EDP results are materially impacted by one-off impacts in both 2017 and 2018, which materially distort YoY comparison: in 2017, +€268m in total, mainly driven by portfolio reshuffling and impairments in Iberia; in 2018, -€277m in total, mainly driven by an administrative decision on retroactive CMEC resulting in a one-off €285m provision booked in 3Q18 (full details on page 4). Excluding all the one-offs and the de-consolidation of gas distribution operations, **recurring net profit increased by 3% YoY, to €797m in 2018**, as market improvement in Iberia and Brazil outstood the effect from adverse regulatory developments in Portugal (announced in 4Q17), and particularly weak wind resources vs. LT average. Regulatory changes in Iberia (mostly in Portugal) dented net profit by €151m (excluding additional non-recurring after tax cost of €208m).

In 2018, EDP continued to implement its growth strategy focused on renewables and Brazil. **Total installed capacity reached 27.2 GW in Dec-18**, following the commissioning of 825 MW of new wind capacity, combined with the first sell down of a controlling stake in wind farms and the disposal of some mini-hydro plants in Portugal and Brazil. **By Dec-18, 74% of EDP installed capacity is renewables (hydro, wind and solar PV)**. Also worth to note is the increase in equity-method capacity to 920 MW in Dec-18: 539 MW of hydro capacity in Brazil (+0.2 GW YoY) and 371 MW of wind capacity (the first asset rotation deal of a majority stake: +40 MW).

In terms of **total production, the weight of renewables advanced 10 p.p. YoY, to 66% in 2018**. EDP keeps focused in improving customers' satisfaction, the quality of service provided and enhancing customers engagement, leveraging on its **customers portfolio of 11.5 million** contracts spread throughout Iberia and Brazil.

EBITDA in 2018 reached €3,317m. Excluding the contribution from Iberian gas networks disposed over the 2H17 and one-off impacts (as per page 3), recurring EBITDA fell 3% (-€96m) YoY, to €3,287m in 2018, as underlying growth was hampered by the negative forex impact in the period: -5% or -€163m, prompted by BRL and, to a lower extent, USD depreciation vs. the Euro. In 2018, EBITDA performance further reflected the positive effect from i) hydro recovery to normalised level (despite very poor 4Q18) and strong OPEX performance in Iberia, ii) strong underlying growth in Brazil (local currency) and iii) benefits from portfolio expansion, particularly in wind capacity (+6% on average). These positives were nevertheless offset by regulatory cuts in Portugal (-€210m YoY recurring), low wind resources (6% below P50 in 2018 and at 6-year low record in 2H18, over 10% below average) and lower revenue per MWh in wind.

On efficiency, OPEX (staff + supplies & services costs; excluding staff restructuring costs) excluding forex increased 1% YoY. By main division, OPEX in **Iberia** decreased 3%, Core OpeX/avg. MW at EDPR rose by 2% YoY and local currency OPEX at EDP **Brazil** grew 3%, 1pp short of inflation.

Net financial results (including equity results) **improved by 32% YoY (+€254m), to -€543m in 2018**, including a steady improvement in interest costs (-9% YoY) prompted by a lower average cost of debt (from 4.1% in 2017 to 3.8% in 2018) and the decrease of avg. debt (-10% or -€1.7bn YoY).

Net debt was down from €13.9bn in Dec-17 to €13.5bn in Dec-18. Recurring organic cash flow generated in 2018 (€1.2bn) more than covered the €0.7bn dividend payment to shareholders plus €0.4bn net debt reduction, while net expansion activity (€0.4bn) and one-off cash flow items were balanced with tariff deficit sales (contribution to a €0.6bn reduction in regulatory receivables).

EDP Executive Board of Directors will submit to the upcoming ASM (April 24th) a proposal for the distribution of €0.19 dividend per share as to 2018 fiscal year.

(1) Including Wind, Solar, Hydro and mini-hydro capacity; (2) CESE: Extraordinary contribution from the energy sector; (3) Excluding one-off impacts as per page 3 (EBITDA) and page 4 (Net profit); In 2017, it excludes the contribution from Gas distribution in Iberia (€140m on EBITDA; €75m on net profit); (4) OPEX = Supplies and services + Personnel costs + Costs with social benefits; (5) Net of regulatory receivables; Based on trailing 12 months recurring EBITDA and net debt excluding 50% of hybrid bond issue (including interest).

EBITDA Breakdown

EBITDA (€ m)	2018	2017	Δ %	Δ Abs.	1Q17	2Q17	3Q17	4Q17	1Q18	2Q18	3Q18	4Q18	4Q18 YoY Δ %	Δ Abs.

Recurring EBITDA	3,287	3,383	-3%	-96	953	835	783	812	911	829	688	858	6%	46

Consolidated EBITDA amounted to €3,317m in 2018. Excluding the contribution from Iberian gas networks disposed over the 2H17 (€140m in 2017) and the one-off impacts^(*), **recurring EBITDA fell 3% (-€96m) YoY, to €3,287m in 2018**, largely impacted by the adverse forex impact (-5% or -€163m, mainly due to BRL depreciation vs. the Euro) and weaker-than-average wind resources (-€69m vs. normalised year). In 2018, growth drivers of EBITDA included i) hydro recovery and strong OPEX performance in Iberia, ii) strong underlying growth in Brazil and iii) benefits from portfolio expansion. Nevertheless, such positives were overshadowed by regulatory cuts in Portugal (-€210m YoY recurring) and low wind resources (particularly in 3Q18 and 4Q18: 11% and 12% below the LT average, respectively).

WIND & SOLAR POWER (39% of EBITDA) – EBITDA was 5% lower YoY (-€66m), at €1,300m in 2018, penalised by i) -€36m forex impact (due to USD and BRL depreciation), ii) weak wind resources in 2018 (6% below LT average), iii) avg. selling price -7% YoY Ex-forex, following lower green certificates revenues and the mix effect from new MWs (mainly in US, Brazil); and iv) expiration of the 10-year period PTCs in some wind farms in US (-€51m). These impacts outstood the effect from the 6% increase in avg. capacity and the gain on the first sell down transaction, corresponding to the upfront monetisation of value accretion of 499 MW built to sell and operate.

GENERATION & SUPPLY IN IBERIA (22% of EBITDA) – EBITDA advanced by 37% YoY to €762m, penalised by one-off effects (-€33m in 2018 vs. -€13m in 2017). **Recurring EBITDA increased 40% YoY, to €796m in 2018**, propelled by higher hydro contribution to the production mix (39% share in total production in 2018 vs. 22% in 2017, following improved hydro conditions) and higher selling prices, which more than compensated the adverse impact from weak thermal spreads and poor energy management results, due to the hedge position closed in 2017. Hydro resources improved from 53% below-the-average in 2017 to 5% above-the-average in 2018, although the seasonally strongest quarters (1Q and 4Q) were particularly weaker than average: hydro resources in 4Q18 fell 36% short of historical average.

REGULATED NETWORKS IN IBERIA (19% of EBITDA) – Excluding gas distribution in Iberia and restructuring costs (as per page 18), **EBITDA fell by 23% YoY, to €636m in 2018**, largely impacted by: (i) in Portugal (77% of total), the new regulatory terms applicable to electricity distribution and LRS as from 1-Jan-18 (-€164m YoY) which was only partially compensated by tight cost control; and (ii) in Spain (23% of total), our prudent approach to possible regulatory changes, even ahead of the end of the current regulatory period, in 2020.

BRAZIL (20% of EBITDA) - EBITDA was 6% higher YoY, to €649m in 2018, despite the adverse change of the BRL vs. the EUR (-16% YoY, -€127m impact). EBITDA in 2018 includes the gain booked in the sale of mini-hydros^(*), net of €7m restructuring costs). Adjusted for these, **local currency recurring EBITDA was up 12%, to R\$2,472m in 2018**, mainly reflecting: i) in **distribution (+7% YoY or +R\$56m)**, better operational performance; and ii) in **generation**, the successful portfolio integrated management (leading to a GSF impact net of hedging of R\$151m in 2018) and the revision of Pecém contracted availability.

(*) *Non-recurring items: (i) +€467m in 2017, resulting from the net impact of the sale of gas distribution business in Spain and Portugal (+€574m); regulatory-driven provisions in Generation & supply (-€35m) and Regulated networks (-€42m); RH restructuring costs (-€30m); (ii) +€31m in 2018, net impact of the sale of mini-hydro plants Brazil (+€82m), and 2H17's share of the impact from the difference between CMEC final adjustment recognised in Dec-17 and approved by the Government on May 3rd (-€18m), restructuring costs (-€34m).*

(1) Adjustments for one-off impacts^(*) and to exclude the 2017 contribution from Gas distribution in Iberia; (2) Includes Poland, Romania, France, Belgium, Italy and UK.

Amortisation and impairments fell by 14% YoY, to €1,445m in 2018, impacted by last year's impairments (€257m, mostly in coal plants in Iberia and EDPR), by the de-consolidation of gas distribution (€19m in 2017) and forex (-€43m). In 2018, amortisation and impairment charges reflect the impact from new capacity additions in the last 12 months and impairments in 4Q18 (€24m in coal plants in Iberia and €7m at EDPR).

On 26-Sep-18, DGEG notified EDP about an Order of the Secretary of State for Energy (SSE), from 29-Aug-18, quantifying at €285m the financial impact of an alleged overcompensation of the CMECs (details on page 11). Considering that the dispatch lacks legal, economic technical basis, EDP has taken necessary actions to protect its interests and rights. Although EDP considers that there were no innovative features weighted in the annual adjustments or in the final adjustment of the CMEC, a €285m provision was booked in 3Q18. As a result, total **provisions** amounted to €288m in 2018.

Net financial results amounted to -€554m in 2018 (+31% YoY). **Net interest expense improved by 9% YoY**, to €626m in 2018 supported by lower average debt in 2018 (-10% or €1.7bn YoY); better funding conditions and past years' liability management, gathering a 30bps YoY decline in the avg. cost of debt (from 4.1% in 2017 to 3.8% in 2018). These effects were smoothed by higher one-off costs mostly related to early debt prepayment: -€39m in 2018 vs. -€27m in 2017. **Capitalised financial expenses**, at €34m in 2018, are mainly related to new renewable capacity under construction and regulated networks. **Capital gains** (€113m in 2018) refer to the sale of our stake in Bioeletrica biomass plant in Portugal (€24m) vs. €25m in 2017 (sale of a stake in REN). It further includes the impact from the sale of some stakes in our UK (totalling 43%) and France (13.5%) offshore projects (totalling €87m). **Other financial results** in 2018 include the goodwill arising from the acquisition of a stake in Celesc (+€18m in 2018) and higher financial guarantees in Brazil.

(1) Includes unwinding of medium, long term liabilities (regarding dismantling & decommissioning provision for wind assets, TEIs and Alqueva/Pedrogão concessions) and interest on medical care and pension fund liabilities.

Share of net profit in joint ventures and associates was broadly stable at €11m in 2018, reflecting the mixed impact from contribution of CELESC (23.6% stake built up during 2018; +€6m on equity contribution) and early stage of operations at our hydro plants in Brazil. (Details on page 28).

Income taxes amounted to €100m (+€89m YoY). Note that excluding the major tax effect of €285m provision for alleged CMEC overcompensation, the effective tax rate stood at 14% in 2018.

Non-controlling interests amounted to €357m in 2018 (+9% or +€29m YoY). The evolution of non-controlling interests is justified by minorities' share on one-off impacts at EDP Brasil level (€40m). (Details on page 28)

Overall, net profit reached €519m in 2018, heavily impacted by one-off impacts(*). Excluding one offs and the contribution from gas networks in 2017, **recurring net profit rose 3% YoY, to €797m in 2018**, supported by hydro recovery from very weak level in 2017, underlining growth in Brazil, which more than compensated the effects from adverse regulatory changes in Portugal and weak wind resources in 2018.

(*) **Non-recurring items:** (i) **+€268m in 2017**, including net gain on disposals (NED and EDP Gas: +€574m; REN stake: +€25m), restructuring costs (-€21m), regulatory-driven costs/provisions (-€61m); impairments at coal plants in Iberia and other (-€191m); debt prepayment fees and others (-€33m); impact from US fiscal reform (+€44m) and the extraordinary energy tax (-€69m); (ii) **-€277m in 2018**, including regulatory impacts (-€208m), impairments at coal plants in Iberia (-€21m), restructuring costs (-€21m), net gain on disposals (Mini-hydros: +€40m; Bioeletrica: +€24m); debt prepayment fees and others (-€26m) and the extraordinary contribution for the energy sector (-€65m).

Proceeds from TEI in US	(399)	(445)	10%	+46
Other (2)	(111)	299	-	-410
Total	350	(1,777)	-	+2,127

Consolidated capex amounted to €2,031m in 2018, supported by an acceleration of expansion capex, particularly in renewables and transmission in Brazil. In line with EDP strategy, the bulk of total capex (89%) was devoted to regulated and long term contracted activities, including expansion projects (c70% of total capex).

Maintenance capex (€637m in 2018) was mostly absorbed by regulated networks in Brazil and Iberia (67% of total). The decline in 2018 is mainly supported by the de-consolidation of gas distribution in Iberia (€24m capex in 2017) and weaker BRL/EUR rate underlying capex.

Expansion capex was mostly dedicated to new renewable capacity and the transmission lines in Brazil:

1) New wind & solar capacity: capex amounted to €1,275m in 2018, of which 59% was applied in North America, 27% in Europe and 13% in Brazil. Onshore wind under construction by the end of Dec-18 totalled 344 MW: 58% in US and 42% in Europe.

2) Transmission lines in Brazil: capex is ramping up, with €73m invested in 2018, as the execution of the R\$3.1bn capex planned until 2022 is proving ahead of schedule.

Net financial divestments amounted to €534m, including: (i) in Brazil, the acquisition of a 23.6% stake in Celesc (Centrais Elétricas de Santa Catarina) for €89m, combined with the sale of several small hydro plants (€150m); (ii) at EDPR level, the sale of a 43% stake in Moray East offshore wind project (23% in 4Q18), the sale of a 13.5% stake in our France offshore projects (4Q18) and the asset rotation of 499 MW of wind onshore capacity in the US and Canada (4Q18), explaining the bulk of €422m; (iii) in Iberia, the cash in of additional €38m relative to the disposal of Naturgas Energia Distribución ('NED') and the sale of mini hydro/biomass plants in Portugal (€135m).

Overall, net expansion activity resulted in net cash investment of €350m, including an acceleration of expansion capex (+€377m YoY, to €1,394m), proceeds from new TEI structures (€399m) and net impact from disposals/acquisitions (-€534m in 2018). Note that 2017 investment activity was marked by an intense portfolio reshuffling activity and changes in the consolidation perimeter.

(1) Includes shareholders loans; (2) Includes Change in WC Fixed asset suppliers, change in consolidation perimeter and other

Recurring organic cash flow amounted to €1.184m in 2018 (+50% YoY). Note that the adverse impact from regulatory developments in Portugal in late 2017 and the disposal of gas distribution in Iberia (-€129m YoY) on Recurring organic cash flow was smoothed out by the correspondent income tax effect. In detail, it is worth to highlight: (i) **Recurring cash flow from operations, reaching €2.6bn in 2018**, was €0.1bn lower YoY in the wake of the impact from weak wind resources and the de-consolidation of gas assets, even if this was cushioned by lower income taxes; (ii) **Net interests paid (net of capitalised expenses) amounted to €570m**, posting a €60m YoY improvement, mirroring EDP's improvement trajectory in terms of financial debt and the respective cost; (iii) Other items include €196m gain from the sale of stakes in renewable projects during 2018. Note that expenditure in maintenance capex (€664m) includes payables to fixed assets suppliers.

Net expansion activity comprised the construction of new wind capacity and execution of programmed capex in transmission lines in Brazil; but also, equity contributions by EDPR (mainly focused in wind offshore projects) and in Brazil (hydro generation). Additionally, our expansion activity encompassed the acquisition of 23.6% stake in CELESC for €89m and several disposals, mainly in 4Q18: asset rotation transactions in offshore wind (€189m in 2018), the first asset rotation of majority stake deal in wind onshore (€226m in 4Q18), the disposal of several small hydro plants in Brazil and Portugal (€285m closed in 4Q18). Note that in 2017, net expansion divestments (€1.8bn) included net proceeds from portfolio reshuffling (€2.4bn).

Regulatory receivables fell by €602m in 2018, driven by Portugal on system deleveraging (-€0.8bn YoY, to €3.8bn) and EDP's asset rotation deficit strategy (€1.3bn in 2018).

On 2-May-18, **EDP paid its annual dividend totaling €691m** (€0.19/share).

Effects of exchange rate fluctuations had a negligible impact on net debt, reflecting balanced effects from the appreciation of the USD (+5%) and depreciation BRL (-19%) vs. Dec-17, both against the Euro.

One-off impacts (included in **Other**) amounted to €0.3bn in 2018, including the taxes cash out (energy tax previously provisioned and fiscal revaluation: €0.2bn), extraordinary contribution to pension fund and early debt prepayment costs. In 2017, total one-off impacts amounted to €0.5bn, including €0.4bn tax-related (arising from 2016 reduction in regulatory receivables, fiscal revaluation program and other), extraordinary contribution to pension fund and costs arising from early debt prepayments.

Overall, recurring organic cash flow generated in 2018 more than covered dividend payment to shareholders plus net debt reduction. Net expansion activity and one-off cash flow items were balanced by lower regulatory receivables arising from tariff deficit sales. **Net debt** decreased by €0.4bn in the year, to €13.5bn as of Dec-18.

Funds from operations (FFO) were 26% lower YoY, at €2,237m in 2018, reflecting i) a €673m decrease in reported EBITDA (see details on page 3); ii) a €67m increase in current income tax; iii) a €65m decrease in net financial interests paid; iv) a €32m decrease in net income and dividends received from Associates, following the disposal of a 3.5% stake in REN in 2017; and v) higher impact from FFO adjustments mainly explained by higher extraordinary contribution to pension fund.

(1) Excluding Regulatory Receivables; (2) Maintenance capex includes payables to fixed assets suppliers.

Total amount of **property, plant & equipment and intangible assets** remained flat vs. Dec-17 at €27.4bn as of Dec-18, mainly driven by an acceleration in CAPEX in the 2018 which outstood depreciation charges and forex impact from the depreciation of the BRL (-11%) against the EUR between Dec-17 and Dec-18. As of Dec-18, EDP works in progress amounted to €1.7bn (6% of total consolidated tangible and intangible assets): 51% at EDPR level, 9% at EDP Brasil level and the remaining 40% at Iberian level.

The book value of **financial investments & assets held for sale** decreased by €148m vs. Dec-17 (details on page 28). Worth noting in this regard that some mini-hydro plants, along with a biomass plant in Portugal and small hydro plants in Brazil, were sold during 4Q18. Note also that by Dec-18, financial investments include: i) €357m at EDPR level, corresponding to equity stakes in 356MW wind farms in US and Spain, and 33% and 29.5% stakes in offshore projects in UK and France, respectively; ii) €456m at EDP Brasil level (mainly related to 23.6% stake in Celesc, 50% stake in Jari, 50% stake in Cachoeira Caldeirão and 33% stake in São Manoel); and iii) €264m at EDP level, including a 50% equity stake in EDP Asia (the owner of a 21% stake in CEM) and other.

Tax assets net of liabilities, deferred and current remained flat vs. Dec-17 at €0.3bn in Dec-18. **Other assets (net)** decreased €0.1bn vs. Dec-17 to €6.9bn as of Dec-18, supported essentially by the €0.6bn reduction in regulatory receivables, which was mostly mitigated by the impact of changes to IFRIC 12 - Concessions through the adoption of IFRS 15 regarding under construction concession assets. Note that other assets (net) includes €0.16bn in cash yet to collect from the disposal of Naturgas Distribución.

Total amount of EDP's **net regulatory receivables** was €0.6bn lower vs. Dec-17, at €287m as of Dec-18 (**€219m net of tax**), due to the combined effect of the sale of €1.3bn of regulatory receivables in Portugal and the annual increase of deficit reflected in EDP's accounts. Worth noting that the total Portuguese system debt has decreased significantly in 2018 by €0.8bn to €3.8bn, on the back of demand growth (+2.9% YoY in the 2018) and past regulatory cuts in Portugal.

Equity book value attributable to EDP shareholders decreased by €0.6bn to €9.0bn as of Dec-18, reflecting the net profit for the period (€0.5bn) which was more than offset by the annual payment of dividends (€0.7bn), by the €0.1bn impact of IFRS 9 and IFRS 15 adoption and by the impact of exchange differences arising on consolidation, following the depreciation of BRL against EUR.

Non-controlling interest (details on page 28) were stable vs. Dec-17, at €3.9bn as of Dec-18, as the results attributable to minority stakes in the period were offset by the YTD depreciation of BRL against the EUR.

Pension fund, medical care and other employee benefit liabilities fell by €0.1bn vs. Dec-17 to €1.4bn as of Dec-18 (**€1.0bn, net of tax**), reflecting the recurrent payment of pension and medical care expenses in 2018, as well as a one-off €0.1bn contribution to the pension fund.

Institutional partnership liabilities increased 2% YoY, following the benefits appropriated by the tax equity partners during the period, new tax structure and forex impact.

Provisions by Dec-18 amounted to €1.0bn (+€266M vs Dec-17), mainly explained by the recognition of a provision of €285m related with CMEC and the payment of 2017 and 2018 CESE.

Other liabilities (net) increased €0.6bn YoY, mainly supported by the working capital related with wind farms construction activity.

(1) Tariff deviations to be recovered/(returned) through tariffs in the following years by electricity distribution and last resort supply and gas in Portugal.

Debt by Interest Rate Type - Dec-18 (1)

Debt by Currency - Dec-18 (1)(2)

EDP's financial debt is essentially issued at holding level (EDP S.A. and EDP Finance B.V.) through both debt capital markets and bank loans. Maintaining access to diversified sources of funding and assuring refinancing needs at least 12-24 months ahead continue to be part of the company's funding strategy.

In Dec-18, **Fitch** affirmed EDP's credit rating at "BBB-", with Stable outlook. In Aug-17, **S&P** upgraded EDP's credit rating to "BBB-" with Stable outlook. In Apr-17, **Moody's** affirmed EDP's credit rating at "Baa3" with Stable outlook.

Looking at 2018's major debt repayments and refinancing deals: in Feb-18 EDP repaid USD531m of a USD1,000m bond with a 6% coupon, of which USD469m had been bought back in Dec-16. In Mar-18, EDP signed a 5-year revolving credit facility (with options to extend for 2 additional years, subject to bank's approval) in the amount of €2.24bn, which can be drawn in either EUR or USD, replacing a €2.00bn facility that was maturing in Feb-20. In Jun-18, EDP issued a €750m bond with a yield of 1.67%, maturing in Jan-26. In Sep-18 EDP exercised the option (and obtained bank's approval) to extend the maturity of the €3.3bn RCF for 1 year to Oct-23. In Oct-18, EDP made its first ever "Green Bond" issuance of €0.6bn with a 7-year maturity and a yield of 1.959%. Also, in Oct-18, EDP issued R\$1.2bn, at a transmission line project level, with a coupon of IPCA + 6.72% maturing in Oct-28. EDP's long dated bond issues are in line with the Group's financial policy of extending the average term of its debt portfolio and reinforcing its financial flexibility.

In 4Q18, EDP bought-back €500m of several bonds and sold significant tariff deficit, which contributed to a decrease of the share of EUR in Debt.

The weight of consolidated financial debt through capital markets stood at 81%, while the remaining debt was raised mainly through bank loans. **Refinancing needs in 2019** amount to €2.4bn, consisting in €1.4bn in bonds and €1.0bn in bank loans. **In 2020 and 2021**, refinancing needs amount to approx. €3.5bn. Total cash and available liquidity facilities amounted to €7.6bn by Dec-18. This liquidity position allows EDP to cover its refinancing needs beyond 2020.

In Jan-19, EDP extended €2,095m out of the €2,240m Revolving Credit Facility maturity until Mar-24 and issued €1.000m of subordinated green notes with a yield of 4.5%.

(1) Nominal Value includ. 100% of the hybrid bond; (2) Derivatives designated for fair-value hedge of debt; (3) Based on trailing 12 months recurring EBITDA and net debt exclud. 50% of hybrid bond issue (includ. interest).

Gas Demand (TWh)	Portugal			Spain			Iberian Peninsula		
	2018	2017	Δ%	2018	2017	Δ%	2018	2017	Δ%
Conventional demand	44.1	42.1	5%	287.5	275.1	5%	331.6	317.2	5%
Demand for electricity generation	20.8	27.6	-25%	61.8	75.7	-18%	82.6	103.3	-20%
Total Demand	64.9	69.7	-7%	349.3	350.8	0%	414.3	420.5	-1%

Electricity demand in Iberia grew 0.7% in 2018, following a 1.1 % YoY decline in 4Q18 (vs. +0.8% in 3Q18). In Spain (83% of Iberia), demand adjusted for temperature and working days was up 0.3% YoY. In Portugal (17% of total), demand adjusted for temperature and working days increased 1.7% YoY (total demand up by 2.6%), driven by both the residential and business segments.

Installed capacity in Iberia decreased by 0.3 GW to 118.1 GW as of Dec-18, mainly reflecting a reduction in CCGT installed capacity.

Residual thermal demand (RTD) declined 20% YoY in 2018 (-21 TWh), mostly supported by a strong rebound of hydro resources in Iberia since Mar-18 (5% and 30% above the average year in Portugal and Spain in 2018, respectively, vs. c.50% below average year in 2017). Even so, an extremely dry 4Q in Portugal (hydro resources 33% below historical average) drove reservoirs levels below avg. historical levels as of Dec-18. All in all, hydro output (net of pumping) posted an YoY increase of 22 TWh. Wind output increased 1.8 TWh YoY backed by outstanding wind resources in 1Q18, and net imports increased 1.9 TWh YoY, fully driven by Spain. In turn, nuclear output fell 2.4 TWh, reflecting some nuclear outages, particularly in 2Q18. As a result, coal output decreased 18% YoY (-10 TWh) and CCGT output fell 23% YoY (-11 TWh). Overall, higher demand in Iberia (+2 TWh YoY) was tackled by higher production from renewables and net imports, leading to lower avg. load factors at both coal (-9p.p. YoY to 48%) and CCGTs (-4p.p. YoY to 14%), respectively.

Average electricity spot price rose 10% YoY, to c.€57/MWh in 2018 (+8% YoY in 4Q18), fuelled by the rise in commodities prices in the European markets. **Average CO₂ prices** soared 172% YoY, to €15.9/ton in 2018. The **average electricity final price** in Spain rose by 7%, to €63/MWh. The difference between final electricity price and pool price derives from the contribution from profiling, restriction market, ancillary services and capacity payments.

In the Iberian gas market, consumption was slightly lower, reflecting the mixed impact from: (i) 5% YoY increase in conventional gas demand (80% of total gas consumption in Iberia), mostly driven by the cold snap in the beginning of the year; and (ii) 20% YoY decline in gas consumption for electricity generation, due to a lower thermal gap.

On 3-May-18, it has come to EDP's knowledge, through a DGEG's letter of Apr-18, that the ERSE's amount of €154m for the final adjustment of CMEC had been officially approved. Although EDP considers that the administrative act contained in the Order of approval of the Secretary of State for Energy (SSE) lacks technical, economic and legal basis, a provision corresponding to the difference of the amounts already recognised in revenues was booked, with an impact on EBITDA of -€30m, of which -€18m relative to 2H17 (one-off).

Excluding the one-off impacts, **recurring EBITDA rose 40% YoY, to €796m in 2018**, propelled by hydro's higher output and contribution to the production mix (39% share in total production in 2018 vs. 22% in 2017) and higher selling prices, which more than compensated the adverse impact from weak energy management results, due to the hedge position closed in 2017. One-off impacts include CMEC adjustment (€18m in 2018) and restructuring costs (€15m in 2018 vs. €13m in 2017).

Gross Profit breakdown (€ m)	2018	2017	Δ%	Δ Abs.
Electricity Sources & Uses	1,247	956	30%	+290
Total Volume (TWh) - Details below	70.3	70.6	-0%	-0
Unit margin (€/MWh)	17.7	13.5	31%	+4
Before hedging (€/MWh) - Details below	18.9	12.8	47%	+6
From Hedging (€/MWh) (2)	(1.1)	0.7	-	-2
Other	187	279	-33%	-92
Electricity generation (Detail page 12), Energy supply	178	275	-35%	-97
Gas trading, other and adjustments	9	5	98%	+5
Total	1,434	1,236	16%	+199

Gross profit excluding CMEC one-off impact rose by 18% YoY, to €1,453m in 2018, mainly driven by higher avg. unit margin (up from €14/MWh in 2017 to €18/MWh in 2018):

Volumes: Total volume sold was broadly flat YoY, at 70 TWh in 2018, reflecting the mixed impact from an 8% fall in sales to customers, mainly prompted by business customers; and 2% rise in sales in the wholesale market, driven by higher production. Generation output was 2% higher YoY, reflecting an increase in hydro production; electricity purchases were 2% lower YoY.

Unit margin ⁽²⁾⁽³⁾: Avg. electricity spread before hedging rose from €12/MWh in 2017, to €19/MWh in 2018, mainly reflecting a cheaper generation mix. **Avg. sourcing cost** declined 5% YoY, to €44/MWh in 2018, mainly supported by a higher contribution from hydro production in the generation mix. **Avg. selling price** rose 6% YoY in 2018, almost in line with the increase in the electricity market final price.

