of such drawing, if such drawing is made on or after 11:00 A.M. (New York time), amounts due in respect of drawings under the Letters of Credit ("Reimbursement Amounts"), and any interest (to the extent permitted by law) and other amounts due hereunder or under any other Credit Document; provided that if the Credit Documents provide for acceptance of a time draft or incurrence of a deferred payment obligation and if Account Party notifies

U

Issuing Bank of such acceptance or incurrence at least one (1) Business Day in advance of its maturity, reimbursement shall be due sufficiently in advance of its maturity to enable Issuing Bank, as issuer, to arrange for its cover in same day funds to reach the place where it is payable no later than the date of its maturity.

U

(b) Any amounts that are not paid on the date when due shall bear interest (before as well as after judgment) payable on demand at 2% over the Base Rate from and including the date when such payment was due to, but excluding, the date of receipt of payment.

U

5. Calculations; Payments; Taxes:

U

(a) All payments hereunder, including for Reimbursement Amounts and computations of fees and interest shall be made on the basis of a 360-day year for actual days elapsed. Except as required by law, any and all payments by Account Party under the Credit Documents shall be made free and clear of and without reduction or withholding for any and all present or future taxes, levies, deductions, imposts, charges or withholdings, imposed by any governmental authority (all such taxes, levies, deductions, imposts, charges, and withholdings being hereinafter called "Taxes"), excluding (i) franchise taxes, branch profits taxes or taxes imposed on or measured by the overall net income of Issuing Bank, (ii) any U.S. tax that is imposed on amounts payable to Issuing Bank under the law applicable at the time such Issuing Bank acquires an interest in a Letter of Credit (or designates a new lending office), except to the extent Issuing Bank (or its assignor, if any) was entitled, at the time of the designation of a new lending office (or assignment) to receive additional amounts from Account Party with respect to such withholding tax, (iii) taxes attributable to Issuing Bank's failure or inability to comply with Section 5(b), and (iv) any withholding taxes imposed under FATCA.

U

(b) (i) If Issuing Bank is entitled to an exemption from or reduction of withholding tax with respect to payments made under any Credit Document, Issuing Bank shall deliver to Account Party, at the time or times prescribed by applicable law and reasonably requested by Account Party, such properly completed and executed documentation reasonably requested by Account Party as will permit such payments to be made without withholding or at a reduced rate of withholding. In addition, Issuing Bank, if requested by Account Party, shall deliver such other documentation prescribed by law or reasonably requested by Account Party as will enable Account Party to determine whether or not Issuing Bank is subject to backup withholding or information reporting requirements.

U

(ii) If Account Party shall be required by law to deduct any Taxes from or in respect of any sum payable under the Credit Documents to Issuing Bank, (A) Account Party shall forthwith pay to Issuing Bank such additional amounts as may be necessary so that after making all required deductions for Taxes Issuing Bank receives an amount equal to the sum it would have received had no such deductions been made and (B) Account Party shall make such deductions and shall pay the full amount deducted to the relevant taxing authority in accordance with applicable law. Account Party shall, provide appropriate documentation, including receipts, evidencing payment by Account Party of any such Taxes. The obligations of Account Party under this Section 5 shall survive the termination of this Agreement, the repayment or reimbursement of all Reimbursement Amounts and all other amounts payable hereunder and under the other Credit Documents.

U

(iii) Without limiting the generality of the foregoing, if a payment made to Issuing Bank under any Credit Document would be subject to U.S. federal withholding Tax imposed by FATCA if such Issuing Bank were to fail to comply with the applicable reporting requirements of FATCA (including those contained in Section 1471(b) or 1472(b) of the Code, as applicable), such Issuing Bank shall deliver to Account Party at the time or times prescribed by law and at such time or times as reasonably requested by Account Party such documentation prescribed by applicable law (including as prescribed by Section 1471(b)(3)(C)(i) of the Code) and such additional documentation reasonably requested by Account Party as may be necessary for Account Party to comply with its obligations under FATCA and to determine that Issuing Bank has complied with Issuing Bank's obligations under FATCA or to determine the amount to deduct and withhold from such payment. Solely for purposes of this sub-clause (b)(iii), "FATCA" shall include any amendments made to FATCA after the date of this Agreement.

U

U

(iv) Issuing Bank agrees that if any form or certification it previously delivered pursuant to this Section 5 becomes obsolete or inaccurate in any respect (other than as a result of expiration), it shall update such form or certification or promptly notify Account Party in writing of its legal inability to do so.

U

6. Increased Costs:

U

In the event of the introduction of, or any change in, any applicable law, rule, regulation or official directive (whether or not having the force of law), or in the interpretation or application thereof by any governmental authority after the date hereof which results in an increase in the cost to Issuing Bank of making or maintaining, or which reduces the rate of return on capital of Issuing Bank as a consequence of its obligations with respect to, execution or maintenance of this Agreement or the issuance, maintenance or extension or amendment of any Letter of Credit by reason of reserve (including, without limitation, the imposition of any reserves with respect to "Eurocurrency Liabilities" (as defined in Regulation D of the Board)), liquidity, capital adequacy or similar requirements, or which results in a reduction of amounts otherwise receivable by Issuing Bank from Account Party of principal, interest or other fees and charges hereunder and thereunder by reason of tax (other than tax on the overall net income of Issuing Bank), levy, impost, fee, charge, withholding or similar requirements of any kind, Account Party will pay to Issuing Bank upon demand an amount equal to such actual increased cost or reduction. For clarity, the foregoing sentence shall apply to all requests, rules, guidelines or directives concerning capital adequacy issued in connection with the Dodd-Frank Wall Street Reform and Consumer Protection Act and all requests, rules, guidelines or directives concerning capital adequacy promulgated by the Bank for International Settlements, the Basel Committee on Banking Regulations and Supervisory Practices (or any successor or similar authority) or the U.S. financial regulatory authorities, regardless of the date adopted, issued, promulgated or implemented. If Account Party becomes liable for the payment of any additional amounts pursuant to this Section 6, it may avoid further liability for such additional amounts by: as to each outstanding Letter of Credit, seeking and obtaining replacements therefor from other financial institutions which fully cancel all obligations of Issuing Bank under such Letter of Credit (which shall thereupon be returned promptly to Issuing Bank) and the relevant Application and paying to Issuing Bank in full on the date of replacement all interest, fees and other amounts or charges due relating to such obligations. The obligations of Account Party under this Section 6 shall survive the termination of this Agreement the repayment or reimbursement of all principal and all other amounts payable hereunder and under the other Credit Documents.

U

7. Representations and Warranties:

U

Account Party represents and warrants as of the date hereof and as of the date of each Letter of Credit issued, renewed, extended or amended that:

U

(a) (i) it is a corporation duly organized and validly existing under the laws of the State of New York, (ii) it is in good standing therein, (iii) it is duly qualified to transact business in all jurisdictions where its ownership, lease or operation of property, or conduct of its business requires such qualification, (iv) no consent or authorization of, approval by, notice to, filing with or other act by or in respect of, any governmental authority or any other Person is required in connection with the execution, delivery, performance, validity or enforceability of any of the Credit Documents, and (v) it has the legal right and corporate power and authority to own its assets and properties and enter into, execute, deliver and perform the Credit Documents and all documents, instruments and agreements related thereto and perform the transactions and agreements contemplated thereby;

U

(b) the execution, delivery and performance of the Credit Documents have been duly authorized by all necessary corporate action;

U

(c) this Agreement has been, and each of the Credit Documents when delivered hereunder, will have been, duly executed and delivered by it, and this Agreement is, and each of the Credit Documents when delivered hereunder will, constitute the legal, valid and binding obligations of Account Party enforceable in accordance with their respective terms except as enforceability may be limited by applicable bankruptcy, insolvency, reorganization, moratorium or similar laws affecting the

U

enforcement of creditors' rights generally and by general equitable principles (whether enforcement is sought by proceedings in equity or at law);

U

(d) it is not in default under any material agreement to which it is a party or by which its businesses, assets or properties are bound, which default would materially adversely affect such Borrower's financial condition and the execution and delivery of, and the performance by it under, the Credit Documents do not and will not, create any Lien on its businesses, properties or assets, contravene, violate or conflict with any material Requirement of Law, nor result in a breach or default under any material agreement to which it is a party or by which its businesses, assets or properties are bound, except for such defaults or breaches that would not have a Material Adverse Effect;

U

(e) except as disclosed on Schedule 7(e) or in Account Party's annual reports on Form 10-K or quarterly reports on Form 10-Q filed with the SEC, there are no actions, suits or proceedings of any kind pending or threatened against Account Party or its assets or properties which, in any one case or in the aggregate, could reasonably be expected to have a Material Adverse Effect;

U

(f) it is in compliance with all Requirements of Law except where such non-compliance could not reasonably be expected to have a Material Adverse Effect; provided, however, that where such compliance relates to any Anti-Corruption Laws, Anti-Money Laundering Laws or Sanctions, each of Account Party and its Subsidiaries is in compliance in all respects and subject to no exceptions;

U

(g) it has filed or caused to be filed all federal, state and local tax returns which are, to its knowledge, required to be filed by it, and has paid or has made provision for the payment of all taxes shown to be due and payable on such returns or on any assessments received by it, other than any taxes or assessments it is contesting in good faith by appropriate proceedings and with respect to which it shall, to the extent required by GAAP, have set aside adequate reserves on its books;

U

(h) no part of the proceeds of any Letter of Credit will be used for "purchasing" or "carrying" any "margin stock" within the respective meanings of such quoted terms under Regulations T, U and X of the Board or for any purpose, which violates, or which would cause Issuing Bank to violate, the provisions of any such regulations;

U

(i) it is not subject to regulation under the Investment Company Act of 1940, as amended, or subject to any federal or state statutes or regulations limiting its ability to incur the indebtedness contemplated under, or otherwise affecting the validity or enforceability of, the Credit Documents;

U

(j) Account Party's obligations hereunder and under any other Credit Document do and, at all times hereafter, shall rank pari passu with all other unsecured and unsubordinated indebtedness of Account Party;

U

(k) the Financial Statements were prepared in accordance with GAAP consistently applied unless expressly disclosed therein and fairly present the consolidated financial position of the Account Party during the relevant financial year unless expressly disclosed therein to the contrary;

U

(l) Account Party shall, and shall cause its Subsidiaries to, maintain and enforce policies and procedures designed to promote and achieve compliance by Account Party and its Subsidiaries with applicable Anti-Corruption Laws, Anti-Money Laundering Laws and Sanctions;

(m) none of Account Party or any of its Subsidiaries or, any of their respective directors, officers or, to Account Party's knowledge, any of their respective Affiliates, agents or employees (i) has conducted their respective businesses or taken any action that would constitute or give rise to a violation of any Anti-Corruption Law or Anti-Money Laundering Law or (ii) is or has been subject to any action, proceeding, litigation, claim or, to Account Party's knowledge, investigation with regard to any actual or alleged violation of any Anti-Corruption Laws or Anti-Money Laundering Laws;

U

U

(n) none of Account Party or any of its Subsidiaries or any of their respective directors, officers or, to Account Party's knowledge, any of their respective Affiliates, agents or employees (i) is a Sanctioned Person, (ii) is currently engaging or has engaged in any dealings or transactions with, involving or for the benefit of a Sanctioned Person, or in or involving any Sanctioned Jurisdiction, in each case in violation of applicable Sanctions, or (iii) is subject to any action, proceeding, litigation, claim or, to Account Party's knowledge, investigation with regard to any actual or alleged violation of Sanctions; and

U

(o) since September 30, 2016, no event, circumstance or change has occurred that has caused, either individually or in the aggregate, a Material Adverse Effect.

U

8. Covenants:

U

Until the later of (a) the Expiration Date and (b) the date on which all obligations of Account Party in respect of the Credit Documents are indefeasibly paid in cash in full and all Letters of Credit have expired or been released by the beneficiaries thereof and tendered to Issuing Bank for cancellation, Account Party agrees and covenants with Issuing Bank as follows:

U

(i) Account Party shall be deemed to have furnished Issuing Bank with its audited annual Financial Statements when its annual report on Form 10-K is filed with the SEC and its quarterly unaudited Financial Statements when its quarterly report on Form 10-Q is filed with the SEC;

(ii) Account Party shall provide prompt written notice of any Default or Event of Default;

U

(iii) Account Party shall continue to engage in business of the same general type as now conducted by it and preserve, renew and keep in full force and effect its corporate existence and take all reasonable action to maintain all rights, privileges and franchises necessary in the normal conduct of its business and comply with its material contractual obligations;

U

(iv) Account Party shall not convey, sell, lease, transfer or otherwise dispose of, or create, assume or suffer to exist any Lien on, all or substantially all of its assets (in each case, whether in one transaction or in a series of transactions);

U

(v) Account Party shall not consolidate with, or merge into, any other Person (unless there is no Change of Control of Account Party and no Default or Event of Default shall have occurred and be continuing or result therefrom);

U

(vi) Account Party is in compliance, and shall comply with all Requirements of Law (other than those specifically referenced in clauses (vii) through (ix) below) except where the failure to so comply could not reasonably be expected to have a Material Adverse Effect;

U

(vii) Account Party's obligations hereunder and under the other Credit Documents shall rank pari passu with all other unsecured and unsubordinated indebtedness of Account Party;

U

(viii) Account Party shall, and shall cause its Subsidiaries to, continue to maintain and enforce policies and procedures designed to promote and achieve compliance by Account Party and its Subsidiaries with applicable Anti-Corruption Laws, Anti-Money Laundering Laws and Sanctions;

U

(ix) Account Party shall not, directly or indirectly, (A) use any part of the proceeds of the Letters of Credit, or otherwise make available such proceeds to any Person in any manner that would constitute or give rise to a violation of Sanctions by any party hereto or (B) fund all or part of any repayment or reimbursement of the obligations hereunder out of proceeds derived from any transaction or activity involving a Sanctioned Person or Sanctioned Jurisdiction; and

U

(x) Account Party shall not, directly or indirectly, use any part of the proceeds of the Letters of Credit for any payments to any governmental official or employee, political party, official of a political party, candidate for political office, or anyone else acting in an official capacity, in order to obtain,

U

retain or direct business or obtain any improper advantage, in each case in violation of Anti-Corruption Law.

U

9. Events of Default:

U

The occurrence of any one or more of the following events shall constitute an "Event of Default" under the Credit Documents:

U

(a) if Account Party shall (i) fail to reimburse any Reimbursement Amount when due and payable or (ii) fail to pay interest or any other amounts due under the Credit Documents within five (5) days of the date on which such payment of interest or other amount was due and payable;

U

(b) if Account Party shall fail to perform any of its obligations for the payment of any Indebtedness (i) under its \$1,500,000,000 Revolving Credit Agreement dated as of April 5, 2016, as amended, with JPMorgan Chase Bank, N.A., as Administrative Agent, et al., or (ii) in the aggregate amount of more than U.S.\$50,000,000 (other than Indebtedness described in subsection 9(a)) when due (whether at scheduled maturity or upon acceleration, demand or otherwise) or if Account Party shall default under any agreement or instrument relating to such Indebtedness or any other event shall occur and continue after any grace period applicable thereto, if the effect of such default or event is to accelerate, or permit the acceleration of, the maturity of such Indebtedness;

U

(c) if Account Party shall:

U

(i) commence a voluntary case or other proceeding seeking liquidation, reorganization or other relief with respect to itself or its debts under any bankruptcy, insolvency or other similar law now or hereafter in effect or seeking the appointment of a trustee, receiver, liquidator, custodian or other similar official of it or any material part of its property, or shall consent to any such relief or to the appointment of or taking possession by any such official in an involuntary case or other proceeding commenced against it, or shall make a general assignment for the benefit of creditors, or shall fail generally to pay its debts as they become due, or shall take any action to authorize any of the foregoing; or

U

(ii) suffer the commencement of an involuntary case or other proceeding seeking liquidation, reorganization or other relief with respect to itself or its debts under any bankruptcy, insolvency or other similar law now or hereafter in effect or seeking the appointment of a trustee, receiver, liquidator, custodian or other similar official of it or any material part of its property, and such involuntary case or other proceeding shall not be controverted by appropriate proceedings within thirty (30) days of the commencement thereof or shall remain undismissed or undischarged for a period of sixty (60) days; or suffer the entry of an order for relief or be adjudicated a bankrupt or insolvent under the bankruptcy, insolvency or similar laws of any competent jurisdiction;

U

(d) if any representation, warranty or statement made by Account Party in any Credit Document or in any certificate or statement furnished pursuant to, or in connection with, any Credit Document shall prove to have been incorrect, misleading or incomplete in any material respect when made or deemed made;

U

(e) if Account Party shall fail to perform or observe in any material respect any term, covenant or agreement on its part to be performed or observed pursuant to any Credit Document (other than those covered by subsection 9(a)) and such failure shall continue unremedied for thirty (30) days after the earlier of (i) an officer of Account Party obtaining knowledge thereof and (ii) receipt by Account Party of written notice thereof from Issuing Bank;

U

(f) if one or more judgments or decrees shall be entered against Account Party or any of its Subsidiaries involving in the aggregate for all such Persons a liability (not paid or fully covered by insurance) of U.S.\$50,000,000 or more and all such judgments and decrees shall not have been vacated, discharged, stayed or bonded pending appeal within sixty (60) days from the entry thereof;

U

U

(g) if an event shall occur with respect to Account Party which, in the reasonable judgment of Issuing Bank, has or is likely to have a Material Adverse Effect; or

U

(h) if a Change of Control or any material alteration of the structure or organization of Account Party, including without limitation, as a result of a leveraged buyout, recapitalization, merger or consolidation shall occur.

U

Upon the occurrence of any Event of Default (other than any Event of Default specified in subsection 9(c) in respect of Account Party), Issuing Bank may, by written notice to Account Party, declare this Agreement canceled and/or declare all amounts outstanding under this Agreement (including, without limitation, all amounts of L/C Obligations, whether or not the beneficiaries of the then outstanding Letters of Credit shall have presented the documents required thereunder) to be immediately due and payable in full, whereupon this Agreement shall be canceled and/or such amounts shall become immediately due and payable; provided, however, that upon the occurrence of any Event of Default specified in subsection 9(c) in respect of Account Party, this Agreement automatically shall be canceled and all amounts outstanding under this Agreement (including, without limitation, all amounts of L/C Obligations, whether or not the beneficiaries of the then outstanding Letters of Credit shall have presented the documents required thereunder) automatically shall become immediately due and payable in full, in each case without notice, presentment, demand, protest or other action of any kind, all of which are hereby expressly waived by Account Party.

U

With respect to any Letters of Credit with respect to which presentment for honor shall not have occurred at the time of an acceleration pursuant to the immediately preceding paragraph, Account Party shall at such time deposit in a cash collateral account on Issuing Bank's books, within Issuing Bank's sole dominion and control, designated by Issuing Bank and over which Issuing Bank shall have exclusive right of withdrawal (the "Collateral Account"), an amount (in the Currency of such Letter of Credit; provided that upon the failure or inability of Account Party for any reason to so effect such payment in the required Currency, Account Party shall be obliged to perform in accordance with Section 3(e)) equal to the aggregate then undrawn and unexpired amount of such Letters of Credit. The Collateral Account (and any and all funds and investments held therein) shall be held in the name of, and subject to the sole dominion and control of, Issuing Bank, as cash collateral for the reimbursement obligations of Account Party in the event of any drawing under the Letters of Credit. Any and all amounts held in the Collateral Account shall be applied by Issuing Bank to satisfy Account Party's L/C Obligations for which Issuing Bank has not been reimbursed, and any unused portion of such amounts after the Letters of Credit shall have expired and all L/C Obligations shall have been satisfied, shall be applied to repay other obligations of Account Party under this Agreement and the other Credit Documents. Except as expressly provided in this Section 9, notice, presentment, demand, protest and any other action of any kind are hereby expressly waived by Account Party.

U

Account Party hereby grants to Issuing Bank a security interest in, and right of set-off against, any and all funds and investments held in the Collateral Account from time to time and any instrument evidencing the foregoing to secure the obligations of Account Party hereunder in respect of the Letters of Credit, any and all reimbursement obligations arising in connection therewith and other obligations under this Agreement and the other Credit Documents.

U

Issuing Bank shall have the rights, powers and remedies of a secured party under the Uniform Commercial Code as in effect from time to time in the State of New York with respect to the funds and investments held in the Collateral Account from time to time. Account Party shall take such actions from time to time as Issuing Bank may reasonably request to perfect and preserve the security interests provided for in this Agreement.

U

Issuing Bank shall release all funds and investments held in the Collateral Account to, or upon the order of, Account Party (or as a court of competent jurisdiction may otherwise direct) upon the later to occur of the date that (i) this Agreement and the other Credit Documents terminate and (ii) all obligations of Account Party under the Letters of Credit and all L/C Obligations are satisfied and indefeasibly paid in full and such Letters of Credit have been canceled or expired and all amounts drawn thereunder have been reimbursed in full.

U

The rights and remedies of Issuing Bank under this Agreement are in addition to, and not in substitution of, the rights and remedies Issuing Bank is entitled to exercise at law, in equity and under the other Credit Documents.

U

10. Effectiveness of Agreement; Conditions Precedent:

U

(a) The effectiveness of this Agreement is subject to receipt by Issuing Bank, in form and substance satisfactory to it, of each of the following:

U

(i) a copy of this Agreement, duly executed by Issuing Bank and Account Party;

U

(ii) a customary certificate duly executed by an authorized officer of Account Party, attaching (A) a copy of the articles of incorporation or comparable organizational document duly certified by the Secretary of State of the State of New York as of a recent date; (B) a copy of the by-laws or comparable organizational document of Account Party, duly certified by an authorized officer of Account Party as being in full force and effect; (C) a copy of Account Party's resolutions certified by an authorized officer of Account Party authorizing Account Party to enter into the transactions contemplated by the Credit Documents to which Account Party is a party, including, without limitation, requesting the issuance of Letters of Credit as contemplated hereunder from Issuing Bank in the aggregate amount contemplated hereunder, and evidencing the authority of the officer(s) named therein to sign the Credit Documents and such other documents on behalf of Account Party as Issuing Bank shall require; (D) a certificate of incumbency and specimen signatures of the authorized signers of the Credit Documents issued by the secretary or assistant secretary of Account Party; and (E) a certificate of good standing duly certified by the Secretary of State of the State of New York;

U

(iii) a customary certificate duly executed by an authorized officer of Account Party, certifying as to (A) the truth in all respects of the representations and warranties contained in this Agreement and the other Credit Documents as though made on and as of the date of the effectiveness of this Agreement and (B) the absence of any Default or Event of Default; and

U

U

(iv) such other documents, instruments or agreements as Issuing Bank shall reasonably request.

U

(b) An additional condition precedent to the issuance of each Letter of Credit is the receipt by Issuing Bank of a duly executed Application in respect of such Letter of Credit.

U

(c) Each request to issue, renew, amended or extend a Letter of Credit by Account Party hereunder shall constitute a representation and warranty that (i) each of the representations and warranties made by Account Party contained herein or in any other Credit Document shall be true and correct on and as of the date of such issuance, renewal, amendment or extension as if made on and as of such date and (ii) no Default or Event of Default exists (either immediately before or immediately after giving effect to such issuance, renewal, amendment or extension).

11. Authorization to Debit; Right of Set-Off:

U

With respect to the payment of amounts due hereunder and under any Letter of Credit, Account Party hereby authorizes Issuing Bank to debit any demand deposit account of Account Party maintained with Issuing Bank for such amount when due. In the event Account Party shall default in the payment of any amount due hereunder, under any Letter of Credit, or under the other Credit Documents, Issuing Bank shall have the right to set off and apply any deposit, general or special, time or demand, provisional or final, at any time held or owing by any branch or office of Crédit Agricole S.A. to, or for the credit of, Account Party.

U

12. Costs and Expenses; Indemnity; Waiver of Special Damages:

U

U

(a) Account Party agrees to pay or reimburse Issuing Bank for all Issuing Bank's charges, costs and expenses (including, without limitation, reasonable fees and disbursements of counsel to Issuing Bank) incurred in connection with (i) the issuance, amendment, renewal or extension of any Letter of Credit or any demand for, or collection of, payment thereunder and (ii) the enforcement, protection or preservation of any rights under this Agreement and the other Credit Documents and any other document prepared in connection therewith.

U

(b) Account Party agrees to indemnify Issuing Bank and any of its Affiliates and the respective branches, agencies, directors, officers, employees, agents, advisors, partners, trustees and administrators of Issuing Bank and its Affiliates (each such Person being called an "Indemnitee") against, and pay and hold each Indemnitee harmless from, any and all losses, claims, damages and related costs and expenses, including the fees, charges and disbursements of any counsel for any Indemnitee, suffered or incurred by, or asserted against, any Indemnitee however characterized or arising out of, in connection with, or as a result of (i) any delay in paying, stamp, excise and other taxes, if any, which may be payable or determined to be payable in connection with the execution and delivery of, or consummation or administration of, any of the transactions contemplated by, or any amendment, supplement or modification of, or any waiver or consent under or in respect of, any Credit Document and any such other document, (ii) any Letter of Credit or the use of the proceeds therefrom (including any refusal by Issuing Bank to honor a demand for payment under a Letter of Credit if the documents presented in connection with such demand do not strictly comply with the terms of such Letter of Credit) and (iii) any and all other liabilities, obligations, losses, damages, penalties, any actual or prospective actions, claims, litigation, suites, investigation or proceeding (whether sounding in contract, in tort or on any other ground and regardless of whether any Indemnitee is a party thereto), judgments, suits, costs, expenses or disbursements of any kind or nature whatsoever with respect to the execution, delivery, enforcement, performance or administration of, or in any other way arising out of or relating to, any Credit Document or any other documents contemplated by or referred to therein or any action taken or omitted to be taken by any Indemnitee with respect to any of the foregoing (all the foregoing, collectively, the "Indemnified Liabilities"); provided, however, that Account Party shall have no obligation hereunder to any Indemnitee with respect to Indemnified Liabilities arising solely from the gross negligence or willful misconduct of such Indemnitee, as determined by a court of competent jurisdiction in a final, non-appealable judgment.

U

(c) Neither party hereto shall be liable in any action initiated by one against the other for punitive, special, indirect or consequential damages resulting from or arising out of this Agreement, including, without limitation, loss of profit or business interruptions, however the same may be caused.

U

All amounts due under this Section 12 shall be payable immediately after demand therefor. Without prejudice to the survival of any other provision hereof, the terms of this Section 12 shall survive the termination of this Agreement and the repayment or reimbursement of all Reimbursement Amounts and all other amounts payable hereunder.

13. **Obligations Absolute; Risks:**

U

(a) The obligation of Account Party to reimburse Issuing Bank, its correspondents, any of its branches, agencies or Affiliates for each drawing under each Letter of Credit shall be absolute, unconditional and irrevocable, and shall be paid strictly in accordance with the terms of this Agreement under any and all circumstances and irrespective of, including the following: (i) any form, lack of accuracy, legal effect, validity or enforceability of such Letter of Credit, this Agreement, or any other Credit Document or the authority of any persons signing any Credit Documents; provided such Credit Documents appear on their face to be in order; (ii) the existence of any claim, counterclaim, dispute, set-off, defense or other right that Account Party may have at any time against any beneficiary or any transferee of such Letter of Credit (or any Person for whom any such beneficiary or any such transferee may be acting), Issuing Bank or any other Person, whether in connection with this Agreement, any other Credit Document, the transactions contemplated hereby or by such Letter of Credit or any agreement or instrument relating thereto, or any unrelated transaction; (iii) any draft, demand, certificate or other document presented under such Letter of Credit proving to be forged, fraudulent, invalid or insufficient in any respect or any statement therein being untrue, insufficient or inaccurate in any respect; or any loss, error, interruption,

U

omission or delay in the transmission, delivery or otherwise of any document required in order to make a drawing under such Letter of Credit; (iv) any payment by Issuing Bank under such Letter of Credit against presentation of a draft or certificate that does not strictly comply with the terms of such Letter of Credit; or any payment made by Issuing Bank under such Letter of Credit to any Person; (v) any act, omission, insolvency or failure in business of any other Person including any branch of Issuing Bank; or (vi) any other event, act or omission, circumstance or happening whatsoever, whether or not similar to any of the foregoing, including any other circumstance that might otherwise constitute a defense available to, or a discharge of, Account Party. For the avoidance of doubt, the occurrence of any of the above contingencies shall not affect or impair Issuing Bank's rights and powers hereunder or the obligations of payments, indemnity or reimbursement of Account Party to Issuing Bank hereunder.

U

(b) None of Issuing Bank, nor any of its Affiliates nor the respective branches, agencies, directors, officers, employees, agents, advisors, partners, trustees and administrators of Issuing Bank and its Affiliates, shall have any liability or responsibility by reason of or in connection with the issuance or transfer of any Letter of Credit by Issuing Bank or any payment or failure to make any payment thereunder irrespective of any of the circumstances referred to in Section 13(a) above, or any act, error, omission, interruption, loss or delay in transmission or delivery of any draft, notice or other communication under or relating to any Letter of Credit (including any document required to make a drawing thereunder), any error in interpretation of technical terms or any consequence arising from causes beyond the control of Issuing Bank. The parties hereto expressly agree that:

U

(i) Issuing Bank may accept documents that appear on their face to be in substantial compliance with the terms of a Letter of Credit without responsibility for further investigation, regardless of any notice or information to the contrary, and may make payment upon presentation of documents that appear on their face to be in substantial compliance with the terms of such Letter of Credit;

U

(ii) Issuing Bank shall have the right, in its sole discretion, to decline to accept such documents and to make such payment if such documents are not in strict compliance with the terms of such Letter of Credit; and

U

(iii) This Section 13(b) shall establish the standard of care to be exercised by Issuing Bank when determining whether drafts and other documents presented under a Letter of Credit comply with the terms thereof (and the parties hereto hereby waive, to the extent permitted by applicable law, any standard of care inconsistent with the foregoing).

14. Assignments; Successors and Assigns; Pledges to Federal Reserve Bank:

U

(a) This Agreement shall be binding upon and inure to the benefit of Account Party, Issuing Bank and their respective successors and assigns, except that Account Party may not assign, transfer or delegate any of its rights or obligations under this Agreement without the prior written consent of Issuing Bank (such consent not to be unreasonably withheld or delayed). Issuing Bank may, at any time and from time to time, assign all or any part of its rights and obligations under the Credit Documents subject to the prior written consent of Account Party (such consent not to be unreasonably withheld or delayed); provided that no such consent shall be required (i) during the occurrence and continuance of a Default or an Event of Default or (ii) for any assignment to an Affiliate of Issuing Bank.

U

(b) Nothing herein shall prohibit Issuing Bank from pledging or assigning this Agreement to any Federal Reserve Bank in accordance with applicable law.

U

15. Notices:

U

(a) All notices and other communications provided for herein shall be in writing and shall be delivered by hand or overnight courier service, mailed by certified or registered mail or sent by telecopier or electronic communications (including delivery of a "pdf" by email). Notices and other communications sent by hand or overnight courier service, or mailed by certified or registered mail, shall be deemed to have been given when received; notices and other communications sent by fax or email (or

similar electronic communications) shall be deemed to have been given when sent (except that, if not given during normal business hours for the recipient, shall be deemed to have been given at the opening of business on the next Business Day for the recipient).

U

(b) Account Party hereby authorized Issuing Bank to accept and process any amendments, transfers, assignments of proceeds, instructions, consents, waivers and all documents relating to any Letter of Credit which are sent to Issuing Bank by electronic transmission, including SWIFT, electronic mail, telex, telecopy, telefax, courier, mail or other computer-generated telecommunications and such electronic communications shall have the same legal effect as if written and shall be binding upon and enforceable against Account Party. Issuing Bank may, but shall not be obligated to, require (a) authentication of such electronic transmission or (b) provision of original documents to Issuing Bank prior to acting on such electronic transmission. Account Party acknowledges and agrees that the privacy and integrity of electronic transmissions cannot be guaranteed to be secure or error free due to the possibility that third parties could intercept, view or alter such electronic transmissions. To the extent that any documents, information or data relating to any Letter of Credit, any Application or any other Credit Document are transmitted electronically, Account Party hereby irrevocably releases Issuing Bank from any loss or liability incurred in connection with the electronic transmission of any such documents, data and information, including any unauthorized interception, alteration or fraudulent generation and transmission of electronic transmissions by third parties.

U

16. Amendments and Waivers; Execution in Counterparts; Electronic Execution:

U

(a) Neither this Agreement nor any provision hereof may be waived, amended or modified except pursuant to an agreement or agreements in writing entered into by parties hereto.

U

(b) This Agreement may be executed in any number of counterparts and by different parties hereto in separate counterparts, each of which when so executed and delivered shall be deemed to be an original and all of which taken together shall constitute but one and the same agreement.

U

(c) Delivery of an executed counterpart of a signature page to this Agreement by telecopier or electronic communications (including delivery of a "pdf" by email) shall be effective as delivery of a manually executed counterpart of this Agreement.

17. No Waiver; Severability; Integration:

U

The failure or delay by Issuing Bank to exercise any right, power or remedy under this Agreement or any other Credit Document or with respect to the indebtedness evidenced hereby or thereby shall not operate as a waiver thereof, nor shall the exercise of any single or partial right, power or remedy preclude any other or further exercise of the same or any other right, power or remedy. Any provision of this Agreement which is illegal, prohibited or unenforceable in any jurisdiction shall, as to such jurisdiction, be ineffective to the extent of such illegality, prohibition or unenforceability without invalidating the remaining provisions hereof, and any such prohibition or unenforceability in any jurisdiction shall not invalidate or render unenforceable such provision in any other jurisdiction. This Agreement and the other Credit Documents constitute the entire agreement and understanding among the parties hereto and supersede any and all prior agreements and understandings, oral or written, relating to the subject matter hereof.

18. Governing Law:

U

(a) THIS AGREEMENT SHALL BE GOVERNED BY, AND CONSTRUED IN ACCORDANCE WITH, THE INTERNAL LAWS OF THE STATE OF NEW YORK.

U

(b) Each Letter of Credit, each Application and all transactions thereunder shall be subject to and governed by either (a) the Uniform Customs and Practice for Documentary Credits (2007 Revision), International Chamber of Commerce, Publication No. 600 (as the same may be modified or amended, the "UCP") or (b) the International Standby Practices (ISP98), International Chamber of Commerce, Publication No. 590 (as the same may be modified or amended, the "ISP") as Issuing Bank shall select in its sole discretion. To the extent not inconsistent with the UCP or the ISP, as the case may

U

be, each Letter of Credit, each Application and all transactions thereunder shall be governed by and construed in accordance with, the internal laws of the State of New York.

19. Jurisdiction; Venue; Waiver of Jury Trial:

U
(a) Each of the parties hereto hereby irrevocably and unconditionally submits, for itself and its property, to the exclusive jurisdiction of any New York State or federal court of the U.S. sitting in New York City, whether trial or appellate, in any action or proceeding arising out of, or relating to, this Agreement or any of the other Credit Documents, or for recognition or enforcement of any judgment in respect thereof, and each of the parties hereto hereby irrevocably and unconditionally agrees that all claims in respect of any such action or proceeding may be heard and determined in any such New York State court or, to the extent permitted by law, in such federal court and consents that any such action or proceeding may be brought in such courts and waives to the fullest extent permitted by law any objection that it may now or hereafter have to the venue of any such action or proceeding in any such court or that such action or proceeding was brought in an inconvenient court and agrees not to plead or claim the same. Each of the parties hereto agrees that a final judgment in any such action or proceeding shall be conclusive and may be enforced in other jurisdictions by suit on the judgment or in any other manner provided by law. Nothing in this Agreement shall affect any right that Issuing Bank may otherwise have to bring any action or proceeding relating to this Agreement or any of the other Credit Documents in the courts of any jurisdiction.

U
(b) Each of the parties hereto hereby irrevocably waives all right to trial by jury in any action, proceeding or counterclaim arising out of, or relating to, any Credit Document or the actions of Issuing Bank or Account Party in the negotiation, administration, performance or enforcement thereof.

U
20. USA Patriot Act Notification:

Issuing Bank hereby notifies Account Party that pursuant to the USA Patriot Act, it is required to obtain, verify and record information that identifies Account Party, including without limitation the name and address of Account Party.

U
U
* * *
U
If the foregoing is acceptable, kindly acknowledge your agreement with the terms and conditions hereof by having one original copy of this Agreement signed by a duly authorized representative of Account Party (pursuant to its resolutions) and returned to Issuing Bank as soon as possible.

SUBSTITUTION AGREEMENT

This SUBSTITUTION AGREEMENT, dated as of December 19, 2016 (the “Agreement”), is entered into by and between UIL HOLDINGS CORPORATION, a corporation duly organized and existing under the laws of the State of Connecticut (“UIL”) and AVANGRID, INC., a corporation duly organized and existing under the laws of the State of New York (“Avangrid”).

RECITALS

WHEREAS, the predecessor company to UIL, UIL Holdings Corporation (“predecessor UIL”) and The Bank of New York Mellon, a corporation organized under the laws of the State of New York authorized to conduct a banking business, as Trustee (“Trustee”), entered into an Indenture dated as of October 7, 2010 (the “Base Indenture” and, as amended and supplemented to the date hereof, the “Indenture”) to provide for the issuance of predecessor UIL’s unsecured senior debt securities to be issued from time to time in one or more series as might be determined by predecessor UIL under the Indenture;

WHEREAS, predecessor UIL and the Trustee have heretofore executed and delivered the First Supplemental Indenture, dated as of October 7, 2010, pursuant to which predecessor UIL issued its 4.625% Notes due 2020, in the aggregate principal amount of \$450,000,000 (the “2010 Notes”);

WHEREAS, on December 15, 2015, predecessor UIL merged with and into UIL, a wholly-owned subsidiary of Avangrid.

WHEREAS, UIL, predecessor UIL and the Trustee have heretofore entered into a Second Supplemental Indenture, pursuant to which UIL assumed all of the obligations of predecessor UIL under the Indenture and the 2010 Notes;

WHEREAS, UIL, Avangrid and the Trustee intend to execute a Third Supplemental Indenture (the “Third Supplemental Indenture”) pursuant to which Avangrid will be substituted for UIL as issuer of the 2010 Notes and assume all of the obligations and perform every covenant in the Indenture (including every supplemental indenture) (collectively, the “Obligations”); and

WHEREAS, upon assumption of the Obligations by Avangrid, UIL shall be relieved of all obligations and covenants under the Indenture;

NOW THEREFORE: in consideration of the premises and the covenants and agreements provided for herein, and for other good and valuable consideration the receipt of which is hereby acknowledged, UIL and Avangrid mutually covenant and agree as follows:

SECTION I. *Payments by UIL*

UIL shall transfer, on December 19, 2016 (the “Transfer Date”), (i) to such account as shall be designated by Avangrid to UIL, an amount equal to \$ in respect of the market value of the aggregate outstanding principal amount of the 2010 Notes (the “Principal Payment”) plus (ii) \$ in respect of the aggregate interest accrued under the 2010 Notes from and including the relevant last interest payment date up to but excluding the Transfer Date (“Interest Payment”).

Upon receipt of the Principal Payment and the Interest Payment on the Transfer Date, Avangrid shall assume all of the Obligations arising out of the execution of the Third Supplemental Indenture, and UIL shall be simultaneously discharged from such obligations.

SECTION 3. *Effect of Headings.*

The Article and Section headings herein are for convenience only and shall not affect the construction hereof.

SECTION 4. *Successors and Assigns.*

All covenants and agreements in this Agreement by Avangrid shall bind its successors and assigns, whether so expressed or not.

SECTION 5. *Counterparts.*

This Agreement may be executed in any number of counterparts, each of which shall be deemed to be an original, but all such counterparts shall together constitute but one and the same instrument.

SECTION 6. *Governing Law.*

This Agreement shall be governed by and construed in accordance with the laws of New York.

IN WITNESS WHEREOF, the parties hereto have caused this Substitution Agreement to be duly executed as of the day and year first written above.

CERTIFICATION

I, James P. Torgerson, certify that:

1. I have reviewed this annual report on Form 10-K of Avangrid, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) for the registrant and have:
 - a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - c) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Independent Auditor's Report on the Consolidated Annual Accounts

(Translation from the original in Spanish. In the event of discrepancy, the Spanish-language version prevails.)

To the Shareholders of Iberdrola, S.A.

REPORT ON THE CONSOLIDATED ANNUAL ACCOUNTS

Opinion

We have audited the consolidated annual accounts of Iberdrola, S.A. (the "Parent") and subsidiaries (together the "Group"), which comprise the consolidated statement of financial position at 31 December 2018, and the consolidated income statement, consolidated statement of comprehensive income, consolidated statement of changes in equity and consolidated statement of cash flows for the year then ended, and consolidated notes.

In our opinion, the accompanying consolidated annual accounts give a true and fair view, in all material respects, of the consolidated equity and consolidated financial position of the Group at 31 December 2018 and of its consolidated financial performance and its consolidated cash flows for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union (IFRS-EU) and other provisions of the financial reporting framework applicable in Spain.

Basis for Opinion

We conducted our audit in accordance with prevailing legislation regulating the audit of accounts in Spain. Our responsibilities under those standards are further described in the *Auditor's Responsibilities for the Audit of the Consolidated Annual Accounts* section of our report.

We are independent of the Group in accordance with the ethical requirements, including those regarding independence, that are relevant to our audit of the consolidated annual accounts in Spain pursuant to the legislation regulating the audit of accounts. We have not provided any non-audit services, nor have any situations or circumstances arisen which, under the aforementioned regulations, have affected the required independence such that this has been compromised.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key Audit Matters

Key audit matters are those matters that, in our professional judgement, were of most significance in the audit of the consolidated annual accounts of the current period. These matters were addressed in the context of our audit of the consolidated annual accounts as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Recoverability of non financial assets

See note 12 to the consolidated annual accounts

<i>Key Audit Matter</i>	<i>How the Matter was Addressed in Our Audit</i>
<p>The principal activities of the different businesses included in the consolidated annual accounts of the Group are related to the generation, transmission, distribution and supply of electricity, and therefore the balances recognised under intangible assets and property, plant and equipment are highly significant.</p> <p>Furthermore, as a result of the acquisitions made in recent years, the consolidated annual accounts include goodwill for an amount of Euros 7,838 million.</p> <p>IFRS-EU determine the need to carry out an analysis of the recoverable amounts of assets in those cases in which indications of impairment were identified. Goodwill, intangible assets with indefinite useful lives and in-process intangible assets are not amortised, but are instead tested for impairment at least on an annual basis.</p> <p>The calculation of the recoverable amount of non-current assets indicated in the preceding paragraphs is determined through the use of methodologies based on discounted cash flows, the estimation of which requires the use of a high degree of judgement.</p>	<p>Our audit procedures included the following:</p> <ul style="list-style-type: none"> ▪ Assessing the design and implementation of the key controls related to the process of determining recoverable amount. ▪ Assessing the reasonableness of the methodology used to calculate value in use and the main assumptions considered, with the involvement of our specialists. ▪ Analysing the consistency of the estimated growth in future cash flows with the business plans approved by the governing bodies. We also contrasted the cash flow forecasts estimated in prior years with the actual cash flows obtained. ▪ Assessing the sensitivity of certain assumptions to changes that are considered reasonable. ▪ Assessing whether the disclosures in the consolidated annual accounts comply with the requirements of the applicable financial reporting framework.

Provisions for pensions and similar obligations
See note 25 to the consolidated annual accounts

<i>Key Audit Matter</i>	<i>How the Matter was Addressed in Our Audit</i>
<p>The Group has important commitments with personnel in relation to retirement and other long-term liabilities. These commitments are mainly in Spain, the United States, the United Kingdom and Brazil.</p> <p>The present value of commitments undertaken is Euros 10,087 million, while the fair value of plan assets amounts to Euros 7,923 million, of which Euros 1,769 million is classified as level 3 of the fair value hierarchy.</p> <p>Non-material variations in the relevant assumptions that determine the valuation of the commitments undertaken or the fair value of the associated assets could have a significant impact on the amounts recognised in the consolidated annual accounts.</p>	<p>Our audit procedures included the following:</p> <ul style="list-style-type: none"> ▪ Assessing the design and implementation of controls related to the valuation process. ▪ Reading and understanding of collective agreements and other commitments assumed with personnel. ▪ Evaluation of the integrity and accuracy of the databases used for the beneficiaries of the different commitments. ▪ Analysis of the reasonableness of the main actuarial assumptions and calculation methods applied by the Group in the different jurisdictions in which it operates through the involvement of our specialists. ▪ Performance of substantive procedures on a sample of the assets subject to the different plans in order to verify the reasonableness of their valuation. Our procedures included obtaining external confirmations. ▪ Evaluation of the reasonableness of the sensitivity analyses performed. ▪ Analysis of compliance with the disclosure requirements established in IFRS-EU.

Provisions for litigation and claims See note 26 to the consolidated annual accounts	
<i>Key Audit Matter</i>	<i>How the Matter was Addressed in Our Audit</i>
<p>As a result of the operations carried out by the entities that comprise the Group, the consolidated statement of financial position includes significant provisions amounting to Euros 1,357 million that are shown in the "provisions for litigation, indemnities and other items" and "other provisions" columns of note 26 to the consolidated annual accounts.</p> <p>The criteria for the recognition and disclosure of contingencies and provisions require the application of a high degree of judgement.</p>	<p>Our audit procedures included the following:</p> <ul style="list-style-type: none"> ▪ Assessing the design and implementation of the controls related to the process of recognising and evaluating litigations and claims. ▪ Obtaining details of litigation prepared by the Group's legal services department and analysing the reasonableness of the amounts recognised in the consolidated annual accounts. ▪ Sending confirmations to the lawyers with whom the Group operates. ▪ Readings of the minutes of board of directors' meetings. ▪ Selection of a sample of the main litigation procedures and analysis with supporting documentation with the involvement of our specialists. ▪ Analysis of compliance with the disclosure requirements established in IFRS-EU.

Revenue recognition See note 5 a) to the consolidated annual accounts	
<i>Key Audit Matter</i>	<i>How the Matter was Addressed in Our Audit</i>
<p>The Group's businesses that carry out electricity supply activities must make estimates of unbilled supplies to end customers in the period between the last meter reading and the end of the fiscal year.</p> <p>Unbilled electricity supplied is estimated based on internal and external information that is compared with the measurements contained in the management systems used by the businesses. Revenue is calculated by multiplying the volume of estimated unbilled use by the tariff agreed for each customer, a process that is subject to a high degree of uncertainty.</p> <p>Estimated electricity supplied and not invoiced amounts to Euros 2,067 million.</p>	<p>Our audit procedures included the following:</p> <ul style="list-style-type: none"> ▪ Analysis of the design, implementation and operating effectiveness of the key controls related to the estimation of unbilled revenue. ▪ Evaluation of the reasonableness of the calculation model used by comparing the estimates made at the close of the previous period and actual invoicing data (retrospective analysis). ▪ Verification of the reasonableness of the volume of unbilled electricity through an analysis of historical information and other available internal and external data. ▪ Verification of the tariffs applied by comparing them with the data contained in the customer contract databases.

Other information: Consolidated Directors' Report

Other information solely comprises the 2018 consolidated directors' report, the preparation of which is the responsibility of the Parent's Directors and which does not form an integral part of the consolidated annual accounts.

Our audit opinion on the consolidated annual accounts does not encompass the consolidated directors' report. Our responsibility regarding the content of the consolidated directors' report is defined in the legislation regulating the audit of accounts, which establishes two different levels:

- a) A specific level applicable to the consolidated non-financial information statement and to certain information included in the Annual Corporate Governance Report, as defined in article 35.2. b) of Audit Law 22/2015, which consists solely of verifying that this information has been provided in the directors' report, or where applicable, that the directors' report makes reference to the separate report on non-financial information, as provided for in legislation, and if not, to report on this matter.
- b) A general level applicable to the rest of the information included in the consolidated directors' report, which consists of assessing and reporting on the consistency of this information with the consolidated annual accounts, based on knowledge of the Group obtained during the audit of the aforementioned accounts and without including any information other than that obtained as evidence during the audit. Also, assessing and reporting on whether the content and presentation of this part of the consolidated directors' report are in accordance with applicable legislation. If, based on the work we have performed, we conclude that there are material misstatements, we are required to report them.

Based on the work carried out, as described above, we have verified that the information mentioned in a) above has been provided in the consolidated directors' report and that the rest of the information contained in the consolidated directors' report is consistent with that disclosed in the consolidated annual accounts for 2018 and the content and presentation of the report are in accordance with applicable legislation.

Directors' and Audit Committee's Responsibility for the Consolidated Annual Accounts

The Parent's Directors are responsible for the preparation of the accompanying consolidated annual accounts in such a way that they give a true and fair view of the consolidated equity, consolidated financial position and consolidated financial performance of the Group in accordance with IFRS-EU and other provisions of the financial reporting framework applicable to the Group in Spain, and for such internal control as they determine is necessary to enable the preparation of consolidated annual accounts that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated annual accounts, the Parent's Directors are responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Directors either intend to liquidate the Group or to cease operations, or have no realistic alternative but to do so.

The Parent's audit committee is responsible for overseeing the preparation and presentation of the consolidated annual accounts.

Auditor's Responsibilities for the Audit of the Consolidated Annual Accounts

Our objectives are to obtain reasonable assurance about whether the consolidated annual accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with prevailing legislation regulating the audit of accounts in Spain will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence economic decisions of users taken on the basis of these consolidated annual accounts.

As part of an audit in accordance with prevailing legislation regulating the audit of accounts in Spain, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated annual accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Parent's Directors.
- Conclude on the appropriateness of the Parent's Directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated annual accounts or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the consolidated annual accounts, including the disclosures, and whether the consolidated annual accounts represent the underlying transactions and events in a manner that achieves a true and fair view.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated annual accounts. We are responsible for the direction, supervision and performance of the Group audit. We remain solely responsible for our audit opinion.

We communicate with the Audit and Risk Monitoring Committee of Iberdrola, S.A. regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Parent's Audit and Risk Monitoring Committee with a statement that we have complied with the applicable ethical requirements, including those regarding independence, and to communicate with them all matters that may reasonably be thought to bear on our independence and, where applicable, related safeguards.

From the matters communicated to the audit committee of the Parent, we determine those that were of most significance in the audit of the consolidated annual accounts of the current period and which are therefore the key audit matters.

We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

Additional Report to the Audit Committee of the Parent

The opinion expressed in this report is consistent with our additional report to the Parent's audit committee dated 22 February 2019.

Contract Period

We were appointed as auditor of the Group by the shareholders at the ordinary general meeting on 31 March 2017 for a period of three years, from the year ended 31 December 2017.

IBERDROLA, S.A. AND SUBSIDIARIES

Consolidated financial statement for the year ended at 31 December 2018

1. ACTIVITY OF THE GROUP

IBERDROLA S.A. (hereinafter, IBERDROLA), a company incorporated in Spain and with registered office at Plaza Euskadi 5, in Bilbao, is the parent of a group of companies whose main activities are the following:

- Production of electricity from renewable and conventional sources.
- Sale and purchase of electricity and gas in whole sale markets.
- Transmission and distribution of electricity.
- Supply of electric power, gas and energy-related services.
- Other activities mainly linked to the energy sector.

The aforementioned activities may be carried out in Spain as well as abroad, and may be carried out, in whole or in part, either directly by IBERDROLA or through the ownership of shares or equity interests in other companies, subject in all cases and at all times to applicable legal provisions for each industry, especially the electricity industry. The IBERDROLA Group carries out its activities mainly in five countries in the Atlantic region: Spain, United Kingdom (UK), United States of America (USA), Mexico and Brazil.

2. BASIS OF PRESENTATION OF THE CONSOLIDATED ANNUAL ACCOUNTS

2.a) Applicable accounting legislation

The IBERDROLA Group's 2018 consolidated annual accounts authorised for issue by the directors on 19 February 2019, in accordance with International Financial Reporting Standards (hereinafter, IFRS), as adopted by the European Union, in conformity with Regulation (EC) No 1606/2002 of the European Parliament and of the European Council. The directors of IBERDROLA expect these consolidated annual accounts to be approved at the General Shareholders' Meeting without modification.

The IBERDROLA Group's 2017 consolidated annual accounts were approved by the shareholders at their General Meeting held on 13 April 2018.

At 31 December 2018, the annual accounts present negative working capital of Euros 2,774 million. The directors declare the deficit will be offset by the generation of funds from the IBERDROLA Group's businesses. Moreover, as shown in Note 4, the IBERDROLA Group has an undrawn granted borrowings of Euros 10,211 million.

These consolidated annual accounts have been prepared on the basis of a historical cost, except for available-for-sale financial assets and derivatives, which have been measured at fair value. The carrying amounts of assets and liabilities hedged by fair value hedges are adjusted to reflect variations in their fair value as a result of the risk hedged.

The accounting policies used in the preparation of these consolidated annual accounts are those used for the year ended on 31 December 2017, except for the application on January 1 2018, of IFRS 9 “Financial instruments” and IFRS 15 “Revenues from contracts with customers” published by the International Accounting Standards Board (IASB), adopted by the European Union for its use in Europe:

The main impacts of applying the new standards above are:

IFRS 15: “Revenues from contracts with customers”

According to the core principle of IFRS 15, an entity recognises revenue from ordinary activities to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services.

The IBERDROLA Group will adopt IFRS 15 retroactively recording the effect of applying this standard at 1 January 2018. Thus, annual accounts for 2017 do not include any effects resulting from the application of IFRS 15.

The adoption of IFRS 15 has affected the accounting treatment of the following concepts::

- The capitalisation of incremental costs incurred in obtaining contracts with customers, which, prior to application of IFRS 15 used to be posted under “External services” in the consolidated income statement.

Incremental costs capitalised by IBERDROLA Group mainly refer to sales commissions incurred to obtain a contract with a customer which would not otherwise have been incurred if the contract had not been obtained.

Assets recognised for this item are amortised on a systematic basis according to the average expected life of contracts with customers that are associated with such costs.

- Claims against customers in construction contracts. IFRS 15 establishes that to recognise modifications to contracts with customers as revenue, either because new rights and obligations are generated or because pre-existing ones are changed, these have to be approved in writing, by verbal agreement or implicitly on account of customary business practices. However, under the previous IAS 11 “Contracts under construction” claims were included under income to the extent that they are probable and can be reliably measured.
- Penalties with customers in construction contracts for delays or other reasons. IFRS 15 establishes that the estimated amount of variable consideration is to be included in the transaction price only to the extent that it is highly likely that there will be no significant reversal of the amount of revenue when the uncertainty associated with the variable consideration is subsequently resolved. However, under the previous IAS 11 “Contracts under construction” penalties were included under income to the extent that they are probable or the uncertainties related to them were settled.
- The timing of recognition of the revenue that corresponds to assignment agreements applicable to the capacity of technical facilities.

The impact from the above items that was recognised by the IBERDROLA Group in implementing IFRS 15 as of 1 January 2018 was:

Thousands of Euros	Cost capitalisation	Claims/penalties	Time income recognition	Total
Intangible assets.	175,001	-	-	175,001
Trades and other accounts receivable	-	(133,049)	(50,579)	(183,628)
Deferred tax assets	-	64,562	15,174	79,736
Non-current assets	175,001	(68,487)	(35,405)	71,109
Trades and other accounts receivable	-	(57,792)	-	(57,792)
CURRENT ASSETS	-	(57,792)	-	(57,792)
TOTAL ASSETS	175,001	(126,279)	(35,405)	13,317
Parent company	134,496	(192,116)	17,295	(40,325)
EQUITY	134,496	(192,116)	17,295	(40,325)
Other non-current payables	-	-	(75,286)	(75,286)
Deferred tax liabilities	40,505	-	22,586	63,091
NON-CURRENT LIABILITIES	40,505	-	(52,700)	(12,195)

Current Liabilities	-	65,837	-	65,837
TOTAL EQUITY AND LIABILITIES	175,001	(126,279)	(35,405)	13,317

While undertaking the performance through transfer of goods or services to the client before the client pays the consideration or before payment may be enforced, IBERDROLA Group submits the contract as an asset of the contract, excluding the amounts submitted as accounts receivable. An account receivable is the unconditional right to receive compensation subject to the passing of time for payment to be enforced. IBERDROLA Group submits the agreement's assets in the sub-headings "Trade debtors and other non-current assets" and "Trade debtors and other current assets-Other trade debtors and other current assets" of the consolidated annual accounts (Notes 14 and 18).

A liability of the agreement is the obligation that IBERDROLA Group has to transfer goods or services to a client from whom it has already received a consideration (or this client consideration has come due). IBERDROLA Group presents the contract's assets in the sub-headings "Other non-current liabilities" and "Trade creditors and other liabilities-Other trade creditors" of the consolidated annual accounts (Notes 30 and 33).

Given below is the amount by which each item in the annual accounts had been affected by implementation of IFRS 15 as of 31 December 2018 compared with the previously applied rules:

Thousands of Euros	In accordance with IFRS 15	Effects due to changes in rules	In accordance with previous rules
Intangible assets	21,000,248	(254,714)	20,745,534

IFRS 9: “Financial instruments”.

IFRS 9 establishes the requirements for recognising and measuring financial assets, financial liabilities and certain contracts to buy and sell non-financial items and replaces the previously applied IAS 39.

Classification and measurement of financial assets and liabilities

IFRS 9 replaces the previous classification of financial assets and these are now classified in accordance with the business model within which they are held and the cash flow characteristics under their contractual terms. On the other hand, the new standard to a great extent retains the requirements in IAS 39 for classifying and measuring financial liabilities.

The IBERDROLA Group has adopted the classification and measurement requirements retroactively, with initial application on 1 January 2018, thus taking the option of not restating the figures for comparative periods.

The IBERDROLA Group has classified its financial assets into the following categories:

Categories	
Financial Assets at amortised cost	Financial assets that: - are held within a business model where the objective is to hold the assets to obtain the contract cash flows, and - whose contract terms produce, on specific dates, cash flows which are only payments of the principal and interest on the amount of the outstanding principal.
Financial assets at fair value through profit and loss:	This category embraces those financial assets which fail to meet the conditions for being classified as “measured at amortised cost”.

The IBERDROLA Group has irrevocably decided that securities portfolio existing at the time of the initial application of IFRS 9 should be classified at fair value through profit and loss where the changes in fair value are recognised under “Financial costs” and “Financial income” in the consolidated income statement. Under IAS 39 these investments were classified in the category of available-for-sale assets and changes in their fair value were debited or taken to “Value adjustments” in the consolidated statement of financial position up until the time of sale of such investments or their impairment, at which point the cumulative amount for this item was allocated to the consolidated income statement.

Under IAS 39 the amounts classified under IAS 39 have the following equivalent in the new IFRS 9 categories:

In accordance with IAS 39	In accordance with IFRS 9
Loans and receivables	Financial Assets at amortised cost
Available-for-sale assets	Financial assets at fair value through profit and loss:
Assets held for trading	Financial assets at fair value through profit and loss:

On the other hand, classification of the IBERDROLA Group’s financial liabilities has not undergone any changes with respect to what featured in the consolidated annual accounts for 2017.

Impairment of financial assets at amortised cost and contract assets

Under IFRS 9 it is no longer necessary for there to be some event that evidences impairment to recognise credit losses. Instead, expected credit losses are carried, which means bringing forward recognition of credit losses compared to IAS 39.

The IBERDROLA Group has adopted the value impairment requirements retroactively, with initial application on 1 January 2018, thus taking the option of not restating the figures for comparative periods.

The impact recognised by the IBERDROLA Group from applying the new expected loss model (Note 3.I) to calculate value impairment of financial assets at amortised cost and contract assets as of 1 January 2018 was:

Thousands of Euros	01.01.2018
Current Financial investments	(475)
Trades and other accounts receivable	(9,090)
Deferred tax assets	2,652
NON-CURRENT ASSETS	(6,913)
Trades and other accounts receivable	(7,372)
Current Financial investments	(6,918)
Cash and cash equivalents	(710)
CURRENT ASSETS	(15,000)
TOTAL ASSETS	(21,913)
Parent company	(14,640)
Non-controlling interests	(7,273)
TOTAL EQUITY AND LIABILITIES	(21,913)

Valuation adjustment due to impairment in “Non-current trade and other non-current assets” and “Current trade and other current assets” is detailed separately in the consolidated income statement under “Valuation adjustments trade and other contract assets”. Subsequently, the amount of Euros 197,399 million has been reclassified which, in accordance with the previous IAS 39, was detailed in “Amortisations and provisions” in the income statement for 2017.

Hedge accounting

The requirements of IFRS 9 make hedge accounting more closely aligned with risk management, establish a focus that is more in accordance with principles and tackle the incongruences and shortcomings of the hedge accounting model in IAS 39 that was previously applied.

In accordance with IFRS 9, the IBERDROLA Group will record as hedge cost the temporary value of option contracts and term of term contracts should they be excluded from hedges (Note 20). Under IAS 39 these elements were carried in the consolidated income statement.

The transition to IFRS 9 in relation to the recording of hedges will be made prospectively, with the exception of the accounting treatment of the temporary value of those option contracts for which changes in its intrinsic value was designated as hedging instrument. In such case, it will be applied retrospectively. The effect of initial application of IFRS 9 as of 1 January 2018 as regards the above-mentioned time value has meant a charge of Euros 1,552 thousand to “Other reserves” in the consolidated statement of financial position along with a credit to “Value adjustments” in the consolidated statement of financial position (Note 20).

Changes to financial liabilities

The changes of financial liabilities to amortised cost not resulting from the derecognition of a financial liability (for considering this to be a non-material change) imply recording in the consolidated annual accounts the result on the date of the change, the difference between amortised cost of financial liabilities and the amount of cash flows still in financial liabilities deducted from the original effective tax rate.

Previous to this change, in changes of financial liabilities whose conditions were not substantially different, the amortised cost of the financial liability is determined using the effective interest rate method. The effective interest rate is the rate that matches the carrying amount of the financial liability at the date of modification with the cash flows payable under the new terms.

The result of retroactively applying these criteria on 1 January 2018 is as follows:

Thousands of Euros	01.01.2018
Parent company	117,627
EQUITY	117,627
Finance debt (Note 27).	(156,434)
Deferred tax liabilities	38,807
NON-CURRENT LIABILITIES	(117,627)
TOTAL EQUITY AND LIABILITIES	-

The consolidated income statement for 2018 includes a greater cost of Euros 34,600 thousand recognised under "Financial cost" in the consolidated income statement as a result of the rise in the effective interest rate under the new accounting rule for financial liabilities that have been modified to an insignificant degree with respect to the rate which was applied for 2017.

Rules issued pending of application

At the reporting date of these consolidated annual accounts, the following standards, interpretations, and amendments had been adopted, becoming effective after December 31, 2018:

		Mandatory application	
Regulation		IASB	European Union
IFRS 16	Leases	01.01.2019	01.01.2019
IFRS 17	Insurance contracts	01.01.2021	(*)
IFRIC 23	Uncertainties over income tax treatments	01.01.2019	01.01.2019
Modifications to IFRS 9	Prepayment Features with Negative Compensation	01.01.2019	01.01.2019
Modifications to IAS 28	Long-term interests in subsidiaries and joint business	01.01.2019	(*)
Modifications to IAS 19	Changes, reductions or settlement of defined benefit retirement plans	01.01.2019	(*)
Cycle 2015-2017	Annual improvements several standards	01.01.2019	(*)
Modifications to IFRS 3	Business definition	01.01.2020	(*)
Modifications to AIS 1 & AIS 8	Material definition	01.01.2020	(*)

(*) Pending approval from the European Union

The IBERDROLA Group has not applied in advance of the formulation of these consolidated annual accounts any published standard, interpretation or amendment that has not yet come into force.

The IBERDROLA Group believes that their application would not have had a material impact on these consolidated annual accounts, and, furthermore, would not have a material impact when they are applied, except for the application of IFRS 16 “Leases”.

IFRS 16: “Leases”

The IBERDROLA Group will apply on the annual accounts starting from 01 January 2019 the IFRS 16: “Leases”. All the quantitative effects are shown below in gross figures.

From the perspective of the lesser, IFRS 16 eliminates the current classification among operating and financial leases and sets, as regards lease agreements, that the lessee shall recognise in the income statement an asset for right of use and a liability for the present value of the lease during said period.

The lease expense, which in these consolidated annual accounts is recognised under “External services” on the consolidated income statement, will now be recognised in the consolidated income statement under “Amortisations and provisions” due to the amortisation of said right of use asset and “Financial cost” due to the current value of the liability.

From the perspective of the lessor, IFRS 16 does not introduce relevant changes.

IBERDROLA Group has carried out an analysis in order to assess whether an agreement is or includes a lease on the date of its first application in accordance with the conditions set in IFRS 16. In said analysis, IBERDROLA Group has interpreted that assignment of land use does not imply a lease when its owner has the right to carry out any kind of financial activity implying the financial profit inherent to the use of the asset subject to the agreement has not been assigned.

IBERDROLA Group will transition to IFRS 16 through the modified retroactive alternative which does not imply re-stating the comparative period and recognising the effect of the application of IFRS 16 for the first time on 1 January 2019 (date it was first applied). Therefore, in lease agreements in which IBERDROLA Group acts as lessee, lease liabilities will be measured at the present value of the remaining lease payments to which the discount rate at the time of the first application will be discounted. With some exceptions, right-of-use assets will be measured in the same amount as liabilities.

In accordance with the options offered by IFRS 16, the IBERDROLA Group has opted for not applying it to lease agreements for intangible assets, as well as applying the exemption when recognising current leases (lease term equal or under 12 months), which will continue being accounted for as presently.

The same contract may include different lease elements, some of them not qualifying as leases. The IBERDROLA Group has opted for not separating both elements for accounting purposes and recognising them as a sole element, except for the type of underlying assets for which the separation may have a significant impact on the annual accounts.

The implementation of IFRS 16 is well advanced. In this regard, it is estimated that IFRS 16 at 1 January 2019 will imply an increase in current and non-current liabilities of Euros 399,139 million in accordance with the following agreements in accordance with this type of assets:

Thousands of Euros	01 January 2019
Buildings and real property	231,437
Vehicle fleet	34,543
Optical fibre and others (Networks)	38,334
Land related to renewable facilities (solar and other)	46,048
Other	48,803
Total	399,165

Details of discount rates (minimum and maximum ranges) used at the time of the first application are as follows:

Currency	Less than 5 years		Between 20 and 30 years	
	Minimum	Maximum	Minimum	Maximum
Euro	-	2.15	1.87	2.94
Sterling Pound	1.12	3.21	3.19	4.94
US dollar	2.68	3.3	4.16	4.48
Mexican Pesos	9.09	9.46	11.36	12.62
Brazilian Reals	8.68	11.96	14.55	15.15

Details of the reconciliation between the future minimum payment for non-cancellable operating leases under the scope of the current IAS 17 at 31 December 2018 (Note 38) and lease liabilities estimated to be recognised at 1 January 2019 in the transition to IFRS 16 are as follows:

Thousands of Euros	
Future minimum payments for non-cancellable operating leases in accordance with IAS 17 (Note 38)	1,462,154
Re-stated contracts not qualifying as lease in accordance with IFRS 16	(846,374)
Lease agreements starting after 1 January 2019 and other	(127,144)
Difference in financial discount	(89,471)
Lease liabilities at 1 January 2019 under IFRS 16	399,165

Under current standards, the majority of lease agreements for land in which the wind generation facilities are located qualify under operating leases. In application of IFRS 16, IBERDROLA Group interprets that the majority of these agreements do not include lease in accordance with the criteria previously described. Said interpretation in the application of IFRS 16 is in accordance with international practice in the scope of the application of the IFRS.

However, the accounting treatment of agreements observing shared used of underlying assets is subject to changes in accordance with future interpretations. The Group intends on following possible discussions on the matter that may take place in the future in order to confirm the reasonability of the accounting treatment adopted. In the event lease agreements for the use of land in which the wind generation facilities qualified as lease agreements under the scope of IFRS 16 on the date the standard is applied for the first time, estimated current and non-current liabilities for the IBERDROLA Group would increase, in the maximum amount of Euros 846,374 million.

2.b) Basis of consolidation

Appendix I to these consolidated annual accounts lists all IBERDROLA subsidiaries, joint ventures and associates, together with the consolidation method or measurement basis used and other related disclosures.

Subsidiaries

The subsidiaries over which the IBERDROLA Group exercises control have been fully consolidated from the date they were acquired, except when they have a negligible effect on the true and fair view of the IBERDROLA Group.

The IBERDROLA Group considers that it maintains control of a company when it is exposed, or has the right to variable returns from its involvement in the company, and has the capability to influence these returns through its power thereover. For the purpose of preparing these consolidated annual accounts, control is deemed to be exercised in companies in which the Group holds over 50% of the share capital and can prove the existence of this control. The Appendix to these consolidated annual accounts contains information on fully consolidated companies in which the Group holds less than a 50% interest, and on companies in which the Group holds more than 50% interest that have not been consolidated.

The results of subsidiaries acquired or sold during the year are included in the consolidated income statement as from the effective date of acquisition or up to the effective date of sale. All accounts and transactions between fully consolidated companies have been eliminated in the consolidation process.

On the takeover date, assets, liabilities and contingent liabilities of a subsidiary are recognised at fair value. Any excess of the subsidiary's acquisition cost over the market value of its assets and a liability is recognised as goodwill, as it corresponds to assets that cannot be identified and measured separately. If the difference is negative, it is taken to the consolidated income statement.

Non-controlling interests are recognised upon initial recognition at an amount equivalent to their proportional interest in the fair value of the acquiree on the takeover date. The value of non-controlling interests' share of equity and results of fully consolidated subsidiaries is presented under the "Equity –Non-controlling interests" in the consolidated statement of financial position and under the "Non-controlling interests" in the consolidated income statement, respectively.

When there is a loss of control of a company of the Group, its assets, liabilities and any non-controlling interest are derecognised. The resulting gains or losses are recognised in profit or loss. Investments remaining in subsidiaries over which control has been lost are measured at their fair value on the date this loss of control occurred. Gains/losses on shares purchased from non-controlling interests in controlled companies and sales of shares without loss of control, are debited or taken to reserves.

Equity-accounted investees

Equity-accounted investees include investments in associates and joint ventures. Associates are companies in which the IBERDROLA Group has significant influence, i.e., the power to intervene in decisions regarding financial and operating policies but without having control or joint control. A joint venture is a joint agreement in which the Group has the right to net assets of the agreement.

For the purpose of preparing these consolidated annual accounts, significant influence is deemed to be exercised in companies in which the Group holds over 20% of the share capital and can prove the existence of this significant influence.

Appendix I to these consolidated annual accounts contains information on equity-accounted companies in which the Group holds less than a 20% interest, and companies in which the Group holds between a 20% and 50% interest that have not been accounted for using the equity method.

In transactions carried out with associates and joint ventures, the gains or losses on the operation are eliminated at the percentage of interest held in each company. The result of measuring investments in equity-accounted associates is recognised under "Other reserves" and "Share of profit/(loss) of equity-accounted investees - net of taxes" in the consolidated statement of financial position and the consolidated income statement, respectively.

Closing date of the annual accounts

The closing date of the annual accounts of subsidiaries, joint ventures and associates is 31 December, with the exception of Siemens Gamesa Renewable Energy, S.A. (hereinafter SIEMENS GAMESA), whose closing date is 30 September. However, for the purposes of preparing these consolidated annual accounts harmonisation has been applied so that the equity method includes the equity of the associate at 31 December.

The accounting policies applied by the companies of the consolidated Group are the same or have been harmonised with those used by the IBERDROLA Group.

Conversion of the annual accounts of foreign companies

The annual accounts of each foreign company were prepared in their respective functional currencies, understood as the currency of the economic environment in which each company operates and in which it generates and uses cash.

The conversion of the annual accounts of foreign companies has been carried out by applying the year-end exchange rate method. This method consists of converting all the assets, rights and obligations to Euros at the exchange rates prevailing at the reporting date of the consolidated annual accounts, and the average exchange rate for the year (provided that there have not been significant transactions that warrant the use the average exchange rate) for the consolidated income statement items, keeping equity at the historical exchange rate at the date of acquisition (or at the average exchange rate of the year in which they were generated in the case of accumulated results). The resulting translation differences are taken directly to equity accounts.

2.c) Comparative information

When comparing the figures for 2018 included in these consolidated annual accounts with those corresponding to 2017, it is necessary to take into account the following:

The acquisition of Neoenergia, S.A.

As indicated in Note 6, on 24 August 2017, the incorporation of the activity and businesses of Elektro Holding, S.A. (ELEKTRO) in Neoenergia S.A. (NEOENERGIA) was completed, according to the agreement of the NEOENERGIA shareholders (BB Banco de Investimento S.A.- Banco do Brasil, Caixa de Previdência dos Funcionários do Banco do Brasil –Previ and IBERDROLA Energía, S.A.U. - IBERDROLA ENERGÍA), notified on 8 June 2017 and once the suspensive conditions have been met that were subject to the operation. As a result of this transaction, IBERDROLA Group acquired NEOENERGIA compared to the previous control granted by its prior stake. This thus resulted in a business combination in stages.

After the transaction took effect, Banco do Brasil and Previ own 9.35% and 38.21% approximately and respectively of the capital of NEOENERGIA, and IBERDROLA ENERGÍA now holds 52.45%, including the businesses of ELEKTRO as consideration. Currently, Banco do Brasil and Previ are holders of 12% and 49% respectively of the capital of NEOENERGIA, with 39% remaining owned by IBERDROLA ENERGÍA.

The acquisition of NEOENERGÍA should be considered when comparing the figures for 2018 included in these consolidated annual accounts with the 2017 figures.

New applicable rules from 1 January 2018

As mentioned in Note 2.a., on 1 January 2018 IFRS 15 and IFRS 9 were applied for the first time.

Tax reform in the US

On 22 December 2017 the *Tax Cuts and Jobs Act of 2017* (Tax Act), referred to as “US Tax reform”, was signed and passed. The standard includes relevant changes in the US Federal Tax Structure, the most significant aspect of which is the reduction in federal tax for legal persons from 35% to 21%. This circumstance affected the comparison under “Corporate income tax” in the consolidated annual accounts (Note 31).

Merge GAMESA-SIEMENS

In the first half of 2017, as a result of the conclusion of the decision to merge the wind power businesses of Gamesa Corporación Tecnológica, S.A. (GAMESA) and Siemens AG (SIEMENS) whereby Siemens Wind HoldCo (as disappearing company) was taken over by GAMESA (as surviving company), there was dilution to IBERDROLA Group’s percentage holding in GAMESA, which was reduced by 19.69% to 8.07%.

The profit as a result of the aforementioned dilution of the operation reached Euros 250,695 million, which were recognised under ‘Gains on disposal of non-current assets’ in the 2017 consolidated income statement (Notes 13.a and 41).

2.d) Amendment to comparative information

Geographical and business segment reporting (Note 7)

As provided in IFRS 8: “Operation segments” revises comparative information from the previous year for the following reasons:

- From 1 January 2018, hydropower assets in the countries where the IBERDROLA Group operates have been transferred from the Liberalised business to the Renewables business. The purpose of this restructure is to group clean generation assets in only one operation segment. Said change in the management of hydropower assets entails corporate restructuring completed on 1 August 2018, when all administrative authorisations had been obtained.
- In 2017, the gas business in the United States and Canada was included under the Liberalised-Rest of the World segment. In 2018, after having sold the whole gas business in the United States (Note 41), the remaining assets and liabilities of this business in Canada are included under “Other businesses”.

Earnings per share (Note 53)

As described in Note 20 and 51 of these consolidated annual accounts, in July 2018 and January 2019 two free capital increases took place in the context of the “IBERDROLA scrip dividend” programme. According to IAS 33: “Earning per share” these scrip issues meant that earnings per share for 2017 included in the consolidated annual accounts for that year had to be corrected, and have been taken into account when calculating basic and diluted earnings per share for 2018.

3. ACCOUNTING POLICIES

3.a) Goodwill

Goodwill represents future economic benefits arising from other financial assets acquired in a business combination that are not individually identified or separately recognised.

Goodwill arising from acquisitions of companies with a functional currency other than the Euro is converted to Euros at the exchange rate prevailing at the reporting date of the consolidated statement of financial position.

Goodwill acquired on or after 1 January 2004 are measured at acquisition cost and those that are acquired earlier are measured at the carrying amount at 31 December 2003 in accordance with Spanish accounting standards in effect on that date, as provided for in IFRS 1: "First-time adoption of IFRS".

Goodwill is not amortised. However, at the end of each reporting period its recoverability is analysed and any impairment is recognised (Note 3.i).

3.b) Other intangible assets

Concessions, patents, licenses, trademarks and similar rights

The amounts recognised as concessions, patents, licenses, trademarks and similar rights reflect the cost incurred in their acquisition.

The electricity distribution and transmission concessions held in UK by SCOTTISH POWER and those linked to the activities of AVANGRID, are not subject to any limits of a legal or other nature. Accordingly, as they are intangible assets with an indefinite useful life, they are not amortised by the IBERDROLA Group, although they are tested yearly for impairment, as described in Note 3.i.

IFRIC 12: "Service concession arrangements" affects public-private service concession arrangements that meet two prerequisites:

- the grantor controls or regulates which services the operator must provide for the infrastructure, to whom it must provide them to and at what price; and
- the grantor controls any significant residual interest in the infrastructure at the end of the term of the arrangement.

Infrastructures within the scope of a service concession arrangement are not recognised as property, plant and equipment of the operator, because the operator does not have the contractual right to control them.

If the operator performs more than one service (e.g. operation services and construction or upgrade services), the consideration received under the agreement for provision of services is recognised separately in accordance with IFRS 15 "Ordinary income from contracts with customers".

In the case of IBERDROLA Group, IFRIC 12 only affects the electricity distribution and transmission activities carried out by in Brazil (Note 11). Remuneration for network construction and upgrade work carried out by the IBERDROLA Group in this country consisted, on the one hand, of an unconditional right to receive cash and, on the other hand, of the right to charge certain amounts to consumers. As a result, by applying IFRIC 12, two different assets were recognised for the two types of consideration received:

- A financial asset, which is recognised under "Other non-current financial investments" in the consolidated statement of financial position (Note 13.b).
- An intangible asset, amortisable in the concession period, which is recognised under "Other intangible assets" in the consolidated statement of financial position (Note 8).

The costs incurred in relation to the other items included under this heading in the consolidated statement of financial position are amortised on a straight-line basis over their useful lives, of between five and ten years.

Computer software

The acquisition and development costs incurred in relation to computer software are recognised with a charge to "Other intangible assets" in the consolidated statement of financial position. Maintenance costs of computer software are recorded with a charge to the consolidated income statement for the year in which they are incurred.

Computer software is amortised on a straight-line basis over a period of between three and five years from the entry into service of each software application.

Customer acquisition costs

IBERDROLA Group recognises the incremental costs of signing contracts mainly from commissions for signing sales contracts as an intangible asset and they are redeemed during the estimated duration of those contracts.

Research and development expenditure

The IBERDROLA Group's policy is to record research expenses in the consolidated income statement for the period when they are incurred.

Development costs are recognised as an intangible asset in the consolidated statement of financial position if the Group can identify them separately and show the technical viability of the asset, its intention and capacity to use or sell it, and how it will generate probable future economic benefits.

3.c) Investment property

Real estate investments will be recognised at its acquisition cost net of accumulated depreciation. Investment properties are depreciated on a straight-line basis, minus material residual value, over each asset's estimated useful life which ranges between 37.5 y 75 years in accordance with the features of each asset concerned.

3.d) Property, plant and equipment

Items of property, plant and equipment are measured at acquisition or production cost less depreciation and accumulated impairment. Acquisition cost includes, where applicable, the following:

1. Prior to the date of transition to IFRS (1 January 2004), the IBERDROLA Group revalued certain Spanish assets under "Property, plant and equipment" in the consolidated statement of financial position as permitted by applicable legislation, including Royal Decree-Law 7/1996, and considered the amount of these revaluations as part of the cost of the assets, in accordance with IFRS 1.

2. Finance costs relating to external funding accrued exclusively during the construction period, are determined as follows:
 - Interests accrued on specific sources of financing used to build certain assets are fully capitalised.
 - Interests accrued on external general-purpose borrowings is capitalised by applying the average effective interest rate of this financing to the average cumulative investment qualifying for capitalisation, after deducting the investment financed with specific-purpose borrowings, provided that it does not exceed the total finance costs incurred in the year.
3. Personnel expenses relating directly or indirectly to constructions in progress (Note 37).
4. If the IBERDROLA Group is required to dismantle its facilities or restore the place where they are located, the present value of said costs are included in the carrying amount of the asset at their present value, with a credit to "Provisions - Other provisions" of the consolidated statement of financial position (Note 3.s).

The IBERDROLA Group periodically checks its estimate of this current value increasing or decreasing the assets value depending on the results of said estimate.

The IBERDROLA Group transfers property, plant and equipment under construction to property, plant and equipment in use at the end of the related trial period.

Expansion or improvement costs leading to increased productivity, capacity or to a lengthening of the useful lives of the assets are capitalised. Replacements or renewals of complete items are recorded as additions to property, plant and equipment, and the items replaced are derecognised.

Gains or losses arising on the disposal of items of property, plant and equipment are calculated as the difference between the amount received on the sale and the carrying amount of the asset disposed of.

3.e) Depreciation of property, plant and equipment in use

Every year, the IBERDROLA group reviews the useful life of its assets in accordance with internal and external information sources.

Since 2017, following this review, the IBERDROLA Group considers that the best useful life estimation is 40 years for combined cycle plants (compared to the 35 years considered previously) and 50 years for the electromechanical equipment at hydroelectric power plants (compared to the 35 years considered previously). As a result, "Amortisation and provisions" in the 2017 consolidated income statement includes the impact of this change in estimate, which as per accounting regulations has been applied prospectively since 01 January 2017, and resulted in a lower depreciation charge of approximately Euros 65 million. This amount is gradually decreasing as the useful life of hydroelectric and combined cycle power plants in use draws an end 1 January 2017.

The cost of property, plant and equipment in use is depreciated by depreciating the cost of the different items on a straight-line basis, less any residual value, over their estimated useful lives, the majority of which are as follows:

	Average years of estimated useful life
Conventional thermal power plants	25-50
Combined cycle power plants	40
Nuclear plants	40
Wind farms	
Structural components	40
Non-structural components	25
Gas storage facilities	25-40
Transmission facilities	40-56
Distribution facilities	30-54
Conventional meters and measuring devices	10-40
Electronic or smart meters	10
Buildings	50-75
Dispatching centres and other facilities	4-50

As hydroelectric plants are operated under concessions (Note 11), civil engineering assets are depreciated over the life of the concession, while their electromechanical equipment is depreciated in 50 years or in the concession period if this was lower.

Significant components of the property, plant and equipment with different useful lives are considered separately.

3.f) Lease agreements

The IBERDROLA Group classifies all lease arrangements under which the lessor transfers to the lessee substantially all the risks and rewards incidental to ownership of the asset as finance leases. All other leases are classified as operating leases.

Assets acquired under finance leases are recognised as non-current assets in accordance with their nature and function. Assets are measured at the lower of the fair value of the leased asset and the present value of the future lease payments, and are amortised over the useful life of each asset.

Expenses arising from operating leases are taken to the consolidated income statement on an accrual basis over the term of the lease agreement.

3.g) Nuclear fuel

The IBERDROLA Group measures its nuclear fuel stocks on the basis of the costs actually incurred in acquiring and subsequently processing the fuel.

Nuclear fuel costs include the finance costs accrued during construction, calculated as indicated in Note 3.d (Note 42).

Nuclear fuel consumed is recognised under "Supplies" in the consolidated income statement from when the fuel loaded into the reactor starts to be used, in accordance with the cost of the fuel and the degree of burning in each reporting period.

3.h) Inventories

Energy resources

Energy resources are measured at acquisition cost, calculated weighted average cost or at net realisable value, if it were lower. No adjustments are made to the value of energy sources that are part of the production process if the finished products into which they will be incorporated are expected to be sold at above cost.

Real estate inventories

Real estate inventories are measured at acquisition cost, which includes both the acquisition cost of the land and plots and the costs of urbanisation and construction of real estate developments incurred until year end. These costs include those incurred by the architecture and construction departments.

Acquisition cost also includes finance costs to the extent that such expenses relate to the period of town planning permits, urbanisation or construction up until the time at which the land or plot is ready for operation, calculated using the method set out in Note 3.d (Note 42).

Trade costs are charged to the consolidated income statement in the year in which they are incurred except for those incremental costs needed to close contracts with clients.

The IBERDROLA Group periodically compares the cost of acquisition of real estate inventories with their net realisable value, recognising the necessary impairment losses with a charge to the consolidated income statement when the latter is lower. If the circumstances leading to impairment no longer exist, it is reversed recognising the corresponding income.

For land, construction in progress and unsold units, net realisable value is used taking into account the appraisals by independent experts. Net realisable value is the estimated selling price in the ordinary course of business, less the estimated costs to finish production and the costs necessary to sell the element.

This value is determined using the residual method, where the estimated total cost of the work is deducted from the total gross value of the project, and the profit margin for developer's risk is added. The key variables of the residual method are:

- Forecast revenues: consists of the estimated price at which each of the units of the promotion can be sold, according to a pace of sales as estimated by independent experts.
- The cost of the development, including all disbursements to be made by the developer of the work depending on the type (e.g. government-sponsored or private single-family dwellings) and the quality of the construction. In addition to the cost of the work, it includes the cost of projects and licenses (10%-12% of the physical construction project), legal fees (1%-1.5% of the material implementation project), marketing and promotional expenses (2%-4% of income) and unforeseen contingencies (3% of income).
- Development time: the time necessary for different planning, management, and town planning phases, as well as the forecast building and sale period.
- The developer profit considered for each asset, depending on the zone state of the land, size and complexity of the development, ranging from 15% to 35% of total costs.

For land with licences, construction in progress and unsold units, the main difference with regard to unlicensed land is the developer profit, which in this case is lower given the stage of completion of the work and the decrease in risk as the completion of construction nears.

Emission allowances and renewables obligation certificates

Inventories of emission allowances and renewables obligation certificates (ROCs) are measured at acquisition cost, calculated at weighted average cost and at net realisable value, if it were lower. No adjustments are made to the value of emission allowances and ROCs that are part of the production process if the finished products into which they will be incorporated are expected to be sold at above cost.

Emission allowances and ROCs acquired to obtain benefits from fluctuations in their market price are measured at fair value with a credit or debit to the consolidated income statement.

Emission allowances and ROCs are derecognised from the consolidated statement of financial position when they are sold to third parties, have been delivered or expire. When the allowances are delivered, they are derecognised with a charge to the provision made when the CO₂ emissions were produced.

3.i) Non-Financial assets impairment

At least at each reporting date, the IBERDROLA Group reviews the carrying amounts of its non-current assets, testing them for any indications of impairment. If such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment loss, if necessary. For this purpose, in the case of assets that do not generate cash flows that are largely independent of other assets, the IBERDROLA Group estimates the recoverable amount of the cash-generating unit to which they belong.

In the case of goodwill and other intangible assets which have not come into use or which have an indefinite useful life, the IBERDROLA Group performs the recoverability analysis systematically every year, except when there are indications of impairment in another moment, in which case recoverability analysis is performed at the same time.

For purposes of this recoverability analysis, goodwill is allocated to the cash generating units in which it is controlled for internal management purposes (Note 8).

Recoverable amount is the higher of fair value less costs sell and value in use, which is taken to be the present value of the estimated future cash flows. The assumptions used in calculating value in use include discount rates, growth rates and expected changes in selling prices and direct costs. The discount rates reflect the time value of money and the risks specific to each cash-generating unit. The growth rates and the changes in prices and direct costs are in accordance with contractual commitments that have already been signed, information in the public domain, sector forecasts and the experience of the IBERDROLA Group (Note 12).

If the recoverable amount of an asset is less than its carrying amount, the difference is recognised as a charge to "Amortisation and provisions" in the consolidated income statement.

The IBERDROLA Group distinguishes between impairment allowances and write-downs depending on whether the impairment is reversible or not reversible. A write-down involves derecognising the carrying amount of an asset, either because impairment is considered definitive and non-reversible, because of an accounting standard, such as the case of goodwill, or when the value of the asset is not deemed to be recoverable from its use or disposal. Impairment arises when future expected earnings to be obtained are less than the carrying amount.

Impairment losses recognised for an asset are reversed with a credit to “Amortisation, depreciation and provisions” when there is a change in the estimates used to calculate the recoverable amount of the asset, and the asset’s carrying amount is increased to the amount that would have been determined had no impairment loss been recognised.

3.j) Associates and joint ventures

Investments in associates and joint ventures are accounted for using the equity method. Under this method, investments are measured initially at acquisition cost, subsequently adjusted for changes to each company’s equity, taking into consideration the percentage of ownership and, if applicable, any impairment.

Some investments in associates and joint ventures which in the context of these consolidated annual accounts are immaterial are recorded at acquisition cost within “Non-current financial assets – Non-current securities portfolio” of the consolidated statement of financial position.

The IBERDROLA Group regularly analyses the existence of impairment in its associates and joint ventures by comparing the total carrying amount of the associate or joint venture, including goodwill, to its recoverable amount. If the carrying amount exceeds the recoverable amount, the IBERDROLA Group recognises the related impairment with a debit to the consolidated income statement under “Share of profit/(loss) of equity-accounted investees - net of taxes”.

3.k) Joint operations

A joint operation is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets liability, obligations, relating to the arrangement. These consolidated annual accounts include the proportional part of the assets, liabilities, income and expenses of the joint operations in which the IBERDROLA Group takes part in (Note 45).

3.l) Finance instruments

Classification and assessment of financial assets

The IBERDROLA Group measures its current and non-current investments in accordance with the criteria described below:

1. Assets at amortised cost

Under this category financial assets that met the following conditions are included:

- Assets held within a business model where the objective is to hold the assets to obtain the contract cash flows, and
- whose contract terms produce, on specific dates, cash flows which are only payments of the principal and interest on the amount of the outstanding principal.

These assets are initially recognised at fair value adding transaction costs and are subsequently measured at amortised cost. Interests accrued on these liabilities are recognised in the income statement using the effective interest rate method. However, loans and receivables maturing in less than a year that do not have a contractual interest rate, are measured both initially and subsequently at nominal value when the impact of not discounting cash flows is not significant.

2. Assets at fair value through profit and loss:

The IBERDROLA Group includes in this category the derivative financial instruments which do not satisfy the conditions necessary for hedge accounting in accordance with the requirements established for this purpose in IFRS 9: "Financial instruments (Note 28).

Assets held for trade are recognised at fair value. The transaction costs directly attributable to purchase or issuing is recognised as an expense in the consolidated income statement as it is incurred. The changes that occur in their fair value are allocated to the consolidated income statement for the period in the headings "Expenses" e "Income" of the consolidated annual accounts, as may be applicable.

The IBERDROLA Group determines the most appropriate classification for each asset on acquisition and reviews the classification at each year end date.

Before 1 January 2018, prior to the application of IFRS 9: "Financial instruments" for the first time (Note 2.a.), IBERDROLA Group classified financial assets into the following categories:

- Loans and accounts receivable: valued at amortised cost through the application of the effective interest method.
- Held-for-sale assets: valued at fair value with changes to the consolidated financial statement of the overall result.
- Assets held for trading: valued at fair value with changes to the results. The IBERDROLA Group includes the derivative financial instruments which did not satisfy the conditions necessary for hedge accounting in this category, based on the requirements established for this purpose in IAS 39: "Financial instruments".

Impairment of financial assets at amortised cost

The IBERDROLA Group recognised valuation adjustments resulting from credit losses expected from financial assets and contract assets at amortised cost.

The IBERDROLA Group will apply the general model for calculation of expected loss on financial assets other than trade and lease receivables, where the simplified model will be applied.

Under the general model, credit losses expected in the next twelve months are recorded unless the credit risk of financial instruments has significantly increased from the initial recording. In such case, they will qualify as expected credit losses over the life of the asset. IBERDROLA Group recognises that the credit risk of a financial instrument has not increased in a significant manner since its initial recognition if it is determined that at reporting date it has a low credit risk.

Under the simplified model, they qualify as expected credit losses over the life of the asset. The IBERDROLA Group has adopted the practical solution whereby it calculates the expected credit loss on trade receivables by using a matrix of provisions in accordance with its experience of losses historically adjusted for available prospective information.

Valuation adjustments and reversals of trade receivables and contract assets are recognised in “Valuation adjustments in trade and other contract assets” in the consolidated income statement. Impairment losses recognised and reversed relating to other financial assets valued at amortised cost are recorded in the “Finance cost” section of the consolidated statement of comprehensive income (see Note 43).

Derecognition of financial assets

Financial assets are derecognised when the rights to receive cash flows in relation thereto have extinguished or have been transferred or when the risks and profits are considered to have been substantially assigned arising from its ownership.

The derecognition of a financial assets implies a recognition in the consolidated income statement of the difference between its carrying amount and the consideration received, net of expenses, including assets obtained or liabilities assumed and any deferred gain or loss from other comprehensive income.

Classification and assessment of financial liabilities

The IBERDROLA Group classifies all finance liabilities at amortised cost using the effective interest method, except for the derivatives which do not meet the conditions necessary for hedge accounting in accordance with the requirements established for this purpose in IAS 9: “Financial instrument” recognised at fair value.

Derecognition of financial assets and liabilities

A financial liabilities are derecognised when they are extinguished, this means, when the obligation under the liability is discharged or cancelled or expires. Moreover, when a debt instrument between IBERDROLA and the counterparty is replaced by another on substantially different terms, the original financial liability is derecognised and the new liability is recognised. Similarly, substantial modifications in the terms of an existing financial liability are treated in the same way.

The difference between the carrying value of the financial liability or of the part of it that has given below and the paid consideration, including the attributable transaction costs, and in which any transferred asset different from the assumed cash or liability is also included, recognised in the consolidated income statement of the period in which it takes place.

IBERDROLA considers that the conditions are substantially different if the current value of the discounted cash flows under the new conditions, including any net paid fee of any received fee, and using the original effective interest rate for the discount, differs at least 10 per cent from the current discounted value of the cash flows that still remain from the original financial liability.

When a debt instrument exchange is made that does not have substantially different conditions, the original financial liability is not under the consolidated statement of financial position, recording the amount of the paid fees as an adjustment of its book value. The amortised cost of the financial liability is determined using the effective interest rate method. The effective interest rate is the rate that matches the carrying amount of the financial liability at the date of modification with the cash flows payable under the new terms.

Interests and dividends

Interest income is accrued on a time proportional basis, by reference to the outstanding principal and the applicable effective interest rate, which is the rate that exactly discounts estimated future cash receipts through the expected life of the asset to that asset's carrying amount.

Dividend income is recognised when the IBERDROLA Group companies are entitled to receive them.

Contracts to buy or sell non-financial items

The IBERDROLA Group performs a detailed analysis of all its contracts to buy or sell non-financial items to ensure they are classified correctly for accounting purposes.

As a general rule, those contracts that are settled net in cash or in another financial asset are classified as derivatives and are recognised and measured as described in this note, except for contracts entered into and held for the purpose of the receipt or delivery of a non-financial item in accordance with the IBERDROLA Group's purchase, sale, or usage requirements.

Contracts to buy or sell non-financial items to which the treatment described in IAS 9 "Finance instruments" is not applicable, are designated as own-use contracts and are recognised as the IBERDROLA Group receives or delivers the rights or obligations originating thereunder.

Derivative financial instruments and hedge accounting

Financial derivatives are initially recognised at acquisition cost in the consolidated statement of financial position and the required value adjustments are subsequently made to reflect their fair value at all times. Gains and losses arising from these changes are recognised in the consolidated income statement, unless the derivative has been designated as a cash flow hedge or a hedge of a net investment in foreign countries.

At hedge inception, hedging relationships were formally defined and documented, as were risk management aims and strategy. At the commencement of the hedging relationship, ongoing assessment also ensured that hedge effectiveness thresholds were being met prospectively.

Changes in temporary value of options hedging a component related to a forecasted transaction are recognised in the consolidated comprehensive income statement. If the hedged component results in the recognition of a non-financial asset or liability, the accumulated amount is recognised as a non-financial asset or liability adjustment in the consolidated comprehensive income statement. For other hedges, the deferred amount in the consolidated comprehensive income statement is reclassified as profit for the year or for periods in which the expected cash flows affect the profit.

Changes in temporary value of options hedging a component related to a period of time are recognised in the consolidated comprehensive income statement. The accumulated amount in another comprehensive income is systematically amortised during the period over which the hedge adjustment for the intrinsic option value affecting the consolidated income statement or the consolidated comprehensive income statement when the fundamental contractual terms match the hedged component. The Group also separates the term of term contracts and the differences in exchange rates of financial instruments applying criteria similar to those in previous sections. The election is made on a contract by contract basis.

The accounting treatment for hedging transactions is as follows:

1. Fair value hedges:

All changes in the fair value of the derivative financial instruments designated as hedging, or the exchange rate component of a monetary item in the case of non-derivative hedge instruments, such as changes in the fair value of the hedged item produced by the hedged risk are recognised with a charge or credit to the same caption of the consolidated income statement.

2. Cash flow hedges:

The IBERDROLA Group recognises the portion of the gain or loss on the measurement at fair value of a hedging instrument that is determined to be an effective hedge under "Valuation adjustments", in the case of cash flow hedges and "Translation differences", in the case of net investment hedges. The portion of the hedge deemed ineffective, as well as the specific component of the gain or loss or cash flows related to the hedging instrument, excluding the assessment of hedge effectiveness, are recognised in the consolidated income statement.

The gain or loss accumulated in these captions is transferred to the consolidated income statement caption affected by the hedged item as it affects the consolidated income statement.

If a hedge of a future transaction results in a non-financial asset or liability, this balance is taken into account when determining the initial value of the asset or liability generating the hedging transaction.

If a hedge of future transactions results in a financial asset or a liability, this balance is maintained in "Valuation adjustments" until the hedged risk in the future transaction has an impact on the consolidated income statement

3. Fair value hedges and net investment in foreign operations:

The IBERDROLA Group recognises the portion of the gain or loss on the measurement at fair value of a hedging instrument that is determined to be an effective hedge under "Valuation adjustments", in the case of cash flow hedges, and "Translation differences", in the case of net investment hedges. The portion of the hedge deemed ineffective, as well as the specific component of the gain or loss or cash flows related to the hedging instrument, excluding the assessment of hedge effectiveness, are recognised under "Financial Income" and "Financial Cost" in the consolidated income statement.

Discontinuation of hedge accounting

The IBERDROLA Group prospectively discontinues the fair value hedge accounting in the cases in which the hedging instrument matures, is sold, let go of or exercised, the goal of the risk management has changes, there is no financial relation between the hedge element and the hedged item, the credit risk effect dominates value changes, the hedge instrument matures or is liquidated or the underlying hedge ceases to exist.

When hedge accounting is discontinued, the cumulative amount at that date recognised under “Adjustments for changes in value” and “Translation differences” in cash flow hedges and net investment hedges abroad, respectively, is retained under said headings until the hedged transaction occurs, at which time the gain or loss on the transaction will be adjusted. If a hedged transaction is no longer expected to occur, the gain or loss recognised under the aforementioned headings is transferred to the consolidated income statement.

Implicit derivatives

Implicit derivatives in financial liabilities and transactions whose main contract is out of the scope of IFRS 9: Derivatives embedded in other financial instruments are recognised separately when the IBERDROLA Group considers that their risks and characteristics are not closely related to the financial instruments in which they are embedded, providing the entire contract is not carried at fair value, and changes in value are recognised in the consolidated income statement.

Fair value of derivative financial instruments

The fair value of the derivative financial instruments is calculated as follows (Note 15):

- For derivatives quoted on an organised market corresponds to its market price at year end.
- To measure derivatives not traded on an organised market, the IBERDROLA Group uses assumptions in accordance with market conditions at year end. In particular,
 - the fair value of interest rate swaps is calculated as the value discounted at market interest rates of the interest rate swap contract spread.
 - currency futures are measured by discounting the future cash flows calculated using the forward exchange rates at year end.;
 - finally, the fair value of contracts to trade non-financial items falling under the scope of IAS 9 is calculated on the basis of the best estimate of future price curves for the underlying non-financial items at the year end of the consolidated annual accounts, using, wherever possible, prices established on futures markets.

These measurement models take into account the risks of the asset or liability, among these, the credit risk of both the counterparty (Credit Value Adjustment) and the entity itself (Debit Value Adjustment). The credit risk is calculated according to the following parameters:

- Exposure at default: the amount of the risk arising at the time of non-payment by a counterparty, taking into account any collateral or compensation arrangements connected to the transaction.
- Probability of default: the probability that a counterparty will breach its obligations to pay the principal and/or interests, depending mainly on the features of the counterparty and its credit rating.
- Loss given default: the estimated loss in the event of default.

Offsetting of financial instruments principle

The financial assets and liabilities can be offset: the corresponding net amount must be shown in the Statement of financial position if the company currently has a legally enforceable right to offset the recognised amounts and the intention of settling them for the net amount or realising the assets and settling the liabilities simultaneously.

3.m) Treasury shares

At year end, the IBERDROLA Group's treasury shares are included under "Treasury shares" in the consolidated statement of financial position and are measured at acquisition cost.

The gains and losses obtained on disposal of treasury shares are recognised in "Other reserves" in the consolidated statement of financial position.

3.n) Capital grants

This heading includes any non-repayable government grants for financing property, plant and equipment, including the cash received from the US Government in the form of investment tax credits as a result of setting up wind power facilities. All capital grants are taken to "Other operating income" in the consolidated income statement as the financed facilities are depreciated.

3.o) Facilities transferred or financed by third parties

According to the regulation applicable to electricity distribution in the countries in which IBERDROLA operates, the Group occasionally receives cash payments from third parties for the construction of electricity grid connection facilities or direct assignment of such facilities. Both the cash received and the fair value of the facilities received are taken to "Deferred income" heading in the consolidated statement of financial position. These amounts are subsequently recognised under "Other operating income" in the consolidated income statement as the facilities are depreciated.

3.p) Post-employment and other employee benefits

The contributions to be made to the defined contribution post-employment benefit plans are expensed under the "personnel expenses" heading in the consolidated income statement on an accrual basis.

In the case of the defined benefit plans, the IBERDROLA Group recognises the expenditure relating to these obligations on an accrual basis over the working life of the employees by commissioning the appropriate independent actuarial studies using the projected unit credit method to measure the obligation accrued at the year end. The provision recognised under this concept represents the present value of the defined benefit obligation reduced by the fair value of the related plans.

New measurement of net liabilities corresponding to defined provision commitments including positive or negative actuarial differences, the performance of the plan assets, excluding amounts included in the net interest on assets or liabilities and any changed impacting the limit of assets, are recognised under "Other reserves" heading when they arise.

If the fair value of the assets exceeds the present value of the obligation, the net asset is not recognised in the consolidated statement of financial position limited to the updated value of future revenue to receive from the plan o reduction in future contributions to said plan.

The IBERDROLA Group determines the net financial costs (income) related with their commitments for pensions by applying the discount rate used in its measurement on their value at the beginning of the period once considering the changes in the net commitments for pensions made during the period in terms of contributions and repayments made. The net interest and the amount corresponding to other expenses related with the commitments undertaken are recorded in the consolidated income statement.

The IBERDROLA Group determines the discount rate with reference to the market yields at the end of the reporting period, corresponding to the bonds or business obligations of high credit quality (IBERDROLA Group considers rating equivalent to AA/Aa). In the countries where there is not a deep market to such bonds and obligations, the discount rate is determined with reference to Government bonds.

For the Eurozone, United Kingdom and the United States of America, there is a deep bond market with a sufficient period of maturity to cover all payments expected. In reference to the countries related to the Eurozone, the depth of the bond or obligation market is evaluated for the monetary union and not for the particular country. In the case of Brazil and Mexico, the discount rate has been determined taking into account the Brazilian sovereign credit, because a deep corporate market does not exist as they don't satisfy the indicated credit qualifications.

The IBERDROLA Group applies a weighted average discount rate that reflects the estimate timing and amount of benefit payment, as well as the currency in which the benefits are to be paid.

The calculation methodology is mainly in accordance with the following principles:

- The universe and spectrum of the outstanding bonds that meet the criteria of an AA/Aa rating is generated. The source of information corresponds with Bloomberg. The IBERDROLA Group has adopted the notional issues that are higher than Euros 50 million or its equivalent in local currency as the selection criteria.
- Once the bonds' database is obtained, the result is screened and the bonds that show any deficiencies are eliminated.
- The sample is grouped in accordance with the bonds' duration and the return on each duration and outstanding nominal amount of the issue is shown. As far as possible, the price return is in accordance with the midpoint of the bid/ask spread.
- The benefit payment is calculated using a mathematical formula, i.e., the minimum approximation of the quadratic function, resulting in a market return curve in accordance with the duration. The market curve result will provide the discount rates for each future maturity date of the bonds.
- For markets in which government bonds or corporate bonds with maturity dates beyond 25/30 years are not available, the reference sovereign rates for those terms combines with the AA corporate credit spread at liquid terms.
- As far as possible, the price return is in accordance with the midpoint of the bid/ask spread.

The discount rate reflects the time value of money and estimated schedule for the benefit payments. However, it does not reflect the actuarial risk, investment, credit or deviation in compliance with the actuarial assumptions risk.

3.q) Collective redundancy procedure and other early retirement plans for employees

IBERDROLA recognises termination benefits when the Group can no longer remove the offer or when the expenses of restructuring are recognised from which the payment of severance payments arises, in the case that said recognition is made previously.

The payments related with restructuring processes are recognised when the IBERDROLA Group has an implicit debenture, i.e., at the time that there is a detailed formal plan to perform the restructuring (in which are identified, at least, the company activities, or part of them, implied, the main locations affected, the location, function and approximate number of employees that will be paid for the termination of their contracts, the repayments that will be carried out, and the dates on which the plan will be implemented) and has generated a valid expectation amongst the affected personnel which the restructuring will be carried out, either for having started to execute the plan or for having announced its main characteristics.

The IBERDROLA Group recognises the full amount of the expenditure relating to these plans when the obligation arises by performing the appropriate actuarial studies to calculate the present value of the actuarial obligation at year end. The actuarial gains and losses are recognised in the consolidated income statement.

3.r) Provision for CO2 emissions

The IBERDROLA Group records a provision for liabilities and charges in order to recognise the obligation to deliver CO2 emission allowances in Spain and ROCs (Renewables Obligation Certificates) in Scotland (Note 26), under "Supplies" in the consolidated income statement.

3.s) Production facility closure costs

The IBERDROLA Group will incur in several decommissioning costs of its production plants, among which include those arising from necessary tasks to fit the land where they are located. Additionally, in accordance with the current legislation, the Group must perform certain tasks prior to the decommissioning of its nuclear plants, of which Empresa Nacional de Residuos Radioactivos, S.A. (hereinafter, ENRESA) is responsible for.

The estimated present value of these costs is capitalised with a credit to "Provisions – Other provisions" at the beginning of the useful life of the related asset (Note 26).

This estimate is subject to annual revision so that the provision reflects the present value of the full amount of the estimated future costs. The value of the asset is only adjusted for variances with respect to the initial one.

The IBERDROLA Group applies a risk-free rate to financially update the provision because the estimated future cash flows to satisfy the obligation reflect the specific risks of the corresponding liability. The risk-free rate used corresponds to the yield at year end on which reports, government bonds with enough depth and solvency in the same currency and similar due date to the obligation.

Any change in the provision as a result of its discounting is recognised in "Finance cost" in the consolidated income statement.

3.t) Other provisions

The IBERDROLA Group recognises provisions to cover present obligations, whether these are legal or implied, which arise as a result of past events, provided that it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation (Note 26). A provision is recognised when the liability or obligation arises, with a charge to the relevant heading in the consolidated income statement depending on the nature of the obligation, for the present value of the provision when the effect of discounting the value of the obligation to present value is material. The change in the provision due to its discounting each year is recognised under "Finance cost" in the consolidated income statement.

These provisions include those recorded to cover environmental damage, which were determined on the basis of a case-by-case analysis of the situation of the polluted assets and the cost of decontaminating them.

3.u) Current and non-current debt classification

In the consolidated statement of financial position debts are classified by their maturity date at year end. Debts that are due within twelve months are classified as current items and those due within more than twelve months as non-current items.

3.v) Revenue recognition

Revenues from sales is measured at the fair value of the assets or rights received as consideration for the goods and services provided in the normal course of the Group companies' business, net of discounts and applicable taxes.

The amount of the consideration to be received from the customer does not match the financial component in those cases in which, at the start of the contract, the period between the moment at which the asset or service in question is transferred and the moment at which the customer makes payment is a year or less.

Regulated income

Income from regulated activities where remuneration is in accordance with a fixed margin is booked by the IBERDROLA Group under "Net revenue" in the consolidated income statement for the corresponding year.

In the case of some regulated activities carried out by the IBERDROLA Group, any discrepancies between costs estimated when setting the annual tariff and costs actually incurred are recognised as income or expense for the year in which they arise only if its proceed or payment is certain, regardless of future sales.

Revenues from Construction contracts

IBERDROLA Group undertakes construction projects whose revenues are recognised during the time they are being executed since the asset's control in the client's favour is transferred in an ongoing manner.

Income is related to construction contracts recognised in an amount proportionate to the degree of completion of the construction project by measuring the contract costs incurred to date as a proportion of the total estimated costs until the termination of the contract.

Changes to construction work and any claims are included within contract revenue the contract amendments are legally required.

Revenues from the sale of real estate

As to real estate sales, the IBERDROLA Group follows the principle of recognising income at the time when legal title is transferred to the purchaser, which usually matches the date of notarisation of the respective contracts.

Criteria applied on previous years

Up until 2018 the Group's income was recognised, mainly, in accordance with IAS 18: "Revenue recognition" and IAS 11: "Construction contracts". IAS 18 determined that revenue recognition from a model based on transfer of risk, whereas IFRS 15 revenue from customer contracts is based on transfer of control.

The main differences between IFRS 15 and the revenue recognition applied to previous years are detailed in Note 2.a).

3.w) Transactions in foreign currency

Transactions carried out in currencies other than the functional currency of the Group companies are recorded at the exchange rates prevailing at the transaction date.

The monetary assets and liabilities denominated in foreign currency have converted to euros applying the existing rate at the close of the financial year, while the non-monetary ones assessed at historical cost are converted applying the exchange rates applied on the date on which the transaction took place.

During the year, the differences arising between the exchange rates at which the transactions were recorded and those in force at the date on which the related proceeds are made are charged or credited to "Financial Cost" or "Financial Income", as appropriate, to the consolidated income statement.

Those foreign currency transactions in which the IBERDROLA Group has decided to mitigate translation risk through the use of financial derivatives or other hedging instruments are recorded as described in Note 3.l.

3.x) Income Tax

Since 1986, IBERDROLA has filed consolidated tax Returns with certain Group companies. Foreign companies are taxed according to the current legislation of their respective jurisdiction.

The expense or income for the corporate income tax includes both the current and deferred tax. The tax on the current or deferred earnings is recognised in the consolidated income statement, unless arising from a transaction or economic success that has been recognised in the same year or in a different one, against net equity or from a business combination.

The assets or liabilities from tax on the current earnings are assessed for the quantities expected to pay or recover from the tax authorities, using the regulations and tax rates that are approved or are about to be approved on the closing date.

Income Tax is accounted for using the general balance liability method, which consists of determining deferred tax assets and liabilities on the basis of the carrying amounts of assets and liabilities and their tax base, using the tax rates that can objectively be expected to be in force when the assets or liabilities are realised or settled. Deferred tax assets and liabilities arising as a result of direct charges or credits to equity are also accounted for with a debit or credit to equity.

The IBERDROLA Group recognises deferred tax liabilities in all cases but those when:

- arise from the initial recognition of the goodwill or from an asset or liability in a transaction that is not a business combination and on the date of the transaction does not affect the accounting income or the taxable income;
- correspond to temporary differences related with investments in subsidiary companies, associates and joint ventures over which the Group has the ability to control the moment of their reversal and was not probable that their reversal occurred in a foreseeable future.

The IBERDROLA Group recognises deferred tax assets in all cases but when:

- it is probable that there are sufficient future tax earnings for clearing or when the tax legislation includes the possibility of future conversion of assets for deferred tax in a credit due to the public administration. However, the deferred tax assets that arise from the initial recognising of assets or liabilities in a transaction that is not a business combination and on the date of the transaction does not affect the accounting income or the taxable income, are not recognised;
- correspond to temporary differences related with investments in subsidiaries, associates and joint ventures inasmuch as the temporary differences will not be reinvested in a foreseeable future and are not awaiting creating future positive tax earnings to clear the differences.

Deductions in order to avoid double taxation and other tax credits as well as tax relief earned as a result of economic events occurring in the year are deducted from the Income Tax expense, unless there are doubts as to whether they can be realised.

The existence of uncertainties is considered in the taxable events, credits for negative taxable income or applied deductions. In those cases in which the asset or the liability for tax calculated with these criteria, exceeds the amount in the self-settlements, this is presented as current or not current on the consolidated statement of financial position taking into account the expected recovery or settlement date, considering, where applicable, the amount of the corresponding interest on arrears on the liability as earned in the profit and loss account. The IBERDROLA Group records the changes in facts and circumstances regarding tax uncertainties as a change in the estimate.

3.y) Final radioactive waste management costs

On 8 November 2003, the Royal Decree 1349/2003 was published regulating the ENRESA activities and its financing. This royal decree grouped together the previous legislation regulating the activities that ENRESA develops as well as its financing, and repeals, inter alia, the Royal Decree 1899/1984, of 1 August 1984.

Meanwhile, the Royal Decree-law 5/2005 and the Law 24/2005 establish that the costs relating to the management of radioactive waste and spent fuel from nuclear plants, and to the dismantling and closure of the plants attributable to their operation and incurred after 31 March 2005, will be financed by the owners of the nuclear plants in use.

On the other hand, on 7 May 2009, the Royal Decree-law 6/2009 was published, adopting various energy sector measures and approving the social tariff. The principal measures introduced are as follows:

- Necessary costs incurred in the management of radioactive waste and nuclear fuel at nuclear power stations that are definitively dismantled before the state-owned radioactive waste management company ENRESA begins operating, which had not yet been done at the date of these consolidated annual accounts, and all necessary costs incurred in dismantling and closing these power stations, will be treated as diversification and capacity guarantee costs.

Amounts used to cover the cost of managing radioactive waste generated by research activities directly related to nuclear electricity generation and the costs deriving from the reprocessing of spent fuel sent overseas prior to the entry into force of the Electricity Industry Law 54/1997, and all other costs that may be specified by the royal decree, shall also be considered diversification and capacity guarantee costs.

- Amounts used to register provisions to cover the costs incurred in managing radioactive waste and spent fuel generated at operational nuclear power stations after the establishment of ENRESA as well as dismantling and closure costs will not be treated as supply diversification and security costs, since these will be financed by the owners of the nuclear power stations while they are operational, irrespective of the date on which they are generated.
- The balance of ENRESA's provision remaining after deduction of the amounts needed to cover the supply security and diversification costs will be used to cover costs not included in this category.
- To cover the costs associated with nuclear power plants in operation, the companies owning the stations must pay a charge directly proportional to the volume of energy generated at each plant according to the methodology proposed by them

After a detailed analysis of the impact of the Royal Decree-law 6/2009, the IBERDROLA Group considers that the rate is the best estimate available of the accrued expenses originated for that royal decree-law.

3.2) Earnings per share

Basic earnings per share are calculated by dividing the net profit for the year attributable to the parent company by the weighted average number of ordinary shares outstanding during the year, excluding the average number of shares of the parent company held by Group companies (Notes 20 and 53).

Meanwhile, diluted earnings per share are calculated by dividing the net profit for the year attributable to the parent company by the weighted average number of ordinary shares outstanding during the year, adjusted by the weighted average number of ordinary shares that would have been outstanding assuming the conversion of all the potential ordinary shares into ordinary shares of IBERDROLA. For these purposes, it is considered that shares are converted at the beginning of the year or at the date of issue of the potential ordinary shares, if the latter were issued during the current period.

3.aa) Non-current assets held for sale and discontinued operations

If the carrying amount of a non-current asset (or a disposable group of assets) is recovered principally through its sale rather than through its continued use, the IBERDROLA Group classifies it as held for sale and values it at the lower of its carrying amount and its fair value less the costs of sale.

The impairment losses related with the disposal asset groups are assigned first to the goodwill and then to the rest of assets and liabilities proportionally. Value adjustments that could affect the stocks, financial assets, deferred tax assets, assets related with commitments with staff are not recognised. These assets are assessed in accordance with the principles contained in the previous sections. The losses recognised at the time of initial classification in this sub-heading and the capital gains and/or losses that are highlighted later are recognised in the consolidated income statement.

The elements classified as non-current kept for their disposal are not amortised.

A discontinued operation is a component of the entity that either has been sold or disposed of by other means, or is classified as held for sale and:

- represents a business line or geographical area that is significant and can be considered separately from the rest;
- is part of a single and coordinated plan to sell or dispose by other means a business line or geographical area that can be considered separately from the rest; or
- is a subsidiary acquired exclusively with intention to resale.

The IBERDROLA Group recognises a single heading in the consolidated statement of comprehensive income comprising the total of:

- profit or loss after tax from discontinued operations, and
- profit or loss after tax recognized by measurement at fair value less costs of sale, or sale or disposal by other means of the assets or disposable groups of assets that constitutes the discontinued operation.

During the second half of 2017, the activities related to the provision of engineering and construction services were abandoned, meeting the requirements to be considered a discontinued activity. Profit or loss after tax of the discontinued operations is included in "Net profit for the year from discontinued operations (net)" of the consolidated income statement for 2018 and 2017.

3.ab) Consolidated statements of cash flow

In the consolidated statements of cash flow, which were prepared using the indirect method, the following terms are considered:

- Operating activities: the typical activities of the Group companies, as well as other activities that are not investing or financing activities.
- Investing activities: the acquisition, sale or disposal by other means of long-term assets and other investments not included in cash and cash equivalents.
- Financing activities: activities that result in changes in the size and composition of the equity and liabilities of the company that are not operating activities.

3.ac) Share-based employee compensation

The delivery of IBERDROLA shares to employees as compensation for their services is recognised under “personnel expenses” in the consolidated income statement as the employees perform the remunerated services, with a credit to equity under “Equity – Other reserves” in the consolidated statement of financial position at the fair value of the securities portfolio on the delivery date, defined as the date the IBERDROLA Group and its employees reach an agreement establishing the terms of the share delivery.

Fair value is determined in reference to the market value of shares at the concession date deducting estimated dividends, to which employees are not entitled, during the irrevocability period.

If remuneration in accordance with securities portfolio is paid in cash, the amount booked as “Personnel expenses” in the consolidated income statement is taken to “Other non-current payables” or “Trade and other payables - Other current liabilities” on the liabilities side of the consolidated statement of financial position, as appropriate. The fair value of the cash-settled compensation is remeasured at each reporting date.

The amount recognised on the consolidated income statement is adjusted to reflect the number of the market conditions and other conditions that are not related with vesting, they are considered in the assessment of the fair value of the instrument. The rest of the conditions are considered adjusting the number of securities portfolio included in the determination of the transaction amount, so that finally, the amount recognised for the services received, is in accordance with the number of securities portfolio that will prospectively be consolidated.

The securities portfolio retained to make the payment of the corresponding tax obligations to the employee do not change the qualification of the plan as settled on securities portfolio.

4. FINANCING AND FINANCIAL RISK POLICY

The IBERDROLA Group is exposed to risks inherent to the different countries, industries and markets in which it operates and in the businesses it carries out, which could prevent it from achieving its objectives and executing its strategies successfully. Section 4 of the consolidated directors' report contains additional information on the Group's risks.

In particular, the financing and financial risk policy of the IBERDROLA Group approved by the board of directors identifies the risk factors described below. The IBERDROLA Group has an organisation and systems which allow the financial risks to which the group is exposed to be identified, measured and controlled.

Interest rate risk

The IBERDROLA Group is exposed to the risk of fluctuations in interest rates affecting cash flows and fair value in respect of financial liabilities.

In order to adequately manage and limit this risk, the IBERDROLA Group determines the desired annual structure of debt between fixed and floating interest rate, taking into account the situation of the financial markets, the pegging of income, either interest rate or price index. On a yearly basis, actions to be carried out are throughout the year are determined: new sources of financing (at a fixed, floating or indexed rate) and/or the use of interest rate derivatives. On a yearly basis, actions to be carried out are determined throughout the year: new sources of financing (at a fixed, floating or indexed rate) and/or the use of interest rate derivatives.

The debt structure at 31 December 2018 and 2017, after considering the effect of hedging derivatives (Note 28), is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Fixed interest rate	22,081,044	18,025,210
Floating interest rate	15,245,428	18,665,288
Total gross loans and borrowings (Note 27)	37,326,472	36,690,498
Cash and cash equivalents (Note 19)	2,801,157	3,197,340
Other current payables	77,840	63,970
Total gross loans and borrowings	34,447,475	33,429,188

Floating rate borrowings and IBERDROLA Group cash placements are basically pegged to market rates (mainly Euribor, Libor- pound sterling, Libor-dollar and the CDI in the case of the debt of Brazilian subsidiaries).

Currency risk

The IBERDROLA Group is exposed to exchange rate movements in the currencies in which financing transactions and business operations are effected against the functional currency with which the Group's various companies operate. These functional currencies are first and foremost the euro, the US dollar, sterling and the Brazilian real.

Similarly, the IBERDROLA Group is exposed to exchange rate risk as a consequence of its net investment in foreign companies (mainly Scottish Power, Avangrid and Neoen) due to fluctuations in the spot rates of the various functional currencies (sterling, the US dollar and the Brazilian real, respectively) against the euro. Exchange rate variations represent a risk in terms of net asset valuation and translation of results which might impact on the IBERDROLA Group's financial circumstances.

The IBERDROLA Group mitigates exchange rate risk in the operating currency of each group company by maintaining foreign currency debt or through financial derivatives.

Note 5.c of these consolidated annual accounts includes information on the potential impact of the Brexit on the IBERDROLA Group.

Commodity price risk

The IBERDROLA Group's activities require the acquisition and sale of raw materials (natural gas, coal, fuel oil, gas oil, emission allowances, etc.), whose price is subject to the volatility of international markets (global and regional) where those raw materials are traded.

Likewise, the prices for such raw materials are linked to the price indexes of other raw materials (mainly oil) and, therefore, they also depend on the volatility of the global oil market.

The margin obtained in the operations depends on the relative competitiveness of the IBERDROLA Group's plants compared to its competitors. This relative competitiveness also depends on raw material prices.

The use of derivatives in risk management

As far as the contracting of derivatives in order to mitigate the aforementioned risk from interest rates, exchange rates and the price of raw materials, the critical terms of the hedging instrument are established under equivalent terms of the hedged element, in line with the IBERDROLA Groups risk management policy. These terms include:

- The notional value of the hedging instrument is equal to or less than that of the hedged element.
- The underlying currency of the hedging instrument is the same as that of the hedged element.
- The term of the hedging instrument is equal to or less than that of the hedged element.
- The variable benchmark interest rate applicable to the hedging instrument is the same as that of the hedged operation, if appropriate.
- The interest frequency of the hedging instrument is the same as that of the hedged element.

Derivatives hired for interest rate, exchange rate and raw material hedging are described in Note 28.

Liquidity risk

Exposure to adverse situations in the debt or capital markets or the IBERDROLA Group's economic and financial situation can hinder or prevent the IBERDROLA Group from obtaining the financing required to properly carry on its business activities.

IBERDROLA Group's liquidity policy is designed to ensure that it can meet its payment obligations without having to obtain financing under unfavourable terms. For this purpose, it uses various management measures such as the arrangement of committed credit facilities of sufficient amount, term and flexibility, diversification of the coverage of financing needs through access to different markets and geographical areas, and diversification of the maturities of the debt issued.

For 2019 the IBERDROLA Group is expected to face the ordinary investment program established with the cash flow generated from its operations and access to the bank financial markets, capital markets and supranational moneylenders (such as EIB), even though, the Group has the treasury and sufficient credits and loans available to meet these investments.

At 31 December 2018 and 2017, the IBERDROLA Group had undrawn loans and credit facilities amounting to Euros 10,210,609 and 6,863,917 thousand, respectively.

The liquidity position of the IBERDROLA Group is Euros 13.012 million. The breakdown is shown below by maturities of the liquidity position at 31 December 2018 and 2017, considering the balance of "Cash and cash equivalents" in the consolidated statement of financial position.

Thousands of Euros	2018	2017
Available maturity		
2018	—	794,991
2019	671,213	364,250
2020	193,605	179,655
2021 onwards	9,345,791	5,525,021
Total	10,210,609	6,863,917
Cash and cash equivalents (Note 19)	2,801,157	3,197,340
Total adjusted liquidity	13,011,766	10,061,257

Credit risk

The IBERDROLA Group is exposed to the credit risk arising from the possibility that counterparties (customers, financial institutions, partners, etc.) might fail to comply with contractual obligations.

Credit risk is managed and limited adequately in accordance with the type of transaction and the credit quality of the counterparties. Specifically, there is a corporate credit risk policy which establishes criteria for admission, approval systems, authorisation levels, rating tools, exposure measurement methodologies, exposure limits, mitigation tools, etc.

Below balances for financial assets and contract assets are detailed at 31 December 2018 and 2017 by country:

Thousands of Euros	Other non-current financial investments (Note 13.b)		Other current financial investments (Note 13.b)		Trade and other non-current assets (Note 14)		Trade receivables and other current (Note 18)	
	31.12.2018	31.12.2017	31.12.2018	31.12.2017	31.12.2018	31.12.2017	31.12.2018	31.12.2017
Spain	105,451	172,744	167,609	195,090	1,005,490	288,532	2,335,330	2,368,870
United Kingdom	61	16,089	40,018	115,702	80,354	44,111	1,004,961	898,377
United States	55,187	49,230	65,071	62,544	10,247	72,932	1,022,335	910,691
Mexico	5,947	3,972	2,193	8,846	303,212	303,062	158,976	123,404
Brazil	2,514,505	2,363,590	276,831	180,391	76,813	108,624	1,227,178	1,292,174
RoW	4,236	6,940	19,846	36,310	4,136	21,429	349,602	262,856
Total	2,685,387	2,612,565	571,568	598,883	1,480,252	838,690	6,098,382	5,856,372

Balances “Other current and non-current financial investments” correspond to concession agreements executed with Brazilian public administrations (Note 11) and receivables related to regulated activities in Spain. With regard to credit risk on trade receivables and other contract assets, the cost of defaults has remained moderate at levels close to 1% of total turnover of this activity, despite the difficult economic environment of recent years.

With regard to the cash and cash equivalents from the consolidated financial statement, the credit quality of the counter parties is BBB+ according to the Standard and Poor's rating.

Sensitivity analysis

The following sensitivity analyses show, for each type of risk (without reflecting the interdependence among risk variables), how profit for the year and equity might be affected by reasonably possible changes in each risk variable at 31 December 2018 and 2017. Therefore, the sensitivity analysis does not show the effect on profit for the year and equity that might have arisen if during 2018 and 2017 the risk variables had been different.

– Financial:

The sensitivity of consolidated profit and equity to the variation in interest rates is as follows:

Thousands of Euros	Increase/ decrease in interest rate (basis points)	Impact on profit of the year before taxes Income/(Expense)	Direct impact on equity before taxes	Impact on equity before taxes
2018	25	45	112,923	112,968
	(25)	(45)	(112,923)	(112,968)
2017	25	171	67,229	67,400
	(25)	(171)	(67,229)	(67,400)

The sensitivity of the consolidated profit and equity of the IBERDROLA Group to changes in the dollar/euro, pound sterling /euro and Brazilian real/euro exchange rate is as follows:

Thousands of Euros	Change in the dollar/euro exchange rate	Impact on profit of the year before taxes Income/(Expense)	Direct impact on equity before taxes	Impact on equity before taxes
2018	Depreciation 5%	(2,826)	(774,761)	(777,587)
	Appreciation 5%	3,123	856,315	859,438
2017	Depreciation 5%	(166)	(680,585)	(680,751)
	Appreciation 5%	183	752,226	752,409

5. USE OF ESTIMATES AND SOURCES OF UNCERTAINTY

5.a) Accounting estimates

The most significant estimates made by the IBERDROLA Group in these consolidated annual accounts are as follows:

- Unbilled power supplied:

Sales for each year includes an estimate of the power supplied to customers of liberalised markets but not billed because it had not been measured at year end due to the regular meter-reading period. Estimated unbilled power at 31 December 2018 and 2017 amounted to Euros 2,066,981 and Euros 2,005,863 thousand, respectively. This amount is included under "Trade and other current assets" in the consolidated statements of financial position at 31 December 2018 and 2017 (Note 18).

– Settlements of regulated activities in Spain:

At the end of each year, the IBERDROLA Group estimates the definitive settlement of regulated activities in Spain for that year, establishing any shortfall in revenue and the amount that will be recovered in the future on the basis of the announcements made by the authorities and the periods during which this recovery will take place (Note 35).

These estimates are made on the basis of the provisional settlements published up to the date the consolidated annual accounts were authorised for issue and all available sector information.

– Contracts to trade energy supplies:

As mentioned in Note 3.h, the IBERDROLA Group analyses its contracts to trade energy supplies to ensure they are properly classified for accounting purposes. This analysis involves estimating final customer demand and other variables. These estimates are revised at regular intervals.

– Provisions for liabilities and charges:

As indicated in Note 3.t, the IBERDROLA Group recognises provisions to cover present obligations arising from past events. For this purpose, it must assess the outcome of certain legal, tax or other procedures that are ongoing at the date of these consolidated annual accounts were authorised for issue in accordance with the best information available.

– Useful lives:

The IBERDROLA Group's tangible assets operate over very prolonged periods of time. The Group estimates their useful lives for accounting purposes (Note 3.e) taking into account each asset's technical characteristics, the period over which they are expected to generate economic benefits and the applicable legislation in each case.

– Costs incurred in closing and dismantling electricity production and distribution facilities:

The IBERDROLA Group periodically revises the estimates made concerning the costs to be incurred in dismantling its facilities.

– Provision for pensions and similar obligations and restructuring plans:

At each year end, the IBERDROLA Group estimates the current actuarial provision required to cover obligations relating to restructuring plans, pensions and other similar obligations to its employees. In certain cases, it involves the valuation of the assets affected to certain plans. In making these estimates, the IBERDROLA Group receives advice from independent actuaries and expert appraisers (Notes 3.p, 3.q and 25).

– Fair value of investment property:

The IBERDROLA Group appraises its investment property each year. While these appraisals are particularly important given the current situation of the real estate market, the IBERDROLA Group considers that its appraisals, commissioned by independent valuers, appropriately reflect this situation.

- Impairment of assets:

As described in Notes 3.i and 12, the IBERDROLA Group, in accordance with applicable accounting regulations, tests the cash-generating units that require testing for impairment each year. Specific tests are also conducted if indications of impairment are detected. These impairment tests involve estimating the future performance of the businesses and the most appropriate discount rate in each case. The IBERDROLA Group believes its estimates in this respect are appropriate and consistent with the current market situation and reflect its investment plans and the best available estimate of its future expense and income, and that its discount rates appropriately reflect the risk of each cash-generating units.

- Other intangible assets:

As disclosed in Note 3.b of these consolidated annual accounts, "Other intangible assets" in the consolidated statement of financial position include wind farm projects in the development phase acquired in business combinations. The IBERDROLA Group estimates that these projects meet the identifiability requirement under IAS 38 for them to be capitalised, and that the Group's future investment plans will include the construction of the facilities proposed in these projects.

5.b) Sources of uncertainty

There are certain aspects that, at the date of the formulation of these consolidated annual accounts, constitute a source of uncertainty concerning the accounting effect:

- Article 12.5 of the amended Corporate Income Tax Act, in the version drafted prior to Act 31/2011, establishes an applicable deduction for those companies that have acquired significant holdings in foreign companies. IBERDROLA is applying said deductibility for the financial goodwill arising from the acquisitions of Scottish Power PLC. (now Scottish Power Limited) and Energy East Inc. (now AVANGRID).

In 2007 the Official Journal of the European Union published a formal investigation procedure launched by the European Commission to determine whether or not this deduction complied with European law, a process that concluded with three EC decisions issued in 2009, 2011 and 2014 (known as the First Decision, the Second Decision and the Third Decision). In differing contexts, these decisions concluded that Article 12.5 was a form of State aid incompatible with the common market, establishing the recovery of the applicable deductions.

After a long process, the General Court passed a series of rulings on 15 November 2018 that established that tax deduction for goodwill, in the terms outlined in Spanish regulations, is a selective measure, despite the fact that all companies subject to corporate income tax may access the advantage that this measure provides for, thus confirming the EC's First and Second Decision. Spain and IBERDROLA (among other companies) have lodged an application for annulment of the Third Decision before the General Court of the European Union which is pending ruling.

We expect that these November 2018 rulings will be challenged in a new cassation appeal before the Court of Justice of the European Union. However, what is most important to IBERDROLA is that these General Court rulings maintain legitimate expectations, confirming the provisions of the first two decisions that allow the application of the deduction for goodwill relating to acquisitions of holdings made before 21 December 2007 or where the operation had been irrevocably agreed before this date. This legitimate expectation is the basis for the Group's application for deduction of goodwill.

From the perspective of the Spanish Administration, an aid retrieval procedure has been initiated by virtue of the General Tax Act recovering from IBERDROLA the amount Euros 665 million (Euros 576 million as tax base and Euros 89 million as late interests accrued) by virtue of section 12.5. IBERDROLA paid said amount by (i) compensating the return of the 2016 corporate income tax in the amount of Euros 363 million and (ii) paying the amount of Euros 302 million in February 2018. All this was carried out in accordance with the Third Decision.

In any case, actual recovery of the aid will be provisional, subject to the final outcome of the appeals submitted against the three European Commission decisions.

- The IBERDROLA Group has an interest in several nuclear plants, all of which are located in Spain. The operating licences in effect for nuclear plants have a term of 30 to 40 years from their coming into operation. Those plants are governed by the Sustainable Economy Law (Ley de Economía Sostenible), enacted on 15 February 2011, which provides, with no time limit, that the share of nuclear power in the production mix must be determined in accordance with its production timetable and the licence renewals requested by nuclear plant owners within the framework of the prevailing law.

Taking this into account, as well as the investment and maintenance policies followed at its nuclear plants, the IBERDROLA Group considers that the corresponding operating licences will be renewed at least until those plants are 40 years old. Accordingly, for accounting purposes the plants will be depreciated over the resulting period (Note 3.e).

However, as long as regulatory changes affect the future use of nuclear technologies, IBERDROLA will revise their useful life estimates, as required by the accounting standards.

- The Notes 31 and 44 of these consolidated annual accounts describe the principal contingent liabilities of the IBERDROLA Group, the majority of which have arisen in ongoing litigation, the future course of which cannot be determined with certainty at the reporting date of these consolidated annual accounts.
- The IBERDROLA Group is currently involved in negotiations and/or arbitration regarding some of its long-term contracts to supply or sell raw materials and believes that their outcomes will not have a significant change on the amounts shown in the consolidated annual accounts.

The IBERDROLA Group and its legal and tax advisors consider that no losses of assets and no significant liabilities will arise for the IBERDROLA Group as a result of the matters detailed in the paragraphs above.

5.c) IBERDROLA and the United Kingdom's exit from the European Union (Brexit)

On the 29 March 2019, the United Kingdom is expected to conclude its withdrawal from the European Union.

After intense negotiations on matters such as the cost of separation, the mutual recognition of the rights of citizens and the prevention of a return to a hard border between Northern Ireland and the Irish Republic, on 25 November 2018, the Council of the European Union approved two key documents: the EU-UK Withdrawal Agreement (a legally binding document that establishes the terms of the UK's exit from the European Union, including citizen's rights and the Irish backstop) and the Political Declaration (which establishes the basis for a future negotiation of the relationship between the United Kingdom and the EU post-Brexit, including trade relations and matters of UK-EU security). To date, this agreement has not been passed by the UK parliament, the government is seeking changes to the deal and there is talk of delaying Brexit beyond 29 March.

If the EU-UK Withdrawal Agreement is not passed by parliament, there is the risk of a no-deal Brexit on 29 March, which would probably mean that the trade relationship between the European Union and the EU will be regulated by World Trade Organization (WTO) rules. The government of the United Kingdom has published a series of technical documents that cover some of the key areas of concern in the event of a no-deal scenario. Essentially, these documents seek to minimise impact as much as possible, including changes existing agreements. However, WTO rules would mean that UK-EU trade, which is currently fluid, would become cross-border trade, subject to customs controls and tariffs. In the event of a no-deal scenario, an economic downturn is forecast for the United Kingdom. IBERDROLA and SCOTTISH POWER are therefore preparing to offset any negative impact arising from this situation. To this end the business and corporate areas have drawn up a no-deal Brexit risk map, as well as the implementation of measures designed to monitor and allay this impact. Some of the key areas of risk that were considered are explained below:

Risk	Measures
Impact stemming from the UK's decision to leave the EU and market reaction to events arising during the negotiations. This impact may include movements in the value of sterling and other financial instruments. In the longer term, there may be positive or negative changes to the UK economy in the political and regulatory environment in which the Group operates.	As well as monitoring new legislative developments and ongoing measures related to Brexit, the existing financial risk policy takes into account the most common financial risk in the short term, such as adverse fluctuations to exchange and interest rates. Any long-term impact on the UK economy and its impact on the Group and its business will be managed in line with future developments. A large legal team that is monitoring any potential risk which might arise from a regulatory perspective is in contact with governments and regulators in order to minimise any impact.
Interruptions to the supply chain: delays to the import of equipment and components that are essential to key project, resulting in setbacks.	The key materials and supplies have been identified, with extra orders put in to increase stock levels on 29 March 2019. We have also studied extra storage needs, taking steps to guarantee sufficient provisions.
Exposure to exchange rates and additional tariffs if WTO rules are applied.	The exchange rate has been covered in existing contracts. There has been a legal review of critical contracts to determine any possible exposure to new tariffs.
Contractual risk to existing non-trade contracts, including the risk of reopening, clauses such as force majeure, change of law and material adverse change.	There has been a legal review of critical contracts to determine any potential exposure and the specific mitigation of each contract.
Contractual risk affecting existing trade contracts (affecting wholesale and retail energy sales), including master trade agreements and broker and swap contracts.	Risk assessment of all contracts, although some only deal with the United Kingdom, and are therefore not affected, as the majority of counter parties and swaps are in the UK.
Free movement of employees: possible restrictions affecting EU citizens working in the UK or international assignments from other IBERDROLA Group companies, who are currently not present in the United Kingdom but who wish to operate there.	Recent announcements from the UK government confirm that EU citizens in Britain will form a part of the agreement with the EU. Ongoing initiative to assess the impact on and support for affected employees during the process. Contingency agreements are being put in place for workers outside the United Kingdom.
Data protection: the impact of the General Data Protection Regulation on the UK's regulations and status post-Brexit could affect the transfer of data between Group companies and suppliers in the normal course of business.	All inter-company contracts have been reviewed in order to update contractual clauses. High-risk suppliers have been identified and, where necessary, negotiation have commenced to modify contractual terms.

Even in the event that agreement is reached, Brexit may yet have risks and opportunities for IBERDROLA and SCOTTISH POWER. Until the exit terms and nature of the future relationship are clear, it will not be possible to reach definitive conclusions. Many of the risks described previously regarding a no-deal scenario stem from the so-called horizontal problems which may affect many sectors in the economy. IBERDROLA and SCOTTISH POWER will continue to monitor the impact of Brexit, taking the necessary steps as the outcome of leaving becomes clearer.

6. MODIFICATION TO CONSOLIDATION PERIMETER

In 2018, IBERDROLA Group undertook the following sales of stock in Group companies:

- At the closing of 2017, the US and Canada gas business complied with the requirements set in IFRS 5: "Non-current assets held for sale and discontinued operations" for their recognition as such in the consolidated annual accounts, as long as i) there was a sale plan at a reasonable cost compared to fair value of assets subject to the transaction and ii) the sale could be expected to be completed in less than a year.

As of 31 December 2017, the IBERDROLA Group reported assets and liabilities linked to the gas business in the US and Canada for sale in the sub-headings "Assets held for sale" and "Liabilities linked to assets held for sale" in the consolidated annual accounts.

On March 1, 2018, Avangrid Renewables Holdings, Inc., subsidiary of AVANGRID, has formalized the sale of the gas trading business, which operated through the company Enstor Energy Services, LLC, to the company CCI U.S. Asset Holdings LLC, a subsidiary of Castleton Commodities International, LLC. Additionally, on May 1, 2018, Avangrid Renewables Holdings, Inc. has formalized the sale of Enstor Gas, LLC, which managed the gas storage business unit, to Amphora Gas Storage USA, LLC, a subsidiary of ArcLight Capital Partners, LLC.

Said transactions resulted in gross losses of Euros 13,881 thousand recorded under "Losses on disposal of non-current assets" in the consolidated financial statement of 2018 (Note 41).

- In November 2018 90% of IBERDROLA Energía Solar of Puertollano, S.A. was sold to Sociedad Ence Energía, S.L.U. for Euros 72,300 thousand, which resulted in gross capital gains of Euros 12,470 thousand recorded under "Profits on disposal of non-current assets" in the consolidated financial statement of 2018 (Note 41).
- On 16 October 2018, Scottish Power agreed the sale of Scottish Power Generation Ltd. to Drax Group PLC. (DRAX), an operation that was concluded on 31 December 2018 for Pounds Sterling 693 million (Euros 779,101 thousand). The agreement includes a series of variable considerations which, as of 31 December 2018, were valued at zero Euros.

The transaction has implied a gross capital gain of Euros 25,579 thousand which has been recorded under the heading "Gains on sale of non-current assets" in the consolidated financial statement for the year 2018 (Note 41).

- In December 2018, the IBERDROLA Group sold an 80% ownership interest in Coyote Ridge Wind LLC to WEC Infrastructure for a sale price of Euros 50,789 thousand, giving rise to a gross loss of Euros 23,116 thousand, which has been recorded under "Losses on disposal of non-current assets" in the consolidated statement of income for 2018 (Notes 13.a and 41).

As regards to 2017, on 24 August 2017, the incorporation of the activity and businesses of Elektro Holding, S.A. (ELEKTRO) in Neoenergia S.A. (NEOENERGIA) was completed, according to the agreement of the NEOENERGIA shareholders (BB Banco de Investimento S.A.- Banco do Brasil, Caixa de Previdência dos Funcionários do Banco do Brasil –Previ and IBERDROLA Energía, S.A.U. - IBERDROLA ENERGÍA), notified on 8 June 2017 and once the suspensive conditions have been met that were subject to the operation. Through this transaction, IBERDROLA Group acquired NEOENERGIA compared to the previous control granted by its prior stake. This thus results in an acquisition in stages.

NEOENERGIA is a leading private electricity group in Brazil, which operates in 11 states and is present in the energy generation, transmission, distribution and marketing business. Currently, do Brasil and Previ are holders of 12% and 49% respectively of the capital of NEOENERGIA, with 39% remaining owned by IBERDROLA ENERGÍA. After the effectiveness of the operation, on Banco do Brasil and Previ own approximately 9.35% and 38.21% respectively of the capital of NEOENERGIA, and IBERDROLA ENERGÍA now holds 52.45%.

The operation was structured between NEOENERGIA and ELEKTRO via the Brazilian legal form called “*incorporação*”, which involved an increase in share capital in NEOENERGIA that will be fully subscribed by IBERDROLA ENERGÍA and will imply the termination of ELEKTRO and the transfer en bloc of its equity to NEOENERGIA, which acquired the rights and obligations of the former through universal succession.

The competent Brazilian authorities, Conselho Administrativo de Defesa Econômica (CADE), have authorised the merger operation between NEOENERGIA and ELEKTRO without restrictions, as it appears published in the Official Journal from 4 July.

The fair value of the assets and liabilities of NEOENERGIA on 24 August 2017 and its carrying value on this date was the following:

Thousands of Euros	Note	Fair value at 24.08.2017	Fair value at 24.08.2017
Intangible assets	8	3,646,381	2,611,485
Property, plant and equipment	10	1,136,997	1,136,997
Non-Current Financial investments		2,879,125	2,707,592
Deferred tax assets	31	176,485	176,485
Non-Current Trades and other accounts receivable		52,048	52,048
Inventories		14,145	14,145
Current Trades and other accounts receivable		1,014,685	1,014,685
Current Financial investments		763,303	763,303
Cash and cash equivalents		76,366	76,366
Total		9,759,535	8,553,106

Thousands of Euros	Note	Fair value at 24.08.2017	Fair value at 24.08.2017
Provision for pensions and similar Non-current obligations	25	273,900	273,900
Other non-current provisions	26	269,544	129,657
Non-current financial debt	29	2,667,380	2,667,380
Other non-current payables		128,992	128,992
Deferred tax liabilities	31	452,915	20,586
Provision for pensions and similar current obligations	25	7,985	7,985
Other current provisions	26	45,201	45,201
Current financial debt	29	1,228,822	1,228,822
Current Trade and other payables		1,361,369	1,361,369
Total		6,436,108	5,863,892
Net assets		3,323,427	
Fair value of previous stake in NEONERGIA at 39%		(1,321,844)	
Adjustments in NEOENERGIA shares due to previous control (1)		8,723	
Recognition of non-controlling interests	20	(1,798,535)	
Goodwill arising on the acquisition	8	244,069	
Total acquisition cost		455,840	

- (1) For the purposes of calculating acquisition cost, the value of NEONERGIA shares has been reduced in Euros 8,723 thousand due to the existence of previous control by IBERDROLA Group over certain assets over which NEONERGIA in turn had an interest.

As mentioned before, the IBERDROLA Group has acquired an additional stake in NEOENERGIA in exchange for the 47.55% interest it had in ELEKTRO, of which IBERDROLA S.A. was the indirect holder of 100% of its shares through the Group company IBERDROLA ENERGÍA.

As a consequence, Euros 606,918 thousand has been recognised in "Equity - Non-controlling interests" in the 2017 consolidated statement of financial position, which represents the 47.55% non-controlling interest in the carrying amount of ELEKTRO at the transaction date (Note 20). The difference between this amount and fair value of ELEKTRO given as consideration resulted in a charge of Euros 493,293 thousand to "Equity - Other reserves" and a credit of Euros 342,214 thousand to "Equity - Translation differences" in the statement of financial position (negative net impact of Euros 151,079 thousand).

As a consequence of this business combination achieved in stages, an amount of Euros 44,012 thousand was taken to 'Gains/losses on disposal of non-current assets' in the 2017 consolidated income statement (Note 41), which included the following effects:

- Measurement of the previous shareholding in NEOENERGIA at the fair value on the acquisition date, which involved a gain of Euros 325.274 thousand as the difference between the fair value of Euros 1,321,844 thousands and a book value of Euros 996,570 thousand.
- Debit and credit in the consolidated income statement for the losses recognised before the transaction under 'Translation differences' and 'Valuation adjustments ' for an amount of Euros 296,213 thousand and Euros 666 thousand, respectively, from the prior investment of the IBERDROLA Group.
- Measurement of the previous shareholding in which IBERDROLA Group had an interest at the fair value on the acquisition date, resulting in a capital gain of Euros 14,285 thousand.

The IBERDROLA Group has opted to measure the non-controlling interests in NEOENERGIA at their fair value at the acquisition date, crediting Euros 1,798,535 thousand to 'Equity –Non-controlling interests' of the consolidated statement of financial position at 31 December 2017 (Note 20).

The contribution of the net assets incorporated in the transaction with NEOENERGIA to the 2017 net profit from continuing operations of the IBERDROLA Group has amounted to a loss of approximately Euros 3,030 thousand from 24 August 2017, before considering the profit of the Euros 44,012 thousand previously described. Had this acquisition taken place on 1 January 2017, the increase in consolidated revenues in 2017 would have amounted to Euros 3,414,226 thousand and the decrease in net profit from continuing operations would have been Euros 21,825 thousand.

Goodwill resulting from this business combination, of Euros 244,069 thousand, is mainly comprised of future economic benefits derived from the activity of NEOENERGIA that do not qualify for separate recognition at the time of the business combination.

The costs incurred in the acquisition were not significant.

7. GEOGRAPHICAL AND BUSINESS SEGMENT REPORTING

The IBERDROLA Group combines their segments tending to the nature of the business activities in the different geographic areas in which said activities take place. The operating segments identified by IBERDROLA bearing in mind the changes described in Note 2.d are as follows:

- Networks business: including all the energy transmission and distribution activities, and any other regulated activity carried out in Spain, the United Kingdom, the United States and Brazil.
- Liberalised business: includes electricity generation and retail businesses carried out by the Group in Spain and Continental Europe, the United Kingdom, Mexico, and Brazil.
- Renewable business: activities related to renewable energies (mainly wind and hydroelectric) in Spain, the United Kingdom, the United States, Mexico, Brazil and the Rest of the world.
- Other businesses: groups supply and gas storage up to the moment of sale (Note 41) and other non-energy related businesses.

Additionally, Corporation includes the costs of the Group's structure (Single Corporation), and of the administration services of the corporate areas that are subsequently invoiced to the other companies through specific service agreements.

Transactions between the different segments are generally carried out at arm's length.

The key figures for the operating segments identified are as follows:

Business segmentation reporting for 2018

	Liberalised					Renewables						Networks					Other business, Corporation and adjustments	Total	
Thousands of Euros	Spain and continental Europe	United Kingdom	Mexico	Brazil	Total	Spain	United Kingdom	United States	Mexico	Brazil	RoW	Total	Spain	United Kingdom	United States	Brazil			Total
REVENUE																			
External revenues	12,789,028	4,942,455	2,252,552	477,457	20,461,492	367,908	119,913	1,026,925	92,976	56,100	250,988	1,914,810	1,994,890	1,113,669	4,274,777	5,184,180	12,567,516	132,055	35,075,873

“Other intangible assets” includes, among other items, wind farm projects in the development phase which meet the identifiability requirement under IAS 38: “Intangible assets”, as they are separable and susceptible to individual sale and are carried at acquisition cost. The IBERDROLA Group transfers these assets to “Property, plant and equipment” in the consolidated statement of financial position when construction of each wind farm commences.

The amounts incurred in due to research and development activities (expenses and investment) in 2018 and 2017 totals Euros 266,547 and 246,392 respectively.

The fully amortised intangible assets in use at 31 December 2018 and 2017 amounted to Euros 1,122,173 and 1,093,271 thousand, respectively.

The IBERDROLA Group maintains at 31 December 2018 and 2017 commitments to acquire intangible assets for Euros 18,942 and 48.559 thousand, respectively.

In addition, at 31 December 2018 and 2017, there were no significant restrictions on the ownership of intangible assets, except for the regulated businesses that may require authorisation of the corresponding regulator for specific transactions.

The allocation of goodwill to the different cash-generating units at 31 December 2018 and 2017 is as follows:

Thousands of Euros	31.12.2018	31.12.2017 Re-stated (Note 2.d)
Electricity and gas generation and supply in the UK	4,256,753	4,330,358
Regulated activities in the UK	832,954	858,779
Renewables in the UK	495,720	493,279
Renewables in the USA	866,431	828,687
Regulated activities in the USA	1,044,989	999,482
Regulated activities in Brazil	153,038	198,115
Electricity generation and retail in Brazil	41,059	46,760
Renewable activities in Brazil	120,976	137,772
Other activities	25,923	39,172
Total	7,837,843	7,932,404

The allocation of indefinite life and in-progress intangible assets at 31 December 2018 and 2017 to the different cash generating units is as follows:

Thousands of Euros	2018			2017		
	Intangible assets with indefinite useful lives	Intangible assets in progress	Total	Intangible assets with indefinite useful lives	Intangible assets in progress	Total
Electricity distribution in Scotland	738,734	–	738,734	751,075	–	751,075
Electricity distribution in Wales and England	710,979	–	710,979	722,856	–	722,856
Electricity transmission in the UK	280,772	–	280,772	285,463	–	285,463
Renewable in the USA	–	126,756	126,756	–	150,563	150,563
Electricity and gas distribution in New York (NYSEG)	1,041,374	–	1,041,374	996,025	–	996,025

Total net cost	462,342	(2,796)	62,464	(97,981)	424,029	5,305	(72)	(670)	428,592

The investment property owned by the IBERDROLA Group relates primarily to properties destined for leasing. The income accrued during fiscal years 2018 and 2017 for this operation are Euros 26,764 and 25,177 thousand, respectively, and were registered in sub-heading "Turnover" of the consolidated income statement. The operating expenses directly related to real estate investments during fiscal years 2018 and 2017 were not significant.

The fair value of real property investments in operation fully amortised intangible assets at 31 December 2018 and 2017 amounted to Euros 479,864 and Euros 477,299 thousand, respectively. This fair value (classified in Level 3) is determined via expert independent appraisals made annually in accordance with the Assessment Standards published by the Royal Institution of Chartered Surveyors (RICS) of Great Britain, in their January 2014 edition. The assessments on 31 December 2018 and 2017 have been made by Knight Frank España.

The assets have been valued individually and not as part of a property portfolio.

The methods applied for the calculation of fair value have been the discount of cash flows, the capitalisation of revenue and the comparison method, contrasted, as much as possible, with comparable transactions to reflect the reality of the market and the prices to which they are currently closing the asset operations of similar characteristics to the reference operations.

The discount of cash flows is in accordance with a prediction of the probable net income that real estate investment will generate for a period of time and considers its residual value at the end of the period. Cash flows are discounted at an internal rate of return that reflects the urban, construction and business risk of the asset.

The variables and key assumptions of the cash flow discount method are:

- Net income that the property will generate for a certain period of time, keeping in mind the initial contractual situation, development of renters and expected income, marketing costs, divestment expenses (variable percentage depending on the sale price 1%-3%), etc.
- Discount rate or objective internal return rate adjusted to reflect the risk that the investment entails depending on the localisation, occupation, renter quality, property age, etc.
- Disposal return, which consists of an estimate of the exit (sale) price of the property applying an estimated return for the close of the transaction at that date, considering the criteria of obsolescence, liquidity and market uncertainty.

For property for hire that does not include many variables as extensive and involves leased property for a period of time greater than 10 years and up and one renter, the capitalisation method for income is usually applied. This method consists of the perpetual capitalisation of the current contractual income via a capitalisation rate that inherently includes the risks and uncertainties that could arise in the market.

At 31 December 2018 and 2017, none of the investment properties had been fully depreciated and there were no restrictions on their realisation. Moreover, there were no contractual obligations to acquire, build, develop, repair or maintain investment property.

10. PROPERTY, PLANT AND EQUIPMENT

The changes in 2018 and 2017 in “Property, plant and equipment” and the appropriate accumulated amortisations and procurement has been as follows:

Thousands of Euros	Balance at 01.01.2017	Translation differences	Modification of the consolidation perimeter (Note 6)	Additions and charge (reversals)	Transfers	Decreases, disposals or reductions	Assets held for sale (Note 41)	Write-off	Balance at 31.12.2017	Translation differences	Modification of the consolidation perimeter (Note 6)	Additions/charge/(reversals)	Transfers	Decreases, disposals or reductions	Write-off	Balance at 31.12.2018

Corporation and other	63,812	52,489
Total	4,705,560	5,792,488

"Amortisation and provisions" in the consolidated income statement for 2018 includes Euros 94,614 thousand for impairment and write-offs of property, plant and equipment of the IBERDROLA Group (Note 40). In 2017 this heading included a debit of Euros 646,145 thousand.

The fully amortised intangible assets in use at 31 December 2018 and 2017 amounted to Euros 2,211,844 and 2,277,060 thousand, respectively.

The IBERDROLA Group maintains at 31 December 2018 and 2017 commitments to acquire Property, Plant and Equipment for Euros 3,308,813 and 4,130,359 thousand respectively.

At 31 December 2018 and 2017, "Property, plant and equipment – Other elements in use" included Euros 221,257 y 203,835 thousand, respectively, for assets held under finance leases corresponding primarily to IBERDROLA Group's corporate offices in Madrid, among other financial assets. Details of minimum payments on the lease contracts at 31 December 2018 and 2017 are as follows:

Thousands of Euros	31.12.2018	31.12.2017
2018	–	13,569
2019	31,061	12,927
2020-2022	30,376	31,454
From 2023 onwards	117,367	116,904
Total	178,804	174,854
Financial Cost	36,501	28,890
Present value of the payments	142,303	145,964
Total	178,804	174,854

The present value of instalments is recognised in “Financial debt - Loans and borrowings” in current and non-current liabilities on the consolidated income statement at 31 December 2018 and 2017.

11. CONCESSION ARRANGEMENTS

The duration of each concession is 30 years, and they may be extended for up to 30 years at the request of the concession holder and at the discretion of the concession grantor, which is the Agência Nacional de Energia Elétrica (ANEEL). The concession holder may not transfer such assets or use them as collateral without the prior written consent of the regulator. At the end of a concession the property reverts automatically to the concession grantor and the amount of indemnification due to the concession holder is assessed and determined. Appendix II details in more depth the Brazilian regulation applicable to the concessions above.

Income from previous concession agreements include the provision of construction services (Note 35) and of operation and maintenance services in the facilities already built owned by the awarding public administration. The provision of these services constitutes two separate obligations subject to different margins.

Construction services have duration of 3 to 5 years, whereas operation and maintenance services are started on the date the facilities are delivered. As a general rule, this delivery date determines the start of the annual payments agreed on the concession agreements. The collection of said annual payments is extended during the concession period (normally 30 years). This circumstance determines a material financial element.

12. IMPAIRMENT OF NON-FINANCIAL ASSETS

Methodology of impairment tests

At least yearly, the IBERDROLA Group analyses its assets for indications of impairment. If such indications are found, an impairment test is conducted.

In addition, the IBERDROLA Group conducts a systematic analysis of the impairment of cash-generating units that include goodwill or intangible assets in progress or with indefinite useful life.

Additionally, it must be noted that in October 2018 the sale of practically all traditional generation assets in the United Kingdom to the company Drax Smart Generation, subsidiary of Drax Group, was agreed. The sale was completed in December 2018 (Note 41). Following this sale, the cash-generating unit for electricity and gas Generation and Supply in the United Kingdom is based in the supply activity.