Net operating costs amounted to €672m in 2018 (-1% YoY). Cost related to tax and levies fell by €32m YoY (€36m decrease in Spain, €4m YoY increase in Portugal), as a result of 2H17's increase in clawback in Portugal; and from Oct-18 the suspension of generation taxes and tax on gas in Spain and clawback in Portugal.

On 26-Sep-18, DGEG notified EDP about a dispatch issued by the Secretary of State for Energy (SSE) on 29-Aug-2018 on the financial impact of the "innovative features" of the PPA Cessation Agreements, which quantified at €285 million the alleged overcompensation of EDP related to the calculation of the real availability factor of the plants under the CMEC regime. Additionally, the dispatch from SSE also mentioned that the possible charging of a maximum amount of €72.9 million for alleged overcompensation of plants under CMEC regime operating on ancillary services market is still under analysis. Considering that the dispatch lacks legal, economic technical basis, EDP presented in Oct-18 a complaint with the SSE, but with no follow up on the issue so far. As a result, EDP has taken legal action in Feb-19 as to protect its rights and interests. Even though EDP considers that there were no innovative features weighted in the annual adjustments or the final adjustment of the CMEC, this aspect was reflected in 3Q18 through a provision of €285m. As a result, **amortisation, impairment and provisions** increased by 19% YoY, to €696m in 2018, partly offset by higher impairments' recognition in 2017 (€196m from Sines and Soto 3) vs. 2018 (€24m from Sines and Soto 3).

In 2018, total gas consumed/sold declined by 4% YoY, driven by a 18% YoY decrease in gas consumption at our CCGT plants (-2.5 TWh) and 7% YoY decline in sales to final customers (-0.9 TWh). In turn, sales in wholesale market increased 17% YoY (+1.7 TWh).

EDP is adapting its hedging strategy to the current market conditions. As a result, for 2019, EDP has so far forward contracted with clients electricity sales of ~28 TWh, at an avg. price of c.€58/MWh (excluding naturally-hedged price-indexed volumes), and has already secured avg. thermal spread at a high single digit per MWh for around 90% of expected thermal production.

Gas Uses (TWh)	2018	2017	Δ%	Δ Abs.
Consumed at EDP power plants	11.7	14.2	-18%	-2.5
Sold in wholesale markets	12.0	10.3	17%	+1.7
Sold to Final customers	10.6	12.1	-13%	-1.5
Total	34.3	36.6	-6%	-2.3

(1) OPEX = Supplies and services + Personnel costs + Costs with social benefits; (2) Includes results from hedging on electricity; (3) Variable cost: fuel and CO2 cost, hedging costs (gains), system costs;

(4) Excludes production at mini-hydro, cogeneration and waste plants; (5) Average selling price: includes selling price (net of TPA tariff), ancillary services and others.

Electricity Generation in Iberia

Income Statement (€ m)	2018	2017	Δ%	Δ Abs.
Gross Profit	1,153	931	24%	+222
OPEX (1)	241	252	-4%	-11
Other operating costs (net)	154	166	-7%	-12
Net Operating costs	396	419	-5%	-23
EBITDA	757	512	48%	+245
Amortisation, impairment; Provision	656	576	14%	+81
EBIT	101	(63)	-	+164

Our liberalised generation & supply activities are jointly managed as most of our production is sold to our supply units at fixed prices. The current section refers only to electricity generation operations.

The **overall generation portfolio in Iberia** (excluding wind and solar) encompasses a total of 13.5 GW, of which 53% in hydro capacity, 28% in CCGT, 18% in coal (86% with DeNOx), 1% of cogeneration and waste; and 1% in nuclear. **Production** in 2018 increased 2% YoY (+0.8 TWh), to 34.6 TWh, reflecting a sharp rebound of hydro resources to normalized levels in 2018, which enabled a 6.1 TWh YoY increase in hydro output. This increase in hydro output was, however, partially offset by a lower production at our coal (-2.8 TWh) and CCGT (-2.7 TWh) plants.

Avg. production cost fell 14% YoY, to €29/MWh in 2018, driven by hydro's higher contribution to the production mix (39% of total output in 2018 vs. 22% in 2017). **Avg. production cost at our coal plants** increased 22% YoY, fuelled by a higher coal and CO₂ prices. **Avg. production cost at CCGTs** logged an 11% YoY increase, due to a higher cost of gas.

Key Operating Data	2018	2017	Δ%	Δ Abs.
Generation Output (GWh)	34,555	33,778	2%	+777

Maintenance	107	101	6%	+6

Gross profit from generation in Iberia rose 24%, to €1,153m in 2018, benefitting from a lower avg. production cost and higher gross profit from mini-hydro, cogeneration and waste plants (+39% YoY), on the back of the strong recovery in hydro output which more than compensated the impacts from: (i) the €18m one-off provision from CMEC; (ii) 23% YoY decrease in capacity payments following the interruption in Spain, by Jul-18; and (iii) weak energy management results, due to the hedge position closed in 2017. Also note that the annual deviation from PPA/CMEC gross profit vs CMEC reference, totalling €108m in 2017, ceased to be in force since Jun-17 (€5m booked in 2018 reflects prior years adjustments).

Net operating costs decreased by 5% YoY, to €396m in 2018, due to tight cost control. **Regulatory costs** decreased 8% YoY, to €218m in 2018, impacted by: (i) at gross profit level, a €13m YoY increase in social tariff and coal levy in Portugal; (ii) at 'Other operating costs' level, a €32m YoY decrease due to lower generation taxes in Spain, only partly offset by higher clawback in Portugal.

It is noteworthy that, in Spain, RDL 15/2018 of 5-Oct-18 approved a 6-month suspension of the 7% tax on generation with effect from 1-Oct-2018, and has put an end to the green cent tax on gas for electricity generation purposes. RDL 15/2018 was definitively approved by Parliament in 18-Oct-18. Accordingly, in order to harmonize the regulatory mechanisms in the Iberian electricity market, the Portuguese regulator suspended the clawback mechanism with effect from Oct-18.

In respect to capacity payments in Spain, availability payments have been definitely abolished in Dec-18. In Portugal, the Government decided to suspend the auction for the attribution of capacity payment in 2018 (Dispatch 93/2018) in Apr-18, until the EC formally pronounces on the fit of the auction rules with EC framework. Note that the EC has already approved capacity mechanism in 6 European countries. Moreover, note that the current rules have been set in Mar-17 and the auction for capacity payments in 2018 (Ministerial order nr. 2275-A/2017) was initially scheduled for May-17, revenues from capacity payments amounted to €5m in 2017.

Capex decreased by 18% YoY, to €142m in 2018. Note that the €35m of expansion capex in 2018 is mostly related to final works in Foz-Tua hydro plant surrounding area (vs. €71m in 2017 allocated to Venda Nova III and Foz-Tua).

Our electricity and gas supply activities in Portugal and Spain are managed by integrated platforms, ensuring a responsive and competitive commercial structure. EDP Group's subsidiaries that operate in this business segment have intra-group electricity and gas procurement contracts with our generation and energy trading divisions. The current section refers only to energy supply, but excludes gas trading and sourcing activities.

As of Dec-18, **EDP's electricity portfolio in Iberia** remained relatively stable YoY, totaling 5.3m customers, strongly biased towards residential and SME customers (c.43% of total consumption). In Portugal, according to the most recent data released by ERSE, 94% of total electricity consumption was in the liberalized market as of Dec-18. Note that, following the publication of DL 105/2017, electricity customers in Portugal are, since 1-Jan-18, allowed to return to the regulated market until the end of 2020.

EDP targets to leverage on its portfolio of customers, offering additional products and innovative services, as part of its strategy to build a longer-term relationship with customers backed by the enhancement of customer's satisfaction and loyalty levels. The rate of dual fuel offer is currently at 30%, including different stages of evolution in Spain and Portugal: in Portugal, dual offer rate corresponds to 16% in Dec-18; in Spain, dual offer rate, is currently at 79%. As a result of this strategy, EDP's gas portfolio in Iberia increased 1% YoY, to 1.6m customers in Dec-18. The penetration rate of service contracts in Iberia increased from 17% in Dec-17 to 18% in Dec-18.

Electricity volumes sold in Iberia fell 5% YoY, to 31 TWh in 2018, reflecting the mixed impact from: (i) a 3% YoY increase in the residential segment; and (ii) a 10% YoY decrease in the business segment, reflecting more selective commercial criteria.

Gross profit at our supply activities in Iberia declined by 10% YoY, to €273m in 2018, penalised by higher sourcing costs, adverse regulatory changes in Portugal and prior year adjustments.

Net operating costs increased by 5% YoY, to €278m in 2018, impacted by the adoption of IFRS 9, related with the estimates of clients' impairments (€14m). **Amortisation** increased due to the accounting of the costs associated with the acquisition of new clients as D&A, following the adoption of the IFRS 15 methodology.

EDP is building the ground for a decrease in cost per customer through higher digitalisation rate and higher customer satisfaction: electronic invoicing (per avg. residential client) represents a 34% rate as of Dec-18, a 4pp increase vs. Dec-17.

(1) OPEX = Supplies and services + Personnel costs + Costs with social benefits; (2) Based on the number of contracts.

EDP, through EDP Renováveis (EDPR, 82.6% owned by EDP) owns, operates and develops **wind and solar capacity**. As of **Dec-18**, **EDP has a portfolio of 11,301 MW** (of which 145 MW solar) and holds **equity stakes in further 371 MW**. During 2018, we built out 826 MW (mainly in US, Brazil, Italy) fully long term contracted, and executed our **first sell down transaction** (sale of 80% stake in 499 MW, 200 MW commissioned in 2018). As a result we added 40 MW to our equity portfolio in operation, retaining O&M operations of the whole capacity.

Wind & solar EBITDA decreased by 5% YoY (-€66m) to €1,300m in 2018, penalised by: i) adverse forex impact (-€35m) due to USD and BRL depreciation; ii) weak wind resources (-6% below the historical average in 2018; -12% in 4Q18), translated into an avg. load factor of 30% (-1pp YoY); iii) lower avg. selling price (-7% YoY ex-forex), following lower revenues from green certificates (Romania and Poland) and the mix effect from new MWs (mainly in US, Brazil); and iv) expiration of the 10-year period PTCs in some wind farms (-€51m). These impacts outstood the effect from 6% increase in avg. capacity and gain booked on the first sell down, corresponding to the upfront monetisation of value accretion of 499 MW built to sell and operate.

Opex rose by 8% YoY to €460m in 2018, on the back of the new capacity installed, higher headcount and offshore costs crossed charged to projects' SPVs. Core Opex per avg. MW in operation was €43K, +2% YoY. **Other operating costs (net), amounting to €249m net revenue (+€56m YoY)**, include: i) **in 2017**, +€29m gain on the sell down (with loss of control) of a stake in UK offshore project Moray East; ii) **in 2018**, €109m gain subsequent to the aforementioned sale of a majority stake in wind farms, along lower generation taxes in Spain.

EBIT decreased by 6% YoY, to €754m in 2018, following EBITDA performance, and lower depreciation charges YoY following lower impairments (€7m in 2018 vs. €50m in 2017) and forex impact.

Expansion activity resulted into €0.5bn net expenditure in 2018, mainly reflecting i) €1.1bn net investments devoted to capacity built out (+826 MW) and under construction in Dec-18 (344 MW), ii) proceeds from new tax equity financing structures (€0.4bn) and other. In Dec-18, we executed its first sell down on wind onshore, selling a 80% stake in some US/Canada wind farms. Along with the stake sales in wind offshore during the year, this transaction provided proceeds of €0.4bn in the period.

EDPR's net debt amounted to €3.1bn in 2018 (vs. €2.8bn in Dec-17), driven by recurring organic cash flow (€0.6bn), net investments, dividend payment and Forex impact.

Liabilities with Institutional partnerships (net) amounted to €1,269m (+2% YoY), reflecting the tax benefits retained by institutional investors (€140m), the establishment of new tax equity financing structures (€399m) and forex impact.

Financial results (net) amounted to -€220m in 2018 (+27% YoY), following stable Net interest costs, lower financial cost related to institutional partnerships costs (-9% YoY) and gain on the sale of non-controlling stakes in France and UK offshore projects (+€87m, at the level of Other financial results).

(1) OPEX = Supplies and services + Personnel costs + Costs with social benefits; (2) Net of government grants; (3) Includes Holding costs and adjustments at the level of EDPR Europe; (4) Core Opex defined by Supplies and services (including O&M activities) and Personnel costs; (5) Net of deferred revenue.

In North America (NA), installed capacity totalled 5,562 MW in Dec-18 (90 MW solar PV in US and the rest wind onshore: 5,242 MW in the US, 200 MW in Mexico, 30 MW in Canada). As of Dec-18, 86% total installed capacity is long term contracted (PPA/Hedged). Additionally, EDPR owns equity stakes in other wind projects, equivalent to 219 MW (+40 MW YoY).

During 2018, EDP group **built out 478 MW, all in the US and long term contracted**. The bulk of new capacity additions was concentrated in wind onshore, while solar capacity accounted for 60 MW additions. As part of **EDP asset rotation strategy**, the **first asset rotation of majority stake transaction** was announced in Dec-18, encompassing: **i)** As per capacity in operation, the sale of an 80% stake in Meadow Lake VI (already in operation and equivalent to 160 MW), retaining a 20% equity stake (40 MW); **ii)** As per future capacity additions, the sale of a controlling stake in 299 MW to be installed in 2019, of which 199 MW was already under construction by Dec-18. The asset rotation strategy, allowing capital recycling, enhances upfront value crystallization, reflected in a USD 129m contribution in 2018.

Electricity production in 2018 advanced by 4%, as 5% increase in installed capacity was hampered by wind and solar resources: 7% short historical average in 2018, following 15% shorter than LT average resources in 4Q18. **Average selling price** fell by 2%, to USD45/MWh, prompted by lower US prices.

Income from institutional partnerships declined 14% YoY to USD219m in 2018, following the expiration of the 10-year production tax credit ("PTCs") of some wind farms. In 2018, EDPR established **new institutional partnership** equity financing structures, in exchange for interests in Arkwright (78MW), Turtle Creek (199MW) and Meadow Lake VI (200MW) wind farms, for a total amount of USD464m.

All in all, EBITDA in North America rose by 11% YoY, to USD749m in 2018, reflecting particularly weak wind resources in 2018, the first asset rotation of majority stake gain and portfolio expansion.

As of Dec-18, **wind capacity currently under construction** in NA is fully concentrated in the US, Kansas: 199 MW Prairie Queen. Additionally, during 2018, EDPR has secured long-term PPAs in the US for nearly 1.2 GW of new capacity to be built in 2019-2020.

In Brazil, installed capacity reached 467 MW in Dec-18, fully long-term contracted (20 years from inception), following the commissioning of Babilônia wind project in 4Q18.

Gross profit in 2018 declined by 5%, driven by a 3 pp decline in the avg. load factor, to 40% and last year's temporary PPA unwinding at Baixas do Feijão. Along with the lower price of PPAs on capacity commissioned in the past 12 months impacted the evolution of both avg. selling price (-32% YoY to R\$195/MWh) and production (+43% YoY). **Avg. selling price** was down YoY justified by the lower PPA unwinding volumes. **All in all, EBITDA amounted to R\$140m in 2018.**

In 2018, EDPR signed: i) a 20-year PPA to sell the energy produced by two wind farms in Rio Grande do Norte (Jerusalem, 176MW; Monte Verde, 253MW), expected to start commercial operations in 2024; and ii) 15-year PPA to sell the energy produced by a solar photovoltaic park (Pereira Barreto, 199MW), expected to be commissioned in 2022.

- Energy is sold either under PPAs (up to 20 years), Hedges or Merchant prices; Green Certificates (Renewable Energy Credits, REC) subject to each state regulation
- Tax Incentive: (i) PTC collected for 10-years since COD (\$24/MWh in 2018); (ii) Wind farms beginning construction in 2009-10 could opt for 30% cash grant in lieu of PTC

- Feed-in Tariff for 20 years (Ontario)
- Renewable Energy Support Agreement (Alberta)

- Bilateral Electricity Supply Agreement for 25 years under self-supply regime

- Installed capacity under PROINFA program
- Competitive auctions awarding 20-years PPAs

Capacity under construction (MW)	29	68	-58%	-39

In **Spain**, wind installed capacity totaled 2,312MW (MW EBITDA) in Dec-18, following new additions of 68 MW in 2H18 (Muxia). Additionally, EDPR owns equity stakes in other wind projects equivalent to 152MW.

In 2018, **total production** was broadly unchanged (+1% YoY), supported by capacity additions and stable load factor. **Average selling price** fell by 6% YoY, reflecting i) -€35m losses related to the hedging strategy in place (-€11m YoY), ii) a 6% increase in the average realised pool price, to €53/MWh, resulting in lower regulatory adjustment (-€45m, -€27m YoY, reflecting baseload higher than regulatory caps). **All in all, EBITDA in Spain declined 3% YoY to €266m in 2018.**

The remuneration framework in Spain is in place since Feb-17, establishing the new parameters of remuneration for renewable energy assets for 2017-2019 which includes: an increase of wind profile coefficient to 14.79% from previous 11.11%; 2014-2016 regulatory adjustments; and new forecasted pool prices with defined caps and floors for the standard production. 91% of Spanish capacity is entitled to receive capacity complement.

As of Dec-18, we had 68 MW of wind onshore capacity under construction in Spain.

Portugal	2018	2017	Δ %	Δ Abs.
Installed capacity (MW)	1,309	1,253	4%	+55

Capex (€m)	79	27	191%	+52
Capacity under construction (MW)	47	55	-15%	-9

In **Portugal**, total installed capacity reached 1,309 MW in Dec-18 (5 MW of which solar PV), following the commissioning of 55 MW during the year.

Total production in 2018 was up by 3% in 2018, mainly reflecting the increase in installed capacity and stable load factors, at 27%. **Avg. selling price** reached €91/MWh, as the 1% YoY increase translated the inflation indexation of the feed-in-tariff. **All in all, EBITDA in Portugal rose by 5% YoY, to €223m in 2018.**

As of Dec-18, EDPR had 47 MW of wind onshore capacity under construction in Portugal (Feed-in-tariff).

- Wind energy receives pool price and a premium per MW, if necessary, in order to achieve a target return established as 'Spanish 10-year Bond yields + 300bp'; Every 3 years, there will be revisions as to compensate deviations from the expected pool price
- Premium calculation is based on standard assets (standard load factor, production and costs)

- Older Wind farms: Feed-in Tariff inflation-indexed and inversely correlated with load factor. Duration: 15 years (Feed-in tariff updated with inflation) + 7 years (extension cap/floor system: €74/MWh - €98/MWh)
- ENEOP: price defined in a international competitive tender and set for 15 years (or the first 33 GWh per MW) + 7 years (extension cap/floor system: €74/MWh - €98/MWh). Tariff for first year established at c.€74/MWh and CPI monthly update for following years
- VENTINVEST: price defined in a international competitive tender and set for 20 years (or the first 44 GWh per MW)

Capacity under construction (MW)	69	88	-22%	-19

In **European markets outside of Iberia**, EDP group installed capacity totaled 1,652 MW in Dec-18, the bulk of which concentrated in wind onshore (solar PV accounts for 50 MW, in Romania). Net additions during 2018 reached 88 MW (+77M in Italy and Belgium; +11MW in France) and further 69MW are **under construction**: +50MW in Italy and +19MW in France.

In **Poland**, we operate 418 MW of wind capacity. Average selling price was 4% lower YoY at PLN254/MWh driven by lower green certificates' prices arising from the change in the calculation method of the substitution fee (Sep-17). Avg. load factor decreased -5p.p. YoY, to 25% in 2018, justifying a 16% reduction in production).

In **Romania**, EDP group has 521 MW in operation: 471 MW in wind and 50MW of solar PV. In 2018, wind and solar production declined 18% to 1,059 GWh, reflecting a 6pp YoY decline in the avg. load factor (to 23%). Average selling price fell by 24%, following the previously defined reduction in the Green Certificates attributed per MWh produced post-2017.

In **France**, our wind onshore installed capacity rose by 11 MW, to 421 MW in Dec-18, contributing for a similar increase in production. Average tariff was stable at €90/MWh.

In **Belgium & Italy**, the 292 MW wind onshore in operation (221 MW in Italy, 71 MW in Belgium) represented a 36% YoY increase YoY, driven by new capacity additions in Italy. Electricity produced grew by 10% in 2018, to 514 GWh, backed by average capacity expansion and broadly stable load factor. Average selling price was lower at €109/MWh (-7% YoY), due to lower market prices in Italy (in wind farms installed before 2013) and different mix (production vs. price).

All in all, **EBITDA in Rest of Europe decreased by 29% YoY, to €169m in 2018**, driven by i) lower prices particularly in Poland (-4% YoY) and Romania (-26% YoY) mainly derived from regulatory changes; and ii) lower avg. load factor (-4 p.p. YoY), at 23% in 2018.

In Jul-18, EDPR secured a 20-year CfD at the **Greek energy auction** to sell electricity produced by Livadi 45MW wind farm, with expected commercial operation in 2020.

In the wind offshore, EDPR continues pursuing risk-controlled growth, with two projects secured in Europe:

i) In **UK**, EDPR has a 33.3% equity stake in 950MW Moray East project, with an awarded 15-year Contract for Difference ("CfD") of £57.5/MWh (2012 tariff-based) from 2022 onwards. The wind farm obtained FID in 4Q18 and will be equipped with 100 turbines of 9.5MW from Vestas, and has entered the construction phase. Moray East is expected to be commissioned in early 2022.

ii) In **France**, EDPR has a 29.5% equity stake in the consortium Eoliennes en mer des Iles d'Yeu et de Noirmoutier (in partnership with Engie and CDC), which has been developing two offshore wind projects since 2014 (round 2 tender), due to receive a feed-in tariff for 20 years, as defined by the French government (Jun-18): Dieppe-Le Tréport (496MW) and the islands of Yeu and Noirmoutier (496MW), with environmental and maritime permits granted.

- Price is set through bilateral contracts; Wind receive 1 GC/MWh which can be traded in the market. Electric suppliers have a substitution fee for non compliance with GC obligation. From Sep-17 onwards, substitution fee is calculated as 125% of the avg market price of the GC from the previous year and capped at 300PLN

- Wind assets (installed until 2013) received 2 GC/MWh until 2017 and 1 GC/MWh after 2017 until completing 15 years; 1 out of the 2 GC earned until Mar-2017 can only be sold from Jan-2018 and until Dec-2025. Solar assets receive 6 GC/MWh for 15 years. GC are tradable on market under a cap and floor system (cap €35 / floor €29.4); Wind assets (installed in 2013) receive 1.5 GC/MWh until 2017 and after 0.75 GC/MWh until completing 15 years. The GCs issued starting in Apr-2017 and the GCs postponed to trading from Jul-2013 will remain valid and may be traded until Mar-2032

- Feed-in tariff for 15 years: (i) €82/MWh up to 10th year, inflation updated; (ii) Years 11-15: €82/MWh @ 2,400 hours, decreasing to €28/MWh @3,600 hours, inflation updated
- Wind farms under RC 2016 scheme receive 15-year CfD which strike price value is similar to existing FIT fee plus a management premium

- Wind & solar energy sold at 'Market price + green certificate (GC)'; Separate GC prices with cap and floor for Wallonia (€65/MWh-100/MWh); Option to negotiate long-term PPAs

- Projects online before 2013 are (during 15 years) under a pool + premium scheme (premium=1x€180/MWh - "P-1")x0.78, being P-1 previous year average market price; Assets online from 2013 onwards were awarded a 20 years contract through competitive auctions

Our Regulated networks in Iberia in 2017 and 2018 include our activities of distribution of electricity, in Portugal and Spain; and electricity last resort supply activity in Portugal (LRS). Furthermore, Regulated networks in Iberia in 2017 included gas distribution activities in Spain (up to Jul-17, when its disposal was completed) and Portugal (up to Oct-17, when disposal was completed).

Excluding the contribution from gas distribution in Iberia, EBITDA from regulated networks fell by 23% YoY (-€191m), to €636m in the 2018, largely impacted by: (i) in Portugal (77% of total), the new regulatory terms applicable to electricity distribution and LRS as from 1-Jan-18, which largely explain a €164m decrease in gross profit; and (ii) in Spain (23% of total), our prudent approach to possible regulatory changes, even ahead of the end of the current regulatory period, in 2020. Note that 2018 EBITDA from regulated networks includes €11m of one-off restructuring costs.

Controllable costs in the electricity networks fell by 4% YoY, to €383m in 2018, reflecting tight cost control and costs savings prompted by the increasing share of smart meters installed.

Capex amounted to €276m in 2018, the majority of it (88%) related to electricity in Portugal.

ELECTRICITY DISTRIBUTION IN SPAIN

The terms of regulated revenues for electricity distribution in Spain are set for the period 2016-19, under the regulatory framework designed in Dec-13 (Law 24/2013 and RD 1048/2013), Dec-15 (Ministerial order IET 2660/2015) and Jun-16 (Ministerial order IET 980/2016), encompassing a return on RAB equivalent to a 200bp premium over 10-year Spanish bond yields, equaling to 6.5%. Having said this, in Sep-17, the government initiated a process to change one of the terms of IET 980/2016 (*lesividad*), for which clarity is expected during 2019. Additionally, CNMC proposed a change in the regulatory framework from the current bond-linked model to a WACC-linked model, with a 5.58% return on RAB for the next regulatory period, starting in 2020. By means of Royal Decree-Law 1/2019 (Jan-19) CNMC is now entitled to establish the regulatory framework from 2020 on instead of Ministry or Government, so we expect that the specifics of the new regulatory period, including the rate of return, will be established by CNMC during 2019.

EBITDA from our electricity distribution activity in Spain amounted to €145m in 2018 (+3% YoY), reflecting by a prudent approach as to a possible regulatory change ('lesividad'), stable regulated revenues and cost discipline.

(1) In 2017, includes results from gas distribution in Spain and Portugal, sold in Jul-17 and Oct-17, respectively; (2) OPEX = Supplies and services + Personnel costs + Costs with social benefits;

(3) Only for electricity networks; Controllable Costs includes Supplies & services and personnel costs.

Equival. interruption time (min.) (3)	61	53	15%	+8

EBITDA from electricity distribution and last resort supply (LRS) in Portugal amounted to €480m in 2018 (-24% YoY or -€150m), penalized by the new regulatory terms in place as from 1-Jan-18 (-€164m on regulated revenues, in line with the regulatory framework in place until the end of 2020). Such impact was just partly offset by a good cost performance: controllable costs fell by 4% YoY.

In 2018, regulated gross profit amounted to €1,076m, posting a 13% decline YoY (-€164m).

In electricity distribution, regulated revenues amounted to €1,039m in 2018, declining by €164m YoY, driven by tougher regulatory terms and lower rate of return on HV/MV assets: 5.42% in 2018 vs. 6.68% in 2017 (and ERSE's assumption of 5.75%). **Electricity distributed in 2018** rose by 2.9% YoY (+1.3%, adjusted for temperature effect), mainly driven by the residential segment.

In the **last resort electricity supply activity (LRS)**, regulated revenues were flat at €36m in 2018. In 2018, **total number of customers supplied by the LRS** declined by 97 thousand, to 1,125 thousand at the end of 2018 (representing 18% of total electricity customers in Portugal), mostly in the residential segment. Note that, following the publication of DL 105/2017, electricity customers in Portugal are, since 1-Jan-18, allowed to return to the regulated market until the end of 2020. The volume of electricity supplied by our LRS fell by 7% YoY, to 3 TWh in the 2018.

Controllable operating costs were 4% lower YoY in 2018, supported by lower average headcount in 2018 and initial fruits reaped from the rising share of smart meters installed.

Capex amounted to €243m in 2018, including €31m invested in smart meters. The **equivalent interruption time** totaled 61 minutes in 2018 (vs. 53 minutes in 2017).

On 18-Dec-2018, ERSE released 2019 electricity tariffs, setting a 3.5% average tariff decrease for normal low voltage (NLV) segment, applicable to clients in the regulated market (out of the Social Tariff). Accordingly, **regulated revenues for 2019** were assumed at €1,060m in the electricity distribution and €31m in the last resort electricity supply. Electricity distribution regulated revenues preliminarily set assume a rate of return on assets (RoRAB) of 5.42% (reflecting an underlying avg. 10-year Portuguese bond yields of 1.86%) and an expected electricity demand in Portugal of 46.4 TWh in 2019 (0.8% above 2018 electricity distributed).

(1) OPEX = Supplies and services + Personnel costs + Costs with social benefits; (2) Supplies & services and personnel costs. (3) Adjusted for non-recurring impacts (rainstorms, high winds and summer fires).

Financial Results	(366)	(548)	33%	+181

In local currency, EDP Brasil ("EDPB") EBITDA increased 27% YoY (+R\$599m) to R\$2,815m in 2018, impacted by (i) the sale of small-hydro plants (+R\$375m); (ii) better results in Pecém coal plant (+R\$129m YoY) mainly due to revision of the contracted availability; (iii) higher EBITDA in distribution (+R\$56m YoY) on better operational performance; (iv) successful portfolio integration management which led to a GSF impact net of hedging of R\$151m.