The projections used in the impairment tests are in accordance with the best forecast information held by the IBERDROLA Group and include the investment plans for each country prevailing at that time.

a) Assumptions used in liberalised business:

- Production of the facilities: the hours of operation used are consistent with those in previous years, and in line with the expected evolution of the energy mix of the countries where the IBERDROLA Group operates.
- Selling prices of electricity and gas: the selling prices used are the ones agreed upon in the signed price purchase agreements. For unsold production, future prices in the market where the IBERDROLA Group operates are used.
- Gas purchase prices: the prices used are taken from long-term purchase agreements signed by the IBERDROLA Group, estimating the variables included in them according to external studies.
- Electricity and gas retail margin: growth forecasts were used for the number of customers and unit margins in accordance with the knowledge of the markets in which the IBERDROLA Group operates and the company's relative position in each of them.
- Investment: the best information available has been used on investment plants under way which are going to be put in use in the coming years.
- Operation and maintenance costs: maintenance agreements for existing facilities have been considered. Other operating costs were projected consistent with the expected growth of each cash-generating unit, assuming its headcount grows at the same pace.

b) Assumptions used in the Networks business:

- Regulated income: approved remuneration was used for the years in which it was available, while for subsequent periods, updating mechanisms of this remuneration, which were applied in line with the estimated costs of the corresponding cash-generating units, were used.
- Investment: the projections were in accordance with investment plans consistent with the demand growth in each and the undertakings in the concession agreements with the minimum required by the different regulators and the estimate of future remuneration used.
- Operation and maintenance costs: the best estimation available of trends in operating and maintenance costs was used, taking into account its consistency with the remuneration assumed to be received in each year.

c) Assumptions used in the renewables business:

- Facilities' production: the operating hours of each wind farm were consistent with their historical output. In this respect, the long-term predictability of the facilities' output was taken into account, which was also covered in practically all countries by regulatory mechanisms that enabled wind farms to produce whenever meteorological and network conditions so allowed.

- Selling prices of electricity: the selling prices used are the ones agreed upon in the signed sales agreements. For unsold production, future prices in the market where the IBERDROLA Group operates are used. In any case, existing support mechanisms were taken into account.
- As described in Note 5.b, an estimate has been made of the regulation that will apply to USA facilities applicable from 31 December 2019.
- Investment: the projections were in accordance with the best information available about the plants that were expected to enter operation in the coming years, taking into account the price set in the contracts to buy wind turbines from various suppliers, including SIEMENS GAMESA (Note 50), as well as the technical and financial capacity of the IBERDROLA Group to successfully fulfil said planned projects.
- Operation and maintenance costs: the prices set in land leases and maintenance agreements for the entire useful life of the facilities were used, where the high predictability of the costs of wind farms must be taken into account.

d) Projection period and nominal growth:

The projection period of future cash flows and the nominal growth rate (g) used to extrapolate these projections beyond the reporting period for the different groups of cash-generating units are as follows:

	2018		2017	
	No. of years	g	No. of years	g
Electricity and gas generation and supply in the UK	Useful life / 10	- 2.0%	Useful life / 10	- 1.5%
Electricity transmission and distribution in the UK	10	2.5%	10	2,5%
Renewables in the UK	Useful life	-	Useful life	-
Electricity transmission and distribution in the US	10	1.0%	10	1,0%
Renewable Renewables in the USA	Useful life	-	Useful life	-
Electricity generation and retail in Brazil	Useful life / 15	- 4.5%	n/a	n/a
Electricity transmission and distribution in Brazil	Concession life	-	Concession life	-
Renewable energies in Brazil	Useful life	-	n/a	n/a

Although IAS 36: "Impairment assets" recommends the use of projections not exceeding five years for impairment test purposes, IBERDROLA has decided to use the periods included in this table for the following reasons:

- The most appropriate method for assets in the conventional or renewables generation business is to use their remaining useful lives, especially when in many cases very long-term energy sale contracts have been signed and long-term estimated prices curves are frequently used in the operating activity of the IBERDROLA Group (contracts, hedges, etc.).
- Electricity transmission and distribution concessions include longer regulatory periods and the method that the regulator will use to calculate the new tariff at the beginning of the new regulatory period is known.
- The IBERDROLA Group considers its projections to be reliable and that past experience demonstrates its ability to predict cash flows in periods such as those under consideration.

The nominal growth rate considered in the electricity and gas transmission and distribution activities in the United Kingdom, United States and Brazil is consistent with the market and inflation growth forecasts available to the IBERDROLA Group for these markets.

e) Discount rate:

The methodology for calculating the discount rate used by IBERDROLA consists of adding the specific risks of the asset or risk premium of the asset or business in question to the time value of money or risk-free rate of each market.

The risk-free rate corresponds to 10-year Treasury bonds issued in the market, with sufficient depth and solvency. In countries with economies or currencies lacking sufficient depth and solvency, a country risk and currency risk are estimated so that the aggregate of all these components approximates to be the finance cost without the risk spread of the asset.

The asset's risk premium corresponds to the specific risks of the asset, the calculation of which takes into account the betas estimated on the basis of comparable companies performing the same main activity.

The discount rates before taxes used for the impairment test for the different groups of cash-generating units were as follows:

	Rates 2018	Rates 2017
Electricity and gas generation and supply in the UK	7.01%	6.25%
Electricity transmission and distribution in the UK	4.57%	4.75%
Renewable energies in the UK onshore/offshore	5.72%/6.29%	5.95%/6.85%
Electricity transmission and distribution in the US	5.49%	5.48%
Renewable energies in the US onshore/offshore	6.29%/7.49%	6.13%/7.58%
Electricity generation and retail in Brazil	13.90%	n/a
Electricity transmission and distribution in the Brazil	12.34%	12.56%
Renewable energies in Brazil	13.61%	n/a

Impairment and write-downs recognised in 2018 and 2017

During 2018 and 2017, the IBERDROLA Group has recognised the following impairment as a consequence of the impairment tests carried out (Note 40):

- As a consequence of the periodic impairment tests carried out in 2018 and 2017 on the renewables facilities under construction in the USA (Note 3.b), the IBERDROLA Group reversed part of the provision accounted for in relation its intangible assets in past years. In 2018 and 2017 this reversal amounted to Euros 52,688 thousand and to Euros 42,959 thousand, respectively.
- In 2017 in the renewables energies cash-generating unit in the US, the recoverable amount is Euros 449,480 thousand lower than the carrying amount due to the tax reform resulting in substantial changes in both the composition of carrying amounts and the tax rate. This amount has been written-off from goodwill (Note 8).

Sensitivity analysis

The IBERDROLA Group has performed several sensitivity analyses of the impairment test results carried out in a systematic manner including reasonable changes in a series of basic assumptions defined for each cash-generating unit (or groups of cash-generating units):

- Electricity and gas generation and supply in the UK and Brazil:
 - Decrease of 10% in energy produced.
 - Decrease of 10% in margin per kWh.
 - Decrease of 10% in electricity and gas customer growth.
 - Decrease of 10% in electricity and gas supply per kWh.
 - Increase of 10% in operating and maintenance costs.
 - Increase of 10% in investment costs.
- Electricity transmission and distribution in the United Kingdom, United States and Brazil:
 - Decrease of 10% in rate of return on which regulated remuneration is based.
 - Increase of 10% in operating and maintenance costs.
 - Decrease of 10% in investment (resulting in a subsequent decrease in remuneration).
- Renewables in the United Kingdom, United States and Brazil:
 - Decrease of 5% in energy produced.
 - Decrease of 10% in total price per kWh, solely applicable to production for which there are no long-term sales agreements.
 - Increase of 10% in operating and maintenance costs.
 - Increase of 10% in investment costs.

Moreover, the IBERDROLA Group has performed an additional sensitivity analysis, consisting in increasing the applicable discount rate to the United Kingdom and United States by 50 basis point and to Brazil by 100 basis points.

These sensitivity analyses, carried out separately for each basic assumption, would not reveal the existence of any depreciation, except in the following cases:

- Electricity generation and supply in the UK, whose value in use is close to each book value, so that practically any negative variation of the key hypothesis would mean that the value in use would be lower than its carrying amount.
- Renewable energies production in the US, whose value in use is Euros 138 million more than its carrying amount, in which a decrease of 0.6% in energy produced, a lower market price of 1.2% or an increase of 10 basis points in the discount rate would mean that the value in use would be lower than its carrying amount.

13. INVESTMENTS

13.a) Equity-accounted investees

Movement in the carrying amounts of equity-accounted investees, associates and joint ventures of the IBERDROLA Group (Appendix I) in 2018 and 2017 is as follows:

Thousands of Euros	Associated companies	Neonergia Subgroup	Flat Rock Subgroup	Other joint ventures	Total
Balance at 01.01.2017	642,485	1,114,073	144,788	338,309	2,239,655
Investment	6,387	10,422	2,215	58,307	77,331
Modification of the consolidation perimeter (Note 6)	–	770,306	–	–	770,306
Transfers	–	–	–	88,886	88,886
Profit for the year from continuing operations	6,346	(7,189)	(2,302)	14,188	11,043
Profit for the year from discontinued operations	328	–	–	–	328
Value adjustment (provision)/reversion	–	–	–	(39,776)	(39,776)

Disposals	–	–	–	(4,460)	(4,460)
Others	1,128	161	(2)	(565)	722
Balance at 31.12.2018	648,756	661,553	144,834	254,375	1,709,518

The balance corresponding to the NEOENERGIA Subgroup at 31 December 2018 and 2017 mainly includes the shares in Companhia Hidreletrica Teles Pires, S.A (TELES PIRES), Norte Energia, S.A. (NORTE ENERGÍA) and Energetica Aguas da Pedra, S.A. (EAPSA) held by IBERDROLA Group through NEOENERGIA.

Companies' balance of the participated entities at 31 December 2018 includes an amount of Euros 571,414 thousand relating to the IBERDROLA Group's ownership interest in SIEMENS GAMESA, the share price of which at year-end amounted to Euros 584,958 thousand.

Main Transactions

The main transactions performed by the IBERDROLA Group in connection with these equity investments accounted for using the equity method are described in the following paragraphs.

Year 2018

- In December 2018 IBERDROLA Group sold its 80% interest in its subsidiary Coyote Ridge Wind, LLC, keeping the remaining 20%, over which exercises significant influence and which is now held as equity-accounted investee (Notes 6 and 41).
- In June 2018, the IBERDROLA Group sold its 20% stake in the company Tirme, S.A., for an amount of Euros 35,100 thousand, which implied a gross capital gain of Euros 30,928 thousand which have been recorded under "Income from companies accounted for using the equity method - net of taxes".
- IBERDROLA Group, through the company Vineyard Wind, LLC, takes part in the development of a large scale offshore wind farm off the coast of Massachusetts, United States, construction of which is set to commence in 2019. In 2018, IBERDROLA Group invested Euros 37,067 thousand, taking the group's future investment commitments to approximately Euros 100 million (Note 50).

Year 2017

- In relation to the merger agreement for the wind businesses of Gamesa Corporación Tecnológica, S.A. (GAMESA) and of Siemens AG (SIEMENS) initiated in 2016 by virtue of which Siemens Wind HoldCo would be absorbed (as absorbed company) by GAMESA (as absorbing company):
 - On 13 March 2017 the European competition authorities authorised the merger without commitments, and all the conditions precedent to which the merger was subject were met.
 - On 29 March 2017 the board of directors of GAMESA acknowledged compliance with all the conditions for executing the merger deed, which was filed with the Vizcaya Mercantile Registry on 3 April.

As a result of the above, GAMESA issued shares representing approximately 59% of the capital given to SIEMENS, causing a dilution in the percentage interest held by the IBERDROLA Group, which dropped from 19.69% to 8.07% (Note 41).

Despite holding an interest of less than 20%, the IBERDROLA Group considers it has significant influence over Siemens Gamesa Renewable Energy, S.A. (hereinafter, SIEMENS GAMESA), amongst other aspects, due to the status of IBERDROLA as a main shareholder as well as to the presence of one of its representatives on its board of directors and the fact that significant transactions have been carried out with this company.

- On 27 April 2017, the IBERDROLA Group sold its interest in Amara, S.A.U. (Note 41).
- As indicated in Notes 2.c. and 7, on 8 June 2017 the shareholders of NEOENERGIA and IBERDROLA ENERGÍA reached an agreement on the takeover of the Brazilian subsidiary. After the operation took effect, on 24 August 2017, IBERDROLA ENERGÍA's investment rose to 52.45% (compared to 39% before the transaction), in exchange for the businesses of ELEKTRO. The takeover by NEOENERGIA has been recognised in accordance with the requirements of business combinations achieved in stages.

Summary of financial information

A summary of the financial information at 31 December 2018 (at 100% and before intercompany eliminations) for the most significant equity-accounted subgroups is as follows:

	NORTE ENERGIA		TELES PIRES		EAPSA		Flat Rock Subgroup	
Thousands of Euros	31.12.2018	31.12.2017	31.12.2018	31.12.2017	31.12.2018	31.12.2017	31.12.2018	31.12.2017

13.b) Other investments

The detail of “Other non-current financial assets” and “Other current financial assets” in the IBERDROLA Group’s consolidated statement of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Non-current (Note 4)		
Receivables in Brazil (Notes 3.b and 11)	2,196,551	2,084,988
Long-term deposits and guarantees	281,942	282,156
Fixed-income securities	4,061	4,116
Concessional guarantee of the sufficiency tariff in Brazil (Note 11)	1,922	55,642
Long-term deposits	52,429	28,757
Credits to third parties	70,999	87,576
Assets for pension plans (Note 25)	7,007	3,326
Other investments in equity-accounted investees	9,195	4,824
Others	80,413	79,995
Bad debt provisions	(19,132)	(18,815)
Total	2,685,387	2,612,565
Current (Note 4)		
Receivables in Brazil (Notes 3.b and 11)	11,606	17,167
Short-term deposits and guarantees	716	2,065
Concessional guarantee of the sufficiency tariff in Brazil (Note 11)	227,698	129,244
Accounts receivable for financing imbalance in revenues in 2018	25,727	–
Accounts receivable for financing imbalance in revenues in 2017	–	57,297
Other investments in equity-accounted investees	7,542	5,970
Short-term deposits	241,305	158,126
Others	66,603	236,808
Bad debt provisions	(9,629)	(7,794)
Total	571,568	598,883

Receivables in Brazil

“Receivables in Brazil” reflects the amount receivable by the Brazilian companies upon collection of their service concession arrangements (Notes 3.b and 11). Law N°12.783/13 provides that such amount will be determined by the reference to the reposition value (Valor Novo de Reposição, VNR) of the concession assets which have not been amortised at the end of the concession period using the residual value of the Regulatory Asset Base (Base de Remuneração Regulatória BRR) at the end of the contractual term of the concession.

The method specified by the regulator allows reasonable estimates of receivables resulting from the concession as long as the awarding public administration protects the value of the Regulatory Asset Base after each ordinary tariff review. Ordinary reviews are conducted every four or five years, based on the concession. This means that after the regulator has conducted a tariff review the value of the Regulatory Asset Base prior to that date it is adjusted for Brazilian Market Prices General Index (or Índice General de Precios de Mercado Brasileiro - IGPM). The next tariff review will determine the value of the regulatory asset base with regard to additions in the interval between two tariff reviews.

To estimate the amount of the financial asset, observable values are used. Specifically, the net replacement value, as calculated by the energy regulator in the course of the latest tariff review. The amount is updated in the intervals between tariff reviews by additions to the underlying fixed assets and translation differences or, as the case may be, any changes in the method of calculation of the net realizable value and the IGPM.

Long-term deposits and guarantees

The "Long term deposits and guarantees" heading essentially corresponds to the portion of guarantees and deposits received from customers at the time of recruitment as security of electricity supply (which are recorded in "Non-Current Liabilities - Other non-current payables" in the consolidated statement of financial position - Note 30) and have been deposited with the competent Public Administrations in accordance with the current legislation in Spain.

Collection right due to imbalanced financing

Act 24/2013 of the Electricity Sector establishes that, in the case that in a period an imbalance occurs due to an income deficit in the settlements of the electricity sector, its quantity may not exceed 2% of the estimated incomes for the system for this period. Furthermore, the accumulated debt due to imbalances in preceding periods may not exceed 5% of the income estimated for the system. If these limits are exceeded, the entrance tolls will be reviewed at least in a total equivalent to the excess of these limits. This law establishes, furthermore, that the part of the imbalance due to an income deficit that, without exceeding these limits, is not compensated via the increase of tolls and charges, will be financed by those subject to the settlement system proportionally to the remuneration that corresponds to them for the activity they carry out.

In 2018 and 2017, the IBERDROLA Group estimated that the definitive settlement of the Spanish electricity system for 2018 and 2017, respectively, would have a surplus, even though, the provisional settlements made until 31 December 2018 and 2017 had a revenue deficit. IBERDROLA Group's financed deficit as of 31 December 2018 and 2017 amounted to Euros 222,841 and 215,889 respectively.

In 2018 and 2017 the amounts of Euros 197,114 and 158,592 thousand respectively correspond to financed deficit and have been subject to a non-recourse factoring contract with credit assignment. Therefore said amounts have been derecognised in the consolidated financial statements at 31 December 2018 and 2017.

IBERDROLA Group's financed deficit as of 31 December 2017 has been collected in 2018.

14. TRADE AND OTHER ASSETS-NON-CURRENT

Details of "Non-current trade and other receivables" in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Receivables from Brazilian customers	80,691	107,840
Contract assets (Note 2.a.)	303,407	435,136
Public Administrations receivables	658,258	–
Others	442,271	299,975
Bad debt provisions	(4,375)	(4,261)
Total (Note 4)	1,480,252	838,690

Balances with third parties other than public administrations correspond to assets arising in the normal course of business of the IBERDROLA Group and, therefore, are recognised at amortised cost. This broadly coincides with its fair value.

15. MEASUREMENT AND COMPENSATION OF FINANCIAL INSTRUMENTS

Most of the financial assets and liabilities registered in the consolidated statements of financial position correspond to the financial instruments classified under the category of loans and receivables, charges and payables.

Fair value in the heading "Financial debt - loans and other receivables" in current and non-current liabilities in the consolidated annual accounts of IBERDROLA Group as of 31 December 2018 and 2017 amounts to Euros 38,422,381 and 38,208,032 thousand. Carrying amount is Euros 37,326,472 and 36,690,498, respectively. Said value is classified in Level 2. The fair value of the derivative financial instruments does not differ significantly from book value thereof.

The sensitivity of the fair value of the IBERDROLA Group's borrowings, after the effect of hedge accounting, to changes in the euro-dollar euro-sterling pound and euro-Brazilian Reals exchange rates is as follows:

Thousands of Euros	2018		2017	
Exchange rate variation	Depreciation 5%	Appreciation 5%	Depreciation 5%	Appreciation 5%
Debt's fair value variation:				
US dollar	(326,675)	361,062	(276,383)	305,476
Sterling Pound	(151,563)	167,517	(126,534)	139,854
Brazilian reals	(224,082)	247,670	(221,734)	245,074

The estimated fair value of borrowings bearing fixed interest rates, after the effect of hedge accounting at 31 December 2018 and 2017, calculated by discounting future cash flows at market interest rates, amounted to Euros 22,752,999 thousand and Euros 18,675,372 thousand, respectively. The interest rate curve used to make this calculation takes into account the risks associated with the electricity industry and the credit rating of the IBERDROLA Group. The sensitivity of that fair value to interest rate fluctuations is as follows:

Thousands of Euros	31.12.2018		31.12.2017	
Variation of interest rate	+0.25%	+(0.25)%	+0.25%	+(0.25)%
Variation in debt value	(272,305)	300,099	(246,825)	253,059

The IBERDROLA Group measures certain available-for-sale assets and derivative financial instruments at fair value, provided they can be measured reliably, classifying them into three levels:

- Level 1: assets and liabilities quoted in liquid markets.
- Level 2: assets and liabilities whose fair value is determined using valuation techniques with observable market data.
- Level 3: assets and liabilities whose fair value is determined using valuation techniques without observable market data.

The breakdown of financial instruments measured at fair value by levels is as follows:

Thousands of Euros	Value at 31.12.2018	Level 1	Level 2	Level 3
Derivative financial instruments (financial assets)	1,333,649	4,721	1,221,240	107,688
Derivative financial instruments (financial liabilities)	(835,534)	(208)	(699,489)	(135,837)
Total (Note 28)	498,115	4,513	521,751	(28,149)

Thousands of Euros	Value at 31.12.2017	Level 1	Level 2	Level 3
Derivative financial instruments (financial assets)	1,267,298	10,952	1,159,198	97,148
Derivative financial instruments (financial liabilities)	(604,016)	(87,528)	(501,210)	(15,278)
Total (Note 28)	663,282	(76,576)	657,988	81,870

The reconciliation between initial and final balances for financial instruments classified as Level 3 of the fair-value hierarchy is as follows:

Derivative Financial instruments		
Thousands of Euros	2018	2017
Initial balance	81,870	30,534
Income and expense recognised in consolidated income statement	6,655	15,544
Income and expense recognised in equity	(17,298)	(4,930)
Purchases	(9,402)	(1,736)
Sales and settlements	(7,422)	(5,990)
Translation differences	(597)	(6,247)
Transfers	(81,955)	54,695
Final balance	(28,149)	81,870

The fair value of Level 3-classified financial instruments has been determined by the discounted cash flow method. Projections of these cash flows are in accordance with assumptions not observable in the market, and mainly correspond to purchase and sale price estimates that the Group normally uses, in accordance with its experience in the markets.

None of the possible foreseeable scenarios of the indicated assumptions would result in a material change in the fair value of the financial instruments classified at this level.

In addition, the IBERDROLA Group's financial assets and liabilities are compensated and presented net on the consolidated statement of financial position when a legally enforceable right exists to offset the amounts recognised and the Group intends to settle the assets and liabilities net or simultaneously. The breakdown of netted financial assets and liabilities at 31 December 2018 and 2017 is as follows:

31.12.2018						
Uncompensated amounts under compensation agreements						
Thousands of Euros	Gross amount	Compensated amount	Net amount	Financial instruments	Financial guarantee	Net amount
ASSET DERIVATIVES

16. NUCLEAR FUEL

Details of and movement in “Nuclear Fuel” of the consolidated statement of financial position at 31 December 2018 and 2017, are as follows:

Thousands of Euros	Fuel loaded into the reactor core	Nuclear fuel in progress	Total
Balance at 01.01.2017	250,448	72,182	322,630
Additions	–	135,311	135,311
Capitalised borrowing costs (Notes 3.g and 42)	–	2,193	2,193
Transfers	141,188	(141,188)	–
Fuel consumed (Note 3.g)	(128,251)	–	(128,251)
Balance at 31.12.2017	263,385	68,498	331,883
Additions	–	63,198	63,198
Capitalised borrowing costs (Notes 3.g and 42)	–	633	633
Transfers	82,082	(82,082)	–
Fuel consumed (Note 3.g)	(123,040)	–	(123,040)
Balance at 31.12.2018	222,427	50,247	272,674

The IBERDROLA Group’s nuclear fuel purchase commitments at 31 December 2018 and 2017 amount to Euros 485,015 thousand and Euros 433,577 thousand, respectively.

17. INVENTORIES

At 31 December 2018 details of “Inventories” (Note 3.h) in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Energy materials	215,277	212,475
Emission allowances and renewables obligation certificates	351,575	338,534
Real estate inventories	1,177,230	1,224,092
Land and plots	962,665	985,623
Developments under construction	200,763	229,361
Completed developments	13,802	9,108
Other inventories	581,230	226,644
Real estate inventories impairment allowance	(151,481)	(131,624)
Total	2,173,831	1,870,121

Variations in the impairment allowance in 2018 and 2017 are as follows:

Thousands of Euros	2018	2017
Opening balance	131,624	125,205
Charges	2,284	20,832
Reversals	(2,622)	(13,404)
Applications and others	20,195	(1,009)
Closing balance	151,481	131,624

“Revenue” in the 2018 and 2017 consolidated income statements includes Euros 81,274 thousand and Euros 169,045 thousand, respectively, in respect of sales of real estate inventories.

At 31 December 2018, the IBERDROLA Group has “take or pay” contracts with several natural and liquefied natural gas suppliers for the supply of 28 bcm of gas during the period from 2019 to 2039, earmarked for supply and for consumption at the Group's electricity production facilities. The prices under these contracts are determined on the basis of formulas commonly used in the market, which index the price of gas to the performance of other energy variables. Moreover, at 31 December 2018, the IBERDROLA Group has purchase commitments of 10 bcm of natural gas in the National Balancing Point (NBP) (11 bcm at 31 December 2017).

Information on the commitments under said contracts at 31 December 2018 is as follows:

Thousands of Euros	31.12.2018
2019	2,457,288
2020	585,429
2021	467,174
2022	441,506
2023	463,858
From 2024 onwards	5,500,374
Total	9,915,629

18. TRADE AND OTHER CURRENT ASSETS

The breakdown of this heading in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Trade receivables (Note 5.a)	5,949,227	5,521,173
Receivables	543,840	735,201
Contract assets (Note 2.a.)	221,477	232,530
Receivables from equity-accounted investees	6,587	9,610
Bad debt provisions	(622,749)	(642,142)
Total (Note 4)	6,098,382	5,856,372

Generally, the amounts included under this caption on the consolidated statement of financial position do not accrue any interest.

Movement in the impairment allowance in 2018 and 2017 is as follows:

Thousands of Euros	2018	2017
Initial balance	642,142	412,953
First application of IFRS 9 (Note 2.a.)	31,021	–
Charges	344,868	219,397
Applications	(274,314)	(212,575)
Translation differences	(29,730)	(53,594)
Transfers	852	1,674
Surplus	(92,067)	(5,202)
Modification of the consolidation perimeter (Note 6)	(23)	279,489
Final balance	622,749	642,142

Practically all of this provision corresponds to gas and electricity consumers.

19. CASH AND CASH EQUIVALENTS

The breakdown of this heading in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Cash	143,868	188,165
Short-term deposits	2,657,289	3,009,175
Total	2,801,157	3,197,340

Short-term deposits mature within a period of less than three months and bear market interest rates. There are no restrictions on significant cash withdrawals.

20. EQUITY

Subscribed capital

Movement in 2018 and 2017 in the different items of share capital of IBERDROLA is as follows:

	Date recorded Companies Registry	% Capital	Number of shares	Nominal	Euros
Balance at 01.01.2017		–	6,362,079,000	0.75	4,771,559,250
Free capital increase	25 January 2017	1,539	97,911,000	0.75	73,433,250
Capital reduction	25 May 2017	3,405	(219,990,000)	0.75	(164,992,500)
Free capital increase	21 July 2017	1,242	77,515,000	0.75	58,136,250
Balance at 31.12.2017		–	6,317,515,000	0.75	4,738,136,250
Free capital increase	29 January 2018	1,913	120,859,000	0.75	90,644,250
Capital reduction	22 June 2018	3,081	(198,374,000)	0.75	(148,780,500)
Free capital increase	25 July 2018	2,526	157,629,000	0.75	118,221,750
Balance at 31.12.2018			6,397,629,000	0.75	4,798,221,750

The free capital increases made in 2018 and 2017 correspond to the issues approved by the shareholders at their General Meeting through which the IBERDROLA scrip dividend system is implemented.

Information on the holders of free- allocation rights who accepted IBERDROLA's irrevocable commitment to purchase rights is as follows:

	Free of charges allocation rights		Rights waived ⁽¹⁾
	Number	Thousands of Euros	Number
Free capital increase			
25 January 2017	1,956,083,947	264,071	38
21 July 2017	2,596,794,942	381,729	37
29 January 2018	699,283,602	97,899	30

(1) IBERDROLA has waived its right to certain free allocation rights so that new shares issued are a full figure.

Additionally, the holders of 58,717,340 shares opted for receiving the interim dividend paid (Euros 0.14 gross per share) amounting to a gross total of Euros 8,220 thousand in interim dividend distributed. As a result, these shareholders have expressly forgone 58,717,340 free allotment rights and therefore 1,276,464 new shares.

Additionally, on 21 June 2018 and 24 May 2017, capital reductions were carried out through the redemption of treasury shares already held, as approved by the shareholders at their General Meeting held on 13 April 2018 and 31 March 2017, respectively, through the amortisation of treasury shares.

There was no movement in IBERDROLA's share capital other than those resulting from the transactions described above, and IBERDROLA has no share capital obligations other than those provided for in the Spanish Companies Act.

IBERDROLA's shares are listed for trading on the Spanish electronic trading system ("Mercado Continuo Español"), and form part of the IBEX-35 and the European Eurostoxx-50 indexes.

Significant shareholders

Since IBERDROLA's shares are represented by book entries, the exact interest held by its shareholders is unknown. The table below summarises significant direct and indirect interests in the share capital of IBERDROLA at 31 December 2018 and 2017, as well as any financial instruments disclosed by the shareholders in compliance with the Royal Decree 1362/2007 of 19 October 2007. This information is in accordance with filings made by these shareholders in the official registers of the National Securities Market Commission (Comisión Nacional del Mercado de Valores - CNMV) or to the Company itself and its respective annual accounts or press releases, and is presented in the 2018 IBERDROLA Group's Annual Corporate Governance Report.

Among direct or indirect shareholders with a significant interest, IBERDROLA treats any shareholder who exerts a significant influence as a "significant shareholder" when they i) sit on the board of directors or a similar governing body or ii) they have the possibility of exercising the proportional representation system. Therefore, the Company considers Qatar Investment Authority as a significant shareholder, which is the only shareholder who qualifies as such at 31 December 2018 and 2017.

Holder	% of voting rights 2018			Financial instruments 2018	Directors in IBERDROLA 2018
	Direct	Indirect	Total		
Qatar Investment Authority ⁽¹⁾	–	8.646	8.646	–	–

Holder	% of voting rights 2017			Financial instruments 2017	Directors in IBERDROLA 2017
	Direct	Indirect	Total		
Qatar Investment Authority ⁽¹⁾	–	8.570	8.570	–	–

(1) Parent company of Qatar Holding Luxembourg II, S.A.R.L., direct holder of the investment.

In addition, details of other companies having direct and indirect voting rights greater than 3% of the share capital at 31 December 2018 and 2017 are as follows:

Holder	% of voting rights 2018			% of voting rights 2017		
	Direct	Indirect	Total	Direct	Indirect	Total
Norges Bank	3.332	–	3.332	3.210	–	3.210
Blackrock, Inc	–	5.131	5.131	–	3.030	3.030
Capital Research and Management Company (CRMC)	–	–	–	–	3.100	3.100

Financial management

The IBERDROLA Group's main financial management objectives are to ensure a solid financial profile, robust solvency ratios, optimisation of the liquidity position and management of financial risks, all the while maintaining a sustainable remuneration policy for its shareholders.

At 31 December 2018 Moody's, Standard & Poor's y Fitch's ratings were Baa1, BBB+ and BBB+, respectively.

Leverage ratios at 31 December 2018 and 2017 were as follows:

Thousands of Euros	31.12.2018	31.12.2017
Financial debt - Loans and borrowings (Note 27)	37,326,472	36,690,498
Securities portfolio having the substance of a financial liability (Note 22)	177,229	47,281
Liability derivatives	486,453	377,398
Gross debt	37,990,154	37,115,177
Asset derivative	911,966	969,398
Other current loans	77,840	63,970
Cash and cash equivalents (Note 19)	2,801,157	3,197,340
Cash assets	3,790,963	4,230,708
Net debt	34,199,191	32,884,469
Equity		
Parent company	36,582,199	35,509,260
Non-controlling shareholders	5,668,803	5,671,380
Perpetual subordinated bonds	1,725,552	1,552,546
	43,976,554	42,733,186
Leverage	43.75%	43.49%

Derivative financial instruments detailed in the table above include those relating to financing operations whose breakdown is as follows (Note 28):

2018						
Thousands of Euros	Derivative assets			Derivative liabilities		
	Short term	Long term	Total	Short term	Long term	Total
Interest rate hedges	29,462	110,135	139,597	3,905	(109,077)	(105,172)
Interest rate hedges	346,919	404,239	751,158	(242,663)	(121,484)	(364,147)

Total non-hedging derivatives	3,017	15,299	18,316	(12,851)	(17,098)	(29,949)
Total	547,886	421,512	969,398	(149,512)	(227,886)	(377,398)

Powers delegated by the shareholders at their General Meeting

The shareholders at their General Meeting held on 8 April 2016 resolved, under items seven and eight on the agenda, to delegate powers to the board of directors, with express powers of delegation, for a period of five years, to:

- increase share capital in the terms and up to the limits stipulated in Article 297.1 b) of the Spanish Companies Act ("Ley de Sociedades de Capital"), with authorisation to exclude preferential subscription rights, and
- issue bonds or debentures swappable for and/or convertible into shares in the Company or other companies, and warrants on new or existing shares in the Company or other companies, up to a maximum amount of Euros 5,000 million. This authorisation includes the delegation of powers to, where applicable: (i) determine the basis and procedures for conversion, swap or exercise; (ii) increase share capital by the amount required to cover applications for conversion; and (iii) exclude shareholders' preferential subscription rights on the issue.

Both authorisations have a joint limit to a maximum nominal amount of 20% of the share capital.

Legal reserve

Under the Spanish Companies Act, 10% of net profit for each year must be transferred to the legal reserve until the balance of this reserve reaches at least 20% of the share capital.

The legal reserve can only be used to increase share capital provided that the balance left on the reserve is at least equal to 10% of the share capital after the increase. Except for this purpose, until the reserve exceeds 20% of share capital it may only be used to offset losses if no other reserves are available.

Revaluation reserves

The balance of "Revaluation reserves" arose as a result of the revaluation of property, plant and equipment made by IBERDROLA pursuant to Royal Decree-law 7/1996. This balance can be used, free of tax, to offset losses both prior years' accumulated losses and current year losses or losses which might arise in the future, and to increase share capital. From 1 January 2007, the balance of this reserve can be taken to unrestricted reserves, provided that the monetary surplus has been realised. The surplus will be deemed to have been realised on the portion on which depreciation has been taken for accounting purposes or if the revalued assets have been transferred or derecognised. If the balance of this account is used in any way other than as specified in Royal Decree-law 7/1996, it would be taxable.

Share premium

The Spanish Companies Act expressly permits the use of the share premium account balance to increase capital and does not establish any specific restrictions as to its use.

Other restricted reserves

"Other restricted reserves" in "Equity" on the consolidated statement of financial position includes other restricted reserves set up mainly by IBERDROLA in accordance with article 335.c) of the Spanish Companies Act, arising from the capital reductions carried out in prior years through the redemption of treasury shares. Restricted reserves corresponding to Group companies other than the parent, IBERDROLA, are included under "Retained earnings" of the same heading.

Non-controlling interests

Movement in this heading in 2018 and 2017 is as follows:

Thousands of Euros	AVANGRID subgroup	NEONERGIA subgroup	Other	Total
Balance at 01.01.2017	3,277,109	24,787	144,002	3,445,898
Modification of the consolidation perimeter (Note 6)	–	2,320,651	–	2,320,651
Share capital increase	–	318,086	241	318,327
Profit/(Loss) for the year of non-controlling interests	294,822	30,412	8,496	333,730
Other comprehensive income	(2,784)	8,595	135	5,946
Dividends	(89,880)	(2,453)	(8,999)	(101,332)
Translation differences	(412,362)	(142,085)	(1,530)	(555,977)

In March 2018 the subsidiary company Neenergia, S.A., resolved to increase share capital in BRL 999,999,963, taking into consideration the percentage of ownership of its shareholders, resulting in a payment of Euros 115,795 thousand in "Equity in non-controlling interests" in the consolidated financial statement.

On 27 December 2017, NEOENERGIA approved a capital increase of BRL 2,585 thousand (Euros 659,175 thousand). The IBERDROLA Group subscribed to this capital increase in proportion to its shareholding by means of a cash contribution of Euros 60,062 thousand and the writing-off of receivables from NEOENERGIA totalling Euros 285,643 thousand.

The summarised financial information related to subgroups in which IBERDROLA Group does not have a 100% interest refers to amounts consolidated before intercompany eliminations:

Perpetual subordinated bonds

On 27 February 2013, the IBERDROLA Group's perpetual subordinated bonds issue was completed for an amount of Euros 525 million. The issue price was set at 99.472% of the face value, with a fixed annual coupon of 5.75% as from the issue date to 27 February 2018. On 27 February 2018 the IBERDROLA Group exercised its early redemption option on a series of subordinated bonds that it had issued for Euros 525 million. Redemption was at par, as laid down in the terms and conditions attaching to the bonds.

On 22 November 2017, the IBERDROLA Group's perpetual subordinated bonds issue was completed and disbursed, in the amount of Euros 1,000 million. The issue price was set at 100% of the face value, with a fixed annual coupon of 1.875% as from the issue date to 22 May 2023. From the first repricing date on, the coupon will be equal to the applicable five-year swap rate plus a 1.592% annual spread during the following five years, a 1.8492% annual spread during each of the five-year repricing periods beginning on 22 May 2028, 2033 and 2038, and a 2.5992% annual spread during the following five-year repricing periods.

Although these bonds do not have a contractual maturity date, the IBERDROLA Group has the option of redeeming them on 22 May 2023, and from that date on, every five years.

On 19 March 2018, the IBERDROLA Group's perpetual subordinated bonds issue was completed and disbursed, in the amount of Euros 700 million. The issue price was set at 100% of the face value, with a fixed annual coupon of 2.625% as from the issue date to 26 March 2024. From the first repricing date on, the coupon will be equal to the applicable five-year swap rate plus a 2.061% annual spread during the following five years, a 2.311% annual spread during each of the five-year repricing periods beginning on 26 March 2029, 2034 and 2039, and a 3.061% annual spread during the following five-year repricing periods.

Although these bonds do not have a contractual maturity date, the IBERDROLA Group has the option of redeeming them in advance during the three previous months until (and included) on March 26, 2024, and from that date on, every five years.

The interest accruing on these bonds will not be callable but rather cumulative. However, the IBERDROLA Group will be obligated to settle the interest accrued in the event it distributes dividends.

After analysing the issue conditions, the IBERDROLA Group recognised the cash received with a credit to "Perpetual subordinated bonds" of the equity on the consolidated statement of financial position, as it considers that it does not meet the criteria for classification as a financial liability, given that the IBERDROLA Group does not have a commitment to deliver cash, as the circumstances that would require it to do so - namely distribution of dividends and exercise of its right to redeem the bonds - are fully under its control.

The amount of interests accrued on 31 December 2018 and 2017 whose payment would have taken place if IBERDROLA's profit distribution amounted to Euros 37,569 and 32,242 thousand respectively.

Valuation adjustments

The change in this reserve arising from valuation adjustments to available-for-sale assets and derivatives designated as cash flow hedges at 31 December 2018 and 2017 is as follows:

Thousands of Euros	01.01.2017	Change in fair value and other	Allocation to the values of hedged assets	Amounts allocated to income	31.12.2017	First application of IFRS 9 (Note 2.a.)	Change in fair value and other	Allocation to the values of hedged assets	Amounts allocated to income	31.12.2018

Treasury shares

The IBERDROLA Group buys and sells treasury shares in accordance with the prevailing law and the resolutions of the General Shareholders' Meeting. Such transactions include sale and purchase of company shares and of derivative instruments having company shares as the underlying asset.

At 31 December 2018 y 2017 the balances of the various instruments are as follows:

	31.12.2018		31.12.2017	
	No. of shares	Thousands of Euros	No. of shares	Thousands of Euros
Treasury shares of IBERDROLA	135,985,344	873,065	75,710,149	507,175

Balance at 31.12.2018	135,985,344	873,065	1,050,639	8,076

(1) Shares received

(2) Free allocation rights disposed

(3) Includes awards to employees

SCOTTISH POWER's Treasury Shares correspond to the matching shares held by the trust in the share plan called Share Incentive Plan.

During 2018 and 2017, treasury shares held by the IBERDROLA Group were below the legal limit.

(b) Derivatives settled by physical delivery

The IBERDROLA Group recognises these transactions directly in equity under "Treasury shares" and records the obligation to buy back the shares under "Loans and borrowings and other financial liabilities – loans and others" on the liabilities side of the consolidated statement of financial position.

- Total return swaps

The IBERDROLA Group has arranged four swaps on treasury shares with the following features: during the life of the contract it will pay the financial entity 3-month Euribor plus a spread on the notional and will receive the dividends corresponding to the shares paid out to the financial entity. On the expiration date IBERDROLA will buy the shares at the strike price set out in the contract.

The characteristics of these contracts at 31 December 2018 and 2017 are as follows:

	No. of shares as of 31.12.2018	Strike price	Maturity date	Interest rate	2018 thousands of Euros
Total Return Swap	5,810,088	6.188	24/07/2019	Euribor 3 months + 0.38%	35,953
Total Return Swap	6,000,000	6.941	25/07/2019	Euribor 3 months + 0.30%	41,646
Total	11,810,088				77,599

	No. of shares as of 31.12.2017	Strike price	Maturity date	Interest rate	2017 thousands of Euros
Total Return Swap	6,000,000	6.941	24/07/2018	Euribor 3 months + 0.45%	41,646
Total	6,000,000				41,646

- Treasury share accumulators

The IBERDROLA Group holds several purchase accumulators on treasury shares. These accumulators are obligations to buy in the future, with a notional amount of zero on the start date. The number of shares to be accumulated depends on the market price quoted on a range of observation dates throughout the life of the options – in this case, on a daily basis. A strike price is set, and a knockout level above which the structured product is “knocked out” and shares are no longer accumulated.

The accumulation mechanism is as follows:

- when the spot price is below the strike price, two units of the underlying security are accumulated;
- when the spot price is between the strike price and the knockout level, only one unit of the underlying security is accumulated; and
- when the spot price is above the knockout level, no shares are accumulated.

The characteristics of these contracts at 31 December 2018 and 2017 are as follows:

2018	No. of shares	Average Price of the period	Maturity date	Thousands of Euros
Exercised shares	209,361	6.5819	14/02/2019	1,378
Potential maximum ⁽¹⁾	7,613,376	6.5976	14/02/2019	50,230

2017	No. of shares	Average Price of the period	Maturity date	Thousands of Euros
Exercised shares	1,835,379	6.2990	18/07/2018	11,561
Potential maximum ⁽¹⁾	4,592,392	6.3144	10/01/2018 -	28,998

(1) Maximum number of additional shares that could be accumulated according to the described mechanism until the maturity of the structures (assuming that the cash price during the remaining life of the structure is always below the strike price).

Distribution of dividends with charge to 2018 results

IBERDROLA's board of directors has agreed to propose at the General Shareholders' Meeting, the distribution, chargeable to the results of 2018 and the retained earnings from previous years, a gross dividend whose gross amount will be the same as the following amounts:

- (a) the Euros 131,426 thousand were paid as the interim dividend for 2018 on 5 February 2019 to the 870,368,973 IBERDROLA shares that opted for receiving their remuneration in cash within the scope of the second settlement of the IBERDROLA scrip dividend for 2018 in the amount of 0.151 Euros per share, and
- (b) the amount to be determined by multiplying:
 - i) The gross amount per share, as additional dividend payment for 2018, will be distributed by the Company as part of the first settlement of the IBERDROLA scrip dividend optional dividend for 2019; by
 - ii) The total number of shares the holders may have opted for receiving as complementary dividend as part of the first settlement of the IBERDROLA scrip dividend optional dividend.

On the date of authorisation of these annual accounts, it is not possible to determine the amount of the complimentary dividend or, consequently, the amount of the dividend cannot be determined.

The payment of the complimentary dividend shall be made together with the execution of the increase in share capital that will be proposed at the General Shareholders' Meeting, to offer the shareholders the possibility of receiving their remuneration in cash (through the payment of the complimentary dividend) or in the free shares of the new issue of the Company (through the aforementioned increase in share capital).

The payment of the complimentary dividend is configured as one of the alternatives that the shareholder may choose when receiving their remuneration within the scope of the first execution of the IBERDROLA scrip dividend corresponding to 2019. As a consequence of the aforementioned, it will be understood that these shareholders who choose to receive their remuneration in cash by means of the complimentary dividend with respect to all or part of their shares, expressly, automatically and irrevocably waive the free allocation rights corresponding to these shares and therefore the possibility of putting them on the market or to receive new free shares corresponding to those free-allocation rights.

21. LONG-TERM SHARE-BASED COMPENSATION PLANS

21.1 Shared-based compensation plans

2014-2016 Strategic Bonus Programme

On 25 April 2017 the board of directors, on the recommendation of the Appointments and Remuneration Committee, decided to pay the 2014-2016 Strategic Bonus on determining that 93.20% of the objectives had been met. By virtue thereof, having confirmed the bases underlying the delivery of the shares in the first settlement, in the second half of 2017 the first annual payments were made in the form of 2,497,353 shares. These shares included those delivered to executive directors (Note 47) and to senior management (Note 49).

Moreover, as a result of UIL's integration, the 2014-2016 Strategic Bonus for AVANGRID's company directors will be liquidated in cash for the accrued amount for 2015 and 2014, and was replaced in 2016 by a new one, which will be referenced to AVANGRID's shares. The second and last settlement as scheduled was made in the first quarter of 2018

Furthermore and arising from the corporate restructuring operation in Brazil, the second phase of the liquidation of the 2014-2016 Strategic Bond corresponding to the 14 beneficiaries of the ELEKTRO Group was settled in cash in the first half of 2018. The amount corresponding to the cash settlement of the second phase rose to Euros 1,037 million.

Strategic bonus 2017-2019

The General Shareholders Meeting of 31 March 2017 approved under agenda item seven on the establishment of a Strategic Bonus for the executive directors, senior executives and other executive personnel of IBERDROLA and its subsidiaries (up to a maximum of 300 beneficiaries), tied to the IBERDROLA Group's performance in relation to certain metrics throughout the assessment period, from 2017 to 2019:

The payment period for the scheme will run from 2020 to 2022. Payments will be made in the form of shares on a deferred basis in those three years.

The maximum number of shares to be delivered to the beneficiaries of the *2017-2019 Strategic Bonus* will be 14,000,000 shares, equal to 0.22% of the share capital at the time this resolution is adopted. A maximum of 2,500,000 shares will be delivered to the executive directors in compliance with the terms and conditions of the scheme. As of 31 December 2018, 11,685,416 shares were issued as follows:

	No. Of shares
Balance 01.01.2017	–
Additions	12,535,000
Balance 31.12.2017	12,535,000
Additions	400,000
Cancelled	(1,249,584)
Balance 31.12.2018	11,685,416

Also stemming from the corporate restructuring operation in Brazil, at its 19 December 2017 meeting, the IBERDROLA S.A. Board of Directors approved authorisation of the offer of the option to receive a cash sum as a partial early settlement of the programme to the 17 beneficiaries of the ELEKTRO Group. In the first half of 2018, the 17 beneficiaries of the ELEKTRO Group received a proportional part corresponding to the time between the date on which the remuneration began and 31 December 2017, the date of the partial early termination, after assessment by the Board of Directors of the level compliance with the targets that link accrual to the date of partial early termination. The amount corresponding to the partial early settlement rose to Euros 1,527 thousand.

2016-2019 long-term incentives AVANGRID shares bonus

The General Shareholders Meeting of 16 June 2016 approved under agenda item seven on the establishment of a Strategic Bonus for the executive directors, senior executives and other executive personnel of IBERDROLA and its subsidiaries (80 beneficiaries), tied to the IBERDROLA Group's performance in relation to certain metrics throughout the assessment period, from 2016 to 2019.

The maximum number of gross shares to be delivered to the group of the Bonus beneficiaries will be 2,500,000 shares, of which 1,199,596 shares were delivered at 31 December 2018.

The period 2020-2022 will be the settlement period, to be materialised in the deferred issue of shares during those three years.

Restrictive AVANGRID shares scheme

Under the scope of the Avangrid Omnibus Plan, a general plan establishing the governance framework for executive remuneration in cash and shares, 68,000 restricted shares were assigned to a number of executives in 2018. The granting of these shares is dependent on the eligible executives remaining in the company for two years after their assignment.

In relation to the bonuses described above, whose settlement will be in shares, the detail of the transactions under "Other reserves" on the consolidated financial statement is as follows:

Thousands of Euros	Strategic bonus 14-16	Strategic bonus 17-19	AVANGRID's 16-19 Strategic Bonus Programme (*)	Restrictive shares programme (*)	Total
Balance at 01.01.2017	44,083	-	2,152	-	46,235

SCOTTISH POWER share-based incentive plan

Lastly, SCOTTISH POWER has share-based plans for its employees. There are two types of plans:

- Sharesave Schemes: savings plans in which employees decide the amount they want to contribute to the plan (between GBP 5 and GBP 250 on a monthly basis) and this is deducted monthly from their salary. At the end of a three or five year saving period, as applicable to each plan, employees may use the money saved to buy IBERDROLA shares at a discounted option price set at the beginning of the plan or to receive the amount saved in cash.

The fair value of the employee's share purchase options is determined at the start of the plan, and is registered in the consolidated income statement over the plan's consolidation period (three or five years) with a credit to equity. The "Personnel expenses" heading in the 2017 and 2018 consolidated income statements includes Euros 700 and 904 thousand respectively for this concept, which have been taken to "Accumulated profit and remaining", in the consolidated financial statement of changes in equity.

Additionally, in 2018 and 2017 payments for options were made in the amounts of Euros 3,118 and Euros 175 thousand, respectively.

The number of transactions of stock options are as follows:

	Number of accounts	Number of shares
Balance at 01.01.2017	2,616	5,531,681
Exercised	(90)	(125,025)
Derecognised	(117)	(279,308)
Balance at 31.12.2017	2,409	5,127,348
Exercised	(1,090)	(1,414,705)
Derecognised	(59)	(138,761)
Balance at 31.12.2018	1,260	3,573,882

- Share Incentive Plan: this plan has an option for purchasing shares with tax incentives plus a contribution from the company. The employees decide on the amount they wish to contribute, which is deducted from their monthly salary (the maximum contribution allowed by the law in the United Kingdom is GBP 125 on a monthly basis). The shares purchased with this contribution are called partnership shares. Additionally, SCOTTISH POWER complements the employee's contribution to a maximum of GBP 50 monthly. The shares purchased with the company's contribution are called matching shares.

The contributions, both from the company and the employees, are contributed to a trust which buys the shares, and they are held in this trust until withdrawn by the employees. All shares are purchased in the market at the monthly market price.

The partnership shares are owned by the employees who purchased them with their own money, however, the shares acquired with the contribution from the company (matching shares) are not consolidated until three years after the date of purchase. The matching shares acquired by the trust at 31 December 2018 and 2017 amount to 1,149,547 and 1,326,848 shares, respectively.

The contributions of the Company are made in cash on a monthly basis and are charged to the income statement during the three years the employee must remain in the company in order to be entitled to these shares.

"Personnel expenses" in the 2018 and 2017 consolidated income statements amounted to Euros 2,223 thousand and Euros 2,257 thousand, respectively for this concept, which have been recognised under "Other reserves" on the consolidated finance income statement.

Furthermore, 2018 and 2017 saw transfers to participants for exercised options totalling Euros 2,734 million and Euros 3,322 million, respectively.

21.2 Cash-based compensation plans

The following outlines long-term compensation plans with cash settlements.

2014-2016 Strategic bonus - IBERDROLA Distribución Eléctrica

The board of directors of IBERDROLA Distribución Eléctrica, on the recommendation of the Appointments and Remuneration Committee, decided to pay the 2014-2016 Strategic Bonus on determining that 93.20% of the objectives had been met. In the first half of 2018 the second of the three annual payments was made.

The second of the three settlements in cash resulted in the Euros 1,262 thousand being paid.

2017-2019 Strategic bonus - IBERDROLA Distribución Eléctrica

At its 13 December 2017 meeting, the IBERDROLA Distribución Eléctrica S.A. (Sociedad Unipersonal) board of directors approved a strategic bond payable to the Company's executive officers and directors undertaking regulated activities in Spain who are deemed to be "Persons Responsible for the Management of Regulated Companies", as stipulated in the "Code for the Separation of Activities of Companies in the IBERDROLA Group with Regulated Activities in Spain", or who, due to their position within the company or their responsibilities, are deemed to have decisively contributed to the creation of value (to a maximum of 12 beneficiaries).

This strategic bond is linked to the performance of IBERDROLA Distribución Eléctrica S.A. (Sociedad Unipersonal) with regard to a series of parameters over the period of evaluation from 2017 to 2019. The payment period for the scheme will run from 2020 to 2022. Payments will be made in the form of shares on a deferred basis in those three years.

Long-term NEOENERGIA 2018-2019 incentive

At its 27 September 2017 meeting, NEOENERGIA's Board of Directors approved a long-term incentive programme aimed at executives and employees who, through their position or level of responsibility in the NEOENERGIA Group, are felt to have contributed decisively to the creation of value (to a maximum of 100 beneficiaries), an initiative costing 50 million Brazilian reals.

This long-term incentive is linked to the NEOENERGIA Group's performance with regard to a series of parameters over the period of evaluation from 2018 to 2019.

The payment period for the scheme will run from 2020 to 2022. Payments will be made in the form of shares on a deferred basis in those three years.

"Personnel expenses" on the consolidated income statement from 2018 and 2017 includes a charge of Euros 4,072 and 1,636 thousand respectively corresponding to the amount accrued for this incentive plan has been recorded with charge and debit to the sub-headings "Other Provisions" of the consolidated statement of financial position.

The movement of the bonds described above which are settled in cash is as follows:

Thousands of Euros	Strategic bonus 14-16	Strategic bonus 17-19	Bonus paid in cash Brazil	Bonus paid in cash USA	Total

22. SECURITIES PORTFOLIO HAVING THE SUBSTANCE OF A FINANCIAL LIABILITY

In the United States, the IBERDROLA Group has signed several contracts that have brought in third parties as non-controlling interests in some of its wind farms in exchange for cash and other financial assets primarily.

The main characteristics of these contracts are as follows:

- Regardless of the interest acquired by the non-controlling interests, the IBERDROLA Group retains the control and management of the wind farms; accordingly they are fully consolidated in these consolidated annual accounts.
- The non-controlling interests have the right to a substantial portion of the profits and tax credits generated by these wind farms up to the return level established at the beginning of the contract.
- The non-controlling interests remain in the equity of the wind farms until they achieve the stipulated returns.
- Once these returns have been obtained, the non-controlling interests must renounce their stake in the wind farms, thus losing their right to the profits and tax credits generated.
- Whether or not the non-controlling interests of the IBERDROLA Group obtain the agreed upon returns depends on the economic performance of the wind farms. Although the IBERDROLA Group is obliged to operate and maintain these facilities in an efficient manner and to take out the appropriate insurance policies, it is not obliged to deliver cash to the non-controlling interests over and above the aforementioned profits and tax credits.

Following an analysis of the economic substance of these agreements, the IBERDROLA Group classifies the consideration received at the outset of the transaction under "Non-current securities portfolio having the substance of a financial liability" and "Current securities portfolio having the substance of a financial liability" in the consolidated statement of financial position. Subsequently, this consideration is measured at amortised cost.

The amount at 31 December 2018 and 2017 accrues an average interest rate in US dollars of 7.05% and 8.63%, respectively.

The change in this heading of the consolidated statements of financial position for 2018 and 2017 is as follows:

Thousands of Euros	2018	2017
Initial balance	47,281	137,054
finance cost accrued in the year	12,026	6,230
Payments	(65,658)	(76,427)
Translation differences	6,876	(13,294)
Derecognitions	–	(6,282)
Additions	176,704	–
Final balance	177,229	47,281

In May 2018 the Group executed a new contract through its US subsidiary El Cabo Wind LLC.

23. CAPITAL GRANTS

The change in this heading of the consolidated statements of financial position for 2018 and 2017 is as follows (Note 3.n):

Thousands of Euros	Capital grants	Investment Tax Credits	Total
Balance at 01.01.2017	297,695	1,404,236	1,701,931

Transfers	(1,018)	(1,234)	(2,252)
Translation differences	(266)	1,172	906
Allocation to the income statement (Note 3.n)	(118,321)	(78,599)	(196,920)
Balance at 31.12.2018	2,571,045	2,252,351	4,823,396

25. PROVISION FOR PENSIONS AND SIMILAR OBLIGATIONS

The breakdown of this heading in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Defined benefit plans (Spain)	372,553	402,883
Long-service bonuses and other long-term benefits (Spain)	40,796	42,539
Defined benefit plans (United Kingdom)	569,204	637,521
Defined benefit plans (United States)	1,006,606	918,186
Defined benefit plans (Brazil)	210,432	248,537
Defined benefit plans and other long term benefits (Spain and other countries)	55,542	58,376
Restructuring plans	187,773	266,027
Total	2,442,906	2,574,069

Each year IBERDROLA estimates, in accordance with an independent actuarial report, the payments for pensions and similar benefits that it will have to meet in the coming year. These are recognised as current liabilities in the balance sheet.

25.a) Defined benefit plans and other non-current employee benefits

Spain

IBERDROLA Group's main commitments to providing defined benefits for its employees, in addition to those provided by Social Security, are as follows:

- Employees subject to IBERDROLA Group's collective labour agreement, who retired before 9 October 1996, are covered by a defined benefit retirement pension scheme, the actuarial value of which was fully externalised at 31 December 2018 and 2017.

IBERDROLA Group has no liability of any kind for this group and has no claim on any potential excess generated in the assets of this plan over the defined benefits.

- Also, in relation to serving employees and employees who have retired after 1996 and are subjected to IBERDROLA Group's Collective Labour Agreement and members/beneficiaries of the IBERDROLA Pension Plan, risk benefits (e.g. widowhood, permanent disability or orphanage) which guarantee a defined benefit at the time the event giving rise to such benefits occurs, are instrumented through a pluriannual insurance policy. The guaranteed benefit consists of the difference between the present actuarial value of the above mentioned defined benefit at the time of the event and the member's vested rights at the time of the event, if the latter were lower. The premiums on the insurance policy for 2018 and 2017 are recognised under "Personnel expenses" in the income statement and came to Euros 10,621 thousand and Euros 10.065 thousand, respectively.
- In addition, IBERDROLA maintains a provision against certain commitments to its employees other than those indicated above, which are covered by internal funds linked to social security benefits, consisting mainly of free electricity supply, with an annual consumption limit, for retired employees and other long term benefits, primarily consisting of long-service bonus for active employees at 10, 20 and 30 years of service.

United Kingdom (SCOTTISH POWER)

SCOTTISH POWER employees residing in the United Kingdom, hired before 1 April 2006, are covered by several defined benefit retirement plans: ScottishPower Pension Scheme (SPPS) and Manweb Group of Electricity Supply Pension Scheme (Manweb).

One-off capital sums have been offered to pensioners and deferred beneficiaries, reducing the defined benefit burden.

USA (AVANGRID)

The former employees of SCOTTISH POWER that now form part of the workforce of the IBERDROLA Group in the United States, most of them belonging to the workforce of the Avangrid Renewables Holding Inc. (hereinafter, ARHI), are members of various post-employment plans (Supplemental Executive Retirement Plan, IBERDROLA Renewables Retiree Benefits Plan and IBERDROLA Renewables Retirement Plan).

With effect from 30 April 2011, a change affecting all plan participants occurred in the IBERDROLA Renewables Retiree Benefits Plan, whereby the benefit receivable at retirement age was set at the amount accrued until 30 April 2011 and the plan became a defined-contribution scheme from that date onwards.

On the other hand, the employees of the AVANGRID NETWORKS Group are affiliated to various defined benefit retirement pension plans (Qualified Pension Plans, Non Qualified Pension Plans), disability benefit plans (Long Term Disability Plans) and health insurance plans (Postretirement Welfare Plans).

UIL Group's employees were covered by several defined benefit retirement plans (Qualified Pension Plans, Non Qualified Pension Plans) and health plans (Postretirement Welfare Plans).

Defined benefit pension schemes are closed to new entrants and wherever possible, only past service is recognised for those remaining.

One-off capital sums have been offered to pensioners and deferred beneficiaries, reducing the defined benefit burden.

Brazil

Such as is indicated in Notes 2.c. 6, on 24 August 2017 NEOENERGIA was acquired through the incorporation of ELEKTRO. ELEKTRO, CELPE, COELBA and COSERN employees are covered by several defined benefit retirement plans. COELBA employees are covered by a post-employment health plan too.

Defined benefit pension schemes are closed to new entrants.

Other commitments with employees

In addition, some IBERDROLA Group companies have provisions to meet certain commitments with their employees, other than those described above, which are met by in-house pension funds.

The most significant information related to plans is as follows:

(1) These amounts have not been recognised in the consolidated statement of financial position at 31 December 2018 and 2017, respectively, since the requirements set forth in the current legislation for their accounting treatment are not met.

(2) At 31 December 2018 and 2017 a surplus of Euros 53,179 and 51,081 thousand is not recognised in application of the legislation IFRIC14: "IAS 19 - The limit on a defined benefit asset, minimum funding requirements and their interaction".

The changes in provisions for the commitments detailed in the previous section in 2018 and 2017 is as follows:

(1) As the surplus was not recognised, the actuarial differences recognised in reserves were adjusted upwards in 2018 by Euros 4,120 thousand and in 2017 Euros 5,258 thousand in the application of the current legislation IFRIC 14: “IAS 19 - The limit on a defined benefit asset, minimum funding requirements and their interaction”. Moreover, in the years 2018 and 2017, and for the same concept, the finance costs recognised were adjusted upwards by Euros 8,334 and 6,526 thousand, respectively.

The average length at the end of the year of the liability for the employee benefits described previously is:

Years	Spain		United Kingdom	United States			Brazil		Other

Total	8,793,784	561,275	7,018,271	1,214,238

The strategic distribution of pension plan investments is supported by recurring Asset Liability Management studies specific to each of the plans, which guarantees matching up the funding policy with the expected time to achieve full financing of the commitment in accordance with the flows arising therefrom, providing such studies with the sensitivity to different expected rates of return of the assets and discount of the obligations. On the other hand, it is guaranteed that the financing of the plans is adequate to the recovery time of the regulated cash flows. There are also prudential investment rules regarding pensions within the scope of the Group.

In relation to asset management at a global level, the Group has progressively migrated to passive management, pension plan death and disability benefits have been covered with insurance policies and the management entities and investment assets have been qualified by an independent third party, with the consequent reduction in investments with less liquidity. In addition, in the United Kingdom the longevity risk has been covered via swaps and work is underway to partially cover inflation risk.

25.b) Defined contribution plans

The active employees of IBERDROLA and employees who have retired after 9 October 1996, are members of the IBERDROLA pension plan with joint promoters, are covered by an occupational, defined-contribution retirement pension system independent of the Social Security system.

In accordance with this system and IBERDROLA's effective Collective Labour Agreement, the periodic contribution to be made is calculated as a percentage of the annual pensionable salary of each employee, except for employees joining the Company after 9 October 1996, who from 1 January 2018 are subject to a contributory system where the Company pays 60% and the employee 40% (from 1 June 2017, the Company paid 56.45% and the employee 43.55%, whereas before this date, the Company paid 55% and the employee 45%). For the ones hired after 20 July 2015 the company pays 1/3 and the employee 2/3, until the date in which the employee takes part in the Base Salary Rating (SBC). At this moment the same criteria will be applied to those employees as the ones who were hired since 9 October 1996. The respective subsidiaries finance these contributions for all their active employees under 65.

IBERDROLA Group's contributions in 2018 and 2017 were Euros 19,006 thousand and Euros 26,205 thousand, respectively, and are recognised under "personnel expenses" heading in the consolidated income statement.

The contribution made on behalf employees out of the scope of the collective bargaining agreement in 2018 and 2017 is recognised under "Personnel expenses" in the consolidated income statements.

Thousands of Euros	2018	2017
SCOTTISH POWER	12,825	10,464
AVANGRID	31,258	31,598
NEOENERGIA	5,883	2,912
Other	646	-
Total	50,612	44,974

25.c) Restructuring plans

Given the interest shown by some of the employees in requesting early retirement, IBERDROLA Group offered these employees mutually agreed termination of the employment relationship Spain. IBERDROLA Group has carried out a process of individual termination contracts. At 31 December 2018 and 2017, the existing provisions in this regard correspond to the following restructuring plans:

Thousands of Euros	31.12.2018		31.12.2017	
	Provisions	No. of contracts	Provisions	No. of contracts
2012 restructuring plan	981	19	3,396	66
2014 restructuring plan	35,738	237	54,986	309
2015 restructuring plan	10,649	69	15,717	82
2016 restructuring plan	8,238	61	12,531	63
2017 restructuring plan	112,824	409	140,934	413
Total	168,430	796	227,564	933

Additionally, the following provisions are maintained at 31 December 2018 and 2017 to back commitments for this concept outside Spain and for the subsidiary IBERDROLA Ingeniería y Construcción, S.A.U. (IIC):

Thousands of Euros	31.12.2018	31.12.2017
SCOTTISH POWER	5,265	5,057
IIC	14,078	18,106
NEOENERGIA	—	15,300
Total	19,343	38,463

The discount to present value of the provisions is charged to “Finance cost” heading in the income statement.

The movement in provisions for the commitments detailed in the previous section in 2018 and 2017 is as follows:

Thousands of Euros	2018	2017
Initial balance	266,027	146,677
Charge	8,200	172,154
Financial Cost	505	29
Actuarial gain and losses and other	(5,799)	(1,931)
Payments and translation differences(*)	(81,160)	(50,902)
Final balance	187,773	266,027

(*) Payments made during 2018 and 2017 amount to Euros 79,771 thousand and Euros 49,302 thousand, respectively.

The main assumptions applied in the actuarial reports that determined the provisions needed to meet the above mentioned commitments relating to the restructuring plans at 31 December 2018 and 2017 are as follows:

	2018			2017		
	Discount rate	Inflation	Survivorship table	Discount rate	Inflation	Survivorship table
Other restructuring plans	0.33% / 0.42%	1.00% / 0.70%	PERMF 2000	0.32% / 0.38% / 0.45%	1% / 0.70%	PERMF 2000

26. OTHER PROVISIONS

The movement and breakdown of “Other provisions” in the liabilities in the balance sheet in 2018 and 2017 is as follows:

Thousands of Euros	Provisions for litigation, indemnity payments and similar costs	Provision for CO2 emissions (Note 3.r)	Provision for facility closure costs (Notes 3.s and 5.a)	Other provisions	Total
Balance at 01.01.2017	600,733	54,121	1,530,061	473,242	2,658,157

Transfers	17,118	–	(5,027)	(21,745)	(9,654)
Payments made and other	(93,492)	–	(6,090)	(30,069)	(129,651)
Emission allowances and Green certificates	–	(543,530)	–	–	(543,530)
Balance at 31.12.2018	941,941	429,537	1,797,774	415,413	3,584,665

The IBERDROLA Group has provisions for responsibilities arising from litigation in progress and from indemnity payments, obligations, collateral and other similar guarantees, and those aimed at covering environmental risks. These last ones have been determined on the basis of a case-by-case analysis of the polluted assets status and the cost that will have to be incurred in cleaning them.

The IBERDROLA Group also maintains provisions to meet a series of costs needed for dismantling work at its nuclear and thermal power plants, its wind farms, and at other facilities.

The cost arising from dismantling obligations is recalculated on a regular basis to incorporate to the estimate of future costs our experience of the reasonableness of provisions of dismantling events, or to include new statutory or regulatory requirements.

The detail of provision for plants closure costs is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Thermal power plants	60,848	80,123
Nuclear power plants	612,174	590,023
Wind-powered farms and other alternative stations	945,344	853,387
Combined cycle power plant	146,194	154,954
Other facilities	33,214	37,211
Total	1,797,774	1,715,698

The amount related to nuclear plants covers the costs in which the plant operator will incur from the end of its useful life until ENRESA (Note 3.y) takes control of them.

The discount rates (minimum and maximum range) before taxes of the main countries in which the IBERDROLA Group used in the present value of the operating provisions are:

Country	Currency	Discount rate 2018		Discount rate 2017	
		5 years	30 years	5 years	30 years
Spain	Euro	0.33%	2.61%	0.37%	2.84%

(*) At 31 December 2018, financial debt includes Euros 527,380 thousand from draw downs on credit lines and credit facilities, and Euros 2,460,110 thousand from issues of domestic promissory notes (USCP) and the Euro Commercial Paper (ECP).

At 31 December 2017, financial debt includes Euros 883,417 thousand from drawdowns on credit lines and credit facilities, and Euros 2,206,949 thousand from issues of domestic promissory notes and the Euro Commercial Paper (ECP).

The IBERDROLA Group's financial policy recommends maintaining a constant volume of debt issued under the *Euro Commercial Paper* (ECP) programme, the average balance of which amounted to Euros 1,771,712 thousand and Euros 1,527,762 thousand, respectively, in 2018 and 2017.

The borrowings previously mentioned refer to the amounts drawn down and outstanding at 31 December 2018 and 2017.

(1) Currency swaps to company currency.

(2) Reconfiguration, does not involve entry of funds.

Certain Group investment projects, mainly related to renewable energies, have been financed specifically through loans that include covenants such as the compliance with certain financial ratios or the obligation to pledge in benefit of creditors the shares of the project-companies (Note 46). The fair value of real property investments in operation fully amortised intangible assets at 31 December 2018 and 2017 amounted to Euros 483 and 436 millions, respectively. Moreover, the establishment of a reserved deposit for the fulfilment of the obligations under the loan agreements is required, being the default ratios and/or the security deposit not reaching the agreed amount, the reason to preclude the dividends in the year in which they had not been fulfilled.

In relation to credit ratings covenants, IBERDROLA has arranged funding with the European Investment Bank, amounting to Euros 1,265 million and Euros 1,323 million at 31 December 2018 and 2017, respectively, which may have to be renegotiated or shored up with additional guarantees in the event of a significant rating downgrade.

Also, as of December 31, 2018 and 2017, the IBERDROLA Group maintains drawn loans and borrowings of 2,002 and 1,320 million euros, respectively, the cost of which has been modified as that of its credit rating; However, in both cases, the cost increase would not be significant.

In addition, at 31 December 2018 there are bonds issued, borrowings and other agreements between bank entities and IBERDROLA Group whose maturity dates could be impacted or may require additional guarantees to those already existing should there be a control change to be implemented in the manner and times set. The most significant changes are those described in the following paragraphs:

- Bond issues in the amount of Euros 13,314,229 thousand in the European market and USD 1.150.000 thousand (equivalent to Euros 1,010,811 thousand) in the US market.
- EIB loans totalling Euros 2,479,111 thousand.
- Borrowings amounting to Euros 617,308 thousand and USD 400,000 thousand (equivalent to Euros 351,587 thousand).
- Last, BRL 8,595,053 (equivalent to Euros 1,920,867 thousand) for issues and 11,994,129 thousand Brazilian reals (equivalent to Euros 2,680,510 thousand) from borrowings to the Brazilian subsidiary NEOENERGY and its subsidiaries.

At 31 December 2018 and 2017, IBERDROLA was fully up to date on all its financial debt payments. None of the amounts in the table above matured prior to 31 December 2017 and there had been no circumstances affecting the change of control or adverse changes in the credit quality, and consequently it had not been necessary to meet the early maturity of the debt or modify the cost related to the loans of which it is the holder.

The average cost of debt of the IBERDROLA Group in 2018 and 2017 was 2.97% and 2.91%, respectively.

28. DERIVATIVE FINANCIAL INSTRUMENTS

The information presented in the table above includes notional amounts of derivative financial instruments arranged in absolute terms (without offsetting assets and liabilities or purchase and sale positions) and, therefore, do not constitute the risk assumed by IBERDROLA Group since this amount only records the basis on which the calculations to settle the derivative are made.

“Finance cost” in the 2018 and 2017 consolidated income statements includes Euros 161,174 thousand and Euros 127,358 thousand, respectively, in connection with derivatives linked to financial indices that fail to meet the conditions to qualify as hedging instruments or, having met the conditions, but as explained in Notes 3.I and 43 are partially ineffective. The “Finance income” heading in the consolidated income statements for the same years also includes Euros 114,736 thousand and Euros 122,244 thousand, respectively, for the abovementioned items (Note 42).

The nominal value of the liabilities for which foreign exchange hedges (Note 4) have been arranged is as follows:

2018							
Hedge rate	Thousand US dollars	Thousand Japanese Yens	Thousand Norwegian Kroner	Thousand Mexican Pesos	Thousand Swiss Francs	Thousand Sterling Pound	Thousands of Euros
Cash flow	1,227,533	–	2,250,000	–	–	–	79,250
Fair value	2,995,082	13,000,000	–	–	–	700,000	173

2017							
Hedge rate	Thousand US dollars	Thousand Japanese Yens	Thousand Norwegian Kroner	Thousand Mexican Pesos	Thousand Swiss Francs	Thousand Sterling Pound	Thousands of Euros
Cash flow	500,000	–	1,450,000	1,500,000	–	–	–
Fair value	3,851,604	28,000,000	–	–	–	700,000	76,306

The nominal value of the most significant financial liabilities for which interest rate hedges (Note 4) have been arranged is as follows:

2018				
Hedge rate	Thousands of Euros	Thousand US dollars	Thousand Sterling Pound	Thousand Brazilian reals
Cash flow	2,610,258	–	225,000	–
Fair value	3,808,844	–	–	784,959

2017				
Hedge rate	Thousands of Euros	Thousand US dollars	Thousand Sterling Pound	Thousand Brazilian reals
Cash flow	338,611	–	225,000	–
Fair value	4,891,844	–	–	348,574

Additionally, as of 31 December 2018, the IBERDROLA Group has used derivatives to cover the interest rate risk of future financing for a nominal amount of Euros 4,642 million, helping to offset the interest rate risk (Euros 3,620 million as of 31 December 2017).

29. STATEMENT OF CASH FLOWS

The 2018 and 2017 transactions of the financial liabilities classified as financing activities in the Cash flow statement excluded from the equity sub-headings, is the following:

Thousands of Euros	Balance at 01.01.2018	First application of IFRS 9 (Note 2.a.)	Cash flow			Other non-cash changes				Modification of the consolidation perimeter (Note 6)	New leases, transfers and other	Balance at 31.12.2018
			Issues and disposals (1)	Redemption s/charge instalments paid	Interest paid	Accrual of interest	Foreign currency exchange (2)	Change in fair value and others	Accrual expenses subject to amortisation			
Financial leases	127,430	–	–	(4,924)	(5,536)	2,310	2,946	–	–	–	20,082	142,308

(1) Net emissions of expenses.

(2) Includes differences in exchange rates.

30. OTHER CURRENT AND NON-CURRENT LIABILITIES

Details of “Other non-current liabilities” in the consolidated financial statement are as follows:

Thousands of Euros	31.12.2018	31.12.2017
Long term deposits and guarantees (Note 13.b.)	166,772	157,912
Concessional guarantee of the sufficiency tariff in Brazil (Note 11)	41,394	–
Other investments in equity-accounted investees	–	356
Contract liabilities (Note 2.a.)	373,258	408,193
Others	292,582	574,177
Total	874,006	1,140,638

The detail of “Other current liabilities” in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Short-term deposits and guarantees (Note 13.b.)	147,927	167,507
Other investments in equity-accounted investees	93,681	111,994
Short-term intangible trade	573,820	869,597
Staff pending remuneration	232,291	231,044
Others	610,690	485,805
Total	1,658,409	1,865,947

31. DEFERRED TAXES AND CORPORATE INCOME TAX

Due to the multinational nature of the IBERDROLA Group, it is subject to the regulations in force in other tax jurisdictions.

Taxation in Spain

IBERDROLA S.A. is the parent company of two consolidated tax groups in Spain: the 2/86 group, in the so-called common tax system territory, and the 02415BSC group, in the Biscay tax system territory. IBERDROLA S.A. is currently fiscally incorporated into the former.

The 2/86 group is made up of 74 companies, while the 02415BSC group comprises 21.

The other entities that are fiscal residents in Spain and which are not incorporated into these two groups pay corporate income tax on an individual basis.

Companies taxed under the common tax system are subject to a 25% rate in 2018, while in the fiscally autonomous foral regions of Biscay, Gipuzkoa, Álava and Navarra it is 26%.

Taxation in other countries

Other Group companies whose fiscal residence is outside Spain are taxed based on their resident jurisdiction. In the United States, company taxation is based on a consolidated fiscal system, with the existence of a federal tax group, with a tax group also operating in other countries. In the United Kingdom, the group relief mechanism is used. In other tax jurisdictions, Group companies are taxed on an individual basis.

The nominal tax rates applicable in the main jurisdictions in which the IBERDROLA Group operates are as follows (OECD figures, including central and federal governments):

Country	2018	2017
Australia	30	30
Brazil	34	34
Bulgaria	10	10
Canada	26.8	26.7
Cyprus	12.5	12.5
France	34.4	34.4
Germany	29.8	29.8
Greece	29	29
Hungary	9	9
Ireland	12.5	12.5
Italy	27.8	27.8
Luxembourg	26	27.1
Mexico	30	30
Netherlands	25	25
Portugal	31.5	29.5
Qatar	10	10
Romania	16	16
South Africa	28	28
Spain	25-26	25-28
United Kingdom	19	19
United States	25.8	38.9

Income tax expenses proceeds

The accrued corporate income tax expense for 2018 and 2017 is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Profit for the year from continuing activities before tax	4,348,034	2,025,850
Profit for the year from discontinued operations before tax	(64,660)	(321,490)
Consolidated profit of the year before tax	4,283,374	1,704,360
Non-deductible expenses and non-computable income:	–	–
- from individual companies	(40,425)	(145,236)
- from consolidation adjustments	(140,079)	417,238
Profit of companies accounted for using the equity method	(55,904)	28,405
Adjusted accounting profit	4,046,966	2,004,767
Gross tax calculated at the tax rate in force in each country (a)	987,888	645,715
Tax credits deductions due to reinvestment of extraordinary profits and other tax credits	(84,118)	(48,888)
Adjustment of prior years' income tax expense (b)	(22,865)	(47,757)
Net movement in provisions for litigation, compensation payments, similar costs and other provisions (c)	12,400	71,065
Adjustment of deferred tax assets and liabilities (d)	38,022	(2,065,500)
Taxes related to non-distributed earnings	15,519	(12,206)
Others	(841)	(8,034)
Income/Expense Tax from continuing operations	959,499	(1,397,126)
Income /Expense Tax from discontinuing operations	(13,494)	(68,479)
Income Tax	946,005	(1,465,605)

The breakdown between current and deferred Income tax is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Current taxes	663,373	799,441
Deferred taxes	282,632	(2,265,046)
Expense/(income) from continuing and discontinued activities	946,005	(1,465,605)

Deferred taxes

The detail of “Deferred tax assets” and “Deferred tax liabilities” in the consolidated statement of financial position is as follows:

Thousands of Euros	Balance at 01.01.2017	Modification of the consolidation perimeter (Note 6)	Translation differences	Credit (charge) to the income statement	Credit (charge) to Unrealised gains/(losses) reserve	Credit (charge) to "Other reserves"	Balance at 31.12.2017	Modification of the consolidation perimeter	IFRS 9 and IFRS 15 first application (Note 2.a)	Translation differences	Credit (charge) to the income statement	Credit (charge) to Unrealised gains/(losses) reserve	Credit (charge) to "Other reserves"	Other	Balance at 31.12.2018

Administrative action

The inspections undertaken at the close of 2018 varied depending on the tax legislation in place in each country, although it is not expected that any of these will highlight significant impact that has not already been considered in financial statements.

In the case of Spain, there was no general inspection ongoing at the close of the year, although throughout the year a number of partial checks were carried out, with the reports duly signed off as accepted or contested. The accepted reports represent insubstantial payment sums for the Group, while the contested reports are zero rated.

In those other countries in which the Group has a significant presence, the main ongoing inspections are as follows:

- In America, the most important ongoing inspection relates to income tax in the New York State. Additionally, given its status as a major contributor at both a federal and state level, the AVANGRID Group has around 34 inspections ongoing, examining other tax figures.
- In the UK, Scottish Power the HRMC tax authority has classified the company as a low-risk contributor. The only relevant question for discussion relates to the deductibility of certain payments under the guidance of OFGEM, the electricity and gas market regulator.
- Finally, Brazil can be characterised as a jurisdiction that frequently resorts to litigation, with countless inspections ongoing. This is due to the country's fiscal and administrative structures and the habitual actions of its tax authorities. Nevertheless, NEOENERGIA's directors do not expect any significant impact. Generally speaking, these procedures are resolved in favour of the tax administration in a very limited number of cases.

Tax litigation

The IBERDROLA Group includes among its principles the strengthening of the relationship with the tax authorities, based on the respect for the law, loyalty, trust, professionalism, cooperation, reciprocity and good faith, regardless of the legitimate discrepancies that may arise in relation to the interpretation of fiscal law. Therefore, whenever such discrepancies occur, the Group works with the authorities in a spirit of cooperation, in line with its principles of transparency and mutual trust.

As in previous years, all the Group's work this year is analysed by its internal and external advisors, determining whether its activities comply with the law and are based on reasonable interpretations of tax regulations. The existence of contingent liabilities is also analysed – here the Group's general criterion consists of setting aside provisions for tax litigation when there is high risk that the outcome is unfavourable to the Group's interests, while this set-aside does not occur where the risk level is lower or remote.

The IBERDROLA Group's directors and, where appropriate, their tax consultants consider that the current inspection process will not give rise to additional liabilities of significance for the IBERDROLA Group at 31 December 2017.

Tax litigation in Spain

In the case of Spain, the Group is currently awaiting ruling by the Central Economic Administrative Court on the appeals arising from the contested reports from 2008 to 2011.

The main adjustments that feature in the settlement agreements stemming from these contested reports refer to the assessment of the goodwill, susceptible to tax depreciation through the SCOTTISH POWER take-over, the elimination of SCOTTISH POWER's tax exemption for dividends based on the inspection's understanding that it is incompatible with an adjustment of the value of the portfolio due to net investment hedges, differences in fiscal consolidation criteria and a possible concurrence of a debtor change and certain bond issues, pursuant to Article 15.1 of the General Taxation Act.

Tax litigation in other countries

In general, there is no significant tax litigation in the other jurisdictions under which the group operates, except in the case of Brazil, where there are numerous administrative and judicial litigation and other processes, in which the Group expects to obtain a favourable final ruling.

32. TAX RECEIVABLES AND PAYABLES

The breakdown of the headings "Income tax receivables/payables" and "Public entities, other/payables" on the asset and liability sides, respectively, in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Public Administrations receivables		
Public Treasury, Corporate income tax receivables	252,907	546,304
Public Treasury, VAT refundable	229,975	193,359
Tax withholdings and prepayments	158,319	76,136
Public Treasury, other Receivables	115,150	49,087
Total	756,351	864,886
Public Administrations Payables		
Public Treasury, Corporate income tax Payables	349,314	259,633
Public Treasury, VAT payable	105,942	182,294
Public Treasury, withholdings payable	69,980	60,698
Public Treasury, other payables	837,010	717,298
Social Security Agencies, payables	26,517	28,636
Total	1,388,763	1,248,559

33. TRADE PAYABLES

The breakdown of this heading in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Suppliers	3,313,610	3,244,267
Service payables	1,945,804	1,874,977
Contract liabilities (Note 2.a)	169,519	188,307
Total	5,428,933	5,307,551

The majority of these accounts payable do not accrue interest.

34. INFORMATION ON AVERAGE PAYMENT PERIOD TO SUPPLIERS. THIRD ADDITIONAL PROVISION. "REPORTING REQUIREMENT" OF LAW 15/2010, OF 5 JULY

The breakdown of the required information at 31 December 2018 and 2017 is the following:

	Number of days	
	2018	2017
Average payment period to suppliers.	15	16
Paid transactions ratio	14	16
Outstanding payment transactions ratio	26	29

Thousands of Euros	2018	2017
Total payments made	13,413,355	13,754,653
Total payments due	301,766	269,561

The information in the table above has been prepared in accordance with Law 15/2010 of 5 July, amending Law 3/2004 of 29 December, establishing measures to combat late payments in commercial operations and in accordance with the Resolution of 29 January 2016, from the Instituto de Contabilidad y Auditoría de Cuentas, on the information to be included in the notes to the annual accounts in relation to deferred payments to suppliers in commercial transactions operations. The specifications with which such information has been prepared are the following:

- Ratio of paid operations: amount in days of the ratio between the sum of the amount of each of the operations paid and the number of paydays and the total amount of payments made during the year.
- Ratio of outstanding payment operations: amount in days of the ratio between the sum of the amount of the outstanding payment transaction and the number of unpaid days, and the total amount of outstanding payments.
- Suppliers: trade payables generated from debts of goods or services with suppliers included in the current liabilities heading of the balance sheet.
- Property, plant and equipment and other financial lease suppliers are not considered in the information scope.
- Taxes, levies, indemnifications and some other headings are not considered in the information scope since they are not commercial transactions.
- The table shows information corresponding to Spanish companies included in the consolidated group once the credits and debits between the subsidiary companies are eliminated.

35. REVENUE

Other business, Corporation and adjustments	(2,837,095)	(2,187,667)
Total	19,640,736	17,899,454

37. PERSONNEL EXPENSES

The breakdown of this heading in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Wages and salaries	1,973,562	1,926,519
Company social security costs	292,731	262,223
Additional provisions for pensions and similar obligations and defined contributions to the external pension plan (Notes 3.p and 25)	195,706	413,463
Remuneration stipulated in by-law 48.1 (Note 47)	17,000	17,000
Token payments Art. 48.4	5,588	3,398
Other social expenses	194,138	153,391
	2,678,725	2,775,994
Capitalised personnel expenses		
Intangible assets (Note 8)	(73,899)	(42,299)
Property, plant and equipment (Note 3.d)	(581,672)	(558,874)
Nuclear fuel	(3,148)	(3,225)
	(658,719)	(604,398)
Total	2,020,006	2,171,596

The average number of IBERDROLA Group employees in 2018 and 2017 has increased to 33,415 and 28,750 employees, of which 7,729 and 6,711 are women, respectively.

The average number of employees in the consolidated group corresponds to all the employees in those consolidated companies that have been integrated using the global integration method, as well as the employees of the joint ventures determined in accordance with the participation share in those ones.

38. OPERATING LEASES

The “External services” heading on the income statements includes operating lease payments of Euros 148,607 thousand and Euros 148,810 thousand for 2018 and 2017, respectively. Details of future minimum payments under non-cancellable operating leases outstanding at 31 December 2018 are as follows:

Thousands of Euros	
2019	126,656
2020	129,403
2021	124,231
2022	116,221
2023	104,473
From 2024 onwards	1,498,675
Total	2,099,659
Financial Cost	637,505
Present value of the payments	1,462,154
Total	2,099,659

The IBERDROLA Group's enters into lease agreements acting as lessee mainly for land, buildings and vehicles located at wind farms.

The amount differs from the effect of the application of IFRS 16 “Leases” for the first time as explained in Note 2.a.

On the other hand, the IBERDROLA Group acts as lessor in certain operating leases consisting basically on the rental of investment property (Note 9) and the lease of fibre optics. The heading “Net revenue” in the consolidated income statements in 2018 and 2017, includes Euros 50,607 thousand and Euros 47,885 thousand, respectively, related to this concept and the detail of the estimated future minimum proceeds under non-cancellable leases at 31 December 2018 is as follows:

Thousands of Euros	
2019	54,879
2020	35,307
2021	32,000
2022	29,706
2023	27,954
From 2024 onwards	124,084
Total	303,930
Financial Cost	54,842
Present value of the payments	249,088
Total	303,930

39. TAXES

The breakdown of this heading in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017 Restated (Note 2.d)
Liberalised business	802,050	861,408
Spain and continental Europe	693,509	726,622
United Kingdom	106,971	131,536
Brazil	44	39
Mexico	1,526	3,211
Renewable business	468,006	351,676
Spain	396,418	284,266
United Kingdom	23,624	21,817
United States	43,650	39,655
Mexico	357	319
Brazil	539	2,016
ROW	3,418	3,603
Networks business	647,683	636,772
Spain	90,106	89,384
United Kingdom	105,368	101,948
United States	448,421	444,319
Brazil	3,788	1,121
Other business, Corporation and adjustments	13,264	24,647
Total	1,931,003	1,874,503

Law 15/2012 was published on 28 December 2012, regarding tax measures to ensure sustainability of the energy sector. The law introduced the following tax figures registered under "Taxes" of the consolidated income statements of 2018 and 2017:

- A tax on the value of electricity output, entailing payment of 7% of the total amount to be received by the taxpayer for the production of electricity and incorporation thereof in the Spanish electricity system, measured at power station busbars, during the tax period. This tax gave rise to an expense of Euros 194,038 thousand and Euros 225,225 thousand in 2018 and 2017 respectively.
- A tax on spent nuclear fuel, the cost of which amounted to Euros 131,509 thousand and Euros 129,315 thousand in 2018 and 2017, respectively.
- A royalty on the use of inland water affecting production of electricity which, as a general rule, means the payment of a percentage of the economic value of the hydroelectric power produced. The corresponding expense in 2018 and 2017, amounting to Euros 165,135 thousand and Euros 82,365 thousand, respectively.
- A green cent tax levied against energy products used in electricity production, entailing a cost for the IBERDROLA Group of Euros 35,575 thousand and Euros 46,648 in 2018 and 2017, respectively. This payment was recognised under "Procurements" in the consolidated income statement.

Additionally, the sub-heading 'Taxes' of the 2018 and 2017 consolidated income statement includes Euros 168,310 and 165,264 thousands of Euros, respectively, as the best estimate available of the accrued expenses originated by Royal Decree-Law 6/2009 (Note 3.y).

40. AMORTISATIONS AND PROVISIONS

The breakdown of this heading in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017 (re-stated Note 2.d)
Tangible assets depreciation allowances:		
Property, plant and equipment (Note 10)	2,842,430	2,636,990
Acquisition of real property (note 9)	7,533	6,965
Intangible assets depreciation allowances (Note 8):	737,136	542,093
Allowances for impairments and write-offs of non-financial assets:		
Goodwill write off of Renewables in USA (Notes 8 and 12)	–	449,480
Reversal of impairment of intangible assets in Renewables in USA (Notes 8 and 12)	(52,688)	(42,959)
impairment of intangible assets in Gas in USA and Canada (Note 8)	–	68,715
impairment of PPE in Gas in USA and Canada (Note 10)	–	633,003
Other impairments in Gas in USA	–	41,853
Charge Reversal of impairment in PPE (Note 10)	13,565	(24,357)
Other impairment in PPE (Note 10)	81,049	37,499
Changes in provisions	26,849	59,388
Total	3,655,874	4,408,670

Prior to the sale of the gas business in the United States and Canada in 2018 (Note 41), the IBERDROLA Group received binding offers for the sale of the above for a value below the book value of the assets and liabilities for sale. Therefore, a loss for impairment of intangible assets, property, plant and equipment and inventories has been recognised in the amount of Euros 743,571 thousand. Before the decision to sell and the reception of the binding offers, the impairment of the assets was not required as long as its value in use was above its book value.

41. GAINS AND LOSSES ON DISPOSAL OF NON-CURRENT ASSETS

Details of “Gains and losses on disposal of non-current assets” in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Gain on the disposal of intangible assets and PPE	10,419	3,420
Gain on the disposal of equity investments	38,049	295,673
Total	48,468	299,093

Details of “Losses due to disposal of non-current assets” in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Loss on the disposal of intangible assets and PPE	2,331	2,611
Loss on the disposal of equity investments	37,286	17,428
Total	39,617	20,039

Year 2018

The gross losses recognised under "Losses on Disposal of Non-Current Assets" in the consolidated statement of income for 2018 relate mainly to the sale of the gas business in the United States for Euros 13,881 thousand and the 80% stake in the company Coyote Ridge Wind LLC to WEC Infrastructure for Euros 23,116 thousand (Notes 6 and 13.a).

Gross capital gains recognised in "Earnings from sales of non-current assets" on the consolidated financial statement for 2018 corresponds to the sale of IBERDROLA Energía Solar de Puertollano, S.A. for Euros 12,470 thousand and of Scottish Power Generation Limited for Euros 25,579 thousand (Note 6).

Year 2017

- As a consequence of the merger of the wind energy businesses SIEMENS and GAMESA (Note 13), there was a dilution in the percentage of shares held by the IBERDROLA Group, from 19.69% to 8.07%. The result obtained as a result of the aforementioned dilution of the operation reached 250,695 thousand, which were registered under sub-heading 'Gains on disposal of non-current assets' in the 2017 consolidated income statement.
- In April 2017, the IBERDROLA Group sold its shareholding in Amara, S.A.U. for an amount of Euros 8,000 thousand, which implied a gross capital loss of 14,502 thousand and was registered under the sub-heading 'Losses on disposal of non-current assets' in the 2017 consolidated income statement.
- In August 2017 the incorporation of ELEKTRO HOLDING in NEONERGIA was completed (Note 6). The result obtained as a result of the aforementioned dilution of the operation reached 44,012 thousands of Euros, which were registered under sub-heading 'Gains on disposal of non-current assets' in the 2017 consolidated income statement.

42. FINANCIAL INCOME

Details of "Finance Income" in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Income from equity investments	2,284	2,082
Finance income related to assets at amortised cost:		
Other financial interests and income	194,261	223,238
Other interest and finance income due to credits to associated companies	58	96
Non-hedge derivatives and inefficiencies (Note 28)	114,736	122,244
Exchange losses in foreign currency for financing activities	191,789	273,000
Other Exchange losses in foreign currency	143,360	164,808
Capitalised finance costs		
Intangible assets (Note 8)	35,735	21,506
Property, plant and equipment (Note 10)	156,896	112,536
Nuclear fuel (Note 16)	633	2,193
Inventories in real property (Note 17)	159	87
Total	839,911	921,790

The average capitalisation rates used in 2018 and 2017 for external financing of property, plant and equipment was 3.68% and 2.63%, respectively (Note 3.d).

43. FINANCIAL COSTS

Details of "Financial costs" in the consolidated statements of financial position is as follows:

Thousands of Euros	31.12.2018	31.12.2017
Finance cost related to liabilities at amortised cost:		
Finance cost and financing expenses	1,234,475	1,055,901
Other finance cost and similar expenses	94,503	71,171
Securities portfolio having the substance of a financial liability (Note 22)	12,026	6,230
Non-hedge derivatives and inefficiencies (Note 28)	161,174	127,358
Valuation adjustment to financial assets	2,798	9,015
Exchange losses in foreign currency for financing activities	198,604	279,193
Other Exchange losses in foreign currency	146,415	178,212
Financial update of other provisions (Note 26)	68,057	61,792
Financial update of provisions for pensions and similar obligations (Note 25)	77,953	70,020
Total	1,996,005	1,858,892

44. CONTINGENT ASSETS AND LIABILITIES

The IBERDROLA Group companies are part of some legal and out-of-court disputes arising as part of their ordinary course of business (ranging from conflicts with suppliers, clients, administrative or tax authorities, individuals, environmental activists and employees). The IBERDROLA Group's legal advisors believe that these proceedings will not have a material impact on its financial and equity position.

Regarding such disputes, the main contingent assets and liabilities of the IBERDROLA Group not recognised in these consolidated financial statements as the criteria established in accounting regulations is not met, are as follows:

Contingent liabilities

- On 16 June 2014, the CNMC began sanction proceedings against IBERDROLA GENERACIÓN ESPAÑA for alleged fraudulent procedures to alter the price of electricity at the Duero, Tajo and Sil hydroelectric power generation units in December 2013. The fine was announced on 30 November 2015, in the amount of Euros 25 million. IBERDROLA GENERACIÓN ESPAÑA submitted an appeal to the National Court's Contentious-Administrative Section, and this was admitted to proceedings, being also granted the suspension of the execution of the sanction. The IBERDROLA Group believes its action was proper and legal, and did not therefore make any provision for this during the year. The procedure is currently suspended due to prejudication issues.
- Claims filed with the Central Economic Administrative Court, arising from the disagreement statement signed by the Group in 2016, corresponding to the years 2008 to 2011. The main adjustments under dispute arise from the elimination of the exemption regime for dividends received, as the tax inspection considers that it is incompatible with an adjustment in the value of the portfolio for net investment coverage, differences in tax consolidation criteria and the possible concurrence in a debtor exchange transaction regarding some bond issues, due to the circumstances established in article 15.1 of the General Tax Law.

- Arbitration filed by Offshore Windforce (OWF) against IBERDROLA RENOVABLES OFFSHORE DEUTSCHLAND GmbH, due to the contracting of OWF (among others) for the installation of the wind turbine jackets for the Wikinger wind farm. During the construction process differences arose between the parties which resulted in a mutual contractual claim as regards deadline and cost, in the case of OWD, and delay penalties, in the case of IBERDROLA RENOVABLES OFFSHORE DEUTSCHLAND.

On 14 July 2018 IBERDROLA RENOVABLES OFFSHORE DEUTSCHLAND GmbH received an arbitration claim amounting to Euros 71,548 thousand, which have been accrued in the probable. On 23 November 2018 IBERDROLA replied to the arbitration request and in turn filed a counter-claim.

- The subcontractor for one of BOP Eléctrico's contractors from IBERDROLA Energy Projects (IEP, a subsidiary of IBERDROLA INGENIERÍA) on a US project has taken court action against IEP and the BOP Eléctrico contractor, claiming payment for work undertake and unpaid wages. The case has been suspended pending the result of arbitration proceedings involving IEP and the BOP Eléctrico contractor before the American Arbitration Association's International Centre for Dispute Resolution.

On 2 February 2019 the project's client expressed his intention of executing 100% of the guarantee value (USD 141 million)

- There are several labour, civil and tax complaints filed in Brazil against several NEOENERGIA Group companies. The IBERDROLA Group considers that the risk assessment of the possible losses is made by the companies, in accordance with the opinions of the administration and external legal advisors, making the corresponding provisions in accordance with the likelihood of loss depending on the available evidence, legal hierarchy and most recent case-law.

Labour complaints were filed by former NEOENERGIA Group companies or by former subcontractor as regards additional working hours, equitable salaries and other employment rights. Civil proceedings refer to actions of a commercial and indemnifying nature brought in claims for material or moral damages, arbitrations discussing matters related to engineering and energy contracts, and environmental actions.

Among these, the following infractions in place are due to:

- The lack of income tax withholding and the incidence of PIS / COFINS corresponding to the payment of interest on own capital.
- Tax assessment notice issued by the federal tax body (Receita Federal do Brasil) for the collection of capital gains tax originating from the acquisition of Neenergia Group companies (Celpe, Coelba, Cosern, Elektro, Itapebi and Termopernambuco).

They are administrative and court proceedings involving the distribution companies and the retail company NC Energia and the state tax body as regards movement of goods.

As regards regulatory actions, the distribution companies Coelba, Celpe, Cosern and Elektro are involved in similar proceedings, among which the following should be highlighted: (i) the procedures for calculating individual and collective technical continuity indicators of the service ; (ii) commercial issues; (iii) the implementation of the corresponding financial compensations and the recovery of global indicators; (iv) issues relating to the collection or legality of rate elements or items; and (v) issues regarding the legality of the administrative actions imposed by ANEEL.

- Claim by the California Public Utilities Commission: In 2002, the California Public Utilities Commission and the California Electricity Oversight Board ("CPUC" and "CEOB", respectively) submitted a claim to the FERC against a number of electricity producers, alleging that these companies had manipulated the market and that the prices set in energy purchase contracts were "unfair and unreasonable", and demanded modifications to the contracts.

FERC dismissed the claim and, following a review by the Californian courts, the Supreme Court ordered FERC to review the case, which had remained dormant since 2008. In April 2016, following the reopening of the 2014 case, an initial ruling was issued that dismissed any market manipulation by Avangrid Renewables, but considered that the prices in its energy purchase contract were excessive and to the detriment of end consumers. Damages were set at USD 259 million plus interest.

FERC recommended filing the case without sanction. Following these proceedings, FERC is expected to issue a final ruling in the last quarter of 2019 and its decision may be appealed in the courts. The IBERDROLA Group expects that the proceedings will eventually be suspended without any sanction.

Contingent assets

- AVANGRID initiated legal proceedings against the former owners of certain sites in order to recover the costs of environmental restoration work it was forced to pay.
- The subsidiary of IBERDROLA INGENIERÍA in Canada initiated two arbitrations before the International Chamber of Commerce, at its headquarters in Paris, against the boiler supplier of the two biomass projects in Canada: (i) One arbitration is on non-compliance with the supply contracts, issuing a complaint for damages and (ii) the other to issue a claim against the return of amounts paid to the supplier on the price of the supply contracts. The arbitrations are currently suspended given that the supplier is involved in insolvency proceedings in the United States.

The IBERDROLA Group's appeals on regulatory issues were submitted in opposition to general dispositions of an indefinite amount, affecting the regulatory and remuneration framework of the companies. Therefore, they concern regulatory dispositions that were in force at the time of appeal.

IBERDROLA Group's assets are not at risk with respect to the appeals submitted against general energy stipulations because the economic effects of the stipulations challenged apply when they come into force. An estimate of the appeals submitted by third parties has a limited economic scope, as this would force amendments to the regulatory framework and possible refunds.

Among the regulatory litigation brought by third parties that may affect the remuneration and equity of the IBERDROLA Group there are no outstanding resources for its importance.

In addition, within the ordinary business of IBERDROLA Group, the following contingent liabilities have arisen:

- The American gas companies are either the owners or former owners of the land on which they operate gas manufacturing plants. This land has been contaminated as a result of this activity. In some cases, the land has been decontaminated while in others it has been assessed and classified, although not cleaned. In a number of other cases, the level of contamination has yet to be determined. This latter group has not set aside any provision as of 31 December 2018, given that the cost cannot be reasonably estimated as it requires the participation and approval of the regulators. In the past, gas companies were given approval to recover the cost of decontamination from customers through tariffs, as well as hoping to similarly recuperate the cost of cleaning other land.

The contingent assets and liabilities at 31 December 2017 are described in the 2017 consolidated annual accounts of IBERDROLA.

45. INTERESTS IN JOINT VENTURES

The detail (at 100%) of the most significant economic aggregates in 2018 and 2017 relating to the main joint ventures involving the IBERDROLA Group is as follows:

Thousands of Euros	Joint property of nuclear and thermal plants					A.I.E. Almaraz- Trillo	A.I.E. Ascó- Valdellós	West of Duddon Sands	Wiking OSS	Torre IBERDROLA Other businesses

46. GUARANTEE COMMITMENTS TO THIRD PARTIES AND OTHER CONTINGENT LIABILITIES

IBERDROLA and its subsidiaries are required to provide the bank or corporate guarantees associated with the normal management of the Group's activities.

In this regard, the IBERDROLA Group guarantees the obligations undertaken in energy purchase agreements and grid access transactions in different energy markets and against the operators of different electricity systems (MEFF, OMIE, National Grid, CFE, REE and EDP Distribución).

With regard to generation from renewable sources, the IBERDROLA Group has provided guarantees to third parties to cover the construction, bringing into service and dismantling of facilities, in addition to its responsibilities in long-term energy sales.

In 2016, the signing of nonconformity has taken place regarding the corporate income tax for the years 2008 to 2011 and regarding the Value Added Tax, for years 2010 and 2011. IBERDROLA has filed the corresponding claims to the Economic Administrative Court against the liquidation agreements, which confirm the acts of nonconformity, requesting the automatic suspension of the execution of the settlements by means of the necessary bank guarantees (Note 31).

In addition, at 31 December 2018 and 2017, there were outstanding obligations resulting from bond issues in the United States amounting to Euros 1,787,818 and Euros 1,701,555 thousand that were secured by the items in the property, plant and equipment of the subgroup AVANGRID.

IBERDROLA considers that any additional liability other than those provisioned at 31 December 2018 and 2017, arising from the guarantees provided at that date, if any, would not be significant.

Moreover, the IBERDROLA Group in compliance with the contractual obligations associated with loans received from banks, had fully or partially pledged some of its subsidiaries shares at 31 December 2018 and 2017. The detail, by company, of the shares pledged is as follows:

Thousands of Euros	2018			2017		
Company	Carrying amount	Percentage of ownership IBERDROLA Group	Carrying amount by percentage of IBERDROLA Group's ownership (thousands of Euros)	Carrying amount	Percentage of ownership IBERDROLA Group	Carrying amount by percentage of IBERDROLA Group's ownership (thousands of Euros)

47. REMUNERATION OF THE BOARD OF DIRECTORS

47.1 2018 by-law stipulated remuneration

Article 48 of IBERDROLA's by-laws provides that the Company shall assign, as a statutory expense, an amount equal to a maximum of 2% of the profit obtained in the year by the consolidated group for the following purposes:

On the proposal of the Appointments and Remuneration Committee, the board of directors has decided to propose to shareholders at their General Meeting to assign by-law stipulated remuneration of Euros 17,000 thousand in 2018 and the same amount as in the previous three years, this is in 2015, 2016 and 2017.

These amounts have been registered under the "Personnel expenses" heading in the consolidated income statements (Note 37).

a) Fixed remuneration and attendance premium

The fixed annual remuneration and attendance premium received by board and committee members depends on the duties assigned to them in the board of directors and its commissions in 2018 and 2017. The details are as follows:

Thousands of Euros	Fixed remuneration		Attendance premium	
	2018	2017	2018	2017
Chairman of the Board	567	567	4	4
Vice-chairman of the board of directors and committees chairmen	440	440	4	4
Committee members	253	253	2	2
Board members	165	165	2	2

b) Remuneration of the executive directors for their executive duties

The board of directors has resolved to maintain the fixed remuneration for the chairman and chief executive officer in 2018 at Euros 2,250 thousand. It also decided to maintain the limit of variable annual remuneration, which may not exceed Euros 3,250 thousand and which will be paid as far as been agreed in 2019.

The board of directors decided on a fix remuneration in 2018 of Euros 1,000 thousand for the member of the board and Business CEO and set a limit of variable annual remuneration of Euros 1,000, to be paid, as may be agreed, in 2019.

c) Board member remunerations paid and accrued

The detailed fixed remuneration accrued by the members of the board of directors, individually, during 2018 and 2017, respectively, is detailed as follows:

Thousands of Euros	Salaries	Fixed remuneration (1)	Remuneration for sitting on Committees (1)	Attendance fee	Short-term variable remuneration (9)	Compensations	Retribution in kind	Total 2018	Total 2017

Total	3,250	2,712	1,903	696	3,798	–	123	12,482	11,526

(1) Remuneration accrued in 2018. These amounts not satisfied until the approval of 2018 by-law stipulated remuneration by the General Shareholders Meeting 2019.

(2) Appointed vice-chairperson of the board of directors on 21 June 2018.

(3) Appointed member on 31 March 2017. On 21 June 2018 the board of directors approved the appointment as a member of the Audit and Risk Supervision Committee.

(4) Appointed member-Business CEO on 31 March 2017.

(5) Appointed member on 13 April 2018. On that same date the board of directors approved the appointment as a member of the Corporate Social Responsibility Committee.

(6) Ceased as vice-chairman of Boards of Directors at their meeting on 31 March 2017.

(7) Ceased as vice-chairman of Boards of Directors at their meeting on 31 March 2017.

(8) Ceased as vice-chairman of Boards of Directors at their meeting on 13 April 2018.

(9) Amount relates to variable remuneration received in the year 2018, in accordance with attainment of targets and personal performance in 2017.

Currently, all members of the board of directors of IBERDROLA assume responsibility for any of the five committees of the board, except Francisco Martínez Córcoles.

d) Civil liability insurance

The premium paid to cover directors' Civil Liability Insurance amounts to Euros 72 thousand and Euros 71 thousand in 2018 and 2017, respectively.

e) Others

The expenses of the board of directors related to external services and other items during 2018 and 2017 amounted to Euros 2,131 thousand and Euros 1,855 thousand, respectively.

In 2018 and 2017 rebates were received amounting to Euros 106 thousand and Euros 53 thousand, respectively, with respect to the adjustment of the pension insurance policies relating to former Members of the board of directors.

The undistributed by-law stipulated remuneration for 2018 amounting to Euros 2,421 thousand can be externalized to cover the obligations incurred by the Company to ensure them, in the event they should be materialized.

47.2 Remuneration through the delivery of Company shares

The shareholders at their General Meeting held on 28 March 2014 approved the *2014-2016 Strategic Bonus* as a long-term incentive tied to the performance of the Company in accordance to certain parameters.

In the first half of 2018 the second of the three annual payments was made. The Chairman and CEO received 510,596 IBERDROLA shares. The member-Business CEO was granted 120,931 shares corresponding to his performance prior to his appointment as board member.

47.3 Remuneration for sitting on other committees

Remuneration received by executive directors who in 2018 performed director duties in companies controlled by IBERDROLA amounts to Euros 261 thousand

47.4 Law 11/2018: Non-financial information and diversity

Below the average remuneration received by members per type and sex in 2018 and 2017 is detailed as follows:

Thousands of Euros	2018		2017	
	Men	Women	Men	Women
Executive	4,121	–	4,023	–
Independent and other external	313	462	298	462

The fixed and variable compensation of the member-business CEO up to his appointment, on 31 March 2017 are described in Note 49.

Additionally, executive members have received 631,527 company shares in 2018 and 2017 (Note 47.2).

47.5 Indemnity clauses

The indemnity clauses for the directors are described in section C.1.39 of the Annual Corporate Governance Report included in the Directors' Report.

48. INFORMATION REGARDING COMPLIANCE WITH ARTICLE 229 OF THE SPANISH COMPANIES ACT

As established in article 229 of the Spanish Companies Act (Ley de Sociedades de Capital) introduced by the Royal Decree-Law 1/2010 of 2 July 2010 and in the Law 31/2014, of 3 December 2014, modifying the Spanish Companies Act for the improvement of corporate governance, the conflicts of interest.

The president and CEO and the member-Business CEO were absent during the deliberation of all the agreements related to his system of remuneration and assurance.

Finally, Mr. Sagredo Ormaza was absent during the deliberation of that agreements involving Kutxabank, S.A.

49. REMUNERATION OF SENIOR EXECUTIVES

Senior executives are those who answer directly to the Company's board of directors, chairman and chief executive officer and, in all cases, the internal audit director, apart from any other director recognised as senior executive.

At 31 December 2018 and 2017, the Company had 5 and 5 senior executives respectively.

The personnel expenses relating to senior executives amounting to Euros 6,598 thousand and Euros 10,373 thousand in 2018 and 2017, respectively, are recognised under the "personnel expenses" heading in the income statements of the mentioned years.

The remuneration and other compensation received by senior executives in 2018 and 2017 are detailed below:

Thousands of Euros	31.12.2018	31.12.2017 (1)
Retribution in cash	3,050	4,227
Performance-based compensation	2,214	2,909
Retribution in kind	98	421
Payments to account not charged	33	36
Social Security	69	70
Promoter contribution pension plan	30	40
Complementary policy accrual	613	2,171
Complementary policy risk	491	499
Total	6,598	10,373

Number of shares	31.12.2018	31.12.2017
Share-based payment plan, strategic bonus	261,106	261,106
Charged taxes and payments in cash Strategic Bonus (thousands of Euros)	1,206	2,503

- (1) Includes the proportional part of remuneration and other payments the Business CEO until 31 March 2017, then appointed member-Business CEO.

Includes the proportional part of remuneration and other payments, as well as the settlement of the 2014-2016 Strategic Bonus for the Director of Internal Audit, until the date of retirement.

Includes the proportional part of the Internal Audit Officer until the date of appointment, on 21 February 2017.

During the first semester of 2017, 261,106 shares corresponding to the 2014-2016 Strategic Bonus, were delivered to senior management, as described in Note 20; thus, the members of senior management received IBERDROLA shares in equal amounts in 2017, 2018 and 2019.

For comparative purposes, the total remuneration received by the Business CEO in 2018 amounted to Euros 1,710 thousand. The total top management remuneration amount in 2017 does not include the Euros 750 million the Business CEO was paid for his position as member of the board in 2018 (Note 47).

In the first half of 2018 the second of three annual payments has been made corresponding to the Strategic bonus 2014-2016 (Note 21), once the valid period of the grounds supporting this remuneration have been confirmed. Senior management members have received 261,106 shares for the second payment. At 31 December 2018, a provision of Euros 3,384 thousand had been recorded to guarantee the third and final payment.

A maximum of 1,000,000 shares in aggregate are to be delivered to senior executives under the *2017-2019 Strategic Bonus* (Note 21), tied to their success in achievement of objectives. As of 31 December 2017, Euros 5,090 thousand have been provided for these commitments.

Under the same conditions as the other directors of companies that are not wholly owned directly or indirectly by the Company and in accordance with the directors' Remuneration Policy approved by the General Shareholders' Meeting held on 13 April 2018, the members of senior management who have held the office of director have received from these companies the remuneration corresponding to the office in accordance with their corporate governance rules. In the year 2018 the remuneration received amounted to Euros 970 thousand.

The indemnity clauses for senior management are described in section C.1.39 of the Annual Corporate Governance Report included in the Directors' Report.

On the other hand, during 2018 and 2017 there were no other transactions with the executives outside the normal course of the business.

The amount of fixed and variable remuneration to executives not included in IBERDROLA's top management (150 people) totalled Euros 47,310 thousand in 2018. In 2017, the amount was Euros 44,610 thousand (145 people). These amounts do not include shares delivered as part of the 2014-2016 Strategic bonus.

50. RELATED PARTY TRANSACTIONS AND BALANCES

The transactions detailed below are specific to the ordinary business activity and have been carried out on an arm's-length basis:

Transactions carried out by IBERDROLA with significant shareholders

The most noteworthy transactions in 2018 and 2017 are as follows:

	Significant shareholders ⁽¹⁾	
	2018	2017
Thousands of Euros	Qatar Investment Authority	Qatar Investment Authority
Dividends and other distributed profit (2)	2,766	18,948

(1) IBERDROLA treats as a major shareholder any shareholder who exerts a significant influence on the company's financial and operating decisions. Significant influence is defined as having at least one director on the Board. This also applies to those significant shareholders whose ownership interest in the company enables them to exercise the proportional representation system.

At 31 December 2018 only Qatar Investments Authority meets this condition.

(2) Amounts recognised as dividends and other benefits distributed in the first half of 2018 and 2017 correspond to the scrip dividend scheme and the attendance fee received if applicable.

Transactions carried out by other companies with significant shareholders

The most noteworthy transactions in 2018 and 2017 are as follows:

	Significant shareholders ⁽¹⁾	
	2018	2017
Thousands of Euros	Qatar Investment Authority	Qatar Investment Authority
Finance income ⁽²⁾	344	

2) Correspond to income for cash placing in Qatar National Bank by Scottish Power, Ltd. At 31 December there were no outstanding balances.

Other investments in equity-accounted investees

The breakdown of transactions with equity-accounted investees which are related parties that were not eliminated in consolidation (Note 2.b) is as follows:

	2018						2017					
Thousands of Euros	Asset acquisition	Trade payables	Trade receivables	Sales and services provide	Provisions	Received services	Asset acquisition	Trade payables	Trade receivables	Sales and services provide	Provisions	Received services

Total	309,815	198,944	23,324	48,329	307,180	40,464	482,773	240,269	20,404	27,137	250,147	60,659

⁽¹⁾ The purchase of assets mainly correspond to sales to SIEMENS-GAMESA of repair equipment, wind turbines and towers for the wind farms: Kilgallioch, (United Kingdom), Pier y Bajío (Mexico), Twin Butt II (United States) and Chimiche II (Tenerife-Spain)

On 21 December 2011, IBERDROLA and Gamesa Eólica, S.L.U (a company belonging to the GAMESA Group) entered into a framework agreement for the supply and maintenance of wind turbines whereby IBERDROLA undertakes to acquire from GAMESA a minimum amount of megawatts equal to 50% of the total fleet of onshore wind turbines acquired by IBERDROLA for its renewables business unit during the term of the framework agreement. This commitment will remain in effect from 1 January 2013 until 31 December 2022 or until the number of megawatts acquired by IBERDROLA from GAMESA under the framework agreement reaches 3,800, whichever occurs first.

⁽²⁾ The purchase of assets mainly corresponds to investments made by Scottish Power Transmission, Ltd. to build the submarine interconnection line in the Irish Sea to increase the power transmission capacity between England and Scotland. For this purpose, Scottish Power Transmission, Ltd. participates together with the British operator National Grid in the joint venture NGET/SPT Upgrades, Ltd.

⁽³⁾ Supplies relate mainly to purchases of electricity.

⁽⁴⁾ The sales and services rendered mainly correspond to gas sales to co-generation companies.

Transactions with directors and senior executives

Thousands of Euros	Significant shareholders ⁽¹⁾			
	2018		2017	
	Directors	Executives	Directors	Executives
Dividends and other distributed profit (1)	482	11	765	179

(1) Recognised dividends and other benefits distributed in the first half of 2018 and 2017 corresponded to the scrip dividend and the attendance fee to the General Shareholder's Meeting, if applicable.

51. EVENTS AFTER 31 DECEMBER 2018

After 31 December 2017 the main events have been as follows:

IBERDROLA scrip dividend

On 04 January 2019, the facts in relation to the implementation of the second paid-up capital increase (*IBERDROLA* flexible dividend) approved at the *IBERDROLA* General Shareholders' Meeting on 13 April 2018, under item 13 of the agenda, were determined and were as follows:

- The maximum number of shares to be issued under the capital increase is 142,169,533.
- The number of free allocation rights required to receive one new share is 45.
- The maximum nominal value of the capital increase amounts to Euros 106,627,150
- The acquisition price of the free allocation rights under the purchase commitment made by *IBERDROLA* is Euros 0.151.
- Gross interim dividend amount per share was Euros 0.151.

At the end of the trading period for free allocation rights:

- During the period established for this purpose, the holders of 870,368,973 shares of the Company decided to receive interim dividends. Thus, the gross total of distributed interim dividends was Euros 131.426 thousand. As a result, these shareholders have expressly forgone 870,368,973 free allotment rights and therefore 19,341,533 new shares.
- The final number of new ordinary shares with a nominal value of Euros 0.75 to be issued will be 122,828,000, giving a nominal capital increase from this implementation of Euros 92,121 thousand. This will add 1.920% to *IBERDROLA*'s pre-issue share capital.
- As a result, the share capital of *IBERDROLA* following the capital increase amounts to Euros 4,890,342,750, represented by 6,520,457,000 ordinary shares of Euros 0.75 par value each, fully subscribed and paid.
- Following compliance with on legal requirements (and verification of compliance by the Spanish National Security Market Commission), the new shares have been admitted for trading on the continuous market of the Madrid, Barcelona, Bilbao and Valencia stock exchanges on 05 February 2019. The ordinary trading of new shares has started on 06 February 2019.

Transactions with treasury shares

At the reporting date of these annual accounts, accumulators have been liquidated on treasury shares (Note 20) and the result of its liquidation has resulted in the acquisition of 4,016,049 treasury shares for Euros 26,493 thousand (3,806,688 shares have been accumulated of a maximum potential shares of 7,613,376 at 31 December 2018).

Additionally, from the 2018 year-end until the date of formulation of these consolidated annual accounts 7,568,868 treasury shares have been acquired (of which 1,260,317 have been acquired through accumulators signed since the reporting date) amounting to Euros 51,411 thousand and 1,148,555 shares have been transferred for Euros 7,218 thousand. At the date of authorization for issue of these annual accounts, IBERDROLA, S.A. had 145,427,390 treasury shares.

Banking Market and issue of Euromarket bonds

Significant financing transactions carried out by IBERDROLA after 31 December 2018 are as follows:

2019						
Lessor	Operation	Millions of euros	Currency	Coupon	Extension	Maturity
Main new financing transactions						
IBERDROLA Financiación, S.A.U.	Bilateral loan	125	EUR	-	option to extend it for 1 +1 year	Feb-24
IBERDROLA Financiación, S.A.U.	EIB loan	150	EUR	-	-	Upon disposal
IBERDROLA Finanzas	Private issue	50	EUR	1.782%	-	Oct-30
IBERDROLA International B.V.	Hybrid green bonds	800	EUR	3.25%	-	Perpetual
Main transaction for extending existing financing						
IBERDROLA S.A. ⁽¹⁾	Syndicated loan	2,979	EUR	-	+1 year	Feb-24
	Syndicated loan	2,321	EUR	-	+1 year	Feb-24

(1) Extension of novated syndicated loans for 1 additional year in January 2018 in the amount of Euros 5,300 million.

52. FEES FOR SERVICES PROVIDED BY AUDITORS

The fees resulted from the services provided in 2018 and 2017 by the statutory auditor are detailed in the chart below:

Thousands of Euros	TO IBERDROLA			To the rest of the Group Companies			Total		
	Main Auditor	Other auditors	Total	Main Auditor	Other auditors	Total	Main Auditor	Other auditors	Total
Year 2018									
Audit services	3,223	-	3,223	22,116	-	22,116	25,339	-	25,339
Other audit related services	1,459	-	1,459	1,592	-	1,592	3,051	-	3,051
Total	4,682	-	4,682	23,708	-	23,708	28,390	-	28,390

Thousands of Euros	TO IBERDROLA			To the rest of the Group Companies			Total		
	Main Auditor	Other auditors	Total	Main Auditor	Primary auditor	Total	Main Auditor	Other auditors	Total
Year 2017									
Auditing services	3,744	–	3,744	21,266	371	21,637	25,010	371	25,381
Other provided services related to auditing	1,386	–	1,386	2,336	1,633	3,969	3,722	1,633	5,355
Total	5,130	–	5,130	23,602	2,004	25,606	28,732	2,004	30,736
Other professional services	–	–	–	–	481	481	–	481	481
Total	5,130	–	5,130	23,602	2,485	26,087	28,732	2,485	31,217

The details of “Other services related to auditing” are as follows:

Thousands of Euros	2018		2017	
	TO IBERDROLA	To the rest of the Group Companies	TO IBERDROLA	To the rest of the Group Companies
Limited revision interim information	1,194	144	1,162	443
Comfort letters debt issue	205	474	224	1,042
Agreed procedure reports (*)	60	974		101
Historical information and proforma verification services	-	-	-	750
Total	1,459	1,592	1,386	2,336

(*) Mainly agreed procedure reports required by the regulator in each country, as well as reports additional to the audit report required by current legislation in certain countries where the Group operates.

53. EARNINGS PER SHARE

The weighted average number of ordinary shares used in the calculation of the basic and diluted earnings per share at 31 December 2018 and 2017 (Note 3.z) is as follows:

	2018	2017 Restated (Note 2.d)
Average number of shares during the year	6,613,937,351	6,806,224,288
Average number of treasury shares held	(156,370,387)	(125,969,679)
Number of shares outstanding	6,457,566,964	6,680,254,609

The breakdown of the required information at 31 December 2018 and 2017 is the following:

	2018	2017 Restated (Note 2.d)
Net profit from the parent Company's continuing operations (*) (thousands of Euros)	3,065,220	3,057,005
Net profit from discontinuing operations (thousands of Euros)	(51,168)	(253,011)
Number of shares outstanding	6,457,566,964	6,680,254,609
Basic and diluted earnings per share (euros) from discontinued operations	0.475	0.458
Basic and diluted earnings per share (euros) from discontinued operations	(0.008)	(0.038)

(*) Net profit for the year from net continuing operations of subsidiary companies

In the consolidated annual accounts of the IBERDROLA Group for the years ended 31 December 2018 y 2017, basic earnings per share coincide with diluted earnings per share, since there were no potential shares outstanding during these years that could be converted into ordinary shares.

As described in Note 20 and 51 of these consolidated annual accounts, in July 2017 and January 2018 two free capital increases took place in the context of the “IBERDROLA flexible dividend” programme. According to IAS 33: “Earning per share” these scrip issues meant that earnings per share for 2017 included in the consolidated annual accounts for that year had to be corrected, and have been taken into account when calculating basic and diluted earnings per share for 2018.

54. PREPARATION OF THE CONSOLIDATED ANNUAL ACCOUNTS

The consolidated annual accounts for the year ended on 31 December 2018 have been formally prepared by the directors of IBERDROLA on 19 February 2019.

55. EXPLANATION ADDED FOR TRANSLATION TO ENGLISH

These Consolidated financial statements are presented on the basis of IFRS, as adopted by the European Union. Certain accounting practices applied by the Group that conform to IFRS may not conform to other generally accepted accounting principles in other countries.

APPENDIX I

YEAR 2018 ADDITIONAL INFORMATION RELATED TO GROUP COMPANIES, JOINTLY-CONTROLLED COMPANIES AND ASSOCIATES OF THE IBERDROLA GROUP

Below is the detail of the proportion of direct or indirect ownership that IBERDROLA, S.A. holds in its subsidiaries in its different businesses. The proportion of decision-making votes in the bodies of these companies controlled by IBERDROLA basically corresponds with the proportion of ownership.

(*) The consolidation method by company is detailed as follows:

G: Full consolidation

E: Equity-accounted investee

- (1) Companies that are controlled by the Group but due to their immateriality have been integrated using the equity method. At 31 December 2018, the total aggregate assets value and the profit for the year corresponding to these companies amounts to Euros 40,537 thousand and Euros 5,301 thousand, respectively. On 31 December 2017, the aggregate total assets and results of the corresponding period of such companies amounted to Euros 35,953 thousand and Euros 4,443 thousand, respectively.
- (2) Companies considered joint ventures, accounted for the equity method, where shareholders agreements just grant the right to the net assets of the business.
- (3) Companies, where despite holding a percentage of voting rights less than 51%, the Group holds the control through shareholders agreements.
- (4) Companies where the Group has significant influence despite holding a percentage of voting rights less than 20%, since it is represented these companies' board of directors.
- (5) Companies where the Group holds the control, joint control or significant influence, but given its limited relevance, they have not been included in the consolidation scope.

APPENDIX II

INDUSTRY REGULATION AND FUNCTIONING OF THE ELECTRICITY AND GAS SYSTEM

The IBERDROLA Group companies engage in electricity business activities in Spain and abroad (see Appendix I) and are heavily affected by the respective regulatory frameworks. A description of the main regulations affecting the IBERDROLA Group is provided below.

1. European Union

Member states of the European Union in which IBERDROLA is present, should comply with EU regulations.

The aim of the European legislation is the implementations of the single gas and electricity markets in order to facilitate the exchange of energy flows and allow any consumer in the European Union to deal freely with any supplier in the EU. In this regard, there are two types of legislation: directives, which set out common criteria to be observed in domestic markets and which the member states should transpose into national legislation; and regulations, which establish standards for supranational issues, especially those related to the transit of gas and electricity, and are applicable directly.

Other legislation that indirectly affects the energy sector is that arising from the energy and climate policy. In 2007 the triple objective of reducing greenhouse gas emissions (GHGs) by 20%, setting a quota of renewable energy of 20% and a target for reducing consumption by 20%, all by 2020, was agreed. To meet these objectives by 2020, four documents have been drafted to complement the legislation: the reform of the EU Emissions Trading System (EU-ETS), the national targets for emissions from non-EU ETS, the national objectives on renewable energy and the capture and storage of carbon.

Paris Agreement: On 11 April, Decision (EU) 2016/590 of the Council was published, regarding the signing, on behalf of the European Union, of the Paris Agreement approved by virtue of the United Nations Framework Convention on Climate Change. The signing by 174 countries and the European Union took place in New York on 22 April 2016. This agreement came into force on 4 November 2016.

The legislation on infrastructures is also relevant. The European Union has powers with regards to trans-European networks, specifically those relating to energy. During the last few years and months, various regulations and programmes have been created to promote a greater connectivity between the Member States, such as the Trans-European Energy Networks (TEN-E), the European Energy Programme for Recovery (EEPR) and the Connecting Europe Facility (CEF). In December 2014, the European Council approved the creation of a Strategic Investment Plan for the European Union, to mobilize Euros 315,000 million in 2015 – 2017.

On 25 February 2015, the European Commission launched a framework strategy for a resilient Energy Union with a Forward-Looking Climate Change Policy, that includes fifteen action points to be implemented during the mandate of the current European Commission (2014-2019), including, among others, setting out the goals of an energy union and the steps the European Commission will take to achieve it, a new legislation to redesign and reform the electricity market, ensure the supply for electricity and gas, EU funding for energy efficiency, a new energy renewables package and a structural reform of EU-ETS, facilitating the compliance of 2030 Targets set by the European Council in October 2014.

The European Commission presents on annual basis the advances achieved and the steps to be undertaken in the following years

Directive 2003/87/EC on CO₂ emission allowances makes it obligatory for the industry and the electricity sector to deliver an emission allowance for each ton of CO₂ emitted by a plant. The goal for 2020 is that emissions from sectors covered by the EU ETS will be 21% lower than in 2005.

Emission allowances may be acquired by companies through:

- Issuances in capital markets: European Energy Exchange-EEX and Futures Europe – ICE
- In some cases, free temporary allocation where the amount of allowances is determined on the European Union level

Since 2013 IBERDROLA has no longer been entitled to receive any allocation free of charge.

With reference to emissions trading, on 14 March 2018 the Official Journal of the European Union (OJEU) published Directive 410/2018, with the objective of intensifying emission reductions. The reform's most significant features are:

- An increase in the reduction applied each year to the stock of auctioned allowances (known as the “linear factor”) from 1.74% to 2.2% starting in 2021. This parameter is associated with the mechanism's “aim”, upon expecting that a gradual reduction of allowances auctioned implies lower total emissions from the sectors involved in emissions trading.
- If the total number of allowances in circulation (TNAC) exceeds 833 million, 24% of the excess allowances will be withdrawn from the auctions each year and added to the Market Stability Reserve (MSR), from 2019 to 2023. The rate of withdrawal of allowances at 12% is maintained for the following years. If the total number of allowances in the market is less than 400 million, then the MSR releases 100 million into the market. Those allowances remaining in the reserve in 2023 shall be cancelled to prevent them from being returned to the market.

This mechanism is intended to stabilize the EU ETS (EU Emissions Trading System) and strengthen the carbon price signal reducing gradually the surplus allowances.

- Conversely, the procedures for allocation of allowances to sectors subject to the risk of carbon leakage are amended.
- Lastly, support for modernizing the electricity sector in countries with lower GDP is planned, but exclude coal (a point of contention in the negotiations).

As regards non-ETS sectors, the following rules and standards have been published:

- Regulation (EU) 2018/841 on the inclusion of greenhouse gas emissions and removals from land use, land use change and forestry (LULUCF sector): It establishes accounting rules for measuring carbon emissions and removals from cropland, grassland, managed forests and wetlands in 2021-2030. Carbon removals in the LULUCF sector have to be at least equal to emissions.
- Regulation 2018/842, the “Effort Sharing Regulation” With a view to meeting the commitments made in the context of the Paris Agreement, it regulates the binding annual greenhouse gas emission reductions of Member States from 2021 to 2030. It establishes measures for non-ETS sectors to reduce their emissions by 30% by 2030 compared with 2005 by means of national objectives linked to GDP per capita, an emissions reduction path for Member States and a safety

reserve of 105 million metric tons of CO₂ equivalent to help less-favoured Member States with difficulties in achieving the 2030 objectives.

On 30 November 2016 the EC published the package Clean Energy for all Europeans, consisting of 70 documents, of which 8 are legislative proposals and sets the framework to complete the implementation of the energy internal market and to achieve the environmental 2030 targets. November 2016 package involves the wholesale and retail markets and the frameworks for renewable energy sources and energy efficiency.

Practical implementation to market operation is expected to take in place by 2020. At 31 December 2018 the OJEU has published 4 rules:

- Directive (EU) 2018/844 on the energy performance of buildings obliges Member States to establish long-term strategies for renovating buildings so as to shift investment in renovation into highly energy-efficient and decarbonised buildings by 2050. It also establishes minimum requirements for installing recharging points for electric vehicles in buildings with more than ten parking spaces.
- Directive 2018/2001 on the promotion of the use of energy from renewable sources establishes an overall EU target of 32% of energy from renewable sources by 2030, as well as a target of 14% in the transport sector (in each Member State) and an indicative average annual increase of 1.3 percentage points in the heating and cooling sector. It establishes stable (non-retroactive) support schemes for renewables with visibility over five years. It allows individual and group self-consumption, guaranteeing the contribution to the costs of using the grid. It prohibits charges to renewable energy self-consumers in general, but allows them for installations with a capacity of more than 30kW and where otherwise necessary to ensure the financial sustainability of the electricity system.
- Directive 2018/2002 on energy efficiency: This establishes an EU target of 32.5% for 2030, setting obligatory savings each year from 2021 to 2030, per Member State, of 0.8% of annual final energy consumption averaged over the period 2016-2018. It encourages the electrification of the heating and cooling and transport sectors and states explicitly that States may use contributions to Energy Efficiency National Funds as alternatives to obligation schemes.
- Regulation 2018/1999 on the Governance of the Energy Union and Climate Action establishes the rules for drawing up States' national energy and climate plans in accordance with EU targets for 2030 and their reporting to the EC. It imposes a calendar (draft by 31 December 2018, final plans by 31 December 2019) for States' presentation of and the Commission's comments in these Plans, which define the national strategy for attaining the targets and security of supply. It establishes a mechanism for supervising the 2030 targets, allowing the EC to impose measures if the overall targets are at risk of not being met.

In December 2018 agreement was reached among the European Commission, Parliament and Council on the rules for the Market Design, concluding negotiations on the rules of the *Clean Energy for all Europeans* package. The main features of the proposed Directive and Regulation on the internal market for electricity are:

- Capacity mechanisms: An emission limit of 550 g CO₂ kWh for new plants was agreed, applicable once the new Regulation comes into force. For existing plants, the limit of 550 g CO₂ kWh and 350 kg CO₂ on average per year will be applied from 1 July 2025. After 1 July 2025, no power plant with emissions exceeding these limits will be able to receive State aid in the form of capacity

mechanisms (except for those committed to in capacity contracts existing before 31 December 2019).

- Cross-border trade in electricity: At least 70% of interconnector capacity must be left available for cross-border trade in electricity. From January 2026, TSOs may use up to 30% of their interconnector capacity for reliability margins, loop flows and internal flows.
- Energy poverty and regulated prices: Member States may regulate prices temporarily in order to protect vulnerable households. However, preference has to be given to social security systems as the means to address energy poverty. Member States that maintain regulated prices for domestic consumers may continue to do so, but must present evaluation reports on progress towards abolishing regulated prices.

In the course of the first quarter of 2019 the Regulation on Risk-preparedness in the electricity sector will be published, as will the Regulation on the Agency for the Cooperation of Energy Regulators (attributes of the European Regulator) and the Regulation and Directive on the internal market (market design).

In November 2017, the EC published its Clean Mobility Package, which outlines measures to reduce transport sector emissions in 2020-2030, and adapt Europe's industry to comply with the Paris Agreements without losing global market share. Now being processed in the European Council and Parliament are the following matters:

- New emissions standard: vehicles sold between 2025 and 2030 must emit 15% less than those sold in 2021. For 2030 the emission reduction goal compared to 2021 is 37.5% for new vehicles and 31% for new vans. Annual goals will therefore be established for each manufacturer, and incentives will be granted to those with a lower percent than what is established for zero-emission and low-emission vehicles (<50gCO₂/km principally plug-in hybrids).
- Clean Vehicle Directive: promotes the acquisition and leasing of vehicles for public administration. Each State will include a goal for 2025 - 2030 (Spain: 1/light vehicles, 33% set for entire period; 2/heavy vehicles, trucks 10%-14% and buses 50%-75%).
- Communication regarding action plans to promote the use of alternative fuels (electricity, LNG, biogas, etc.): for the purpose of evaluating the investment needs (from Euros 16,000 to 22,000 million in recharge and supply infrastructures) and proposes a strategy to adapt specific States' regulation. The EC will provide Euros 800 million to finance the projects.

Other significant rules published by the OJOU in the recent years:

- Regulation 2016/1952/EU on European statistics on natural gas and electricity prices (17 November 2016). This legislation establishes a harmonised framework to elaborate and disclose the statistics on gas and electricity prices, both for residential customers and for companies. The new rules allow more transparent understanding of the different price components, splitting energy, networks and "taxes and other". EC's Energy Costs and Prices Study included in the "Clean Energy Package" is in accordance with this statistic methodology.
- On 17 August 2017, the Commission Implementing Decision (EU) 2017/1442 was published establishing emission thresholds applicable to large combustion plants (>50MW) using best available techniques. Member States must adapt to these new limits on acid gas emissions [nitrogen oxides (NO_x), sulphur dioxide (SO₂), fine particulate matter and, for the first time, mercury] by 2021.

- Regulation 2017/1938 concerning measures to safeguard the security of gas supply (28 October 2017). The Regulation's general purpose is to reinforce the European Union's energy security, reduce foreign dependence and enable it to confront possible. Main novelties:
 - Principle of solidarity: In the event of a serious gas crisis that puts the supply at risk, the Member States will help their neighbouring states to ensure the supply of gas to homes and necessary social services.
 - Reinforcement of regional cooperation: Common security risks of one Regional Group's supply will be jointly assessed and preventive and common emergencies measures will be agreed on.
 - Reinforcement of system security tools: Preventive action plans and mandatory regional emergency plans are established, along with regional risk analysis, which will be prepared jointly by all Member States that belong to the same risk group.
 - Transparency: To facilitate better supervision of the contracts' risks and clauses, the gas companies must notify the long term contracts that are relevant to the security of the supply (those that represent 28% of yearly gas consumption in the Member State).
- On 26 June 2017, the EC published Directives regarding environmental and social information, complementary to Directive 95/2014 requirements regarding non-financial information. Applicable to more than 500 employees. They comprise a voluntary guide applicable to firms with more than 500 employees, to report information relevant to environmental, social, and labour policies and risks, human rights issues, anti-corruption efforts and gender policies. They include best practices and among others, experience in monitoring Sustainable Development Objectives and the Paris Agreement.
- Electricity balance sheet: EC Regulation 2017/2195 was published on 28 November 2017, establishing a guideline on electricity balancing including the establishment of common principles for the procurement and the settlement of frequency containment reserves, frequency restoration reserves and replacement reserves and a common methodology for the activation of these reserves. This Regulation applies to all transmission systems and interconnections in the European Union except the transmission systems on islands that are not connected with other transmission systems
- EC Decision SA.40348 (2015/NN) was published, authorising the Spanish system for aid to renewables (December 2017). The EC has come to the conclusion that the Spanish system of support for electricity generation from renewable energy sources, cogeneration of high efficiency heat, electricity and waste is in accordance with the state aid rules of the European Union.

2. Industry regulation in Spain

The National Commission for Market and Competition (CNMC) is as a public body attached to the Ministry of Energy, Tourism and Digital Agenda and is subject to parliamentary scrutiny. Its functions include market regulation and supervision.

– Industry regulation and functioning of the electric system in Spain

The electricity sector is regulated by Electricity Industry Law 24/2013 of 26 December 2013, the principles of which are summarised as follows:

1. Activity separation

It establishes the legal and accounting separation of regulated activities (economic and technical management of the system, transmission and distribution) and liberalised activities (generation, wholesale and retail or other activities unrelated to electricity or activities abroad). However, a group of companies can carry out both kinds of activity provided that these are performed by different companies within it.

2. Energy generation activities:

Generation activity is carried out in free market competition, subject to a schedule of approvals, with its remuneration established in the market:

- The daily hour price for energy is established in the wholesale market by marginalist criteria; the dispatch determined by the lowest price until the demand is satisfied. Intra-day markets are also established to adjust the position with regard to the daily schedule. Conversely, certain production plants obtain additional remuneration to provide additional necessary services to guarantee supply.
- Order ITC 3127/2011 regulating payments for capacity, which consist of an investment incentive, an environmental incentive and an availability service is established. This Order establishes an incentive to investment during the first 20 years of the useful life of a facility and an environmental incentive during 10 years to investments for improving air quality. On the other hand, it governs a yearly availability service to be extended at the end of each year. In 2018 this incentive was capped to the first half of the year, except for hydroelectrical plants for draught reasons. For 2019 Order TEC/1366/2018 on tolls has been repealed.

Renewable generation

Royal Decree 413/2014 regulating electricity generation by means of renewable energy sources, cogeneration and waste establishes the specific remuneration scheme for existing and new facilities. The remuneration will be on the basis of six-year periods and some of them may be revised every three years. For facilities prior to July 2013, the remuneration system consists of the sum of:

- Investment remuneration (EUR/MW) to cover, where applicable, the investment costs that cannot be recovered from the sale of electricity in the market, defined on the basis of the reasonable yield on 10 year government bonds plus a spread, initially fixed at 300 basis points for the first regulatory period ending on 31 December 2019 (i.e., 7.398% before taxes).
- Operation remuneration (EUR/MWh) to cover, where applicable, the difference between the operating costs and income obtained in the electricity market. The return on the operation in circumstances where the operating cost of a technology is dependent on fuel prices may be changed at least once a year. The last Order published including an update of these operational costs is the Order ETU/1046/2017.

On the other hand, the Order IET/1045/2014 of June 2014 sets out a classification of standard installations in terms of the technology, installed capacity or any another characteristic already in place for the application of this remunerative scheme. These have been revised by Order ETU/130/2017 for the period 2017-2019.

The remuneration for new renewable facilities, cogeneration and waste will be set by a competitive tendering process. In 2017 there were two competitive bidding processes, with 3,000 MW of wind power awarded in the first and 3,909 MW of solar power and 1,128 MW of wind power in the second. In neither case will any awardee receive additional remuneration if market prices remain at their current levels — only if they fall below a certain threshold.

For 2019, the first call for tenders for wind power in the Canary Islands has been issued for projects co-financed by the ESIFs for a maximum of 271 MW. No other bidding processes have been initiated, although the government has announced a possible one for 3,000 MW of new renewable power.

3. Agents that guarantee the proper functioning of the market

- System Operator (SO): Red Eléctrica de España, S.A. carries on the transmission management and system operation activities. As system operator, it is responsible for managing the adjustment markets to guarantee a continuous balance demand and generation between energy.
- Market Operator (MO): The Iberian Market Operator (IMO) is responsible for the operation the Iberian electricity market (MIBEL) which manages Portuguese and Spanish daily, intra-day and forward markets in Spain and Portugal.

4. Transmission and Distribution

The Electric Industry Law [LSE] establishes that distribution and transmission are regulated activities that are classified as low-risk, whose remuneration is determined by six-year regulatory periods.

- It introduces the concept of “efficient and well-managed company, and the financial remuneration rate will be in accordance with ten year government bonds plus an appropriate spread for a low risk activity.
- It stipulates that the collection of the remuneration generated by new investments starts in the year $n+2$.

On 30 December 2013 two royal decrees regulating the new remuneration methodology of the transmission (Royal Decree 1047/2013) and distribution (Royal Decree 1048/2013) activities were published, as part of the regulatory and tax measures that started in the second half of 2013. The methodology set out in Royal Decree 1048/2013 is in accordance with new standard investment and operation costs and limits the annual volume of investment.

It also sets incentives in quality (it may fluctuate between +2% and -3% of the company's remuneration), in losses (it may fluctuate between +1% and -2%) and in anti-fraud measures, which may reach 1.5% of the company's remuneration.

Orders IET/2659/2015 and IET/2660/2015 published on 12 December 2015 determine the type of facilities and unit values to consider when calculating the remuneration for 2016 onwards.

Remuneration to transmission and distribution for 2016 was published on Order IET/980/2016 on 10 June 2016. However, in September 2017 proceedings were instigated aimed at having this order declared harmful to the public interest due to the treatment of fully depreciated assets still in use, and this has still not been resolved. An objection was also lodged in respect of the parameters used to calculate remuneration for 2016, on the basis that the final amount recognised should take account of the valuation of assets constructed by third parties and subsequently ceded to distributors.

Apart from this, the remuneration has still not been published for either 2017 or 2018, and an amount equivalent to that of 2016 is being paid provisionally, in accordance with Orders ETU/1976/2016 and ETU/1282/2017 which maintain the values published for 2016 for remuneration of distribution (Euros 5,175 million for the sector and Euros 1,655.5 million for IBERDROLA) and transmission (Euros 1,709 million for the sector).

The recent Royal Decree-Law 20/2018 of 7 December on urgent measures to boost economic competitiveness in the industrial and commercial sector in Spain, empowers the government to develop legislation covering Closed Distribution Networks, for supplying electricity only to industrial users which, basically for reasons of safety, are within geographically confined areas. The economic and financial sustainability of the electricity system must be taken into account, as must non-discrimination among consumers and non-redundancy in networks.

5. Access tolls

Access tolls are defined as the consideration consumers will pay for use of the networks and other unrelated supply costs included in the invoice, designated as charges. Access tolls are uniform across the country and are collected by the distributors and carriers, which act as the collector agents of the electricity system.

Currently, the government establishes these access tolls for each year that consumers must pay in each voltage level, in absence of regulatory implementation that outlines an allocation methodology and calculates the tolls per network use as well as unrelated supply charges. The recently published Royal Decree-Law 1/2019 transfers the responsibility of establishing the methods of remuneration, the tariffs for use of the grid and the conditions of access to the electricity and gas transmission and distribution networks to the CNMC, starting with the next regulatory period (2020). The government retains the power to set the charges, which concern all other costs included in the bill that are not related to the use of the networks.

Royal Decree-law 14/2010 of 23 December, developed by Royal Decree 1544/2011 of 31 October, extended the application of access tolls to electricity producers and established a provisional access toll of Euros 0.5 per MWh fed into the grid.

The Order IET/1366/2018, of 20 December, establishes the access tolls for 2019. This Order:

- It freezes all the tolls and current capacity payments.
- It provisionally maintains the transmission and distribution remuneration, until the orders with definitive values for 2019 are published.

- It establishes the use of funds from the accumulated surplus in such amount as is strictly necessary to balance income and costs. As regards revenues from the General State Budget, it includes Euros 750 million for auctions of CO₂, although the Royal Decree-Law on mining published on the same day raises this amount to Euros 1 billion.
- It consolidates the derogation of availability payments, although it maintains the current capacity prices paid by customers.
- It establishes the provisional remuneration of the SO and MO,

6. Supply activity

From 1 July 2009 all consumers may freely contract their supply of electricity with a supplier of their choice.

The government, however, maintains a Voluntary Price for the Small Consumer (VPSC), a regulated tariff for consumers that have a contracted power rating of less than 10 kW, and for those that do not meet the requirements to sign up for it but who temporarily do not have a valid contract with a free market operator.

Royal Decree 216/2014, of 28 March establishes the legal regimen for contracting the VPSC and methodology for calculating it, such as sum of energy cost, access tolls and charges, and commercial margin. In addition, as established by Law 3/2014, it provides the option for consumers to contracting an electricity price fixed for a year with the reference trader.

25 November 2016 saw the publication of Royal Decree 469/2016, changing the commercial margin of the PVPC ("voluntary price for the small consumer") established in Royal Decree 216/2014. Now the commercial margin is in accordance with the costs of three most efficient reference traders plus remuneration for the year of activity (1.05% on the energy price) and excludes face-to-face channel.

On 24 December, a Ministerial Order was published with the concrete values, both for the past (from 1 April 2014) and the future (until 2018).

The recently published Royal Decree-Law 15/2018 on urgent measures for energy transition and consumer protection approved a number of measures that affect sales and marketing:

- Prohibition of "door-to-door" selling of electricity and gas, except by prior appointment.
- CORs (reference marketers) should include a simulation of the application of the variable time slot costs in their invoice.
- It makes it easier to have fraudulent sellers disqualified.
- It facilitates contracting of power in multiple tranches of 0.1 kW for supplies of less than 15 kW.
- Supplies of less than 15 kW are exempt from invoicing for reactivation. Revenues obtained by distributors from reactive energy charges cease to be considered as subject to the settlement procedures and will be applied to actions necessary to comply with the voltage control requirements.

7. Social tariff

The social tariff was created in 2009 as a measure to protect vulnerable customers. It offers a discount on the regulated rate for certain groups. The social tariff is financed by all parents of the Groups with supply activity, in accordance with the method for calculating the percentages for distribution and the procedure for settling the amounts to be financed, in accordance with prevailing legislation. In 2018 IBERDROLA is responsible for 35.05%.

On 24 December 2016, Royal Decree-law 7/2016, which regulates the mechanism for financing the cost of the social tariff and other measures to protect vulnerable electricity consumers, was published. It was subsequently developed by Royal Decree 897/2017, which governs who qualifies as a vulnerable consumer, the social tariff and other protection measures for household electricity consumers, and by Order ETU/943/2017.

Three categories of vulnerable consumers are defined in accordance with criteria involving income, number of minors in the household and other conditions, and a VPSC discount is applied to their bill up to an annual consumption limits count applied to their bill up to an annual consumption limit.

- Vulnerable consumer: 25% discount on VPSC.
- Severe vulnerable consumer: 40% discount on VPSC.
- Consumer at social exclusion risk: 100% discount on VPSC. They must be helped by social services, who will cover at least 50% of their bill at VPSC.

The procedures to suspend supply in the event of non-payment are also reviewed in this legislation. Information requirements are added for all suppliers, payment terms and suspension of supply due to non-payment in the free and regulated market is equalised, with special consideration to consumers at risk of social exclusion, whose service is deemed essential and therefore cannot be suspended. Royal Decree-Law 12/2018 adds an extra level of protection for households in receipt of the bono social subsidy with minors under 16 or disabled or dependent members whose supply is also considered essential and as such not susceptible of being cut off in the event of non-payment.

8. Electric mobility

Royal Decree-Law 15/2018 eliminates the role of gestor de carga (charging agent), introduced by Royal Decree-Law 6/2010. Any consumer can now provide charging services, free of charge or for valuable consideration, on their own behalf or that of others.

It also allows distributors to install charging points where there is no private interest. If subsequently conditions become economically attractive, the installations will have to be transferred to other operators against appropriate compensation; enabling regulations have yet to be developed for this process.

9. Self-consumption

Self-consumption is regulated for the first time in the Electricity Industry Law 24/2013 and defined as the consumption of electricity power provided by generation facilities associated with a consumer. In accordance with the aforementioned Law, self-consumers must pay the same access toll for the consumed energy.

Subsequently, Royal Decree-law 9/2015 of 10 July 2015 modified Law 24/2013 to establish the possibility of setting exemptions for small power self-consumers (up to 10 kW). This measure is exceptional and it will be implemented provided that the safety and economic and financial sustainability of the system is guaranteed.

The administrative, technical and economic conditions of the self-consumption modes are regulated in Royal Decree 900/2015 of 10 October as amended by the recent Royal Decree-Law 15/2018 on urgent measures for energy transition and consumer protection, which establishes two modes of self-consumption:

- Without surplus: when the physical equipment installed prevent any injection of surplus energy into the grid, so that the consumer is only a consumer.
- With surplus: when the generating installations can inject surplus energy into the grid, so that the consumer is also a producer.

Furthermore, Royal Decree-Law 15/2018 eliminates the requirement for a meter for generation and the limitation whereby installed capacity had to be less than consumption. It also eliminates the charges and tolls on self-consumed energy from renewable sources, co-generation or waste and allows shared self-consumption and the setting of quantities for use of the grid. Lastly, it allows the remuneration of surpluses as the rest of production, and the simplified offsetting for self-consumers of shortfalls and surpluses in their production for facilities of up to 100 kW.

10. Interruptibility and assistance to electro-intensive consumers

The interruptibility service for a consumer consists of reducing its active capacity in response to a reduction order from the system operator, in line with the needs that arise in operating the electricity system in accordance with certain technical, security and financial criteria.

- Technical criteria: As a rapid response mechanism in emergency situations in the operation of the system.
- Economic criteria: In situations where the application of the service has a lower cost than that of the adjustment services of the system.

To execute the option, the system operator will send a power reduction order to the service providers who will reduce their active power demanded until the committed residual power values are fulfilled.

The allocation of the interruptibility service will be carried out through an auction procedure managed by the system operator, as established in the Order IET/2013/2013. In October 2017 its application was limited to the first five months of 2018, although subsequently Order ETU/362/2018 revised the mechanism, extending the period to 31 December 2018 and replacing the 90 MW interruptible product by one of 40 MW. Consumers wishing to provide the service must also show that they have no outstanding debts in connection with the provision of the demand-side interruptible load management service.

Lastly, Royal Decree-Law 20/2018 of 7 December, on urgent measures to boost competitiveness, provides for the creation, by means of royal decree, of a Statute of Electro-intensive Consumers, which will take account of objective variables linked to the guidelines and volume of capacity and energy required, as well as its potential contribution to improved technical and economic management of the electricity system.

This Statute will develop mechanisms designed to mitigate the effects of energy costs on competitiveness, in accordance with EU legislation, with obligations and commitments in terms of energy efficiency, substitution of emitting and polluting sources of energy and investment in R+D+i and employment, among other things. Beneficiaries of the subsidies will be obliged to maintain productive activity for a period of three years.

11. Cogeneration

Royal Decree 413/2014 on electricity generation by means of renewable, cogeneration and waste establishes the remuneration scheme for existing and new facilities.

Royal Decree-Law 20/2018 of 7 December introduced an extension to the economic regime of co-generation. High-efficiency co-generation facilities that use renewable fuels or natural gas and that exceed their regulatory useful life after 1 January 2018 may receive the payment term for the operation for a further two years from the entry into force of this royal decree-law, unless a new regime regulating this technology is developed.

Apart from this, the recently published Order TEC/1303/2018 recognises the right of certain manure treatment plants to the efficiency complement for the period 2007-2010, amounting to Euros 11 million, which the CNMC must pay from its accumulated surplus. Euros 1 million corresponds to IBERDROLA plants.

12. Tariffs balance

The difference between collection of tariffs and access tolls set by the Government and real costs related thereto, produced a revenue shortfall between 2000 and 2013, which was financed by the electricity companies. Recovery of this shortfall is deferred through annuities incorporated in the annual tariff.

As measures adopted since 2009 proved to be insufficient throughout 2013, the Government carried out a process of regulatory and tax reform for the electricity sector. As a step prior to this reform, the Law 15/2012 set out new tax measures and Royal Decree-law 9/2013, was approved, adopting urgent measures to guarantee the financial stability of the electricity system and modified the methodology for calculating the remuneration of the transmission and distribution activities, special regime and capacity payments, among other measures.

To consolidate tariff balancing in the sector, Law 24/2013 is governed by the principle of economic and financial sustainability of the electricity system, meaning that any regulatory measure which causes an increase in costs or a reduction in income for the electricity system should include an equivalent reduction of other cost items or an equivalent increase in income that ensures the balancing of the system. Thus, the possibility of new deficits accumulating, as have occurred in the past, is ruled out.

The Electricity Sector Act also establishes a mechanism limiting the revision of charges, by establishing that as long as cost items of the electricity system reflect payments corresponding to debts from previous years, charges may not be revised downwards. This principle is reinforced with the obligation to automatically review, from 2014 onwards, the tolls and fees if the annual or accumulated imbalances exceed 2% or 5%, respectively, of the income estimated for a given year.

The part of the imbalance that, without exceeding such limits, is not compensated by increases in tolls and fees will be financed by the parties to the settlement system in proportion to the remuneration that corresponds to them for their activities. The amounts thus contributed will be returned in the corresponding settlements during the following five years together with an interest rate equivalent to the market rate.

The surplus income that could arise will be used to compensate imbalances from previous years and, in 2017, by virtue of the 2018 General State Budgets Act, to compensate companies for the litigation resulting from the electricity regulation. Hence part of the accumulated surplus has been used to pay to companies in reimbursement of the financing of the “social bonus”, effectively a government-sponsored energy discount, for 2014, 2015 and 2016, including interest. The recently published Royal Decree-Law 15/2018 empowers the Ministry to use the accumulated surplus to cover possible deficits for the years 2018 and 2019, and increases the budgetary credit of revenues transferred from CO2 auctions.

Royal Decree 680/2014 of 1 August 2014, regulates the procedure of budgeting, recognition, settlement and control of the surcharges on the production of electricity power in the isolated electricity systems of the non-peninsular territories charged to the General State Budgets, thus developing the provisions of Law 24/2013, which stipulated that from 1 January 2014, 50% of these surcharges would be financed against the General State Budgets.

Final settlements for 2014, 2015, 2016 and 2017 were closed with a surplus of Euros 550 million, Euros 469 million, Euros 421 million and Euros 150 million, respectively. This accumulated surplus of Euros 1,074 million, deducting the return of the social tariff, will be paid into an account held by the CNMC.

13. Energy efficiency

In this sense, the European Union has set itself the target of achieving a 20% improvement in energy efficiency by 2020.

Law 18/2014 of 15 October, approving urgent measures for growth, competitiveness and efficiency, contains a set of mechanisms designed to achieve the energy saving targets established in the Energy Efficiency Directive. To this end, it created the National Energy Efficiency Fund, managed by the Institute for the Diversification and Saving of Energy (Instituto para la Diversificación y Ahorro de la Energía) and financed by an annual contribution from all suppliers of gas and electricity, wholesalers of oil products and of liquid petroleum gases, in accordance with their sales.

Law 8/2015 of 21 May, modified Law 18/2014 and established that the obliged entities must make an annual contribution from 2016 onwards to the National Energy Efficiency Fund in four instalments: on 31 March, 30 June, 30 September and 31 December of each year. Order ETU/257/2018 of 16 March, establishes the 2018 contributions to the National Energy Efficiency Fund.

– Industry regulation and functioning of the gas system in Spain

The natural gas sector in Spain has undergone significant changes in its structure and operation in the last ten years, driven mainly by the liberalisation measures included in European directives concerning common rules for the internal market in natural gas (Directive 2009/73/EC is currently in force) aimed at opening up markets and creating a single European gas market.

1. Activity separation

The Hydrocarbon Industry Law of 1998 laid the foundations for the new gas system, particularly with regard to the separation of activities (regulated and liberalised), the introduction of third-party access to the regulated network, the abolition of the former concessions for piped gas supply and their conversion into regulated administrative permits, and the establishment of a timetable for progressive market deregulation.

The Hydrocarbon Industry Law 34/1998 provided for the legal separation of liberalised and regulated activities and the segregation for accounting purposes of the various regulated activities. Law 12/2007 took a further step in establishing the functional separation between liberalised activities and the grid and between the latter and the technical management of the system. In 2012, Royal Decree-Law 13/2012 was approved, establishing further measures of separation in management of the transmission network.

In line with these principles, the gas system has been structured around two types of activities: regulated (regasification, basic storage, transmission and distribution) and liberalised (trading and supply).

2. Deregulation of the gas sector

The effective deregulation began with the publication of Royal Decree-Law 6/2000 on urgent measures to intensify competition in markets for goods and services, which created the Technical System Manager, and Royal Decree 949/2001.