EBITDA in distribution increased 7% YoY, driven by the update of the concessions assets' value to inflation (+R\$34m), continuing reduction of losses (+R\$37m) and increase in distributed energy volumes (+R\$43m). However, gains due to overcontracting policy were R\$73m lower than in 2017. Generation & Supply EBITDA grew 9% YoY (+R\$138m), pushed by an active hedging strategy and by Pecém (reduction in the provision for penalties on unavailability). EBITDA in EUR terms, which reached €649m, was negatively impacted by BRL avg. depreciation against the EUR by 16% (-€127m).

OPEX costs increased 3%, below the average IPCA rate of +3.7% YoY. Net operating costs decreased by 25% YoY (-R\$313m), mainly impacted by gains on the sale of small-hydro plants in the 3Q18 (R\$34m) and the 4Q18 (R\$341m).

Net financial debt was flat at R\$4.4bn at the end of 2018. Financial results improved 33% YoY to R\$366m, reflecting lower cost of debt (from 11.4% in 2017 to 8.8% in 2018), in line with the declining interest rates in Brazil - average annual CDI stood at 6.4% in 2018 vs. 9.9% in 2017. Net debt/EBITDA decreased to 1.6x from 2.0x, backed on higher EBITDA levels.

Capex surged 48% (+R\$369m) in 2018 vs. 2017, mainly due to Transmission investments (+R\$278m), a segment in which EDPB was awarded with 5 transmission lines with a total investment of R\$3.1bn up to 2022. Espírito Santo line was the first one concluded, having entered into operation at the end of Dec-18, 20 months ahead of schedule. Capex in Distribution increased by R\$94m YoY, reflecting investments to improve operational efficiency of the distribution grids.

(1) OPEX = Supplies and services + Personnel costs + Costs with social benefits.

Brazil: Electricity Distribution

Income Statement (R\$ m)	2018	2017	Δ %	Δ Abs.
Gross Profit	1,832	1,731	6%	+101
OPEX (1)	760	718	6%	+42
Other operating costs (net)	185	182	2%	+3
Net Operating Costs	945	900	5%	+46
EBITDA	887	831	7%	+56
Amortisation, impairment; Provisions	256	222	15%	+34
EBIT	631	609	4%	+22

EBITDA from our electricity distribution activity in Brazil increased by +R\$56m YoY to R\$887m in 2018, mostly due to: (i) the growth in distributed energy volumes (+R\$43m); (ii) a reduction of the losses, which allowed for an increase in results of +R\$37m YoY; (iii) the update of the concession's assets value to inflation, as contemplated by the regulatory framework (+R\$34m). However, the gains due to overcontracting policy were R\$73m lower than in 2018.

Volumes of electricity sold increased slightly in 2018 by 1% vs. 2017. At the same time, **volumes distributed to clients in the free market** increased 6% YoY to 11.2 TWh in 2018. All in all, **electricity distributed** increased 3% YoY in 2018.

The volumes of energy contracted surpassed by more than 5% the volumes demanded by clients during 2018. The **overcontracted** volumes are sold at the spot price (PLD) which was higher than the long-term sourcing contracted prices, leading to a gain of R\$28m on 2018.

Industrial	595	655	-9%	-61

The trajectory of **lower non-technical losses** observed in the recent quarters was maintained. Non-technical losses in the low-voltage segment have decreased both for EDP Espírito Santo, reaching 11.15% in 2018 (-0.8p.p. YoY), the lowest value of the last 16 years, as well as for EDP São Paulo, whose level stood at 8.46% in 2018 (-1.1p.p. YoY). Both figures stood below ANEEL threshold of 11.45% and 8.87% respectively. This is the reflex of strong investment for reducing losses (R\$93m in 2018), which allowed a revenue of R\$229m in this year.

Provisions for doubtful clients stood at R\$85m in 2018 (slightly higher than R\$82m in 2017). EDPB keeps tackling the situation through increased proximity to clients, regardless of some economic improvement and unemployment reduction in the region of EDP São Paulo.

Regulatory receivables amounted to R\$316m at the end of 2018 - which despite being an increase of +R\$214m vs Dec-17, it is still a significant reduction vs. R\$501m at 3Q18, to be recouped from the system in the following years.

OPEX and other operating costs were higher YoY at R\$760m (+R\$42m) and R\$185m (+R\$3m), respectively. **Distribution capex** in 2018 was more than twice the amount of depreciations, reflecting investments to improve quality of service and reducing energy losses.

Worth noting that in Nov-18, EDPB acquired 1,518,000 preferential shares of CELESC by R\$63.7m, which together with previous shares' purchases resulted in a total 23.56% stake in CELESC.

Brazil: Electricity Generation and Supply

Income Statement (R\$M)	Generation			
	2018	2017	Δ %	Δ Abs.
Gross Profit	1,684	1,545	9%	+139
OPEX (1)	228	231	-1%	-3
Other operating costs (net)	6	(1)	-	+7
Net Operating Costs	234	230	2%	+4
EBITDA	1,450	1,315	10%	+135
Amortisation, impairment; Provisions	368	372	-1.1%	-4
EBIT	1,082	943	15%	+139

EBITDA from our electricity generation activities and supply in Brazil went up 9% YoY (+R\$138m) to R\$1,628m in 2018, reflecting +R\$129m of higher EBITDA at Pecém coal plant in 2018, mostly due to the revision of the availability reference and consequent reduction in the provision for penalties on unavailability.

Hydro gross profit increased 2% YoY to R\$959m. Worth noting that EDPB hedging and GSF insurance coupled with the sale of uncontracted volumes, offset the impact of GSF which otherwise would have had a negative impact of -R\$603m in 2018 (-R\$662m in 2017).

EDP will continue to manage its portfolio of plants and contracts, handling volumes and hedges together with its supply business as to minimize the impact of hydro deficits and price volatility.

Key Data	2018	2017	Δ %	Δ Abs.

Hydro	7,403	7,065	4.8%	+338
Thermal	3,455	4,597	-25%	-1,142
Other	2,478	1,626	52%	+852
Avg. Hydro Sale Price (R\$/MWh) (2)	186	181	3%	+5
Installed Capacity (MW Equity)	539	364	48%	+175
Capex (R\$ m)	124	151	-18%	-27
Financial Investments (R\$ m)	62	319	-81%	-257
Employees (#)	433	488	-11%	-55

The average price of hydro volumes was R\$186/MWh in 2018, 3% higher YoY, due to PPA prices being inflation updated annually, but also due to higher prices on new short-term and long-term contracts. Hydro volumes sold increased 5%.

Pecém gross profit reached R\$725 in 2018, a 21% increase YoY, mainly due to the abovementioned availability effect. Pecém's electricity sold decreased 25% YoY, due to the increase of hydro resources in the 4Q18 and programmed maintenance that occurred in the 2H18.

EDPB operates 2.9 GW of capacity, of which 0.5 GW are equity consolidated. Equity accounted capacity refers to a 50% equity stake in Santo Antônio do Jari hydro plant (393 MW), to a 50% equity stake in Cachoeira-Caldeirão hydro plant (219 MW), both in partnership with CTG, to a 33% equity stake in São Manoel hydro plant (700 MW, fully online in Apr-18) in partnership with CTG and Furnas.

Hydro installed capacity at EBITDA level was reduced by 147 MW, reflecting the sale of EDP PCH (previous owner of 7 small-hydro plants) and Santa Fé and Costa Rica small-hydro plants in the 2H18.

Capex was reduced by R\$27m to R\$124m in 2018, mainly due to lower capex needs in Pecém coal plant. Worth noting that the final equity investments devoted to São Manoel, Jari and Cachoeira-Caldeirão hydro plants are classified as "financial investments" (equity-method accounted) and in 2018 amounted to R\$62m (-81% YoY).

Electricity supply EBITDA increased 2% YoY to R\$178m in 2018, reflecting higher volumes and evidencing the integration of the portfolio through the hedging strategy developed to deal with price volatility.

EDP - Sustainability performance

Main Events 2018 (a)

EDP elected world leader in the social dimension of sustainability

The Group is in the top 2 of energy companies on the Dow Jones Sustainability Index and was considered the best in the world in criteria such as environmental policy management.

EDP increases score on FTSE4Good Global Index

EDP is in the top 2 of companies with the highest ESG score on FTSE4Good Global Index with a score 4.6 out of 5.

Ethisphere Institute - World's Most Ethical Companies 2018

The Most Ethical Companies in the World in 2018, published by the Ethisphere Institute, includes 135 companies from 23 countries and recognizes the EDP Group for its seventh consecutive year.

EDP has been recognized as one of the companies in the world with the best climate change practices

For the 4th consecutive year, having been recognized an A- in the CDP Climate Change category ranked at the highest performance level ('Leadership') and in the CDP Water category, maintaining its 'Management' performance level and B rating.

Green Bond Pioneer Awards 2019

EDP has been recognized by the Climate Bond Initiative (CBI) for being the first portuguese company which issued green bonds.

Important notice

On 1-Jan-19, EDP adopted IFRS 16, which supersedes IAS 17 in what respects the regulation of operating leases. The new standard requires the recognition of lease commitments for the entire duration of contracts into the balance sheet liabilities as well as the recognition of a new asset "Right Of Use Asset" as counterparty. The adoption of IFRS 16 implied higher liabilities (€737m) and higher assets (€748m) on 1-Jan-19. In 2019, it resulted in higher EBITDA (€65m) and lower net profit (-€12m).

In 2019, EDP reinforced its strategic positioning as a leader in energy transition: in renewables, EDP installed +0.9 GW of new wind and solar projects in the US, Europe and Brazil. Furthermore, since the beginning of 2019, EDP has secured 3.0 GW of new wind and solar projects through long-term contracts that are expected to start operations during our current strategic plan horizon (2019-2022). This represents 76% of the growth target for this period. Out of these projects, 1.0 GW were under construction as of December 2019. Regarding offshore wind, EDP installed the largest wind turbine ever installed on a floating platform and secured another long-term contract for 800 MW in a project to be built in Massachusetts, USA. Additionally, in January 2020, the terms for the 50/50 joint venture with Engie were agreed upon. **In electricity networks**, growth is concentrated in Brazil: i) in distribution, following previous years' significant investments, the recent regulatory revisions of EDP São Paulo and EDP Espírito Santo, resulted in an upward revision of our regulated asset base (+36%), reaching R\$5 bn (€1.1 bn); ii) in transmission, we reached c.40% of investment execution with the partial inauguration, in January 2020, of a second line with 203 km – Maranhão's line – 19 months ahead of schedule. **In energy supply**, the focus continues to be on our clients' satisfaction (-23% of complaints YoY, in Iberia), which prompted a stable number of electricity customers and an increase in new services provided, especially, maintenance of home appliance equipment within the residential segment, and energy efficiency within the corporate segment.

The 13% growth in recurring EBITDA benefited from good performance across all platforms. In renewables, wind and solar average installed capacity increased 1% to 10.9 GW. Moreover, the progress on execution of our asset rotation strategy as announced in March 2019, namely through the sale of a portfolio of wind farms in Europe and Brasil, yielded €0.3 bn gain. On the other hand, **hydro production** in Iberia fell 25% vs. 2018, standing 19% short of historical average in Portugal, as a result of weak hydro resources, which had a negative impact on EBITDA of nearly €0.2 bn. In **regulated networks**, growth stemmed mostly from Brazil, prompted by the impact from the recent regulatory revisions at our distribution concessions and expansion of transmission. In Iberia, our distribution networks benefited primarily from greater efficiency in operating expense, which decreased by 4%. In **Client solutions and energy management**, the Iberian supply segment was impacted by i) good results from our energy management activity and an adequate hedging policy in energy markets that more than compensated the deterioration of market conditions for coal-fired power plants; ii) in supply, the normalization of the market and regulatory environment compared to the extremely adverse context of 2018.

The 7% growth in recurring net profit reflects not only the 13% EBITDA expansion, but also the normalization of the effective tax rate and the an average cost of debt 10 bp higher YoY, at 3.9%, penalized by the higher cost of the €1 bn Green Hybrid bond issued in January 2019. The reported net profit was impacted by an €86m provision regarding Fridão hydro project, as well as by the €297m impairment in coal plants in Iberia (both before tax). Hence, the **conventional operations in Portugal** (including electricity distribution network, hydro and thermal generation, as well as energy supply), recorded at net loss of €98m in 2019 (vs. a loss of €18m in 2018), penalized by a continued adverse regulatory and fiscal context, which was worsened in 2019 by abnormally low hydro production.

As of December 2019, net debt stood at €13.8 bn, with an improvement in Adjusted Net Debt/EBITDA to 3.6x (vs. 4.0x in 2018). **Recurring organic cash flow grew 20% to €1.4 bn in 2019**, supported by global renewables strategy: the asset rotation option presented in our 2019-2022 strategic plan allowed for the gross investment in the development of new renewable assets and regulated networks to be offset by the sale of operating renewable assets (€1 bn gain in 2019). Furthermore, in December 2019, EDP reached an agreement for the sale of 6 hydro plants in Portugal (1.7 GW) for €2.2 bn with closing expected in second half of 2020. The disposal aims to fulfil the targets of portfolio optimization and improvement of risk profile, reflected in the strategic plan presented in March 2019.

The Executive Board of Directors will propose at the Annual Shareholders' Meeting (April 16th) the distribution of a dividend for the year of 2019 in the amount of €0.19 per share, which represents a payout of 81% on net recurring income.

(1) Including Wind, Solar, Hydro and mini-hydro capacity; (2) Full P&L statement on page 24; (3) CESE: Extraordinary contribution from the energy sector; (4) Excluding one-off impacts as per page 3 (EBITDA) and page 4 (Net profit); (5) Adjusted for IFRS 16; (6) Net of regulatory receivables; Based on trailing 12 months recurring EBITDA and net debt excluding 50% of hybrid bond issues (including interest).

EBITDA 2019

EBITDA advanced 12% YoY, to €3,706m in 2019, with a positive contribution across all the platforms. Our growth strategy of combining portfolio expansion (+€0.1 bn YoY) with asset rotation strategy (+€0.2 bn YoY) proved outstanding, surpassing the adverse weather effect on hydro production (nearly -€0.2 bn below normalized levels, mostly in Portugal) de-consolidation effects (-€0.1 Bn) and lower one-off contributions (-€41m YoY*). EBITDA performance was also driven by: (i) in Brazil, positive impact from regulatory reviews and execution of transmission investments; (ii) In Iberia, outstanding energy management results in 4Q19 (+€133m QoQ). **Recurring EBITDA was up by 13%, to €3,716m in 2019.** ForEx impact, amounted to +€10m, as USD appreciation vs. Euro (+5%), was largely compensated by Brazilian real depreciation (-2%). The adoption of IFRS16 impacted EBITDA by +€65m (+€45m of which at EDPR level).

RENEWABLES (61% of EBITDA, €2,286m in 2019) – Excluding one-off effects (€71m in 2018 mainly backed by gains on mini-hydro disposals in Brazil), **recurring EBITDA grew by 8% (+€160m YoY)**, driven by higher volumes and realised prices in wind & solar (+€97m YoY) and the benefits from our organic growth and asset rotation strategy (+€72m YoY and +€204m YoY, respectively). Nevertheless, EBITDA performance in 2019 was affected by below-the-average hydro resources in Portugal (nearly -€0.2 bn below normalized levels) and by the the de-consolidation of the wind farms in Europe (-€65m YoY) and some mini-hydros in Portugal and Brazil (-€46m YoY).

NETWORKS (26% of EBITDA, €991m in 2019) - EBITDA increased 19% YoY, prompted by Brazil (+€154m YoY), following: (i) **in distribution**, the positive outcome from regulatory reviews at both our concessions, resulting in regulated gross profit increases (+€31m) and on the update of the concessions assets' residual value (+€53m); (ii) ramp up of **transmission** activity (+€44m YoY on EBITDA), as the construction of our transmission lines progresses. In **Iberia**, EBITDA performance was mainly supported by a disciplined cost management, while gross profit evolution reflects Portugal's declining rate of return (-30 bp YoY, to 5.13%), in line with Portugal's 10-year bond yields during 2019 and the recognition of one-off provision (-€28m).

CLIENT SOLUTIONS & ENERGY MANAGEMENT (13% OF EBITDA, €474m in 2019) - EBITDA rose by 52% YoY (+€162m YoY), following a strong Energy Management performance, particularly in the 4Q19, and the normalization of the market and regulatory context for supply in Iberia from particularly weak 2018 conditions (+€93m YoY). Thermal generation & energy management in Iberia (+75% YoY, to €248m), reflected a strong performance of our energy management business, which benefitted from the increasing volatility in energy markets in 4Q19, namely due to lower spot prices in the wake of higher hydro output and lower gas prices. **In Brazil**, last year's EBITDA was positively impacted by the downward revision of the contracted level of thermal plant availability. In 2019, energy management activity was penalized by lower liquidity in the wholesale market and lower margins.

(*) *Non-recurring items: (i) +€31m in 2018, net impact of the sale of mini-hydro plants Brazil (+€82m), and 2H17's share of the impact from the difference between CMEC final adjustment recognised in Dec-17 and approved by the Government on May 3rd (-€18m), restructuring costs (-€34m); (ii) -€11m in 2019, including restructuring costs (-€13m), provision for the sharing of some gains with consumers (-€28m in electricity distributon in Portugal) and gain following the change in medical plan of employees in Brazil (+€30m).*

(1) Adjustments for one-off impacts, described above(*); (2) Includes Poland, Romania, France, Belgium, Italy and UK.

Extraordinary Contribution for the Energy Sector	68	65	5%	+3	0	67	(0)	1	1	171%	+1
Non-controlling Interests (Details page 27)	388	357	9%	+31	125	98	104	65	121	-3%	-4
Net Profit Attributable to EDP Shareholders	512	519	-1%	-7	222	100	305	55	51	-77%	-171

In both 2019 and 2018, the amount of **provisions** includes one-off effects: (i) in 2019, €86m related to amounts invested on Fridão hydro project since concession awarding; (ii) in 2018, a €285m provision for CMEC innovative features.

The increase in amortisations and impairments (+22% YoY) is mainly driven by €312m impairments in 2019 (€297m on coal plants in Iberia, following the deterioration of market conditions arising from the increase in CO₂ prices; €15m at EDPR), the adoption of the IFRS 16 on leases (+€53m in 2019) and net capacity additions.

The evolution of Financial results (-21% YoY, to -€670m in 2019) primarily reflects gains in 2018 on the sale of some stakes in our offshore wind projects in UK and France (+€87m) and in Bioelectrica (+€24m). **Net interest costs decreased 5% YoY**, to €597m in 2019, reflecting last year's one-off costs mostly related to early debt prepayment (€39m cost) and while unveiling in 4Q19 a €12m cost decline vs 3Q19: avg. cost of debt stood at 3.9% in 2019 (vs. 3.8% in 2018) following the combined impact of higher average weight of the more expensive USD and BRL denominated debt and issuance of €1 bn hybrid bond at a 4.5% yield in Jan-19. Moreover, it is worth mentioning the effect of the adoption of IFRS 16 (€34m higher cost of 'Unwinding'); higher capitalised financial costs, driven by investments in transmission (Brazil); and other financials, including 2018's badwill on the acquisition of Celesc (+€18m in 2018) and revaluation gain at our equity stake in Feedzai in 2019 (+€31m).

Share of net profit in joint ventures and associates increased €14m YoY to €25m in 2019, mainly reflecting higher contribution from our hydro plants and Celesc, both in Brazil (details on page 27).

Income taxes amounted to €226m (+€126m YoY), representing an effective tax rate of 19% in 2019, up from an abnormally low level in 2018.

Non-controlling interests include €218m related to EDPR and €178m related to EDP Brasil. The 9% YoY increase in 2019 is mainly justified by the increase in net profit of EDP Brasil and EDPR (details on page 27).

Overall, net profit remained broadly stable YoY, totalling €512m in 2019. Adjusted by one-off impacts(*), **recurring net profit increased 7% YoY, to €854m in 2019**, as the asset rotation strategy and growth at networks in Brazil more than offset below-the-average hydro resources in 2019 and 2018's low effective tax rate.

(*) *Non-recurring items impact at net profit level: (i) -€277m in 2018, including the regulatory impacts (-€208m), the impairments at coal plants in Iberia (-€21m), restructuring costs (-€21m), net gain on disposals (mini-hydros: +€40m; Bioelectrica: +€24m), debt prepayment fees and others (-€26m) and the extraordinary contribution for the energy sector (-€65m); (ii) -€342m in 2019, including the impairments (-€224m, mainly coal in Iberia), the provision for Fridão (-€59m), provision reversal at S Manoel and the gain on the revaluation of Feedzai (+€28m), one offs at EBITDA level (-€20m net of tax) and the extraordinary contribution for the energy sector (-€66m).*

(1) Includes unwinding of medium, long term liabilities (TEIs, IFRS-16, dismantling & decommissioning provision for generation assets, concessions) and interest on medical care and pension fund liabilities.

368	362	668	634	344	481	456	977

Consolidated capex amounted to €2,258m in 2019, 76% of which dedicated to expansion: 65% share in renewables, c35% share in Networks, with highlight to electricity transmission projects in Brazil.

Financial investments in 2019 (€361m) include: i) **In renewables**, amounts allocated to the build-out of wind onshore capacity in the U.S. and Canada (as committed under our Asset rotation deal in Dec-18), equity contributions to several offshore wind projects (UK, US, France and floating wind in Portugal) and on the construction of San Gaban hydro plant in Peru; ii) **In Networks**, the amount invested to increase our stake in Celesc, from 23% to 25.4%

Maintenance capex (€535m in 2019) was mostly dedicated to our regulated networks in Iberia and Brazil (60% of total), targeting a reduction of grid losses (Brazil) and the implementation of several digitalisation projects (Iberia).

Expansion investments (including financial investment) was focused in renewables globally and grids in Brazil:

1) €1,457m in new renewable capacity (c70% of the total) was distributed between North America (c70%), Europe (c25%) and Latam (c5%). (details on page 10).

2) €596m in networks in Brazil, dedicated to the roll out of transmission lines (€455m on construction works equivalent to 59% of capex program) and to grid expansion in distribution (€141m), which until 2018 was included in maintenance capex.

Financial divestment in 2019 is mainly impacted by €970m proceeds from asset rotation strategy: (i) €780m net proceeds from the sale of c51% stake in a 997 MW wind portfolio in Europe; and (ii) €190m proceeds associated with CAPEX incurred over 2019 with the full completion of Prairie Queen wind farm in US (disposal previously agreed in Dec-18).

All in all, net expansion investments amounted to €1,168m in 2019. The bulk of this (c55%) was dedicated to renewables, mainly wind in the US. Net expansion investments include €186m proceeds from new Tax Equity partnerships and +€244m effect mainly related to payments to fixed asset suppliers (mostly in wind), changes in consolidation perimeter and other.

(1) Includes Proceeds from Tax Equity Partnerships, Change in WC Fixed asset suppliers, Change in consolidation perimeter, reclassification of asset rotation gain and other; (2) Includes Capex and Financial investment.

Recurring organic cash flow amounted to €1.4 Bn in 2019, translating the cash generated and available to fulfil EDP's key strategic pillars of sustainable growth, deleveraging and shareholder remuneration (dividends). In 2019, Recurring organic cash flow rose by €0.2 Bn YoY (+20%), driven by higher gains with asset rotation transactions and lower payments to Tax Equity Partnerships.

Maintenance capex (including payables to fixed assets suppliers) amounted to €657m in the period, mostly related to the networks business and higher YoY payments to fixed asset suppliers (including the impact from the adoption of IFRS16).

The increase in 'Other' recurring organic cash flow items (+€142m YoY to €129m) is mainly justified by higher gains on asset rotation transactions to €313m.

Net expansion investment activity amounted to €1.2 Bn in 2019, c70% of which devoted to renewables and the bulk of the rest to transmission in Brazil. (details on page 5).

Regulatory receivables increased by €65m in 2019, mainly driven by Portugal, following new receivables arising from deviations between the system's real costs and ERSE's assumptions (details on page 7).

On 15-May-19, EDP paid its annual **dividend totalling €691m (€0.19/share)**, in line with the previous year.

Effects of exchange rate fluctuations resulted in a €49m increase on net financial debt in 2019, mainly justified by the appreciation of the USD vs. Euro (+2% YTD, to 1.12).

The caption **Other** includes +€0.5 Bn relative to the 50% equity content attributed by the credit rating agencies to the new €1 bn hybrid bond issued in Jan-19 and -€0.3 Bn one-off impacts in 2019, including an extraordinary contribution to employees' medical care services fund (-€0.17 Bn) and €0.17 Bn tax payment relative to 2018 deficit sales.

Overall, net debt increased by €0.3 Bn in 2019, to €13.8 Bn as of Dec-19, reflecting the pace of expansion activity focused in renewables and grids, while the cash in of proceeds from asset rotation deal in Brazil happened in Feb-20.

Funds from operations (FFO) rose by 18% YoY, to €2,648m in 2019, mainly impacted by higher EBITDA (details on page 3) and lower current income tax.

(1) Includes Amortisation and Impairments, Provisions, Financial Income and expenses, Other; (2) Excluding Regulatory Receivables; (3) Maintenance capex includes payables to fixed assets suppliers.

Total amount of **property, plant & equipment and intangible assets** decreased €3.5 bn vs. Dec-18 to €23.9 bn as of Dec-19, mainly driven by the transfer of a portfolio of hydro assets in Portugal and others to 'Assets held for sale' (-€1.9 bn), the derecognition (-€1.2 bn) of wind assets in Europe and Brazil related with the Asset Rotation strategy, the transfer to 'Other assets, net' of €0.3 bn related with the Fridão Hydro plant and the impairment recognized in the coal plants in Iberia (-€0.3bn). Such effects were partly mitigated by: (i) the construction activity (+€1.3 bn); (ii) the net impact from the evolution of USD (+2%) and the BRL (-2%) against the EUR (+€0.1 bn). As of Dec-19, works in progress amounted to €1.9 bn (8% of total consolidated tangible and intangible assets): 77% at EDPR level, 3% at EDP Brasil level and the remaining 20% at Iberian level.

The adoption of IFRS 16, on January 1st 2019, resulted in a €0.75 bn accounted as '**Right-of-use assets**'. Along with this, a liability of €0.74 bn was booked under 'Other liabilities, net'. The current amount of €0.8 bn is the result of the normal activity of the group.

The book value of **financial investments & assets held for sale net of liabilities** increased by €2.4 bn vs. Dec-18, mainly due to the recognition under the account "assets held for sale" of the abovementioned portfolio of hydro assets (+€1.9 bn) and the wind offshore assets under the scope of the strategic memorandum of understanding with Engie (+€0.2 bn). (More details on page 27).

Tax assets net of liabilities, deferred and current increased €0.4 bn vs. Dec-18 at €0.8 bn in Dec-19. **Other assets (net)** increased €1.2 bn vs. Dec-18 to €8.3 bn as of Dec-19, mainly supported by the development of transmission lines and execution of CAPEX in Networks and the abovementioned effect related with Fridão hydro plant.

Equity book value attributable to EDP shareholders decreased by €0.1 bn to €8.9 bn as of Dec-19, reflecting on one hand the positive effects of the net profit for the period and the Forex and on the other hand the payment of annual dividend. **Non-controlling interests** declined €0.16 bn largely reflecting the effect of the asset rotation deal completed in Jul-19.

Pension fund, medical care and other employee benefit liabilities fell by €0.1 bn vs. Dec-18, to €1.3 bn as of Dec-19 (**€0.9bn, net of tax**), reflecting the recurrent payment of pension and medical care expenses in 2019, the extraordinary contribution to the pension fund in Portugal (€142m).

Institutional partnership liabilities were flat vs Dec-18 at €1.3 bn, following the benefits appropriated by the tax equity partners during the period which offset a new institutional partnership secured and the USD appreciation against the EUR.

Provisions were broadly flat vs. Dec-18, at €1.1 Bn. This caption includes, among others, provisions for dismantling (€486m, +€5m YoY), of which €270m related with wind farms and a provision related with the amount invested on the Fridão hydro plant since the concession attribution (€86m).

Other liabilities (net) increased €0.6 bn vs Dec-19, includes the adoption of the IFRS-16 (+€0.76 bn) and the increase in equipment suppliers liabilities (+€0.2 bn), associated with the augmented development of expansion projects. These effects were mitigated by the deconsolidation of wind projects associated with the asset rotation transactions executed (-€0.4 bn)

Net regulatory receivables amounted to €370m as of Dec-19 (**€255m net of tax**). The evolution during 2019 is mainly justified by unanticipated deviations vs. ERSE's assumptions: i) lower amounts allocated to the electricity system regarding mitigation measures (+€212m); ii) special regime over-cost caused by lower realized prices and higher volumes (+€182m). In 2019, Portuguese electricity system debt amounted to €3.57 bn, including a €0.44 bn decrease in ex-ante debt and higher tariff deviations, due to be recovered in 1-2 years.

Also worth to note is EDP's full disposal of ex-ante deficit created in 2019: €1.1bn sold in 2Q19.

(1) Excluding the amount corresponding to the impact from the exclusion of ICMS from the calculation of PIS/COFINS from past years in our distribution companies (R\$1.8 Bn), since the receivable (recognized under current tax assets) is a pass-through to the tariff.