Royal Decree 949/2001 established the specific terms and conditions for third-party network access and, for regulated activities, a cost-based system of remuneration, tariffs, tolls and fees structured according to pressure levels and consumption bands. The remuneration assigned to each company as well as the tariffs, tolls and fees are updated annually by ministerial orders and resolutions.

The economic system also defined a settlement procedure to allow redistribution of revenues collected among the various regulated activities.

Other issues related to the regulation of the transmission, distribution and supply businesses, the administrative authorisation procedures for natural gas facilities and the regulation of certain aspects of the supply business are covered in Royal Decree 1434/2002.

The deregulation process in Spain was completed with Law 12/2007 transposing Directive 2003/55/EC. The two key changes enacted by this law were the elimination of regulated supply and the functional separation among activities.

As in the Spanish electricity sector, since 1 July 2008 all customers have been able to choose their gas supplier freely, although there is a regulated Last-Resort tariff that may be used by low-pressure customers with annual consumption of less than 50,000 kWh. The price is calculated automatically and cumulatively.

3. Technical operation of the system

Order ITC 3126/2005 develops the rules for the technical management of the gas system. Inter alia, these regulations establish that each operator is individually responsible for maintaining its liquidity and enacts specific protocols for the conduct of the technical system manager in exceptional operating circumstances.

Despite the sector's progressive deregulation, prevailing regulation upholds the state's obligation to ensure the safety and continuity of supply. Royal Decree 1766/2007 establishes the obligation of sellers and direct consumers in the market to hold minimum safety stocks corresponding to 20 days of firm supplies, with a limit of 50% on the maximum percentage of supplies from any one country.

Additionally, the Winter Plan for Gas in force published in 2017 obliges gas retailers to hold a winter reserve (from November to March) in the form of stocks of liquefied natural gas (LNG) equivalent to 3.5 days of their contracted input capacity to the transmission and distribution network.

The State also maintains responsibility for obligatory planning work for certain infrastructures (for example, gas pipelines forming the core transmission network, the secondary transmission network, determining the total LNG regasification capacity necessary and core natural gas storage facilities). For all other infrastructures, the state's planning work is indicative only. In 2012, Royal Decree-Law 13/2012 enacted a series of measures to halt the construction of new infrastructure in a context of falling demand for gas.

Royal Decree 335/2018 of 25 May amends various royal decrees relating to the administrative handling of certain installations, the procedure to be followed in cases of disqualification of sellers and the setting of tolls and fees. This last point has been held in abeyance due to the transfer of responsibilities to the National Commission on Markets and Competition (CNMC).

4. Remuneration

Law 18/2014 approving urgent measures for growth, competitiveness and efficiency, and before that Royal Decree-Law 8/2014, establish the principle of economic and financial sustainability of the gas system. This principle is reinforced with the obligation of automatic revision of tolls and fees if the annual mismatch exceeds 10% of revenues subject to settlement for the financial year or 15% of the sum of the annual mismatch and annual amounts recognised and pending amortisation.

The part of the imbalance that, without exceeding the above limits, is not compensated by the increase in tolls and fees, will be financed by the parties to the settlement system in proportion to their remuneration. The amounts contributed will be returned in the following five years and will earn an interest rate equivalent to the market rate.

The deficit accumulated as at 31 December 2014 will be financed by the owners of the installations during a period of 15 years.

On the other hand, the remuneration of the regulated activities will be in accordance with the costs necessary for an efficient and well-managed company to carry out the relevant activity, following the principle of performing the relevant activity at the lowest cost for the gas system. In addition, the remuneration of regulated activities will be on the basis of six-year regulatory periods. The first regulatory period ends on 31 December 2020. Every three years adjustments may be made to the remuneration parameters within the gas system in the event that there are significant changes in revenues or costs.

The remuneration system for distribution is in accordance with the previous year's system adjusted to market growth. The remuneration system for transmission, storage facilities and regasification is in accordance with the net value of the assets plus a complement associated with trends in demand. The cost of operation and maintenance is also taken into account.

5. The organised gas market

The Hydrocarbon Industry Law was modified by Law 8/2015 of 21 May, the main aspects of which regarding the gas system are:

- The creation of an organised wholesale gas market.
- The designation of the operator of the regulated gas market.
- Measures relating to minimum security stock levels.
- It empowers CORES (Corporación de Reservas Estratégicas de Productos Petrolíferos) to constitute, maintain and manage strategic gas and LNG stocks.
- Inspections may be carried out by any natural gas installation company, not only distribution companies.

Finally, the Royal Decree 984/2015 of 30 October 2015 regulated the organised wholesale gas market and the third party access to the facilities of the natural gas system. It establishes the bases for the development of the organised gas market, which will initially include the negotiation of short-term standardised products by an electronic platform managed by the Market Operator (MIBGAS - OMEL), together with a system of centralised management of guarantees. In addition, it centralises the contracting of capacity managed by the TSO (technical system operator) (ENAGAS), with standardised products and auction procedures.

At the end of 2017 the Resolution for the provisions of compulsory market service by dominant operators (Endesa y GNF) was published. They are therefore obliged to maintain a minimum volume of sales or purchases up to a maximum of 5.68% of their annual gas supplies in Spain. The price separation between the purchase and sale offers must be equal to or less than 0.50 euros per MWh. This measure is complementary to the periodic call of voluntary market makers.

3. Industry regulation in the UK

The principal laws that govern Scottish Power Ltd.'s (hereinafter, *SCOTTISH POWER*) activities are the Electricity Act 1989 and the Gas Act 1986, as substantially amended and supplemented by numerous subsequent amendments, including the Gas Act 1995, the Utilities Act 2000, the Energy Act 2004, the Energy Act 2008, the Energy Act 2010, the Energy Act 2011, the Energy Act 2013, the Energy Act 2016 and various EU Directives (subject to any changes arising from the UK's forthcoming exit from the EU).

1. The Regulatory Authorities

The principal regulatory authority for utilities is the Gas and Electricity Markets Authority (*GEMA*), comprising a chairman and other members appointed by the Secretary of State for Business, Energy and Industrial Strategy (*BEIS*). *GEMA* is backed by the *Office of Gas and Electricity Markets* (*OFGEM*). The main instrument of regulation used by *GEMA* is the licensing regime which in most cases requires the various activities of the energy industry to be carried out under a licence to which standard conditions apply. In addition, there are a number of statutory obligations for licence holders, known as relevant requirements, which are enforced by *GEMA* as if they were licence conditions.

GEMA's principal objective is to promote the interests of present and future consumers and promote effective competition. Under the Energy Act 2010, the interests of such consumers must be taken as a whole, including their interest in reducing greenhouse gases and in the security of the supply of gas and electricity.

In furthering this objective *GEMA* must ensure that all reasonable demand for electricity and gas is met, ensure that licence holders are able to finance the activities they are obliged to undertake, and contribute to the achievement of sustainable development. It must also take into consideration vulnerable customers and *GEMA* must observe certain guides on social and environmental matters.

GEMA's functions include the granting of licences (and their revocation in certain limited circumstances), the proposal of changes to licence conditions (including the operation of price controls for the monopoly network functions), the review of industry code modifications, operating schemes for promoting renewable electricity and energy efficiency, and the enforcement of the industry's obligations.

GEMA's regulatory activities must be transparent, responsible, proportionate, consistent and focused solely on those cases where action is needed in line with best regulatory practices.

GEMA has the power to impose monetary penalties for past and ongoing breaches of licence conditions and relevant requirements and it can order that redress is provided to consumers. Fines and redress orders for a particular breach can in aggregate be up to 10% of the licensee's applicable turnover.

The principal Regulatory Authority for competition matters is the Competition and Markets Authority (*CMA*). They can undertake general market investigations and, working concurrently with *GEMA*, can investigate potential breaches of competition law in the utility field. Consumer protection matters are enforced by the *CMA*, *OFGEM* and Local Authority Trading Standards departments.

2. Licences

Companies within the *SCOTTISH POWER* Group hold licences for various activities including:

- The supply, generation and distribution of electricity;

- the shipping of gas (that is, arranging for the insertion, the transmission, and the removal of it from the public network) Gas; and
- the transmission of gas to certain specific sites (such as proposed new gas fired power stations).

The conditions of licences regulate such matters as:

- for network licences: the quality of service and the charges that can be made.
- for supply to household consumers: consumer protection provisions including rules on standards of conduct, provision of information, disconnection in view of debt, cost reflective pricing, supply information to customers and on treating customers fairly.
- for most types of licence: rules requiring adherence to industry codes that set down the detailed technical rules for operating the industry, and providing for OFGEM to determine whether proposed changes to the codes should go ahead.

The Gas Act 1995 and Utilities Act 2000 introduced standard licence conditions to ensure that all holders of a particular licence type are subject to the same conditions. Under the Electricity and Gas Regulations 2011 (Internal Markets), modifications of individual or standard licensing terms no longer require the holders' consent.

A gas and electricity market investigation was carried out by the CMA, which issued a report on 24 June 2016. The final report concluded that competition in the wholesale gas and electricity markets works well and that the presence of vertically integrated companies does not have a detrimental impact on competition.

However, a number of adverse effects on competition were identified in the supply market, some due to ill-conceived regulation, but mainly focussed on the 'weak customer response' from the 70% of customers who are on standard variable tariffs (SVT) and who lose out through lack of engagement in the market. Most of the CMA's remedies are focussed on increasing competition in the SVT segment, including creating a database of disengaged customers (those who have been on SVT for more than three years) which could be used by rival suppliers for marketing, and a programme of trials to develop more effective customer prompts. In the case of customers with prepayment meters the CMA decided to impose a transitional safeguard tariff cap, to be set above the "efficient" level of pricing.

Other remedies include location-dependent charging for transmission losses, changes to industry settlement processes and code governance, and recommendations to the Government on a number of subjects including GEMA's duties.

The CMA made a number of orders in December 2016 to implement relevant remedies, ahead of its statutory deadline of 23 December to complete implementation. On 7 December 2017, OFGEM decided to extend the CMA's prepayment meter price cap to a further 1 million customers in receipt of Warm Home Discount (WHD) payments with effect from 2 February 2018.

On 19 July 2018, the Domestic Gas and Electricity (Tariff Cap) Act 2018 received Royal Assent. This legislation obliges OFGEM to cap energy tariffs temporarily (to the end of 2020) for all domestic customers on SVT and other default tariffs, with a view to protecting existing and future domestic consumers, and having regard to the need to create incentives for efficiency, enable effective competition, maintain incentives for switching and ensure licensed activities remain financeable.

OFGEM decided on 6 November 2018 that the cap would come into effect on 1 January 2019 and for the first period (1 January 2019 to 31 March 2019) would be set at £1,137 for dual fuel customers paying by Direct Debit (DD) and £1,221 for those paying by Standard Credit (SC). Customers currently covered by the WHD price cap would move to the default tariff cap for DD (whether they pay by DD or SC). Those covered by the CMA's prepayment price cap are unaffected (but the cap is subject to review by the CMA in 2019).

3. Price controls

A number of temporary price controls are currently in effect in the domestic energy supply market.

- As noted above, following its 2014-2016 Energy Market Investigation, the CMA introduced a transitional safeguard tariff cap for domestic consumers with prepayment meters (PPMs), which will apply from 1 April 2017 to 31 December 2020. and in December 2017 OFGEM extended to consumers in the WHD program WHD, which will apply from 2 February 2018 to 31 December 2019. Following enactment of the Domestic Gas and Electricity (Tariff Cap) Act 2018, prices for the sale of electricity and gas to the domestic consumers on SVT or other default tariffs will be subject to a temporary cap (the 'Default Tariff Cap') applying from 1 January 2019 to 31 December 2020 (extendable on an annual basis to 31 December 2023). The level of the cap is set by OFGEM.
- The provisions of the Competition Act 1998 and the Transmission Constraint Licence Condition (TCLC), may also provide a constraint on prices charged to commercial customers or on other prices in the wholesale electricity and gas markets. TCLC prohibits electricity generators from making excessive profits resulting from possible actions in balancing markets. OFGEM has published guidelines on the interpretation and application of the TCLC. The condition was renewed and made permanent on 16 July 2017 and some elements were removed to address potential overlap with REMIT.
- OFGEM has implemented electricity market liquidity obligations for large integrated retail and generation companies, including SCOTTISH POWER. These include obligations to facilitate trading with smaller suppliers and also an obligation to create market in a number of wholesale products during two specified "windows" in each business day. Although the prices of bids and offers are not regulated, the licence condition limits the spread between them. OFGEM will revise this obligation in 2019 in view of the drop in the number of companies subject to it.
- The networks are considered to be a natural monopoly. Therefore, their revenues have been controlled and this is now achieved through the new RIIO framework (Revenue = Incentives + Innovation + Outputs). This involves setting a revenue profile for an eight year period (with the opportunity for Ofgem to propose a limited revision every four years) which would deliver a target return on investments in accordance with the regulator's assessment of the costs of an efficient network operator and the likely capital programme (aided by a business plan submitted by the company). The formula also includes various incentives and takes into account inflation. The formula uses a Market Indicator for setting the debt cost, and phases in (for electricity) an asset depreciation period of 45 years, replacing the 20 year period used previously.

In the transmission business, SPTL's new RIIO-T1 framework became effective from April 2013. In distribution, the new RIIO-ED1 for the Scottish Power network in the South of Scotland and in the Manweb area came into force on 1 April 2015.

OFGEM is reviewing the RIIO framework ahead of the second round of controls, which will start with RIIO-T2 in April 2021.

- a duration of RIIO-1 of 5 years instead of 8;
- *Retail Price Index* will be replaced by *Consumer Price Index* (CPI);
- The participation of stakeholders will improve through the creation of *Stakeholder Challenge and User Groups*;
- the existing depreciation policy for *Regulated Asset Value* (RAV) will still be in force;

OFGEM is considering options for the adjustment mechanisms of the Fair Returns to limit the companies having abnormally high returns. Ofgem has also signalled that large, new and separable transmission projects may be tendered or made subject to a bespoke (lower) rate of return. OFGEM is currently developing two models: a 'Special Purpose Vehicle' (SPV) model, in which projects would be delivered through a SPV that would bid competitively for the financing, construction and operation of the assets in an Ofgem supervised auction; and a 'Competitive Proxy Model' (CPM) in which the project would be developed by the transmission licensee and Ofgem would set the allowed revenue using 'competitive' benchmarks.

4. Other issues

Other key elements of the regulatory regime in the United Kingdom include:

The Renewables Obligation (RO)

For some time, the United Kingdom Government's aim has been to source at least 30% of electricity from renewable sources by 2020. To help meet this objective, the RO Orders (which apply separately to different parts of the United Kingdom within a unified scheme) place obligations on suppliers of electricity to source an increasing proportion of their electricity from renewable sources (in accordance with the expected level of renewable energy production in each year plus a 10 percent spread in order to prevent certificate prices from falling sharply).

Suppliers meet their obligations by presenting sufficient Renewables Obligation Certificates (ROCs) or by paying an equivalent amount into a fund. If suppliers default on their obligations and the total shortfall is above a threshold amount, the shortfall is recovered from the remaining suppliers through a process of 'mutualisation'.

The proceeds of the fund are paid back to those suppliers that have presented ROCs in proportion to the number of ROCs presented. Since April 2009, the RO has been banded so that differing technologies receive different levels of support depending on the expected average costs.

The RO was closed for new projects after 31 March 2017 and the Government has implemented the Contracts for Difference (CFDs) mechanism that was part of the Electricity Market Reform (EMR) programme. The wind farms in ScottishPower's onshore renewables pipeline that received planning permission in time to qualify for the relevant grace period were be eligible to accredit under the RO. The RO remained in place for new facilities entering the scheme before the relevant closure date; payments will continue until 31 March 2027 for projects that started generating power before 1 April 2009 and for 20 years after entry into the RO for subsequently dated projects. The Energy Act 2013 foresees changing from the RO to a premium payment on substantially similar terms.

Electricity Market Reform (EMR)

The principal elements of the United Kingdom Government's EMR programme are:

- a new incentive scheme, in accordance with CFDs to boost low carbon generation; and
- a Capacity Market to enhance security of supply (market-wide auction - CM mechanism).

The first CFD Allocation Round took place on 4 February 2015 in two “pots”; one for ‘established technologies’ (mainly onshore wind and solar) and a second one for ‘less established technologies’ (mainly offshore wind). ScottishPower's 714 MW East Anglia ONE offshore Wind Farm achieved a contract in the auction at a price of GBP 119.89 per MWh. The second round concluded on 11 September 2017 and procured some 3.2GW of offshore wind, mostly at a clearing price of £57.50 per MWh. The Government has now announced a further CFD Allocation Round for less established technologies which is due to commence in 2019). A budget allocation of GBP 557 million (2011/12 prices) has been made in aggregate for allocation rounds prior to 2025.

Within this overall budget the Government has published the draft budget for Allocation Round 3, namely, £60 million (2011/12 prices) for delivery years 2023/24 and 2024/25. The Government expects this to support the delivery of around 4GW of new capacity, and the allocation round will be subject to an overall 6GW capacity cap (subject to State Aid approval). The CfD administrative strike prices for offshore wind are set at £56/MWh for projects delivering in 2023/24 and £53/MWh for those delivering in 2024/25 (in 2012 prices). A final Budget and parameters will be set ahead of the auction.

Annual Capacity Market auctions took place in December 2014, 2015 and 2016, for capacity delivery in winter 2018, 2019 and 2020, respectively.

On 15 November 2018, the European Court of Justice upheld Tempus Energy's challenge against the EU Commission, annulling its decision not to raise State Aid objections to the UK CM. BEIS announced a ‘standstill period’ until the scheme can be approved again by the Commission. On 6 December 2018, BEIS published its forward plan (agreed with the Commission) for obtaining State Aid re-approval for the CM. This envisages the Commission issuing an Opening Decision to open the formal investigation in early 2019. The Government intends to hold a ‘top-up’ T-1 auction during summer 2019, for delivery in winter 2019/20, making any agreements conditional on the outcome of the Commission's formal investigation. The Government has also published (subject to consultation) a “minded-to” plan to resume supplier charging arrangements to fund deferred payments to capacity providers (upon State Aid re-approval). The T-4 auction for 2022/23 is planned to be run as a T-3 auction upon State Aid re-approval.

EU-ETS and United Kingdom Carbon Price Support

The Climate Change Act 2008 set out a trajectory towards reducing UK greenhouse gas emissions from 1990 levels by at least 80% by 2050, with interim reduction targets.

A positive final State Aid decision would allow CM payments to be made to CM agreement holders that have met their obligations during the ‘standstill period’. This EU ETS participation position for the UK remained the case for 2018, but the position for 2019 and subsequent years is not yet clear due to ongoing Brexit negotiations. In light of Brexit developments to date, as expected, the EU Commission has suspended for the time being the UK-related processes in the Union Registry of the EU ETS with effect from 1 January 2019.

The Carbon Price Support mechanism is a United Kingdom tax levied on fossil fuels used for electricity generation at differential rates which simulate a charge on the CO₂ emissions. In recent years, this charge has been set at GBP 18 per tonne of CO₂. The Government announced in its 2018 budget that it will maintain this GBP 18 per tonne of CO₂ rate for 2020/21. In the case of a Brexit without agreement the budgets of 2018 establish that the Government will introduce a new rate to the CO₂ emissions (Carbon Emission Tax) that in 2019 would be of 16 pounds sterling per ton.

The Energy Companies Obligation (ECO)

Energy suppliers who supply over 250,000 domestic customers are required to achieve energy efficiency improvements or heating cost reductions by domestic customers.

As with any other cost, the costs of making those improvements can be incorporated by suppliers into tariffs, subject to the need to remain competitive in the market. These costs need to be taken into account in any price caps.

The current ECO program began in April 2017 at a cost of 640 million pounds sterling per year. The new program (ECO3) began in October 2018 (and will continue until March 2022) focused on vulnerable customers. Under the ECO3, the exemption is reduced to the program of small suppliers in a staggered way, leaving exempt in 2019/2020 those suppliers with less than 200,000 clients and, in 2020/2021 those with less than 150,000 clients (instead of the current 250,000). **Closure of coal plants**

In November 2015 then Secretary of State Amber Rudd announced plans to consult on requirements for all coal power stations without CCS to close by 2025 (subject to any security of supply issues). At the end of 2016 the Government published a request and in January 2018 confirmed its intention of eliminating coal generation from the system in 2025.

Pollution Control

European pollution control directives are: The Integrated Pollution Prevention and Control (IPPC), the Large Combustion Plant Directive (LCPD) and the Industrial Emissions Directive (IED) impose limits on various categories of emissions transposed into United Kingdom law through the Pollution Prevention and Control (Scotland) Regulations 2012 and amendments to the Environmental Permitting (England and Wales) Regulations 2010. These controls are enforced by the Environment Agency or, in Scotland, the Scottish Environmental Protection Agency.

The Medium Combustion Plants Directive places emission limits on smaller generating and other combustion plants. As part of the implementation of this, Defra (Department for Environment, Food and Rural Affairs) is expected to impose NOX limits on diesel generators, which could reduce the air quality implications of allowing such plants to participate in the capacity mechanism.

4. Industry regulation in the USA

1. Electricity and natural gas distribution

Some of the most important specific regulatory processes that affect AVANGRID Networks, Inc. (hereinafter, AVANGRID NETWORKS) include the New York rate settlement for NYSEG and RG&E, the Connecticut United Illuminating distribution rate case decision, the Maine and Connecticut transmission Federal Energy Regulatory Commission (FERC) Return on Equity (ROE) case and the Reforming Energy Vision (REV) process of New York.

The main revenues of AVANGRID NETWORKS are essentially regulated, and are in accordance with tariffs established in accordance with administrative procedures set by the various regulatory bodies. The tariffs applied to regulated activities in the United States are approved by the regulatory commissions of the different States and are in accordance with the cost of providing service. Energy, financial and capital costs are included (capital costs show the Company's capital index and legitimate capital profitability).

Energy costs that are set on the New York and New England wholesale markets are passed on to consumers. The difference between energy costs that are budgeted for and those that are actually incurred by the utilities is offset by applying compensation procedures that result in either immediate or deferred tariff adjustments.

These procedures apply to other costs, which are in most cases exceptional (due to effects of extreme weather conditions, environmental factors, regulatory and accounting changes, treatment of vulnerable customers, etc.) that are offset in the tariff process.

Each of the eight supply companies in AVANGRID NETWORKS, must comply with regulatory procedures that differ in form but in all cases conform to the basic framework outlined above.

As a general rule, tariff reviews cover various years (three in New York and Connecticut) and provide reasonable returns on equity, protection and automatic adjustments for exceptional costs incurred and efficiency incentives.

2. New York

– New York State Electric & Gas Corporation (NYSEG) and Rochester Gas and Electric Corporation (RG&E) Tariff Plans presented in 2015:

On 20 May 2015, NYSEG and RG&E filed electric and gas rate cases with the New York Public Service Commission (NYPSC). The companies requested, on the one hand, rate increases for NYSEG Electric, NYSEG Gas and RG&E Gas and, on the other hand, RG&E Electric requested rate decreases.

On 19 February 2016, the NYSEG, RG&E and other signatory parties filed a Joint Proposal, or the Proposal, with the NYPSC for a three-year rate plan commencing on 1 May 2016. The Proposal was submitted on April 7, 2016 and June 15, 2016, the adoption resolution of the NYPSC, with the retroactive application of May 1, 2016.

The delivery rate increase can be summarized as follows:

Utility	01 May 2016		01 May 2017		01 May 2018	
	Rate Increase (Millions USD)	Delivery Rate Increase (%)	Rate Increase (Millions USD)	Delivery Rate Increase (%)	Rate Increase (Millions USD)	Delivery Rate Increase (%)
NYSEG Electric	29.6	4.10	29.9	4.10	30.3	4.10
NYSEG Gas	13.1	7.30	13.9	7.30	14.8	7.30
RG&E Electric	3.0	0.70	21.6	5.00	25.9	5.70
RGE Gas	8.8	5.20	7.7	4.40	9.5	5.20

The allowed rate of return on common equity for NYSEG Electric and NYSEG Gas is 9%. The equity ratio for both Electric and Gas is 48%. The Proposal includes an applicable Earnings Sharing Mechanism (ESM). The customer share of earnings would increase at higher earnings levels, with customers receiving 50%, 75% and 90% of earnings over 9.5%, 10% and 10.5% of ROE, respectively, in the first year. Earnings thresholds would increase in subsequent years.

The Proposal reflects the recovery of deferred costs of approximately USD 262 million incurred by electric storms and borne by NYSEG, and also continues reserve accounting for qualifying Major Storms (USD 21.4 million annually at NYSEG and USD 2.5 million annually at RG&E). Incremental maintenance costs incurred to restore service in qualifying divisions will be chargeable to the Major Storm Reserve provided that they meet certain thresholds.

The Proposal establishes threshold performance levels for designated aspects of customer service quality and continues and expands bill reduction and arrears forgiveness Low Income Programs at increased funding levels.

The Proposal provides for the implementation of NYSEG's Energy Smart Community ("ESC") Project in the Ithaca region which will serve as a test-bed for implementation and deployment of Reforming the Energy Vision (REV) initiatives. The ESC Project will be supported by NYSEG's planned rollout of Distribution Automation and Advanced Metering Infrastructure (AMI) to customers on circuits in the Ithaca region.

The Proposal provides for partial or full reconciliation of certain expenses including, but not limited to: pensions, other postretirement benefits; property taxes; variable rate debt and new fixed rate debt; gas research and development; environmental remediation costs; Major Storms; nuclear electric insurance limited credits; economic development; and Low Income Programs. The Proposal provides for partial or full reconciliation of certain expenses including, but not limited to: pensions, other postretirement benefits; property taxes; variable rate debt and new fixed rate debt; gas research and development; environmental remediation costs; Major Storms; nuclear electric insurance limited credits; economic development; and Low Income Programs.

• Reforming the Energy Vision

Reforming the Energy Vision: In April 2014, the NYPSC commenced a proceeding titled Reforming the Energy Vision (REV), which is an initiative to reform New York State's energy industry and regulatory practices.

The REV has followed several paths simultaneously: Track 1 deals with market design and platform technology and Track 2 deals with the regulatory reform. REV's objectives include the promotion of more efficient use of increasing the utilization of renewable energy resources such as wind and solar power (in support of New York State's renewable energy goals) and a wider deployment of "distributed" energy resources, and storage.

REV is also intended to promote greater use of advanced energy management products to enhance demand elasticity and efficiencies. AVANGRID is currently participating in the initiative with other New York utilities. The NYPSC issued a 2015 order in Track 1, which acknowledges the utilities' role as Distribution System Platform (DSP) providers, and requires the utilities to file an initial Distribution System Implementation Plan (DSIP) by 30 June 2016. The DSIP was filed on 30 June 2016 and included information regarding the proposed deployment of Automated Metering Infrastructure (AMI). Various REV-related proceedings have also been initiated by the NYPSC, and each proceeding has its own schedule. These proceedings include the Clean Energy Fund, Demand Response Tariffs, Net Energy Metering/Value of Distributed Energy Resources and Community Choice Aggregation.

Track 2 of the REV initiative is also underway, and through a NYPSC personnel Whitepaper review process, is examining potential changes in current regulatory, tariff, market design and incentive structures which could better align utility interests with achieving New York state and NYPSC's policy objectives. On 1 December 2016, NYSEG and RG&E filed their proposed Earnings Adjustment Mechanism (EAM), and despite collaborative sessions have been held in the first and second quarters of 2017, the companies cannot forecast the result of the proceeding.

On 20 December 2016, NYSEG and RG&E filed a petition for the full deployment of Automated Metering Infrastructure (AMI) with the Commission. The AMI petition requests authorisation to implement full-scale AMI at NYSEG Electric, NYSEG Gas, RG&E Electric and RG&E Gas. Approximately 1.8 million AMI electricity meters and gas modules will be installed.

The Companies also requested to implement a surcharge to recover the investment until such values can be included in base delivery rates in their next rate cases.

On 14 September 2017, the NYPSC issued an order related to the Value of Distributed Energy Resources (VDER), which included filing requirements for (1) new tariffs, (2) a timeline and cost estimate for implementing automated consolidated billing, and (3) proposed changes to Standard Interconnection Requirements.

- **NY Transco**

AVANGRID NETWORKS owns approximately 20% of New York Transco. New York Transco was established by the New York transmission utilities to develop, own, and operate electric transmission in New York.

In December 2014, New York Transco filed for regulatory approval of its tariffs, terms, and conditions, with the FERC, including a base ROE of 10.6%, plus 150 basis points as incentives. The New York Transco will not make final decisions on transmission project development until a FERC decision.

On 2 April 2015, the FERC issued an order granting, inter alia, a 50 basis points adder for NY Transco's membership in the NYISO RTO. The FERC also set the formula rate and base ROE issue for hearing and settlement judge procedures. In addition, the FERC rejected the New York Transco's owners' cost allocation method for the Transmission Owner Transmission Solutions (TOTS), Projects because it would allocate costs to the Long Island Power Authority (LIPA) and the New York Power Authority (NYPA) that they did not voluntarily agree to pay.

On 5 November 2015, New York Transco's owners filed the Settlement with the FERC to resolve all outstanding issues associated with the TOTS Projects, including the base ROE of 9.50%, and a 50-basis point ROE adder, the capital structure of 53%, and the cost allocation by virtue of an Open Access Transmission Tariff (OATT) under the New York Independent System Operator, Inc. (NYISO) for the TOTS Projects. The FERC approved the Settlement on 17 March 2016.

- **Net Energy Metering**

On 16 October 2015, the NY Commission issued an order establishing interim ceilings on the interconnection of net metered generation (Floating Cap Order). The Commission directed that net metering limitations should "float" until completion of a proceeding to develop an interim method of evaluating the benefits of distributed energy resources.

Following the issuance of the Floating Cap Order and the launch of the CDG program, the Joint Utilities experienced a surge in new applications for net metered resources, ultimately leading to more than 4000 MW of interconnection applications. The Commission implemented the Value of Distributed Energy Resources (VDER) mechanism in response to the decision to leave the limit of net metering open and the promise to adopt a "new regulatory approach" for assessing Distributed Energy Resources (DER).

- **New York State Department of Public Service Investigation of the Preparation for and Response to the March 2017 Windstorm**

On 11 March 2017 the New York State Department of Public Service (the "Department") commenced an investigation into NYSEG's and RG&E's preparation for and response to the March 2017 windstorm, which affected more than 219,000 customers.

A Department Report on the investigation was issued in November 2017 which identified 29 recommendations for corrective action, as well as identifying four Emergency Response Plan (ERP) alleged violations for NYSEG and eight ERP alleged violations for RG&E.

On December 18, 2017, NYSEG and RG&E filed a response to the order in which it accepted the 29 recommendations and proposed implementation plans associated with each of the recommendations. These plans will be reviewed by the Department Staff and will be subject to approval by the NYPSC. On May 18, 2018, NYSEG and RG&E filed two settlement Joint Proposals with the NYPSC, both which have been executed by the Companies and the New York State Department of Public Service. The settlement Joint Proposals reflect agreement by the Companies to make resiliency and emergency response investments totalling \$3.9 million, which will not be reflected in the Companies' rate base or operating expenses. The Joint Proposals are a settlement of potential penalties stated and should not be construed as an assessment of a fine or penalty.

The settlement Joint Proposals will be subject to a public comment period and we expect the NYPSC Commission to make a determination on the settlement agreements in 1Q19.

- **NY 2018 March Snowstorms**

NYSEG's lower Hudson Valley and United Illuminating's service territories were significantly impacted by three of four March Nor'easter snowstorms, resulting in tens of thousands of customer outages, primarily in NYSEG's Brewster division. For some customers, outages lasted up to a week, causing customers and local politicians to harshly criticize NYSEG's storm preparedness and response.

On March 6, 2018 NY Governor Cuomo called for an investigation on NYSEG's preparedness and restoration efforts related to Winter Storm Riley, the first of the four Nor'easters. The investigation includes an evaluation under the Public Service Commission's emergency response scorecard, a regulatory tool developed following Super storm Sandy to gather data and assess utility performance. Utility filings of scorecard data were submitted in April 2018.

3. Maine

- **CMP Distribution Rate Case**

On May 29, 2018 the MPUC received a ten person complaint requesting the MPUC open a rate case to determine if CMP and its parent Companies are making excessive returns on investment. The Complaint also request that CMP be denied recovery of its October 2017 storm costs. CMP responded stating the Complaint should be dismissed because it is without merit. On July 24, 2018, the MPUC issued Order dismissing the complaint as it relates to CMP's parent companies and the October 2017 Storm costs.

The MPUC performed a calculation of CMP's returns and found that its 2016 and 2017 returns exceeded the allowed reasonable range and therefore opened an investigation and ordered CMP to make a general rate case filing by October 15, 2018.

On October 15, 2018, CMP submitted its required rate case as directed by the Maine Public Utilities Commission (MPUC). In its filing, CMP is proposing to keep customer distribution rates the same as those rates currently in effect. The Company is proposing to use savings from changes in federal tax laws to keep its distribution prices stable while making its electric system more resilient. CMP plans on using savings from the *Tax Cut and Jobs Act*, passed in December 2017, to pay resiliency programmes costs and other investments.

The Commission has established a 10-month process to review CMP's filing and we expect a decision in August of 2019 with new rates taking effect in September of 2019.

- **MPUC Investigation into the Response by Public Utilities to the October 2017 Storm**

On December 19, 2017, the Commission issued a Notice of Investigation regarding utility response to the October 2017 Storm. The wind storm of October 2017 was unprecedented in the number of customers impacted and the magnitude of the damage across the entire Central Maine Power service territory. The vast majority of tree related damage was from trees that were located outside of the maintenance clearance zone. Damage occurred on nearly every CMP distribution circuit, resulting in more than 1,400 broken poles. CMP incurred the total incremental costs are approximately \$68.6 million, of which \$24.7 million are capital costs associated with the replacement of damaged infrastructure, including poles, cross arms, transformers and related equipment and after applying the agreed up capitalization method contained in the approved stipulation.

On June 29, 2018, the MPUC approved a Stipulation Agreement in Docket no. 2018-00069 which provides for the recovery of incremental storm restoration costs through CMP's distribution rates. The Stipulation agreement included a revised storm capitalization amount and the value of recovery was reduced by approximately \$531 thousand of cumulative underspent funds on non-cycle vegetation management activities.

On October 4, 2018, the Commission issued an Order stating that in accordance with the weather forecast information and the availability of storm restoration crew resources, that both Central Maine Power Company (CMP) and Emera Maine acted reasonably in their preparation for and response to a major wind and rain storm in October 2017 (October Storm) and that no further investigation of this aspect of the utilities response is warranted. The Commission identifies there are potential for improvements for future storm performance of the utilities, and with respect to coordination and communication with other involved entities. CMP filed its report on December 1, 2018.

- **Net Energy Metering**

On 14 September 2016, the Maine Public Utilities Commission (MPUC) issued a Notice of Rulemaking regarding Amendments to the Net Energy Metering Rule.

The MPUC made a decision on its Notice of Rulemaking on 31 January 2017. The MPUC has not yet issued the final rule but did issue a notice stating that the resulting rule a) grandfathers existing customers for fifteen years, b) for new entrants it locks in the phase down level, at the year in which they enter, for fifteen years, and c) maintains incentive margins consistent with the declining costs of solar technology.

4. Connecticut

- **UI rate case**

On 1 July 2016, UI filed an application with the Connecticut Public Utilities Regulatory Authority, or PURA, requesting approval of a three-year rate plan commencing 1 January 2017, and extending through 31 December 2019.

UI's rate request is attributable primarily to the amount of capital expenditures devoted to its electric distribution system for the purpose of reliability and system resiliency, both in relation to routine operations and during major storm events.

On 15 December 2016, the PURA issued its Final Decision authorising a cumulative three-year rate of USD 57 million (compared to the 98.3 million requested by UI during the process) for the years 2017, 2018 and 2019. The 2017 rate increase is USD 43.0 million, with an additional USD 11.5 million in 2018, and an additional USD 2.9 million in 2019. The PURA established a 9.10% ROE and 50% equity ratio.

The three year rate plan retains the existing earnings sharing level whereby earnings above the allowed ROE are shared equally between customers and shareholders. The Company's revenue decoupling mechanism continues. The PURA did reduce the residential basic service charge to USD 9.65 per month.

- **SCG rate case**

On June 30, 2017, The Southern Connecticut Gas Company (SCG) filed an application with PURA for new tariffs to become effective January 1, 2018.

On 13 December 2017, PURA approved the amended settlement agreement and the new rates are effective as of 1 January 2018 the DIMP as proposed by SCG, the amortization of certain regulatory liabilities and rate increases in accordance with an ROE of 9.25% and approximately 52% equity level.

The parties also agreed on a three-year rate plan with rate increases of \$1.5 million, \$4.7 million and \$5.0 million in 2018, 2019, and 2020, respectively. The new rates are effective as of 1 January 2018.

- **CNG Rate Case Settlement Agreement**

On June 30, 2018, CNG filed an application with PURA for new tariffs to become effective January 1, 2019. CNG requested a three-year rate plan for calendar years 2019, 2020 and 2021 and a proposed ROE of 10.20%. On August 30, 2018, the parties reached a three year settlement agreement with PURA for approval, which includes tariff increases in accordance with an ROE of 9.30% and 54%, 54.5% and 55% equity levels during years 1, 2 and 3. The parties agreed on rate increases of \$9.9 million, \$4.6 million and \$5.2 million in 2019, 2020, and 2021, respectively.

PURA approved the rate case settlement agreement on December 19, 2018 and new tariffs became effective on January 1, 2019.

- **Net Energy Metering**

On May 24, 2018, Connecticut Public Act 18-50 was passed. The act changes the current annual net energy metering in Connecticut to a customer choice between either (A) a tariff for the purchase of all energy and renewable energy certificates produced by the distributed generation on a cents-per-kilowatt-hour basis (no net energy metering), or (B) a tariff for the purchase of any net energy produced by a facility and not consumed for a period of no greater than one day, to be determined by PURA (daily net energy metering). There is currently an active docket to determine the net energy metering interval, and other tariff requirements.

- **Millstone nuclear plant**

On December 5, 2018 PURA issued a decision finding that the Millstone nuclear power plan is at-risk of retirement as soon as June, 2023 if it needs to rely on the ISO New England wholesale market for its revenues. The Connecticut Department of Energy and Environmental Protection (DEEP) is conducting a request for proposals (RFP) for zero-carbon generation, including nuclear energy, and this RFP provides a mechanism for Millstone to receive a bidding preference as an existing generating resource found to be at-risk of retirement.

The RFP allows DEEP to select bids totalling up to 12 million MWh per year. It is possible that UI will be directed by DEEP to enter into one of more long-term contracts as a result of this RFP, including a long-term contract to procure a share of the output from Millstone.

5. Massachusetts

On May 17, 2018 Berkshire Gas Company filed a petition with the Massachusetts Department of Public Utilities seeking approval of a distribution rate increase of approximately \$3.3 million. The Company requested a 10.35% ROE and a 61.5% equity ratio and to implement a revenue decoupling mechanism.

On December 4, 2018, Berkshire Gas and the Attorney General's Office filed a Settlement Agreement with the MDPU. The Settlement Agreement provides for a \$1.6M distribution base rate increase effective January 1, 2018 and an additional \$0.7M based distribution increase effective November 1, 2019 if certain investments are made by Berkshire. The distribution rate increase is in accordance with a 9.70% ROE and 55% Equity. The Settlement Agreement, pending of approval by the MDPU, provides for the implementation of a Revenue Decoupling Mechanism and pension expense tracker and also provides that Berkshire Gas will not file to change base distribution to become effective before November 1, 2021.

6. FERC

Federal Tax Cuts and Jobs Act (Tax Act): On 22 December 2017, the US President approved the tax reform, Tax Act, which implied a cut of 1.5 billion US dollars. The new law establishes the following:

- The permanent reduction of corporate income tax from 35% to 21%, effective as of 1 January 2018.
- The elimination of the corporate Alternative Minimum Tax (AMT).
- The maintenance of corporate deductions for local and state taxes.
- The limitation on the deduction of interests.
- The exclusion of the utilities (regulated public services) from the total expense and their exemption from the limitation on the deduction of interests.
- The inclusion of normalisation and the excess provisions of deferred taxes.
- The maintenance of tax on dividends and capital gains.
- The maintenance of the elimination and gradual reduction of the PTC (Production Tax Credits) and the ITC (Investment Tax Credits), without modifications.
- Enforcement of a Base Erosion Anti-Abuse Tax on the deductions for the costs paid or accrued to a foreign subsidiary.

AVANGRID does not anticipate a direct impact from BEAT under current conditions. However, most U.S. providers of tax equity for renewable energy projects (generally, large banks and other corporations) meet the criteria to be subject to the BEAT.

By January 2018, inquiries and/or proceedings were initiated in all Avangrid Networks jurisdictions to assess the impact of this new law and ensure resulting benefits are passed back to customers.

- The deferred liability associated with the tax rate change began to be returned to customers in July 2018 for CMP (deferred balance from Jan 2018 – Jun 2018) and May 2018 for MNG (deferred balance from Jan 2018 – Apr 2018). CMP purposed to keep rates stable by taking advantage of the tax cuts in their Rate Case filing.
- On 8/9/18 the NYPSC issued a Ruling requiring credits effective 1/10/18 for annual savings plus a three-year amortization of the existing deferred liability. Estimated impact to NYSEG and RG&E is \$61M (\$54M annual value + \$6M amortization). Consistent with the ruling, Credits began to be reflected in tariffs on 1/10/18.

- In Massachusetts, the Company is proposing to return the tax rate reduction in the Berkshire Gas Rate Case presentation effective April 2019.
- In Connecticut, PURA reopened the most recent rate case decisions of each public utility to determine how the new tax law will impact rates. A Hearing was held on 7/5/18 establishing the appropriateness of an adjustment to rates.
- Utilities with formula rates will automatically have the tax benefits returned to customers through the formula. In May, NYSEG and RG&E submitted proposed revisions to its stated transmission rates which if approved would have an effective date of 1/1/19.

In all jurisdictions, the Company has created regulatory liabilities to capture the tax benefits of the Tax Act. Revisions to these balances are possible upon resolution of the proceedings. The final result of these cases will likely include the amortization of the liabilities.

FERC Rates

CMP's and UI's transmission rates are determined by a rate regulated by the FERC and administered by ISO New England (ISO-NE). Transmission rates are set annually pursuant to a FERC-authorized formula that allows for recovery of operating and maintenance expenses, as well as the return on assets invested. Prior to 16 October 2014, the FERC provided a base ROE of 11.14% and additional ROE incentives applicable to assets based upon vintage, voltage and other factors.

On 30 September 2011 a complaint was filed (Complaint I) seeking sought an order from the FERC reducing the 9.2% base return on equity (ROE) used in calculating formula rates for transmission service under the ISO-New England.

On 16 October 2014, FERC issued its final decision in the Complaint I setting the base ROE at 10.57% and a maximum total ROE of 11.74% (base plus incentive ROEs) for the October 2011 – December 2012 period as well as prospectively from 16 October 2014.

In June 2015, the affected parties filed an appeal in the U.S. Court of Appeals for the District of Columbia, which overwrote FERC's decision on Complaint I and remanded it back to FERC. The Court ruled that FERC should have first determine that the then existing 11.14% base ROE was unjust and unreasonable before selecting the 10.57% as the new base ROE.

On 26 December 2012, a second ROE complaint (Complaint II) for a subsequent rate period was filed requesting the ROE be reduced to 8.7%. On 19 June 2014, FERC accepted Complaint II, and established a 15-month refund effective date of 27 December 2012.

On 31 July 2014, a third ROE complaint (Complaint III) was filed for a subsequent rate period requesting the then effective ROE of 11.14% be reduced to 8.84%, and on 29 April 2016, a forth ROE complaint (Complaint IV) was filed for a subsequent rate period requesting the then effective ROE be reduced from 10.57% to 8.61% and that a ROE cap of 11.24% be established.

CMP and UI reserved refunds for Complaints I, II and III consistent with the FERC's final decision of 3 March 2015 in Complaint I. Refunds were provided to customers for Complaint I. The CMP and UI total reserve associated with Complaints I, II and III is USD 22.2 million and USD 4.4 million, respectively, as of 30 September 2017.

On 5 October 2017 the New England Transmission Owner's (NETO) companies filed a Motion for Dismissal asserting that all four complaints should be dismissed because the complainants have not proven that the existing ROE of 11.14% is unjust and unreasonable as the Court decision requires. In addition, the NETOs assert that Complaints II, III and IV should also be dismissed because the Court decision implicitly found that FERC's acceptance of Federal Energy Legislation Section 206 complaints was statutorily improper. In the event FERC chooses not to dismiss the complaints, the NETOs request that FERC consolidate the complaints and issue a final order.

FERC issued an "Order Directing Briefs" on October 16, 2018 regarding the New England Transmission Owner's (NETO) ROE Complaints I - IV. The FERC Order addresses United States Court of Appeals (D.C. Circuit) Remand of FERC Opinion No. 531-A issued October 16, 2014 relating to ROE Complaint I. FERC proposes a methodology for addressing Remand; including New ROE Method resulting in a base ROE of 10.41% and maximum ROE at 13.08% for Complaint I. The FERC Order is not a Final Order or Opinion. "Order Directing Briefs" requires "Paper Hearing" on the new proposed ROE method.

Initial Briefs due January 2019 and responses are due March 2019. There is no decision due date. The FERC Order applies to Complaint I. If adopted, then new ROE method would need to be applied to Complaints II, III and IV periods.

CMP and UI have been reserving in accordance with FERC Opinion 531-A base ROEs of 10.57% and 11.74% Cap. Total reserve is \$26.4 million as of September 2018. If New FERC Proposed ROE (Base ROE of 10.41% / Cap ROE of 13.08%) is adopted for all Complaint Periods, then preliminary impacts are: \$24 M historical one-time benefit; \$3.4 M annual prospective benefit.

FERC Formula Rate Proceeding: A settlement in principle was reached in February 2018 providing for regional and local transmission formula rates for calendar years periods consistent with the majority of transmission formula rates across the country.

The new formula rates will be effective January 1, 2020.

7. Electricity generation from renewable energy resources

Numerous State Governments and the Federal Government have adopted measures and implemented numerous regulations designed to foster the development of electricity production from renewable resources. State programs have generally come in the form of: 1) Renewable Portfolio Standards (RPSs) that usually require utilities to generate or purchase a minimum amount of renewable electricity; and 2) tax incentives. To date, the Federal Government has primarily supported renewable energy development through tax credits for production and investment as well as accelerated tax depreciation.

State Law

Several States have adopted mandatory RPS requirements, which vary across the states but will generally range from 15-33% of the generation by 2025. The requirements are typically implemented through a system of tradable renewable energy certificates that verify that a kWh of electricity has been generated from a renewable resource.

Several state legislatures have debated whether to repeal or roll back significantly their RPS requirements. In 2014 Ohio enacted legislation to freeze its RPS program until 2017; in 2015, Kansas replaced its mandatory RPS with a 20% voluntary standard as part of a compromise that retained existing property tax exemptions. In contrast, California (in 2015) and Oregon (in 2016) enacted legislation to increase the state RPS to 50%. California in 2018 raised the bar further, to 60% by 2030 while Massachusetts and Connecticut also increased their requirements to 40%. New Jersey set a 50% standard by 2030 and Nevada approved a 50% by 2030.

Most states also offer a wide variety of tax incentives to promote investment in renewable energy resources. For instance, Washington and Colorado, among other states, exempt the sale and use of renewable energy equipment from taxation, which reduces development costs substantially. Several states reduce property tax requirements on renewable power generation facilities through enterprise zones or similar designations, while Minnesota has substituted a property tax in lieu of fixed production tax. Other states, such as Texas, boost the construction of electricity infrastructure (Competitive Renewable Energy Zones) to ease the transmission of renewable electricity towards load points.

In 2018 California legislators approved and signed Senate Bill 100, raising the RPS to 60% by 2030 (with interim targets) and establishing a state policy of zero carbon emissions from electric generation by 2045. Both New Jersey and Massachusetts raised their RPS requirement and set objectives for procurement of offshore wind generation. Maryland enacted an RPS increase. Proposals to provide financial support to operating nuclear plants in New Jersey.

Federal Law

In 1992, the US Congress enacted legislation that established a Production Tax Credit (PTC) of USD 15 per MWh (adjusted for inflation) for the production of electricity from wind power facilities for the first ten years of a project's operation.

This programme has been renewed several times and extended to include the generation of electricity from other renewable sources, such as biomass, geothermal power, urban solid waste and hydro power.

In 2005 the Congress established a 30% Investment Tax Credit (ITC) for solar power projects.

The PTC, which is currently valued at USD 24 per MWh, was extended and phased out by the Congress on 18 December 2015. The wind projects that are launched before 2017 will be eligible for full credit, while those that start construction between 2017 and 2019, will opt for a reduced credit. The plants that meet the requirements can also opt for an ITC of 30% instead of a PTC.

Congress also phased down the solar ITC. Projects to be commissioned before 2020 may opt for a 30% ITC, but those whose construction is to start after 2019 will opt for a lower ITC.

FERC

In regard to generation, FERC has focused on two areas. The first is the issue of resilience of the bulk power system. Following FERC's decision not to adopt the proposal submitted by the Department of Energy that would have directed payments to generation resources that maintain on-site fuel supplies, FERC initiated a new proceeding to collect information on the matter. Second, FERC in conjunction with certain of the Regional Transmission Organizations, has approved or is considering changes to capacity market eligibility requirements. Consideration of these matters will continue in 2019.

5. Industry regulation in Mexico

The Mexican Energy Reform, which began at the end of 2013 with the amendment of three articles of the Mexican Constitution, set in motion the in-depth transformation of the electricity and hydrocarbons sectors, through the creation of a completely new regulatory framework and the promotion of competitiveness, non-existent up until now in the country. As a consequence of this constitutional reform, twenty-one new laws were enacted during 2014 and 2015 and twenty-five regulations were either created or reformed.

Besides having an impact on the hydrocarbons sector, the Proposal also introduced new business opportunities in the generation, transmission, distribution and management of electricity infrastructure. This transformation opens to the private sector some activities previously reserved for the state in the electricity sector.

The Hydrocarbons Law (LH) regulates activities like petroleum treatment and refining natural gas processing export and import of hydrocarbons and petroleum products; transportation, storage, distribution, compression, liquefaction, decompression, re-gasification, marketing and sale to the public of natural gas, hydrocarbons, petroleum products and petrochemicals, along with the management of integrated systems. All these activities are now open to private investment.

One of the main goals of the industry restructuring is to improve the electricity power generation, promoting the use of renewable sources or low carbon emissions. Thus, the Government introduced Clean Energy Certificates (CECs) through the Electricity Industry Law (Ley de la Industria Eléctrica - LIE).

Concurrently with the COP 21 in Paris, the Mexican Congress and Senate passed the Energy Transition Law (Ley de Transición Energética - LTE), which creates binding obligations for clean energy generation and emission reductions targets for the future, bringing a strong legal framework to the development of clean energy projects in Mexico.

The previous regulatory framework will continue being applicable to IBERDROLA's existing businesses and facilities.

1. Competences after the Energy Reform

The planning and control of the National Electrical System (SEN), as well as the electricity power distribution and public transmission service are the exclusive responsibility of the Government of Mexico. Power generation, excluding nuclear, is open to private investment, as are electricity supply sales to the end users. The Mexican Government may grant service contracts to private companies, creating opportunities to participate in the construction, operation and maintenance of T&D infrastructure.

Power generation, excluding nuclear, is open to private investment, as well as power sales to the end users.

The Electricity Industry Law (Ley de la Industria Eléctrica - LIE) regulates activities in the electricity sector in Mexico. In accordance with the LIE, private companies can now generate and sell electricity under an organised Wholesale Electric Market, and also invest in transmission and distribution infrastructure, under specific Public-Private Associations and other legal structures described in the LIE.

From the regulatory side, three agencies will have primary responsibility for the sector. The Energy Secretariat (SENER) will have the function of applying public policies; the Energy Regulatory Commission (CRE) will have the regulatory function; and the National Energy Control Center (CENACE), a new decentralized and independent agency, will operate the power grid and the Wholesale Electric Market.

2. Energy Secretariat

As part of the Energy Reform, the Energy Secretariat (Secretaría de Energía - SENER) has been empowered to coordinate the centralised planning and direct the national energy policy, both for hydrocarbon and electricity subsectors. SENER is also in charge of guaranteeing the implementation of the laws derived from the reform, including the LTE enacted in December 2015 for the transition to clean energy and emission reduction.

In 2015, SENER issued the “mandatory requirement of Clean Energy Certificates (CECs) for year 2018”, with a target of 5% of the total consumption and in March 2016 established a target of 5.8% for 2019. In March 2017, the targets for CECs for 2020, 2012 and 2022 (7.4%, 10.9% and 13.9%, respectively) were defined. Penalties for non-compliance with the requirements of CECs have also been issued.

In 2016 SENER called for the second long term auction, and twenty three companies were awarded contracts to develop 2.8 GW of the renewable capacity; the cost of the clean energy was 30% lower than in the first auction in 2015. In 2017 a long-term auction was held where the award prices were again decreased (-40% with respect to the previous auction) for 2 GW of new allocated renewable generation.

In February 2017, the first Medium-Term Auction was held for 1- to 3-year energy and power contracts, which resulted in less than 4% of the Power purchase bid and 0% of the Energy awarded. On 20 December 2018 CENACE convened the second Medium-Term Auction, while the publication of the final bidding specifications were pending.

Throughout this process, SENER has been responsible for publishing updates of all wholesale electricity market Operational Manuals that outline the fundamental aspects of the market Guidelines. In December 2017, SENER delivered this package of Manuals to the CRE, which will be responsible for carrying out modifications and updates in accordance with market behaviour.

In June 2018 SENER published the annual updated versions of the National Electric Grid Development Programme (Programa de Desarrollo del Sector Eléctrico Nacional - PRODESEN) including projections of power generation, demand and infrastructure requirements for the 15 years following its publication (2017-2031).

3. Regulatory bodies

As a key part of the energy reform in Mexico, the country enacted the Regulatory Body Law in August 2014, setting out the guidelines for operating and responsibilities of the new regulatory bodies in the energy field: the National Hydrocarbons Commission (Comisión Nacional de Hidrocarburos - CNH) and the Energy Regulatory Commission (Comisión Reguladora de Energía - CRE).

CRE and the CNH are the two most relevant regulatory authorities in the energy sector. They have their own legal status, budget, technical and governance autonomy. Both bodies have a similar governance authority of seven commissioners and an executive secretary.

Regarding electric power, the main faculties of CRE are to modify WEM's basis and define terms and conditions of auctions and bidding processes; to supervise the wholesale market operation; to issue rules for transactions between generators and suppliers; to authorise the contract and auction models; to regulate with regard to reliability issues; to define capacity requirements and operational costs; to regulate and define the regulated tariffs and contract models for services involving transmission, distribution and basic supply of electricity; to issue models and authorise technical specifications for interconnection of power stations and users, issue rules regarding smart grids;

Other roles of the CRE include granting permits for market participants, to issue CECs and other instruments to promote clean energy; to resolve controversies and enforce fines related to non-compliance of wholesale market participants.

Regarding the hydrocarbons, the CRE regulates and promotes the development of transmission, storage, distribution, compression, liquefaction and regasification activities of all hydrocarbons. In this regard, the natural gas market deregulation began in 2017, for the purpose of promoting fair conditions for participation of new retailers in the market and protection of natural gas end users in the country.

The CNH has the fundamental task of regulating and supervising the exploration and extraction of hydrocarbons.

4. National Agency for Energy Control

Mexico created the National Agency for Energy Control (Centro Nacional de Control de Energía - CENACE) as a decentralised public body with authority to perform the operational control of the National Electricity System and the wholesale electricity market.

CENACE has full autonomy and acts under the authority of SENER and CRE, in order to control the participation of generators and suppliers in the market; acquire and provide electricity and capacity in a competitive environment; and summon and manage the long-term auctions of capacity, energy and CECs.

CENACE guarantees open access to the transmission and distribution facilities to all market participants, public and private.

Additionally, CENACE also operates and oversees the preparation of proposals for planning and expansion of the entire national electricity grid through its development programme (PRODESEN), which is then supervised and issued by SENER and thereafter by CRE.

During 2016, CENACE launched the first phase of the Wholesale Electricity Market, conducted the second auction for CECs, Clean Energy and Capacity and issued the first result of the Capacity Balance Market process.

In 2017, CENACE developed the Clearing House that allows all Responsible Load Entities (Users and/or Suppliers) to buy products from the Wholesale Electricity Market through long-term auction. Additionally, it develops the Market Information System, a key piece of the WEM's operations.

As is the case every year, in February 2018 it issued the results of the Power Balance Market for 2017, which sets a price on the available capacity during the year 2017. This availability is recognised for the system's 100 critical hours. The resulting price was US\$37.7 per kW year (709.6 pesos per kW year) for the National Interconnected System (NIS), US\$31.4 per kW year for the Baja California system and US\$146.3 per kW year for the Baja California Sur system. As of February 2019, the same is expected for 2018; likewise it is expected that CENACE will operate for the first time the CEL Market.

At the end of March 2018, CENACE convened a new Long Term Auction, in which Purchase Offers were registered by five entities in addition to the CFE Basic Service Supplier, which considerably increased purchase volumes. Sales offers were registered from 28 bidders. At the beginning of December 2018, before the execution of the economic model, the Auction was suspended for the revision of its objectives and scope by the new CENACE administration, introduced after the change in the Republic's Presidency.

On 12 July 2018 the CRE published the criteria that the CENACE must follow to purchase Power by means of Reliability Auctions (SEN). These auctions will be proposed by CENACE when it foresees a deficit of generation capacity within a horizon of three to twelve months, purchasing power for a maximum term of one year. Contracts will be paid at the price offered and their cost will be distributed among the entities responsible for the Charge according to the power not covered by electrical coverage contracts.

At the end of 2018, the second annual market report was published by an Independent Monitor to evaluate market operations, its evolution, performance, efficiency and level of competition with the intention of issuing a series of opinions and recommendations.

5. Federal Electricity Commission Law

The Federal Electricity Commission Law (Ley de la Comisión Federal de la Electricidad), issued in August 2014, stipulates that the Federal Electricity Commission (CFE) becomes a productive state-owned production company wholly owned by the Federal Government.

The new CFE has budgetary and governance autonomy, with a board of directors formed by members of the incumbent secretariats (SENER, Treasury, etc.) and independent board members.

The new CFE will operate through its subsidiaries and affiliates and will participate in electricity generation, transmission, distribution and supply, so that other parties will be able to participate in the private investment in the wholesale electricity market.

During 2016, SENER published the terms and conditions of the strict legal separation of CFE and carried out asset restructuring. The operation of its recently created subsidiaries and affiliates as separate entities in the wholesale electricity market was commenced. A very significant success of CFE during 2016 was the renegotiation of the Labour Union Contract, which significantly reduced the burden of the pension liability in CFE's Balance Sheet.

6. Transmission and Distribution

As ruled by the LIE, the Mexican Government will perform electricity transmission and distribution (T&D) as a strategic regulated public service through state-owned production companies or their subsidiaries. CFE's legal separation allows creating these entities as regulated open access companies.

The Reform introduces the possibility for the State to form associations or enter into contracts with individuals to carry out the activities relating to this public service, such as financing, installation, maintenance, management, operation, expansion, rehabilitation, surveillance and preservation of the required infrastructure for this service.

Therefore, in December 2017, the preliminary guidelines for the first bidding for transmission lines were published following the Reform's implementation. Called by SENER in February 2018, this bid invitation will award the High Voltage Direct Current (HVDC) project that connects the National Interconnected System with Baja California. This bid was cancelled on 16 January 2019.

One of the key elements in this matter is the implementation of a HVDC transmission line that will connect Istmo de Tehuantepec (one of the most important wind energy generation zones in Mexico) with the central area of the country (one of the areas with highest demand in the country); the preliminary bidding package was issued in the last quarter of 2016 and in February 2018, although the bidding date has still not been defined.

7. Generation and Supply

The LIE provides that generation and supply of electricity power can be performed by any private or public entities subject to the compliance of permits and market rules. Generation plants 0.5 MW or larger require a permit from the CRE.

These are three types of permits required for electricity power supply: 1- basic supply with regulated tariff (for those consumers with a demand of less than 1 MW) or 2- qualified supply through the wholesale electricity market under liberalised conditions for consumers with a demand of 1 MW or above and 3) supply of last resort, of temporary use when the qualified consumers have not chosen a supplier or the supplier has stopped supplying them.

SENER may revise and reduce the threshold of 1 MW to opt for qualified supply. However, becoming a qualified user is optional and is only mandatory for new customers.

Accordingly, several Qualified Services Supplier (QSS) licenses have been issued, which in a free access and not unduly discriminatory environment, have competed since 2016 with the CFE affiliate dedicated to this service is one of the keys to making the electricity market's liberalisation a success.

8. Wholesale electricity market

The wholesale electricity market (WEM) commenced operation at the beginning of 2016. It is a local marginal price market operated by CENACE, where generators, suppliers and qualified consumers of electricity power can carry out transactions involving energy, capacity, ancillary services, CECs and financial transmission rights in Day Ahead, Hour Ahead and Real Time markets.

All of the Market Rules have not yet been fully developed, although a high degree of progress has been reached and many aspects of this Market are already operational. The Market Guidelines were issued in the second half of 2015, and since then more than 20 WEM Operational Manuals have been published. The Manuals outlining all aspects of the WEM's management and operations were made public in 2018.

9. Sustaining of previous regime for permits, plants and existing electricity industry contracts

Private generators currently holding a generation permit granted under the former Public Electricity Power Service Law (Ley del Servicio Público de Energía Eléctrica - LSPEE) shall retain their permits and prevailing terms and conditions thereof, provided that they do not breach what is stipulated by the LIE.. Once the wholesale electricity market starts operating, the holders of these legacy contracts - self supply and Independent Power Producers ("IPP") - have the alternative to migrate partially or completely to the new market system. Generators which, upon entry into force of the LIE, hold interconnection contracts known as Legacy Connection Contracts (Contratos de Interconexión Legados - CIL) issued under the former system should take into account that these contracts cannot be renewed upon termination.

Permit requests for self-supply, co-generation, small-scale production, imports or exports made before August 2014 were resolved under the LSPEE terms and conditions, provided that the facilities under such permits start operation before 31 December 2019.

10. Electricity tariffs

In November 2017, the CRE published the new calculation methodology for regulated tariffs that apply to basic supply. The principle of the new tariffs is to be in accordance with the recovery of all generation costs, connection services, transmission and distribution costs, clean energy certificates and other recoverable costs and collection targets.

During 2018, the performance of the rate showed high volatility due to the generation costs recognised by the CRE, partly because the performance of the generation mix was different from the forecast and partly because the fuel costs were not correctly reflected. At the end of 2018 it was felt that the revenue provided by the rate was able, in an aggregate way, to recover the necessary costs to an acceptable extent.

Throughout the second half of 2018, the CRE worked to fine-tune the rate methodology by designing improvements expected to apply as of 2019, contributing to a more predictable and less volatile rate.

As the main mechanism to promote the reduction of non-technical losses arising from customer fraud, the CRE has imposed collection targets on the transport and distribution companies.

11. Functioning of Natural Gas System

As part of the Energy Reform, the former owner of the Natural Gas Transportation System (SISTRANGAS), Petróleos Mexicanos (PEMEX), has been split into the following affiliates and subsidiaries: Pemex exploration and production, Pemex industrial transformation, Pemex perforation, Pemex logistics, Pemex co-generation and services, Pemex fertilisers and Pemex ethylene, as provided under the PEMEX Law enacted in August 2014. This law transformed PEMEX into a state-owned production company which performs business activities with profitability goals. Concurrently with this transformation, the natural gas transportation system was transferred from PEMEX to Centro Nacional de Control de Gas Natural (CENAGAS), in order to promote an open market for gas transmission, distribution and supply.

As a result of liberalisation, provisions concerning open access and pipeline transport and natural gas storage services were published and amended at the end of 2018 as well as provisions for their marketing. In accordance with the principle of asymmetric regulation, PEMEX could not continue to integrate the transport and the marketing of gas within the same company so a programme to transfer the natural gas contracts to new marketers was established. This programme concluded in 2018.

CENAGAS has issued the 5 year programme (2015-2019) for the Expansion of the National Natural Gas Transmission and Storage System governing its operation, of which two revisions have been issued. As part of the programme to reduce fuel oil consumption, CFE called for several bidding processes to contract natural gas transmission services through private companies.

The large majority of these pipelines will be operational by 2018, thus increasing the availability of natural gas to generate electricity and reducing the CO₂ emissions from the industry.

The Legacy Transportation Permits (permits given before the energy reform) for self-supply and the long-term natural gas supply contracts with PEMEX required by the electricity plants will remain in effect and will not be adversely affected by these changes in the new regulatory framework.

During the second half of 2016 CENAGAS was empowered to conduct the future bidding processes for natural gas transmission auctions, (CFE or Pemex no longer have exclusivity). Additionally, all capacity rights of the SISTRANGAS were transferred to CENAGAS to control its management.

SENER issued a public policy to create a Natural Gas Open Market by 2018, in order to promote the entry of new players and to reduce the role of PEMEX in the supply.

As part of this public policy in 2017, CENAGAS issued an Open Season for Transportation Capacity in the SISTRANGAS, which granted firm capacity rights to the winning bidders for year 2017 and will help to identify the sections that need to be expanded in the future.

6. Industry regulation in Brazil

1. Generation

The Brazilian system

Although hydroelectric generation's share has decreased in recent years, Brazil's generation system is predominantly hydraulic. In terms of the energy matrix, from 2000 to 2018, hydraulic share has decreased from 83% to 64%, with reference to installed capacity. On the other hand, wind share has increased to 7%. In upcoming years, Brazil's government expects the system to expand mainly through wind, solar energy and firm complementation source possibly natural gas.

The Brazilian system is interconnected and the power plants are spread over four electricity regions: southeast, south, northeast and north. These regions have distinct hydrology and the synergies between them can be used.

Electricity (independent system operator) dispatch is based in power plant audited cost optimization done by ONS, the Brazilian independent system operator. ONS uses a series of computer programs to determine what generation assets (hydroelectric and thermoelectric plants) should be optimally dispatched considering hydrological uncertainty, reservoir storage capacity, thermal power plant fuel and O&M costs, non dispatchable (i.e.: wind and solar) generation forecast, interconnection restrictions and demand forecast. In addition to defining the power plants' dispatch, these programs calculate the marginal energy cost, used as the market's spot price.

Assured energy

Since the system is predominantly hydraulic, the installed capacity is insufficient to measure the supply guarantee. Therefore, each hydroelectric station has a related assured energy, calculated by the Brazilian government, which represents the contribution in terms of the reliability of each power plant interconnected to the system. Thermoelectric and hydroelectric plants (dispatchable generation) have their assured energy calculated by the computer programs used to determine dispatch when they participate in the energy auction. Non-dispatchable sources have their assured energy calculated considering their generation expectations in the long term.

The regulation establishes that hydroelectric plants' assured energy must be reviewed every five years, but the first review was conducted in 2017 and only for those power plants that have been running for at least five years.

The following table contains details of the assured energy (in MW med) for those plants that have been reviewed. It shows the new values valid from 2018 onwards.

Utility	Avg MW	
	Former	New
Baguari	80.2	84.7
Corumbá III	50.9	49.3
Itapebi	214.3	209.1

Energy reallocation mechanism

A financial mechanism exists that allows centralized dispatch and mitigates the hydrologic risk of hydraulic plants. This mechanism is called energy reallocation mechanism (ERM) and all hydroelectric plants must participate in it. The important thing for the ERM is total hydraulic generation and not each plant's individual generation. According to this mechanism, each month the total hydroelectric generation is allocated between each hydroelectric plant in proportion to its share in the system's total hydroelectric assured energy.

The total hydraulic generation of the group of ERM generators divided by their total assured energy is denominated Generation Scaling Factor (GSF) and its monthly calculation is used to implement the ERM. The energy allocated to each generator is, then, the GSF multiplied to its assured energy.

This mechanism worked well until 2012. Since then, hydrological conditions and other issues have reduced the GSF and this has caused a significant financial impact on hydroelectric power plants.

Recent hydrology and litigation

In recent years, total hydraulic generation has been systematically less than the total assured energy (GSF below 100%). Part of this can be explained due to the low level of hydrology, but there are other reasons that have reduce the hydraulic generation.

- Thermal power generation outside the order of merit: on several occasions the operator decided to replace the hydraulic generation determined by the computer programs by higher cost thermal generation, for the purposes of conserving hydro reservoir levels.
- Delays in the transmission line construction: some new hydraulic power plants were finished before the transmission lines necessary for their electricity evacuation were operational. However, these hydroelectric plants still participated in the ERM with their total assured energy even though they could not generate at full capacity. This scenario reduces the energy allocated for all participants of the mechanism.
- Assured energy timeline acceleration hydroelectric plants has their assured energy recognised in advance during project construction and commissioning. That is, they have participated in the ERM with more assured energy than they were able to generate. This has been a regular practice at large hydroelectric plant, such as Belo Monte, Santo Antonio and Jirau.
- Increase of intermittent sources, such as wind has reduced hydraulic generation.

All these reasons have resulted in energy allocated to each ERM generator below their assured energy.

Given that the assured energy has been used as the benchmarking level for long-term energy contracts resulting in the generators being short and the high spot market prices in those years, the ERM generators suffer huge financial losses. Because of this, since 2015 some companies have filed administrative and judicial claims with the government to review ERM rules and cease spot market charges.

At the end of 2015, the government offered an insurance to those generators with contracts with distributors in order to protect these generators against a GSF (below a certain limit from 89% to 100%) in exchange of a premium to be paid by the generator.

This process, known as renegotiation of the hydrological risk, reallocated part of the hydrological risk to the customers in exchange for an insurance premium and abandonment of current and future hydrological risk litigation.

However, the majority of claims of generators with contracts in the free market are currently in force. At the end of October 2018, a preliminary decision which protected these generators was annulled. But the values from 2015 up to February 2018 are still under judicial dispute.

The total amount under dispute is 6.78 billion of Brazilian Reals and the final solution depends on the publication of a specific law to regulate the GSF. During 2019 is expected that this law will continue its parliamentary procedure (PL 10.985). This law tries to eliminate from the calculation of the GSF all the factors not related to the hydrological situation.

Generation assets

In the generation business, NEOENERGIA has 3.5 GW of installed capacity between hydroelectric, wind and natural gas projects.

The most relevant hydraulic projects are: Teles Pires with a participation of 50.1%; Belo Monte (10% participation) and Baixo Iguaçu (70% participation).

Regarding Baixo Iguaçu, the Ministry of Mines and Energy proposed in 2014 to reduce its assured energy from 172.8 MWmed to 171.1 MWmed. After submitting resources and several interactions, the assured energy has been set at 172.4 MWmed.

NEOENERGIA has 100% of its wind energy production contracted in PPA in the long term, in the free and regulated markets. In December 2017, NEOENERGÍA won 294 MW in auction A-6 with the award of nine wind farms. In accordance with the rules of the auction, these wind farms will begin commercial operation on January 1, 2023.

In June 2018, NEOENERGÍA started a process in ANEEL to obtain the construction authorization in Paraíba for six other free-market wind farms.

Regarding thermal generation, NEOENERGIA operates the gas power plant Termopernambuco that arose from the Priority Thermal Power Program (PPT in Portuguese), established by the Ministry of Mines and Energy in 2000. In accordance with the PPT the minister established that the gas supply guarantee should be provided by Petrobras. In recent years, Petrobras has tried to disregard the fuel supply contracts signed under the regulatory framework established by the PPT, alleging insufficient charges.

In this regard, Petrobras started arbitration proceedings in August 2010, which have been completed in November 2018, with a decision 100% favourable for Termopernambuco.

Generation auctions

The government held two new auctions in 2018: A-4 in April and A-6 in August.

The A-4 auction hired 39 new generation projects, representing 1,024 MW of installed power and respective assured energy equivalent to 356 MW average. Solar energy had a highlighted participation with 29 plants (807 MW), almost 80% of the total energy sold. Also four wind farms (114 MW), four small hydropower plants (42 MW) and two biomass plants (62 MW) were awarded winners.

The average final price of the auction was BRL 124.75/MWh, with average discount of 59.07% from the ANEEL's auction cap-price.

The A-6 auction hired 62 new generation projects, representing 2.1 GW of installed power and respective assured energy equivalent to 1.23 GW average. The average final price of the auction was BRL 149.87/MWh, with average discount of 46.89%. The energy supply will start on January 1st, 2024.

On December, the Government held two auctions for electric power from existing plants to adjust the demand needs of distributors in the next two years.

- In auction A-1, an average of 4 MW was awarded at a price of 142.99 Brazilian reais per R \$ / MWh (discount of 16% on the ceiling of 170 Brazilian reais for R \$ / MWh). The resulting supply contracts will last from 1 January 2019 until 31 December 2020.
- In auction A-2, an average of 359 MW was awarded at a price of 161.35 Brazilian reais per R \$ / MWh (discount of 4% on the exit price 162 Brazilian reais for R \$ / MWh). The contracts will have a duration from 1 January 2020 until 31 December 2021. 53% of the contracted energy is natural gas thermal, sold under the modality of contract for availability.

Regulatory laws published in 2018

On 5 June, ANEEL published resolution nº 817 with the criteria to treat transmission congestion surplus and expositions of some specific generators. By this rule, in case of congestion, the transmission surplus is used to cover primarily financial expositions of ERM and, secondarily, to gift the system charges account.

On 26 June, ANEEL published the resolution nº 822 that change the resolution nº 697. This resolution establishes a new ancillary service for complementary frequency control services.

On 10 July, ANEEL published resolution nº 824 which allows distribution companies to sell contracts in the free market through multilateral auctions in case they are long (have more energy contracted than demand). Additionally, the resolution changes some rules of current mechanisms for other distribution companies' contract exchange mechanism known as surplus and deficits compensation mechanism (or MCS-D, its Portuguese acronym) and bilateral agreements limiting the participation only to generators that aren't in commercial operations. Resolution 833/2018, of December 4, establishes the specific marketing rules and the sanctions procedure. The first round of this market took place on December 26, 2018 (for 3-month energy delivery).

2. Distribution

Distribution activities are regulated and executed in a 30-year concession under a monopoly. The concession term may be extended during the same period at the granting authority's (Union) discretion. At the end of the concession period, the assets will be reversed back to the Union and the concessionaire must be compensated for investments not depreciated or redeemed.

The Brazilian regulatory framework is in accordance with a price cap system which designates a major revision and reparametrization, known as tariff review, every four or five years, depending on each company concession contract. COELBA and COSERN have a five-year term, whilst CELPE and ELEKTRO have a four-year term.

Moreover, tariffs are updated annually by ANEEL, through the annual adjustment process that considers inflation, an ex-ante efficiency factor and variations on non-manageable costs components, such as energy purchase costs and transmission tolls.

The purpose of the annual adjustment is to ensure that the charges, transmission and energy acquisition costs (known as Parcel A) are passed on to the tariff and to adjust the distribution costs (known as Parcel B) for inflation, discounting a predetermined efficiency factor (factor X).

An annual tracking account mechanism is used to register Parcel A's imbalances, which should be passed on to tariffs in the following tariff review process.

In 2018 COELBA and COSERN's rates **were revised**:

- On 17 April, ANEEL approved COELBA's annual tariff readjustment, which increased its tariffs by an average 16.95%, in effect as of 22 April 2018. There was an increase of 15.85% in Parcel A (due to transmission costs and industry charges) and of 25.20% in Parcel B, mainly due to remuneration to investment.
- On 17 April, ANEEL approved COELBA's annual tariff readjustment, which increased its tariffs by an average 15.61%, in effect as of 22 April 2018. There was an increase of 10.42% in Parcel A (due to transmission costs and industry charges) and of 11.69% in Parcel B, mainly due to remuneration to investment.

Additionally, ANEEL approved CELPE and ELEKTRO's **annual tariff adjustment**.

- On 24 April, ANEEL approved the annual tariff adjustment of CELPE's tariffs, which increased its tariffs by an average 8.89%, in effect as of 29 April 2018. The most striking thing was the 8.26% increase in Parcel A (responsible for the final rate increase of 5.67%) due to energy acquisition costs and networks. Parcel B increased some 1.42% as a result of the inflation adjustment index, IGP-M minus factor X, and was responsible for the 0.45% drop in the final rate.
- On 21 August, ANEEL approved ELEKTRO's annual tariff readjustment, which increased its tariffs by an average 22.42%, in effect as of 27 August 2018. The most significant adjustment was the 13.11% hike in Parcel A due to energy transmission networks costs. Parcel B rose by 5.85% in accordance with index IGP-M minus factor X.

2018 metering procedures	COELBA Change	ELEKTRO Change	CELPE Change	COSERN Change
Variation Parcel A	15.85%	13.11%	8.26%	10.42%
Variation Parcel B	25.20%	5.85%	(1.42%)	11.69%
Economic adjustment index	18.45%	11.28%	5.22%	10.81%
Package A monitoring account/Other financial components	2.73%	13.39%	5.36%	4.13%
Total	21.18%	24.67%	10.58%	14.94%
Removal of previous year's financial components	(4.21%)	(2.25%)	(1.69%)	0.67%
Consumer impact	16.97 %	22.42%	8.89%	15.61%

In accordance with current regulation, the distributors must sign PPAs with the generators in order to supply 100% of the estimated demand. The cost assumed by the distributors for the purchase of this energy is transferred to the final tariff, as long as it covers between 100% and 105% of the estimated consumption. . If the distributor purchases energy for less than 100% of its estimated demand it may be penalised; conversely, if it has contracts over 105% of its demand, it will be exposed to spot price risk.

In 2016, distributors had a surplus of energy contracts due to relocation¹ of hydroelectric energy participation (known as energy quotas), which increased the quantity of energy of PPAs of some distributors.

Other reasons for the surplus were the migration of consumers to the energy free market, (without the distributors being able to reduce the PPAs) and the significant market reduction, due to the economic crisis and the cumulative tariff increases of previous years. In order to confront this issue, MME and ANEEL have carried out several actions, such as:

- Acknowledgement that the additional energy received by the distributors by the quota system must be considered involuntary and transferred to the tariff (resolution 706/2016)
- Creation of a mechanism whereby the distributors and generators commonly agree to reduce their PPAs (resolution 711/2016)
- Determination of the distributors right to reduce PPAs for the purpose of compensating the exit of special customers to the free market (customers with demand between 0.5 and 3MW (resolution 726/2016)
- Broadening of the new energy relocation (MCSD de Energia Nova), thus allowing generators to offer reduction of the PPA (resolution 727/2016)
- Reduction of the energy limit that must be acquired by distributors in A-1 auctions, for distributors with surplus energy (decree 8,828/2016)
- Reduction from 95% to 90% of the insured energy volume considered under the quota system (whereby the electric power is distributed among the distributors regardless of the demand forecast they have; by decreasing the volume of insured energy, less energy is distributed)
- Permission for distributors to sell energy surplus to generators, retailing companies and consumers (up to 3 MW).