Debt by Interest Rate Type (1) - Dec-19

Debt by Currency (1) (3) - Dec-19

EDP's financial debt is mostly issued at holding level (EDP S.A. and EDP Finance B.V.), accounting for 84% of the Group's Nominal Financial Debt. Debt for the group is raised mostly through debt capital markets (83% in Dec19, +2% YoY), with the remaining through bank loans.

Maintaining access to diversified sources of funding and assuring refinancing needs, mostly through underwritten syndicated facilities, at least 12-24 months ahead continue to be part of the company's prudent financial strategy.

In April-19, S&P affirmed EDP's credit rating at "BBB-", with Stable outlook on the expectation of EDP successfully executing its strategy. The company's current credit rating under Moody's is "Baa3" with Stable outlook and under Fitch is "BBB-", with Stable outlook.

Looking at 2019's major debt repayments and financing transactions: In Jan-19, EDP extended €2,095m out of the €2,240m Revolving Credit Facility maturity until Mar-24 (except for €145m which matures in Mar-23) and issued €1.000m of subordinated green notes with a yield of 4.5% with maturity in 2079 (green hybrid); in Apr-19, EDP repaid at maturity the remainder € 501m of a €600m bond that carried a coupon of 2.625%;. In Sep-19, EDP issued a €600m green note with 7-year maturity and a record-low yield of 0.4%. Also, in Sep-19, EDP extended €3,295m out of the €3,300m Revolving Credit Facility until Oct-24 (except for €5m which matures in Oct-23). Lastly, in Oct-19 19 EDP repaid at maturity the remainder \$637m of a \$1,000m bond that carried a coupon of 4.9%.

Refinancing needs for 2020 amount to €3.2 Bn including €2.2 Bn of bonds. Note that the increase in 2020 maturities over the past quarter is fully explained by an increase in outstanding ECP and by the repurchase of our 2015 €750m hybrid in 1Q2020: **as of Jan-2020**, EDP issued a new €750 million Green Hybrid with a coupon of 1.7%, first call date in Apr-25 and final maturity in 2080; together with the new issuance, EDP also launched a tender over the abovementioned 2015 hybrid (coupon of 5.375%), that had a success rate of 91% and will allow EDP to exercise the clean-up call in March over the remaining 9%. Additionally, in Jan-2020 a USD bond matured with a total outstanding value of \$583m and a coupon of 4.125%. For the remainder of 2020, there are two Euro bonds maturing in June and September with coupons of 4.125% and 4.875%, respectively, with a total outstanding amount of €695m. **In 2021 and 2022**, refinancing needs amount to approx. €3.1 Bn.

Total cash and available liquidity facilities amounted to €7.1 Bn by Dec-19, of which €5.5bn are credit facilities.

Installed Capacity EBITDA MW - Dec-19

Assets' average life and residual life

(Years)

Hydro Iberia	31	35
Hydro Brazil	17	14
Wind & Solar Brazil	3	27
Wind & Solar Europe	10	20
Wind & Solar North America	7	23

Renewables capacity accounts **77%** of our total installed capacity, equivalent to **20.6 GW** (including Equity MW).

In 2019, we commissioned **888 MW** of wind and solar capacity (139 MW of which equity), the bulk of which in US (81%). On the other hand, as part of our asset rotation strategy, we completed, in July, the sale of our **c51% stake in 997 MW in operation in Europe** (388 MW in France, 348 MW in Spain, 191 MW in Portugal and 71 MW in Belgium), leading to the deconsolidation of the full EBITDA MW capacity.

As of today, we have **PPAs secured for 5.4 GW** (+3.0 GW vs Dec-18) to support installations in 2019-22, representing around **76% of our targeted global renewables capacity built-out plans**. To date, we secured PPAs in North America (2.8 GW), Europe (1.2 GW), LatAm (1.2 GW) and Offshore (0.2 GW).

As of Dec-19, our wind & solar capacity under construction totaled **994 MW**, including attributable capacity of 316 MW in Moray East (UK) and 14 MW Windplus floating project (Portugal), both offshore technologies as Equity MW.

In **North America**, we have currently **509 MW of wind farms under construction**, including Harvest Ridge I (200 MW) and Reloj del Sol (209 MW) that are expected to be commissioned in 2020 and Nation Rise (100 MW in Canada). The last one, we have already sold an 80% stake, though keeping the commitment to complete construction.

In **Europe**, we have 154 MW of wind onshore under construction of which 18 MW are wind repowering projects in Spain.

Our **hydro portfolio** comprises **7,186 MW in Iberia** (c. 40% of which pumping capacity) and 1,599 MW in Brazil. In LatAm, we own equity stakes on 3 hydro plants (Jari, Cachoeira-Caldeirão and S. Manoel, all in Brazil) and own a 50% share in a hydro plant under construction in Peru (San Gaban, 78 MW net).

Lastly, in 2019, we agreed on the **asset rotation of Babilonia wind farm** (137 MW) in operation in Brazil and the disposal of **1,689 MW of hydro plants in Portugal**. The deconsolidation of the full EBITDA MW capacity will follow the financial closing of these transactions (deal in Brazil on February 12th and Hydro disposal in Portugal expected in 2H20).

All in all, **net expansion investments amounted** to €621m in 2019, mainly due to proceeds from the asset rotation deals (+€780m equity proceeds from the deal in Europe and +€190m cash received relating to Prairie Queen). The **expansion investment** is mainly devoted to projects in North America (~70%) and Europe (~27%). **Financial investments of €318m** includes expenditures mostly in Prairie Queen, Nation Rise, San Gaban and wind offshore. Lastly, impact of €338m, mainly related to payments to **fixed asset suppliers** (largely in wind) and **changes in consolidation perimeter** (mostly related to the agreed asset rotation deals in Europe and Brazil).

Core OPEX/Average MW	2019	2018	Δ %	Δ Abs.
Wind & Solar	40.5	42.8	-5%	-2.3
Hydro				
Iberia	11.8	23.6	-50%	-11.7
Brazil	13.7	13.9	-1%	-0.2

In 2019, EBITDA rose by 4% YoY to €2,286m, mainly driven by higher volumes and prices (+€97m YoY) in the wind & solar business and by a favorable forex impact of +€22m. Moreover, the benefits from our portfolio expansion (+€72m on EBITDA) and asset rotation strategy (+€203m YoY) were mitigated by below-the-average hydro resources in Iberia (-€0.2 bn) and de-consolidation of assets sold (-€65m).

Wind and solar EBITDA increases to nearly €1,648m (+27% YoY) was driven by:

- net growth effect, including higher gain on both asset rotation deals (+€313m in 2019 vs €110m in 2018), de-consolidation of assets sold (-€65m YoY in 2H19) and portfolio expansion (+€72m YoY);
- stronger wind resources (+3 pp, although still 3% short of P50), average selling price of +3% YoY (backed by eastern Europe) and by the adoption of IFRS 16 (+€45m YoY). Finally, EBITDA performance also reflected the expiring of 10-year PTC incentive in US wind projects (-€33m YoY).

The 29% YoY decline in hydro EBITDA to €638m was mainly driven by extremely weak hydro resources in Iberia (trimming EBITDA by €0.2 Bn vs. normalized level) and the deconsolidation of mini hydro plants disposed on in 4Q18 in Portugal and Brazil (-€46m on EBITDA loss and +€82m of net gain in 2018).

OPEX performance in renewables (-7% YoY) reflected tight cost control and successful implementation of ongoing savings program, both in Iberia and Brazil. In wind and solar, **Core OPEX per average MW decreased to €40.5k** (-5% YoY), before IFRS 16 adjustment (+€45m YoY). Considering additional impacts (IFRS16, offshore and one-offs), Adjusted Core OPEX per average MW is **stable at 0% YoY** (ex-forex).

Other operating costs (net), amounting to a **€424m** revenue in 2019, includes the gain of the asset rotation deals (+€313m in 2019) completed in July of 2019. In Iberia, lower generation taxes at €36m (vs. €51m in 2018), mainly due to the underlying lower production and lower PTC revenue (-\$15m YoY).

Wind portfolio resources 2019

Wind & Solar Avg. Selling Price 2019
vs. 2018 (€/MWh)

Renewables in North America

USA: EBITDA MW by market - Dec-19

In North America, **installed capacity** (5,944 EBITDA MW) is **98% wind** while the remaining is **solar** (90 MW). Additionally, we own **equity stakes in other wind projects**, equivalent to **398 MW** (+82% YoY), following the commissioning of 199 MW Prairie Queen, in Aug-19 (20% equity stake) and acquisition of 50% of First Solar portfolio (139 MW net). In 2019, **87% of total installed capacity is PPA/Hedged contracted**.

Electricity production increased +5% YoY, mainly reflecting the growth of installed capacity (+7% YoY) and stable wind resources YoY (although 7% short of LT average). **Wind resources improvements** were YoY concentrated in the **Eastern region**, while **Central and West** had **poorer resources**.

Gross profit rose to USD 729m (+7% YoY) in 2019, mainly supported by the 5% **output growth**. **PTC Revenue & Other declined to USD 203m** (-7% YoY), mainly due to the combined effect from the **expiration of 10-year PTC fiscal incentives** in some wind projects (-USD 39m YoY) and **establishment of new partnerships** (+USD 21m YoY).

EBITDA stood at USD 688m (-8% YoY) in 2019, mainly justified by 2018's gain from the asset rotation of 80% stake from 499 MW of wind onshore capacity in the US and Canada (€109m gain booked in 4Q18).

- Sales can be agreed under PPAs (up to 20 years), through Hedges or Merchant prices;
- Green Certificates (Renewable Energy Credits, REC) subject to each state regulation;
- Tax Incentive:
 - i) PTC collected for 10-years since CoD (\$25/MWh in 2019);
 - ii) Wind farms beginning construction in 2009 and 2010 could opt for 30% cash grant in lieu of PTC.

- Feed-in Tariff (Ontario). Duration: 20-years;
- Renewable Energy Support Agreement (Alberta).

- Technological-neutral auctions (opened to all technologies) in which bidders offer a global package price for the 3 different products (capacity, electricity generation and green certificates);
- EDPR project: bilateral Electricity Supply Agreement under self-supply regime for a 25-year period.

Installed capacity (Equity MW)	152	152	0%	-
Share of net profit in JVs/associates	3.7	4.5	-18%	-1

In Iberia, **installed capacity** (10.3 GW) is split between wind (~30%) and hydro (70%), following the deconsolidation of 348 MW in Spain and 191 MW in Portugal resulting from the sale of our c. 51% stake in an European wind portfolio of assets (Jul-19). In Dec-19 and as part of our disposal plan, we agreed to sell 6 hydro plants in Portugal (1.7 GW) for €2.2 bn. The closing is expected in 2H20.

In Iberia **wind & solar output** increased to 8.5 TWh (+4% YoY), experiencing a stronger wind resource and high load factors, despite the deconsolidation of capacity sold in Jul-19 (-539 MW YoY). Moreover, the average selling price decreased 2% YoY and as a result, gross profit amounted to €668m (-2% YoY).

Hydro gross profit was down to €572m (-23% YoY), mainly driven by weak hydro resources despite a strong recovery of this resource in the last quarter (+56% resource above historical average in 4Q19).

Hydro resources in Portugal were 19% below historical average (vs. +5% in 2018), resulting in a decline of 26% YoY in net production. In the 4Q19 there was a strong recovery of hydro resources in Iberia, allowing to store the levels of our reservoirs (+0.4 TWh above historical average) in Portugal.

The **average unit pumping margin** was above €15/MWh while **average selling price of hydro production** stood at €54/MWh (-14% YoY) being supported by hedging gains.

Regarding **one-off provisioning**: (i) in 2019, we booked an €86m provision for invested amounts on Fridão hydro plant project since concession attribution; (ii) in 3Q18, hydro's share in the €285m provision related to the alleged CMEC overcompensation.

- Wind energy developed until 2015 receives pool price + premium / MW, if necessary, in order to achieve a target return of 7.4% for the 2016-2019 period;
- Premium calculation is based on standard assets (load factor, production and costs);
- Since 2016, all the new renewable capacity is allocated through competitive auctions.

- MWs from previous regime: Feed-in Tariff inversely correlated with load factor throughout the year. Tariff monthly inflation-updated, through the later of: 15y of operation or 2020, + 7 years (cap/floor system: €74/MWh - €98/MWh);
- ENEOP portfolio : price set in an international competitive tender for 15y (or the first 33 GWh/MW) + 7y (extension cap/floor system: €74/MWh - €98/MWh). First year tariff at c.€74/MWh, CPI monthly-updated;
- VENTINVEST portfolio: price defined in an international competitive tender and set for 20y (or the first 44 GWh/MW) of €66/MWh.

In the Rest of Europe (ex-Iberia), installed capacity stands heavily focused in onshore wind (~1,203 MW) and 50 MW of solar capacity in Romania. Our average installed capacity decreased 389 MW, mostly due to the deconsolidation of our asset rotation strategy deal in Europe in Jul-19.

Output was stable at 3,333 GWh, as the benefit from stronger wind resources (+2.5 pp vs LT Average) was offset by the de-consolidation of wind farms sold (388 MW in France and 71 MW in Belgium). Poland and Romania factored considerable high load factors being the main contributors to keep generation stable.

Average selling price was 6% higher YoY, reflecting a recovery in prices in Poland and Romania.

As a result, EBITDA rose to €221m (+31% YoY), following stronger wind resources, market price recovery in Eastern Europe, portfolio expansion and asset rotation gains.

- Wind assets (installed until 2013) receive 2 GC/MWh until 2017 and 1 GC/MWh after 2017 until completing 15 years. 1 out of the 2 GC earned until Mar-2017 can only be sold from Jan-2018 and until Dec-2025. Solar assets receive 6 GC/MWh for 15 years. 2 out of the 6 GC earned until Dec-2020 can only be sold after Jan-2021 and until Dec-2030. GC are tradable on market under a cap and floor system (cap €35 / floor €29.4); Wind assets (installed in 2013) receive 1.5 GC/MWh until 2017 and after 0.75 GC/MWh until completing 15 years; The GCs issued starting in Apr-2017 and the GCs postponed to trading from Jul-2013 will remain valid and may be traded until Mar-2032.

- Electricity price can be established through bilateral contracts; Wind receive 1 GC/MWh which can be traded in the market. Electric suppliers have a substitution fee for non compliance with GC obligation. From Sep-17 onwards, substitution fee is calculated as 125% of the avg market price of the GC from the previous year and capped at 300PLN.

- Feed-in tariff for 15 years: (i) €82/MWh up to 10th year, inflation updated; (ii) Years 11-15: €82/MWh @2,400 hours, decreasing to €28/MWh @3,600 hours, inflation updated; Wind farms under the RC 2016 scheme receive 15-yr CfD which strike price value similar to existing FIT fee plus a management premium.

- MW <2013 are (during 15 years) under a pool + premium scheme; MW >2013 were awarded a 20 years contract through competitive auctions. According with the auction scheme, the electricity produced by these wind farms is sold on the market with CfD.

- Market price plus green certificate (GC) system;
- Separate GC prices with cap and floor for Wallonia (€65/MWh-100/MWh);
- Option to negotiate long-term PPAs.

Our renewable portfolio in Brazil encompasses 2.1 GW of consolidated installed capacity: 1,599 MW in hydro plants and 467 MW in wind farms. Additionally, EDP owns **equity stakes in hydro plants, representing an attributable capacity of 551 MW.**

Hydro output decreased by 26% YoY, but this figure is affected by the sale of mini hydro plants in 2018 (EDP PCH, Santa Fé and Costa Rica).

The 10% YoY decline in **Hydro gross profit** (-R\$99m YoY) derives from the aforementioned de-consolidation of small hydro plants (-R\$123m). Excluding this, gross profit rose by +3% YoY. Hydro energy sold under PPA increased by 43% YoY, mainly due to the increased number of bilateral contracts, including short-term purchases of energy. In parallel, the average selling price of hydro decreased 9%, impacted by Peixe Angical, which output is entirely sold in the market (and thus, the decline in the selling price reflects lower PLD) and Energest which selling price of bilateral contracts in 2019 was lower than in 2018.

EBITDA from hydro declined by R\$80m, not only due to the 10% decline in gross profit as above mentioned, but also due to booked gains of R\$375m in the 2018 due to the sale of mini hydro plants.

Wind output grew by 42% YoY, mainly due to the commissioning of wind capacity in 4Q18 (137 MW), which also contributed to improve the average load factor. **Wind gross profit grew by +R\$112m**, reflecting new capacity added and higher selling price.

EBITDA from wind increased by +R\$473m, reflecting gross profit underlying performance and the asset rotation gain booked on the sale of Babilonia wind farm (+R\$377m).

Wind:

- Old installed capacity under a feed-in tariff program ("PROINFA")
- Since 2008, competitive auctions awarding 20-years PPAs

Hydro:

- All the capacity has long term contracted remuneration regimes at the inception,
- Hydro plants are remunerated at an established PPA price and are obliged to deliver a certain amount of physical guarantee of energy.

Brazil	93	92	1%	+1

Our Networks segment includes activities of distribution of electricity, in Portugal, Spain and Brazil; electricity last resort supply activity in Portugal (LRS); and the new activity of transmission, in Brazil.

The 19% YoY growth in 2019 EBITDA (to €991m, +€160m YoY) was prompted by Brazil, namely: (i) In distribution, the positive outcome from regulatory reviews at both our concessions, resulting in tariff increases (+€31m) and the update of the concessions assets' residual value (+€53m); (ii) ramp up of transmission activity (+€44m on EBITDA), as the construction of our transmission lines progresses. **In Iberia,** EBITDA performance was mainly supported by the cost cutting trajectory and disciplined cost management, while gross profit evolution reflects Portugal's declining rate of return (-30 bp YoY, to 5.13%), in line with Portugal's 10-year bond yields; and the recognition of provisions for amounts deemed to be returned to the system (-€28m).

The overall impact of one-off impacts on EBITDA growth was immaterial: (i) **in 2019,** €28m provision for the amounts to return to the tariff, €31m gain related with a change in future liabilities arising from a change in health care services supplier, in Brazil, and restructuring costs (€12m) mainly in Portugal; (ii) **In 2018,** restructuring costs (€17m).

OPEX improved by 8% YoY to €551m in 2019, including a net positive one-off impact of €19m. In Iberia, controllable costs fell by 6% YoY, reflecting cost saving efforts and an increasing penetration of smart meters installed. **In Brazil,** OPEX was mostly impacted by a gain arising from a change in the medical plan (+€31m). It is also worth highlighting that despite the increase in headcount and annual inflation update in wages our tight cost control, insourcing and digital strategies yielded significant cost savings: controllable costs per customer decreased 5% YoY, in BRL (-7% in EUR terms).

Capex in 2019 (€911m) includes €513m dedicated to expansion, of which €455m related to the new transmission lines under construction in Brazil (Lot 11, 18 and 21, in Maranhão, São Paulo/Minas Gerais and Santa Catarina states, respectively) and €58m committed to develop the distribution network in Brazil. Maintenance capex is related to the distribution network: (i) in Iberia, it includes €40m invested in the installation of ~691k smart meters in Portugal during 2019; (ii) in Brazil, it includes investments targeting network improvements and reduction of losses.

(1) Supplies & services + Personnel costs; (2) Net of subsidies; (3) Relative to distribution.

Electricity distribution and LRS in Portugal

In 2019, distribution allowed revenue, amounting to €1,007m, was impacted by: (i) one-off cost of €28m on account of past gains to be returned to the system during 2020; and (ii) lower than preliminarily set regulated revenues following weak demand and lower Portuguese government 10-year bond yields, which resulted in a rate of return on HV/MV assets of 5.13%, 29 bp below ERSE's assumption in 2019 tariffs.

Electricity distributed in 2019 posted a 1% YoY decline, mostly due to an adverse temperature effect, with a particular impact on the residential segment. Supply points advanced by 1%.

In the **last resort electricity supply (LRS) activity**, gross profit declined €5m YoY, reflecting a lower number of customers (-91 thousand YoY), to a share of 16% of total electricity customers in Portugal.

Net operating costs were 5% lower YoY (-€32m), driven by tight cost control and continuing efforts of digitalization and processes streamlining. This cost performance is closely related to fewer clients' claims (-19% YoY), fewer clients switching between suppliers and higher share of telemetering: as of Dec-19 there were ~2.6m smart meters installed, of which ~70% were remotely operated. Other operating costs reflect the recovery of previous periods' revenues.

Overall, EBITDA was flat YoY as operational efficiencies and disciplined cost management largely mitigated the adverse effect from lower sovereign yields and electricity demand, along with one-off adjustments at both gross profit and OPEX levels (HR restructuring costs of €9m). The implementation of IFRS16 explains +€5m YoY on EBITDA.

On 16-Dec-2019, **ERSE released 2020 electricity tariffs**, setting a 0.4% average tariff decrease for normal low voltage (NLV) segment, applicable to clients in the regulated market (out of the Social Tariff). Accordingly, regulated revenues for 2020 were assumed at €1,029m in the electricity distribution and €32m in the last resort electricity supply. Electricity distribution regulated revenues preliminarily set assume a rate of return on HV/MV assets (RoRAB) of 5.13% (reflecting an underlying avg. 10-year Portuguese bond yields of 1.14%) and an expected electricity demand in Portugal of 46.3 TWh in 2019 (1.4% above 2019).

Electricity distribution in Spain

EBITDA from electricity distribution activity in Spain rose 7% (+€10m YoY), to €155m.

It is worth noting that distributed electricity fell by 12% YoY, penalised by a strong decline of one large industrial consumer's production activity.

Share of net profit in JVs/associates	47	29	62%	+18

Gross profit from distribution activities increased by 23% **(+R\$420m)**, propelled by the regulatory review at our distribution companies, leading to **the recognition of higher asset base (+R\$234m), the tariff update (+R\$136m) and +R\$39m YoY from higher volumes of electricity distributed (+2.3% YoY).**

Gross profit from **transmission** reached R\$246m in 2019 **(+R\$209m YoY)**, following the commissioning of our first line in Dec-18 and the evolution of construction works in the remaining lines. In early Jan-2020, lot 11 was partially commissioned, 19 months ahead of the regulatory schedule, which will allow an anticipation of Regulated Revenues by R\$17m.

OPEX decreased 13% YoY, justified by a one-off change in social benefits related to a change in the provider of medical assistance, which resulted into a booked gain of R\$134m in EDP Espírito Santo. Excluding this one-off, OPEX would have increased 4%, reflecting the strategy of insourcing and digitalization of processes.

Overall, reported EBITDA from networks activities rose 77% YoY (+R\$706m), backed by a strong performance of both our distribution and transmission activities.

Also to note that in Dec-19, EDP Brasil acquired 692k preferential shares of **Celesc**, which increased our stake in this company to 25.35%. Stronger results from Celesc, together with the successive increases in our stake since 2018, led to +62% YoY results from this equity stake.

- EDP operates both in distribution in and transmission businesses, through its subsidiary EDP Brasil
- EDP Brasil holds 100% of EDP São Paulo and EDP Espírito Santo. Furthermore, EDP Brasil owns a 25,35% stake in CELESC, which operates the concession of the distribution grid in Santa Catarina state.
- A new regulatory period began for EDP Espírito Santo in Aug-19 (renewed every 3 years) and for EDP São Paulo in Oct-19 (renewed every 4 years). The regulated WACC is currently defined at 8.09%
- EDP operates one transmission line (since Dec-18) and part of another line (since Jan-20), while developing 4 other transmission lines, including a new one, acquired in May-19.

Iberian electricity market context

During 2019, electricity demand in Iberia declined 2% YoY (-4.9 TWh). Residual thermal demand (RTD), i.e. coal and CCGT generation, decreased 5% YoY in 2019 (-4.0 TWh), reflecting: (i) +8.3 TWh YoY of renewables/cogeneration (SRP) output mainly driven by better wind resources and, to a lower extent, by solar; (ii) +2.6 TWh YoY of nuclear output; and (iii) a 1.4 TWh increase in net imports. On the opposite direction, hydro output (net of pumping) declined 13 TWh YoY in the wake of extremely weak hydro resources (19% and 10% below-the-average resources in Portugal and Spain in 2019, respectively; vs. 5% and 30% above-the-average in 2018, respectively). Coal output declined 66% YoY (-30 TWh), as lower gas prices and higher CO₂ costs prompted for a switch towards CCGT production (+72% YoY, +26 TWh).

Average electricity spot price declined 17% YoY, to ~€48/MWh in 2019 (~€41/MWh in 4Q19), fuelled by the decreasing trajectory of coal and gas prices (-34% YoY and -36% YoY respectively). Consequently, average electricity final price in Spain declined 17% YoY in 2019, to €53/MWh.

EDP Performance

EBITDA increased +€199m YoY to €336m (€149m in 4Q19), propelled by: (i) strong performance of our thermal & energy management business mainly in 4Q19, due to our hedging results which more than offset the increase in avg. production costs of thermal plants in Iberia; (ii) normalisation of operating conditions in Supply business vs. a weak 2018; and (iii) lower generation taxes in Spain and clawback levy in Portugal following its suspension during 1Q19.

In 2019, the outlook for our coal plants deteriorated materially following: (i) worsening market conditions arising from the rise in CO₂ prices and decline in gas prices; (ii) stronger political will to anticipate the closure of coal capacity, namely in Portugal. As a result, EDP booked an impairment of €297m on its coal power plants in Iberia. As a result, EBIT was negative at -€156m in 2019. In 2018, EBIT figure was highly impacted by the thermal's share in the €285m provision related to the alleged overcompensation of the CMEC.

On energy management, it is worth noting that EDP keeps tracking market conditions to adapt its hedging strategy. For 2020, EDP already forward contracted spreads for over 90% of expected production, with hydro/nuclear production contracted at €55/MWh and average thermal spreads at high single digit.

- Our client solutions & energy management segment in Iberia incorporates our supply, thermal and energy management activities, encompassing 6.4 GW of thermal installed capacity, ~5.3m electricity clients and energy trading activities in Iberia.
- These businesses are the roots for the success of our integrated portfolio management, ensuring a responsive and competitive structure capable of offering clients diversified solutions and the necessary security of supply.

Sources: EDP, REN, REE; (1) Net of pumping; (2) Special Regime Production, namely wind, solar and cogeneration; (3) Average in the period; (4) Final price reflects spot price and system costs (capacity payment, ancillary services);

Supply Iberia

Number of electricity clients in Portugal and Spain was broadly stable YoY, as EDP maintains its focus on service quality and is leveraging on its customer portfolio to increase the share of wallet. In fact, the number of complaints per 1,000 contracts decreased 23% in 2019, the penetration rate of new services increased by 5% YoY to 18.9% in Dec-19, while the rate of dual fuel offer (electricity + gas) increased slightly to 30.4% in Dec-19 (vs. 30.3% in Dec-18).

Electricity volumes sold in Iberia fell by 1% YoY, while **gas volumes rose** by 3% YoY, reflecting the adverse impact of mild temperatures on residential consumption.

EBITDA at our supply activities in Iberia increased +€93m YoY to €88m (€16m in 4Q19), supported by the normalisation of regulatory conditions, following a particularly adverse 2018. **EBITDA** performance was highly impacted by gross profit evolution, coupled with a lower value of provisions for doubtful clients at EBITDA level.

- EDP's electricity clients portfolio in Iberia (~5.3m clients), has a significant weight of residential and SME clients, corresponding to ~42% of total consumption.

Thermal generation & Energy management Iberia

Production in 2019 decreased 10% YoY, due to the reduction in coal output (-49% YoY) leading to a 32 p.p. decrease in the load factor of our coal plants to 34% in 2019 (18% in 4Q19), which was partly mitigated by higher CCGT output. **Avg. thermal production cost** posted a 21% YoY rise (to €51/MWh in 2019), due to the increase in CO₂ prices.

The decline in thermal generation EBITDA, mostly due to lower volumes and margins was more than compensated by the strong performance of our energy management business, which benefitted from the decline in gas prices and our hedging policy based on forward contracting of thermal spreads. Our hedging policy benefitted from the increasing volatility in energy markets in 4Q19, namely due to stronger hydro volumes, lower spot prices and lower gas prices, enhancing energy management results. Note that generation taxes in Spain and clawback levy in Portugal (-€32m YoY), were suspended during the 1Q19.

Due to the aforementioned factors, **EBITDA from thermal generation & energy management in Iberia** increased 75% YoY to €248m in 2019 (€133m in 4Q19).

Thermal & EM - Drivers and financials	2019	2018	Δ %	Δ Abs.

(1) Values of individual accounts.

As part of our risk-controlled approach to its portfolio management, EDP follows a hedging strategy to mitigate the GSF/PLD risk, aiming at reducing the volatility of earnings. While this strategy resulted in significant gains in 2017-18, which compensated for the harsh effect of an extremely adverse energy context in Brazil on energy sales; results in 2019, given a more favorable context with higher GSF and lower PLD, resulted in a smoother evolution of energy sales combined with lower gains on our energy management strategy. Nevertheless, results from energy management in the 4Q19 improved significantly, due to our strategy of allocating physical guarantee to the second half of the year.

At our Supply and energy management activities, EBITDA decreased R\$67m YoY, to R\$111m in 2019, despite a strong recovery in the 4Q (+R\$69m QoQ) due to results from hedging, as we were expecting higher PLD at the end of the year (which was confirmed) and thus we contracted previously energy at lower PLD. However, for the full year, lower results in this segment reflect weaker results from energy management, as described above, but also a 22% YoY reduction in volumes supplied due to low liquidity in the free market.