¹ Energy from hydroelectric power plants renewing their concessions in accordance with Law 12.783/2013.

Since 2015, distributors' tariffs have been complemented with tariff flags, revised annually by ANEEL in accordance with marginal operation cost (energy cost).

In 2018 the flags were set in the following manner:

Flag	Thermal plants in operation (fuel cost)	BRL/MWh
Green	Up to 211.28 BRL/MWh	-
Yellow	211.28 - 422.56 BRL/MWh	10
Red - level 1	422.56 – 610.00 BRL/MWh	30
Red - level 2	More than 610.00 BRL/MWh	50

In 2018 the green flag was set for January, February, March, April and December, whereas the yellow flag was set for May and November and the Level 2 of red flag for from June to October.

WACC is used to define the remuneration of investments made by energy distributors. ANEEL decided during a Public Meeting of the Board of Directors held on March 6th, to maintain the weighted average cost of regulatory capital (WACC) of 8.09% for the distribution segment. According to the Agency's decision, the methodology used in 2015 has been maintained and the current percentage will be applied until December 2019. The idea is for a new system to be applied from January 2020 on.

ANEEL approved on 04 September 2018 the extraordinary review of the Energy Development Account (CDE) budget for 2018. On Dec. 28, 2018 Decree No. 9,642 was published on the reduction of subsidies in the sector account of the CDE. The decree establishes an annual reduction of the subsidy of the electricity tariff of rural consumers and irrigators of 20% until its elimination in 2023. It also eliminates the possibility that these rates accumulate more than one discount.

The Board of ANEEL decided on October 23, 2018 to approve a resolution authorizing the Electric Energy Trading Chamber (CCEE) to manage the restitution of the balance of the Reserve Energy Account (CONER), which generates a financial surplus when the Settlement Price (PLD) is higher than the average value of the reserve power contracts (renewables). Part of this surplus is retained at CONER's account to guarantee the payment of contracted generators. Under the rules previously in force, the reimbursement to consumers of reserve power would be equivalent to one third of that balance. With the new resolution, the expectation is that the reimbursement will increase bringing relief in the tariff of the distributors.

3. Transmission

In the electric transmission business, NEOENERGIA has five concession contracts between 2009 and 2013, which include transmission lines and substations, as well as reinforcements. Together, they generate an annual allowed profit (RAP) of approximately BRL 80 million.

Company	Annual profit allowed (BRL)
Afluenta T	39,697,547
SE Narandiba	9,805,992
SE Extremoz II	3,111,373
SE Brumado II	1,953,742
Potiguar Sul	25,349,469
Total	79,918,123

These assets are subject to tariff reviews every five years, in addition to annual adjustments made for monetary reformulation. In 2018 SSE Brumado II was submitted to a tariff review process; and in 2019, SE Naradibay Potiguar Sul will submit to a tariff review process.

In 2018, two transport auctions were held:

- The first (Auction 002/2018) made available 20 projects, representing 2,562 km of transmission lines and substations with a transformation capacity of 12,226 MVA.
- The second (Auction 004/2018) took place on 20 December 2018. It awarded 16 lots totalling 7,152 km of transport lines and 14,819 MVA in transformation capacity, with works in 12 Brazilian states and with an average discount of 46%. The total investment planned amounts to 13,170 million Brazilian Reals. The term of execution of the works varies between 48 and 60 months and the duration of the concession is 30 years from the signing of the contract.

4. Other regulatory changes

Changes in the regulatory framework and liberalization of the electricity market.

Currently, consumers over 3 MW can migrate to the free market. Customer between 0.5 and 3 MW can also migrate if they are supplied only from incentivized sources (wind and solar).

The National Congress has been working on a proposal to launch two bills: PL 1917/2015 (Chamber of Deputies) and PL 232/2016 (Federal Senate) that contemplate the following schedule of liberalization of the market: 2 MW in 2020 regardless of the contracted voltage, 1 MW in 2021, 0.5 MW in 2022 and 0.3 MW from 2024. On December 28, Ministerial Decree No. 514/2018 was published, which anticipates the liberalization of the electricity market by establishing the intermediate milestone of 2.5 MW in July 2019.

Hourly Spot Price in short-term market

At the end of 2017, the Ministry of Mines and Energy opened the Public Consultation 42, about the adoption of hourly spot prices in short-term market to 2019 onwards. NEOENERGIA, and other companies and associations noticed that the process was not taking all the necessary steps required to guarantee a safe transition. In April 2018 it was started a parallel accounting of prices and dispatch known as shadow operation. But in June 2018, the Independent System Operator (ONS) and the Commercialization Chamber (CCEE) realized that the DESSEM computation model (used to optimize dispatch and compute prices hourly), needed some improvements. Then, they decided to postpone the implantation of hourly spot price to 2020.

New limits of the LDP (Resolution No. 2498/2018 published on December 18, 2018)

The resolution establishes that the minimum limit of the PLD for 2019 is 42.35 Brazilian reais per MWh and the maximum is 513.89 Brazilian reais per MWh. It also establishes the rate of auxiliary services for 2019.

Light for All Program extended until December 2022 (Decree No. 9.357 / 2018)

The “Luz para Todos” program was created in 2003 with the aim of electrifying rural, isolated and economically disadvantaged areas. The program is coordinated by the Ministry of Mines and Energy, operated by Eletrobrás and executed by energy concessionaires and rural electrification cooperatives.

This program is financed jointly with: 1) sectorial funds such as the Conta de Desenvolvimento Energético

(CDE) and the Reversão Global Reserve (RGR), 2) by the Governments of the States and 3) by the distribution companies (that recover later investments in the corresponding tariff reviews).

Privatisation of Eletrobras

During the second half of 2018, the privatization of the six distributors managed by Eletrobrás was carried out, with the following results:

Company	Auction winner	Discount
Companhia Energética do Piauí (CEPISA)	Equatorial Energia	119%
Companhia de Eletricidade do Acre (ELETROACRE)	Energisa	31%
Centrais Elétricas de Rondônia (CERON)	Energisa	21%
Boa Vista Energia S.A. (BOA VISTA)	Consórcio Oliveira Energia	-
Amazonas Energia	Consórcio Oliveira Energia	-
Companhia Energética de Alagoas (CEAL)	Equatorial Energia	-

CONSOLIDATED DIRECTORS' REPORT 2018

This directors' report has been prepared taking into consideration the "Guide of recommendations for the development of directors' reports of listed companies", published by the CNMV in July 2013.

1 COMPANY'S POSITION

The Company has undergone a major transformation over the last 15 years, staying clearly ahead of the energy transition in order to address the challenges posed by climate change and the need for clean electricity.

Boasting a track record that spans over 170 years, today IBERDROLA is an international energy leader producing and supplying electricity to more than 100 million people in the countries in which it operates.

As a result of our environmental commitment and our engagement in the decarbonisation of the economy, we stand out as the leading renewable energy company and have succeeded in reducing its emissions in Europe by 75% since 2000, reaching levels that are 70% below the average for European companies in its sector.

The IBERDROLA group is currently present in the following countries and geographical regions, where we occupy a leading position and are regarded as a benchmark thanks to our sustainable energy model.

- Euro zone: leading producer of wind power in Europe, leading energy company in Spain, with a presence in Portugal, France, Italy, Germany, Greece, Hungary, Romania, Cyprus, etc.
- United Kingdom: 100% renewable producer, transmission and distribution networks in England, Scotland and Wales.
- United States: Gas and electricity distributor in New York, Maine, Connecticut and Massachusetts and third biggest producer of wind power.
- Brazil: one of the leaders in the energy sector.
- Mexico: leading private sector producer of electricity.

As the electric utility of the future, IBERDROLA has placed its bets on clean energy, smart grids, efficient energy storage and the development of solutions tailored to its customers. At the centre of this strategy are the various stakeholders, with which it engages in ongoing dialogue. In order to confront the future energy scene with assurance of success, the Company places its trust in digital transformation, which is in accordance with two main pillars: technology and innovation.

On this basis, IBERDROLA is now embarking on a new stage of growth, supported by a strong investment drive essentially in regulated businesses or with long-term contracts, which will provide the security, stability and visibility that are the hallmarks of the company's business model. Likewise, IBERDROLA will continue maintaining its social commitments, acting as a driver for the growth and generation of employment in the countries where it operates, and creating sustainable value for all its stakeholders.

1.1. Business model

The current trends in the energy sector — the decarbonisation and electrification of the economy, technological advances and customers' increased connectivity — confirm the focus of our three global businesses: networks, renewables and generation and retail, and all of them centred on the customer.

The IBERDROLA Group accelerates value creation along five strategic pathways: profitable growth, operational excellence, a customer-focused approach, optimisation of capital, and finally digitisation and innovation.

To make its business model as competitive as possible, IBERDROLA has organised the management of its activities into three global businesses:

Renewable Business the renewables area is tasked with generating and marketing electricity from renewable sources: wind (onshore and offshore), mini-hydroelectric, solar thermal, photovoltaic, biomass, etc. Among the main objectives of the renewable business are:

- Safety in operations.
- Efficiency in operations to maximise the return on assets.
- Efficiency in construction costs, with special emphasis on offshore wind projects.
- Profitable growth in onshore and offshore wind power in strategic countries for the Group and new counties of interest.
- New long-term energy sale contracts at global level.

Network business: the networks area is responsible for the construction, operation and maintenance of power lines, substations, transformer centers and other facilities for delivering electric power from the production centres to the end user. Among the main targets are:

- Zero accidents.
- Offering an excellent service to customers, in accordance with quality of supply and grid information.
- Maximising efficiency in the operation of the system through operating excellent and digitisation of assets.
- Leading change towards a more efficient integration of renewable distributed energy.
- Integration of the electrical vehicle.
- 100% smart grids by 2030.

Generation and Supply business: the generation and supply area focuses on the production of electricity through the construction, operation and maintenance of generation plants and the sale and purchase of energy in wholesale markets. It also supplies energy and additional products and services to end customers.

- Competitive supply and excellence in customer service.
- Safety at work.
- Environmental management and respect for biodiversity.
- Identifying and minimising risks.
- Development of growth opportunities and new energy solutions.
- Growth in direct sales with private companies.
- Smart energy and mobility.
- Smart solar.

1.2 Mission, Vision and Values of the IBERDROLA Group

Our corporate governance system is inspired and takes form in our commitment to the Mission, Vision and Values of the IBERDROLA Group, which is our corporate ideology, channels our ordinary activity and guides our strategy and all our actions.

Mission

“Our mission is to create value in a sustainable way in carrying out our activities for society, citizens, customers, employees, shareholders, and other stakeholders, as the leading multinational group in the energy sector providing a quality service through the use of environmentally-friendly energy sources, which engages in innovation, leads the process of digital transformation in its area of activity, and is committed to the fight against climate change through all of its business activities, with a social dividend and the generation of local employment and wealth, and which considering its employees a strategic asset. With this in mind, we foster their development, training, and work-life balance, favouring a good working environment and equal opportunities. All of the foregoing is within the framework of our strategy of social responsibility and compliance with tax rules.”

Vision

“We want to be the leading multinational group in the energy sector at the forefront of a better future, sustainably creating value with a quality service for people: citizens, customers and shareholders, whom we care for and involve in our corporate life, and for the communities in which we carry out our activities, generating employment and wealth, with whom we engage in constructive dialogue. We want to be known for our firm commitment to ethical principles, good corporate governance and transparency, the safety of people and security of supply, operational quality and excellence, innovation, protection of the environment, customer focus and the Sustainable Development Objectives approved by the UN. We will make this possible through the work of our employees and the people working at our suppliers and collaborators, whom we care for by offering all the training and work-life balance resources at our disposal for their development and to strengthen equality of opportunity.”

Values

The mission and vision of the Group are in accordance with a firm commitment to 12 values to which all Corporate Policies, internal rules and other internal codes and procedures must adhere:

- Creation of sustainable value
- Ethical principles
- Good corporate governance and transparency
- Development of our workforce
- Social commitment
- Sense of belonging
- Safety and reliability
- Quality
- Innovation
- Respect for the environment
- Customer focus
- Institutional loyalty

1.3. IBERDROLA' corporate governance model

Corporate governance system

IBERDROLA constantly updates its corporate governance system, which consists of its By-Laws, the Mission, Vision, and Values of the IBERDROLA Group, the corporate policies, the governance rules of the corporate decision-making bodies and internal committees, and the compliance function. In order to move forward in developing specific aspects of its corporate governance system, the Company promotes the creation of working groups composed of authorised representatives of the stakeholder group(s) affected in each case, Company employees and top-level external experts in the field concerned.

The IBERDROLA Group's commitment to good corporate governance and transparency is reflected in its Mission, Vision and Values, the bases of which as regards corporate governance are the involvement of the shareholders in the Company's affairs and maintaining a leadership position in the application of best practices and in transparency.

The general corporate governance policy contains a summary of the basic principles regulating the corporate governance of the Company and of the Group and of its most important components, available in full at www.iberdrola.com.

Governance model

This duly makes a distinction between the functions of strategy and supervision and those of management and control:

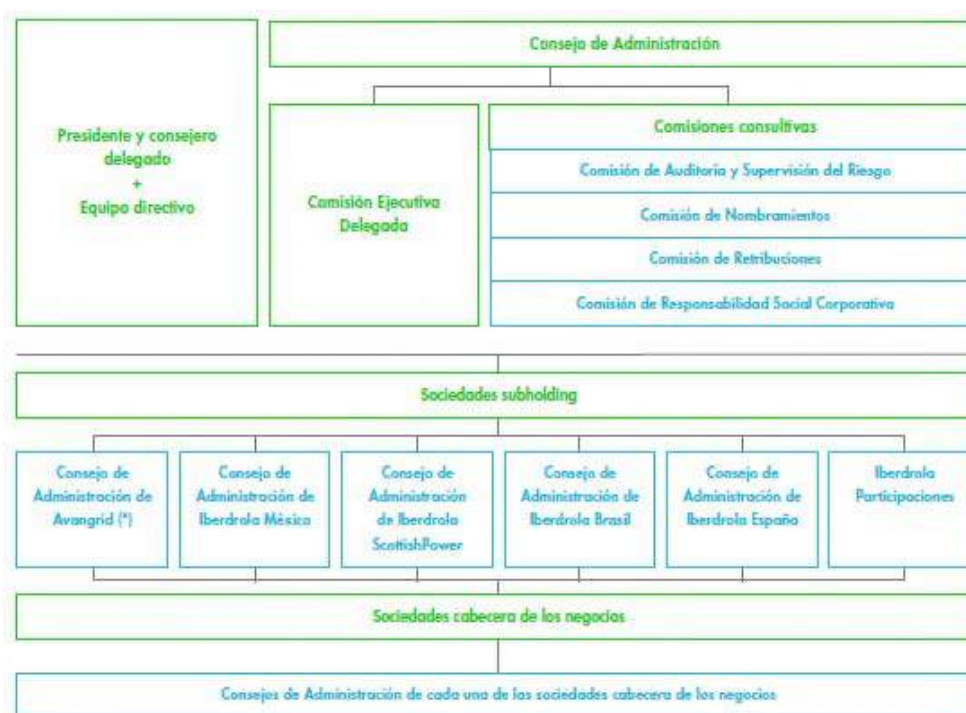

- The IBERDROLA Board, composed of a large majority of independent directors, focuses on defining, supervising and monitoring the policies, strategies and guidelines to which the group must adhere.
- The chairman of the Board, the chief executive officer and the rest of the management team are responsible for the group's strategic coordination and organisation, through the distribution, implementation and monitoring of the general strategy and its basic guidelines.
- In all countries in which the group operates, business is organised and strategically coordinated through subholding companies, which group investments in energy business operating in the country concerned and centralise the provision of common services to these companies. The group also has a subholding to handle all non-energy business.

The subholdings have boards with independent directors, and their own Audit and Compliance Committees, Internal Audit departments and Compliance units or departments.

- Parent companies are tasked with ordinary management and effective administration of all lines of business. They also have boards with independent directors and specific management teams.

This structure, which operates along with the group's business model, fosters global integration of the lines of business (Networks, Generation and Sales and Renewables), and focuses on maximising operational efficiency, by implementing best market practices.

Corporate and governance structure of IBERDROLA, S.A.

(*) Sociedad cotizada en la Bolsa de Nueva York.

1.4. Corporate structure of the Group

Given the nature of the activities carried out by the IBERDROLA Group, its organization responds to the strategic business units, rather than product and service lines. These businesses are managed independently, as they respond to different technologies, regulations, and geographic markets (Note 7).

The IBERDROLA Group has a decentralised structure and management model to approximate the decision taking to places where they should have effect, through the subholding companies and parent companies of the businesses. In addition, the independence and listed subholding companies' reinforced autonomy are guaranteed.

The corporate structure encompasses the Company (IBERDROLA, S.A.), subholding companies and business parent companies.

- IBERDROLA, S.A. (Parent company)

The board of directors of the Company defines and supervises the Group's policies and strategies and of the basic guidelines for the management thereof, and adopts strategic decisions.

The chairman of the Board of Directors & chief executive officer of with the technical support of the Operating Committee, the Group's Business CEO and the rest of the management team, assumes the duty of organisation and strategic coordination of the Group through the dissemination, implementation and monitoring of the overall strategy and of the basic management guidelines established by the Board of Directors.

- Subholding companies

The subholding companies group together the equity investments in the energy business parent companies that conduct their activities in the various countries in which the Group operates. This structure also comprises a subholding company that groups together certain equity investments in other entities, including the parent companies of non-energy businesses, present in several countries.

They contribute to organisation and strategic coordination in their respective countries, disseminating and implementing the Group's guidelines and management policies.

Furthermore, they centralise the provision of shared services to the business parent companies, always in accordance with applicable legislation and, in particular, with the rules on segregation of regulated activities.

The subholdings have boards with independent directors, and their own Audit and Compliance Committees, Internal Audit departments and Compliance units or departments.

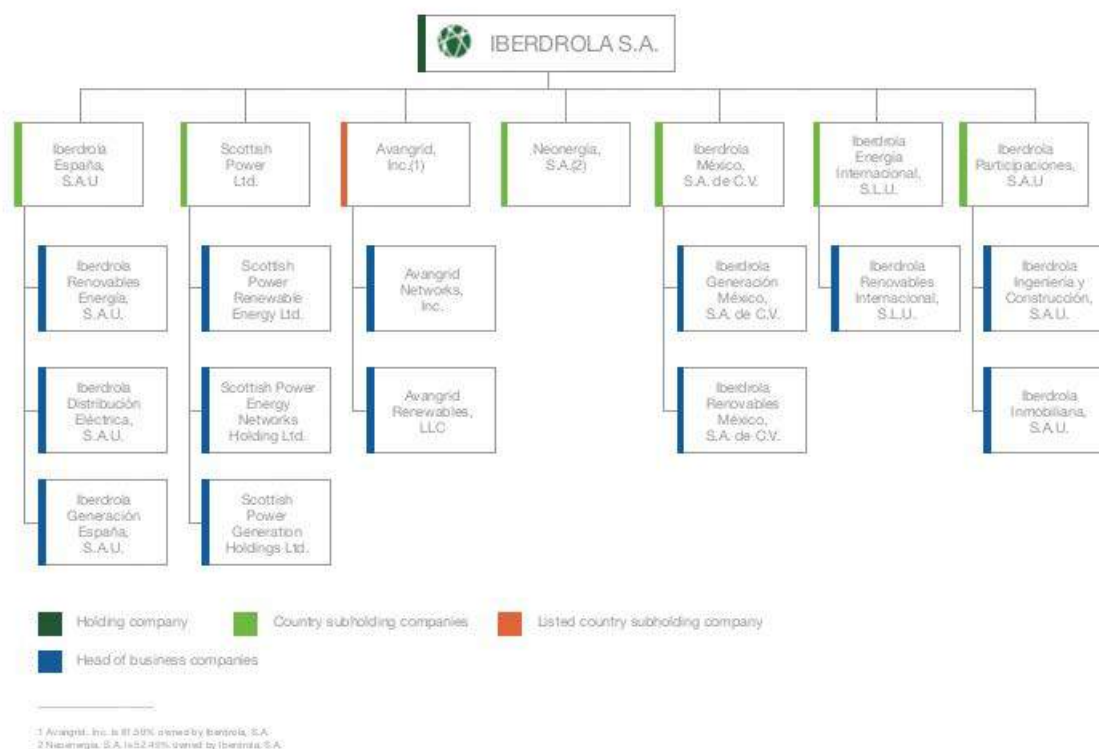

Listed subholding companies enjoy greater autonomy, as provided for in legislation and with regard to related party transactions and management.

- Business parent companies

The business subholding companies of the Group assume decentralised executive responsibilities. They have the necessary autonomy to carry out the day-to-day administration and effective management of each of the businesses, and are responsible for the day-to-day control thereof.

They are organised through their Boards of Directors, which may include independent directors, and their own governing bodies; they may also have their own audit committees, internal audit areas, and compliance departments.

Outline of the Group's corporate structure

The Company's and the Group's governance conforms to the structure described above: it segregates the duties relating to strategy, oversight, and control of the Group as a whole, those of organisation and coordination of the businesses in each country and the multinational non-energy business, as well as those of day-to-day administration and effective management of each business.

It is established on the following bases:

- The board of directors of the Company, which solely exercises holding company duties, has been assigned powers relating to the establishment of the Group's policies and strategies and of the basic guidelines for the management thereof, as well as general oversight of the implementation of such policies, strategies and guidelines and of decisions on matters that are strategically significant at the Group level.
- The chairman of the board of directors & chief executive officer of the Company, with the technical support of the Operating Committee, the Group's Business CEO and the rest of the management team, assumes the duty of organisation and strategic coordination of the Group through the dissemination, implementation and monitoring of the overall strategy and of the basic management guidelines established by the board of directors.

- c) This organisation and coordination duty is strengthened through the boards of directors of the subholding companies, which includes independent directors, as well as their own audit committees, internal audit areas, and compliance units or departments.
- d) The business parent companies of the Group assume decentralised executive responsibilities. They have the necessary autonomy to carry out the day-to-day administration and effective management of each of the businesses, and are responsible for the day-to-day control thereof. These business parent companies are organised through their respective boards of directors and their own governing bodies.

The corporate and governance structure of the Group described above operates in parallel with the Group's business model, which entails the global integration of the businesses and aims to maximise the operational efficiency of the different units. The business model ensures the dissemination, implementation and monitoring of the overall strategy and of the basic management guidelines established for each business, primarily through the exchange of best practices among the various companies of the Group, while upholding their decision-making autonomy.

In any case, the Company and the Group assume the commitments established by law in connection with the legal and functional separation of the companies carrying out regulated activities, while the subholding companies ensure compliance with such legislation.

1.5. Organisation of the board, or the bodies to which its decision-making function is delegated, including control functions and the policy with respect to non-controlling interests.

A comprehensive description of the governance structure of the Company, and of the functions and internal regulations of the committees is provided in section C of the annual corporate governance report, which forms part of this directors' report.

1.6. Regulatory framework of the activities

A comprehensive description of sector regulation and operation of the electricity and gas system in the markets in which the Group operates is provided in Appendix 2 "Sector regulation and operation of the electricity and gas system" attached to the annual accounts.

1.7. Main products and services, and production processes

The main products that IBERDROLA offers to its customers are electricity and natural gas, in both the wholesale and retail markets serving the end consumer. The Company also offers a wide range of products, services and solutions in the fields of:

- Improving the quality of life, peace of mind and safety of the consumer.
- Efficiency and energetic services.
- Caring for the environment: renewable energy and sustainable mobility.
- Quality of power supply and safety of facilities.
- Installation of electrical infrastructure.

- Global management of facilities and energy supplies.

Through its subsidiaries, the Company also provides services for the engineering and construction of power generation, distribution and control facilities; operation and maintenance of power generation facilities, land management and development; and the sale and rental of housing, offices and commercial premises. More detailed information can be found at www.iberdrola.com, in the "customers" section.

As a general rule, companies directly manage the activities that make up their core business and outsource the activities they consider will be conducted more efficiently by other specialised companies, of which IBERDROLA requires certain quality standards and responsible behaviour as regards environmental, social and labour aspects.

This information can be extended with the corresponding indicators described in the sustainability report.

1.8. Strategic principles for the 2018-2022 period

The energy scenario in which IBERDROLA will be undertaking its activity in the coming years will be based on three pillars:

- The need for decarbonisation.
- Technological advances, continuing the trend toward increased efficiency in terms of the sources of renewable energy and electricity grids.
- New demands from consumers, who need new energy services, more connections. These will be possible thanks the possibilities offered by digitalisation.

All of this means an increase in demand for energy, especially for electricity, which will grow 60% in the years to 2040². In order to attend to this growth in demand for electricity, associated investment will exceed 16.3 billion dollars² in power grid and renewables alone.

In accordance with this increase in electricity consumption, in the 2018-2022 period, the company will continue to develop its strategy in the different businesses and markets where it has a presence:

- In the United States the company is taking up a position to home in on opportunities for investment in energy infrastructures and renewables through the platform operated by its subsidiary AVANGRID, which has eight regulated energy transmission and distribution companies in New York, Connecticut, Maine and Massachusetts, as well as being one of the country's third largest wind energy producer. The group will continue investing in transport and distribution network infrastructures and will continue with its strategy of growth of onshore wind energy and solar energy. The company is also working in the development of the offshore wind power sector, in which it has an extensive portfolio of projects, with Vineyard (800 MW³)

² International Energy Agency: *World Energy Outlook 2018, New Policies Scenario (NPS)*

³ 50% corresponding to Avangrid

- In the UK, where IBERDROLA has become the first 100% renewable utility, its commitment to renewable energy will continue to be underlined, especially that of offshore wind power via an existing platform, with the company maintaining development of the “East Anglia One” offshore wind farms in the North Sea of 714 MW, which will be fully operational by 2020. Moreover, reading renewables projects in the UK it will continue developing networks infrastructures under regulatory frameworks already approved for transmission and distribution (RIIO-T1 and RIIO-ED1).
- In Iberian Peninsula it will strengthen its leadership in networks and renewable energies. Investments will focus on networks, and more in particular in distribution. The company will also continue to develop its renewable energy portfolio through wind and solar power projects, as well as the Tâmega hydroelectric complex in Portugal, which has a total generating capacity of 1,158 MW.
- In Mexico, where work on projects currently under construction is set to finish, investment will focus on contracted power generation and renewables, analysing the opportunities that may arise.
- NEOENERGIA, one of Brazil's main power generating groups with a presence in 18 states, offers growth opportunities in both the renewable and transmission and distribution network sectors.
- In other countries in Europe, where the company has already brought its first offshore wind farm in Germany on line. The company's commercial activities have expanded into new European markets, including Portugal, France and Italy.

Operating efficiency

IBERDROLA has always been one of Europe's most efficient electricity companies, and will continue to boost its operational efficiency on the strength of technical progress in terms of the digitisation of all its businesses and processes, as well as synergies arising from process standardisation through the Group's implementation of best practices in all its businesses.

Earnings performance

The strategy, consisting in the profitable growth in mature businesses, efficient operation of ongoing assets, and the aforementioned investment plan, will lead to sustainable growth in company profits.

Shareholder remuneration

The trend forecast for the period will enable the Company to increase long-term remuneration for shareholders, in keeping with results.

Financial solvency

The Company will continue to present a solid financial position that is compatible with the investment plans and the forecasted shareholders remuneration.

This section of the directors' report of IBERDROLA contains forward-looking information, including financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, capital expenditure, synergies, products and services, and statements regarding future performance or directors' estimates which are in accordance with assumptions they consider reasonable.

Although IBERDROLA believes that the expectations reflected in such forward-looking statements are reasonable, investors and shareholders of IBERDROLA are cautioned that forward-looking information and statements are subject to risks and uncertainties, many of which are difficult to predict and generally beyond the control of IBERDROLA; risks that could cause actual results and developments to differ significantly from those expressed in, or implied or projected by, the forward-looking information and statements.

The forward-looking statements are not guarantees of future performance and have not been reviewed by the auditors of IBERDROLA. It is recommended that no decisions be made on the basis of the forward-looking statements, which refer only to the date they were made. All of the forward-looking statements included in this report are expressly qualified by the cautionary statement above. All forward-looking statements included in this directors' report are in accordance with the information available on the date hereof. Except as required by the applicable law, IBERDROLA undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

2. BUSINESS PERFORMANCE AND RESULTS

2.1. Highlights for the period

From 1 January 2018 results of hydroelectrical generation is presented under the scope of the Renewables business (before, they were presented within the scope of the Liberalised business). Subsequently, information regarding 2017 has been re-stated bearing in mind this circumstance.

As for the average performance of IBERDROLA's main reference currencies regarding the Euro in 2018, the main currencies depreciated: the Pound Sterling by 0.9%, the US Dollar by 4.7%, and the Brazilian Real by 19.5%.

Regarding the performance of electricity production in the period, the main areas of activity were:

- The energy balance on the Iberian Peninsula in 2018 can be characterised by a significant increase in hydroelectric production (up 74%) compared to the previous year. 2018 closed with the index of producible hydroelectric power reaching 1.3, with hydroelectric reserves at 44.1%, compared to an index of 0.5 and reserve levels at 26.3% at the close of 2017. Coal and combined cycle production fell 18% and 22% respectively in comparison to the previous year. The rest of energy production from renewable sources closed 2018 at levels that were similar to the previous year, the result of greater wind power production (up 3%), which offset the drop in solar power production (down 12%).

In terms of demand, it increased by 0.4% with respect to the same period of 2017, while in terms adjusted for work and temperature, it grew by 0.3%.

- In the United Kingdom, electricity demand peaked by 0.3% compared to 2017, while customer gas demand (not including energy used in generation) is up 5.2% compared to 2017.
- In the AVANGRID area in the East Coast of the United States, electricity demand increased by 3.2%, while gas demand increased 8.8% compared to 2017.
- In the IBERDROLA catchment area in Brazil, electricity demand rose by 2.8% compared to 2017.

2.2 Basic indicators

At the end of 2018, IBERDROLA had 44,104 MW of installed generation capacity, of which 68.2% emission-free energy while operating at a very low variable cost. The tables below show distribution by country and technology:

Power per countries (MW)	2018	2017	MW change
Spain	25,574	25,607	(33)
United Kingdom	2,086	4,616	(2,530)
United States	7,180	7,009	171
Mexico	6,663	6,242	421
Brazil	1,640	1,640	–
RoW	961	961	–
Total	44,104	46,075	(1,971)

Power per technology (MW)	2018	2017	MW change
Renewables	26,909	27,066	(157)
Onshore	15,251	15,032	219
Offshore	544	544	–
Hydroelectric	10,421	10,984	(563)
Mini Hydroelectric	301	301	–
Solar and other	392	205	187
Nuclear	3,166	3,166	–
Gas combined cycle	12,542	14,465	(1,923)
Cogeneration	613	504	109
Coal	874	874	–
Total	44,104	46,075	(1,971)

IBERDROLA Group's total production in this period grew by 8.4% to 136,737 GWh (126,198 GWh in 2017). Net production by geographical areas and technologies is the following:

Net production per country (GWh)	2018	2017	% change
Spain	56,636	50,358	12.5
United Kingdom	10,576	11,945	(11.5)
United States	19,462	17,612	10.5
Mexico	41,323	41,854	(1.3)
Brazil	6,560	3,047	115.3
RoW	2,180	1,382	57.7
Total	136,737	126,198	8.4

Power per technology (MW)	2018	2017	MW change
Renewables	53,684	42,216	27.2
Onshore	35,711	32,340	10.4
Offshore	1,642	820	100.2
Hydroelectric	15,711	8,659	81.4
Mini Hydroelectric	279	150	86.0
Solar and other	341	247	38.1
Nuclear	23,419	23,190	1.0
Gas combined cycle	55,910	55,964	(0.1)
Cogeneration	2,108	2,163	(2.5)
Coal	1,616	2,665	(39.4)
Total power (MW)	136,737	126,198	8.4

2.3. Business performance

2.3.1. Analysis of the profit and loss account

As indicated, the information for 2017 has been re-stated to show hydroelectric generation within the Renewables business (in 2017, it was shown within the Liberalised business).

The key figures for the financial year 2018 are as follows:

Millions of Euros	2018	2017	% change
Revenue	35,076	31,263	12.2
Gross margin ⁽¹⁾	15,435	13,364	15.5
EBITDA ⁽²⁾	9,349	7,319	27.7
EBIT ⁽³⁾	5,439	2,713	100.5
Net profit	3,014	2,804	7.5

(1) Gross margin: Revenue – Supplies

(2) EBITDA: Operating profit+ Depreciation/Amortisation and provisions

(3) EBIT: Operating profit

The profit for the year has exceeded the goals initially set for the performance in all countries and businesses. Operating profit (EBITDA) came to Euros 9,349 million and net profit exceeded Euros 3,000 million for the first time (Euros 3,014 million).

This improvement was underpinned by the Group's growth, particularly in Brazil, Mexico and the US and by the return to normal of margins and the small sales margins in the UK. All this in spite of currency devaluations (Pound Sterling by 0.9%, the US dollar by 4.7% the Brazilian real by 19.5%) which supposed a minor Euros 363 million off EBITDA.

The effect of the reorganisation in Brazil during the first eight months of the financial year (from September 2017 on, the bases for comparison are like-for-like) improved EBITDA by Euros 570 million, although it did not affect net profit significantly.

Net profit for the year increased by Euros 210 million or 7.5% relative to 2017, despite the recognition in 2017 of a gain of Euros 255 million on the Gamesa transaction the positive impact Euros 1,284 million of the US tax reform on net profit after restructuring and early retirement plan, as well as other positive non-recurring effects recognised in 2017, such as the exceptional positive result in the Gas business in Spain as a result of the exceptional price revision in supply contracts, which was not repeated in 2018 and therefore has a negative effect on the year-on-year comparison. On the negative side, we would point to the impact of the severe storms in the US.

From an operational point of view, outstanding positive points were the improvements in tariffs in the US and Brazil, the increase in onshore wind power production (thanks both to the greater operating capacity and the increased load factor) and in hydroelectric power, the normalisation of conditions in the liberalised business in the UK and the increased CFE tariff in Mexico.

2.3.1.1 Gross margin

The gross margin stood at Euros 15,435 million, with an increase of Euros 2,071 million, up 15.5% compared to that obtained in 2017, supported by the positive performance of all the countries and businesses and the incorporation of Neoenergía. The performance of reference currencies had a negative effect of Euros 406 million offsetting the Euros 1,505 million improvement in business performance, and the impact of the incorporation of Neoenergía in the first eight months of the year 2018, which represents Euros 972 million,.

The gross margin by business is as follows:

Millions of Euros	2018	2017	% change
Networks business	7,641	6,786	12.6
Liberalised business	4,168	3,757	10.9
Renewable business	3,611	2,791	29.4
Other businesses	58	70	(17.1)
Corporation and adjustments	(43)	(40)	(7.5)
Gross margin	15,435	13,364	15.5

– Networks business

The Networks business improved its contribution by 12.6% to reach Euros 854 million up to 7,641 million euros (Euros 6,787 million in 2017) propelled by the improvement all geographic areas.

Without taking into consideration the integration in Brazil, of Euros 784 million, and the impact of exchange rate, a lower gross margin of Euros 287 million, gross margin would rise Euros 358 million, up by 5.3%.

Thousands of Euros	2018	2017	% change
Spain	2,109	2,003	5.3
United Kingdom	1,222	1,174	4.1
United States	2,780	2,754	0.9
Brazil	1,530	856	78.7
TOTAL	7,641	6,787	12.6

As significant facts in the performance of the Networks business' gross margin, the following stand out:

- In Spain, the gross margin amounted to Euros 2,109 million, Euros 106 million more than in the previous year, mainly due to a rise in recognised earnings in Euros 105 million.
- The United Kingdom contributes Euros 1,222 million (4.1%), up by Euros 48 million compared to 2017 and impacted by the depreciation of the Pound Sterling, Euros 11 million. The increase is explained by an improvement in transmission and distribution income due to larger assets.
- The contribution of the US in the period was Euros 2,780 million, Euros 26 million more than in the previous financial year (0.9%). Without the dollar's depreciation of Euros 130 million, the margin would have grown by Euros 156 million (+5.7%), thanks to new "rate cases" (formal process to determine charges to customers for utilities) and reduced costs of energy.

- Brazil's Gross Margin amounted to Euros 1,530 million (78.7%), Euros 674 million more than in 2017, of which 784 million was the result of the corporate reorganisation in the first eight months of the financial year and a negative 145 million due to the depreciation of the Brazilian real, the remaining positive 35 million being the result of the growth of the business itself. The tariff revisions of COELBA (Bahia state electricity company) and COSERN (Companhia Energética do Rio Grande do Norte) and increased demand compensate lower inflation and higher losses.

- Renewables business

The Renewable business increased its gross margin by 29.4% to Euros 3,611 million (Euros 2,791 million in 2017), up Euros 820 million more than in 2017.

Millions of euros	2018	2017	% charge
Spain	1,580	1,174	34.6
United Kingdom	644	547	17.7
United States	835	783	6.6
Brazil	178	92	93.5
Mexico	88	71	23.9
ROW	286	124	130.6
Total	3,611	2,791	29.4

The main causes of this trend are:

- Spain: gross margin reached Euros 1,580 thousand growing by 34.6% compared to the same period of 2017. This growth was due to the increase in production, of both hydroelectric (72%) and wind power production (3.9%).
- The gross margin in the United Kingdom increased by Euros 97 million to Euros 644 million (17.7%) with the impact of the depreciation of the Pound Sterling, which accounted for Euros 6 million. The details of the impact are:
 - Improvement of Euros 41 million as a result of larger onshore wind output (13.7%) to which contribute both wind factor and a better installed power for the new wind farms in 2017.
 - Reduction of Euros 9 million due to lower offshore wind output (7.9%);
 - The improvement in wind prices represents Euros 19 million and the peak in ROC prices increases margin in Euros 21 million and 2 other minor effects million ;
 - Hydroelectrical energy contributes Euros 29 million due to better prices despite output going down by 16.2%;
- The contribution of the United States for the period totalled Euros 835 million (6.6%), Euros 52 million more compared to the previous year. The depreciation of the US Dollar had a negative impact of Euros 39 million. The improvement compared to the previous year in production (10.7%) enhanced the gross margin by Euros 95 million and was offset by the Euros 4 million in the impact of lower prices and derivatives.

- Mexico improved its contribution to the gross margin by Euros 17 million due to price increases to reach Euros 88 million in 2018 due to a larger output of 13.8%, which overcomes the depreciation of the dollar, which in turn lowers margin in Euros 4.2 million.
- Brazil improved its contribution to the gross margin by Euros 86 million, affected by the appreciation of the Brazilian Real (Euros 35 million) due to the global integration of the plants of the Neoenergia subgroup since the second half of 2017.
- The rest of the world increased Euros 162 million, due to the commissioning of Wikinger, with an installed capacity of 350 MW and an output of 887 GWh in December 2018.

- Liberalised business

The Liberalised business (Generation and Supply) increased its contribution to gross margin in Euros 411 million, to Euros 4.168 million (Euros 3,757 million in 2017).

Thousands of Euros	2018	2017	% change
Spain	2,415	2,293	5.3
United Kingdom	863	743	16.2
Mexico	756	646	17.0
Brazil	134	75	78.7
Total	4,168	3,757	10.9

- In Spain and Portugal the gross margin was Euros 2,415 million, an improvement of Euros 122 million (5.3%), basically due to:
 - the Euros 111 million improvement in the generation business, the lower production being offset by better margins;
 - Improvement of Euros 88 million in the customer business, thanks to increased sales activity, with increased sales of electricity in volume terms, as well as a greater contribution from other products and services;
 - negative impact of Euros 77 million on the Gas business due to the comparison's being affected by the exceptional revision of prices in the supply contracts portfolio in 2017.
- The UK improved its gross margin by Euros 120 million (+16.2%) to Euros 863 million. The basic reasons for this improvement compared with 2017 are the recovery in sales margins from the compression experienced in the previous financial year, Euros 109 million, and the slight improvement in generation, Euros 11 million. This improvement was affected by the 0.9% depreciation of the pound (Euros 128 million). Without this effect the margin would have improved by 17.3%, as it did in local currency.
- Mexico contributed Euros 756 million to the gross margin (+17.0%), up by Euros 110 million on its contribution in 2017. Without taking account of the dollar's depreciation, which represented Euros 35 million, the business increased its contribution by Euros 145 million, underpinned by the good progress of the IPP projects with the CFE (Mexican state-owned electric utility), Euros 30 million, the recovery of the tariff with private customers in 2018, and other minor effects – Euros 108 million and 7 million respectively.

- Brazil's gross margin increased by Euros 59 million to Euros 134 million. The effect of the incorporation of Neoenergía in the first eight months of the 2018 financial year amounted to Euros 76 million and the depreciation of the real Euros 11 million, leading the gross margin to diminish by Euros 6 million, basically explained by poorer performance of the Termopernambuco power plant due to the stoppages of 2018.

– Other businesses

The contribution of other businesses amounted to Euros 58 million, a decrease of Euros 12 million compared to 2017 (Euros 70 million in 2017), although this is due to the discontinuation of the engineering business.

2.3.1.2 Gross Operating result – EBITDA

Consolidated EBITDA increased by Euros 2,030 million, 27.7%, to Euros 9,349 million (compared to Euros 7,319 million in 2017). The devaluation of currencies and the integration of Neonergia represent Euros 252 and 570 million, respectively. Notwithstanding these effects, EBITDA would improve in 23.4% amounting to Euros 1,713 million.

All business improve: Networks by 16.2%, Renewables by 39.3%, and Liberalised (Generation and Supply) by 39.2%.

Millions of euros	2018	2017	% charge
Network business	4,915	4,228	16.2
Liberalised business	2,038	1,464	39.2
Renewable business	2,445	1,755	39.3
Other businesses	29	13	123.1
Corporation and adjustments	(78)	(141)	44.7
EBITDA	9,349	7,319	27.7

The EBITDA performance variables are explained as follows:

– Net operating expenses

Net operating expenses go down Euros 16 million (–0.4%) to Euros 4,155 million (Euros 4,171 million in 2017). The impact of exchange rate resulted in Euros 128 million and the reorganisation in Brazil in Euros 399 million for the first 8 months of the year. If we excluded these impacts, the decrease would be Euros 287 million, down 6.9%.

This variation is explained by:

- An increase of Euros 20 million due to the storms in the United States;
- A decrease of Euros 175 million as a result of the application of IFRS “Revenues from contracts with customers” due to customer acquisition costs which improve compared to previous years;
- The implementation of personnel leaving plans in 2017 amounting to Euros 203 million less in personnel expenses.

- The net result of business growth and efficiency plans represent an increase of Euros 71 million.

Millions of euros	2018	2017	% charge
Networks business	2,079	1,922	8.2
Liberalised business	1,328	1,432	(7.3)
Renewables business	698	685	1.9
Other businesses	28	52	(46.2)
Corporation and adjustments	22	80	(72.5)
Net Operating Expenses	4,155	4,171	(0.4)

– Taxes

Taxes increased by Euros 57 million to Euros 1,931 million, up 3.0% compared to 2017, due to:

- the exchange rate impact improves in Euros 25 million whereas the incorporation of Neenergia has a negative impact of Euros 3 million;
- increase in US rates in contributing Euros 13 million to the Networks Business.
- Sustainability taxes increase in Euros 65 million due to a higher water fee and the price increase (on which a 7% is charged despite having been eliminated in the last months of 2018).
- The net of appropriations and reversions of provisions increase the headings in Euros 13 million.
- Increase in Enresa rate in the amount of Euros 3 million:
- Lower taxes in the United Kingdom in Euros 24 million of which Euros 13 million are a result of the implementation of the WHD (since the end of the previous plan in March until the implementation of the new one in October) and Euros 9 of ECO (the programme ended on 30 September 2018).
- Raise in public prices and other less relevant variations result in an increase of Euros 9 million.

2.3.1.3. Net Operating result – EBIT

EBIT totalled Euros 5,439 million, 100.5% higher in comparison with 2017 (Euros 2,713 million).

Millions of euros	2018	2017	% charge
Network business	3,034	2,660	14.1
Liberalised business	1,139	704	61.8
Renewable business	1,397	352	297.0
Other businesses	20	(798)	102.5
Corporation and adjustments	(151)	(205)	26.3
EBIT	5,439	2,713	100.6

– Depreciation, amortisations and provisions

Depreciation, amortisation and provisions rose by 17.1% to Euros 3,656 million:

- Amortisation increased in the amount of Euros 401 million (12.6%) to stand at 3,587 million.

- Effect of exchange rate changes of Brazil reduces amortisation in Euros 89 million and the impact of the integration in Brazil amount to Euros 212 million.
 - Accelerated amortisation of thermal power plants whose closure is expected in 2021 increases provisions in Euros 15 million.
 - The application of IFRS 15 results in Euros 81 million due to the amortisation of customer acquisition costs as described above;
 - Larger investments in the Networks business in the United Kingdom represents an increase in amortisations of Euros 38 million.
 - Larger investments in the Networks business result in higher amortisations of Euros 88 million for Wiking and the rest of the business of Euros 37 million;
 - The sale of the gas business in the United States reduces this item in Euros 31 million;
 - The rest of the new investments, networks in Spain, the United States, Brazil and Mexico increase amortization by 49 million euros.
- The Provisions represent Euros 69 million decreasing Euros 1,154 million compared to 2017. Additionally, as well as the impact of exchange rates improves in Euros 89 million and the integration of Neenergy amounting to Euros 212 million, the main impacts explaining the variation are:
- Provision derived from the classification of the gas business in the United States and Canada as held for sale in an amount of Euros 743 million;
 - Reorganisation of the goodwill of the renewables business in the United States as a result of the tax reform amounting to Euros 450 million;
 - The remaining Euros 39 million is the net effect of several less significant provisions and reversals.

2.3.1.4. Net finance cost

The net finance cost was Euros -1,156 million, Euros 219 million higher than in 2017, 23% lower compared to 2017 mainly due to the restructuring of our business in Brazil.

Average cost stands at 2.97% (2.91% in 2017).

Miles de euros	2018	2017	charge
Debt profit	(913)	(920)	7
Impact IFRS 9	(35)	-	(35)
Differences derivatives exchange rates and other	36	68	(32)
Restructuring Brazil	(245)	(86)	(159)
Total	(1,156)	(937)	(219)

The main items that explain the variation are:

- The reduction of financing costs, as a result of optimising and diversifying sources of financing, has contributed to better debt which has more than offset the raise in average balance of Euros 1,150 million (excluding Neoenergia) due to investment effort.
- The reinterpretation of IFRS 9, which reflects the highest interest rate of financial liabilities amended but not in a material manner compared to 2017, has resulted in a loss of Euros 35 million.
- The positive profit of derivatives and others is reduced in Euros 33 million mainly due to the performance of net revenue hedges on the main currencies. Its impact is offset in operating result.
- Last, the consolidation of Neoenergia for a whole year, as a result of the restructuring in Brazil, compared to the four months in the previous year, has worsened profit in Euros 158 million.

2.3.1.5 Profit/loss of equity-accounted investees

Profit/loss of equity-accounted investees amounted to Euros 56 million, of which Euros 31 million correspond to the sale of Tirme.

2.3.1.6 Gains on disposal of non-current assets

Gains on disposal of non-current assets amounted to Euros 9 million, down Euros 270 million compared to 2017 (Euros 279 million). The Siemens-Gamesa merge and the company reorganisation in Brazil occurred in 2017 have an impact on the comparative information.

In 2018 the most significant transactions were as follows:

- The sale of the gas business in the United States and of 80% of the interest in Coyote Ridge Wind LLC resulted in gross losses of Euros 37 million.
- The sale of IBERDROLA Energía Solar de Puertollano, S.A. and of Scottish Power Generation Limited resulted in gross gains of Euros 38 million.
- The profit of intangible assets resulted in gross gains of Euros 8 million.

2.3.1.7 Net profit

Net income rose to Euros 3,014 million, Euros 210 million more than in the prior year, as a result of:

- Corporate tax costs stood at 959 million, an increase of Euros 2,357 million as a result of:
 - o Reductions to nominal rates compared to the previous year in America and companies in the Bizkaia tax system in Spain, as well as greater contribution in terms of income from the United Kingdom, where the nominal rate is below average, reduced the Group's average effective ordinary tax rate (from 26.3% in 2017 to 23.6% in 2018). The overall effect of this was an increase in corporate tax expenditure for the year of 192 million.
 - o The effect of the 2017 tax reforms in the US and the fiscal effect of the associated write-offs meant a tax revenue of 2.026 billion euros and 225 million respectively

- Other less significant effect improved corporate tax expenditure by Euros 87 million.
- Non-controlling interests stemming from the integration of NEOENERGIA, improved results in the US and increased funding through hybrid loans stood at 323 million.
- Discontinued operations saw a loss of Euros 51 million.

2.4 Operating performance of the period

2.4.1 Networks business

A. Spain

IBERDROLA has approximately 11 million managed supply points and total distributed energy 93,897 GWh, an increase of 0,7%% compared to the same period of the previous year (93,289 GWh in 2017).

The TIEPI (continuity of supply indicator) for 2018 was 44.6 minutes, an improvement of 15.37% on the previous year (52.70 minutes in 2017).

The table shows the values of the TIEPI (interruption time in minutes), the lowest in the last years, and NIEPI (number of interruptions in number) in relation to the previous year:

Year	Accumulated TIEPI	Accumulated NIEPI
2017	52.70	1.14
2018	44.6	0.91

The STAR project for the rollout of smart meters has been completed. IBERDROLA has installed more than 10.8 million digital meters and adapted the infrastructure that supports them to a smart grid, which represents a modernisation of the company's meter pool in Spain.

In July works for the first 2 MWh batteries storage system for the distribution grid in Caravaca de la Cruz commenced. This system will guarantee supply in the in case of breakdown, improve power control and facilitate the integration of distributed renewable generation.

B. United Kingdom

IBERDROLA has more than 3.5 million supply points in the United Kingdom. The volume of energy distributed during 2018 was 32,460 GWh (32,772 GWh in 2017), a decrease of 1% compared to 2017

All quality of service indicators, the average Customer Minutes Lost (CML) and the number of consumers affected by interruptions per every 100 customers (Customer Interruptions, CI) have been as follows:

	2018		2017	
	CML	CI	CML	CI
Scottish Power Distribution (SPD)	49.4	35.9	29.4	40.7
Scottish Power Manweb (SPM)	34.7	35.3	33.2	29.6

C. United States

- Distribution

In the United States IBERDROLA has 2.2 million electricity supply points. The volume of energy distributed in the year was 37,336 GWh, which represents an increase of 2.0% compared to 2017 (36.591 GWh).

The System Average Interruption Frequency Index (SAIFI) and the Customer Average Interruption Duration Index (CAIDI) are as follows:

	2018		2017	
	SAIFI	CAIDI	SAIFI	CAIDI
Central Maine Power (CMP)	* 1.24	* 2.14	* 1.61	* 1.83
NY State Electric & Gas (NYSEG)	* 0.84	* 2.07	* 1.20	–
Rochester Gas & Electric (RG&E)	* 0.54	* 1.85	* 0.55	* 1.77
United Illuminating Company (UI)	* 0.50	* 1.54	* 0.41	* 1.36

The whole area of energy distribution in US has suffered the impact from heavy storms in winter and spring that battered the east coast of North America, affecting quality indicators.

In Maine, a violent windstorm in April left tens of thousands of Central Maine Power customers without electricity, hitting supply indicators compared to 2017. CMP was praised for its extraordinary response to further heavy storms in October last year, receiving the Edison Electric Institute's EEI Emergency Recovery Award for the seventh consecutive occasion. This award recognises the great effort that companies make to restore the power supply as swiftly as possible in the face of inclement weather conditions and natural disaster.

In Connecticut, UIL's quality indicators for its distribution business were adversely affected by a grid incident which coincided with equipment renewal in the same area.

In March, the New England Clean Energy Connect project presented by Avangrid, CMP and Hydro-Québec, was chosen as the best way to supply clean energy to Massachusetts. With an investment of 950 million dollars, the project involves the construction of a 233-kilometre HVDC transmission line between Canada and New England, supplying 1,200 MW of 100% hydroelectric energy to customers in Massachusetts for twenty years. In 2018 the project sought to obtain the required permits in order to begin construction in 2019. The majority of these permits have been applied for, with only local and municipal approval still pending, meaning that construction work is expected to start on schedule.

- Gas

At the end of 2018 there are slightly more than 1 million gas users in the United States who have been supplied with 59,301 GWh, a 15.3% increase compared to the previous year (51,440 GWh).

D. Brazil

The demand of distributors in Brazil in 2018 increased by 2.3% to 56,760 GWh (55,510 GWh in 2017).

Energy distributed (GWh) 100% of business	2018	2017	% Change
COELBA	20,133	19,679	2.3
COSERN	5,704	5,623	1.4
CELPE	13,777	13,512	2.0
ELEKTRO	17,146	16,696	2.7
Total	56,760	55,510	2.3

The number of customers served by the distributors at the end of the year amounts to 13.8 million.

Number of customers (million) 100%	2018	2017
COELBA	6.0	5.9
COSERN	1.4	1.44
CELPE	3.7	3.6
ELEKTRO	2.7	2.6
Total	13.8	13.5

2.4.2 Liberalised business

A. Spain and Portugal

A.1. Generation

Installed capacity in Spain (not considering renewables) totals 10,032 MW, with no variations compared to 2017 (10.032 MW).

Power per technology (MW)	2018	2017	Change
Nuclear	3,166	3,166	–
Coal-fired thermal	5,694	5,694	–
Gas combined cycles	298	298	–
Cogeneration	874	874	–
Total	10,032	10,032	–

In 2018 net production decreased by 2.39% to 31,139 GWh. Trends in the year by technologies are as follows:

Net production (GWh)	2018	2017	% Change
Nuclear	23,419	23,190	1.0
Gas combined cycle	3,996	3,884	2.9
Cogeneration	2,108	2,163	(2.5)
Coal-fired thermal	1,616	2,665	(39.4)
Total	31,139	31,902	(2.39)

- Nuclear production stands at 23,419 GWh, up 1%.
- Thermal power stations produced 2,108 GWh, compared to 2,163 GWh in the previous year, representing a reduction of 2.5%.
- Production of combined cycles increased their production by 39.4%, to 1,616 GWh.

A.2 Supply

Supplied energy (electricity and gas) in Spain amounted to 66,836 GWh for electricity (63,083 GWh in 2017), 55,882 GWh of electricity and 10,954 GWh of gas.

Electricity sales on the free market in 2018 increased by 2.1% to GWh up to 48,448 GWh compared to 47,455 GWh supplied in the same period of 2017. Electricity supplied at the voluntary price for small consumers ("PVPC") amounted to 7,435 GWh.

Gas supplied in the free market in 2018 increased by 38.2% to GWh compared to 10,867 GWh supplied in 2017.

International retail (Portugal, Italy, France and Germany, mainly) IBERDROLA supplied 9,225 GWh during 2018, compared to the 7,587 GWh supplied in 2017, and was the second-ranking seller in the medium voltage industrial clients segment.

B. United Kingdom

B.1. Generation

Generation capacity has been sold to Drax. Therefore, at 31 December 2018 installed capacity in the UK is only renewable, although the year's output up until the moment of sale was managed by the Group. In 2018 output dropped by 23.2% to 5,453 GWh, compared to 7,100 GWh. The market share of the generation business in 2018 maintained similar levels to the previous years of 4%:

UK production (MW)	2018	2017	% change
Gas combined cycles	5,453	7,100	(23.2)
Total	5,453	7,100	(23.2)

B.2. Supply

Regarding sales, during 2018 customers were supplied with 20,008 GWh of electricity and 27,773 GWh of gas (21,591 GWh of electricity and 29,514 GWh of gas supplied during 2017). SCOTTISH POWER had 3 million electricity customers and 2 million gas customers at 31 December 2018.

C. Mexico

IBERDROLA is the leading private producer in the Mexico with installed capacity of 5,985 MW (5,832 MW in 2017). Highlights are the entry into commercial operation of Altamira (Dynasol) (57 MW) and Bajío (50 MW) cogeneration plants and the extensions of 23 MW to the California and to the MXL de Monterrey III, plants, contributing more than 21 MW extra to the plant for sale to private customers.

Currently the following cogeneration cycle plants are under construction and in the case of Topolobambo III is expected to be commissioned in 2019 and 2020:

Projects	MW
Escobedo	857
Topolobambo II	887
El Carmen	842
Topolobambo III	766
Combined cycle	3,352

The electricity supplied from the combined cycle and cogeneration plants amounted to 40,227 GWh (40,891 GWh in 2017), representing a load factor of 80%, as generation with natural gas is the basis of electricity generation in Mexico. Cumulative availability of the plants in Mexico has been 97%.

D. Brazil

Brazil's generation power corresponds to the gas combined cycles Termopernambuco is 533 MW, whose production peaked in 2018 to 3,986 GWh.

2.4.3. Renewable business

At the end of 2018, the Renewables business had an installed capacity of 26,794 MW (26,951 MW in 2017).

Renewable production increased by 8.4% to 136,737 GWh (126,198 GWh in 2017).

In the last 12 months, IBERDROLA has increased its power by 456 MW and sold the hydraulic plants in the United Kingdom (563 MW) in the transaction with Drax already commented, and the solar plant of Puertollano (50 MW).

MW installed	2018	2017	MW change
Onshore wind	15,251	15,032	219
Spain	5,526	5,508	18
UK	1,891	1,891	–
US	6,305	6,145	160
Mexico	408	367	41
Brazil	516	516	–
RoW	605	605	–
Offshore wind	544	544	–
UK	194	194	–
RoW	350	350	–
Hydroelectric	10,607	11,170	(563)
Spain	10,016	10,016	–
UK	–	563	(563)
Brazil	591	591	–
Other technologies	392	205	187
Total	26,794	26,951	(157)

A. Onshore wind energy

In the last 12 months, the performance, IBERDROLA's installed capacity by country is as follows:

- In Spain, the Chimiche II wind farm (18 MW)
- In the United States, 162 MW were added as a result of the purchase of 50% in Colorado Green, consolidated as global, and the retirement of 2MW of the Peñascal II wind farm.
- In Mexico the 39 MW of PIER II are added and 2 MW of the Santiago wind farm were commissioned.

Regarding ongoing and approved projects:

- In Mexico construction work continues on two wind farms – Santiago (105 MW in total) and Pier (220.5 MW), of which 39 MW has been handed over. In addition, approval has been granted to the building of a 105 MW onshore wind facility at Santiago, in the state of San Luis de Potosí. Work began in April 2018 and is expected to conclude sometime this year.
- In the United States, work has started on the Montague wind farm (201 MW) in Oregon, at Otter Creek (158.2 MW) in Illinois, at the Karankawa (288 MW) project in Texas, at the Tatanka (97 MW) and La Joya (166 MW) projects in South Dakota and New Mexico and at the Patriot facility in Texas (226 MW).
- In Brazil the construction of total de 15 wind-power projects totalling 472 MW has been green lighted in Paraíba state.
- Meanwhile, in Greece, approval has been given to the building of a 16 MW-onshore wind facility at Pyrgari.

B. Offshore wind energy

IBERDROLA has two offshore wind farms operating with 544 MW, West of Duddon Sands in the United Kingdom, located in the Irish Sea, with an attributable installed capacity of 194 MW and Wikinger in Germany with 350 MW.

Currently, offshore wind projects mainly in the United Kingdom, the United States, Germany and France are being developed.

- In the United Kingdom the East Anglia project in the North Sea. East Anglia 1 (714 MW) is under construction.
- In the United States with the acquisition of 50% of the company Vineyard Wind, owner of the rights to a wind farm off the coast of Massachusetts, with a generation potential of 3 GW. The wind farm will start its construction phase in 2019 and it is expected that 400 MW will come into operation by the end of 2021 and the remaining 400 MW by the second half of 2022. This way Vineyard Wind will become the first large scale US offshore wind farm.
- Also in the United States, with the award of the rights to develop another project under the name Kitty Hawk, off the coast of North Carolina, with a potential generation capacity of 2.5 GW.
- In Germany, in April 2018, IBERDROLA took part in the offshore wind tender and presented offers for its projects Baltic Eagle, Wikinger Süd and Windanker. IBERDROLA was awarded 476 MW in Baltic Eagle and 10 MW in Wikinger Süd, whose commissioning is expected in 2023.
- In France, the offshore wind farm Saint-Brieuc, of 496 MW of capacity. The project has stated its geotechnical studies which are currently under way as the first construction milestone.

The project is moving forward in order to commence the marine works in 2018, starting with the foundation works by Van Oord, and continuing with the installation of the marine substation by Seaway Heavy Lifting, and the installation of the marine cabling, for its connection with the terrestrial substation, by Nexans and DeepOcean. Siemens Gamesa will manufacture and install the 102 units of 7MW turbines, installation of which is expected to begin in mid-2019.

C. Other technologies

The Renewables business has facilities of other renewable technologies in various countries whose breakdown is presented in the following table:

MW installed	2018	2017	change
Mini-hydroelectric special regime	130	130	0
Mini-hydroelectric ordinary regime	171	171	0
Solar thermal hybrid	–	50	-50
Photovoltaic	392	155	237
US	116	106	10
Mexico	270	43	227
Greece	6	6	0
Total	693	506	187

The evolution of installed capacity in the year is as follows:

- In the United States, the solar photovoltaic plant of W'y East (10 MWn) has been commissioned in Oregon and
- In Mexico 227 MWn were commissioned with the solar photovoltaic plants of Santiago (150 MWn) in San Luis de Potosí and Hermosillo (77 MWn) in Sonora.
- In Spain the hybrid solar thermal plant of Puertollano of 50 MWn has been sold.

Among photovoltaic projects the following should be highlighted:

- In Spain, the photovoltaic plant of Núñez de Balboa with a capacity of 391 MWn in Badajoz, and
- In Mexico the construction of Hermosillo of a total 100 MWc is under way, of which 77 MWn are already in operation. Moreover, the following two photovoltaic projects have been approved: Cuyoaco, of 200 MW in the State of Puebla, and Apaxco, of 190 MW in the State of México, whose construction works are expected to start in the first half of 2019.

3. LIQUIDITY AND CAPITAL

3.1. Leverage

Gross financial debt as of 31 December 2018 increased by 1.315 billion euros to 34.199 billion euros compared to Euros 32,884 million as of 31 December 2017, mainly as a result of the integration of Neoenergía, which accounts for an increase of Euros 2,817 million, and investments made over the year. As a result, financial leverage rose to 43.7% compared to 43.5% for the previous year (see Note 24).

IBERDROLA has a varied debt maturity profile, with an average maturity of six years, mainly as a result of the active management of liabilities carried out during this financial year.

3.2. Credit rating of IBERDROLA senior debt

Agency ratings are as follows:

Agency	Long-term ⁽¹⁾	Outlook	Date
Moody's	Baa1	Stable	14/03/2018
Fitch	BBB+	Stable	08/07/2016
Standard & Poors	BBB+	Stable	22/04/2016

(1) The above ratings may be revised, suspended or withdrawn by the rating agency at any time

3.3. Debt structure

At 31 December 2018 the Company's borrowings costs stood at 2.97% compared to 2.91% in the same period of the previous year (Note 27).

The debt structure by interest rate and currency is presented in notes 4 and 27 of the consolidated annual accounts.

In accordance with the policy of minimising the financial risks of the Company, foreign currency risk has continued to be mitigated through the financing of international businesses in local currencies (Pound Sterling, Brazilian Real, US Dollar, etc.) or in their functional currencies (US dollar, in the case of Mexico).

IBERDROLA has a strong liquidity position at the end of 2016 exceeding Euros 13.012 million (Note 4).

IBERDROLA presents a comfortable profile of debt maturities, with more than six years of average debt life. IBERDROLA's debt maturity profile at the end of 2018 can be seen in note 27 of the consolidated annual accounts.

3.4. Working capital

Working capital has increased by Euros 52 million since December 2017 as a result mainly due to several different effects which partially offset one another:

- An increase in working capital as a result of an increase in inventories.
- A decrease of Euros 428 million in working capital associated with assets held for sale, in the gas business in the United States and Canada.
- Other assets of lesser amounts

Millions of Euros	31.12.2018	31.12.2017	Change
Assets held for sale	62	356	(294)
Nuclear fuel	273	332	(59)
Inventories	2,174	1,870	304
Trade and other accounts receivables	6,855	6,721	134
Current investments	572	601	(29)
Asset derivative financial instruments ⁽¹⁾	225	175	50
CURRENT ASSETS	10,160	10,055	106
Liabilities linked to assets held for sale	1	135	(134)
Provisions	580	627	(47)
Liability derivative financial instruments ⁽²⁾	209	136	73
Trade and other payables	8,476	8,422	54
Current liabilities	9,266	9,320	(54)
NETWORKING CAPITAL	894	735	52

(1) Not including cash and cash equivalents or debt derivative assets (note 20)

(2) Not including financial debt or debt derivative liabilities (note 20)

4 MAIN RISKS AND UNCERTAINTIES

4.1 Risk management system

The IBERDROLA Group is exposed to various inherent risks in the different countries, industries and markets in which it operates and through the businesses it carries out, which could prevent it from achieving its objectives and executing its strategies successfully.

The Company's board of directors, aware of the importance of this matter, has undertaken to develop its capabilities to ensure that the risks relevant to all of the Group's activities and businesses are appropriately identified, measured, managed and controlled, and has established, through the Group's general risk control and management policy, the basic mechanisms and principles necessary for the appropriate management of risk-opportunity with a level of risk that enables it to:

- attain the strategic objectives defined by the Group while controlling volatility;
- provide the maximum level of assurance to the shareholders;
- protect the results and reputation of the Group:
- defend the interests of shareholders, customers, other groups interested in the progress of the Company, and society in general, and
- ensure corporate stability and financial strength in a sustained fashion over time.

For the implementation of the aforementioned commitment, the board of directors and its Executive Committee have the cooperation of the Audit and Risk Supervision Committee, which, as a consultative body, monitors and reports on the appropriateness of the system for assessment and internal control of significant risks, acting in coordination with the audit committees existing at other companies of the Group.

All actions aimed at controlling and mitigating risks shall conform to the following basic action principles:

- a) Integrate the risk-opportunity vision into the Company's management, by defining the strategy and risk appetite and incorporating this variable into strategic and operating decisions.
- b) Segregate duties, at operating level, between risk-taking areas and areas responsible for the analysis, control and monitoring of such risks, ensuring an appropriate level of independence.
- c) Guarantee the proper use of risk-hedging instruments and the maintenance of records thereof as required by applicable legislation.
- d) Inform regulatory agencies and the principal external players, in a transparent fashion, regarding the risks to which the Group is exposed and the operation of the systems developed to monitor such risks, maintaining suitable channels to favour communication.
- e) Ensure appropriate compliance with the corporate governance rules established by the Company through its corporate governance system and the update and continuous improvement of that system within the framework of the international best practices as regards to transparency and good governance, and implement the monitoring and measurement thereof.
- f) Act at all times in compliance with the law and the Company's Corporate Governance System and, specifically, with due observance of the values and standards of conduct set forth in the Code of Ethics and the principles and best practices contained in the Corporate Fiscal Policy, under the principle of zero tolerance as regards the unlawful acts and fraud situations included in the *Prevention of Fraud and Crimes Policy*.

The *General Risk Control and Management Policy* and the basic principles underpinning it are implemented by means of a comprehensive risk control and management system, supported by the Group's Risk Committee and based upon an appropriate definition and allocation of duties and responsibilities at operating level and upon suitable procedures, methodologies and tools for the different stages and activities of the system, including the following:

- a) The establishment of a structure of policies, guidelines, and limits, as well as of the corresponding mechanisms for the approval and implementation thereof, which effectively contribute to risk management being performed in accordance with the Company's risk appetite.
- b) The ongoing identification of significant risks and threats in accordance with their possible impact on key management objectives and the annual accounts (including contingent liabilities and other off-balance risks).
- c) The analysis of such risks, in each corporate business or function and taking into account their combined effect on the Group as a whole.
- d) The measurement and control of risks, by following consistent procedures and homogeneous standards that are common to the Group as a whole.
- e) The analysis of risks associated with new investments, as an essential element of decision-making based upon risk/return.
- f) The maintenance of an internal control system to monitor compliance with policies, guidelines, and limits, by means of appropriate procedures and systems, including the contingency plans needed to mitigate the impact of the materialisation of risks.

- g) The periodic monitoring and control of risks that could have a significant impact on the income statement, in order to control the volatility of the Group's profit or loss for the year.
- h) The ongoing evaluation of the suitability and efficiency of applying the system and the best practices and recommendations as regard risks for their possible inclusion in the model.
- i) The audit by the Internal Audit Division of the comprehensive risk control and management system.

In addition, the General Risk Control and Management Policy is further developed and supplemented through the policies listed below which are also subject to approval by the Company's board of directors:

a) Corporate risk policies:

- Corporate credit risk policy.
- Corporate market risk policy.
- Operational Risk in Market Transactions Policy.
- Insurance Policy.
- Investment Policy.
- Financing and Financial Risk Policy.
- Treasury Share Policy.
- Risk Policy for Equity Interests in Listed Companies.
- Reputational Risk Framework Policy.
- Procurement Policy.
- Information Technology Policy.
- Cybersecurity Risk Policy.

b) Specific risk policies and limits for the various businesses of the Group:

- Risk policy for the Generation and Supply business of the IBERDROLA Group.
- Risk policy for the Renewables business of the IBERDROLA Group.
- Risk policy for the Networks business of the IBERDROLA Group.
- Risk Policy for the Real Estate business of the IBERDROLA Group.

The *General Risk Control and Management Policy*, as well as a *Summary of the Corporate Risk Policies* and a *Summary of the Specific Risk Policies* for the various Group businesses, are available on the corporate website (www.IBERDROLA.com).

In order to align the risk impact with the established risk appetite, the Executive Committee of the board of directors, acting at the proposal of the business or corporate divisions involved and upon a prior report from the Group's Risk Committee, annually reviews and approves specific guidelines regarding the Group's risk limits in the Corporate Risk Policies.

Subholding companies are responsible for adopting the Group's risk policies and specifying their application, approving the guidelines regarding specific risk limits, in accordance with the characteristics and unique features of the businesses in each country. They shall also implement, within their areas of activity, the control systems required for their compliance.

Listed subholding companies and those with significant minority interests, by virtue of their own special autonomy framework have their own risk policies approved by the competent bodies, aligned with those of IBERDROLA group.

The risk factors to which the Group is generally exposed are listed below:

- a) Corporate governance risks: the Company assumes the need to safeguard corporate interests and to maximise, on a sustained basis, the economic value of the Company and its long-term success, in accordance with the Group's corporate interest, culture and corporate vision, taking into consideration the legitimate public and private interests that converge in the conduct of all business activities, particularly those of the various stakeholders, communities and regions in which the Company and its employees act. A fundamental requirement for the foregoing is compliance with the Company's Corporate Governance System, made up of the *By-Laws, the Mission, Vision and Values of the IBERDROLA Group, the Code of Ethics, the Corporate Policies*, the corporate governance rules, and other internal functions and committees and compliance. Every rule has been approved by the competent decision-making bodies of the Company and is inspired by the good governance recommendations generally acknowledged in international markets.
- b) Market risks: defined as the exposure of the Group's results and equity to changes in market prices and variables, such as exchange rates, interest rates, electricity and commodity prices (gas, CO2 emission allowances, other fuel, other mechanisms to promote renewables, etc.), prices of financial assets and others.
- c) Credit risks: defined as the possibility of a counterparty failing to meet its contractual obligations, thus causing an economic or financial loss to the Group, including liquidity risks and replacement costs. Counterparties can be end customers, counterparties in financial or energy markets, partners, suppliers, or contractors.
- d) Business risks: defined as the uncertainty regarding the performance of key variables inherent in the business, such as the characteristics of demand, weather conditions, the strategies of different players.
- e) Political and regulatory risks: defined as those arising from regulatory changes made by the various regulators, such as changes in compensation for regulated activities or in the required conditions of supply, or environmental or tax regulations, including risks related to political changes that could affect legal certainty and the legal framework applicable to the Group's businesses in each jurisdiction, the nationalisation or expropriation of assets, the cancellation of operating licences and the early rescission of government contracts.

- f) Operational technological, environmental, corporate and legal risks: defined as those related to direct or indirect economic losses resulting from external events, inadequate internal procedures, technical failures, human error and/or fraud, including those associated with climate change, information technology and cybersecurity, and the risk of technological obsolescence.
- g) Reputational risks: the potential negative impact on the value of the Company resulting from conduct on the part of the Company that does not meet the expectations of the different stakeholders defined in the Stakeholder Relations Policy.

Owing to its universal and dynamic nature, the system allows for the consideration of new risks that may affect the Group as a result of changes in its operating environment or revise of objectives and strategies, as well as adjustments resulting from ongoing monitoring, verification, review and supervision activities.

The audit and risk supervision committee of the board of directors periodically monitors the trends in the Company's risks:

- It reviews the Group's quarterly risk reports, which include monitoring compliance with risk limits and indicators and updated key risk maps, submitted by the Group's director of corporate risks.
- It coordinates and reviews risk reports sent periodically, at least half-yearly, by the audit and compliance committees of the main subsidiaries of the Group, including the subholding companies of the main countries where the Group operates, which are used, together with the risk director's input, to prepare a risk report for the board of directors at least every half-year.

For further details, see section E "Risk management and control systems" of the Corporate Governance Report for 2018 and the Risks section included in the Integrated Report dated February 2019.

4.2. Credit risk

The IBERDROLA Group is exposed to credit risk arising from the possibility of counterparties (customers, suppliers, financial institutions, partners, etc.) failing to comply with contractual obligations. This exposure may arise with regard to unsettled amounts, the cost of replacing products that are not supplied, as well as, in the case of plants, that supply one customer, amounts on which depreciation is pending, for those plants.

Credit risk is managed and limited in accordance with the type of transaction and the credit worthiness of the counterparty. A specific corporate credit risk policy is in place which establishes criteria for acceptance, approval systems, authorisation levels, scoring tools, exposure measurement methodologies, etc.

With regard to credit risk on trade receivables for electricity and gas sales, the cost of defaults has remained moderate and stable at close to 1% of total turnover of this activity, despite the difficult economic environment in recent years.

4.3. Financial risk

4.3.1. Interest rate risk

The IBERDROLA Group is exposed to the risk of fluctuations in market interest rates affecting cash flows and the market value of debt in respect of items in the balance sheet (debt and derivatives). In order to adequately manage and limit this risk, the IBERDROLA Group determines the required proportion of fixed and variable debt annually and establishes the actions to be carried out throughout the year: new sources of financing (at a fixed, floating or indexed rate) and/or the use of interest rate derivatives.

The reference interest rates for floating rate borrowings are basically market rates: primarily Euribor, Libor-Pound Sterling, Libor-Dollar, and the CDI in the case of the Brazilian subsidiaries' debt.

Additionally, as of 31 December 2018 the IBERDROLA Group has arranged future funding derivatives for a notional amount of Euros 4,642,000 thousand, which help to mitigate the interest rate risk.

The Group's debt structure at 31 December 2018, after considering hedging derivatives, and sensitivity to an increase in interest rates are included in the note 4 to the consolidated annual accounts.

Bearing in mind the composition of the IBERDROLA Group's debt at the end of the financial year, between fixed and variable interest rates, and assuming it remains constant in the future, the impact on the income statement of a potential increase of 25 basis points (0.25%) in the reference rates referred to in the foregoing paragraph would be Euros 45 million (increased finance income).

4.3.2. Foreign currency risk

As the IBERDROLA Group's presentation currency is the Euro, fluctuations in the value of the currencies in which borrowings are arranged and transactions are carried out with respect to the Euro, mainly the Pound Sterling, the US Dollar and the Brazilian Real, may have an effect on the finance costs, profit and equity of the Group.

The following items could be affected by currency risk:

- Proceeds and payments for supplies, services or the acquisition of capital goods in currencies other than the local or functional currency.
- Income and expenses incurred by certain foreign subsidiaries indexed to currencies other than the local or functional currencies.
- Debt and finance cost denominated in currencies other than the local or functional currency.
- Profit or loss on consolidation of foreign subsidiaries.
- Consolidated net value of investments in foreign subsidiaries.
- Tax expense in Mexico owing to the functional currency (US Dollar) being different from the currency used to calculate corporate income tax (Mexican peso).

The IBERDROLA Group mitigates this risk by:

- Ensuring that all its economic flows are carried out in the functional currency of each Group company whenever possible and economically viable and efficient or using derivatives if not.
- Hedging the risk of transferring forecast earnings for the current year, insofar as possible, thereby limiting the ultimate impact on Group earnings
- Hedging the currency risk on corporate income tax in Mexico, insofar as possible, thereby limiting the overall impact on the earnings of Mexico and of the Group.
- Mitigating the impact on the consolidated net asset value of a hypothetical depreciation of currencies due to Group's investments in foreign subsidiaries, by maintaining an appropriate percentage of debt in foreign currency and by arranging derivatives.

The sensitivity of the consolidated profit and equity of the IBERDROLA Group to fluctuations in the US Dollar/Euro, Pound Sterling/Euro and Brazilian Real/Euro exchange rates is as presented in note 4 to the consolidated annual accounts. Detailed information on debt by currency can be seen in note 27 to the consolidated annual accounts.

In accordance with the breakdown by currency of the finance costs in 2018 and assuming it remains constant in the future, a 5% appreciation of the main currencies would have a negative impact on the income statement of Euros 2.7 million (increased consolidated finance income in euros).

4.3.3. Liquidity risk

Exposure to adverse situations in the debt or capital markets or in relation to the IBERDROLA Group's own economic-financial position may hinder or prevent the IBERDROLA Group from obtaining the financing required to properly carry on its business activities.

The IBERDROLA Group's liquidity policy is designed to ensure that it can meet its payment obligations without having to obtain financing under unfavourable terms. For this purpose, various management measures are used such as the arrangement of committed credit facilities for a sufficient amount, term and flexibility, diversification of the coverage of financing needs through access to different markets and geographical areas, and diversification of the maturities of the debt issued.

The combined balances of cash, liquid assets and available committed credit facilities are sufficient to meet the Group's forecast liquidity needs in a risk scenario for more than 18 months, without the need to source new financing.

The figures relating to changes in the Company's debt are included in notes 27 and 51 to the Consolidated annual accounts and additional information is also provided in Note 4 of the Consolidated annual accounts.

4.4. Country risk

All international activities of the IBERDROLA Group are exposed to a greater or lesser extent and depending on their characteristics, to the risks inherent to the country in which they are conducted:

- Imposition of monetary limitations and other restrictions on the movement of capital.
- Changes in the trade environment and administrative policies.

- Economic crises, political instability and social unrest affecting operations.
- Nationalisation or expropriation of assets.
- Exchange rate fluctuations.
- Cancellation of operating licences.
- Early termination of government contracts.
- Regulatory changes.

The results of our international subsidiaries, their market value and their contribution to the Group may be affected by such risks.

The IBERDROLA Group's main operations are concentrated in Spain, the United Kingdom, the United States, Brazil and Mexico, countries with low or moderate risk, whose credit ratings at 31 December 2018 are as follows:

Country	Moody's	S&P	Fitch
Spain	Baa1	A-	A-
United Kingdom	Aa2	AA	AA
United States	Aaa	AA+	AAA
Brazil	Ba2	BB-	BB-
Mexico	A3	BBB+	BBB+

Presence in countries other than those mentioned above is not significant at Group level from an economic point of view.

Note 5.c in these consolidated annual accounts include information regarding the potential impact of Brexit on IBERDROLA Group.

4.5. Activity risks

The Group has presence in the regulated businesses of electricity transmission and distribution sector in Spain, the United Kingdom, the United States (through Avangrid) and Brazil (through Neenergia). In the United States, the Group also has presence in the natural gas distribution sector.

IBERDROLA operates in the renewables industry sector carried out in Spain, the United States (through Avangrid), the United Kingdom, Mexico and Brazil (through Neenergia) and other European countries.

Last, IBERDROLA operates in the thermal generation sector in Spain, Mexico and Brazil (through Neenergia) and electricity and gas retail in Spain, the United Kingdom and to a lesser degree in Brazil (through Neenergia) and other European countries.

The activities of the different businesses conducted by the IBERDROLA Group are exposed to various risks including market, credit, operational, business, regulatory and reputational risks arising from uncertainty in the main variables by which they are affected. Section 4.6 addresses the operational risks associated to the Group's three main businesses.

4.5.1. Regulatory and political risks

Regulated and liberalised businesses in the IBERDROLA Group are subject to laws and regulations concerning tariffs and other regulatory aspects of their activities in each of the countries in which they operate. The introduction of new laws and regulations or amendments to the existing ones may have an adverse effect on our operations, annual results and the economic value of our businesses.

The following sections summarise the regulatory frameworks in force in the main markets where the Group operates, as well as the array of new regulatory measures approved in 2019 or expected to be developed in 2019.

4.5.2. Networks business risk

The regulations of each country in which the IBERDROLA Group's networks businesses operate establish regularly revised frameworks to guarantee reasonable and predictable returns for these businesses. These frameworks include incentives and penalties for efficiency, service quality and, where applicable, for default management, which have a minor, immaterial impact overall. Any significant structural changes to the aforementioned regulations may represent a risk for these businesses.

In general, the profitability of the IBERDROLA Group's networks businesses is not exposed to demand risk, except for the Brazilian subsidiaries.

The IBERDROLA Group's networks businesses in Spain and in the United Kingdom do not sell energy and are not exposed to any market risks associated with energy prices.

The Group's networks businesses in Brazil and certain networks subsidiaries of Avangrid in the USA sell energy to regulated customers at previously determined tariffs. Assuming prudent procurement management in line with each regulator's specifications, the regulatory frameworks in both countries guarantee sums will be collected in subsequent tariff readjustment reviews in the event of deviations in purchase prices with respect to those previously stipulated in the tariff.

Given the above, in the case of extraordinary events (extreme drought in Brazil, catastrophic storms in the USA, etc.), occasional temporary imbalances between payments and collections may arise with an impact on the cash flows of some of these businesses and potentially on profits recognised under IFRS.

– **Networks in Spain**

The present regulatory model is in accordance with Electricity Industry Law 24/2013 of 26 December, which stipulates six-year regulatory periods and profitability for the distribution activity calculated as the yield on government bonds plus 200 basis points.

Royal Decree 1048/2013 of 27 December establishing the methodology to calculate remuneration for electricity distribution activities defines a methodology in accordance with standard unit costs of investment and operation. Profitability was set at 6.5% for the first regulatory period, which runs until the end of 2019. Fluctuation in the financial remuneration rate used between two consecutive years may not exceed 50 basis points in absolute value.

This methodology is currently under revision:

- During November 2018 the CNMC, Spain's competition authority, published a proposed new methodology in accordance with WACC for calculating the rate of financial remuneration of transmission and distribution activities applicable to the following regulatory period (2020-2025), with a resulting rate of 5.58% at the date of its publication.
- On 11 January 2019 the Spanish government approved the new Royal Decree-law 1/2019 on urgent measures to adapt the powers of the CNMC to the requirements deriving from EU law and thus transferring to the CNMC the powers and responsibilities to determine the remuneration of the electricity and gas transmission and distribution networks to apply from the next regulatory period (2020).

- **United Kingdom Networks**

The group operates in the United Kingdom through its subsidiary Scottish Power Ltd, which manages the following licences:

- SP Distribution PLC (SPD)
- SP Manweb PLC (SPM)
- SP Transmission PLC (SPT)

The framework of remuneration for the electricity transmission and distribution activities in the UK is in accordance with a price control model using a recognised cost of capital (WACC), depreciation of assets and operating and maintenance costs plus an incentive which is obtained if management is better than the regulatory standard, and which the companies retain (in part) in the following tariff revision.

The current regulatory model for SPD and SPM is in accordance with the RIIO ED1 framework, and on the RIIO T1 framework in the case of SPT. The latest tariff review for electricity distributors (RIIO ED1), including SPD and SPM, is valid from April 2015 to April 2023. The SPT review (RIIO T1) is valid from April 2013 to April 2021. Recognised ROE after tax (in real terms) is 6% for SPD and SPM, whereas for SPT it is 7%.

The regulator (OFGEM) also establishes incentives/penalties for safety, environmental impact, consumer satisfaction, social obligations, connections and quality, which could have an effect on the income statement.

In July 2018 the OFGEM published its preliminary report included some of the hypothesis proposed for the next regulatory revision. Companies are expected to present their investment plans in the second half of 2019 and the OFGEM is expected to publish its conclusions in 2020.

- **United States Networks**

The IBERDROLA Group operates in the US through its listed subsidiary Avangrid, which in turn has the following subsidiary networks companies:

- New York State Electric & Gas (NYSEG), New York, with a 3-year rate case valid from 30 April 2016 (base ROE 9% for distribution Electricity).

- Rochester Gas and Electric (RG&E), New York, with a 3-year rate case valid from 30 April 2016 (base ROE 9% for distribution Electricity).
- Central Maine Power (CMP), Connecticut, whose annual rates are in force since 1 July 2014. They may extended for its electricity distribution businesses (base ROE 9.45%) and transmission business (base ROE 10.57%).

Last October, CMP, following the instructions provided by Maine's utilities regulatory commission, started a rate case review.

- United Illuminating (UI), Connecticut, with rates in force since 1 January 2017 for its electricity distribution business (base ROE 9.1%) and transmission business (base ROE 10.57%).
- As well as the following natural gas distribution companies: Maine Natural Gas Corporation (MNG), Connecticut Natural Gas (CNG), Southern Connecticut Gas (SCG) and Berkshire Gas (BG).

Companies that carry out regulated business in the US are exposed to risks associated with the regulations of a number of federal regulatory bodies (FERC, CFTC, DEC) and the different state commissions, responsible for defining the regulatory frameworks of the companies regulated (tariffs and other conditions).

The distributors' tariff plans have been designed to reduce the level of risk to which the business is exposed through mechanisms for deferral, reconciliation and provisions for costs. Regulated distributors pass on the costs of gas and electricity to end customers, thereby mitigating any impacts of fluctuations in demand.

– **Brazilian Networks:**

The IBERDROLA Group operates in Brazil through its listed subsidiary Neoenergía, which in turn has the following subsidiary networks companies:

- Elektro Redes, S.A., operating in the states of Sao Paulo and Mato Grosso do Sul. Rates in force until August 2019 and WACC of 8.09%;
- Companhia de Eletricidade do Estado do Bahia (Coelba), operating in the state of Bahía. rates in force until April 2023 and WACC of 8.09%;
- Celpe Energetica de Pernambuco S.A. (Celpe), operating in the state of Pernambuco. rates in force until April 2021 and WACC of 8.09%; rates in force until April 2021 and WACC of 8.09%;
- Companhia Energética do Rio Grande do Norte (Cosern), operating in the state of Rio Grande do Norte. rates in force until April 2023 and WACC of 8.09%;
- Several transmission assets with their specific regulation.

The Brazilian regulatory framework is in accordance with a price cap system that is revised every four or five years, depending on each company's concession contract and is updated annually by the regulator. Coelba and Cosern have a five-year term and Celpe and Elektro have a four-year term.

Brazilian legislation applicable to regulated electricity distribution business establishes two types of costs: i) "Plot A", which includes the costs of energy, transmission and other obligations and regulatory charges, which can be recovered through tariffs ("pass through") as part of the conditions and limits imposed by ANEEL, and ii) "Plot B", which includes remuneration for investment and the costs of operation and maintenance (calculated using a reference model that compares all distribution companies in the country and determines efficient cost levels, which generates either an incentive or a risk for the investor).

ANEEL also allows for other smaller incentives to minimise default and impairment of quality and customer satisfaction, which could affect the income statement.

Pursuant to current legislation, electricity distribution companies transfer the cost of supplying electricity to the end customer through the regulated tariff, provided the energy contracted is between 100% and 105% of the demand required.

4.5.3. Renewables business

Since 2018 all Group's hydroelectric generation activity has been included in the Renewables business.

The regulations of each country in which the Group operates establish regulatory frameworks aimed at promoting the development of renewable energies in accordance with formulas which may include feed-in tariffs, green certificates, tax deductions or regulated tariffs, which allow investors to obtain a sufficient and reasonable return. Any significant structural changes to the aforementioned regulations could represent a risk for that business.

In addition to the aforementioned regulatory risk, the Group's renewable energy businesses may be exposed to a greater or lesser extent, to Hydraulic wind resource risk and market risk:

- In the medium to long term, years with lower than average water and/or wind resources are offset by years with above-average overall resources.
- The risk of water resources in a given year basically affects the Renewables business in Spain, and to a lesser extent Brazil.
- The risk of wind resources in any given year affects the Renewable Energy Businesses of all countries in which the Group operates. The Group considers that the wind resource risk is mitigated by the large number of wind farms available and their geographical diversification.
- Management of market risk of the Renewables Businesses in Spain, the UK, Brazil and Mexico is transferred to the Generation and Retail Businesses of those countries so that it can be integrated into a single risk position. Management of market risk of the Renewables Business in the US is integrated within the business itself.

- **Renewables Spain**

The Group currently has an installed capacity of renewable energy in Spain of: 5,570 MW through wind power, 9,715 MW through hydroelectric plants and 303 through mini hydroelectric plants. Additional, it is worth mentioning that the 391 MW photovoltaic plant Nuñez de Balboa in Cáceres is under development and that in the north of Portugal the Alto Tamega hydraulic project, with a total capacity of 1,158 MW is being built and that its estimated commissioning date is 2021-2023 (depending on the stage).

Subsequent to the approval of the new regulatory framework (Royal Decree-Law 9/2013 of 12 July 2013, Law 24/2013 of 26 December 2013, Royal Decree 413/2014 of 6 June 2014, Ministerial Order IET/1045/2014 of 16 June 2014 and Ministerial Order ETU/130/2017 of 17 February 2017), all renewable energy generated since 2004 is remunerated at market price plus a feed-in tariff per MW. This guarantees a reasonable regulated return in accordance with a recognised standard investment.

- The reasonable rate of return is calculated on the basis of the yield on 10-year government bonds plus a differential, initially fixed at 300 basic points (equivalent to 7.4% for the initial period of 6 years that ends at the end of 2019);
- At the middle of each 3-year regulatory period different parameters are revised, among them price estimates, and the asset value pending of recovery in accordance with prices observed in the previous 3 years is updated following certain tranches:
- The facilities that began operating in 2003 or before have a null premium, and therefore are fully exposed to market risks.
- On 30 October last the CNMC published a proposed methodology for calculating the rate of financial remuneration for energy generated from renewable sources, co-generation and waste for the second regulatory period 2020-2025, in accordance with the commonly accepted WACC methodology, the resulting value with the information available at that time being 7.09%.
- At the end of December 2018 the Ministry for Ecological Transition published on its website a proposed draft bill which among other things proposed that for renewable installations prior to Royal Decree law 9/2013 the current remuneration of (7.4%) be maintained for the next two six-year regulatory periods.

Large hydroelectric plants generation is not subject to the above mentioned regulation and is exposed to market risk. The lesser or greater availability of hydro resources has an impact on the marginal hour prices of the Spanish electricity system.

Despite having a large water storage capacity Spain, IBERDROLA Group's annual results depend significantly on the rainfall contributions. The changes in output from a dry year to a wet year with respect to the average value can be up to -4,000 GWh in a dry year and +5,000 GWh respectively in Spain, and the variability would be between an estimated Euros -170 and Euros +210 million. In the mid and long-term dry years are offset by wet years.

Lastly, we should highlight Royal Decree law 15/2018, ratified in October by the Spanish Parliament, which includes a set of measures, prominent among which is, in addition to the promotion of renewable energy and greater protection for vulnerable customers, the temporary suspension of the 7% tax on generation. The package also included a reference to a possible future revision of the wholesale generation market.

– **Renewables United Kingdom**

The Group currently has an installed capacity of renewable energy in the UK of 1,906 MW in onshore wind farms and 194 MW in offshore wind farms, operational under current “Renewables Obligation” legislation. Under such legislation, revenues are partially exposed to the risk of the market price for electricity in the UK, as the revenues obtained reflect the price of the energy produced and the sale of Renewables Obligation Certificates (ROCs).

UK regulations impose minimum ROC requirements per MWh sold on electricity suppliers, 10% more than the system envisages producing, and determine the price at which the rest must buy, which in practice amounts to a floor price equal to the price of the ROCs.

Renewable technology plants implemented from 1 April 2017 (those implemented as of 12 May 2016 in the case of onshore wind farms) may avail of the new "Contract for Difference" (CfD) remuneration scheme, which eliminates market risk for 15 years. Such is the case of the East Anglia 1,714 MW offshore plant, currently under construction. Its commissioning date is expected throughout 2019 and 2020 (depending on the stage).

The fixed prices for these projects are established under CfD on a project-by-project basis through public tenders. The counterparty guaranteeing this price, "The Low Carbon Contracts Company", finances its potential payments by imposing a levy on suppliers in accordance with their market share, and therefore credit risk vis-à-vis the counterparty is practically zero.

Additionally, the Group has a 15 MW onshore wind farm in the Republic of Ireland selling at market prices.

– **Renewables United States**

The IBERDROLA Group conducts its renewables business in the US through its listed company Avangrid, which has an installed capacity of 6,466 MW in onshore wind farms, and 129 MW in operational photovoltaic plants and 115 MW in hydroelectric plants.

Approximately 70% of the energy produced is sold on fixed-price long-term contracts with third parties. If hedges of some type are considered, this percentage rises up to 80%. The remaining 20% of the energy produced is sold to the market in more or less short terms.

With electricity prices around USD 30/MWh, a 5% change in prices could give rise to an impact of Euros ±6 million on operating results.

Avangrid is building 988 MW of wind power and is also developing the Vineyard offshore wind farm in the coasts of Massachusetts, in the United States, under a 50% joint venture with a financial partner. The facility will consist of 800 MW and it is expected to be brought into operation in 2021. MHI Vestas Offshore Wind has been selected as preferential supplier for the turbines.

– **Renewables Mexico**

In Mexico the business currently has an installed capacity of 409 MW in wind farms and 270 MW in solar plants, with two sale schemes: a) fixed-price sale to the CFE under a long-term contract and b) sale to third parties with a discount on the official price published by the CFE. In addition, facilities for 326 MW of wind power and is developing several solar projects.

Mexican legislation requires electricity retailers in the free market to present Certificates of Clean Energy (CEL in the Spanish abbreviation) at the end of each year for a percentage which increases over time of their energy sales for the year. The Group's renewable production for the market in Mexico gives rise to these certificates.

– **Renewables Brazil**

In Brazil the business currently has an installed capacity of 516 MW in onshore wind farms, all operating under long-term contracts (PPAs) with a fixed price for the country's distributors. Surpluses and shortfalls in the production contracted with the distributors are settled over periods of four years, and surpluses must be offered and shortfalls purchased at market prices. In addition, 472 MW of wind power are being under development.

Furthermore, in Brazil the Group has 2,419 MW in hydroelectric plants, of which 60% is sold to electricity distribution companies under long term contracts (PPA).

In order to incentivise the execution of new renewable energy projects, Brazilian legislation establishes that free market energy retailers must supply those of their free market customers that consume less than 3 MW entirely with energy from renewable sources ("energía incentivada").

– **Renewables in other countries**

Germany: Wiking offshore wind farm of 350 MW operating since the end of 2017. Pursuant to German regulations, Wiking plant will have a fixed price for the energy it produces over the first 15 years of operation on a CfD contract, similar to the aforementioned setup for East Anglia 1.

Other European countries: the IBERDROLA Group currently has an onshore installed capacity of 605 MW in wind farms and 6 MW in photovoltaic facilities. Regulations in these countries make a distinction between two energy sale schemes: sales at the tariff (Portugal, Greece, Cyprus and Hungary), or sales at market price (Romania).

The Group has been selected, and is already taking part in them, for several significant offshore wind farm projects in Europe, which are expected to be brought into operation throughout 2023-2024.

- Germany: Wiking Süd and Baltic Eagle projects, with a combined capacity of 486 MW.
- France: Saint Brieuc project, with an expected total capacity of 496 MR, in which the Group has a 70% stake in the promoting company.

4.5.4. Generation and Supply businesses

The IBERDROLA Group has a wide array of thermal generation plants in Spain and Mexico, a single thermal plant in Brazil and another in the US. A significant number of the plants in Mexico and the Brazilian plant have long-term PPAs (power purchase agreements) with the CFE (Mexican state electricity company) and the electricity distributors Coelba and Cosern in Brazil respectively.

Management of the risk of the energy produced for the market by the Group's thermal and renewable plants and surplus production of plants with PPAs is transferred to the Energy Management unit of each country where the Group operates, taking as a reference the wholesale market prices.

The various Energy Management units supply electricity and gas to the Retail Business at wholesale market prices (hourly or forward) in accordance with the usual practices of each of the countries in which the Group operates, and manage the sale and purchase of surpluses and shortfalls.

The Retail Businesses sell energy to end customers at fixed or indexed prices, together with other services, at such terms as may be customary in the retail markets of the countries in which they operate.

Main risks:

- Market prices for electricity, both wholesale and retail, are closely correlated with prices of fuel (oil and gas) and of the emission allowances needed to produce electricity.
- Spot prices in the wholesale electricity market exhibit marked volatility as a result of: 1) the volatility of spot prices of fuels and emission allowances, 2) fluctuating demand, 3) availability of wind or water and 4) possible operational problems in networks or power plants.
- Forward electricity prices are further influenced by projections of new generation plants coming on stream and of increases or decreases in future reserve capacity.
- In general terms: 1) margins of the generation business (thermal and renewable to market) are subject to the risk of the differential between the wholesale spot price and the cost of production, and 2) margins of the retail business are subject to i) the risk of the price differential between the wholesale spot market and forward retail prices, ii) the degree of competition among retailers and iii) the risk of possible regulatory intervention in the form of regulated tariffs, taxes or other obligations.

The offsetting of risk positions between the generation business (thermal and renewable) and the retail business largely reduces the Group's market risk. The sensitivities shown below cover the exposures of both activities.

- **Generation and Supply businesses in Spain**

In Spain the Group has 10,099 MW of installed capacity in conventional generation, of which 3,177 MW nuclear, 5,695 MW combined cycle, 353 MW co-generation and 874 MW coal.

Sales of the free-market retail electricity business in Spain amounted to nearly 48 TWh in 2018. Additionally, the Last Resort Tariff retail subsidiary supplied just over 7 TWh in 2018.

We would highlight the various measures contemplated by Royal Decree law 15/2018, ratified by the Spanish Parliament in October, as noted in section 4.5.2.

Commodity price risk

Given current market conditions, the production price at coal-fired power plants defines, to a large extent, the price of electricity in Spain since coal is the marginal technology necessary to cover electricity demand. Consequently, the price of coal conditions revenues from the other less expensive technologies which are used to cover demand. With coal prices around USD 89 per tonne, a 5% change in prices could give rise to an impact of Euros ± 9 million on operating results.

The price of CO₂ influences the cost of production at coal-fired thermal power plants. With coal prices around Euros 23 per tonne, a 5% change in prices could give rise to an impact of more or less Euros ± 6 million on operating results.

Payment of the majority of gas supplied in Spain is indexed to the price of oil by means of complex formulas. The IBERDROLA Group has another type of fixed-price supply agreement in place with prices not indexed to the market price of oil. These agreements are used for electricity generation, end customer consumption and for sales to other intermediaries. Inasmuch as the electricity generation margin is covered by the contracting schemes vis-à-vis the system operator, sales to end customers and third parties only entail residual risk. The risk assumed is minimal and depends on the correlation between the price of oil and European and international gas prices. According to the expected performance of said indexes, the maximum impact on the operating result would be approximately Euros ± 5 million.

Demand risk

Given the current market condition, where price is primarily determined by the generation cost at coal-fired plants, which make up around 15% of the generation mix, demand fluctuations are not deemed to impact on marginal technology in the market. The impact on the market price of a 1% change in demand is therefore minimal, amounting to approximately Euros 0.25 per MWh.

A moderate drop in demand in Spain does not affect the scheduled output of the Group's nuclear, hydroelectric and wind power plants, since there is a mandatory electricity market in Spain guaranteeing the efficient dispatch of output from all technologies.

Nevertheless, there could be an impact if a drop in electricity demand entails an equivalent reduction in the Group's supply sales and consequent narrowing of the margin. This is mitigated to some extent by increasing sales of own energy on the wholesale market. This same effect of loss of margin on retail sales is seen in demand for gas.

Taking both effects into account, it is estimated that a 1% fluctuation in demand would have an impact of around Euros ± 11.5 million overall.

Operational risk and nuclear plants risk

From the perspective of its impact on business results, the main risk arises from unscheduled outages at nuclear power plants (partially covered by a loss of profits insurance policy over and above an excess).

Nuclear power plants are also exposed to specific risks derived from the operation, storage and manipulation of radioactive materials.

- Constitutional Spanish law caps the liability of nuclear power plant operators in the event of a nuclear accident at Euros 700 million. This liability for a nuclear accident must be compulsorily insured by the operator of Spanish nuclear power plants. The IBERDROLA Group meets this obligation by taking out Nuclear Civil Liability insurance policies for each plant. However, Law 12/2011, of 27 May 2011, concerning civil liability for nuclear damage or damage caused by radioactive materials, will increase the operator's liability ceiling and the consequent ceiling on mandatory insurance to Euros 1,200 million for nuclear power plants. The law will enter into force when all signatories of the Paris and Brussels Agreements ratify the 2004 Amendment Protocols, as established in these agreements.
- Last, there is a debate currently going in the Spanish society regarding when nuclear plants should be closed.

– **Liberalised and Supply businesses in MEXICO**

The Group has 6,446 MW in combined cycles and 346 MW in cogeneration plants in Mexico. Additionally, 2,572 MW of combined cycles are being built.

Approval of the Energy Regulatory Commission's Agreement A/058/2017, which defines the methodology to determine the calculation and adjustment of the final tariff and the operations tariffs that will apply to the subsidiary production company CFE Suministrador de Servicios Básicos from 1 December 2017 to 31 December 2018.

Commodity price risk

Electricity generation at IBERDROLA Generación México is gas-intensive. Gas prices are therefore an essential component of this risk. In 2018, approximately 80% of the electricity generated in Mexico was sold under long-term sales agreements (to CFE and, to a lesser extent, other major industrial customers), whereby the risk associated with the price of gas used in generating this electricity is passed on.

The remaining energy is sold to customers (either under self-provision or the free market) at a price linked to the official tariffs published by CFE. The Group's competitiveness in this case relies on its obtaining a better input price for gas than the cost used to define the CFE's basic supply tariff. In the event of an adverse scenario (high cost of gas relative to other energy commodities), the impact would be below Euros 11.5 million in the 95 percentile.

Demand risk

The structure of the agreements IBERDROLA has entered into in Mexico shields business results from electricity demand fluctuations. Revenues come mainly from plant availability and only the sales indexed to the official Mexican tariff are exposed to a certain extent to fluctuations in demand. Nonetheless, most of the plants have committed sales exceeding their production capacity and therefore a shift in demand would not have an impact on their operations or results as the electricity generated would be sold to another customer. Changes in electricity demand in Mexico therefore have no effect on results.

Operational risk

From the perspective of its impact on business results, the main risk arises from the combined cycle power plants outages (partially covered by a loss of profits insurance policy over and above an excess). In the case of the contracts with the CFE, non-availability leads to a penalty, whereas the contracts with private sector customers in Mexico would oblige the Group to acquire the missing energy in the market.

– **Generation and Supply businesses in UK**

Sales of the IBERDROLA Group's retail business in 2018 amounted to 20 TWh of electricity and 29 TWh of gas.

In November 2018, following the entry into force of the Domestic Gas and Electricity Tariff Act 2018, OFGEM published the new maximum prices that suppliers may charge to end customers under the "Standard Variable Tariff" during the first quarter of 2019. From 1 April 2019 this figure will be updated every six months. The desirability of maintaining this system of price caps will be reviewed in 2020; it may be extended to 2023.

As noted previously, last October we announced the sale of the generation business in the UK.

– **Generation and Supply businesses in Brazil**

The Generation Business had a 533 MW combined cycle plant in Brazil at the end of 2018, with long-term PPAs with Coelba and Cosern.

Renewable energy with no PPA and surpluses from thermal generation are sold through the Group's retail sales company in the free market. With market prices in the area of 175 R\$/MWh, a price fluctuation of 30% would affect the results by some Euros 1 million.

— **Gas supply operations**

The IBERDROLA Group maintains an adequate balance in the global mix, both in terms of the number of supplier countries and the type of supply (gas via pipelines or LNG).

In the case of Spain, gas supply is guaranteed through long-term agreements. This mix of agreements comprises 23% at a fixed price while the remainder is indexed to the prices of various fuels on international markets.

Gas supply in Mexico is either secured through i) long-term agreements with PEMEX and CFE at a price indexed to international natural gas prices in the US, or ii) is contracted in the United States, and therefore at a price that depends on the market price of gas in that country.

– **Unhedged energy transactions (discretionary trading)**

Discretionary trading of electricity, gas, emissions allowances and other fuels and associated products performed by some of the Group's businesses is residual and the overall risk thereof is mitigated using individual stop-loss limits, the aggregate sum of which may never exceed 2% of consolidated net profit forecast for the period, pursuant to the market risk policy approved by IBERDROLA, S.A.'s board of directors.

IBERDROLA has reduced discretionary trading in recent years in line with the widespread move away from market speculation. At the end of December 2018, the notional value of derivatives used in speculative trading (calculated in accordance with the criteria set forth in the European Market Infrastructure Regulation (EMIR)) was Euros 63 million for commodity derivatives and Euros 8 million for equity derivatives. In both cases, these values are much lower than the Euros 3,000 million and Euros 1,000 million thresholds set for non-financial companies in the European regulation (EMIR).

4.6 Other operational risks

Any of the IBERDROLA Group's activities, may give rise to direct or indirect losses as a result of inadequate internal procedures, technical failures, human error or external factors.

The IBERDROLA Group is exposed to the following operational risks, inter alia:

- Risk of malfunctions, explosions, fire, toxic spillages or polluting emissions in gas and electricity distribution networks and in both traditional and renewable generation plants.
- Force majeure

- Risk of sabotage and/or terrorism.
- Cybersecurity risks
- Operational risk of operations in treasury and energy markets.

Any of these risks could cause damage or destruction to the IBERDROLA Group's facilities, as well as injuries to third parties or damage to the environment, along with the ensuing lawsuits, especially in the event of power outages caused by accidents at our distribution networks and possible penalties imposed by the authorities.

Although many of these risks are unpredictable, the IBERDROLA Group mitigates them by making the necessary investments, implementing operation and maintenance procedures and programmes (supported by quality control systems), planning appropriate employee training, and taking out the required insurance to cover both material damage and civil liability.

In relation to insurance cover, IBERDROLA has international insurance programmes to cover equity (insurance for material damage, machinery breakdowns, loss of profits, damage due to natural disasters and risks arising from construction work) and third-party liabilities (general public liability, liability for environmental risks, professional public liability, etc.).

However, this insurance does not completely eliminate operational risk, since it is not always possible or in the Group's economic interest to pass all such risk on to insurance companies. In addition, cover is always subject to certain limitations and/or excesses.

- **Operational risk of market transactions**

In addition, market trading conducted by the Group's various energy trading desks and treasury dealers is also exposed to operational risk.

This risk is mitigated by following the operational risk policy when trading on the market in accordance with a robust risk control culture, an appropriate segregation of duties, the publication of clear processes and policies and availability of secure and flexible information systems. This policy sets specific thresholds and guidelines applicable to all trades performed in accordance with the principle of proportionality.

- **Cybersecurity risks**

The IBERDROLA Group companies may be affected by threats and vulnerabilities in connection with information, control systems or information and communications systems used by the Group, or by any consequences of unauthorised access to or the use, disclosure, degradation, interruption, modification or destruction of information or information systems, including the consequences of acts of terrorism.

These risks are managed in accordance with the basic principles of the lays down the necessary measures to promote secure usage of information and communications systems and other cyber-assets, bolstering detection, prevention, defence and response capacities with respect to counter cyberattacks.

The IBERDROLA Group currently has specific insurance protection against cyber risks under the terms allowed by the insurance market, and which will be regularly reviewed in view of the rapid evolution and extensive variety of cyber risks.

4.7 Climate change risks

IBERDROLA has a Policy against climate change (available from www.iberdrola.com) and is clearly committed to the investor community's growing interest in the risks of climate change, which is why we are working to implement the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) initiative of the Financial Stability Board.

Climate change compromises several long-term risks which, to a greater or lesser extent are not new to the sector. Risks may be grouped in the following categories:

- Physical risks due to potential material impact on facilities due to the effects resulting from climate change (raise in temperatures, rise of sea level, variations in rainfall, increase both in frequency and intensity of extreme meteorological phenomena, etc.).
- Transition risks, linked to risks arising from global decarbonisation, such as regulatory, market price, technological, reputational, and demand changes, penalties and variations in demand, inter alia).
- Other risks, i.e. Credit impairment of counterparties (suppliers, banks, etc.), social phenomena (humanitarian crises, impact on crops and fishing, refugee crises, epidemics, etc.) and larger competition for financial resources.

It is worth mentioning that the impact of climate change, despite being perceivable already in the short-term (i.e. Higher intensity and frequency of climate events in certain geographical areas), are progressive and act over relatively long periods of time. This mainly implies that it will be the Group's future assets and not current assets the ones more severely impacted, since assets are progressively renewed when they reach the end of their useful life. The design and specification of new equipment will bear in mind more severe climate conditions and technological improvements to come will allow obtaining more financial value from projects.

Regulated business

Given the geographical spread of our networks assets in Spain, the United Kingdom, the United States and Brazil, and in accordance with already existing studies, the potential increase in sea level in coast areas will have a reduced impact on the regulatory conditions of our Group's assets.

Increases in temperature and greater frequency of extreme weather events will imply a very moderate gradual increase in O&M costs (associated with various phenomena such as bigger technical losses and reduced useful life of assets) and in annual capital expenditure, although in perfectly manageable amounts given the multi-annual tariff revisions of these regulated businesses. Additionally, the investment and response plans already in force, accumulated experience and the design of networks (meshed) would act as mitigating factors.

In terms of risks of transition we would highlight that of large-scale development of distributed generation, the impact of which would be partly offset by the growing electrification of the economy (electric vehicles for example) and investment in smart grids.

Renewables Business

The main risk is potential negative future performance of hydraulic and wind resources, the key elements having a financial impact on this activity at present. Added to the uncertainty associated with long-term global climate projections is the need to specify the impact on the geographical regions where our generating assets are located, whether hydroelectric or wind-based, the latter to a lesser extent since they are more widely spread. Nowadays there are no conclusive reports by third parties enabling reasonable predictions on the potential positive or negative variation of said resources either at global or regional level.

In the case of hydraulic resources, a potential decrease in annual rainfall average could lead to a negative impact on the output of hydraulic plants, especially visible in flow plants. Additionally, climate change could affect seasonal rainfall.

- In Spain, for illustrative purposes, a drop of 5% in production would have an estimated mid-term impact on gross margin (net of taxes and rights) of approximately Euros 20 million.
- In Spain, for example, a drop of 5% in production would have an estimated impact for the Group of Euros 10 million (as a result of its stake in Neenergia).

In terms of transition risks, potential cuts to remuneration to renewable energies and a drop in wholesale marginal market prices due to a higher renewable production should be noted. To face this risks, potential technology improvements which would predictably improve the performance of facilities in the future, the inclusion of climate change risks in the assessment of new investments and alternative ways to market sale (such as PPAs or tariff agreements) should be highlighted.

Generation and Supply businesses

The long-term impact of climate change on the thermal generation business is not expected to be material, since the Group's assets in this area will be substantially reduced in the next few decades as they reach the end of their useful life, and will essentially be concentrated in Mexico.

The impact on the pure retail business is considered minor, since any possible negative impacts deriving from efficiency measures and changes in temperature could be offset by the increased growth that the electrification of the economy is expected to produce.

By way of conclusion, and in accordance with the forecast effects alluded to and the mitigating factors to hand, we estimate that the physical risks of climate change will not have a disastrous or lasting impact on the Group's consolidated figures, the Group being resilient overall, and in any case the opportunities deriving from the decarbonisation of the global economy (growth in renewables, investment in integrating smart grids, electrification of transport, etc.) outweigh the risks. In terms of transitional risks, the Group's current positioning, as a result of its focus as an investor on energy from renewable sources and networks, places it in a position of leadership to face these risks.

Apart from this we should highlight the fact that the Group continues to make progress with in-depth climate analysis with a view to improving its forecasting and establishing the most appropriate measures in order to adapt.

For further information on this risk, please refer to the Integrated Report of February 2019, as well as the "Climate Change Risk Management" section and the TCFD of the Sustainability Report for 2018.

4.8 Legal risks

The IBERDROLA Group companies are part of a certain in-court and out-of-court disputes within the ordinary course of their activities, the final result of which, in general, is uncertain. An adverse result, or an out-of-court resolution thereof or other proceedings in the future could have a material adverse effect on our business, financial situation, operating results and cash flows. However, the Group's legal advisers consider that the outcome of the aforementioned disputes will not have a significant effect.

Notes 5.b. and 44 of the consolidated annual accounts contains a more detailed description of the most significant matters.

4.9. Risks materialised during the year

For further details, see the section E “Control systems and risk management” of the Corporate Governance Report 2018.

5. SIGNIFICANT SUBSEQUENT EVENTS TO YEAR END

Events after the reporting period are described in note 51 to the annual accounts.

6. RESEARCH AND DEVELOPMENT ACTIVITIES

IBERDROLA is now a leading multinational group which has become the utility of the future thanks to its innovative strategy, which encompasses all its business units and areas of activity. Through its constant commitment to innovation, IBERDROLA ranks as the most innovative utility in Spain and the third in Europe in the European Commission's classification.

In 2018, IBERDROLA spent more than Euros 266 million on R&D&i activities, 8% more than in the previous year. These resources were basically directed at our business areas: more renewables, more structured smart grids, and more solutions for customers and digital transformation. Plus, continuing the digital transformation, applying more intelligence to it, has been crucial.

Looking ahead, new technologies, innovation and people will be the pillars on which we will build our energy model:

- **Disruptive technologies** that are increasingly efficient, sustainable and respectful of the environment, enabling the functioning of facilities and processes to be optimised.
- **Digitisation and automation**: The IBERDROLA Group plans of investing Euros 4,800 million in digital transformation between 2018 and 2022 and will focus its investment efforts in improving operation and performance of assets and in increasing the availability of generation plants, thanks to on new technologies such as blockchain, big data, the Internet of Things, virtual reality, artificial intelligence, etc. at all levels of the company.

- **Innovation with start-ups, entrepreneurs and suppliers** with the aim of developing new disruptive business models, promoting the exchange of know-how and exerting a pull effect on their collaborators. Among these initiatives, the International startup programme stands out.
- **Culture of innovation and talent:** IBERDROLA promotes a culture of innovation by means of knowledge transfer, attracting talent and promoting the entrepreneurial spirit: Within the University Programme, IBERDROLA collaborates with five first-class universities: the University of Salamanca, Universidad Pontificia de Comillas, Massachusetts Institute of Technology (MIT), Instituto Tecnológico de Monterrey and the University of Strathclyde. Various initiatives are developed with them: chairs, R&D projects, training of students, in-house training and young entrepreneurs. This past year also saw the launch of the Renewables Accelerator Programme, Networks 2.0 and Accelerator for Customer initiatives and of the IBERDROLA Renewables, IBERDROLA Distribution and Liberalised Businesses, with the aim of meeting the new demands both of the market and of the business itself.

The following are some of the most notable innovative initiatives classified by broad area.

6.1 Renewable energies

In 2018, Innovation activities in Renewables, similarly to previous years, have focused primarily on:

- **Efficiency improvement at wind farms, photovoltaic plants and hydroelectric power stations.** In this area the *Doctor PV* project stood out. It seeks to reduce costs of photovoltaic plants by means of predictive maintenance strategies, as well as the possible use of drones. We also continued to work on the European *ROMEO* project, coordinated by IBERDROLA, and the *ASPA* project, which seek to develop models and tools for the early detection of problems in accordance with artificial intelligence/big data techniques. We would highlight the launch of the “Renewables Digital Evolution Plan (2018 – 2022)”, and the “Renewables Accelerator” project for the promotion of new ideas that contribute to an increase in efficiency and overall competitiveness of Renewables. In Brazil, we are developing various projects for the installation of solar energy. In Mexico, IBERDROLA constructed the photovoltaic installations of Santiago in San Luis Potosí and Hermosillo in Sonora. In the area of hydroelectric power, we would highlight the *HIDRODEMAND* project aimed at implementing operational savings and *HIDROSMART* for the development of 2 new technologies to be operated by the Basin Operation Centres.
- As regards **improving the integration of energy from renewable sources**, several initiatives have been carried out in the area of energy storage. In 2018 Avangrid Renewables registered as an independent Balancing Authority (BA), taking on the responsibility for balancing production and demand in real time. To do so, it will incorporate a 10MW/20MWh lithium-ion battery. We are also studying projects in the US for hybrid energy storage in batteries with photovoltaic solar power.
- As regards innovation in offshore wind projects, during 2018 the Wiking offshore wind farm was inaugurated, and a start was made on construction of the East Anglia One offshore wind farm in the UK, with an innovative foundations based on 3-leg jackets and connection cables between 66kV arrays. In addition, activities have continued to analyze the effect of undermining on offshore foundations: HasPRO and Sodercan-SPJ.

6.2. Clean generation technologies

During 2018, efforts in the area of generation focused on flexibility, operating efficiency and environmental protection, and the improvement of plant safety.

In the field of nuclear, notable projects include *OFF-GAS*, *RESHAND* and *FILTRABRIS*, which were developed collaboratively with *GDEST4S* in the context of IBERDROLA's Innovation Programme with Suppliers, and all of them are aimed at operational efficiency and nuclear safety.

In the area of thermal generation, and as a continuation of the *GT-CONTROLFLEX* project, the *OCTAVE* project pursues the development of diagnostic and control technologies for the combustion process to make our power stations more flexible. Both projects are key to ensuring the robustness and security of the Spanish electricity system, allowing the integration of renewables.

6.3. Retail Area - New projects and services

Innovation is essential in commercial activity, in order to offer customers the products and services best suited to their needs. Thus in 2018 IBERDROLA worked on the following:

- New initiatives to enhance the customer experience:

Throughout 2018 we continued to launch innovative campaigns and projects focused on greater personalisation of content and offerings, a new customer app in Spain, France and Portugal and a new website. Furthermore, it is now possible to sign up for and buy products online, without first having to register.

- New products and functionalities: Energy Wallet, Smart Home, Smart Solar and Smart Mobility.

By means of the *Energy Wallet* app in Spain and the *PowerUp* app in the UK, customers can buy power by the month at a set price, choose how to pay and share it among all their houses. All this is 100% digital (website and app), easy and quick.

This past year we launched new *Smart Home* packs combining energy, products and services, and devices for improving energy management in the home free of charge. We also improved the functionalities of *Smart Solar*, so that an "online offer" can now be obtained on the public website thanks to an analysis of consumption curves, expected hours of sunshine and the location and orientation of the installation. The web tool allows the production of the installation to be monitored, with details of consumption, possible storage in batteries and demand from the grid.

Within *Smart Mobility*, we would highlight the launch of the new IBERDROLA Public Charging app which allows users to book and use the charging points in IBERDROLA's network, and also the launch of the *Smart Mobility Home* app designed to control charging of domestic appliances.

In Brazil, Neenergia has made a mobile app available to customers allowing them to check their consumption, access their bills and manage their payments; and in the US, Avangrid has launched *NYSEG Smart*, an online store where customers can seek out, compare and securely buy energy-efficient products (smart thermostats, LED lighting, EV chargers, etc.).

6.4. Smart grids

In 2018, IBERDROLA Distribution has continued dedicating efforts to several R+D+i initiatives both at Spanish and European level:

- In Europe, we continue to take part in the *ASSURED* project, the objective of which is to develop quick charge solutions for heavy electric vehicles, and in the *INTENSIS4EU* project, which seeks a new approach in the field of smart grids and energy storage. As for the *STAR+* project, it will enable us to continue to digitise the network so as to improve efficiency and prepare IBERDROLA Distribution as a future distribution system operator (DSO).
- In Spain, IBERDROLA will continue to drive the digital transformation of the electricity distribution network of the Basque Country thanks to the *Bidelek 4.0* project. Work continues on the *LAYCA* project, which seeks to develop a system for locating breakdowns and characterising faults in medium-voltage networks. Work has started on the *ALOIS* project to develop a control and protection system for stable and sustainable island operation of distribution feeders. The *mGRIDSTORAGE* project is developing an advanced micro-grid model with storage for distribution networks. The *Caravaca BESS* project has been launched, with the aim of achieving the integration of a working battery energy storage system (BESS). We also continue to work in new analytical models for detecting non-technical losses. Lastly, the *CARTOLIDAR* project has improved the power-line inventory and mapped a cartography of the vegetation around power lines.
- In the UK, work continues on the *Fusion* and *LV Engine* projects, both targeted at optimising low-voltage grids which represent some of the major opportunities and challenges in the drive towards a more flexible system.
- In Brazil, we highlight the *BID MONITOR* project which is pursuing the development of a support system for decision-making in electricity sales, and the *Smart City* project for implementing innovative solutions for the automation and operation of the electricity grid. Projects on isolated micro-grids are also being developed. The *TITAM-BT* project seeks to develop equipment to help reduce fraud and ensure correct billing of customers. Lastly, we would highlight the *Qliente* project, which seeks to improve customer service by increasing efficiency and flexibility in the call centre and reducing times for restoration of service and resolving complaints.
- In the US, the outstanding project is the *Woodbridge Microgrid* in Woodbridge, Connecticut, a microgrid with a fuel cell which will be operated in island mode in the event of critical loads with the aim of backing up the grid in extreme weather conditions. The initiatives included in the *Energy Smart Community* (ESC) programme have also continued, such as the *ADMS* (advanced distribution management system). Apart from this, use has been made of drones to carry out pilot inspections of Transmission and Substation assets, with excellent result.
- 2018 saw the inauguration of '*IBERDROLA Innovation Middle East*', a technological centre aimed at rescinding to the challenges involved in digitising the energy system, from which the company will develop new innovation and technological advisory services, centring on three key areas: smart grids, integration of renewables and energy efficiency. Located in the unique Qatar Science & Technology Park, it aims to create new products and services for digital utility companies, working at the point where information and communication technologies intersect with those of energy.

6.5 IBERDROLA Ventures – PERSEO

IBERDROLA Ventures – PERSEO is IBERDROLA's Euros 70 million start-up programme created ten years ago with the aim of promoting the creation and development of a dynamic ecosystem of start-ups and entrepreneurs in the electricity sector. The programme focuses on technologies and business models that improve the sustainability of the energy model by means of greater electrification and decarbonisation of the economy. Since its creation in 2008, more than Euros 50 million have been invested through the programme in start-ups in the energy sector worldwide:

The most notable achievements in 2018 included:

- Recognition by the European Commission in the framework of the Start-up Europe Partnership initiative, IBERDROLA being named for the second year in a row among the 12 European companies doing the best work with start-ups. IBERDROLA was the only Spanish energy company selected for its model of innovation with start-ups, also receiving the special “Start-up Procurement Award”.
- More than ten pilot projects with start-ups in technological areas such as Artificial Intelligence, “Big Data”, IoT and blockchain, with the aim of improving both planning and management of assets and optimising their operation and maintenance.
- In the area of investment, we would point to the investment in Atten2, a company dedicated to the development of solutions for the online monitoring of critical assets to improve their operation and maintenance. This investment represents a very significant contribution to the digitisation of assets with the aim of prolonging their useful life by means of predictive maintenance and improved operation.

7. ACQUISITION AND DISPOSAL OF TREASURY SHARES

The Group's treasury share policy establishes the following:

Treasury share transactions are considered those transactions carried out by the Company, whether directly or through any of the Group companies, the object of which are Company shares, as well as financial instruments or agreements of any type, whether or not they are traded on the stock market or other organised secondary markets, which grant the right to acquire, or the underlying security of which are, Company shares.

Treasury share transactions will always have legitimate purposes, such as, among others, to provide investors with liquidity and sufficient depth in the trading of Company shares, to execute treasury share purchase programmes approved by the board of directors or General Shareholders' Meeting resolutions, to fulfil legitimate commitments undertaken previously or any other acceptable purposes in accordance with applicable regulations. Under no circumstances shall the purpose of treasury share transactions be to interfere with the free establishment of prices. In particular, any conduct referred to in article 83.ter.1 of the Securities Market Law and article 2 of Royal Decree 1333/2005, of 11 November 2005, implementing the Securities Market Law related as regards matters of market abuse, must be avoided.

The Group's treasury share transactions shall under any circumstances be carried out on the basis of insider information.

Treasury shares are to be managed providing with absolute transparency as regards relationships with market supervisors and regulatory organisations.

Note 20 of the consolidated annual accounts presents the movements of IBERDROLA's shares in the Group companies' portfolios in recent years. Likewise, other information on transactions in 2018 and 2017 is presented in the following table:

Treasury shares	No. of shares	Thousands of Euros Nominal value (thousands of Euros)	Thousands of Euros Treasury shares	Average price (Euros)	Total shares	% Capital
Balance at 01.01.2017	151,224,777	113,419	868,936	5.75	6,362,079,000	2.38

During 2018 and 2017, treasury shares held by the IBERDROLA Group were below the legal limit at all times.

Lastly, the conditions and deadlines for the current mandate of the board of directors to acquire or transfer treasury shares are detailed below.

- The General Shareholders' Meeting, at its meeting of April 13, 2018, agreed to expressly authorize the Board of Directors, with the power to substitute, in accordance with the provisions of article 146 of the Spanish Companies Act, for the derivative acquisition. of shares of Iberdrola, SA in the following conditions: Acquisitions may be made directly by Company or indirectly through its subsidiaries under the same terms and conditions as this agreement. The subsidiary companies which develop regulated activities as prescribed in Law 24/2013 of 26 December on the Electricity Sector and Law 34/1988 of 7 October on the Hydrocarbon Sector are excluded from this authorization.
- Acquisitions may be made by purchase transactions, swaps or any other form permitted by law.
- Acquisitions may be made up, at all times, to the maximum legal threshold.
- Such acquisitions may not be made at a price higher than the market price or lower than the par value of the shares.
- This authorization is granted for a maximum period of five years since the adoption of the agreement.
- As a result of the acquisition of shares, including those in which the Company or the person acted on its own name and behalf but on behalf of the Company it had previously required and already had in stock, resulting net equity could not be reduced under its share capital plus unavailable legal or statutory reserved, as provided in section 146.1.b) of the Spanish Companies Act.

The agreement expressly states that the shares acquired as a result of this authorization may be used for their disposal or amortization as well as for the application of the remuneration systems contemplated in the third paragraph of letter a) of article 146.1 of the Companies Law Capital, as well as the development of programs that encourage participation in the capital of the Company, such as, for example, dividend reinvestment plans, loyalty bonds or other similar instruments.

(1) Purchase price of rights guaranteed by IBERDROLA equivalent to interim dividend in accordance with "IBERDROLA scrip dividend".

(2) Complementary dividend in cash (24/07/2018 0.186; 07/07/2017 = Euros 0.03 and purchase price of rights guaranteed by IBERDROLA: = 21/07/2017 =0.147)

(3) Interim dividend, complementary dividend and attendance bonus for attending the General Shareholders' Meeting/share price at period end.

8 FURTHER RELEVANT INFORMATION

8.1. Non financial information and diversity

The information required by Law 11/2018 on Non-financial information and diversity is described in the non-financial information and diversity section in this consolidated directors' report.

8.2. IBERDROLA Foundation

In 2018, the Group allocated Euros 10,277 thousand to financing the various Group foundations.

The main recipient of the funding was the IBERDROLA Foundation, which received Euros 6,604 thousand. Information on its goals and activities is available at: www.fundacioniberdrola.org. The IBERDROLA Foundation is a private, non-profit, cultural foundation, founded by the Company. Its mission is to develop initiatives which effectively contribute to improving the quality of life of people in the regions and countries in which the Group operates, especially in the areas of energy sustainability, art and culture, as well as solidarity and social initiatives. The Foundation may act independently to achieve its goals and is fully functional and autonomous. Without prejudice to its collaboration with other entities, the IBERDROLA Foundation coordinates and executes the Group's corporate social responsibility strategy, insofar as this is consistent with the purpose for which it was created and has been assigned there to it by the board of directors.

The IBERDROLA Foundation coordinates its welfare work in the United Kingdom through the Scottish Power Foundation, which was granted Euros 1,323 thousand. In the United States, this work is carried out through the Avangrid Foundation with a budget of Euros 2,211 thousand, and in Brazil through the Instituto IBERDROLA Brasil, which received Euros 140 thousand.

In 2016, the Group intends to follow a policy aimed at financing activities of interest to the general public in line with that followed in 2018 as regards amount and allocation.

Remarks

A.4 If applicable, state any family, commercial, contractual or corporate relationships that exist among significant shareholders to the extent that they are known to the company, unless they are insignificant or arise in the ordinary course of business, except those that are reported in Section A.6:

Name of related party	Nature of relationship	Brief description

A.5 If applicable, state any commercial, contractual or corporate relationships that exist between significant shareholders and the company and/or group, unless they are insignificant or arise in the ordinary course of business:

Name of related party	Nature of relationship	Brief description

A.6 Describe the relationships, unless insignificant for the two parties, that exist between significant shareholders or shareholders represented on the Board and directors, or their representatives in the case of legal-person directors.

Explain, as the case may be, how the significant shareholders are represented. Specifically, state those directors appointed to represent significant shareholders, those whose appointment was proposed by significant shareholders and/or companies in its group, specifying the nature of such relationships or ties. In particular, mention the existence, identity and post of directors, or their representatives, as the case may be, of the listed company, who are, in turn, members of the Board of Directors or their representatives of companies that hold significant shareholdings in the listed company or in group companies of these significant shareholders.

Name or company name of related director or representative	Name or company name of related significant shareholder	Company name of the group company of the significant shareholder	Description of relationship/post

Remarks
There are no directors appointed on behalf of significant shareholders or directors connected thereto or proposed by them for appointment.

A.7 State whether the company has been notified of any shareholders' agreements that may affect it, in accordance with Articles 530 and 531 of the Ley de Sociedades de Capital ("Corporate Enterprises Act" or "LSC"). If so, describe these agreements and list the party shareholders:

Yes ☐

No ☒

Parties to the shareholders' agreement	Percentage of affected shares	Brief description of the agreement	Date of termination of agreement, if applicable

Remarks

State whether the company is aware of any concerted actions among its shareholders. If so, provide a brief description:

Yes ☐

No ☒

Parties to the concerted action	Percentage of affected shares	Brief description of the agreement	Date of termination of agreement, if applicable

Remarks

If any of the aforementioned agreements or concerted actions have been modified or terminated during the year, please specify expressly:

--

A.8 State whether any individual or company exercises or may exercise control over the company in accordance with Article 5 of the Ley de Mercados de Valores (“Spanish Securities Market Act” or “LMV”). If so, please identify them:

Yes ☐

No ☒

Name

Remarks

A.9 Complete the following table with details of the company’s treasury shares:

At the close of the year:

Number of direct shares	Number of indirect shares (*)	Total percentage of share capital
135,985,344		2.13

Remarks

(*) through:

Name of direct shareholder	Number of direct shares
Total:	

Remarks

Explain any significant changes during the year:

Explain significant changes
<p>The Company sent to the CNMV three updates to its treasury share position in 2018 as a result of a change in the number of voting rights arising from corporate transactions:</p> <ul style="list-style-type: none"> • Notices of direct acquisitions of a total of 3,391,573 shares (0.053%) were provided on 2 February, coinciding with the increase in capital resulting from the "Iberdrola Flexible Dividend" programme. • Notices of direct acquisitions of a total of 61,453,601 shares (0.985%) were provided on 3 July, coinciding with the reduction in capital; and • Notices of direct acquisitions of a total of 4,322,023 shares (0.068%) were provided on 1 August, coinciding with the increase in capital resulting from the "Iberdrola Flexible Remuneration" programme. <p>During financial year 2018 the Company also provided three more notices arising from consecutive direct acquisitions of own shares due to said acquisitions exceeding 1% of voting rights since the preceding notice:</p> <ul style="list-style-type: none"> • Notices of direct acquisitions of a total of 63,704,610 shares (1.008%) were provided on 12 January. • Notices of direct acquisitions of a total of 64,747,653 shares (1.006%) were provided on 26 March; and • Notices of direct acquisitions of a total of 132,533,252 shares (2.072%) were provided on 28 December.

A.10 Provide a detailed description of the conditions and terms of the authority given to the Board of Directors to issue, repurchase, or dispose of treasury shares.

The shareholders acting at the General Shareholders' Meeting held on 13 April 2018 resolved to expressly authorise the Board of Directors, with the power of substitution, pursuant to the Companies Act (*Ley de Sociedades de Capital*), to carry out the derivative acquisition of shares of Iberdrola on the following terms:

- a) Purchases may be made by Iberdrola directly, or indirectly through its subsidiaries. Subsidiaries carrying out regulated activities are excluded pursuant to the provisions of the Electricity Industry Act (*Ley del Sector Eléctrico*) and the Hydrocarbons Act (*Ley de Hidrocarburos*).
- b) Purchases shall be made by means of a purchase and sale agreement, a swap arrangement, or any other transaction permitted by law.
- c) Purchases may be made up to the maximum sum permitted by law (i.e. 10% of the share capital).
- d) Purchases may not be made at a higher price than that quoted on the Stock Exchange or at a price lower than the share's nominal value.
- e) The authorisation was granted for a period not to exceed five years as from the approval of the resolution.
- f) The acquiring company shall establish a restricted reserve in shareholders' equity equal to the amount of the shares of the controlling company recorded under assets. Such reserve shall be maintained for so long as the shares are not transferred or retired, in compliance with the provisions of the Companies Act.

The shares, if any, purchased as a result of the aforementioned authorisation could be used for either transfer or retirement or could be applied to the remuneration systems provided for in the Companies Act; added to the foregoing alternatives was the possible development of programmes fostering the acquisition of interests in the Company, such as, for example, dividend reinvestment plans, loyalty bonuses or similar instruments. Furthermore, at the General Shareholders' Meeting held on 8 April 2016, the shareholders resolved to authorise the Board of Directors to increase share capital upon the terms and within the limits set forth in section 297.1.b) of the Companies Act, with the power to exclude preemptive rights, limited to a maximum nominal amount of 20% of the share capital.

A.11 Estimated working capital:

	%
Estimated working capital	88.88

Remarks

A.12 State whether there are any restrictions (article of associations, legislative or of any other nature) placed on the transfer of shares and/or any restrictions on voting rights. In particular, state the existence of any type of restriction that may inhibit a takeover attempt of the company through acquisition of its shares on the market, and those regimes for the prior authorisation or notification that may be applicable, under sector regulations, to acquisitions or transfers of the company's financial instruments.

Yes X

No ☐

Description of restrictions
<p>Those having an interest equal to or greater than 3% of the capital or voting rights of two or more companies that have the status of Principal Operator in certain markets or sectors (including the generation and supply of electricity) may not exercise rights in excess of such percentage in more than one entity. Article 29.2 of the By-Laws provides that no shareholder may cast a number of votes greater than those corresponding to shares representing 10% of the share capital.</p> <p>According to article 28, a shareholder may not exercise their right to vote at the General Shareholders' Meeting if the resolution to be approved is intended to: (a) relieve the shareholder of an obligation or grant the shareholder a right; (b) provide the shareholder with any kind of financial assistance, including the provision of guarantees in favour thereof; or (c) release the shareholder, if a director, from obligations arising from the duty of loyalty as provided by law.</p> <p>Article 50 of the By-Laws provides that the by-law restrictions against the exercise of voting rights by shareholders affected by conflicts of interest established in article 28 above and the limitation on the maximum number of votes that may be cast by a single shareholder contained in sections 2 and 4 of article 29 above shall be deprived of effect upon the occurrence of certain circumstances in the case of a takeover bid.</p> <p>Furthermore, section 527 of the Companies Act provides that at listed companies (<i>sociedades anónimas cotizadas</i>), the by-law provisions that directly or indirectly set, as a general rule, the maximum number of votes that may be cast by a single shareholder, by the companies belonging to the same group or by those acting in concert with the foregoing shall be of no effect when, following a takeover bid, the bidder has reached a percentage that is equal to or greater than 70% of the voting share capital, unless such bidder is not subject to equivalent breakthrough measures or has not adopted them.</p> <p>Pursuant to U.S. law, due to the business carried out by Avangrid, Inc. (a company belonging to the Iberdrola group) in that country, the acquisition of an interest giving rise to the holding of 10% or more of the share capital of Iberdrola will be subject to the prior approval of certain U.S. regulatory authorities.</p>

A.13 State if the shareholders have resolved at a meeting to adopt measures to neutralise a take-over bid pursuant to the provisions of Act 6/2007.

Yes ☐

No ☒

If so, please explain the measures approved and the terms under which such limitations would cease to apply:

Explain the measures approved and the terms under which such limitations would cease to apply:

A.14 State if the company has issued shares that are not traded on a regulated EU market.

Yes ☐

No ☒

If so, please list each type of share and the rights and obligations conferred on each.

List each type of share

B GENERAL SHAREHOLDERS' MEETING

B.1 State whether there are any differences between the quorum established by the LSC for General Shareholders' Meetings and those set by the company and if so, describe them in detail:

Yes ☒

No ☐

	% quorum different from that contained in Article 193 LSC for general matters	% quorum different from that contained in Article 194 LSC for special resolutions
Quorum required at 1st call	0.00	66.67
Quorum required at 2nd call	0.00	60.00

Description of differences
As the only exception to the rules provided for in the Companies Act, article 21.2 of the By-Laws increases the quorum required to hold a valid meeting "in order to adopt resolutions regarding a change in the object of the Company, transformation, total split-off, dissolution of the Company, and the amendment of this section 2", in which case "shareholders representing two-thirds (2/3) of subscribed share capital with voting rights must be in attendance at the first call to the General Shareholders' Meeting, and shareholders representing sixty (60%) per cent of such share capital must be in attendance at the second call".

B.2 State whether there are any differences in the company's manner of adopting corporate resolutions and the manner for adopting corporate resolutions described by the LSC and, if so, explain:

Yes ☒

No ☐

Describe how it is different from that contained in the LSC.

	Qualified majority different from that established in Article 201.2 LSC for Article 194.1 LSC matters	Other matters requiring a qualified majority
% established by the company for adoption of resolutions	75.00	75.00

Describe the differences
Article 52 of the By-Laws provides that all resolutions intended to eliminate or amend the provisions contained in title IV (breakthrough of restrictions in the event of takeover bids), in article 28 (conflicts of interest), and in sections 2 to 4 of article 29 (limitation upon the maximum number of votes that a shareholder may cast) shall require the affirmative vote of three-fourths (3/4) of the share capital present in person or by proxy at a General Shareholders' Meeting.

B.3. State the rules for amending the company's Articles of Association. In particular, state the majorities required for amendment of the Articles of Association and any provisions in place to protect shareholders' rights in the event of amendments to the Articles of Association.

In addition to the provisions of section 285 *et seq.* of the Companies Act, the By-Laws of Iberdrola contain articles 21.2 (qualified quorum) and 52 (qualified majority) mentioned in sections B.1 and B.2 above.

B.4 Give details of attendance at General Shareholders' Meetings held during the year of this report and the two previous years:

Date of General Meeting	Attendance data				
	% physically present	% present by proxy	% distance voting		Total
			Electronic voting	Other	
13/04/2018	0.33	71.44	0.27	4.05	76.09
Of which, free float:	0.23	62.90	0.27	4.05	67.45
31/03/2017	0.39	71.92	0.17	4.71	77.19
Of which, free float:	0.32	60.43	0.17	4.71	65.63
08/04/2016	1.40	69.68	0.15	6.69	77.92
Of which, free float:	1.31	56.53	0.15	6.69	64.68

Remarks
<p>Absentee votes cast by the shareholders through their depositaries (without direct communication from the shareholders to the Company), which in prior reports were included in the "in person" percentage, are now included in the "Other" column, which reflects the percentage of share capital of all absentee votes issued at each Meeting through depositaries and custodians, cards received at shareholder information desks, cards received by post and the telephone channel (started in 2018). Adding all votes and proxies received through the corporate website, electronic participation reached a percentage of share capital equal to 0.52% in 2016, 0.82% in 2017 and 1.03% in 2018.</p> <p>Free float percentages have been calculated by dividing the shares represented in person and by proxy less those belonging to significant shareholders and directors participating at each Meeting, according to the information available in the list of attendees, by the total shares outstanding as at the date of the Meeting. For these purposes, significant interests deposited in omnibus accounts (not opened in the name of the owners of such interests) are not subtracted from the shares present in person or by proxy, except in cases in which the significant shareholder notified the Company of the shareholder's participation in the Meeting.</p>

B.5 State whether any point on the agenda of the General Shareholders' Meetings during the year has not been approved by the shareholders for any reason.

Yes ☐

No ☒

Points on agenda not approved	% votes against (*)

(*) If the non-approval of the point is for a reason other than the votes against, this will be explained in the text part and "N/A" will be placed in the "% votes against" column.

B.6 State if the Articles of Association contain any restrictions requiring a minimum number of shares to attend General Shareholders' Meetings, or on distance voting:

Yes ☐

No ☒

Number of shares required to attend General Meetings	
Number of shares required for distance voting	

Remarks

B.7 State whether it has been established that certain decisions other than those established by law exist that entail an acquisition, disposal or contribution to another company of essential assets or other similar corporate transactions that must be subject to the approval of the General Shareholders' Meeting.

Yes ☒

No ☐

Explain the decisions that must be subject to the General Shareholders' Meeting, other than those established by law

Sections s), t) and u) of article 17 of the By-Laws provide that the shareholders acting at a General Shareholders' Meeting will decide the following issues, among others:

s) The transfer to controlled entities of core activities that were previously carried out by the Company itself, while maintaining full control thereof.

t) The acquisition, transfer, or contribution of key assets from or to another company.

u) The approval of transactions having an effect equivalent to liquidation of the Company.

B.8 State the address and manner of access to the page on the company website where one may find information on corporate governance and other information regarding General Shareholders' Meetings that must be made available to shareholders through the company website.

www.iberdrola.com / corporate governance

Mr Manuel Moreu Munaiz	<p>Pontevedra, Spain, 1953</p> <p>He is president of the Seaplace, S.L., sole director of H.I. de Iberia Ingeniería y Proyectos, S.L. and of Howard Ingeniería y Desarrollo, S.L., a director of Tubacex, S.A. and a member of the Spanish Committee of Lloyd's Register EMEA. He is also a professor of the Master's Programme in Oil at Universidad Politécnica de Madrid (ETSIM), of the Maritime Master's Programme of Instituto Marítimo Español and of Universidad Pontificia Comillas.</p>

	<p>Academic training</p> <p>Doctorate in naval engineering from Escuela Técnica Superior de Ingenieros Navales (ETSIN) of the Universidad Politécnica de Madrid, and Master's degree in Oceanic Engineering from the Massachusetts Institute of Technology (MIT).</p> <p>Noteworthy experience in the energy and industrial engineering sector</p> <p>He has been a member of the Corporate Social Responsibility Committee of Iberdrola, S.A., of the Board of Directors of Iberdrola Renovables, S.A., and a director and member of the Audit and Compliance Committee of Gamesa Corporación Tecnológica, S.A.</p> <p>Noteworthy experience in other industries</p> <p>He has been a member of the board of Metalships and Docks, S.A., Neumáticas de Vigo, S.A. and Rodman Polyships, S.A., dean of the Colegio Oficial de Ingenieros Navales y Oceánicos de Madrid y de España, president of the Spanish Institute of Engineering, and a professor of the Escuela Técnica Superior de Ingenieros Navales of the Universidad Politécnica de Madrid and for the Repsol's Masters programme in oil.</p>
Mr Juan Manuel González Serna	<p>Madrid, Spain, 1955</p> <p>He is the chairman of Cerealto SIRO Foods, a business group in the food sector, and a member of the Governing Board of the Spanish Commercial Coding Association (<i>Asociación Española de Codificación Comercial</i>) (AECOC).</p> <p>He is also a founding trustee and chairman of the Grupo SIRO Foundation.</p> <p>Academic training</p> <p>Degree in Law, Economics and Business Studies from the Instituto Católico de Administración y Dirección de Empresas (ICADE) of Universidad Pontificia Comillas (Madrid) and Masters in Business Administration (MBA) from the Escuela de Dirección del Instituto de Estudios Superiores de la Empresa de la Universidad de Navarra (IESE Business School) in Barcelona.</p> <p>Noteworthy experience in the energy and industrial engineering sector</p> <p>He has been an independent director of Iberdrola España, S.A.U. and of Iberdrola Renovables, S.A., as well as chair of the Appointments and Remuneration Committee of the latter company.</p> <p>Noteworthy experience in other industries</p> <p>Apart from the food sector, he also has extensive experience in the finance, venture capital and health sectors: he is a member of the advisory board of Rabobank in Spain and Europe and has been a member of the board of Banco Urquijo Sabadell Banca Privada, S.A. and of Sociedad para el Desarrollo Industrial de Castilla y León, Sociedad de Capital Riesgo, S.A. (SODICAL, now Ade Capital Social,</p>

	<p>Sociedad de Capital Riesgo de Régimen Común, S.A.). He is also a member of the board of directors of the HM Hospitales Group.</p>
Mr Anthony L. Gardner	<p>Washington D.C., United States of America, 1963</p> <p>He is a member of the board of directors of Brookfield Business Partners LP, senior adviser at the consulting firm Brunswick Group, LLP and senior counsel in the law firm Sidley Austin LLP, where he works in the International Trade and Privacy and Cybersecurity areas. He is also an adviser to the Bill and Melinda Gates Foundation and a member of the advisory boards of the Centre for European Reform, the German Marshall Fund and the European Policy Centre.</p> <p>Academic training</p> <p>He studied Government at Harvard University and International Relations at the University of Oxford. He holds a Juris Doctor degree from Columbia Law School and a Masters in Finance from London Business School.</p> <p>Noteworthy experience in the energy and industrial engineering sector</p> <p>He was an independent director of Scottish Power, Ltd and a member of that company's Audit and Compliance Committee.</p> <p>Noteworthy experience in other industries</p> <p>He was the US ambassador to the European Union from 2014 to 2017. Prior to that appointment, for six years he was the managing director at Palamon Capital Partners, a private equity firm based in London. He was also the director of one of the finance departments of Bank of America and of GE Capital, as well as director in the international acquisitions group of GE International. He has also worked as an attorney at international law firms in London, Paris, New York and Brussels.</p> <p>He has dedicated more than twenty years of his career to US-European affairs, as a government official, lawyer and investor. As Director for European Affairs on the National Security Council (1994-1995), he worked closely with the US Mission to the European Union to launch the Transatlantic Free Trade Agreement.</p> <p>He had previously worked with the Treuhandanstalt (German Privatisation Ministry) in Berlin, with the Stock Exchange Operations Committee in Paris and as secondee for the European Commission in Brussels. He is the author of "A New Era in US-EU Relations? The Clinton Administration and the New Transatlantic Agenda" and numerous articles on EU affairs.</p>

Number of independent directors	9
---------------------------------	---

Percentage of the Board	64.29
-------------------------	-------

Remarks

State whether any independent director receives from the company or any company in the group any amount or benefit other than compensation as a director, or has or has had a business relationship with the company or any company in the group during the past year, whether in his or her own name or as a significant shareholder, director or senior executive of a company that has or has had such a relationship.

In this case, include a statement by the Board explaining why it believes that the director in question can perform his or her duties as an independent director.

Name of director	Description of the relationship	Statement of the Board

1.1.1.2 OTHER EXTERNAL DIRECTORS

Total number of other external directors	3
Percentage of the Board	21.43

Remarks

State any changes in status that have occurred during the period for each director:

Name of director	Date of change	Previous Status	Current status
Ms Inés Macho Stadler	07/06/2018	Independent	Other external

Remarks
Twelve years have passed since appointment.

C.1.4 Complete the following table with information relating to the number of female directors at the close of the past 4 years, as well as the category of each:

	Number of female directors				% of directors for each category			
	Year t	Year t-1	Year t-2	Year t-3	Year t	Year t-1	Year t-2	Year t-3
Executive	-	-	-	-	-	-	-	-
Proprietary	-	-	-	-	-	-	-	-
Independent	4	5	5	5	44	50	50	50
Other external	1				6			
Total:	5	5	5	5	35.71	35.71	35.71	35.71

Remarks
The Board of Directors has proposed to the shareholders at the General Shareholders' Meeting to be held on 29 March 2019 the appointment of Sara de la Rica Goiricelaya in order to fill the vacancy occurring due to the end of the term of Ángel Jesús Acebes Paniagua. If such proposal is approved, the percentage of women on the Board of Directors will increase to 50% of the external directors.

C.1.5 State whether the company has diversity policies in relation to the Board of Directors of the company on such questions as age, gender, disability and training and professional experience. Small and medium-sized enterprises, in accordance with the definition set out in the Accounts Audit Act, will have to report at least the policy they have implemented in relation to gender diversity.

(i) Yes ☒ No ☐ Partial policies ☐

Should this be the case, describe these diversity policies, their objectives, the measures and way in which they have been applied and their results over the year. Also state the specific measures adopted by the Board of Directors and the appointments and remuneration committee to achieve a balanced and diverse presence of directors.

In the event that the company does not apply a diversity policy, explain the reasons why.

Description of policies, objectives, measures and how they have been implemented, including results achieved
<p>The Company's Corporate Governance System, and particularly the Board of Directors Diversity and Director Candidate Selection Policy, entrusts the Appointments Committee with the duty to ensure that when new vacancies are filled or new directors are appointed, the selection procedures are free from any implied bias entailing any kind of discrimination and, in particular, that such procedures do not hinder the selection of female directors. The goals thereof include ensuring that female directors continue to account for at least 30% of the Board of Directors by the year 2020.</p> <p>Five of the fourteen members of the Board of Directors are currently women. One of them holds the position of vice chair of the Board of Directors and another three chair three of the four consultative committees.</p> <p>On 7 June 2006, the Board of Directors appointed Ms Inés Macho Stadler as independent director on an interim basis to fill a vacancy; such appointment was ratified by the shareholders at the General Shareholders' Meeting held on 29 March 2007, where the shareholders</p>

also approved her re-election for a five-year period. On 22 September 2009, Ms Inés Macho Stadler was appointed as lead independent director (*consejera coordinadora*), in which position she was replaced by Mr Juan Manuel González Serna. On 21 June 2018 Ms Inés Macho Stadler was appointed vice chair of the Board of Directors.

At its meeting of 31 July 2008, the Board of Directors resolved to appoint Ms Samantha Barber as an independent director on an interim basis to fill a vacancy; such appointment was ratified by the shareholders at the General Shareholders' Meeting held on 20 March 2009. Ms Barber has also chaired the Sustainable Development Committee since 24 April 2012.

The shareholders at the General Shareholders' Meeting held on 26 March 2010 approved the proposed appointment of Ms María Helena Antolín Raybaud, with the classification of external independent director.

On 23 April 2013, Iberdrola's Board of Directors approved the interim appointment of Ms Georgina Kessel Martinez as an external independent director, which appointment was subsequently ratified by the shareholders at the General Shareholders' Meeting held on 28 March 2014. Furthermore, Ms Kessel Martínez was appointed chair of the Audit and Risk Supervision Committee on 17 February 2015.

On 24 June 2014, the Board of Directors approved the interim appointment of Ms Denise Holt as an external independent director. This appointment was ratified by the shareholders at the General Shareholders' Meeting held on 27 March 2015.

The Appointments and Remuneration Committee was split into two separate committees on 27 March 2015. The appointment of Ms María Helena Antolín Raybaud and of Ms Inés Macho Stadler as chairs of the Appointments Committee and the Remuneration Committee, respectively, was approved for these purposes.

The Board of Directors has proposed to the shareholders at the General Shareholders' Meeting to be held on 29 March 2019 the appointment of Sara de la Rica Goiricelaya in order to fill the vacancy occurring due to the end of the term of Ángel Jesús Acebes Paniagua. If such proposal is approved, the percentage of women on the Board of Directors will increase to 50% of the external directors.

It should also be noted that the Board of Directors, at its meeting held on 19 December 2017, approved a Board of Directors Diversity and Director Candidate Selection Policy, the new name of the former Director Candidate Selection Policy, which is intended to cause the composition of the Board of Directors to reflect a maximum diversity of skills and viewpoints with special emphasis on issues such as age, gender, disability, training and professional experience. This Policy is available on the corporate website (www.iberdrola.com) where the Activities Report of the Board and of the Committees thereof can also be found. Among other issues, this Report details the professional skills

and experience of the directors and is a good example of the application of the Policy.

C.1.6 Describe the means, if any, agreed upon by the appointments committee to ensure that selection procedures do not contain hidden biases which impede the selection of female directors and that the company deliberately seeks and includes women who meet the target professional profile among potential candidates and which makes it possible to achieve a balance between men and women:

Explanation of means
<p>The <i>Board of Directors Diversity and Director Candidate Selection Policy</i> ensures that the proposed appointments of directors are based on a prior analysis of the needs of the Board of Directors. In particular, the candidates must be respectable and qualified persons, widely recognised for their expertise, competence, experience, qualifications, training, availability and commitment to their duties. They must be irreproachable professionals, whose professional conduct and background is aligned with the principles set forth in the Directors' Code of Ethics and the corporate values contained in the Mission, Vision and Values of the Iberdrola group.</p> <p>In the selection of candidates, it also endeavours to ensure a diverse and balanced composition of the Board of Directors overall, such that decision-making is enriched and multiple viewpoints are contributed to the discussion of the matters within its purview. To this end, the selection process shall promote a search for candidates with knowledge and experience in the main countries and sectors in which the group does or will do business. The directors must also have sufficient knowledge of the Spanish and English languages to be able to perform their duties.</p> <p>In turn, the Board has entrusted to the Appointments Committee the responsibility of ensuring that when new vacancies are filled or new directors are appointed, the selection procedures are free from any implied bias entailing any kind of discrimination and, in particular, from any bias that might hinder the selection of female directors.</p>

In the event that there are few or no female directors in spite of any measures adopted, please explain the reasons that justify such a situation:

Explanation of reasons
Not applicable

C.1.7 Describe the conclusions of the appointments committee regarding verification of compliance with the selection policy for directors; in particular, as it relates to the goal of ensuring that the number of

female directors represents at least 30% of the total membership of the Board of Directors by the year 2020.

The Remuneration Committee believes that IBERDROLA is developing the Diversity Policy in a fully consistent manner and that the objectives for 2020 were met significantly in advance, as shown in section C.1.4 of this Report.

C.1.8 If applicable, please explain the reasons for the appointment of any proprietary directors at the request of shareholders with less than a 3% equity interest:

Name of shareholder	Reason

State whether the Board has failed to meet any formal requests for membership from shareholders whose equity interest is equal to or higher than that of others at whose request proprietary directors have been appointed. If this is the case, please explain why the aforementioned requests were not met:

Yes ☐

No ☒

Name of shareholder	Explanation

C.1.9 State the powers delegated by the Board of Directors, as the case may be, to directors or Board committees:

Name of director or committee	Brief description
Mr José Ignacio Sánchez Galán	The chairman & CEO, as an individual decision-making body, has all the powers that may be delegated under the law and the By-Laws.
Executive Committee	All the powers inherent to the Board of Directors, except for those powers that may not be delegated pursuant to law or the Corporate Governance System.

C.1.10 Identify any members of the Board who are also directors, representatives of directors or officers in other companies in the group of which the listed company is a member:

Name of director	Name of group member	Position		Does the director have executive powers?
Mr José Ignacio Sánchez Galán	SCOTTISH POWER LTD.	Chair		No
Mr José Ignacio Sánchez Galán	AVANGRID, INC.	Chair		No
Mr José Ignacio Sánchez Galán	NEOENERGIA, S.A.	Chair		No
Mr Francisco Martínez Córcoles	IBERDROLA ESPAÑA, S.A.	Chair		No
Mr Francisco Martínez Córcoles	IBERDROLA MÉXICO, S.A. DE C.V.	Director		No

Remarks

C.1.11 List any directors or representatives of legal person-directors of your company who are members of the Board of Directors of other companies listed on official securities markets other than group companies, and have communicated that status to the Company:

Name of director	Name of listed company	Position
MS GEORGINA KESSEL MARTÍNEZ	GRUPO FINANCIERO SCOTIABANK INVERLAT, S.A. DE C.V.	Director
MS GEORGINA KESSEL MARTÍNEZ	FRESNILLO, PLC	Director
MR MANUEL MOREU MUNAIZ	TUBACEX, S.A.	Director

Remarks

C.1.12 State whether the company has established rules on the number of boards on which its directors may hold seats, providing details if applicable, identifying, where appropriate, where this is regulated:

Yes ☒ X

No ☐

Explanation of the rules and identification of the document where this is regulated
Pursuant to the Regulations of the Board of Directors, individuals or legal entities serving as directors in more than five companies, of which no more than three may have shares trading on domestic or foreign stock exchanges, may not be appointed as directors. Positions within holding companies are excluded from the calculation. Furthermore, companies belonging to the same group shall be deemed to be a single company.

C.1.13 State total remuneration received by the Board of Directors:

Board remuneration in financial year (thousand euros)	16,987
Amount of vested pension interests for current members (thousand euros)	0
Amount of vested pension interests for former members (thousand euros)	0

Remarks
This amount includes the remuneration received (5,434 thousand euros) by all of their directors for their performance as such during financial year 2018 (fixed remuneration, attendance fees and other items) as well as salaries, annual variable remuneration and the shares received by the executive directors in payment of the second period of the 2014-2016 Strategic Bonus, all of which is duly described in the Annual Director Remuneration Report.

C.1.14 Identify senior management staff who are not executive directors and their total remuneration accrued during the year:

Name	Position
Mr José Sainz Armada	CFO
Mr Juan Carlos Rebollo Liceaga	Administration and Control Director
Mr Pedro Azagra Blázquez	Corporate Development Director
Mr Santiago Martínez Garrido	Director of Legal Services
Ms Sonsoles Rubio Reinoso	Director of Internal Audit

Total senior management remuneration (thousand euros)	10,344
Remarks	
The amount of the fixed and variable remuneration of the directors of the Iberdrola group (150 people) is 47,310 thousand euros. This figure does not include the total of the shares delivered in payment of the long-term incentives.	