At our thermal generation plant, Pecém I, EBITDA YoY comparison (-13% or -R\$80m) is impacted by last year's positive effect from the downward revision of the regulatory level of availability of this plant to 83.75% (R\$106m positive impact on EBITDA 2018). Excluding this effect, EBITDA would have grown by 5% YoY, reflecting higher availability at 95%, lower O&M costs and inflation update of contracted revenues.

Specific CO₂ Emissions (g/kWh)

Sustainable Development Goals (SDG)

EDP is committed to ensuring that its activity contributes actively to 9 of the 17 United Nations SDG to be achieved by 2030.

- (1) The stationary emissions do not include those produced by the burning of ArcelorMittal steel gases in EDP's power plant in Spain.
- (2) Scope 2 emissions according with GHG Protocol based location methodology.
- (3) Including vehicle fleet.
- (4) The series was revised in according to GRI 303 update.
- (5) Accidents leading to an absence of one more calendar day and fatalities.

Key Financial data (€ million)	Dec-20	Dec-19	Δ %	Δ Abs.
Net debt	12,243	13,827	-11%	-1,584
Net debt/EBITDA (x) (5)	3.2x	3.6x	-10%	-0.4x

EDP's recurring net profit increased 6%, in 2020, to €901m, supported by the growth in the activity of renewable energy production, which registered a 7% increase YoY to 47.3 TWh from wind, hydro and solar. On the other hand, in 2020, demand and short-term electricity market prices, as well as thermal generation, presented significant drops in comparison with 2019. In Portugal, distributed electricity fell 3%, mainly penalized by the industrial consumption contraction, in line with the tendency observed in Spain and Brazil. The COVID-19 pandemic crisis had a negative impact of €100m in 2020's recurring EBITDA, excluding ForEx impact, mainly due to the aforementioned fall in electricity demand and increase in provision for doubtful debts. EDP's conventional activities in Portugal, (including conventional production, networks and energy retailing), after two consecutive years with losses in 2018 (-€18m) and 2019 (-€98m), presented in 2020 a net profit of €92m, which represented 11% of EDP's Group net profit.

One-offs had a net negative impact of €101m, leading to a reported net profit, in 2020, of €801m. From these effects, we highlight: (i) costs related to the closure of Sines coal power plant, (ii) provision on the alleged overcompensation regarding CMEC plants' participation in the ancillary services market, during 2009-2013, (iii) the cost of the extraordinary energy tax in Portugal, (iv) impairment losses related with thermal power plants in Portugal and Spain, (v) curtailment costs due to early retirements, (vi) accounting gains from disposal of conventional means of production and retailing business unit in Spain and Portugal and (vii) accounting gains resulting from the final terms of the regulatory dispute over GSF costs in Brazil.

Recurring EBITDA fell 2% to €3,657m, in 2020. Excluding ForEx impact, recurring EBITDA grew 3% YoY. The evolution of the recurring EBITDA was supported by several factors, including the normalization of hydro resources in Iberia (compared to the dry period of 2019) and by our hedging strategy in energy markets. Moreover, higher gains, in comparison with 2019, with renewable assets rotation, which amounted to €434m in 2020, resulted from transactions concluded in 2020 in the USA and in Spain, and due to the creation of the joint-venture with Engie for the offshore wind segment, with the contribution from assets in a further advanced development stage in the United Kingdom, France and USA. These effects more than compensated the Brazilian Real depreciation against the Euro (-25% in average terms), wind resources 8% lower than long-term average, as well as the 25% fall in thermal energy production.

As of December 2020, EDP had 18.6 GW of renewables' installed capacity, having during 2020, accelerated its contribution to the economy decarbonization, with a **33% reduction YoY of specific CO₂ emissions**. In networks, growth was concentrated in Brazil: regarding the 6 transmission lines, 82% of the total investment has already been concluded. Iberian networks EBITDA was penalized by the lower regulated rates of return (6,0% in Spain and 4,86% before the energy tax (CESE), in Portugal). In the client solutions and energy management segment, results were supported by the good performance of our energy management activity, which mitigated the reduction in the load factors of thermal power plants. **In clients services in Portugal and Spain, the penetration rate of new services increased to 26.1%.** The financial results in 2020 were in line YoY. Excluding the one-off cost, related with the repurchase of debt, net financial interests improved 17%, with the positive impact of **lower average cost of debt at 3.3% (-60 bps YoY)**.

Net debt and adjusted Net Debt/EBITDA ratio, in 2020, were the EDP's lowest, in the last 13 years. As of December 2020, net debt was €12.2 Bn, representing a 11% reduction YoY, while the Adjusted Net Debt/EBITDA decreased from 3.6x in 2019 to 3.2x in 2020. This positive impact in the ratio resulted from the conclusion in December 2020 of several transactions, namely the disposal of 2 CCGTs and B2C supply in Spain, the sale of 6 hydro plants in Portugal. Additionally, 2 asset rotation deals in Europe and USA, as well as the Viesgo acquisition and consequently the partnership with Macquarie for the electricity distribution in Spain, this last acquisition financed by the €1 Bn rights issue concluded in Aug-20. These transactions reinforce EDP's low-risk profile and focus on the energy transition.

The Executive Board of Directors will propose at the Annual Shareholders' Meeting, scheduled for April 16th 2021, the distribution of a dividend concerning the year of 2020 in the amount of €0.19 per share, in line with last year.

EBITDA 2020

EBITDA in 2020 amounted to €3,950m (+6% or +€219m YoY), including significant one-off impacts (+€295m YoY, to €293m in 2020*) and an adverse ForEx impact (-€205m), mainly driven by the 25% depreciation of BRL against Euro. Excluding one-offs and Forex impact recurring EBITDA advanced by 3% YoY to €3,657m, reflecting normalisation of hydro resources, successful hedging strategy in energy management in Iberia and higher gains from the renewables asset rotation strategy, on the one hand; lower EBITDA in wind and solar on deconsolidation of renewables assets sold during 2019, related to the asset rotation strategy, and weaker wind resources, on the other hand.

RENEWABLES (65% of EBITDA, €2,613m in 2020) – EBITDA was 14% higher YoY (+€316m YoY). Excluding one-off impacts (+€279m YoY, to €287m gain in 2020), recurring EBITDA amounted to €2,326m (+2% YoY), reflecting the strong recovery of hydro resources in Iberia (+16 p.p. but still 3% short of LT average in Portugal) along with our hedging strategy (+€84m) and higher asset rotation gains (+€120m YoY), which more than offset the de-consolidation effect of wind assets sold (-€102m) and adverse ForEx impact (-€70m, mainly driven by BRL depreciation).

NETWORKS (23% of EBITDA, €910m in 2020) – EBITDA declined by 9% YoY (-€87m YoY). Excluding one-off impacts (+€28m YoY, to €19m gain in 2020), recurring EBITDA amounted to €891m (-€115m YoY) driven by 25% depreciation of BRL against the Euro (-€90m), overshadowing local currency 7% EBITDA growth in the period backed by positive tariff updates in Brazil and tight cost control across all geographies. In Portugal, the low Portuguese government 10-year bond yields drove the rate of return on RAB in 2020 very close to the floor (4.75%), at 4.85% for High Voltage/Medium Voltage (vs. 5.13% in 2019).

CLIENT SOLUTIONS & ENERGY MANAGEMENT (12% OF EBITDA, €474m in 2020) - EBITDA decreased 1% YoY (-€6m YoY), with a negligible net impact from one-offs (+€4m YoY increase to a €6m net cost). In Iberia, our successful *hedging* strategy and price volatility in the year prompted for outstanding energy management results, while operating conditions in supply have normalised after the demand shock in 2Q20 caused by COVID lockdown. **In Brazil**, EBITDA performance largely reflected the BRL depreciation against the euro (-€44m), while local currency performance was driven by the positive impact of mark-to-market restatement of long-term contracts in supply. Ahead of its cease of operations in late Dec-20, Sines coal plant has increased production in the 2H20 as to burn the remaining coal stocks: as a result, Sines accounted for 3% of EDP's total production and 2% of EDP's revenues in 2020. **The remaining coal fired power production accounted for 6% of production in 2020 (vs. 10% in 2019) and 3% of the EDP group revenues in 2020 (vs. 6% in 2019).**

(*) *Non-recurring items: (i) -€2m in 2019, including restructuring costs (-€13m), regulatory costs (-€28m) and gain following the change in medical plan of employees in Brazil (+€30m) and reversal of an impairment at São Manoel hydro plant (+€8m); (ii) +€293m in 2020, including net gains related to portfolio reshaping (+€277m), HR restructuring costs and other HR-related items (-€53m), costs related to Sines shutdown (-€18m) and regulatory issues in Brazil and Portugal (+€87m).*

Extraordinary Contribution for the Energy Sector	65	68	-5%	-3	1	63	(0)	3	-	-	-1
Non-controlling Interests (Details page 27)	361	388	-7%	-27	121	90	83	49	138	14%	+17
Net Profit Attributable to EDP Shareholders	801	512	56%	+289	51	146	169	108	378	636%	+327

In 2020, **provisions** amounted to €112m, including €103m of one-offs (+€16m YoY): €30m related to the decision to anticipate the shutdown of Iberian coal plants (2Q20) and €73m booked in 3Q20 on the alleged overcompensation regarding CMEC plants participation in the ancillary services market in 2009-13.

Amortisations and impairments were 8% lower YoY, at €1,632m, mainly due to lower impairments in thermal YoY (-€61m YoY, to €236m in 2020), the de-consolidation of assets sold and held for sale and ForEx impact (-€49m).

Excluding the €70m one-off cost related to the repurchase of outstanding debt in 2020, **net financial interests improved 17% YoY** to -€493m in 2020, prompted by a 5% YoY decline in the average debt and a 60bps YoY decline in avg. cost of debt to 3.3% (vs. 3.9% in 2019). This decline was supported by the past proactive debt management, lower cost of recent issues and declining benchmark interest rates, particularly in Brazil (CDI and TJLP). The increase of **capitalised financial expenses** to €71m in 2020 was mainly related to increasing volume of works in progress in transmission in Brazil and renewables. **Other financials** were mainly impacted by last year's one-off gain on the revaluation of our equity stake in Feedzai (+€31m).

Income taxes amounted to €309m, representing an effective tax rate of 20% in 2020 following the past few quarters' specific impacts from asset rotation gains on wind offshore joint-venture.

Non-controlling interests fell 7% YoY to €361m in 2020, including €220m related to EDPR (+1% YoY) and €149m related to EDP Brasil (-16% YoY), mainly explained by the Brazilian Real depreciation (details on page 27).

Overall, net profit amounted to €801m in 2020 (+56% or +€289m YoY), penalised by net one-off* costs of €101m in 2020 (+€242m YoY*). As a result, **recurring net profit increased 6% YoY, to €901m in 2020**, driven by strong results on our energy management business in Iberia, recovery of hydro resources and strong performance on financial results. These positives more than offset the impact on our share in EDP Brasil net profit from Brazilian Real depreciation. Under tough context of Covid pandemic, EDP performance confirms its distinctive and resilient business profile.

() Non-recurring items impact at net profit level: (i) -€342m in 2019, related to impairments and provisions (-€283m, mainly coal in Iberia), provision reversal at S. Manoel and the gain on the revaluation of Feedzai (+€28m), regulation related items and other (-€78m) and HR related costs (-€8m); (ii) -€101m in 2020, including the net gain from disposals and investments (+€325m), impairments (-€252m, mainly thermal in Iberia), liability management costs (-€55m), regulation related items and other (-€18m) and HR restructuring costs (-€38m).*

(1) Includes unwinding of medium, long term liabilities (TEIs, IFRS-16, dismantling & decommissioning provision for generation assets, concessions) and interest on medical care and pension fund liabilities.

CAPEX 2020

Net expansion activity (€ m)	2020	2019	Δ %	Δ Abs.
Expansion Capex	2,401	1,724	39%	+677
Financial investments	806	318	153%	+488
Proceeds Asset rotation	(1,678)	(970)	-73%	-708
Proceeds from TEI in US	(305)	(186)	-63%	-118
Acquisitions and disposals	(629)	38	-	-667
Other (1)	326	244	33%	+81
Net expansion activity	922	1,168	-21%	-247

Consolidated capex increased 29% to €2,909m in 2020, 95% of which dedicated to Renewables and Grids. EDP expansion capex increased 39% to €2,401m, accounting for 83% of total capex, mostly dedicated to Renewables and Networks.

Financial investments in 2020 (€806m) were entirely concentrated in renewables: wind offshore (€380m related to the establishment of Ocean Winds, joint venture with Engie for wind offshore business, in which we own a 50% stake), solar and wind onshore projects.

Maintenance capex (€508m in 2020) was mostly dedicated to our regulated networks (66% of total), namely in Portugal, where the roll out of digitalisation continues, with 51% of supply points already with smart meters (+10p.p. YoY). In 4Q20, maintenance Capex increased 77% QoQ due to works performed to recover investments that had been postponed because of the Covid-19 pandemic.

Expansion investments (expansion capex + financial investment) in 2020 increased 58% to €3.2 Bn, largely dedicated to renewables globally (~90%):

1) €2,907m investment in new renewable capacity was distributed between North America (55%), Europe (38%) and Latam (7%). (details on page 10).

2) €289m investment in networks in Brazil (-51% YoY, significantly impacted by the BRL devaluation in the period). **In local currency, distribution capex increased 16% while capex in transmission decreased by 49% YoY to R\$1,021m following reduction in construction activity in 2Q20, related to COVID restrictions** and employees-safety. Despite some delays in construction of our transmission projects experienced during the lockdown period, the commissioning is expected ahead of regulatory schedule, until the end of 2021.

In 2020, proceeds from asset rotations amounted to €1,678m, including onshore and in Brazil (€254m, of which €132m debt de-consolidation), in Spain (€505m), in US (€423m); in Offshore (€421m related to the incorporation of JV with Engie).

All in all, expansion activity accelerated to €1,550m in 2020 (+37% YoY), reflecting (i) the acceleration of the build out activity contemplated in our Strategic Update (€3.2 Bn, +57% YoY); which was partially compensated by this year's higher proceeds from Asset rotation (€1.7 Bn), and proceeds from new Tax Equity partnerships (€305m).

Acquisitions and disposals amounted to €629m reflecting the €2.8 Bn of the disposals announced since Dec-19 (mainly hydro in Portugal and CCGT + B2C Supply in Spain) and the acquisition of Viesgo coupled with a new partnership with Macquaire funds "MIRA" which will retain 25% of the new perimeter of electricity distribution activities in Spain (€2.1 Bn). Overall, including the impact from acquisitions and disposal, net disposals, net expansion activity amounted to €921m.

EUR/USD	1.23	1.12	-8%	-0.10
BRL/EUR	6.37	4.52	-29%	-1.86

Recurring organic cash flow increased by 27% YoY, to €1.8 Bn in 2020, driven by the normalization of hydro resources, higher asset rotation gains and lower interest charges. **Recurring organic cash flow translates the cash generated and available to fulfil EDP's key strategic pillars of sustainable growth, deleveraging and shareholder remuneration.**

Maintenance capex (including payables to fixed assets suppliers), mostly related to the networks business, amounted to €646m in the period following a strong recovery QoQ in 4Q due to works performed to recover investments that has been postponed because of the Covid pandemic.

Net expansion amounted to €0.9 Bn in 2020, as the step up in expansion activity to €1.5 Bn (+37% YoY) was partially compensated by the strong execution of portfolio reshaping: in Dec-20, we completed the €2.8 Bn disposals of merchant assets (including on the one hand, 6 hydro plants in Portugal and, on a second block, a portfolio of 2 CCGTs and B2C supply in Spain) and the acquisition of Viesgo, along with a new partnership with MIRA for electricity distribution activities in Spain (€2.1bn). Our core expansion activity encompassed: (i) accelerating build out activity justifying €3.2 Bn expansion investment in 2020 (including financial investments), with a step up from 1H20 and focused in new renewable capacity and Brazil (details on page 5); (ii) €1.7 Bn proceeds from asset rotations in the period, after the closing in Dec-20 of the two deals announced in Aug/Sep-20, (iii) proceeds from institutional partnerships in US totaling €305m from 3 wind farms totaling 375 MW.

Regulatory receivables (including interests) increased by €48m in 2020, mainly Portugal, following new receivables arising from deviations between the system's real costs and ERSE's assumptions, which was mitigated by several tariff deficit sales, totaling €1.4 Bn (details on page 7).

On 14-May-20, EDP paid its **annual dividend totalling €691m (€0.19/share)**, in line with the previous year.

Effects of exchange rate fluctuations resulted in a €620m decrease on net financial debt in 2020, justified by the depreciation of USD (-8% YoY vs. the Euro) and the BRL (-29% YoY vs. the Euro).

The caption **Other** includes the €1 Bn proceeds from the rights issue concluded in Aug-20 aimed at partially finance the acquisition of Viesgo's regulated assets and -€0.2 Bn one-off impacts in 2020, mainly including CESE payment for 2019 and 2020 (€129m) and extraordinary liability management cost (€70m).

Overall, net debt declined by €1.6 Bn in 2020, to €12.2 Bn as of Dec-20.

Deferred tax on Regulat. Receivables (-)	-139	-115	-24
Regulatory Receivables (Net of tax)	242	255	-12

Total amount of **property, plant & equipment and intangible assets** increased €1.3 Bn vs. Dec-19 to €25.2 Bn as of Dec-20 mainly influenced by the additions YTD (+€2.7 Bn) and acquisition of Viesgo (€2.6 Bn) which were offset by the disposal of assets (-€1.4 Bn) and unfavourable exchange rate movements (-€1.5 Bn, mainly due to the devaluation of the BRL by 29% YoY and of the USD by 8% YoY vs. the Euro). As of Dec-20, works in progress amounted to €3.0 Bn (12% of total consolidated tangible and intangible assets): 88% at EDPR level, 2% at EDP Brasil level and the remaining 10% at Iberian level.

The book value of **financial investments & assets held for sale net of liabilities** (Incl. Equity Instruments at Fair Value) was at €1.1 Bn as of Dec-20, mainly influenced by the completion late 2020 of the portfolio reshuffle in Iberia and Asset Rotation transactions in Europe and in the US. Financial investments amount to €1.0 Bn: 51% at EDPR, 34% at EDP Brasil and 15% in Iberia (Ex-Wind). (Details on page 27)

Tax assets net of liabilities, deferred and current decreased €0.1 Bn vs. Dec-19 at €0.5 Bn in Dec-20. **Other assets (net)** was flat at €8.2 Bn vs. Dec-19. It is worth noting that Other assets (net) evolution also reflects the cash-in of €113m in 3Q20 referent to the final proceeds from sale of Naturgas as agreed in 2017.

Equity book value attributable to EDP shareholders increased by €0.7 Bn to €9.6 Bn as of Dec-20, reflecting the €0.8bn reported net profit in the 2020, the €1.0bn share capital increase executed in Aug-20, the €0.7bn annual dividend paid in May-20 and the negative Forex impact on reserves. **Non-controlling interests** decreased €0.2 bn as the establishment of the partnership with Macquarie in Spanish networks and a slight increase of our stake in EDP Brasil to 53.4% total ownership (52.6% direct stake) were offset by the negative forex impact of Brazilian Real.

Institutional partnership liabilities were down by €0.1 Bn vs Dec-19, to €1.1 Bn, as the new institutional partnerships secured were slightly outweighed by the benefits appropriated by the tax equity partners during the period, the transfer to “assets for sale” of wind onshore assets as part of the asset rotation in US closed in December and the negative exchange rate movement.

Provisions increased €0.2 Bn vs. Dec-19, at €1.3 Bn before tax. This caption includes, among others, provisions for dismantling (€567m), of which €302m related with wind farms..

Net regulatory receivables after tax amounted to **€247m as of Dec-20** (€382m before tax). The evolution during 2020 is mainly justified by unanticipated deviations vs. ERSE’s assumptions, namely lower amounts allocated to the electricity system regarding mitigation measures (+€51m).

Other liabilities (net) increased €0.3 Bn vs Dec-19, explained by Viesgo’s acquisition and new lease contracts mainly related to wind farms. The capture of Leases amounts to €0.96 Bn. Employee Benefits (net of tax) decreased €58m to €966m, namely due to a 30bps (currently at 0.6%) reduction in the discount rate applicable in the liabilities related with pensions and medical care in Portugal.

(1) Excluding the amount corresponding to the impact from the exclusion of ICMS from the calculation of PIS/COFINS from past years in our distribution companies (R\$1.5 Bn), since the receivable (recognized under current tax assets) is a pass-through to the tariff. Excludes the regulatory liability recognized against the receipt of 'Conta COVID' (R\$0.6bn), which will be recognized in the tariffs in the future

■ EDP S.A. & EDP Finance BV and Other ■ EDP Brasil

Debt by Interest Rate Type as of Dec-20 (1)

Debt by Currency as of Dec-20 (1) (3)

EDP's financial debt is mostly issued at holding level (EDP S.A. and EDP Finance B.V.), accounting for about 80% of the Group's Nominal Financial Debt. Debt for the Group is raised mostly through debt capital markets (88 %), with the remaining through bank loans and commercial paper. Following the acquisition of Viesgo (Dec-20), we have consolidated Viesgo's debt under EDP Espanha, rated at BBB (€1 Bn). EDP made its **first ever green bond issuance in Sep-18 and has since then until the end of December, issued €4.4 Bn worth of Green Bonds, corresponding to 31% of total bonds outstanding and 28% of total financial debt.**

Regarding the latest rating actions, in Feb-2020, Fitch affirmed EDP at "BBB-" and revised the outlook to positive.

Following the announcement of Viesgo acquisition deal and €1 Bn capital increase, **all 3 main rating agencies stated that the acquisition represents a strong fit with EDP's current activities.** Furthermore, it reinforces EDP's credit profile namely through the increased share of regulated/long term contracted activities in EBITDA by ~4 p.p, from 79% in 2019.

Looking at 2020's major debt maturities and early repayments in 2020:

- Repurchase of 2015 EUR750m Hybrid bond, with a 5.375% coupon;
- Maturity of USD583m bond outstanding, with a coupon of 4.125% (Jan-20);
- Maturity of EUR233m bond outstanding, with a coupon of 4.125% (Jun-20);
- Maturity of EUR462m bond outstanding, with a coupon of 4.875% (Sep-20).

In 2020, EDP completed the following operations:

- In Jan-20, €750m Green Hybrid issue, with a coupon of 1.7% (first call date in Apr-25 and final maturity in 2080 to replace the abovementioned 2015 hybrid);
- In Apr-20, €750m Green bond issue, with a coupon of 1.625% and a yield of 1.719%.
- In Sep-20, USD850m Green bond issue, with a coupon of 1.71% and a yield of 1.716%.
- During 2020, €1.4 bn of tariff deficit sales were executed in Portugal: In March €825m, in July €273m and in December €300m.

Subsequent operations:

- In Jan-21, €750m Green Hybrid issue, with a coupon of 1.875% and a yield of 1.95%(first call date in May-26 and final maturity in 2081);
- Maturity of EUR533m bond outstanding, with a coupon of 4.13% (Jan-21).
- Maturity of USD750m bond outstanding, with a coupon of 5.25% (Jan-21).

Total cash and available liquidity facilities amounted to €8.9 Bn by Dec-20, of which €5.9bn are fully available credit facilities. This liquidity position allows EDP to cover its refinancing needs beyond 2023, on a business as usual environment.

(1) Nominal Value includ. 100% of the hybrid bonds; (2) Derivatives designated for fair-value hedge of debt including accrued interest; (3) After FX-derivatives; (4) Net of regulatory receivables; net debt excluding 50% of hybrid bond issues (including interest); Based on trailing 12 months recurring EBITDA and net debt excluding 50% of hybrid bond issue (including interest).

Wind & Solar Europe	10	20
Wind & Solar North America	8	22

Renewables capacity accounts for **c80% of our total installed capacity** and is our **current main growth driver**. Installed capacity as of Dec-20 totaled **19.8 GW**, including 1.2 GW Equity of wind & solar in US and Iberia, and hydro in Brazil.

In the last 12 months we added 1.6 GW of wind and solar capacity to our portfolio, including (i) in wind onshore Harvest Ridge in US (200 MW), Aventura II-V in Brazil (105 MW), and the wind onshore assets in Spain and Portugal from the Viesgo acquisition closed in Dec-20 (511 MW EBITDA + Equity), (ii) in solar the Los Cuervos plant in Mexico (200 MW) and (iii) in offshore the Windfloat project in Portugal (10 MW Equity). Also, as part of our asset rotation strategy, during 2020 we completed the sale of i) **137 MW in Brazil (Babilónia)** in Feb-20, ii) **237 MW in Spain** in Dec-20, iii) 80% shareholding position in a portfolio of **563 MW in US** in Dec-20, of which 200 MW will start operations in 2021 and the remaining position is now accounted under the equity method (73 MW), and iv) **102 MW in US (Rosewater)**, following the conclusion of the construction and the transfer of the wind farm under the Build and Transfer Agreement signed in Feb-19.

As of Dec-20, our **wind & solar capacity under construction totaled 2.4 GW**, including 2.1 GW wind onshore and solar capacity (EBITDA MW) and wind offshore capacity in UK and Belgium. In **North America**, we have currently **1.0 GW of wind onshore and solar under construction**, including Riverstart (200 MW) and Indiana Crossroads (302 MW). In **Europe**, we are building 0.7 GW of wind onshore, mainly in Poland, Portugal and Italy. In **Brazil**, we are building wind onshore and solar projects, totaling 359 MW.

Our **hydro portfolio** comprises **5,527 MW in Iberia** (c. 45% of which pumping capacity) and **1,599 MW in Brazil**. In LatAm, we additionally own equity stakes on 3 hydro plants totaling 551 MW (Jari, Cachoeira-Caldeirão and S. Manoel, all in Brazil) and own a minority stake in a hydro plant under construction in Peru (San Gaban, 78 MW net). As part of our disposal plan announced in Mar-19, we **completed the sale of 6 hydro plants in Portugal in Dec-20** (1,683 MW) for €2.2 bn. With this transaction, we reduced our exposure to hydro risk in the North of Portugal, while maintaining ~75% of our current hydro portfolio in Iberia.

All in all, **net expansion activity** worth €1,787m in 2020, almost tripled the pace of growth YoY, propelled by doubling of **expansion investment (including financial investments)**, to €2,907m in 2020 with North America accounting for ~55%. In line with our strategy since Mar-19, we closed €1,678m worth asset rotation deals, including assets in Brazil (€254m, of which €132m debt de-consolidation), in Spain (€505m), in US (€423m), the transfer of Rosewater (€74m) and in the offshore wind through our JV with Engie on OW (€421m related to the incorporation of JV with Engie).

Additionally, our expansion activity in renewables also includes €550m from the acquisition of Viesgo (511 MW EBITDA + Equity) and €305m proceeds from new TEI structures which is offset by other items (€312m), that encompass changes in consolidation perimeter (mostly related to the agreed asset rotation deals in Europe and Brazil) and the netting of asset rotation gains.

USD/EUR	1.14	1.12	-2%	0.02
BRL/EUR	5.89	4.41	-25%	1.48

In 2020, EBITDA amounted to **€2,613m (+14% YoY)**, impacted by the one-off effects on hydro, mainly (i) the gain with the sale of 6 hydro plants in Portugal closed in Dec-20 (€216m) and (ii) the gain booked in 4Q20 on GSF legal settlement in Brazil (€66m). Excluding these extraordinary impacts, **EBITDA amounted to €2,326m (+2% YoY)**, as the strong recovery of hydro resources in Iberia along with our hedging strategy and higher gains on the execution of our asset rotation strategy (+€120m YoY), more than offset the de-consolidation effect of wind assets sold (-€102m) and BRL depreciation.

Excluding the one-off gains abovementioned and in 2019, **Hydro EBITDA** increased 5% YoY to €671m (+€34m), mainly driven by Iberia. In **Iberia**, EBITDA increased €78m YoY due to the higher hydro production (+33% YoY) on the back of the recovery in hydro resources (+16p.p. to 3% short of LT average in Portugal), with the negative impact from lower average pool price being offset by a positive impact from our hedging strategy. As of Dec-20, hydro reserves in Portugal stood at 56%, 6 p.p. above LT average. In **Brazil**, hydro generation performance was impacted by the adverse effect from the energy context in 1Q20 and 4Q20, despite the significant recovery in the 2Q20 and 3Q20, and the 25% YoY BRL depreciation (-€65m).

Wind and solar EBITDA was broadly stable at €1,655m in 2020, due to the mixed impacts of:

- (i) de-consolidation of assets sold (-€102m YoY), including 997 MW in Europe (Jul-19) and 137 MW in Brazil (Feb-20);
- (ii) higher asset rotation gains (+€120m YoY to €434m): €227m on the asset rotation deals in US and Spain and the transfer of Rosewater, and €207m on the establishment of the wind offshore JV with Engie, Ocean Winds;
- (iii) lower wind resources (-5p.p YoY., 8% short of P50), particularly in Iberia and US, and lower average selling price, which were compensated by new capacity additions.

OPEX in renewables was flat, reflecting asset's deconsolidation, growth impact, tight cost control and successful implementation of ongoing savings program. In wind and solar, **Core OPEX per Avg. MW**, adjusted by asset rotations, offshore costs, service fees and forex, increased 1% given the requirements needed to accelerate growth.

Excluding the gain with the sale of the 6 hydro plants (+€216m) and the positive impact arising from 2019 clawback value ultimately set (+€8m), **Other operating costs (net)** decreased by €97m YoY, mainly driven by higher results booked with our asset rotation strategy (+€120m). This caption includes generation taxes in Spain and clawback levy in Portugal (€39m in 2020, including the €8m positive impact abovementioned).

Installed Capacity Dec-20

USA: EBITDA MW by market - Dec-20

In North America, **installed capacity** (6.3 GW EBITDA GW) is **95% wind and 5% solar PV** (290 MW). Additionally, we own equity stakes in other wind and solar projects, equivalent to 471 MW.

In line with EDP's long term contracted growth strategy, the 825 MW additions to portfolio over the last 12 months are PPA-contracted. In 2020, **~90% of total installed capacity is PPA/Hedged contracted**.

Electricity production increased by +6% YoY, mainly reflecting the growth of average installed capacity (+8% YoY) and slightly lower average load factors. In 2020, **average wind resources** were 10% short of LT average (P50), mainly due to poorer resources in **Central and East regions**. **Average selling price** fell slightly to USD 44/MWh.

Gross profit rose to USD 765m (+5% YoY) in 2020, as benefits from the portfolio expansion largely compensated the below-the-average wind resources. **PTC Revenue & Other increased to USD 230m** (+13% YoY), reflecting new PTCs contracted and negligible impact from PTCs expiry.

EBITDA in North America increased 33% to USD 914m in 2020, following gross profit trajectory, the \$219 gain booked with the asset rotation in US and the transfer of Rosewater, as well as North America's share in the gain booked on the establishment of the JV with Engie.

- Sales can be agreed under PPAs (up to 20 years), through Hedges or Merchant prices; Green Certificates (Renewable Energy Credits, REC) subject to each state regulation;
- On Dec-19, the President signed the Taxpayer Certainty and Disaster Tax Relief Act of 2019. The act changes the phase down schedule for the PTC for onshore wind energy projects and with no changes to the solar ITC. Under prior law, the PTC phased down to 40% for projects beginning construction in 2019 and then to 0% for facilities for which construction began in 2020. The new act leaves in place the 40% PTC rate for 2019 projects, then increases the PTC to 60% for projects beginning construction in 2020. Projects beginning construction in 2021 & later will have no PTC. For 2020, PTC value is \$25/MWh.

- Feed-in Tariff for 20 years (Ontario); Renewable Energy Support Agreement (Alberta).

- Technological-neutral auctions (opened to all technologies) in which bidders offer a global package price for the 3 different products (capacity, electricity generation and green certificates);
- EDPR project: bilateral Electricity Supply Agreement under self-supply regime for a 25-year period.

Hydro reserves in Portugal vs. LT Average

Hydro production in Portugal vs. LT Average

In Iberia, installed capacity (8.9 GW) is split between **hydro (~60%)** and **wind and solar (~40%)**. In Dec-20 we completed the sale of 6 hydro plants in Portugal and the acquisition of the 511 MW (EBITDA + Equity) wind portfolio in Spain and Portugal from Viesgo.

Wind & solar output in Iberia declined by 18% YoY, to 7.0 TWh, due to the deconsolidation of capacity sold in Jul-19 (-0.8 TWh YoY) and 13p.p. YoY deterioration of wind resources, to 6% below LT average. As a result, **wind & solar gross profit** amounted to €575m (-13% YoY).

Hydro gross profit amounted to €681m. The strong performance YoY (+19% YoY) mainly reflects last year's extremely weak hydro conditions and this year's successful hedging strategy. In 2020, hydro resources posted a sharp improvement, from 19% deficit in 2019 to 3% below-the-average level in Portugal in 2020. As a result, hydro net production surged 35% YoY but pool prices were downward pressured and so was the average selling price of hydro (-21% YoY, excluding hedging effect).

Pumping activity was more intense in 2020, posting a 20% YoY increase in volume, with a unitary **pumping margin** at double digit, while contributing for hydro reserves at 56%, 6 p.p. above historical average by the end of Dec-20.

EBITDA in 2020 includes a net positive one-off impact totalling €221m, explained by the capital gain booked on the disposal of 6 hydro plants in Portugal (€216m), the impact from a lower clawback relative to 2019 ultimately set and some HR restructuring costs. Excluding these effects, **EBITDA** declined 10% YoY to €1,080 in 2020, mainly due to last year's higher gain with asset rotation strategy, the deconsolidation of assets sold (€76m) which was partly mitigated by the strong hydro performance. Additionally, generation taxes in Spain and clawback levy in Portugal amounted to €39m in 2020.

 On 22-Nov, Royal Decree Law 17/2019 was passed, introducing measures aimed at guaranteeing a stable regulatory and economic framework to encourage the development of renewable energy generation in Spain.
 The RD Law 17/2019 updates the "reasonable return" for renewable generation for the next regulatory period starting on 1 January 2020 at a level of 7.398% for assets before RDL 9/2013 and 7.09% for the new ones.
 MWs from previous regime: Feed-in Tariff inversely correlated with load factor throughout the year. Tariff monthly inflation-updated, through the later of: 15y of operation or 2020, + 7 years (cap/floor system: €74/MWh - €98/MWh);
 ENEOP portfolio: price set in an international competitive tender for 15y (or the first 33 GWh/MW) + 7y (extension cap/floor system: €74/MWh - €98/MWh). First year tariff at c.€74/MWh, CPI monthly-updated.

(1) Includes hedging adjustments; (2) Excludes mini-hydros FIT; (3) Source: REN; (4) Includes mini-hydros FIT.

In the Rest of Europe (ex-Iberia), installed capacity is mostly focused in onshore wind (1,353 MW), including also solar capacity in Romania (~50 MW). During the last 12 months, we added 140 MW to our portfolio, of which 127 MW in 2H20.

Output declined 8% YoY to 3,054 GWh, following the asset rotation transaction in Europe closed in Jul-19 (representing a 0.4 TWh output in 1H19), which outstood the benefits of stronger wind resources, justifying a 1 p.p. YoY increase in average load factor. Load factors improved YoY in France and Romania.

Average selling price remained broadly flat at €78/MWh, as lower realized prices in France and ForEx depreciation was offset by the increase of prices of green certificates in Poland.

All in all, **gross profit amounted to €235m in 2020** (-12% YoY) mainly impacted by the change in consolidation perimeter. **EBITDA reached €167m** (-25% YoY), on the back of gross profit performance and lower asset rotation gains.

• Wind assets (installed until 2013) receive 2 GC/MWh until 2017 and 1 GC/MWh after 2017 until completing 15 years. 1 out of the 2 GC earned until Mar-2017 can only be sold from Jan-2018 and until Dec-2025. Solar assets receive 6 GC/MWh for 15 years 2 out of the 6 GC earned until Dec-2020 can only be sold after Jan-2021 and until Dec-2030. GC are tradable on market under a cap and floor system (cap €35 / floor €29.4); Wind assets (installed in 2013) receive 1.5 GC/MWh until 2017 and after 0.75 GC/MWh until completing 15 years; The GCs issued starting in Apr-2017 and the GCs postponed to trading from Jul-2013 will remain valid and may be traded until Mar-2032.

• Electricity price can be established through bilateral contracts; Wind receive 1 GC/MWh which can be traded in the market. Electric suppliers have a substitution fee for non compliance with GC obligation. From Sep-17 onwards, substitution fee is calculated as 125% of the avg market price of the GC from the previous year and capped at 300PLN.

• Feed-in tariff for 15 years: (i) €82/MWh up to 10th year, inflation updated; (ii) Years 11-15: €82/MWh @2,400 hours, decreasing to €28/MWh @3,600 hours, inflation updated; Wind farms under the RC 2016 scheme receive 15-yr CfD which strike price value similar to existing FIT fee plus a management premium.

• MW <2013 are (during 15 years) under a pool + premium scheme; MW >2013 were awarded a 20 years contract through competitive auctions. According with the auction scheme, the electricity produced by these wind farms is sold on the market with CfD.

Operating data	2020	2019	Δ %	Δ Abs.
Installed capacity (MW EBITDA)	2,035	2,066	-2%	-32
Wind	436	467	-7%	-32

Installed capacity (Equity MW)	551	551	0%	-0

Our renewable portfolio in Brazil encompasses 2.0 GW of consolidated installed capacity, 79% of which hydro majority PPA-contracted and 21% in wind onshore (PPA contracted). Additionally, EDP owns equity stakes in hydro plants, representing an attributable capacity of 551 MW.

The 41% YoY increase (+R\$354m) in hydro gross profit during 2020 to R\$1,213m is driven by the +R\$389m GSF one-off impact due to the extension of the concession of the hydro plants, as a result of the published Law 14.052/20 and respective Resolution 895/20 by ANEEL, related to the mechanism of reallocation of energy.

This positive regulatory development compensated the particularly weak hydro year, due to the combined impact of an unfavorable energy context (rainfall arrived later than usual) and adverse impact from the allocation strategy adopted, together with a lower volume of bilateral contracts established with market agents and the commercial arm (total volume sold decreased by 37% during 2020).

The deconsolidation of Babilonia wind farm in Feb-20 has impacted YoY wind operating performance providing its weight on portfolio (137 MW), higher average load factor and lower PPA price. Excluding this change in consolidation perimeter, Wind output was broadly stable at 1,093 GWh. Wind resources were 6% short of average, justifying a load factor of 38% (vs. 43% in 2019). All in all, excluding Babilonia de-consolidation effect, wind gross profit rose by 13%.

Overall, EBITDA from hydro improved by 42%, driven by the aforementioned GSF impact, while EBITDA from wind fell by 75%, driven by last year’s gain on Babilonia disposal and its de-consolidation in 2020.

Our Networks segment includes distribution of electricity in Portugal, Spain and Brazil; electricity last resort supply activity in Portugal (LRS); and the new activity of transmission, in Brazil. Overall, our regulated asset base (RAB) amounts to €6 Bn, with the transmission's financial asset base gaining track, with 11% of total base. After the acquisition of Viesgo in Spain, completed in Dec-20, the weight of Spain in the group's RAB increased to 28%, providing further regulatory visibility as the current regulatory period will be in place until 2025.

Excluding one-off impacts (+€9m in 2019, - €19m in 2020), recurring EBITDA amounted to €891m (-€115m YoY), largely reflecting the 25% depreciation of Brazilian Real against the Euro (-€90m), overshadowing local currency 7% EBITDA growth in the period backed by positive tariff updates. In Spain, recurring EBITDA amounted to €136m, reflecting the new regulatory terms in place and negligible contribution from Viesgo.

In Portugal, recurring EBITDA to €485m in 2020 (-6% YoY) reflecting lower rate of return on RAB and higher costs with vegetation management.

OPEX improved by 2% YoY, excluding one-off HR restructuring costs and favorable ForEx impact c€60m backed by the BRL depreciation (€45m), reflecting mostly tight cost control, more remote orders and lower headcount, namely in Portugal. Efficiency in operations has been improving greatly in part by the continued effort for smart meter installation and registration.

Other net operating costs fell by 3% including one-off gain related to past disposals.

Capex in 2020 declined by 32% YoY to €624m, primarily explained by lower capex in Brazil (-€300m). This, in turn, reflects: (i) interruption in construction works in new transmission lines in the 2Q20, given the Covid-19 context; (ii) heavy rainfall in some regions in Brazil in 1Q20; and (iii) BRL depreciation vs. Euro. Finally, it is worth to mention that the 4 transmission lines under construction are still ahead of the regulatory schedule, with 82% of the investment plan already executed.

Electricity distribution and LRS in Portugal

Electricity distributed declined by 3% YoY in 2020, impacted by Covid-19 pandemic. In spite of the recovery in 3Q20 (with consumption barely flat YoY), 4Q20 was 3.3% below YoY. Note that in line with Portugal's regulatory model in place, although this contraction in consumption had a negligible impact on EBITDA, it contributed for higher regulatory receivables in the period (as detailed in page 7).

Distribution regulated revenues were €1,023m. The low Portuguese government 10-year bond yields resulted in a rate of return on RAB for 2020 very close to the floor (4.75%), at 4.85% for High Voltage/Medium Voltage (vs. 5.13% in 2019). In the **last resort electricity supply (LRS) activity, regulated revenues increased to €34m.**

Excluding one-off HR restructuring costs (+€2m YoY, to €11m in 2020), OPEX improved 2% YoY, benefitting from tight cost control and grids digitalisation. The continued roll out of smart meters, key to enhance grid digitalization, enabled a 14% rise in remote orders in Portugal and a 13% decline in the number of complaints.

Overall, excluding one-off costs (-€26m YoY, to €11m cost in 2020), **EBITDA amounted to €485m in 2020 (-6% YoY) reflecting lower rate of return on RAB** and higher costs with vegetation management.

On 15-Dec-2020, ERSE, the Portuguese energy regulator, published its **final electricity tariffs for 2021.** According to ERSE, allowed revenues for electricity distribution is €1,024m (vs €1,029m in 2020) and €34m (vs. € 32m in 2020) for last resort supplier, both excluding previous years' adjustments. Low Voltage regulated clients will see a 0.6% reduction in their tariff. Electricity distribution regulated revenues preliminarily assume a rate of return on HV/MV assets (RoRAB) of 4.85% (assuming for 2021 the same rate of 2020).

Electricity distribution in Spain

Gross profit from electricity distribution activity in Spain declined 2% YoY to €193m, mainly driven by the lower rate of return on RAB, at 6.0% in 2020 (-50bp YoY). Excluding one-off impacts (+€31m in 2020, including the reversion of contingencies relative to past disposals and HR restructuring costs), **EBITDA amounted to €136m in 2020 (-13% YoY), reflecting the new regulatory terms and lower adjustments to past year's revenues.**

As a result of the acquisition of Viesgo, completed in Dec-20, EDP more than doubled its Spanish network size to 52,492 km (+153% YoY) and the number of electricity supply points (+105% YoY) reinforcing EDP's presence in this market and the weight of regulated activities. The transaction increases our **RAB to €1.7 Bn in Spain.**

Following court decision 481/2020 on Lesividad, distribution RAB in Spain can fall from €2,051m to a minimum of €1,706m, depending on the final terms applicable yet to be known. Having said this, our **EBITDA already reflects this impact since 2017.**

Distributed electricity in Brazil declined 5% YoY in the 2020, mainly due to the 12% YoY fall in the 2Q20 due to the pandemic crisis, which was partially offset by a 2% YoY recovery in consumption in 4Q20, in our concession areas.

Gross profit from distribution was relatively flat YoY, at R\$2,233m, positively impacted by the tariff updates (+R\$97m YoY), factoring in a higher IGP-M index (as a result of Brazilian Real depreciation in the past year). On the other hand, last year’s update of concessions assets’ residual value in the wake of regulatory reviews explains a R\$156 m YoY decline in gross profit, despite recovery quarter-on-quarter.

Several measures were introduced by the Brazilian government to face the challenges caused by the pandemic, in particular the COVID account whereas ANEEL deemed that the over-contracting related to the pandemic was considered as involuntary, which corresponded to R\$28m for EDP Brasil in 2020.

In addition, the negative impact witnessed by demand contraction and, thus, excess supply (-R\$27m YoY) together with higher client losses (-R\$30m YoY) was partially mitigated by the gradual recovery of economic activity together with an increase in PLD witnessed in the 4Q20.

Gross profit from transmission increased by 59% YoY, reaching R\$391m, following the full commissioning of lot 11 (12 months ahead of schedule) and the evolution of construction works in the remaining lines, even taking into account some delays as a result of the pandemic.

Excluding one-off impacts (mainly last year’s R\$134m gain on social benefits related to a change in the provider of medical assistance), **OPEX** decreased by 1% YoY, due to renegotiation of contracts and reduced amount of operations. Other operating costs increased 17% YoY (+R\$36m), reflecting higher client impairments in distribution business (+R\$30m).

Overall, excluding one-off impacts mentioned above, EBITDA from networks activities increased by 7% YoY to R\$1,597m, positively impacted by a solid recovery in residential demand in the 4Q20, positive regulatory developments, as well as strong growth in transmission with the roll-out of construction works, partially offsetting the negative impact caused by the pandemic with more prominence in the 1H20.

• Two distribution concessions, both 100% owned by EDP Brasil: EDP SP, in São Paulo, with 4-year regulatory period last renewed in Oct-19; EDP ES, in Espírito Santo with 3-year regulatory period last time renewed in Aug-19. The regulated WACC is currently defined at 8.09%.

• EDP operates one transmission line (since Dec-18) and part of another line (since Jan-20), while developing 4 other transmission lines, including a new one, acquired in May-19.

Client Solutions & Energy Management segment in Iberia encompasses 4.3 GW of thermal installed capacity, ~4.1m electricity clients and energy trading activities in Iberia. These businesses are the roots for the success of our integrated portfolio management, ensuring a responsive and competitive structure capable of offering clients diversified solutions and the necessary security of supply.

Sources: EDP, REN, REE; (1) Net of pumping; (2) Special Regime Production, namely wind, solar and cogeneration; (3) Average of the period; (4) Final price reflects spot price and system costs (capacity payment, ancillary services); (5) Excludes activities carried in Italy, France and Poland (-€3m EBITDA in 2020)

Iberian electricity market context

During 2020, electricity demand in Iberia declined 5% YoY (-2% in 4Q YoY), penalised by lower economic activity due to Covid pandemic. **Residual thermal demand (RTD)**, i.e. coal and CCGT generation, decreased 27% YoY in 2020 (-21 TWh YoY), reflecting: (i) +9 TWh YoY of hydro output (net of pumping) following the recovery of hydro resources (+20% YoY but still 3% below-the-average in Portugal; +26% YoY to normalised level in Spain); (ii) a c14 TWh reduction in electricity demand in Iberia (iii) a c3 TWh increase in SRP driven by the growth in solar production. These effects were partially mitigated by a c5 TWh reduction in net imports.

Average electricity spot price declined 29% YoY, to ~€34/MWh in 2020, supported by the declining gas prices (-34% YoY), lower demand and higher hydro resources availability. Average electricity final price in Spain declined 21% YoY in 2020, to €42/MWh, reflecting higher demand for restrictions and the evolution of wholesale spot price.

EDP Performance

EBITDA rose by 1% YoY, to €345m in 2020, with a negligible net impact from one-offs (+€4m YoY increase to a €6m cost). EBITDA growth was mainly prompted by a normalization of the operating conditions in supply, particularly in 2H20: (i) demand showed signs of recovery namely in the B2C segment, following a very tough 2Q20, when demand fell short of predicted and excess energy had to be sold in the market at very depressed prices; (ii) higher services penetration, prompting an increase in revenues per customer. Additionally, the strong performance of our Energy Management & Thermal business, driven by our successful hedging strategy, was nevertheless offset by the forced burning of coal stocks in Sines during 2H20, ahead of its production ceasing in late December. Its decommissioning works started on January 15th. As a results Sines accounted for 3% of production and 2% of revenues in 2020.

In 2020, excluding Sines, EDP's coal fired electricity production in Iberia represented 2% of consolidated revenues and had a contribution below 1% to consolidated EBITDA.

In 2020, the one-off impacts (€6m) related to the forced burnt of coal at Sines and HR restructuring in Iberia were offset by the one-off positive impact related with the sale of our B2C portfolio in Spain and Castejón CCGT (+€30m net gain, completed on 1-Dec-20) and the reversal of clawback 2019 (+€13m) in line with terms ultimately set.

For 2021, we have 100% of our expected hydro and nuclear production hedged at prices close to €45/MWh (baseload price excluding ancillary services) and 100% of our expected CCGT production at mid-single digit average spread.

Our thermal portfolio in Iberia encompasses 4.3 GW installed capacity, which plays an active role in ensuring the security of electricity supply: 67% in CCGT, 29% in coal, 4% in nuclear and 1% of cogeneration and waste.

Supply Iberia

Excluding the impact from the disposal of our B2C portfolio in Spain to Total, **the number of electricity clients in Portugal and Spain (B2B) slightly decreased**, as EDP maintains its focus on service quality and is leveraging on its customer portfolio to increase the share of wallet. In fact, the penetration rate of new services increased by 38% YoY to 26.1% in Dec-20, as a consequence of a 5% increase in the number of Funciona clients and also the deconsolidation of a portfolio of B2C clients with lower service penetration. EDP keeps growing into new energy solutions involving its clients in the energy transition. In this regard, in 2020, EDP did nearly 15,000 installations of distributed solar panels (+70% YoY) in Portugal B2C.

Total electricity supplied in 2020 decreased by 8% mainly driven by the B2B segment (-12%), which was heavily impacted by the slower economic activity during the Covid-19 pandemic lockdown. Demand in the B2C segment was also impacted by the deconsolidation of these assets on Dec-1st.

Excluding one-off impacts (€47m gain in 2020), EBITDA at our supply activities in Iberia rose by 7% YoY, to €99m, fully supported by the recovery in 2H20 after a harsh 2Q20, when surplus energy arising from sudden decline in demand was resold in the market at unfavourable prices. Moreover, EBITDA performance was supported by resilient demand in the B2C segment, increased installation of distributed solar and services provided. **EBITDA** performance was impacted by €19m bad debt recognition (0.8% of turnover, down 0.3 p.p. since Sep-20), of which -€1m in 4Q20.

Thermal generation & Energy management Iberia

Production in 2020 decreased 18% YoY, largely explained by the reduction in coal output (-41% YoY) leading to a 14 p.p. decrease in the load factor of our coal plants to 20% in 2020. Sines coal plant ceased production in late Dec-20, after completing the forced burning of coal stocks during 2H20. Decommissioning works started on January 15th 2021. Slightly lower CCGT output (-4% YoY) reflected the lower residual thermal demand and deconsolidation of Castejón power plants in the beginning of December.

Avg. thermal production cost posted a 16% YoY decrease (to €43/MWh in 2020), driven by lower commodity prices, particularly gas, which was slightly compensated by the higher coal-based production in 2H20.

Excluding one-off effects mentioned before, Energy Management and Thermal EBITDA reached €252 m in 2020 (+€2m YoY) reflecting a dilution of the very strong 1Q20 performance (+€121m YoY in 1Q20), driven by a normalisation of price volatility and the forced coal stock burnings in Sines.

Excluding one-off impacts, generation taxes in Spain and clawback levy in Portugal relative to 2020 declined €13m YoY, to €34m, reflecting lower CCGT production in Spain and coal production (in Portugal) and lower pool prices (in Spain).

(1) Includes SMEs; (2) Includes fuel costs, CO2 emission costs and hedging results.

EDP Energy management in Brazil 2020
(R\$ Million)

(1) Includes GSF, PLD and MRE

As part of our risk-controlled approach to its portfolio management, EDP follows a hedging strategy to mitigate the GSF/PLD risk, aiming at reducing the volatility of earnings. Therefore, supply and generation activities are managed in an integrated way, allowing the optimization of the portfolio as a whole.

At our Client Solutions & Energy Management activities in Brazil, EBITDA in EUR terms decreased by 6% to €132m, penalised by 25% YoY BRL depreciation against the euro, which offset the 22% EBITDA increase in BRL.

EBITDA from supply and energy management in Brazil improved by 75% in local currency, to R\$195m, positively impacted by an accounting change in the long-term contracts, of R\$206m due to a mark-to-market restatement of these contracts, helping to offset the reduced liquidity in the liberalized market and lower prices. Furthermore, performance in 2020 also reflected the clients' use of contracts flexibility to mitigate the adverse impact from the slump in demand.

Our thermal generation plant, Pecém I, was not dispatched from April to August, and was only dispatched during 3 days in September, as a result of lower electricity demand and better hydro conditions in the Northeast of Brazil. On the contrary, as the economy rebounded in 4Q20 amidst dry weather and activity picked-up, load factor of this plant increased to 67% in the 4Q20. Nevertheless, providing this plant is PPA remunerated based on availability, results tend to be stable and less dependent on actual production. Worth also highlighting that Pecém has a fixed monthly revenue of R\$62m, being adjusted to twelve-months IPCA, in November (+2.6% YoY).

EBITDA from thermal generation increased by +13% YoY in 2020 to R\$581m, driven by: (i) increased fixed revenues, due to annual adjustment in PPA in Nov-19; (ii) adjustment related with the downwards revision of the reference availability level of Pecém (R\$34m YoY); and (iii) better comparison YoY on variable costs.

Installed capacity by Country as of Dec-20

Breakdown by Technology as of 2020

(GW Capacity & TWh of Production)

- Wind & Solar
- Hydro
- Gas
- Coal
- Other

(1) Installed capacity that contributed to the revenues in the period; (2) Includes Poland, Romania, France, Belgium and Italy; (3) Includes Canada and Mexico.

1 ENGIE 2018 RESULTS

The previously published financial data presented hereafter have been restated to take into account (i) impacts resulting from the application of the new standards IFRS 9 – Financial Instruments and IFRS 15 – Revenue from Contracts with Customers; and (ii) the presentation in the financial statements at December 31, 2017 (for the income statement, statement of comprehensive income and statement of cash flows) of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 as "Discontinued operations", as they represent a separate major line of business under IFRS 5 – Non-current Assets Held for Sale and Discontinued Operations. A reconciliation of the reported data with the restated comparative data is presented in Note 2 "Restatement of 2017 comparative data" to the consolidated financial statements.

Main 2018 financial milestones

- **2018 results in line with targets: net recurring income Group share at €2.5 billion**, net debt/EBITDA ratio at 2.3x.
- **Stable EBITDA demonstrates ENGIE's robust business model**, with positive underlying momentum in growth segments offsetting the unfavorable impacts of unscheduled maintenance at Belgian nuclear plants, negative foreign exchange effects and dilution from disposals.
- **Solid organic⁽¹⁾ growth in EBITDA (5%)**, led by progress in the Group's key growth drivers: in particular Renewables and BtoB & BtoT Solutions.
- **Net debt reduction** (€1.4 billion vs. end 2017), due to a robust operating cash flow⁽²⁾ and disposals. The Group's financial structure is solid, as confirmed by the rating agencies which position ENGIE as an industry leader in that respect.
- **Recap of 2016-2018 strategic delivery: a reconfigured asset portfolio, reduced commodity exposure, lower carbon intensity, and an improved growth profile.** Transformation driven by portfolio rotation (€16.5 billion⁽³⁾ of disposals nearly closed), strategic investments (€14.3 billion⁽⁴⁾ of growth capex reinvested), efficiency (€1.3 billion of cost savings since 2015), customer-centric commercial capability development and accelerating momentum in Renewables.

Consistent with the strategic repositioning initiated in 2016, ENGIE continued to develop its privileged businesses. **It strengthened its positions in Client Solutions through** (i) **targeted acquisitions** in Latin America, the United States, Germany and Singapore, (ii) **new contracts** in high-growth business segments (mobility, campus management and cooling networks), (iii) **order book growth** in installation activities, and (iv) an increase in the **sale of electricity and gas market offer contracts** in France. In **Infrastructures**, storage regulation has been implemented in France, the number of smart gas meters installed in France has reached 2.5 million, and our Latin American businesses continued to grow. In **Renewables**, 1.1 GW of wind and solar capacity were added in 2018. In **Thermal contracted**, new long-term contracts were signed.

For 2019, ENGIE expects growth in net recurring income Group share to a level between €2.5 and €2.7 billion⁽⁵⁾. Looking ahead, ENGIE announces a new medium-term dividend policy, which provides for a 65%-75% targeted NRIGs payout ratio range. For the fiscal year 2019, it is ENGIE's current intention to target a dividend payout towards the upper end of this range.

(1) Gross variation without scope and foreign exchange impacts.

(2) Cash generated from operations before income tax and working capital requirement.

(3) Cumulative impacts from January 1, 2016 to December 31, 2018.

(4) Cumulative impacts from January 1, 2016 to December 31, 2018, net of DBpSO (Develop, Build, partial Sell & Operate) proceeds; excluding Capex related to E&P and upstream / midstream LNG and Corporate Capex.

(5) These targets and this indication assume average weather conditions in France, full pass through of supply costs in French regulated gas tariffs, no significant accounting changes except for IFRS 16, no major regulatory and macro-economic changes, commodity price assumptions based on market conditions as of December 31, 2018 for the non-hedged part of the production, average foreign exchange rates as follows for 2019: €/USD: 1.16; €/BRL: 4.42, and without significant impacts from disposals not already announced.

Financial data at December 31, 2018

<i>In billions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	60.6	59.6	+1.7%	+1.7%
EBITDA	9.2	9.2	+0.4%	+4.7%
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	5.1	5.2	-0.9%	+5.1%
Net recurring income relating to continued operations, Group share	2.5	2.2	+10.1%	+17.3%
Net income, Group share	1.0	1.3	-21.7%	
Cash Flow From Operations (CFFO)	7.3	8.5	-€1.2 bn	
Net debt	21.1	22.5	-€1.4 bn	

1.1 Analysis of 2018 financial data

1.1.1. Revenues: €60.6 billion

Revenues were €60.6 billion in 2018, up 1.7% on both a reported and organic basis versus 2017.