C.1.15 State whether the Board rules were amended during the year:

Yes ☒ x

No ☐ □

Description of changes
<p>A new Title I has been introduced regarding the principles that should govern the conduct of the Board of Directors, in order to include within the guidelines for their conduct the effective engagement of shareholders and other stakeholders, satisfaction of the corporate interest, commitment to the social dividend and conformance of the work of the Board of Directors and all of its members to the Company's Code of Ethics. In particular, the Board of Directors' commitment to the Sustainable Development Goals (SDGs) approved by the United Nations and to the fight against climate change has been made explicit.</p> <p>There has also been an update of references to the Corporate Social Responsibility Committee, which in October 2018 became the Sustainable Development Committee, and other technical improvements have been made in order to clarify the powers of the Board of Directors and of the lead independent director, as well as to simplify and improve the consistency of the regulation of the committees.</p>

C.1.16 Specify the procedures for selection, appointment, re-election and removal of directors: the competent bodies, steps to follow and criteria applied in each procedure.

1. APPOINTMENT AND RE-ELECTION OF DIRECTORS

The appointment, re-election, and removal of directors is within the purview of the shareholders at the General Shareholders' Meeting.

Vacancies that occur may be filled by the Board of Directors on an interim basis until the next General Shareholders' Meeting.

The Appointments Committee must advise the Board of Directors regarding the most appropriate configuration thereof and of its committees as regards size and equilibrium among the various classes of directors existing at any time. This is in any event based on the conditions that candidates for director must meet pursuant to the Board of Directors Diversity and Director Candidate Selection Policy.

The following may not be appointed as directors or as individuals representing a corporate director:

- a) Domestic or foreign companies competing with the Company in the energy industry or other industries, or the directors or senior officers thereof, or such persons, if any, as are proposed by them in their capacity as shareholders.
- b) Individuals or legal entities serving as directors in more than five companies, of which no more than three may have shares trading on domestic or foreign stock exchanges.
- c) For purposes of the provisions of the preceding paragraph, positions within holding companies are excluded from the calculation. Furthermore, companies belonging to the same group shall be deemed to be a single company.
- d) Persons who, during the two years prior to their appointment, have occupied high-level positions in Spanish government administrations that are incompatible with the simultaneous performance of the duties of a director of a listed company under Spanish national or autonomous community law, or positions of responsibility with entities regulating the energy industry, the securities markets, or other industries in which the Group operates.

Individuals or legal entities that are under any other circumstance of disqualification or prohibition governed by provisions of a general nature, including those that have interests in any way opposed to those of the Company or the Group.

The Board of Directors and the Appointments Committee, within the scope of their powers, shall endeavour to ensure that the candidates proposed are respectable and qualified persons, widely recognised for their expertise, competence, experience, qualifications, training, availability, and commitment to their duties.

It falls upon the Appointments Committee to propose the independent directors, as well as to report upon the proposals relating to the other classes of directors.

If the Board of Directors deviates from the proposals and reports of the Appointments Committee, it shall give reasons for so acting and shall record such reasons in the minutes.

2. EVALUATION OF DIRECTORS

The Board of Directors annually evaluates: (i) its operation and the quality of its

work; (ii) the performance of their duties by the chairman of the Board of Directors & CEO and by the Business CEO, based on the report submitted thereto by the Appointments Committee; and (iii) the operation of its committees, in view of the report submitted thereto by such committees. For such purpose, the chairman of the Board of Directors shall organise and coordinate the aforementioned evaluation process with the chair of each committee. The following section reports on the evaluation process during financial year 2018.

3. REMOVAL OF DIRECTORS

Directors shall serve in their position for a term of four (4) years, so long as the shareholders acting at the General Shareholders' Meeting do not resolve to remove them and they do not resign from their position.

The Appointments Committee shall inform the Board of Directors regarding proposed removals due to breach of the duties inherent to the position of director or due to a director becoming affected by supervening circumstances of mandatory resignation or withdrawal. In addition, the Committee may propose the removal of directors in the event of disqualification, structural conflict of interest, or any other reason for resignation or withdrawal, pursuant to law or the Company's Corporate Governance System.

The Board of Directors may propose the removal of an independent director before the passage of the period provided for in the By-Laws only upon sufficient grounds, evaluated by the Board of Directors after a report from the Appointments Committee, or as a consequence of takeover bids, mergers, or other similar corporate transactions resulting in a significant change in the structure of the Company's share capital, as recommended by the Good Governance Code of Listed Companies.

C.1.17 Explain how the annual evaluation of the Board has given rise to significant changes in its internal organisation and to procedures applicable to its activities:

Description of changes
<p>The Iberdrola group has an on-going commitment to the development of its corporate governance. Along these lines, Iberdrola evaluates the operation of its governance bodies on an annual basis, and based on the conclusions obtained, identifies the principal areas of work for the coming year.</p> <p>More than 98% of the work areas defined in the evaluation process from the prior year were met during 2018. Specifically, significant advancements were made in the following areas:</p> <p>Composition of the governance bodies:</p> <ul style="list-style-type: none"> - Appointment of Mr Juan Manuel González Serna as lead independent director (<i>consejero coordinador</i>). - Appointment of Ms Inés Macho Stadler as vice-chair of the Board of Directors. - Staggered renewal of the Board of Directors, with the appointment of Mr Anthony L. Gardner, who has a profile aligned with the

needs specified in the renewal planning matrix for the Board of Directors.

- Strengthening of the checks-and-balances system with the appointment of CEOs at the country subholding companies.

Operation:

- Preparation of an orientation programme for new directors.
- Implementation within the Audit and Risk Supervision Committee of the recommendations contained in Technical Guide 3/2017 on audit committees at public-interest entities.
- Allocation of new talent management and promotion powers to the Appointments Committee.
- Approval of a new *Director Remuneration Policy* at the 2018 General Shareholders' Meeting.
- Preparation of a comparative analysis of the remuneration of the executive directors with the support of an external adviser.
- Inclusion of the SDGs approved by the UN in more than 30 corporate policies and rules of the Corporate Governance System.

Stakeholder engagement:

- Contact by the lead independent director with shareholders of the Company.
- Continuous analysis of the main issues raised by the shareholders and other stakeholders.
- Expansion of the information published regarding shareholder engagement, describing the main issues discussed with the shareholders at the corporate governance roadshows.
- Iberdrola's joining the *Task force on Climate Related Financial Disclosure* initiative.

Describe the evaluation process and the areas evaluated by the Board of Directors with the help, if any, of external advisors, regarding the function and composition of the board and its committees and any other area or aspect that has been evaluated.

Description of the evaluation process and evaluated areas

The Board of Directors evaluates its performance on an annual basis. The evaluation of the chairman & CEO was led by the lead independent director. The process concluded at the meeting of the Board of Directors held on 19 February 2019, which approved the results of the evaluation of financial year 2018 and the Continuous Improvement Plan for financial year 2019.

In order to align the Company with best international practices, it was decided to hire PricewaterhouseCoopers Asesores de Negocios, S.L. ("PwC") as an external adviser in the evaluation process.

The evaluation process verifies compliance with legal provisions and the Company's Corporate Governance System. It also includes a comparative analysis covering more than 20 domestic and international companies and monitors the most advanced corporate governance trends. In addition, it evaluates the achievement of the areas of work identified in the evaluation from the prior year.

The evaluation also serves as an instrument to perfect corporate governance practices, as it allows for identification of opportunities for

improvement that are specified in the Continuous Improvement Plan. The conclusions of the evaluation process reflect compliance with the indicators relating to mandatory legal rules and regulations and an alignment of more than 95% with the comparative analysis, with the latest international trends and with the implementation of the areas for improvement identified during prior years.

The Continuous Improvement Plan 2019 deriving from the evaluation process focuses on continuing to advance in three areas, principally:

- Strengthening supervision in critical areas, like the monitoring of factors that could eventually involve major changes in strategy, performance or the environment in which the Company competes.
- Continuing to adopt best international practices on the operation of consultative committees.
- Reviewing new developments arising from the CNMV's draft Technical Guide on Nomination and Remuneration Committees and identifying actions for greater implementation thereof.

C.1.18 Describe, in those years in which the external advisor has participated, the business relationships that the external advisor or any group company maintains with the company or any company in its group.

Iberdrola has been assisted by an outside consultant for the last 9 years. In 2017 and 2018, business relations with PwC came to an aggregate of 10.7 million euros and 11.2 million euros, respectively. The amount of billing by PwC for advising the Board of Directors and the Office of the Secretary thereof in 2018 was 500,000 euros.

C.1.19 State the situations in which directors are required to resign.

Directors must submit their resignation from the position and formally resign from their position upon the occurrence of any of the instances of disqualification from or prohibition against performing the duties of director provided by law or by Iberdrola's Corporate Governance System.

In this connection, the Regulations of the Board of Directors provide that the directors must submit their resignation to the Board of Directors in the following cases:

- a) When, due to supervening circumstances, they are involved in any circumstance of disqualification or prohibition provided by law or the Corporate Governance System.
 - b) When, as a result of any acts or conduct attributable to the director, serious damage is caused to the value or reputation of the Company or there is a risk of criminal liability for the Company or any of the companies of the group.
 - c) When they cease to deserve the respectability or to have the capability, expertise, competence, availability or commitment to their duties required to be a director of the Company.
- In particular, when the activities carried out by the director, or the companies directly or indirectly controlled by the director, or the individuals or legal entities that are shareholders of or related to any of them, or the individual representing a corporate director, may

- compromise the competence of the director.
- d) When they are seriously reprimanded by the Board of Directors because they have breached any of their duties as directors, by resolution adopted by a two-thirds majority of the directors.
 - e) When their continuance in office on the Board of Directors may for any reason, either directly, indirectly, or through persons related thereto, jeopardise the faithful and diligent performance of their duties in furtherance of the corporate interest.
 - f) When the reasons why the director was appointed cease to exist and, in particular, in the case of proprietary directors, when the shareholder or shareholders who proposed, requested, or decided the appointment thereof totally or partially sell or transfer their equity interest, with the result that such equity interest ceases to be significant or sufficient to justify the appointment.
 - g) When an independent director unexpectedly falls under supervening circumstances that prevent the director from being considered as such pursuant to the provisions of law.

The resignation provisions set forth under f) and g) above shall not apply when, after a report from the Appointments Committee, the Board of Directors believes that there are reasons that justify the director's continuance in office, without prejudice to the effect that the new supervening circumstances may have on the classification of the director.

C.1.20 Are qualified majorities other than those established by law required for any specific decision?

Yes ☒ X

No ☐

If so, please describe any differences.

Description of differences
<p>The Regulations of the Board of Directors require a majority of at least two-thirds of the directors present at the meeting in person or by proxy to approve the amendment thereof.</p> <p>The serious reprimand of a director for having breached any of the duties entrusted thereto as director under the Regulations of the Board of Directors requires a majority of two-thirds of the directors.</p>

C.1.21 Explain whether there are any specific requirements, other than those relating to directors, to be appointed as chairman of the Board of Directors.

Yes ☐

No ☒ X

Description of requirements

C.1.22 State whether the Articles of Association or the Board Rules establish any limit as to the age of directors:

Yes ☐

No ☒

	Age limit
Chairman	
CEO	
Directors	

Remarks
Each of the non-executive directors has undertaken to tender their resignation to the Board of Directors at the first meeting it holds after they reach seventy years of age or twelve years as a director of the Company.

C.1.23 State whether the Articles of Association or the Board Rules establish any term limits for independent directors or other more stringent requirements in addition to those established by law:

Yes ☐

No ☒

Additional requirements and/or maximum number of term limits	
--	--

C.1.24 State whether the Articles of Association or Board Rules establish specific rules for granting proxies to other directors at Board meetings, how they are to be delegated and, in particular, the maximum number of proxies that a director may have, as well as if there is any limit regarding the category of director to whom a proxy may be granted beyond the limitations imposed by law. If so, please briefly describe the rules.

Pursuant to the By-Laws, all of the directors may cast their vote and give their proxy in favour of another director, provided, however, that non-executive directors may only do so in favour of another non-executive director. The Regulations of the Board of Directors require that directors attend the meetings of the Board of Directors. When directors are unable to attend in person for well-founded reasons, they shall endeavour to give a proxy to another director, to whom they shall give any appropriate instructions, but may not grant a proxy in connection with matters in respect of which they are involved in a conflict of interest.

The proxy granted shall be a special proxy for the Board meeting in question and may be communicated by any means allowing for the receipt thereof.

There is no maximum number of proxies provided per director.

C.1.25 State the number of meetings held by the Board of Directors during the year, and if applicable, the number of times the Board met without the chairman present. Meetings where the chairman sent specific proxy instructions are to be counted as attended.

Number of Board meetings	8
Number of Board meetings without the chairman	

Remarks

State the number of meetings held by the coordinating director with the other directors, where there was neither attendance nor representation of any executive director:

Number of meetings	1
--------------------	---

Remarks
Pursuant to the provisions of art. 45 of the By-Laws, the lead independent director coordinates, meets with and reflects the concerns of the non-executive directors, and also directs the periodic evaluation of the chairman of the Board of Directors and leads any process for the succession thereof. In the exercise of these powers, the lead independent director has had meetings with the non-executive directors and, in particular, contacted all of the independent directors, who unanimously resolved to propose the re-election of the chairman & CEO.

Please specify the number of meetings held by each committee of the Board during the year:

Number of meetings held by the Executive Committee	15
Number of meetings held by the Audit and Risk Supervision Committee	12
Number of meetings held by the Appointments Committee	6
Number of meetings held by the Remuneration Committee	6
Number of meetings held by the Sustainable Development Committee	7

Remarks
The Appointments Committee adopted resolutions in writing and without a meeting on three occasions. The Remuneration Committee adopted resolutions in writing and without a meeting on two occasions.

C.1.26 State the number of meetings held by the Board of Directors during the year and information regarding the attendance of its members:

Number of meetings with the attendance of at least 80% of the directors	8
% personal attendance of total votes during the year	100.00
Number of meetings with all directors attending in person or by proxy with specific instructions	8
% of votes cast in person and by proxy with specific instructions of all votes cast during the year	100.00

Remarks
The attendance of each and every one of the directors at the meetings of the Board of Directors and its committees during financial year 2018 is detailed in the Annex to this Report.

C.1.27 State if the individual and consolidated financial statements submitted to the Board for preparation were previously certified:

Yes ☒ No ☐

Identify, if applicable, the person/s who certified the individual and consolidated financial statements of the company for preparation by the Board:

Name	Position
Mr José Ignacio Sánchez Galán	Chairman & CEO
Mr Juan Carlos Rebollo Liceaga	Administration and Control Director

Remarks
The Iberdrola Group has established a certification process by which those responsible for financial information in the different areas of the Company certify that: (i) the financial information they deliver to Iberdrola for purposes of consolidation does not contain any material errors or omissions and provides a fair view of the results and the financial condition within their area of responsibility, and (ii) they are responsible for establishing the ICFRS within their area of responsibility and have found, upon evaluation, that the system is effective. The text of these

certifications is inspired by the form of certification established in section 302 of the U.S. Sarbanes-Oxley Act.

The culmination of the process is a joint certification that the chairman & CEO and the director of Administration and Control submit to the Board of Directors.

The process is carried out by means of electronic signature in a software application which manages the areas of responsibility and time periods and which serves as a repository of all the documentation generated, allowing for periodic review by the supervision and control bodies of the Group.

C.1.28 Explain any measures established by the Board of Directors to prevent the individual and consolidated financial statements prepared by the Board from being submitted to the General Shareholders' Meeting with a qualified audit opinion.

The Regulations of the Audit and Risk Supervision Committee provide that it shall have the following duties, among others:

- Supervise the process of preparing and presenting regulated financial information relating to the Company, both individual and consolidated with its subsidiaries, reviewing compliance with legal requirements, the proper delimitation of the scope of consolidation and the correct application of accounting standards, and submit recommendations or proposals to the Board of Directors to safeguard the integrity thereof.
- Establish appropriate relationships with the statutory auditor to receive information regarding matters that might entail a threat to the independence thereof, for examination by the Committee, and any other information related to the development of the audit procedure, as well as such other communications as are provided for in the laws on statutory audit and in other legal provisions on auditing. The Committee must receive written confirmation from the statutory auditors on an annual basis of their independence in relation to the Company or entities directly or indirectly related thereto, as well as a detailed breakdown of information on additional services of any kind provided to and the corresponding fees received from such entities by such statutory auditors or by persons or entities related thereto, pursuant to the legal provisions governing the auditing of accounts.
- On an annual basis, prior to the audit report, issue a report that will express an opinion on whether the independence of the statutory auditors is compromised, which shall be made available to the shareholders upon the terms set forth in the Regulations for the General Shareholders' Meeting. This report shall contain a reasoned assessment of the provision of each and every one of the additional services other than the legal audit referred to in the preceding point, considered individually and as a whole, and in relation to the rules on independence or the legal provisions regarding the statutory audit.
- Report in advance to the Board of Directors regarding the financial information that the Company must disclose on a regular basis because of its status as a listed company; the Committee shall make sure that the interim accounts are prepared in accordance with the same accounting standards as the annual accounts and, for such purpose, it shall consider the appropriateness of a limited review by the statutory auditor.
- Review the contents of the audit reports on the accounts and of the

<p>reports on the limited review of interim accounts, if any, as well as other mandatory reports to be prepared by the statutory auditor, prior to the issuance thereof, in order to avoid qualified reports.</p> <ul style="list-style-type: none"> - Evaluate the results of each audit of accounts and supervise the responses of the senior officers to the recommendations thereof. - Act as a channel of communication between the Board of Directors and the statutory auditors, causing them to hold an annual meeting with the Board of Directors to report thereto on the work performed and the accounting status and risks of the Company. <p>In turn, the Regulations of the Board of Directors provide that:</p> <ul style="list-style-type: none"> - The Board of Directors shall meet with the statutory auditors at least once per year in order to receive information regarding the work performed and regarding the accounting status and risks of the Company. - The Board of Directors shall use its best efforts to definitively prepare the accounts such that there is no room for qualifications by the statutory auditors. However, if the Board of Directors believes that its opinion must prevail, it shall provide a public explanation of the content and scope of the discrepancy. <p>Pursuant to the above-cited rules, the Audit and Risk Supervision Committee reports on the economic/financial information of the Company throughout the financial year and prior to the approval thereof by the Board of Directors and its submission to the National Securities Market Commission (<i>Comisión Nacional del Mercado de Valores</i>). The reports of the Committee, which the chair thereof presents to the full Board of Directors, are mainly intended to disclose such aspects, if any, as may give rise to qualifications in the audit report of Iberdrola and its consolidated group, making the appropriate recommendations to avoid any such qualifications.</p> <p>Accordingly, the Committee submitted to the Board of Directors the following reports regarding the annual and half-yearly financial reports and the interim management statements of the Company for financial year 2018:</p> <ul style="list-style-type: none"> - Report dated 23 April 2018 on the Interim Management Statement for the first quarter of 2018. - Report dated 23 July 2018 on the economic/financial information for the first half of 2018. - Report dated 22 October 2018 on the Interim Management Statement for the third quarter of 2018. - Report dated 18 February 2019 regarding the annual accounts of Iberdrola and its consolidated group for financial year 2018. <p>As disclosed in the information about Iberdrola posted on the website of the National Securities Market Commission (www.cnmv.es), the audit reports on the individual and consolidated annual accounts prepared by the Board of Directors have historically been issued without qualifications.</p>	
---	--

C.1.29 Is the secretary of the Board also a director?

Yes ☐

No ☒

If the secretary is not a director, please complete the following table:

Name of the secretary	Representative
Mr Julián Martínez-Simancas	

Remarks

C.1.30 State, if any, the concrete measures established by the entity to ensure the independence of its external auditors, financial analysts, investment banks, and rating agencies, including how legal provisions have been implemented in practice.

MECHANISMS TO PRESERVE THE INDEPENDENCE OF THE AUDITOR.

The Regulations of the Audit and Risk Supervision Committee and the Statutory Auditor Contracting and Relations Policy, contained within the Company's Corporate Governance System, provide that:

- The relations of the Committee with the statutory auditor of the Company shall respect the independence thereof, in accordance with the provisions of the Corporate Governance System.
- The Audit and Risk Supervision Committee must discuss with the statutory auditor any circumstance that might give rise to a threat to the independence thereof and evaluate the effectiveness of the protective measures adopted, as well as understand and evaluate the set of relationships between the Iberdrola group and the statutory auditor and its network that entail the provision of non-audit services or any other type of relationship.
- The Committee shall ask the statutory auditor to provide an annual certification of independence of the firm as a whole and of the members of the team participating in the process of auditing the annual accounts of the Iberdrola group from the Company or entities directly or indirectly connected thereto, as well as a detailed breakdown of information regarding additional services (other than auditing) of any kind provided by the statutory auditor or by persons connected thereto, pursuant to the law on statutory audit. In addition, the statutory auditor shall include in such certification a statement in which it reports on compliance with the application of the internal procedures of quality assurance and protection of independence that have been implemented.
- The statutory auditor shall provide to the Committee annual information regarding the profiles and the track record of the persons making up the audit teams of the Company and of the Iberdrola group, stating the changes in the composition of such teams compared to the immediately preceding financial year.
- On an annual basis and prior to the issuance of the audit report, the Committee shall issue a report setting forth an opinion on the independence of the statutory auditor. This report must contain an assessment of the possible impact on the independence of the statutory auditor of each and every one of the additional services (other than the legal

audit) of any kind provided by the statutory auditor or by persons connected thereto, considered individually and as a whole.

- The Committee shall monitor the quality assurance and independence safeguarding internal procedures implemented by the statutory auditor.
- The Committee shall not submit a proposal to the Board of Directors, and the Board of Directors shall not submit a proposal to the shareholders at the General Shareholders' Meeting, for appointment as statutory auditor of firms for which it has evidence that they are affected by any circumstance of lack of independence, prohibition or disqualification pursuant to the legal provisions governing the audit of accounts, and in any event if the fees that the Company intends to pay it for any and all services are greater than five percent of its total domestic income during the last financial year.
- The Committee shall receive information on the hiring by any of the companies of the Iberdrola group of professionals coming from the statutory auditor.

The Audit and Risk Supervision Committee has also established a restrictive policy on the services provided by the statutory auditor to the Iberdrola group that are susceptible to being authorised. As regards 2018:

- Iberdrola's statutory auditor, "KPMG Auditores, S.L" ("KPMG") appeared on fifteen occasions before the Audit and Risk Supervision Committee and on one occasion before the Board of Directors to report on various matters relating to the audit process. During these appearances, the statutory auditor did not report issues that might put its independence at risk.
- On 19 February 2018 KPMG sent to the Committee written confirmation of its independence with regard to the audit of the economic/financial information for financial year 2017.
- On 19 July 2018 KPMG sent to the Committee written confirmation of its independence with regard to the limited review of the economic/financial information until 30 June 2018.
- On 18 February 2019 KPMG sent to the Committee written confirmation of its independence with regard to the audit of the economic/financial information for financial year 2018.
- In the letters described above, the statutory auditor represents that it has implemented internal policies and procedures designed to reasonably ensure that KPMG and its personnel maintain their independence when so required by applicable legal provisions.
- The hiring of the statutory auditor for services other than auditing is approved in advance by the Committee. Furthermore, prior to approval thereof, the director of the Audit Area, and if necessary the audit committee and internal audit division of the group company receiving the services, must state that the provision thereof does not generate threats to the independence of the statutory

auditor. In requests for services directed by the Committee, the statutory auditor must confirm that there are no restrictions on independence for the performance of the work in question.

- In its statement of independence of 18 February 2019, KPMG reported that it had no evidence that any member of the teams participating in the audit of the financial statements for financial year 2018 had joined as an employee of Iberdrola or of its related companies.
- On 18 February 2019 the Committee submitted its report to the Board of Directors regarding the independence of the Company's statutory auditor. The Committee concluded that the statutory auditor performed its audit work with independence from Iberdrola or entities related thereto.

MECHANISMS TO PRESERVE THE INDEPENDENCE OF FINANCIAL ANALYSTS, INVESTMENT BANKS, AND RATING AGENCIES.

The principles which form the basis of the relations of the Company with financial analysts, investment banks, and rating agencies are contained in the Policy regarding Communication and Contacts with Shareholders, Institutional Investors, and Proxy Advisors and are transparency, non-discrimination, truthfulness, and trustworthiness of the information supplied. The Finance and Resource Division, through the Investor Relations Division, manages their requests for information and requests submitted by institutional or retail investors (in the case of retail investors, through the Office of the Shareholder). The Finance and Resource Division gives mandates to investment banks. The Development Division gives the appropriate advisory mandates to investment banks within the scope of its activities, in coordination with the Finance and Resource Division.

The independence of financial analysts is protected by the Investor Relations Division, which ensures the objective, fair, and non-discriminatory treatment thereof.

To actualise the principles of transparency and non-discrimination, always in strict compliance with regulations regarding the Securities Market, the Company has a number of communication channels:

- Personalised assistance for analysts, investors, and rating agencies.
- Publication of the information relating to quarterly results and other specific events, such as those relating to the submission of the Business Prospects or to corporate transactions.
- E-mail through the corporate website (accionistas@iberdrola.com) and a toll-free line for shareholders (+34 900 100 019).
- In-person and broadcasted presentations.
- Release of announcements and news.
- Visits to Company facilities.

C.1.31 State whether the company changed its external auditor during the year. If so, please identify the incoming and outgoing auditor:

(ii) Yes ☐
No ☒

Outgoing auditor	Incoming auditor

Remarks

If there were any disagreements with the outgoing auditor, please provide an explanation:

Yes ☐ No ☒

Explanation of disagreements

C.1.32 State whether the audit firm provides any non-audit services to the company and/or its Group and, if so, the fees paid and the corresponding percentage of total fees invoiced to the company and/or Group:

Yes ☐ No ☒

	Company	Group Companies	Total
Amount invoiced for non-audit services (thousand euros)			
Amount invoiced for non-audit services/Amount for audit work (in %)			

Remarks

C.1.33 State whether the auditors' report on the financial statements for the preceding year contains a qualified opinion or reservations. If so, please explain the reasons given to the shareholders at the General Meeting by the chairman of the audit committee to explain the content and extent of the aforementioned qualified opinion or reservations.

Yes ☐

No ☒

Explanation of reasons

C.1.34 State the number of consecutive years the current audit firm has been auditing the financial statements of the company and/or group. Furthermore, state the number of years audited by the current audit firm as a percentage of the total number of years that the financial statements have been audited:

	Individual	Consolidated
Number of consecutive years	2	2

	Individual	Consolidated
Number of years audited by the current audit firm/number of fiscal years the company or its group has been audited (by %)	7.69%	7.69%

Remarks

C.1.35 State whether there is a procedure whereby directors have the information necessary to prepare the meetings of the governing bodies with sufficient time and provide details if applicable:

Yes ☒

No ☐

Explanation of procedure
Section 16 of the General Corporate Governance Policy provides that "the Company has a programme to provide directors with information and updates in response to the need for

professionalisation, diversification and qualification of the Board of Directors.

In order to improve their knowledge of the group, presentations are made to the directors regarding the businesses thereof. In addition, a portion of each meeting of the Board of Directors tends to be dedicated to a presentation on economic, legal or political/social issues of importance to the group.

The directors have access to a specific application, the directors' website, that facilitates performance of their duties and the exercise of their right to receive information. This website includes information deemed appropriate for preparation of the meetings of the Board of Directors and the committees thereof in accordance with the agenda, as well as training materials intended for the directors and presentations made to the Board of Directors.

In addition, the directors shall be given access through the directors' website to the minutes of the meetings of the Board of Directors and the committees thereof, as well as to any other information that the Board of Directors decides to include".

Pursuant to the Regulations of the Board of Directors, there shall be an inclusion on the directors' website of such information as is deemed appropriate for preparation of the meetings of the Board of Directors and the committees thereof, in accordance with the agenda included in the calls to meeting, as well as access to materials relating to director training programmes.

In addition, the Regulations of the Board of Directors provide that a director is specifically required to "properly prepare the meetings of the Board of Directors and, if applicable, the meetings of the Executive Committee or of the committees of which the director is a member, for which purposes the director must diligently become apprised of the running of the Company and the matters to be discussed at such meetings".

C.1.36 State whether the company has established rules whereby directors must provide information regarding and, if applicable, resign, in circumstances that may damage the company's standing and reputation. If so, provide details:

Yes ☒ x

No ☐ □

Explain the rules

The General Corporate Governance Policy sets out the obligations and duties of the directors, including, as a statement of the duty of loyalty, the duty to submit their resignation to the Board of Directors in the event of supervening disqualification, lack of competence, prohibition against holding office as a director, and other instances

provided for in the Company's Corporate Governance System.

As provided by the Regulations of the Board of Directors, the director must inform the Company of any judicial, administrative or other proceedings instituted against the director which, because of their significance or characteristics, may seriously reflect upon the reputation of the Company. In particular, if a director is subject to investigation or an order for further criminal prosecution upon indictment, or if an order for the commencement of an oral trial will be issued against the director for the commission of any of the crimes contemplated in section 213 of the Companies Act, such director shall give notice thereof to the Company, through the chairman of the Board of Directors. In such instance, the Board of Directors shall review this circumstance as soon as practicable and, following a report of the Appointments Committee, shall adopt the decisions it deems fit taking into account the interests of the Company.

In addition, the director must inform the Company of any fact or event that may be relevant to the holding of office as a director.

Directors must also submit their resignation to the Board of Directors and formally resign from their position in the events set forth in the Regulations of this body, particularly:

- a) When, due to supervening circumstances, they are involved in any circumstance of disqualification or prohibition provided by law or the Corporate Governance System.
- b) When, as a result of any acts or conduct attributable to the director, serious damage is caused to the value or reputation of the Company or there is a risk of criminal liability for the Company or any of the companies of the Group.
- c) When they cease to deserve the respectability or to have the capability, expertise, competence, availability, or commitment to their duties required to be a director of the Company.
- d) In particular, when the activities carried out by the director, or the companies directly or indirectly controlled by the director, or the individuals or legal entities that are shareholders of or related to any of them, or the individual representing a corporate director, may compromise the competence of the director.
- e) When they are seriously reprimanded by the Board of Directors because they have breached any of their duties as directors, by resolution adopted by a two-thirds majority of the directors.
- f) When their continuance in office on the Board of Directors may for any reason, either directly, indirectly, or through persons related thereto, jeopardise the faithful and diligent performance of their duties in furtherance of the corporate interest.
- g) When the reasons why the director was appointed cease to exist and, in particular, in the case of proprietary directors, when the shareholder or shareholders who proposed,

requested, or decided the appointment thereof totally or partially sell or transfer their equity interest, with the result that such equity interest ceases to be significant or sufficient to justify the appointment.

- h) When an independent director unexpectedly falls under supervening circumstances that prevent the director from being considered as such pursuant to the provisions of law.

In any of the aforementioned instances, the Board of Directors shall request the director to resign from such position and, if applicable, shall propose the director's removal from office to the shareholders at the General Shareholders' Meeting.

By way of exception, the resignation provisions set forth in letters f) and g) above shall not apply if the Board of Directors believes that there are reasons that justify the director's continuance in office, after a report of the Appointments Committee, without prejudice to the effect that the new supervening circumstances may have on the classification of the director.

C.1.37 State whether any member of the Board of Directors has notified the company that he or she has been tried or notified that legal proceedings have been filed against him or her, for any offences described in Article 213 of the LSC:

Yes ☒

No ☐

Name of director	Criminal charge	Remarks
Mr Ángel Jesús Acebes Paniagua	Alleged crime of false accounting as an independent director of Bankia, S.A.	Commencement of oral criminal trial ordered against various directors of Bankia, S.A., including Mr Acebes Paniagua, on 17 November 2017 by Central Investigative Court (<i>Juzgado Central de Instrucción</i>) number 4 of the National High Court (<i>Audiencia Nacional</i>).

State whether the Board of Directors has examined the case. If so, explain in detail the decision taken as to whether the director in question should continue in his or her post or, if applicable, describe any actions taken by the Board up to the date of this report, or which it intends to take.

(iii) Yes ☒ X
No ☐

Decision/Action taken	Explanation
It was considered that Mr Ángel Acebes met the criteria set out in the Regulations of the Board of Directors to continue holding the position of director.	Both the Office of the Public Prosecutor (<i>Ministerio Fiscal</i>) and the Fund for the Orderly Restructuring of the Banking Sector (<i>Fondo de Reestructuración Ordenada Bancaria</i>) (FROB) requested dismissal of the case against him.

C.1.38 Detail any material agreements entered into by the company that come into force, are modified or are terminated in the event of a change in control of the company following a public takeover bid, and their effects.

Not applicable

C.1.39 Identify individually for directors, and generally in other cases, and provide detail of any agreements made between the company and its directors, officers or employees providing severance payments or golden parachutes in the event of resignation or unfair dismissal or termination of employment due to a takeover bid or any other type of transaction.

Number of beneficiaries	31
Type of beneficiary	Executive directors and officers
Description of agreement	<p>1. EXECUTIVE DIRECTORS</p> <p>Pursuant to the provisions of his contract, the chairman & CEO has the right to receive a severance payment in the event of termination of his relationship with the Company, provided that such termination is not the consequence of a breach attributable thereto or exclusively due to his own decision to withdraw. The amount of the severance payment is three times annual salary. In the case of the Business CEO, the severance is two times annual salary.</p> <p>Furthermore, in consideration for the executive directors' non-compete commitment for a period of between one and two years, they shall be entitled to severance pay equal to the remuneration for such period.</p>

	<p>2. OFFICERS</p> <p>Some employment contracts with officers of Iberdrola include specific severance clauses. The purpose of such clauses is to obtain an effective and sufficient level of loyalty for the management of the Company and thus avoid a loss of experience and knowledge that might jeopardise the achievement of strategic objectives, more so for positions deemed to decisively contribute to the creation of value due to the responsibilities entailed thereby. The amount of the severance pay is determined based on length of service and the reasons for the officer's withdrawal from office, up to a maximum of five times annual salary.</p> <p>Notwithstanding the foregoing, the Senior Officer Remuneration Policy provides since 2011 that the limit on the amount of the severance pay under new contracts with senior officers shall be two times their annual salary.</p>
--	---

State if these contracts have been communicated to and/or approved by management bodies of the company or of the Group. If they have, specify the procedures, events and nature of the bodies responsible for their approval or for communicating this:

	Board of Directors	General Shareholders' Meeting
Body authorising the severance clauses	X	

	YES	NO
Are these clauses notified to the General Shareholders' Meeting?	X	

Remarks

C.2 Committees of the Board of Directors

C.2.1 Provide details of all committees of the Board of Directors, their membership, and the proportion of executive, proprietary, independent and other external directors that comprise them:

EXECUTIVE COMMITTEE

Name	Position	Category
Mr José Ignacio Sánchez Galán	Chair	Executive
Ms Inés Macho Stadler	Member	Other external
Mr Ángel Jesús Acebes Paniagua	Member	Independent
Mr Manuel Moreu Munaiz	Member	Independent
Ms Samantha Barber	Member	Independent

% of executive directors	20
% of independent directors	60
% of other external directors	20
Remarks	

Explain the duties exercised by this committee, other than those that have already been described in Section C.1.10, and describe the rules and procedures it follows for its organisation and function. For each one of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions attributed thereto by law, the Articles of Association or other corporate resolutions.

The Executive Committee is assigned all the powers of the Board of Directors, except for those powers that may not be delegated pursuant to legal or by-law restrictions. The chairman of the Board of Directors and the chief executive officer, if any, are members in all cases. The secretary of the Board of Directors acts as secretary of the Committee.

The Executive Committee shall meet as many times as deemed necessary by the chair thereof. It shall also meet when so requested by a minimum of two of the directors forming part thereof.

Resolutions of the Committee shall be adopted by absolute majority of its members who are present at the meeting in person or by proxy.

The duties of this Committee consist of making proposals to the Board of Directors regarding strategic decisions, investments and divestitures that are significant for the Company or the group, assessing their conformity to the budget and the strategic plans and analysing and monitoring business risks. It also provides assistance to the Board of Directors in the ongoing supervision of compliance with the principles governing the organisation and coordination of the group and the strategic goals thereof.

The most relevant activities performed during the financial year by this Committee are described in the Activities Report of the Board of Directors and of the Committees thereof, available at www.iberdrola.com.

AUDIT AND RISK SUPERVISION COMMITTEE

Name	Position	Category
Ms Georgina Kessel Martínez	Chair	Independent
Ms Denise Holt	Member	Independent
Mr José W. Fernández	Member	Independent
Mr Xabier Sagredo Ormaza	Member	Other external

% of independent directors	75.00
% of other external directors	25.00

Remarks

Explain the duties exercised by this committee, describe the rules and procedures it follows for its organisation and function. For each one of these functions, briefly describe its most important actions during the year and how it has exercise in practice each of the functions attributed thereto by law, in the Articles of Association or other corporate resolutions.

The Audit and Risk Supervision Committee is an internal informational and consultative body.

A majority of its members shall be independent, and at least one of them shall be appointed taking into account the knowledge and experience thereof in the areas of accounting, audit, and risk management.

The Board of Directors shall appoint a chair of the Committee from among the independent directors forming part thereof, as well as its secretary, who need not be a director.

The members of the Audit and Risk Supervision Committee shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length. The chair shall hold office for a maximum period of four years, after which period the director who has held office as such may not be re-elected until the passage of at least one year from ceasing to act as such.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.

The duties of the Committee are provided and are further developed in the Regulations of the Board of Directors, as well as in the Regulations of the Audit and Risk Supervision Committee.

The most relevant activities performed during the financial year by this Committee are described in the Activities Report of the Board of Directors and of the Committees thereof, available at www.iberdrola.com.

Identify the directors who are member of the audit committee and have been appointed taking into account their knowledge and experience in accounting or audit matters, or both, and state the date that the Chairperson of this committee was appointed.

Name of directors with experience	Ms Georgina Kessel Martínez
Date of appointment of the chairperson	17/12/2015

Remarks

APPOINTMENTS COMMITTEE

Name	Position	Category
Ms María Helena Antolín Raybaud	Chair	Independent

Mr Iñigo Victor de Oriol Ibarra	Member	Other external
Mr Ángel Jesús Acebes Paniagua	Member	Independent

% of independent directors	66.67
% of other external directors	33.33

Remarks

Explain the duties exercised by this committee, describe the rules and procedures it follows for its organisation and function. For each one of these functions, briefly describe its most important actions during the year and how it has exercise in practice each of the functions attributed thereto by law, in the Articles of Association or other corporate resolutions.

The Appointments Committee is an internal informational and consultative body.

A majority of the members of the Appointments Committee must be classified as independent. The Board also appoints the chair thereof from among the independent directors forming part thereof, as well as its secretary, who need not be a director.

The members of the Appointments Committee shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.

The duties of the Committee are further developed in the Regulations of the Board of Directors, as well as in the Regulations of the Appointments Committee.

The most relevant activities performed during the financial year by this Committee are described in the Activities Report of the Board of Directors and of the Committees thereof, available at www.iberdrola.com.

REMUNERATION COMMITTEE

Name	Position	Category
------	----------	----------

Mr Juan Manuel González Serna	Chair	Independent
Ms Inés Macho Stadler	Member	Other external
Mr Manuel Moreu Munaiz	Member	Independent

% of independent directors	66.67
% of other external directors	33.33

Remarks

Explain the duties exercised by this committee, describe the rules and procedures it follows for its organisation and function. For each one of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions attributed thereto by law, the Articles of Association or other corporate resolutions.

The Remuneration Committee is an internal informational and consultative body.

A majority of the members of the Remuneration Committee must be classified as independent. The Board also appoints the chair thereof from among the independent directors forming part thereof, as well as its secretary, who need not be a director.

The members of the Remuneration Committee shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.

The duties of the Committee are further developed in the Regulations of the Board of Directors, as well as in the Regulations of the Remuneration Committee.

The most relevant activities performed during the financial year by this Committee are described in the Activities Report of the Board of Directors and of the Committees thereof, available at www.iberdrola.com.

SUSTAINABLE DEVELOPMENT COMMITTEE

Name	Position	Category
Ms Samantha Barber	Chair	Independent
Mr Anthony L. Gardner	Member	Independent
Mr Iñigo Victor de Oriol Ibarra	Member	Other external

% of independent directors	66.67
% of other external directors	33.33

Remarks

Explain the duties exercised by this committee, describe the rules and procedures it follows for its organisation and function. For each one of these functions, briefly describe its most important actions during the year and how it has exercised in practice each of the functions attributed thereto by law, the Articles of Association or other corporate resolutions.

The Sustainable Development Committee is an internal informational and consultative body.

A majority of the members of the Sustainable Development Committee must be classified as independent. The Board of Directors shall appoint a chair of the Committee from among the members forming part thereof, as well as its secretary, who need not be a director.

The members of the Sustainable Development Committee shall be appointed for a maximum term of four years and may be re-elected on one or more occasions for terms of the same maximum length.

A valid quorum shall be established with the attendance at the meeting, in person or by proxy, of a majority of its members, and resolutions shall be adopted by an absolute majority of votes of the members present at the meeting in person or by proxy.

The duties of the Committee are set out in the Regulations of the Board of Directors, as well as in the Regulations of the Sustainable Development Committee.

The most relevant activities performed during the financial year by this Committee are described in the Activities Report of the Board of Directors and of the Committees thereof, available at www.iberdrola.com.

C.2.2 Complete the following table with information regarding the number of female directors who were members of Board committees at the close of the past four years:

	Number of female directors			
	Year t Number %	Year t-1 Number %	Year t-2 Number %	Year t-3 Number %
Executive Committee	2/40	2/40	1/20	1/20
Audit and Risk Supervision Committee	2/50	2/50	2/50	2/50
Appointments Committee	1/33	1/33	1/33	1/33
Remuneration Committee	1/33	1/33	1/33	1/33
Sustainable Development Committee	1/33	1/33	1/33	1/33

Remarks

C.2.3 State, where applicable, the existence of any regulations governing Board committees, where these regulations may be found, and any amendments made to them during the year. Also state whether any annual reports on the activities of each committee have been voluntarily prepared.

Each of the Committees has its own regulations, available at www.iberdrola.com, where one can also find the Activities Report of the Board of Directors and of the Committees thereof. The main amendments to their regulations during the year were the following:

- At the meeting of the Board of Directors held on 23 October 2018, the name of the Corporate Social Responsibility Committee was changed to Sustainable Development Committee. The Regulations of the Corporate Social Responsibility Committee were therefore amended to be called Regulations of the Sustainable Development Committee. The change included the strengthening of the powers of the committee with respect to monitoring the Iberdrola group's contribution to the achievement of the Sustainable Development Goals (SDGs) approved by the United Nations.

- At the same meeting, there was an amendment of the Regulations of the Appointments Committee in order to expand the powers of the Appointments Committee regarding talent management and promotion, mainly in relation to the executive directors and senior management. This committee was also assigned the duty of informing itself regarding the implementation of measures adopted at the Group level to recruit, retain, manage and promote talent, and particularly regarding the programmes for training and monitoring officers.
- Finally, the Regulations of the Audit and Risk Supervision Committee have been successively amended to clarify the powers of the Audit and Risk Supervision Committee with respect to the monitoring of investigations regarding financial and accounting improprieties, as well as the approval of the Basic Internal Audit Regulations and the General Framework for Relations of Coordination and Information among the Audit Committees of Iberdrola, S.A. and its group.

RELATED-PARTY AND INTRAGROUP TRANSACTIONS

D.1 Describe, if applicable, the procedure and competent bodies for approval of related-party and intragroup transactions.

The Regulations of the Board of Directors provide that:

1. Any transaction by the Company or the companies forming part of its Group with directors, with shareholders that directly or indirectly own a shareholding interest that is equal to or greater than that legally regarded as significant at any time or that have proposed or caused the appointment of any of the directors of the Company, or with the respective related persons ("Related-Party Transactions"), shall be subject to the approval of the Board of Directors, or in urgent cases, of the Executive Committee, following a report from the Appointments Committee.
2. In the event that authorisation has been granted by the Executive Committee due to the urgency of the matter, the Executive Committee shall give notice thereof to the Board of Directors at its next meeting in order for it to be ratified.
3. The authorisation of Related-Party Transactions must be approved by the shareholders at the General Shareholders' Meeting in the instances provided by law, and particularly if it relates to a transaction having a value of more than ten per cent of the corporate assets.
4. As an exception, Related-Party Transactions with any of the listed companies of the Group (as is the case of Avangrid, Inc.) or with the subsidiaries thereof shall not be subject to the provisions of article 43, provided that they have corporate governance rules similar to those of the Company.
5. The execution of a Related-Party Transaction puts the director engaging in said transaction or who is related to the person engaging in the transaction in a conflict of interest, for which reason the provisions of article 39 of the Regulations of the Board of Directors shall apply, to the

extent applicable.

6. The Board of Directors, through the Appointments Committee, shall ensure that Related-Party Transactions are carried out under arm's length conditions and with due observance of the principle of equal treatment of shareholders in the same situation. In the case of transactions to be carried out by companies of the Group, the scope of authorisation of the Board of Directors, or that of the Executive Committee, if applicable, referred to in the preceding sections, shall be limited to the verification of compliance with such particulars.
7. In the case of customary and recurring Related-Party Transactions in the ordinary course of business, it shall be sufficient for the Board of Directors to give prior generic approval of the kind of transaction and of the conditions for performance thereof, following a report from the Appointments Committee.
8. If a Related-Party Transaction entails the successive performance of different transactions, of which the second and subsequent transactions are mere acts of execution of the first transaction, the provisions of article 43 shall only apply to the first transaction carried out.
9. The authorisation shall not be required in connection with transactions that simultaneously satisfy the following three conditions: that they are conducted under contracts whose terms and conditions are standardised and apply on an across-the-board basis to a large number of customers; that they are conducted at prices or rates established generally by the party acting as supplier of the goods or services in question, and that the amount thereof does not exceed one per cent of the consolidated annual income of the Group.
10. The Company shall report Related-Party Transactions in the Half-Yearly Financial Report and in the Annual Corporate Governance Report, in the cases and to the extent provided by law. Likewise, the Company shall include in the notes accompanying the annual accounts information regarding the transactions by the Company or by the companies of the Group with the directors and with those persons who act for the account of the latter when such transactions are conducted other than in the ordinary course of the Company's business or other than under normal arm's length conditions.

To this end, the directors must give written notice to the secretary of the Board of Directors, on a semi-annual basis, within the first week of January and July of each year, regarding the Related-Party Transactions that they have engaged in. If they are not carried out, the directors shall so report. The secretary of the Board of Directors shall send a notice to the directors on a semi-annual basis requesting the appropriate information that must be sent to the Company.
11. The notice must include the following information: the nature of the transaction; the date on which the transaction originated; the conditions and periods for payment; the name of the person who carried out the transaction and the relationship, if any, with the director; the amount of the transaction; and other aspects, such as pricing policies, guarantees given and received, and any other feature of the transactions that allows for a proper assessment thereof, particularly such information as allows for verification that it has been carried out on arm's length conditions and in compliance with the principle of equal treatment.
12. The secretary of the Board of Directors shall prepare a register of Related-Party Transactions. The information set forth in such register shall be

made available to the Compliance Unit when it so requests, and shall also periodically be made available to the Audit and Risk Supervision Committee through the Management of the Internal Audit Area.

D.2 Describe any transactions which are significant, either because of the amount involved or subject matter, entered into between the company or entities within its group and the company's significant shareholders:

Name of significant shareholder	Name of company or entity within the group	Nature of the relationship	Type of transaction	Amount (thousand euros)
QATAR INVESTMENT AUTHORITY	IBERDROLA, S.A.	Corporate	Dividends and other distributed profits	2,766
QATAR INVESTMENT AUTHORITY	IBERDROLA Group	Corporate	Other	344

Remarks
<p>Transactions by shareholders exercising a significant influence on participation in the entity's financial and operating decisions, with significant influence being understood as having a member of the Board of Directors, are deemed to be related-party transactions.</p> <p>Shareholders who are able to exercise the proportional representation system due to their interest in the capital of the Company are also considered to have such influence.</p> <p>As of the date of this report, only Qatar Investment Authority meets this condition, for which reason the amounts reflected in the period refer to transactions with this shareholder.</p> <p>The amounts set forth as "profits and other dividends paid" correspond to the cash dividend distributed by the Company and to the free-of-charge allocation rights stemming from the two increases in share capital by means of a scrip issue approved by the shareholders at the General Shareholders' Meetings, which were sold to the Company at a guaranteed fixed price pursuant to the terms and conditions of such increases.</p>

D.3. Describe any transactions which are significant, either because of the amount involved or subject matter, entered into between the company or entities within its group and the directors or officers of the company:

Name of director or manager	Name of the related party	Relationship	Type of transaction	Amount (thousand euros)

Remarks

D.4 Report any material transactions carried out by the company with other entities belonging to the same group, provided that these are not eliminated in the preparation of the consolidated financial statements and do not form part of the company's ordinary business activities in terms of their purpose and conditions.

In any event, note any intragroup transaction conducted with entities established in countries or territories which are considered tax havens:

Name of entity within the group	Brief description of the transaction	Amount (thousand euros)

Remarks
Transactions with subsidiaries and companies in which the Company has an interest that have not been eliminated in the process of consolidation were made in the ordinary course of business of the Company, were carried out under arm's-length conditions, and are of little significance to accurately reflect the assets, financial condition and results of operations of the Company.

D.5 Describe significant transactions conducted with other related parties that have not been reported in the previous sections.

Name of the related party	Brief description of the transaction	Amount (thousand euros)
GAMESA GROUP	ACQUISITION OF ASSETS	218,602
GAMESA GROUP	PROCUREMENT	1,702
GAMESA GROUP	RECEIPT OF SERVICES	37,602

GAMESA GROUP	SALES	1,376
--------------	-------	-------

Remarks

D.6 Describe the mechanisms in place to detect, determine and resolve potential conflicts of interest between the company and/or its group and its directors, senior management or significant shareholders.

Pursuant to the Regulations of the Board of Directors, a conflict of interest shall be deemed to exist in those situations provided by law, particularly when the interests of the director, either for their own or another's account, directly or indirectly conflict with the interest of the Company or of companies within the Group and their duties to the Company. An interest of a director shall exist when a matter affects the director or a person related thereto or, in the case of a proprietary director, when it also affects the shareholder or shareholders that proposed or caused the appointment thereof or persons directly or indirectly related thereto.

Such article contains a list of persons deemed to be related for such purposes, distinguishing between an individual and a corporate director.

Conflicts of interest shall be governed by the following rules:

- a) Communication: once a director becomes aware of being in a situation of conflict of interest, the director must give written notice of the conflict to the Board of Directors, in the person of the secretary thereof. The secretary shall periodically submit a copy of the notices received to the Appointments Committee, in the person of the secretary thereof.

The notice shall contain a description of the situation giving rise to the conflict of interest, with a statement as to whether it is a direct conflict or an indirect conflict through a related person, in which case the latter person must be identified.

The description of the situation must include, as applicable, the subject matter and the principal terms of the transaction or the planned decision, including the amount thereof or an approximate financial assessment thereof. If the situation giving rise to the conflict of interest is a Related-Party Transaction (as this term is defined in article 43), the notice shall also identify the department or person of the Company or of any of the companies of the Group with which the respective contacts were made.

Any question as to whether a director might be involved in a conflict of interest must be forwarded to the secretary of the Board of Directors, and the director must refrain from taking any action until it is resolved.

- b) Abstention: if the conflict arises from an operation, transaction, or circumstance that requires any kind of operation, report, decision, or acceptance, the director must refrain from taking any action until the Board of Directors studies the case and adopts and informs the director of the appropriate decision.

To this end, the director shall leave the meeting during the deliberation and voting on those matters in which the director is affected by a conflict of interest, and shall not be counted in the number of members attending for purposes of the calculation of a quorum and majorities. At each meeting of the Board of Directors and of the committees thereof, the secretary reminds the directors, before dealing with the agenda, of the abstention rule established in this article.

- c) Transparency: whenever required by law, the Company shall report any cases of conflict of interest in which the directors have been involved during the financial year in question and of which the Company is aware by reason of notice given thereto by the director affected by such conflict or by any other means.

However, if the conflict of interest situation is, or may reasonably be expected to be, of a structural and permanent nature, it shall be deemed that there is a loss of the competence required to hold office. In this regard, the Regulations of the Board of Directors provide that a loss of competence is grounds for resignation, removal and cessation of the director.

Conflicts of interest with officers are subject to the same rules of communication, abstention and transparency.

Furthermore, transactions between companies forming part of the group with significant shareholders or shareholders that have proposed the appointment of any of the directors and their respective related persons are also dealt with in the Regulations of the Board of Directors mentioned in section D.1. They must be carried out on arm's-length conditions and be previously approved by the Board of Directors. Thus, approval by the shareholders at a General Shareholders' Meeting shall be required if the value of the transaction exceeds 10% of the corporate assets, and all transactions shall be reported in the Annual Corporate Governance Report and in the Annual Financial Report.

The Code of Ethics, which dedicates a specific section to conflicts of interest, applies to all professionals within the group, regardless of rank.

D.7 Is there more than one company in the group listed in Spain?

Yes ☐

No ☒

Identify the other companies that are listed in Spain and their relationship to the company:

Identity and relationship with other listed group companies

State if the respective areas of activity and business relationships between the listed companies have been defined publicly and precisely, as well as between the subsidiary and other members of the group;

Yes ☐

No ☐

Describe the business relationship between the parent and subsidiary listed companies as well as between the subsidiary and other members of the group

Identify measures taken to resolve potential conflicts of interest between the listed subsidiary and the other group companies:

Measures taken to resolve potential conflicts of interest

E RISK MANAGEMENT AND CONTROL SYSTEMS

E.1. Explain the scope of the company's Risk Management and Control System, including tax compliance risk.

The *General Risk Control and Management Policy* and the *Risk Policies* in further development thereof apply to all companies over which the Company has effective control, within the limits established in the legal provisions applicable to the companies of the Group that carry out Regulated activities in the various countries in which it has a presence.

These policies are implemented by means of a comprehensive risk control and management system, supported by a Risk Committee of the group and based upon a proper definition and allocation of duties and responsibilities at the operating level and upon supporting procedures, methodologies and tools, suitable for the various stages and activities within the system, including:

- a) The establishment of a structure of risk policies, guidelines, limits and indicators, as well as of the corresponding mechanisms for the approval, implementation and monitoring thereof, which effectively contributes to risks being managed in accordance with the Company's risk appetite.
- b) The ongoing identification of significant risks and threats, taking into account their possible impact on key management objectives and the accounts (including contingent liabilities and other off-balance sheet risks).
- c) The analysis of such risks, both at each corporate business or function and taking into account their combined effect on the group as a whole.
- d) The measurement and control of risks following homogeneous procedures and standards common to the entire group.
- e) The analysis of risks associated with new facilities, as an essential element in risk/return-based decision-making.
- f) The maintenance of a system for internal monitoring of compliance with policies, guidelines and limits, by means of appropriate procedures and systems, including the contingency plans needed to mitigate the impact of the materialisation of risks.

- g) The periodic monitoring and control of profit and loss account risks in order to control the volatility of the annual income of the group.
- h) The ongoing evaluation of the suitability and efficiency of applying the system and the best practices and recommendations in the area of risks for eventual inclusion thereof in the model.
- i) The audit of the system by the Internal Audit Division.

The foregoing is undertaken in accordance with the following main principles of conduct:

- a) Integrate the risk/opportunity vision into the Company's management, through a definition of the strategy and the risk appetite and the incorporation of this variable into strategic and operating decisions.
- b) Segregate functions, at the operating level, between areas that assume risks and areas responsible for the analysis, control and monitoring of such risks, ensuring an appropriate level of independence between them.
- c) Guarantee the proper use of risk-hedging instruments and the maintenance of records thereof as required by applicable law.
- d) Inform regulatory agencies and the principal external players, in a transparent fashion, regarding the risks facing the group and the operation of the systems developed to monitor such risks, maintaining suitable channels of communication.
- e) Ensure compliance with the Corporate Governance System and the update and continuous improvement thereof, in order to incorporate the best international practices as to transparency and good governance, and implement the monitoring and measurement thereof.
- f) Act at all times in compliance with the law and the Company's Corporate Governance System and, specifically, with due observance of the values and standards reflected in the *Code of Ethics* and the principles and good practices reflected in the *Corporate Tax Policy*, under the principle of "zero tolerance" for the commission of unlawful acts and situations of fraud set forth in the *Crime Prevention Policy* and in the *Anti-Corruption and Anti-Fraud Policy*.

The listed country subholding companies (like Avangrid, Inc.) and those with significant interests held by other partners (like Neoenergia, S.A.) have their own risk policies approved by their competent bodies pursuant to their own special framework of strengthened autonomy, which are aligned with those of the group.

At those companies in which the Company has an interest but which do not belong to the group, the Company shall promote principles, guidelines, and risk limits consistent with those established in the *General Risk Control and Management Policy* and in its supplemental *Risk Policies* and shall maintain appropriate channels of information to ensure a proper understanding of risks.

Iberdrola believes that its comprehensive risk control and management system operates on a comprehensive and continuous basis, strengthening such management by business unit or activity, subsidiaries, geographic areas and corporate-level support areas.

E.2. Identify the bodies within the company responsible for creating and executing the Risk Management and Control System, including tax compliance risk.

1. BOARD OF DIRECTORS

In the area within its purview, and with the support of the Audit and Risk Supervision Committee, it must use develop all of its capabilities in order for the significant risks to all the activities and businesses of the group to be adequately identified, measured, managed and controlled, and to establish through the *General Risk Control and Management Policy* the mechanisms and basic principles for appropriate management of the risk/opportunity ratio. By virtue thereof, it defines the risk strategy and profile of the group and approves the *Risk Policies*.

2. EXECUTIVE COMMITTEE

In order to conform the impact of the risks to the established appetite, the Executive Committee of the Board of Directors, upon the proposal of affected business or corporate divisions and after a report from the group's Risk Committee, annually reviews and, if appropriate, approves the specific guidelines regarding the risk limits provided for in the *Corporate Risk Policies*. In the case of the *Treasury Share Policy*, the Executive Committee can also approve limits additional to those provided for in this policy.

3. AUDIT AND RISK SUPERVISION COMMITTEE.

As a consultative body of the Board of Directors, it has the following powers, among others, relating to the internal risk control and management systems:

- Directly supervise the Corporate Risk Division and maintain an appropriate relationship therewith and with the audit and compliance committees of the other companies of the group.
- Continuously review the internal risk control and management systems, such that the principal risks are properly identified, managed and reported.
- Supervise the effectiveness of the internal risk control and management systems, formulating proposals for improvement.
- Obtain information regarding any significant deficiency in internal control that the statutory auditor detects while carrying out its audit work.
- Ensure that the group's risk control and management system identifies at least:
 - the various risk factors that the Company faces;
 - the establishment and review of the risk map and levels that are deemed acceptable;
 - the means identified in order to mitigate the potential impact any of the identified risks in the event they transpire; and
 - the internal control and information systems to be used in order to control and manage such risks.
- Promote (within the limits of its purview) a culture in which risk is a factor that is taken into account in the decisions of the Company.
- Identify and evaluate emerging risks, like those arising from technological, climactic, social and regulatory risks, as well as existing alert mechanisms, periodically evaluating the effectiveness thereof.
- Receive annual visits from the heads of the businesses of the group in order for them to report on the trends of their respective businesses and the risks associated therewith.
- Report in advance on the risks of the group to be included in the Company's *Annual Corporate Governance Report*.
- Receive information from the Company's tax director regarding the tax standards applied by the Company during the financial year, and particularly regarding the level of compliance with the *Corporate Tax Policy*.

4. BOARDS OF DIRECTORS AND AUDIT AND COMPLIANCE COMMITTEES OF COUNTRY SUBHOLDING AND HEAD OF BUSINESS COMPANIES

The country subholding companies adopt the risk policies of the group and define the application thereof, approving guidelines on specific risk limits based on the nature and particularities of the businesses in each country. The Audit and Compliance Committees of such companies shall report to the Board of Directors on the internal risk control and management systems.

The management decision-making bodies of the head of business companies of each country must approve the specific risk limits applicable to each of them and implement the control systems necessary to ensure compliance therewith.

In the case of the head of real estate business company, Iberdrola Inmobiliaria, S.A. (Sociedad Unipersonal), the Audit and Compliance Committee thereof shall report to the Board of Directors regarding the internal risk control and management systems.

Pursuant to their special framework of strengthened autonomy, Avangrid, Inc. and Neoenergia, S.A. have

their own risk policies, which are aligned with those of the group.

5. GROUP RISK COMMITTEE

The Risk Committee of the Iberdrola group is a technical committee that is chaired by the CFO and that performs executive duties in the customary management of risks as well as provides advice to the governance bodies of the group.

The committee meets at least once a month, with the participation of the group's Risk Management Directors, the risk directors of the businesses and corporate areas that have such a figure, the Internal Audit Division and the Administration and Control Division.

The committee reviews the evolution of the various risks and issues the *Quarterly Risk Report of the group*, which includes the main risk positions, the report on compliance with the risk limits and indicators, and the update of the key risks map.

The group's Risk Committee is supplemented by the Credit Risk and Market Risk committees, which report to the former, and which meet on a monthly basis to discuss and decide on credit and market (financial and commodities) risks.

E.3. State the primary risks, including tax compliance risks, and those deriving from corruption (with the scope of these risks as set out in Royal Decree Law 18/2017), to the extent that these are significant, which may affect the achievement of business objectives

The group is subject to various risks inherent in the different countries, industries and markets in which it does business and in the activities it carries out, which may prevent it from achieving its objectives and successfully implementing its strategies.

In the section "Principal risks and uncertainties" of the Management Report of the *Annual Financial Report* for financial year 2018, there is a detailed description of the principal risks associated with the activities of the main businesses of the group, as well as the risks of the corporation.

Due to the universal and dynamic nature thereof, the comprehensive risk system allows for the consideration of new risks that could affect the group as a consequence of changes in the environment or revisions of objectives and strategies, as well as updates based on the monitoring, verification, review and supervision activities that are performed on a continuous basis.

Pursuant to the definitions established by the *General Risk Control and Management Policy*, risks at the group level are classified as follows:

- a) **Corporate Governance Risks:** the Company accepts the need to achieve the fulfilment of the corporate interest and the sustained maximisation of the economic value of the Company and its long-term success, in accordance with the group's corporate interest, culture and corporate vision, taking into account the legitimate public and private interests that converge in the conduct of all business activities, particularly those of the various Stakeholders and communities and regions in which the Company and its employees act.
- b) **Market Risks:** understood as the exposure of the group's results and net worth to changes in prices and other market variables, such as exchange rates, interest rates, commodity prices (electricity, gas, CO₂ emission allowances, other fuel, etc.), prices of financial assets, and others.
- c) **Credit Risks:** defined as the possibility that a counterparty fails to perform its contractual obligations, thus causing an economic or financial loss to the group. Counterparties can be end customers, counterparties in financial or energy markets, partners, suppliers or contractors.
- d) **Business Risks:** defined as the uncertainty regarding the performance of key variables inherent in the various activities of the group through its businesses, such as the characteristics of demand, weather conditions and the strategies of different players.
- e) **Regulatory and Political Risks:** are those arising from regulatory changes made by the various regulators, such as changes in compensation of regulated activities or in the required conditions of supply, or in environmental or tax regulations, including risks relating to political changes that might affect legal security and the legal framework applicable to the businesses of the group in each

jurisdiction, nationalisation or expropriation of assets, the cancellation of operating licences and the termination of government contracts.

- f) **Operational, Technological, Environmental and Social Risks:** are those related to direct or indirect economic losses resulting from external events, inadequate internal procedures, technical failures, human error and/or fraud, including those associated with climate change, information technologies, cybersecurity and the risk of technological obsolescence.
- g) **Reputational Risks:** potential negative impact on the value of the Company resulting from conduct on the part of the Company that is below the expectations created among various stakeholders, as defined in the *Stakeholder Relations Policy*.

Iberdrola has a Compliance System made up of a set of substantive rules, formal procedures and significant actions intended to ensure that conduct is in accordance with ethical principles and applicable law, preventing, avoiding and mitigating the risk of conduct that is improper or contrary to ethics or the law by professionals of Iberdrola within the organisation. The bodies and divisions directly entrusted with the implementation and further development thereof also form part of this system.

Elements of the system include the *Code of Ethics* (which is applicable to all professionals of the group, board members and suppliers) and the Compliance Unit, a collective permanent and internal body linked to the Sustainable Development Committee of the Board of Directors of Iberdrola, which, among other things, spreads a preventive culture based on the principle of "zero tolerance" towards the commission of illegal acts or improper conduct. The system has been designed following the best domestic and international practices in the area of compliance, fraud prevention and the fight against corruption. For more details on these risks, please see the section "Risk Evaluation" (205-1) of the *2018 Sustainability Report*, as well as the *Integrated Report* and other sections of this *Annual Corporate Governance Report*.

E.4. State whether the entity has a risk tolerance level, including tolerance for tax compliance risk.

The Company's Board of Directors reviews and approves the risk tolerance level that is acceptable for the group on an annual basis. The *General Risk Control and Management Policy*, together with the policies that further develop and supplement it, qualitatively and quantitatively establish the annually accepted risk appetite, in a sufficiently detailed manner, both at the group level and at the level of each of its principal businesses and corporate functions.

By way of complement, the Administration and Control Division, after considering such limits and guidelines, in order to verify the risk globally assumed in the annual profit and loss account, engages in a comprehensive probability analysis of the global risk remaining for the financial year at the time of approving the annual budget.

In addition, all new multi-annual plans are accompanied by their corresponding analysis of associated risk.

The *General Risk Control and Management Policy* is further developed and supplemented through the following policies, which are also subject to approval by the Company's Board of Directors, and which include the following risk limits and indicators:

Corporate Risk Policies:

- *Corporate Credit Risk Policy*
- *Corporate Market Risk Policy*
- *Operational Risk in Market Transactions Policy*
- *Insurance Policy*
- *Investment Policy*
- *Financing and Financial Risk Policy*

- *Treasury Share Policy*
- *Risk Policy for Equity Interests in Listed Companies*
- *Information Technologies Policy*
- *Cybersecurity Risk Policy*
- *Reputational Risk Framework Policy*
- *Procurement Policy*

Risk policies for the various businesses of the group:

- *Risk Policy for the Networks Businesses of the Iberdrola Group*
- *Risk Policy for the Renewable Energy Businesses of the Iberdrola Group*
- *Risk Policy for the Liberalised Businesses of the Iberdrola Group*
- *Risk Policy for the Real Estate Business*

The *General Risk Control and Management Policy*, as well a summary of the risk policies in further implementation thereof, are available on the corporate website.

The limits and indicators of the risk policies should be consistent with the annual budget and the objectives set forth in the multi-annual investment plans. The numeric values of the limits and indicators set forth in the various policies are probabilistic in nature (like VaR and EBITDA at risk) or deterministic in nature, and are expressed in monetary units, indices or benchmarks based on which volumetric risks and/or values are generated, including:

- limits on the maximum overall credit risk exposure by type of counterparty;
- limitations on market risk proportional to the volume of activity of each business;
- strict overall limit on the discretionary trading of energy;
- limitations on operational risk through preventative maintenance programmes and assurance programmes; and
- strict limitations on activities not associated with the main energy business.

The *Corporate Tax Policy* establishes the limits on tax risk by setting the tax strategy, the principles of conduct and the good tax practices assumed by the Company.

As described above, the Iberdrola group has a risk tolerance level (acceptable risk level) established at the corporate level, which is annually approved by the Board of Directors and its Executive Committee. The group's Risk Committee, the Operating Committee, the Audit and Risk Supervision Committee, the businesses, the corporate functions, the Administration and Control Division and the Risk Management Division also participate in the process.

E.5. State which risks, including tax compliance risks, have materialised during the year.

The activities of the Iberdrola Group during 2018 have been subject to various risk factors occurring in the countries and markets in which it operates, and on a global basis have not had a significant impact on the results for the financial year, thanks to the diversification of activities, markets and geographic areas in which the group is present, which has allowed for the negative effects of some businesses to be offset with favourable behaviour in others.

During the financial year, the group was negative affected by events described below, although they have been offset by the following positive events:

- The recovery in 2018 of average prices in the international markets for coal (+14%), natural gas (+32%), CO₂ trading rights (+171%) and oil (+37%), with the resulting positive impact on final electricity prices.

- The recovery of hydroelectric production in Spain in 2018 to levels close to those of an average year, with a 70% increase in production over 2017.
- The publication in November by the National Markets and Competition Commission (*Comisión Nacional de los Mercados y la Competencia*) (the “**CNMC**”) of a proposed methodology for calculating the financial remuneration rate for transmission and distribution and renewable generation for the upcoming regulatory period (2020-2025), with rates as at the date of publication of 5.58% and 7.09%, respectively.
- The approval of Royal Decree-Law 1/2019, of 11 January, on urgent measures to adapt the powers of the CNMC to the requirements of EU law, which transfers to this body powers to determine remuneration for the transmission and distribution of electricity and gas beginning with the upcoming regulatory period (2020).
- The publication by the Ministry for Ecological Transition at the end of the year of a draft law that, among other things, proposes that renewables facilities before Royal Decree-law 9/2013 maintain their current remuneration (7.389%) for the next two regulatory periods, of 6 years each.
- The approval in April 2018, on terms favourable to the group, of 5-year remuneration frameworks for the Brazilian distributors Companhia de Electricidade do Estado do Bahia, S.A. (Coelba) and Companhia Energética do Rio Grande do Norte, S.A. (Cosern), with a WACC of 8.09%. The remuneration frameworks will neutralise the main uncertainties associated with network subsidiaries of the group in the coming years;

The risks that have materialised include:

- The adverse regulatory and market environment faced by the retail electricity and gas business in the United Kingdom, with the entry into force of a system for setting maximum prices for customers under the “Standard Variable Tariff” mode.
- During financial year 2018 updates were made to the provisions recorded in relation to pending arbitrations commenced at the end of certain of the projects of Iberdrola Ingeniería y Construcción S.A (Sociedad Unipersonal).

Finally, it should be noted that activities during financial year 2019 and later will be affected by the following risk factors:

- The potential impact of a progressive withdrawal of the monetary stimulus programme of the European Central Bank, with the resulting risk of interest rate increases.
- Uncertainty regarding the final outcome of the exit of the United Kingdom from the European Union, and its impact on the macroeconomic conditions of the country and on the pound/euro exchange rate.
- Uncertainties arising from potential trade wars resulting from the protectionist policies introduced by the new government administration of the United States of America.
- The evolution of commodities and electricity prices in the various countries in which the group operates.
- The annual change in hydraulic or wind resources for the production of electricity at the renewable generation plants of the group.
- Increased competition in the unrestricted market in Spain as a result of the entry of significant new players.
- The final review of the parameters to establish remuneration in Spain for the regulated networks and renewable generation businesses, which will enter into force on 1 January 2020.
- The effects of potential changes that may be implemented in the Spanish electricity market and the potential establishment of a scheduled closing of the nuclear plants and coal plants.
- The capacity for implementation of major current investment plans, especially new offshore wind projects, in terms of cost and timing.

- The opportunities/risks that might arise as a result of changes in government in Mexico and Brazil after the general elections held in 2018.
- The risks associated with cybersecurity.

The risks associated with the conventional generation business in the United Kingdom have ceased after the divestment by the group of its assets in this segment through the sale of “Scottish Power Generation, Ltd.” to the Drax group.

E.6. Explain the response and monitoring plans for all major risks, including tax compliance risks, of the company, as well as the procedures followed by the company in order to ensure that the board of directors responds to any new challenges that arise.

The Comprehensive Risk System, together with the control and management policies of the Company that implement them, including the group's Risk Committee and the Company's Operating Committee, have allowed for the identification of risks and new threats sufficiently in advance, as well as for establishing appropriate mitigation plans.

The Company's Operating Committee meets on an approximately weekly basis.

The group's Risk Committee, which reviews the evolution of the various risks, meets on a monthly basis, and on a quarterly basis issues the *Quarterly Risk Report of the Group*, which includes the main risk positions, the report on compliance with policies and limits approved, and the update of the key risks map.

On at least a quarterly basis, the Audit and Risk Supervision Committee of the Board of Directors supervises the evolution of the Company's risks:

- It reviews the group's Quarterly Risk Report submitted by the group's Risk director.
- It coordinates and reviews the Risk Report submitted on a regular basis (at least half-yearly) by the audit and compliance committees of the country subholding and head of business companies of the group.
- On at least a half-yearly basis, it prepares a Risk Report for the Board of Directors.

F. INTERNAL RISK MANAGEMENT AND CONTROL SYSTEMS RELATED TO THE PROCESS OF PUBLISHING FINANCIAL INFORMATION (ICFR)

Describe the mechanisms comprising the System of Internal Control over Financial Reporting (ICFR) of your company.

F.1. Control environment

Report on at least the following, describing their principal features:

F.1.1. The bodies and/or departments that are responsible for (i) the existence and maintenance of an adequate and effective ICFR; (ii) their implementation; and (iii) their supervision.

Iberdrola's Board of Directors is ultimately responsible for implementing and maintaining a proper and effective internal control over financial information (“ICFR”) system. The Boards of Directors of the country subholding companies and head of business companies also have this responsibility within their various purviews.

The heads of the country subholding companies and of the head of business companies, together with their respective heads of control, as well as the directors of the global corporate areas, are in turn responsible for the design and implementation of the ICFR system. This responsibility is explicitly set forth

in the certifications that said persons sign on a half-yearly basis in relation to the financial information for their respective areas of responsibility.

Pursuant to article 31.6.d of the *Regulations of the Board of Directors*, the Audit and Risk Supervision Committee (hereinafter, “**ARSC**”) is responsible for supervising the effectiveness of the internal control of the Company and of its group, as well as the risk management systems thereof. Article 31.6.f also provides that the duties of the ARSC include that of supervising the process of preparing and presenting mandatory financial information and submitting recommendations or proposals to the Board of Directors to protect the integrity of this information. The ARSC relies on the Internal Audit Area to carry out these responsibilities. Any audit committees at the country subholding and head of business companies have these powers within their respective purviews.

F.1.2. State whether the following are present, especially if they relate to the creation of financial information:

- **Departments and/or mechanisms in charge of: (i) design and review of corporate structure; (ii) clear definition of lines of responsibility and authority with an adequate distribution of tasks and functions; and (iii) assurance that adequate procedures exist for proper communication throughout the entity.**

The Board of Directors of Iberdrola defines the organisational structure at the first level. The heads of these top-level organisations, together with the Human Resources and General Services Division, implement the deployment within their respective purviews.

Each top-level division prepares a proposed organisational structure, including a description of the mission, duties and responsibilities of the various organisations deployed, which must subsequently be validated by the Human Resources and General Services Division, as well as by the Finance and Resources Division.

The main responsibility for preparing financial information lies with the corporate Administration and Control Division. This division proposes the structure of heads of Control of the country subholding and head of business companies and deals with coordinating and supervising the conduct thereof.

- **Code of conduct, the body approving this, degree of dissemination and instruction, including principles and values, (state if there is specific mention of transaction recording and creation of financial information), a body charged with analysing breaches and proposing corrective actions and sanctions.**

The Iberdrola group has a *Code of Ethics* that was first approved by the Board of Directors in financial year 2002, and that is regularly reviewed and updated. In its latest revision, in October 2018, the *Code of Ethics* included within its scope of application the directors of Iberdrola, who until then had been governed by the now-repealed *Directors’ Code of Ethics*, which contemplated principles and rules analogous to those of the *Code of Ethics*.

According to article A.2.1 thereof, “*the principles and guidelines for conduct contained in the Code of Ethics apply to all directors, including natural persons who appoint corporate directors to represent them in the performance of their duties, to professionals and to suppliers of the companies of the Group, regardless of their rank, their geographical location or functional reporting, or the Group company to which they provide their services*”.

The *Code of Ethics* is communicated and disseminated among the professionals of the Iberdrola group in accordance with the plan approved annually for this purpose by the Compliance Unit, which provides for various initiatives in the area of training (both on-line and in-person) and communication, addressed to the various groups of employees based on their exposure to Compliance risks.

The *Code of Ethics*, which includes informational transparency among its general ethical principles and principles on relations with Iberdrola’s Stakeholders, expressly states the following in article B.6.:

“1. *The Group shall provide true, proper, useful and consistent information regarding its programmes and actions. The transparency of the information required to be disclosed is a basic principle that must govern*

the conduct of all directors, professionals and suppliers of the Group.

2. The economic/financial information of the Group (especially the annual accounts) shall faithfully reflect its economic and financial position and its net worth, in accordance with generally accepted accounting principles and applicable international financial reporting standards. For such purposes, no directors, professional or supplier shall conceal or distort the information set forth in the accounting records and reports of the Group, which shall be complete, accurate and truthful.

3. A lack of honesty in the communication of information, whether internally within the Group (to professionals, subsidiaries, departments, internal bodies, management decision-making bodies, etc.) or outside the Group (to auditors, shareholders and investors, regulatory entities, the media, etc.) is a breach of the Code of Ethics. This includes delivering incorrect information, organising it in an incorrect manner or seeking to confuse those who receive it'.

The Compliance Unit, which is a collective permanent and internal body linked to the Sustainable Development Committee (previously called the Corporate Social Responsibility Committee) of Iberdrola, controls the effective operation of the Company's Compliance System, with powers in the area of regulatory compliance. The duties of the Unit include ensuring the application of the *Code of Ethics* and of the other rules of the group in the compliance area, and the spread of a preventive culture based on the principle of "zero tolerance" towards the commission of unlawful acts. It also approves the *General Compliance System Framework of the Iberdrola group*, which contains the basic principles of structure and operation of the group's Compliance System as well as the duties and responsibilities of the various bodies involved. The Unit also evaluates and prepares an annual report on the effectiveness of the Compliance System of the Company and of the other companies of the group. The report is submitted to the Sustainable Development Committee, which issues its opinion and forwards it to the Board of Directors.

The Compliance Unit is also in charge of determining whether a professional of Iberdrola, S.A. has engaged in activities that violate the provisions of law or the *Code of Ethics*, and if applicable, for tasking the Human Resources and General Services Division to apply disciplinary measures in accordance with the offences and penalties system set forth in the collective bargaining agreement to which the professional belongs or in applicable labour law. The Compliance divisions of the other companies of the group perform this same function at each of them.

Pursuant to article F.6.1 thereof, directors, professionals of the companies of the group and the suppliers thereof expressly accept the rules of conduct established in the *Code of Ethics* that are applicable thereto.

Pursuant to article F.6.2, professionals who hereafter join or become part of the group and suppliers contracting with companies of the group shall also expressly accept the rules of conduct to which they are subject as set forth in sections D (for professionals of the group) and E (for suppliers), respectively, of the *Code of Ethics*. For this purpose, a literal extract of the corresponding section in each case is attached to their respective contracts.

Likewise, directors shall receive a complete copy of the *Code of Ethics*, for which they shall deliver a signed receipt.