Reported revenue growth was impacted by an adverse foreign exchange effect (€929 million), mainly due to the depreciation of the Brazilian real and US dollar against the euro, offset by an aggregate positive scope effect (€955 million). Changes to the scope of consolidation primarily included acquisitions in Client Solutions (Keepmoat Regeneration in the United Kingdom, MCI in France, and Talen and Unity in the United States), as well as two new hydro power concessions acquired in Brazil. These positive impacts were partly offset by the disposal of thermal generation businesses in the United Kingdom and Poland in 2017 and of the Loy Yang B coal-fired power plant in Australia in early 2018.

Organic revenue growth was primarily driven by tariff increases and new power supply contracts in Latin America, growth in hydro power sales in France and Brazil, higher retail power sales in France, higher energy sales in the United Kingdom, Romania and Australia, and improved business volumes in BtoB and BtoT Solutions in France and the rest of Europe. Revenue growth was partly offset by the new accounting treatment of long-term gas supply contracts in Europe since the end of 2017 (no impact on EBITDA), as well as a decrease in gas sales in France.

1.1.2. EBITDA: €9.2 billion

EBITDA was €9.2 billion, up 0.4% on a reported basis and up 4.7% on an organic basis versus 2017.

Reported EBITDA growth includes an adverse foreign exchange effect (€258 million), mainly due to the depreciation of the Brazilian real and, to a lesser extent, the US dollar against the euro, and a negative scope effect (€113 million). This scope effect stems chiefly from the sale of the Loy Yang B coal-fired power plant in Australia in early 2018 and of thermal generation assets in the United Kingdom at the end of 2017, partly offset by two hydro concessions acquired in Brazil in late 2017 and by various acquisitions in BtoB and BtoT Solutions, mainly in the United States and the Middle East.

Organic EBITDA growth was mainly driven by revenue-related developments. Additional contributions have come from energy management activities (due to favorable European markets and a new management model for certain long term contracts), the *Lean* 2018 performance program and the positive impact of new French gas storage regulation. These more than offset the negative impact of major unscheduled maintenance operations and a decrease in captured prices in the Belgian nuclear business.

Organic EBITDA performance by segment:

<i>In billions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
North America	0.2	0.2	+0,1%	-7,5%
Latin America	1.8	1.7	+3,8%	+11,1%
Africa/Asia	1.1	1.3	-11,7%	+6,0%
Benelux	(0.2)	0.5	-133,7%	-133,5%
France	1.7	1.5	+14,2%	+14,2%
Europe excluding France & Benelux	0.7	0.6	+4,6%	+6,5%
Infrastructures Europe	3.5	3.4	+3,3%	+3,3%
GEM	0.2	(0.2)	NA	NA
Other	0.2	0.1	+56,6%	NA
TOTAL	9.2	9.2	+0,4%	+4,7%

- **North America** reported a 7.5% organic reduction in EBITDA due to 2017 and 2018 one-offs creating tough comparison and an increase in the cost of wind and solar development platforms expected to contribute as of 2019. These negative impacts were partly offset by growth in thermal and renewable power generation activities due to favorable climate conditions in the United States and Canada and to the contribution of the Holman solar farm in Texas commissioned in the second half of 2017.
- **Latin America** delivered strong 11.1% organic EBITDA growth, driven mainly by an improvement in power generation in Brazil (better hydrology and commissioning of new windfarms), tariff increases in gas infrastructures in Mexico and Argentina and new long-term power purchase agreements (PPA) in Chile, partly offset by the expiration of long term PPAs in Peru at the end of 2017.
- **Africa/Asia** reported buoyant 6.0% organic growth in EBITDA, driven mainly by the solar business in India and gas distribution business in Thailand.
- **Benelux** reported a very significant 134% organic decrease in EBITDA, mainly due to nuclear activities which were severely affected by unscheduled outages, leading to a very low availability rate in 2018 (52%), and by a decrease in captured prices.
- **France** delivered strong 14.2% organic EBITDA growth, driven primarily by a sharp increase in renewable hydro power generation, significant gains on partial disposals of wind and solar assets, and an increase in margins on BtoB and BtoT Solutions. These positive impacts were partly offset by declining margins in the retail gas market.
- **Europe excluding France & Benelux** reported 6.5% organic EBITDA growth, due mainly to improved performance in Client Solutions in the United Kingdom, Romania and Spain.
- **Infrastructures Europe** delivered 3.3% organic EBITDA growth following the introduction of gas storage regulation on January 1, 2018.
- **GEM (Global Energy Management)** delivered very strong organic EBITDA growth, driven by excellent performance in a favorable market environment (versus a weaker early 2017 comparable due to supply difficulties in southern France) and by a change of management model for some long-term contracts.
- In the **Other segment**, strong organic growth in EBITDA was driven by corporate cost savings under the Lean 2018 performance program and positive one-off items in the thermal generation business in Europe (favorable outcome of litigations), which offset the less favorable market conditions in 2018 compared with 2017.

EBITDA performance by activity:

<i>In billions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Client Solutions	2.4	2.2	+9%	+5%
Of which BtoC	0.7	0.7	-1%	+0%
Of which BtoB and BtoT	1.7	1.5	+13%	+7%
Infrastructures	3.9	3.8	+4%	+5%
Renewables and Thermal contracted	2.8	2.5	+9%	+15%
Of which Renewables	1.6	1.4	+17%	+25%
Of which Thermal contracted	1.1	1.1	-1%	+4%
Merchant	0.5	0.8	-29%	-29%
Of which Nuclear	(0.5)	0.1	NA	NA
Of which Merchant excluding Nuclear	1.1	0.6	+76%	+77%
Others ⁽¹⁾	(0.4)	(0.1)	NA	NA
TOTAL	9.2	9.2	+0.4%	+4.7%

(1) Including activities sold or in the process of being sold.

Apart from Nuclear, all activities delivered reported and organic growth, despite a significant adverse foreign exchange effect.

- In **Client Solutions**, 9% reported EBITDA growth was driven by a strong overall performance in BtoB and BtoT Solutions and a stable performance in BtoC. BtoB and BtoT Solutions delivered 13% reported EBITDA growth, driven mainly by contributions from new acquisitions, good services volume and margin performance in Europe, and from gas and electricity sales to businesses in Europe and Latin America. BtoC was stable compared with 2017, with a decrease in gas volumes and margins in France offset by an increase in the electricity client portfolio in France and Australia and by positive one-offs in Europe.
- **Infrastructure** delivered 5% organic EBITDA growth despite an unfavorable temperature effect in France. Growth was driven primarily by the implementation of the French gas storage regulation on January 1, 2018, Mexican gas transportation tariff increases and gas distribution activities in Argentina and Thailand. These positive impacts were partly offset by the introduction of new contractual provisions in gas transportation business for low calorific gas conversion in the north of France.
- **Renewables and Thermal contracted** delivered 9% reported EBITDA growth and a strong 15% organic growth. The negative impact of the depreciation of the Brazilian real and, to a lesser extent, of the US dollar against the euro was partly offset by the contribution of the two hydro concessions in Brazil acquired at the end of 2017. Renewable power generation delivered strong 25% organic growth, driven primarily by a large number of wind and solar farm partial disposals in 2018 (DBpSO⁽¹⁾ model) and by growth in hydro power generation in France. **Thermal Contracted** power delivered 4% organic growth even though there were more significant positive one-offs in 2017 than in 2018. Growth was driven by new long-term PPAs obtained in Chile and the commissioning of the Safi power plant in Morocco, which more than offset the expiration of long-term PPAs in Peru.
- The **Nuclear** business reported a very significant decrease due to unscheduled outages leading to a very low availability rate of 52% in 2018 and due to a decrease in captured prices.
- **Merchant business excluding Nuclear** delivered very strong 76% growth in reported EBITDA and 77% organically, driven mainly by a good performance from Global Energy Management (GEM) and thermal power generation in Europe.

(1) Develop, Build, partial Sell & Operate.

1.1.3. Current operating income after share in net income of entities accounted for using the equity method: €5.1 billion

Current operating income after share in net income of entities accounted for using the equity method amounted to €5.1 billion, down 0.9% on a reported basis and up 5.1% on an organic basis compared with 2017, in line with EBITDA growth.

1.1.4. Net recurring income relating to continued operations, Group share of €2.5 billion and Net income Group share of €1.0 billion

Net recurring income Group share relating to continued operations amounted to €2.5 billion in 2018, a sharp increase of 10.1% compared with the previous year, driven by the continued improvement in current operating income after share in net income of entities accounted for using the equity method, coupled with an improvement in the recurring effective tax rate.

Net income Group share amounted to €1.0 billion compared with €1.3 billion in 2017. It includes mainly impairment losses, partially offset by the gain on disposal of the upstream LNG business ("Discontinued operations").

1.1.5. Net financial debt: €21.1 billion

Net financial debt stood at €21.1 billion, down €1.4 billion compared with December 31, 2017. This variation is mainly due to (i) cash flow from operations (€7.3 billion), (ii) the impacts of the portfolio rotation program (€4.4 billion, including the closing of the sale of the exploration-production and upstream LNG businesses, the Loy Yang B coal-fired power plant in Australia and the distribution business in Hungary, as well as the classification of Glow, a power plant operator in the Asia-Pacific region, as "Assets classified as held for sale"). These items were partially offset by (i) gross capital expenditure over the period (€7.6 billion⁽¹⁾), and (ii) dividends paid to ENGIE SA shareholders (€1.7 billion) and to non-controlling interests (€0.8 billion).

Cash flow from operations (CFFO) amounted to €7.3 billion, down €1.2 billion compared with 2017. The decrease stems chiefly from the return to a normal level in working capital (€1.5 billion negative impact) and from a decrease in financial cash flows, partly offset by an increase in operating cash flow and lower tax expense.

At end December 2018, **net financial debt to EBITDA ratio** amounted to 2.3x, below the target of less than or equal to 2.5x. The average cost of gross debt was 2.68%, up very slightly compared with 2017.

Economic net debt⁽²⁾ to EBITDA ratio stood at 3.85x, stable compared with end 2017. Taking into account the future impact of IFRS 16 at EBITDA⁽³⁾ level, the ratio stands at 3.66x.

1.2 Successful strategic repositioning for ENGIE

ENGIE successfully continued its strategic repositioning and reached the targets set in 2016:

- the disposal of its interest in Glow in Asia-Pacific (announced in June 2018) will reduce ENGIE's consolidated net debt by €3.2 billion. It will enable the Group to **complete its portfolio rotation program** initiated three years ago. To date €16.5 billion⁽⁴⁾ of disposals were announced, of which €14.0 billion already booked.

(1) Net of disposal proceeds from DBpSO operations.

(2) Net economic debt amounted to €35.6 billion at the end of December 2018 (compared with €36.4 billion at the end of December 2017); it includes in particular nuclear provisions and post-employment benefits; details of its calculation are provided in the notes to the financial statements (see Note 6.7).

(3) Leases commitments included in economic net debt are restated in EBITDA (for approximately €0.5 billion), reflecting the implementation of IFRS 16 from 2019 onwards.

(4) Cumulative impacts from January 1, 2016 to December 31, 2018.

- the **capital expenditure program** has also been completed, with €14.3 billion⁽¹⁾ of growth investments since 2016, mainly in Renewables and Thermal contracted (48%), but also in Client Solutions (33%) and Infrastructure (15%).
- the **Lean 2018 performance program** achieved €1.3 billion in net gains at EBITDA level at the end of 2018, versus an initial cost reduction target of €1.0 billion.

In addition, this successful strategic repositioning also led to an improvement in the Group's capital efficiency and profitability, with in particular an increase in ROCEp⁽²⁾ of more than 90 bps over the period 2016-2018 and an increase in Client Solutions current operating income margins of 30bps in 2018.

1.3 2019 financial targets

ENGIE anticipates for 2019 **a net recurring income Group share between €2.5 and €2.7 billion**. This guidance is based on an indicative range for EBITDA of €9.9 to 10.3 billion, after IFRS 16 – Leases⁽³⁾ implementation.

For 2019, ENGIE anticipates:

- a net financial debt/EBITDA ratio below or equal to 2.5x, and
- an “A” category credit rating.

In order to monitor and communicate performance of this objective, segment information will be complemented from 2019 onwards. In accordance with the project, internal organization will need to be adapted, which will be announced shortly.

1.4 Dividend policy

For **fiscal year 2018**, ENGIE confirms the payment of a **0.75 euro per share dividend, payable in cash**.

From 2020⁽⁴⁾, the annual dividend will be paid in one time, at the end of the Ordinary General Meeting (OGM) approving the annual accounts.

In order to offset the impact of this transition on shareholders in 2019, ENGIE will submit for shareholder approval at its OGM on May 17, an exceptional dividend of €0.37 per share, which will bring the total distribution decided by this General Meeting to €1.12 per share.

Looking ahead, ENGIE announces a **new medium-term dividend policy, in the range of 65 to 75% NRIs payout ratio**. For the fiscal year 2019, ENGIE is aiming for a dividend at the upper end of this range.

(1) Cumulative impacts from January 1, 2016 to December 31, 2018, net of DBpSO proceeds; excluding Capex related to E&P and upstream/midstream LNG and Corporate Capex.

(2) Return on Productive Capital Employed, excluding non-productive capital employed and with NOPAT restated for share of entities accounted for using the equity method in non-recurring items.

(3) Impact of around €0.5 billion (without any impact on NRIs).

(4) Based on the distributable amount for the year ended December 31, 2019 for the dividend paid in 2020.

2 REPORTABLE SEGMENT BUSINESS TRENDS

<i>In millions of euros</i>	Dec. 31, 2018	Dec 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	60,596	59,576	+1.7%	+1.7%
EBITDA	9,236	9,199	+0.4%	+4.7%
Net depreciation and amortization/Other	(4,110)	(4,027)		
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	5,126	5,172	-0.9%	+5.1%

REVENUE TRENDS

In millions of euros

EBITDA TRENDS

In millions of euros

2.1 North America

In millions of euros	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	3,383	2,964	+14.1%	+5.5%
EBITDA	224	224	+0.1%	-7.5%
Net depreciation and amortization/Other	(73)	(50)		
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	151	174	-13.1%	-20.1%

Revenues for the North America segment totaled €3,383 million, up 14.1%. The negative foreign exchange effect was more than offset by positive scope effects mainly arising from the acquisition of the service activities of Talen in September 2017, Unity in March 2018 and Donnelly in August 2018. On an organic basis, the 5.5% revenue increase was mainly driven by higher prices and volumes achieved by the residual LNG activity.

EBITDA totaled €224 million, stable compared with 2017 but down 7.5% organically adjusted for the contribution of new acquisitions. Growth in thermal and renewable generation activities was mainly attributable to favorable weather conditions in the Northeast region of the United States and in Canada, and to the commissioning of Holman solar assets in the second half of 2017. These effects were more than offset by significant non-recurring items in 2018 and by an increase in the costs of wind and solar projects, the largest of which are expected to make a contribution in 2019.

Current operating income after share in net income of entities accounted for using the equity method amounted to €151 million, down 20% on an organic basis, due to the one-off positive effect on net depreciation and amortization charges recorded in 2017.

2.2 Latin America

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	4,639	4,383	+5.8%	+17.1%
EBITDA	1,775	1,709	+3.8%	+11.1%
Net depreciation and amortization/Other	(419)	(433)		
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	1,355	1,277	+6.2%	+12.9%

Revenues for the Latin America segment totaled €4,639 million, up 5.8% on a reported basis and 17.1% organically. Reported revenues were negatively impacted by the strong depreciation of the Brazilian real (-16%) and, to a lesser extent, the US dollar (-4%), but these negative effects were more than offset by the scope effect of the new hydro concessions in Brazil (Jaguara and Miranda) acquired at the end of 2017 and by the organic revenue increase. In Brazil, organic growth was mainly driven by higher hydro sales in the spot market and the commissioning of new wind farms. In Mexico and Argentina, revenues benefited from price increases in gas distribution activities. In Chile, business was positively impacted by the start of new PPAs with distribution companies, while in Peru it was affected by the end of some high margin PPAs in 2017.

Electricity sales increased by 3.3 TWh to 62.6 TWh and gas sales increased by 5.4 TWh to 34.3 TWh.

EBITDA totaled €1,775 million, up 11.1% on an organic basis, mainly due to the above change in revenues.

Current operating income after share in net income of entities accounted for using the equity method amounted to €1,355 million, up 12.9% on an organic basis in line with the change in EBITDA.

2.3 Africa/Asia

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	4,014	3,939	+1.9%	+5.0%
EBITDA	1,122	1,272	-11.7%	+6.0%
Net depreciation and amortization/Other	(229)	(256)		
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	893	1,016	-12.1%	+6.0%

Revenues for the Africa/Asia region totaled €4,014 million, up 1.9% on a reported basis and up 5.0% organically. On a reported basis, revenues were impacted by the negative exchange rate effect relating to the US dollar, the Australian dollar and the Turkish lira. The net scope effect was slightly positive, as the negative impact of the sale of the Loy Yang B coal-fired power plant in Australia in January 2018 was more than offset by the positive contribution from several acquisitions in Client Solutions in South Africa, Morocco, Ivory Coast, Uganda, Zambia and Australia. The organic increase mainly reflects higher sales in retail activities in Australia and higher volumes of thermal contracted power generation in Thailand. These effects were partially offset by the impacts of the closure of the Hazelwood coal-fired power plant in Australia in March 2017.

Electricity sales decreased by 9.7 TWh to 35.2 TWh, with reduced volumes mostly due to the Hazelwood closure and the sale of Loy Yang B.

EBITDA totaled €1,122 million, down 11.7% on a reported basis but up 6.0% organically. Reported EBITDA was negatively impacted by the foreign exchange effects mentioned above and by the sale of Loy Yang B, partly offset by the positive contribution from Tabreed (cooling networks) in the United Arab Emirates. Organic growth was driven mainly by a higher contribution from the solar business in India and PTT NGD's gas distribution business in Thailand.

Current operating income after share in net income of entities accounted for using the equity method amounted to €893 million, up 6% on an organic basis primarily for the same reasons as those given above for EBITDA, although the

lower depreciation charges following the classification of the thermal generation business in Thailand as “Discontinued operations” only partially offset the impact of impairment charges related to equity-accounted entities.

2.4 Benelux

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	6,690	6,771	-1.2%	-1.9%
EBITDA	(186)	550	-133.7%	-133.5%
Net depreciation and amortization/Other	(579)	(561)		
CURRENT OPERATING INCOME/(LOSS) AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	(765)	(11)	NA	NA

Revenues for the Benelux segment amounted to €6,690 million, down 1.2% on a reported basis compared with 2017. This decrease is due to nuclear power generation activities, which are affected both by a decline in volumes due to more shutdowns in 2018 than in 2017 (in particular at Doel 3 from September 22, 2017 until August 5, 2018 and Tihange 3 since March 31, 2018) and by a decrease in captured prices. These negative impacts were partially offset by the positive volume impacts recorded in energy retail activities and by the contribution from 2018 of revenues from the Cozie service activities.

In Belgium and Luxembourg, power generation amounts to 27.5 TWh, representing a decrease of 10.5 TWh. In the Netherlands, electricity sales amounted to 10.7 TWh, representing an increase of 0.9 TWh.

Natural gas sales in Benelux totaled 52 TWh, representing an increase of 2.5 TWh compared with 2017, due to a favorable climate effect in the first quarter of 2018 and net customer gains.

EBITDA was down by €736 million to a negative €186 million due to the nuclear power business which was severely affected by unscheduled outages leading to a very low availability rate of 52% in 2018, and by a decrease in captured prices.

Current operating income/(loss) after share in net income of entities accounted for using the equity method amounted to a negative €765 million, down €754 million compared with 2017 in line with the change in EBITDA.

2.5 France

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	15,183	14,157	+7.2%	+4.4%
EBITDA	1,669	1,461	+14.2%	+14.2%
Net depreciation and amortization/Other	(635)	(592)		
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	1,034	869	+19.0%	+18.3%

Volumes sold

<i>In TWh</i>	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)
Gas sales	88.3	94.7	-6.8%
Electricity sales	39.0	34.3	+14.0%

France climatic adjustment

<i>In TWh</i>	Dec. 31, 2018	Dec. 31, 2017	Total change in TWh
Climate adjustment volumes (negative figure = warm climate, positive figure = cold climate)	(3.0)	(0.3)	(2.7)

Revenues for the France segment totaled €15,183 million, up 7.2% on a reported basis and 4.4% on an organic basis. Reported growth includes the impact of the acquisition of several service companies in the BtoB segment (MCI at end-December 2017, Icomera in June 2017, CNN MCO in September 2017 and Eras in March 2018). Organic growth was driven primarily by a sharp increase in hydro power generation thanks to better runoff in 2018, growth in retail electricity sales and buoyant business in BtoB et BtoT services.

Natural gas sales fell by 6.4 TWh following the loss of retail customers due to competitive pressure (3.7 TWh) and an unfavorable temperature effect (2.7 TWh). Electricity sales were up 4.8 TWh thanks to the continued development of retail offers (up 2.9 TWh) and growth in sales of hydro power (up 1.9 TWh).

EBITDA amounted to €1,669 million, up 14.2% on an organic basis, driven primarily by a large number of wind and solar farm disposals in 2018 (mainly the Compagnie du Vent facilities and offshore wind projects at Yeu-Noirmoutiers and Dieppe-Le Tréport), growth in hydro power generation, and improved margins in service activities.

Current operating income after share in net income of entities accounted for using the equity method amounted to €1,034 million, up 18.3% on an organic basis in line with the change in EBITDA.

2.6 Europe excluding France & Benelux

In millions of euros	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	9,527	8,831	+7.9%	+5.1%
EBITDA	679	650	+4.6%	+6.5%
Net depreciation and amortization/Other	(207)	(216)		
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	473	434	+9.0%	+11.6%

Revenues for the Europe excluding France & Benelux segment amounted to €9,527 million, up 7.9% on a reported basis and 5.1% on an organic basis, driven mainly by Client Solutions. Reported growth includes the impact of the acquisition of housing regeneration company Keepmoat Regeneration in the United Kingdom in April 2017. The 5.1% organic growth was driven by the start-up of the retail energy business in the United Kingdom in June 2017, the development of Keepmoat over a nine-month period, a positive price effect in the gas and electricity retail business in Romania, and growth in service activities in Spain.

Electricity sales amounted to 29 TWh, representing a decrease of 1.1 TWh compared to 2017, mainly in the BtoB segment in Germany. Gas sales were down 0.4 TWh to 70.6 TWh.

EBITDA totaled €679 million, representing an increase of 6.5% on an organic basis, mainly for the same reasons as given above for revenues, coupled with good hydrological conditions in Spain. These items were partly offset by a lower performance in hydro power generation in the United Kingdom due to regulatory and market conditions.

Current operating income after share in net income of entities accounted for using the equity method amounted to €473 million, up 11.6% on an organic basis, slightly higher than EBITDA growth due to the improvement in the contribution from equity-accounted entities in Germany.

2.7 Infrastructures Europe

In millions of euros	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	5,694	5,446	+4.6%	+4.6%
Total revenues (incl. intra-group transactions)	6,859	6,712	+2.2%	
EBITDA	3,499	3,386	+3.3%	+3.3%
Net depreciation and amortization/Other	(1,482)	(1,444)		
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	2,016	1,941	+3.9%	+3.8%

Revenues for the Infrastructures Europe segment amounted to €5,694 million, up 4.6% on a reported basis compared with 2017. The increase was mainly due to price increases in the transportation networks in France, LNG terminal business, which delivered a strong commercial performance, and the development of own account storage sales in the United Kingdom. Growth was partly offset by negative temperature effect of 8.1 TWh, representing €51.8 million.

EBITDA amounted to €3,499 million, up 3.3% driven mainly by the introduction of gas storage regulation on January 1, 2018 in France, partly offset by the introduction of new contractual provisions for L-gas conversion in Northern France at GRTgaz.

Current operating income after share in net income of entities accounted for using the equity method amounted to €2,016 million for the period, an increase of 3.9% in line with EBITDA growth.

2.8 GEM

In millions of euros	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	6,968	7,638	-8.8%	-8.8%
EBITDA	240	(188)	NA	NA
Net depreciation and amortization/Other	(41)	(40)		
CURRENT OPERATING INCOME/(LOSS) AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	199	(229)	NA	NA

Revenues for the GEM segment amounted to €6,968 million, down 8.8% compared with 2017. The decrease was mainly due to the change of accounting treatment for long-term gas supply contracts and transport and storage capacity contracts⁽¹⁾.

EBITDA amounted to €240 million, up sharply compared with the prior-year period, driven by an excellent performance from the energy management activities in favorable market conditions in 2018 (whereas the first quarter of 2017 had suffered from supply difficulties in the south of France), coupled with the positive impact on EBITDA of the change of management model for certain long term contracts.

Current operating income after share in net income of entities accounted for using the equity method amounted to €199 million in 2018, representing growth on both a reported and an organic basis, in line with EBITDA trends.

2.9 Other

In millions of euros	Dec. 31, 2018	Dec. 31, 2017	% change (reported basis)	% change (organic basis)
Revenues	4,498	5,445	-17.4%	-10.2%
EBITDA	213	136	+56.6%	NA
Net depreciation and amortization/Other	(444)	(436)		
CURRENT OPERATING INCOME/(LOSS) AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	(232)	(300)	+22.8%	+37.1%

(1) Since October 1, 2017, these contracts have been managed individually based on market conditions rather than as part of a portfolio. As a result, fair value accounting is mostly applied. The segment's results therefore include the realized and unrealized gains and losses relating to these contracts, which are now measured at fair value through profit or loss and included in the net margin presented in revenues.

Volumes sold

In TWh	Dec. 31, 2018	Dec 31, 2017	% change (reported basis)
Gas sales in France	36.9	42.4	-12.9%
Electricity sales	34.9	46.1	-24.9%

France climatic adjustment

In TWh	Dec. 31, 2018	Dec. 31, 2017	Total change in TWh
Climate adjustment volumes (negative figure = warm climate, positive figure = cold climate)	(0.7)	(0.1)	(0.6)

The Other segment mainly comprises the activities of the Generation Europe, Tractebel and GTT business units, the *Entreprises & Collectivités* activities, and the Group's holding and corporate activities, which notably include the entities centralizing the Group's financing requirements and the equity-accounted contribution of SUEZ.

Revenues amounted to €4,498 million, down 17.4% on a reported basis and 10.2% on an organic basis. The reported decrease mainly reflects the 2017 disposal of the thermal power generation business in the United Kingdom and Poland. The organic decrease mainly reflects lower downstream gas sales in France and less favorable market conditions for power generation in Europe.

Gas sales fell by 5.4 TWh as a result of strong competitive pressure, with a slightly negative climate effect. ENGIE's share of the BtoB market was 18% compared with 21% at end-2017.

Electricity sales totaled 34.9 TWh, representing a decrease of 11.2 TWh compared with 2017. The decrease was mainly due to the disposal of thermal generation assets in the United Kingdom and Poland, and the end of the Rosen power station contract in Italy.

EBITDA totaled €213 million, up on both a reported and organic basis compared with 2017, mainly due to one-off positive items in the thermal power generation business in Europe (mainly the favorable outcome of certain disputes), the development of ancillary activities, and the contribution from the Lean 2018 program, which more than offset the less favorable market conditions in 2018.

Current operating loss after share in net income/(loss) of entities accounted for using the equity method amounted to a negative €232 million for the period, representing an increase on both a reported and an organic basis in line with EBITDA.

3 OTHER INCOME STATEMENT ITEMS

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾	% change (reported)

Of which Net income/(loss) relating to discontinued operations, Group share	1,045	273	
Non-controlling interests	595	788	
Of which Non-controlling interests relating to continued operations	572	695	
Of which Non-controlling interests relating to discontinued operations	24	93	

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

Income from operating activities amounted to €2,645 million in 2018, representing a decrease compared with 2017, mainly due to (i) losses on asset disposals, (ii) higher impairment losses in 2018, (iii) the negative impact of fair value adjustments to commodity hedges, and (iv) the decrease in current operating income after share in net income of companies accounted for using the equity method, partly offset by (v) the non-recurring charge recognized in 2017 related to the change in the accounting treatment of long-term gas supply contracts and transport and storage contracts implemented by the GEM business unit, and (vi) lower restructuring costs.

Income from operating activities was also affected by:

- changes in the fair value of commodity derivatives relating to operating items, which had a negative impact of €223 million (reflecting transactions not eligible for hedge accounting), compared with a positive impact of €29 million in 2017. The impact for the period results chiefly from negative overall price effects on these positions, combined with the net negative impact of unwinding positions with a positive market value at December 31, 2017;
- net impairment losses of €1,798 million, compared with €1,298 million the previous year.
At December 31, 2018, the Group recognized net impairment losses of €14 million against goodwill, €1,576 million against property, plant and equipment and intangible assets, and €209 million against financial assets and investments in entities accounted for using the equity method. These impairment losses related mainly to the Benelux, Other (primarily the Generation Europe business unit), Africa/Asia, Infrastructures and Latin America reportable segments. After taking into account the deferred tax effects and the share of impairment losses attributable to non-controlling interests, the impact of these impairment losses on net income Group share for 2018 amounts to €1,540 million. These impairment losses are described in Note 10.2 "Impairment losses" to the consolidated financial statements. In 2017, the Group recognized net impairment losses of €481 million against goodwill, €787 million against property, plant and equipment and intangible assets, and €30 million against financial assets and investments in entities accounted for using the equity method. These impairment losses related mainly to the Infrastructures (storage), and Other (primarily the Generation Europe business unit) reportable segments;
- restructuring costs of €162 million (compared with €669 million the previous year) including notably costs related to decisions to shut down operations and close some entities and sites, as well as costs related to various staff reduction plans;

- negative scope effects of €150 million, mainly comprising a €87 million loss on the sale of the Loy Yang B thermal power plant in Australia, primarily in respect of items of other comprehensive income recycled to the income statement;
- other non-recurring items totaling a negative €147 million, mainly including asset scrapping and costs related to site closures.

The **net financial loss** was stable and amounted to €1,381 million in 2018, compared with €1,388 million the previous year (see Note 11).

The **income tax** charge for 2018 amounted to €704 million (versus a €395 million benefit in 2017). It includes an income tax benefit of €125 million arising on non-recurring operating and financial income/(loss) (versus €1,462 million in 2017), mainly comprising non-recurring taxable charges in France and deferred tax assets on impairment losses in Germany and Latin America. In 2017, non-recurring items included the reduction in the tax rate in France pursuant to the 2018 Finance Act and the refund of the 3% tax on dividends previously paid by French companies. Adjusted for these non-recurring items, the effective recurring tax rate was 23.7%, lower than the 2017 rate of 29.6% due mainly to the recognition of deferred tax assets in several countries where the Group's prospects have improved.

Net income relating to continued operations attributable to non-controlling interests amounted to €572 million, compared with €695 million in 2017. The decrease was mainly due to the change in impairment losses, coupled with the sale of the Loy Yang B coal-fired power plant.

4 CHANGES IN NET DEBT

Net financial debt stood at €21.1 billion, down €1.4 billion compared with December 31, 2017. This variation is mainly due to (i) cash flow from operations (€7.3 billion), (ii) the impacts of the portfolio rotation program (€4.4 billion, including the closing of the sale of the exploration-production and upstream LNG businesses, the Loy Yang B coal-fired power plant in Australia and the distribution business in Hungary, as well as the classification of Glow, a power plant operator in the Asia-Pacific region, as “Assets classified as held for sale”). These items were partially offset by (i) gross capital expenditure over the period (€7.6 billion⁽¹⁶⁾), and (ii) dividends paid to ENGIE SA shareholders (€1.7 billion) and to non-controlling interests (€0.8 billion).

Changes in net debt break down as follows:

In millions of euros

(1) See Note 19.2.1 “Issuance of deeply-subordinated perpetual notes”.

	Maintenance investments
	Development investments
	Financial investments

The net debt (excluding internal debt of discontinued operations) to EBITDA ratio came out at 2.28 at December 31, 2018.

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Net debt (excluding internal debt of discontinued operations)	21,102	20,788
EBITDA	9,236	9,199
NET DEBT/EBITDA RATIO	2.28	2.26

(16) Net of DBSO proceeds.

The economic net debt (excluding internal debt of discontinued operations) to EBITDA ratio stood at 3.85 at December 31, 2018.

In millions of euros	Dec. 31, 2018	Dec. 31, 2017
Economic net debt (excluding internal debt of discontinued operations)	35,590	35,127
EBITDA	9,236	9,199
ECONOMIC NET DEBT/EBITDA RATIO ⁽¹⁾	3.85	3.82

(1) The 2018 ratio comes to 3.7 once lease payments relating to operating lease commitments included in economic net debt have been restated for EBITDA (around €0.5 billion), thus reflecting expected impacts as from 2019 of the application of IFRS 16 – Leases.

4.1 Cash flow from operations (CFFO)

Cash flow from operations (CFFO) amounted to €7.3 billion, down €1.2 billion compared with 2017. The decrease stems chiefly from the return to a normal level in working capital (€1.5 billion negative impact) and from a decrease in financial cash flows, partly offset by an increase in operating cash flow and lower tax expense.

4.2 Net investments

Gross investments during the period amounted to €8,169 million and included:

- financial investments for €1,967 million, relating primarily to (i) the acquisition of renewable energy companies (wind and solar) and services companies (micro-power grid, heating and cooling network) in North America (€446 million), wind power and service companies in Africa (€193 million) and the Langa group in France (€174 million), (ii) financing of the construction of the Safi thermal power plant in Morocco (€149 million), and (iii) a €188 million increase in Synatom investments;
- development investments totaling €3,613 million, including (i) €1,463 million invested in the Latin America segment to build thermal power plants and develop wind and photovoltaic farms in Brazil and Chile, (ii) €671 million invested in the Infrastructures Europe segment (blending projects and development of the natural gas distribution and transportation network in France), (iii) €494 million invested in the North America segment (mainly to develop wind power projects), and (iv) €568 million invested in the France segment (mainly in renewable projects);
- maintenance investments for an amount of €2,589 million.

Disposals represented a cash inflow of €2,755 million and mainly included the Group's divestment of its LNG activities, its 70% holding in its subsidiary ENGIE E&P International (EPI), the Loy Yang B coal-fired power plant in Australia and the gas distribution business in Hungary.

Taking into account changes in the scope of consolidation for the period relating to acquisitions and disposals of subsidiaries (€2,290 million negative impact), the impact on net debt of investments net of proceeds from disposals amounted to €3,124 million.

Capital expenditures break down as follows by segment:

In millions of euros

■ Maintenance investments
■ Development investments

(1) Net of partial disposals under DBSO operations, excluding Corporate, and Synatom reallocated to maintenance expenditure.

4.3 Dividends and movements in treasury stock

Dividends and movements in treasury stock during the period amounted to €2,554 million and included:

- €1,739 million in dividends paid by ENGIE SA to its shareholders, which corresponds to the balance of the 2017 dividend (€0.35 per share for shares with rights to an ordinary dividend or €0.42 per share for shares with rights to a dividend mark-up) paid in May 2018 and to an interim dividend (€0.37 per share) paid in October 2018;
- dividends paid by various subsidiaries to their non-controlling shareholders in an amount of €796 million, the payment of interest on hybrid debt for €123 million and movements in treasury stock.

4.4 Net debt at December 31, 2018

Excluding amortized cost but including the impact of foreign currency derivatives, at December 31, 2018 a total of 75% of net debt was denominated in euros and 18% in US dollars.

Including the impact of financial instruments, 81% of net debt is at fixed rates.

The average maturity of the Group's net debt is 10.9 years.

At December 31, 2018, the Group had total undrawn confirmed credit lines of €13.2 billion.

5 OTHER ITEMS IN THE STATEMENT OF FINANCIAL POSITION

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017	Net change
Non-current assets	91,716	92,412	(696)
<i>Of which goodwill</i>	<i>17,809</i>	<i>17,285</i>	<i>525</i>
<i>Of which property, plant and equipment and intangible assets, net</i>	<i>55,635</i>	<i>57,566</i>	<i>(1,931)</i>
<i>Of which investments in entities accounted for using the equity method</i>	<i>7,846</i>	<i>7,606</i>	<i>240</i>
Current assets	61,986	57,729	4,257
<i>Of which assets classified as held for sale</i>	<i>3,798</i>	<i>6,687</i>	<i>(2,889)</i>
Total equity	40,941	42,122	(1,181)
Provisions	21,813	21,715	98
Borrowings	32,178	33,467	(1,289)
Other liabilities	58,769	52,836	5,933
<i>Of which liabilities directly associated with assets classified as held for sale</i>	<i>2,130</i>	<i>3,371</i>	<i>(1,241)</i>

The carrying amount of **property, plant and equipment and intangible assets** was €55.6 billion, down €1.9 billion compared with December 31, 2017. The decrease was primarily the result of the classification of Glow in Thailand, some of Langa's solar farms in France, and renewable energy assets in Mexico as "Assets classified as held for sale" (€2.6 billion negative impact) (see Note 5.2), depreciation and amortization charges (€3.8 billion negative impact), impairment losses (€1.6 billion negative impact) and translation adjustments (€0.1 billion negative impact), partly offset by capital expenditure during the period (€6.3 billion positive impact).

Goodwill increased by €0.5 billion to €17.8 billion, mainly due to acquisitions made by the North America business unit (€0.2 billion positive impact) and the France Renewable business unit (€0.2 billion positive impact), offset by the goodwill on the holding in Thai company Glow and Langa's operating assets following their classification as "Assets classified as held for sale" (€0.2 billion negative impact).

Total equity amounted to €40.9 billion, a decrease of €0.5 billion compared with December 31, 2017. The decrease stemmed mainly from the payment of the cash dividend (€2.6 billion negative impact, including €1.7 billion of dividends paid by ENGIE SA to its shareholders and €0.9 billion paid to non-controlling interests), partly offset by net income for the period (€1.6 billion positive impact).

Provisions amounted to €21.8 billion, stable compared with December 31, 2017.

At December 31, 2018, assets and liabilities reclassified to "**Assets classified as held for sale**" and "**Liabilities directly associated with assets classified as held for sale**" correspond to Glow in Thailand, some of Langa's solar farms in France and renewable energy assets in Mexico, and at December 31, 2017, to the exploration-production activities and the Loy Yang B power plant in Australia (see Note 5.1).

6 PARENT COMPANY FINANCIAL STATEMENTS

The figures provided below relate to the financial statements of ENGIE SA, prepared in accordance with French GAAP and applicable regulations.

Revenues for ENGIE SA in 2018 totaled €27,833 million, driven mainly by positive price and volume effects on sales to other gas operators.

The net operating loss was €1,058 million, relatively stable compared with a loss of €1,358 million in 2017. Revenue growth (€7,248 million) was offset by an increase in gas purchase costs (€7,471 million). The electricity business was up slightly from €4,602 million in 2017 to €4,683 million in 2018, representing an increase of 2% driven by new electricity customers (approximately 450,000 new customers), partly offset by an increase in supply costs.

Net financial income amounted to €3,718 million compared with €3,849 million in 2017.

Non-recurring items represented a loss of €2,107 million, mainly comprising impairment of equity investments.

The income tax benefit amounted to €549 million compared to a benefit of €1,001 million in 2017, mainly comprising a tax consolidation benefit of €343 million, a net tax provision reversal of €124 million and various other net tax credits of €82 million. The 2017 figure included a €422 million refund by the French State of the 3% tax on dividends, which was held unconstitutional by the French Constitutional Court.

Net income for the year came out at €1,102 million.

Shareholders' equity amounted to €36,616 million at end-2018 compared with €37,191 million at end-2017. The €575 million decrease was due in large part to the difference in net income between 2017 and 2018 (negative €319 million) and the appropriation of 2017 net income (negative €333 million).

At December 31, 2018, net debt stood at €36,080 million, and cash and cash equivalents totaled €8,032 million (of which €5,216 relating to subsidiaries' current accounts).

Information relating to payment deadlines

Pursuant to the application of Article D.441-4 of the French Commercial Code, companies whose annual financial statements are certified by a Statutory Auditor must publish information regarding supplier and customer payment deadlines. The purpose is to demonstrate that there is no significant failure to respect settlement deadlines.

ENGIE SA, the parent company of the Group, is a French *société anonyme* with a Board of Directors that is subject to the provisions of Book II of the French Commercial Code (*Code de Commerce*), as well as to all other provisions of French law applicable to French commercial companies. It was incorporated on November 20, 2004 for a period of 99 years.

It is governed by current and future laws and by regulations applicable to *sociétés anonymes* and its bylaws.

The Group is headquartered at 1 place Samuel de Champlain, 92400 Courbevoie (France).

ENGIE shares are listed on the Paris, Brussels and Luxembourg stock exchanges.

On February 27, 2019, the Group's Board of Directors approved and authorized for issue the consolidated financial statements of the Group for the year ended December 31, 2018.

NOTE 1 ACCOUNTING FRAMEWORK AND BASIS FOR PREPARING THE CONSOLIDATED FINANCIAL STATEMENTS

1.1 Accounting standards

Pursuant to European Regulation (EC) 809/2004 on prospectuses dated April 29, 2004, financial information concerning the assets, liabilities, financial position, and profit and loss of ENGIE has been provided for the last two reporting periods (ended December 31, 2017 and 2018). This information was prepared in accordance with European Regulation (EC) 1606/2002 "on the application of international accounting standards" dated July 19, 2002. The Group's consolidated financial statements for the year ended December 31, 2018 have been prepared in accordance with IFRS Standards as published by the International Accounting Standards Board and endorsed by the European Union⁽¹⁾.

The accounting standards applied in the consolidated financial statements for the year ended December 31, 2018 are consistent with the policies used to prepare the consolidated financial statements for the year ended December 31, 2017, except for those described in § 1.1.1 below.

1.1.1 IFRS Standards, amendments or IFRIC Interpretations applicable in 2018

- IFRS 9 – *Financial instruments*

In accordance with the transition principles of IFRS 9, the new standard is applied retrospectively for the classification and measurement of financial assets and liabilities as well as for impairment losses, and prospectively for hedge accounting with the exception of the provisions relating to the recognition of the time value of derivative instruments. For these, as from January 1, 2017, the Group has decided to recognize changes in the fair value of the time component in other comprehensive income, for hedging relationships in which only the 'spot' element had previously been designated as hedging instrument.

For further details on the impact of IFRS 9 on the consolidated financial statements, please refer to Notes 2, 17 and 18.

- IFRS 15 – *Revenue from Contracts with Customers*

The first-time application has been implemented under the full retrospective method requiring comparative information to be restated at the date of initial application. In addition, ENGIE has decided to apply the practical expedients provided for by the standard regarding completed contracts or contracts modified as at January 1, 2017.

(1) Available on the European Commission's website: http://ec.europa.eu/internal_market/accounting/ias/index_en.htm.

For further details on the impact of IFRS 15 on the consolidated financial statements, please refer to Notes 2 and 18.

- Amendments to IFRS 2 – *Share-based payment: Classification and measurement of share-based payment transactions*
- IFRIC 22 – *Foreign Currency Transactions and Advance Consideration*
- Annual Improvements to IFRS Standards 2014-2016 Cycle⁽¹⁾

The impact of the application of IFRS 9 and IFRS 15 is presented in the Notes mentioned above.

The other amendments, interpretations and improvements have no significant impact on the Group's consolidated financial statements.

1.1.2 IFRS Standards, amendments or IFRIC Interpretations effective in 2019 and that the Group has elected not to early adopt

- IFRS 16 - *Leases*

In January 2016, the IASB has issued a new standard on leases. Under the new standard, all lease commitments will be recognized on the face of the statement of financial position, without distinguishing between operating leases and finance leases.

The main impact we expect on the consolidated statement of financial position is an increase in the "right-of-use assets" on the assets side and an increase of the lease liabilities on the liabilities side, regarding leases where the Group acts as lessee and which are currently qualified as operating leases. They concern mainly real estate and vehicles. In the consolidated income statement, reversal of the rental expenses of these operating leases will lead to an increase in EBITDA and in depreciation and financial expenses.

Having concluded the stage of identifying leases throughout the Group, their analyzes under the criteria of the new standard have been realized (identifying a lease, assessing the term of the lease, measuring and determining the discount rates, etc.). They are now identified on an ongoing basis so as to update the Group database. The IT tool able to deal with processing a large number of leases, has been deployed throughout the Group.

Transition

Analyzing the impact of the transition under the modified retrospective approach is being finalized. The Group has elected to apply some of the transition options of the new standard as at January 1, 2019. Amongst others, it has elected to include in the Group database the leases for which the lease term ends within 12 months of the transition date, to adjust the "right-of-use assets" by the amount of the provisions for onerous leases recognized in the statement of financial position as at December 31, 2018 (instead of impairing them) and to apply the grand-fathering clause.

Commitments relating to operating leases are presented in Note 23.1 "Operating leases for which ENGIE acts as lessee" (please refer to Note 22 for finance leases). Consistently with the amount of these off-balance sheet commitments, these leases are expected to have an impact amounting from €2.1 billion to €2.3 billion on the Group's debt as from 2019.

- Amendments to IFRS 9 – *Financial Instruments: Prepayment features with negative compensation*
- Amendments to IAS 28 – *Investments in Associates and Joint Ventures: Long-term interests in Associates and Joint Ventures*⁽²⁾
- Amendments to IAS 19 – *Employee benefits: Plan Amendment, Curtailment or Settlement*⁽²⁾

⁽¹⁾ The improvements of this cycle relating to IFRS 1 and IAS 28 are applicable as from 2018.

- IFRIC 23 – *Uncertainty over income tax treatments*
- Annual Improvements to IFRS Standards 2015-2017 Cycle⁽¹⁾.

The impact of the application of these other amendments, interpretations and improvements is currently being assessed.

1.1.3 IFRS Standards, amendments or IFRIC Interpretations effective after 2019

- IFRS 17 – *Insurance contracts*⁽²⁾
- Amendments to IFRS 3 – *Business Combinations: Definition of a Business*⁽¹⁾
- Amendments to IAS 1 – *Presentation of Financial Statements* and IAS 8 – *Accounting Policies, Changes in Accounting Estimates and Errors: Definition of Material* ⁽¹⁾.

The impact of the application of these standards and amendments is currently being assessed.

1.2 Measurement and presentation basis

1.2.1 Historical cost convention

The Group's consolidated financial statements are presented in euros and have been prepared using the historical cost convention, except for financial instruments that are accounted for under the financial instrument categories defined by IFRS 9.

1.2.2 Chosen options

1.2.2.1 Reminder of IFRS 1 transition options

The Group used some of the options available under IFRS 1 for its transition to IFRS in 2005. The options that continue to have an effect on the consolidated financial statements are:

- translation adjustments: the Group elected to reclassify cumulative translation adjustments within consolidated equity at January 1, 2004;
- business combinations: the Group elected not to restate business combinations that took place prior to January 1, 2004 in accordance with IFRS 3.

1.2.2.2 Business combinations

Business combinations carried out prior to January 1, 2010 were accounted for in accordance with IFRS 3 prior to the revision. In accordance with IFRS 3 revised, these business combinations have not been restated.

Since January 1, 2010, the Group applies the purchase method as defined in IFRS 3 revised, which consists in recognizing the identifiable assets acquired and liabilities assumed at their fair values at the acquisition date, as well as any non-controlling interests in the acquiree. Non-controlling interests are measured either at fair value or at the entity's proportionate interest in the net identifiable assets of the acquiree. The Group determines on a case-by-case basis which measurement option to be used to recognize non-controlling interests.

(1) These standards and amendments have not yet been adopted by the European Union.

(2) These standards and amendments have not yet been adopted by the European Union.

1.2.2.3 Consolidated statement of cash flows

The consolidated statement of cash flows is prepared using the indirect method starting from net income.

“Interest received on non-current financial assets” is classified within investing activities because it represents a return on investments. “Interest received on cash and cash equivalents” is shown as a component of financing activities because the interest can be used to reduce borrowing costs. This classification is consistent with the Group’s internal organization, where debt and cash are managed centrally by the Group treasury department.

As impairment losses on current assets are considered to be definitive losses, changes in current assets are presented net of impairment.

Cash flows relating to the payment of income tax are presented on a separate line.

1.2.3 Foreign currency transactions

1.2.3.1 Translation of foreign currency transactions

Foreign currency transactions are recorded in the functional currency at the exchange rate prevailing on the date of the transaction.

Functional currency is the currency of the primary economic environment in which an entity operates, which in most cases corresponds to local currency. However, certain entities may have a functional currency different from the local currency when that other currency is used for an entity’s main transactions and better reflects its economic environment.

At each reporting date:

- monetary assets and liabilities denominated in foreign currencies are translated at year-end exchange rates. The resulting translation gains and losses are recorded in the consolidated statement of income for the year to which they relate;
- non-monetary assets and liabilities denominated in foreign currencies are recognized at the historical cost applicable at the date of the transaction.

1.2.3.2 Translation of the financial statements of subsidiaries with a functional currency other than the euro (the presentation currency)

The statements of financial position of these subsidiaries are translated into euros at the official year-end exchange rates. Income statement and cash flow statement items are translated using the average exchange rate for the year. Any differences arising from the translation of the financial statements of these subsidiaries are recorded under “Translation adjustments” as other comprehensive income.

Goodwill and fair value adjustments arising on the acquisition of foreign entities are classified as assets and liabilities of those foreign entities and are therefore denominated in the functional currencies of the entities and translated at the year-end exchange rate.

1.2.4 Use of estimates and judgments

1.2.4.1 Estimates

The preparation of consolidated financial statements requires the use of estimates and assumptions to determine the value of assets and liabilities and contingent assets and liabilities at the reporting date, as well as income and expenses reported during the period.

Developments in the economic and financial environment prompted the Group to step up its risk oversight procedures and include an assessment of these risks in measuring financial instruments and performing impairment tests. The Group's estimates used in business plans and determination of discount rates used in impairment tests and for calculating provisions, take into account the environment and the important market volatility.

Accounting estimates are made in a context which remains sensitive to energy market developments, therefore making it difficult to apprehend medium-term economic prospects.

Due to uncertainties inherent in the estimation process, the Group regularly revises its estimates in light of currently available information. Final outcomes could differ from those estimates.

The key estimates used in preparing the Group's consolidated financial statements relate mainly to:

- measurement of the fair value of assets acquired and liabilities assumed in a business combination (*see Note 5*);
- measurement of revenue not yet metered, so called un-metered revenue (*see Note 8*);
- measurement of recognized tax loss carry-forwards (*see Note 12*);
- measurement of the recoverable amount of goodwill (*see Note 14*), other intangible assets (*see Note 15*) and property, plant and equipment (*see Note 16*);
- financial instruments (*see Notes 17 and 18*);
- measurement of provisions, particularly for back-end of nuclear fuel cycle, dismantling obligations, disputes, pensions and other employee benefits (*see Notes 20 and 21*).

1.2.4.2 Judgment

As well as relying on estimates, Group management also makes judgments to define the appropriate accounting policies to apply to certain activities and transactions, particularly when the effective IFRS Standards and IFRIC Interpretations do not specifically deal with the related accounting issues.

In particular, the Group exercised its judgment in assessing:

- the type of control (*see Note 3*);
- the performance obligations of sales contracts (*see Note 8*);
- how revenue is recognized for distribution or transmission services invoiced to clients (*see Note 8*);
- the identification of "own use contracts" as defined by IFRS 9 within non-financial purchase and sales contracts (electricity, gas, etc.) (*see Note 18*);
- the classification of arrangements which contain a lease (*see Notes 22 and 23*).

Entities for which judgment on the nature of control has been exercised are listed in Note 3 "Main subsidiaries at December 31, 2018" and Note 4 "Investments in entities accounted for using the equity method".

Accounting standards

From now on, accounting standards are presented above the Notes to which they relate in order to improve the clarity of these consolidated financial statements.

NOTE 2 RESTATEMENT OF 2017 COMPARATIVE DATA

The previously published financial statements presented hereafter have been restated to take into account:

- impacts resulting from the application of the new standards IFRS 9 – *Financial Instruments* and IFRS 15 – *Revenue from Contracts with Customers*; and
- the presentation in the financial statements at December 31, 2017 (the income statement, statement of comprehensive income and statement of cash flows) as “Discontinued operations” of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018, as they represent a separate major line of business under IFRS 5 – *Non-current Assets Held for Sale and Discontinued Operations*.

It should be noted that the exploration-production activities (ENGIE E&P International) were already classified as discontinued operations in the consolidated financial statements at December 31, 2017.

2.1 Impacts of applying IFRS 9 and IFRS 15 to the comparative 2017 financial statements

2.1.1 Impacts on the statement of financial position at December 31, 2017

2.1.1.1 Summary of the main impacts

<i>In millions of euros</i>	Dec. 31, 2017 reclassified	IFRS 9 impacts	IFRS 15 impacts	Dec. 31, 2017 restated
Other financial assets	7,632	(35)	-	7,596
Investments in entities accounted for using the equity method	7,702	(79)	(16)	7,606
Trade and other receivables, net	13,247	(126)	4	13,126
Assets from contracts with customers	6,946	(16)	-	6,930
Other current and non-current assets	114,761	37	83	114,882
TOTAL ASSETS	150,287	(217)	70	150,140
Shareholders' equity	36,639	(224)	(132)	36,283
Non-controlling interests	5,938	(11)	(87)	5,840
TOTAL EQUITY	42,577	(235)	(219)	42,122
Provisions	21,720	3	(8)	21,715
Liabilities from contracts with customers	3,278	-	298	3,575

TOTAL EQUITY AND LIABILITIES	150,287	(217)	70	150,140

2.1.1.2 Reclassifications to adapt the presentation of the statement of financial position following the application of the two new standards

The main impacts concern, for IFRS 9, the reclassification of financial assets that were previously classified as "Available-for-sale securities" and measured at fair value through other comprehensive income, and, for IFRS 15, the separate presentation of contract assets and contract liabilities.

In millions of euros	Dec. 31, 2017 published	Reclassifications						Dec. 31, 2017 reclassified
Assets								
Available-for-sale securities	2,656	(2,656)						-

Other current and non-current liabilities	15,765				22	(3,269)	25	12,542

2.1.1.3 IFRS 9 – Financial Instruments: impacts on the statement of financial position at December 31, 2017

The main impacts of the first-time application of IFRS 9 on the statement of financial position are summarized below for each of the three phases of the new standard.

- **Classification and measurement of financial assets and liabilities**

IFRS 9 requires financial assets to be classified and measured based on their type, their contractual cash flow characteristics and their business model. The new standard does not significantly change how financial liabilities are classified and measured.

For the Group, the main impact concerns the reclassification of financial assets which were previously presented as "Available-for-sale securities" and measured at fair value through other comprehensive income. A summary of the reclassifications is shown in the table above (see Note 2.1.1.2).

- **Impairment**

IFRS 9 rules regarding impairment require the recognition of expected credit losses on initial recognition of receivables, or as from the time when loans are granted or financial guarantees given.

The first-time application of IFRS 9 resulted in an increase in impairment. The increase mainly concerns trade receivables and assets from contracts with customers (increase in impairment of €134 million at end-2017 out of a total gross amount of €20 billion), as well as long-term receivables (increase in impairment of €26 million at end-2017 out of a total gross amount of €4 billion).

The impacts of changes in impairment following the first-time application of IFRS 9 are summarized in the table below.

<i>in millions of euros</i>	Dec. 31, 2017 reclassified	IFRS 9 impacts	Dec. 31, 2017 restated before IFRS 15 impacts
Other financial assets	7,632	(35)	7,596
Equity instruments at fair value through other comprehensive income	745	(12)	733
Gross	578	(3)	575
Fair value	167	(9)	158
Equity instruments at fair value through income	379	14	393
Gross	466	(2)	464
Fair value	(87)	16	(71)
Debt instruments at fair value through other comprehensive income	1,783	3	1,786
Gross	1,741	-	1,741
Fair value	42	4	46
Debt instruments at fair value through income	863	(6)	857
Gross	908	(2)	906
Fair value	(46)	(3)	(49)
Loans and receivables at amortized cost	3,861	(35)	3,826
Gross	4,084	(8)	4,076
Fair value	19	-	19
Impairment	(242)	(26)	(269)
Trade and other receivables, net	13,247	(126)	13,122
Gross	14,221	-	14,221
Impairment	(973)	(126)	(1,099)
Assets from contracts with customers	6,946	(16)	6,930
Gross	6,950	(8)	6,943
Impairment	(4)	(8)	(12)

- **Hedge accounting**

The new standard aims to better align hedge accounting with risk management, without substantially changing hedge accounting principles.

The Group, which applies hedge accounting primarily to hedge net debt risk, did not observe any material impact as a result of the transition in this respect.

For the three phases, the first-time application of IFRS 9 had a total negative €235 million impact on consolidated equity at December 31, 2017 (including a negative €79 million impact on the measurement of the share in net assets of entities accounted for using the equity method).

2.1.1.4 IFRS 15 – Revenue from Contracts with Customers: impacts on the statement of financial position at December 31, 2017

The main impacts of the first-time application of IFRS 15 on the Group's statement of financial position concern:

- the separate presentation of contract assets and contract liabilities, which results in certain trade receivables being reclassified as contract assets and certain other current liabilities as contract liabilities (see summary table of reclassifications in section 2.1.1.2 above);
- the measurement of the revenues to be recognized, for which more explicit rules are set out in the new standard, notably depending on how the performance obligations identified are satisfied, and has modified the timing of revenue recognition and the margin profile for certain contracts.

The second point, this mainly affects contracts for the operation and maintenance of power plants or the provision of production capacities, with a potential increase in contract liabilities reflecting the delay between the price received and the completion of the services.

As a consequence, applying IFRS 15 had a negative €219 million impact on equity at December 31, 2017 whereas the impact on the rhythm of revenue recognition in the income statement for these contracts was not material, given their term.

2.1.2 Impacts on income statement at December 31, 2017

2.1.2.1 Summary of the main impacts

In millions of euros	Dec. 31, 2017 published	IFRS 9 impacts	IFRS 15 impacts	Dec. 31, 2017 restated excluding IFRS 5 impacts relating to
Revenues from contracts with customers	64,280	-	(9,898)	54,381
Revenues from other contracts	749	-	5,805	6,555
REVENUES	65,029	-	(4,093)	60,936
Purchases	(36,740)	-	3,980	(32,760)
Other operating income and expenses	(9,636)	-	78	(9,558)
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	5,273	(23)	(39)	5,211
INCOME/(LOSS) FROM OPERATING ACTIVITIES	2,819	(27)	(39)	2,752
NET FINANCIAL INCOME/(LOSS)	(1,296)	(100)	(11)	(1,407)
Income tax expense	425	37	11	473
NET INCOME/(LOSS)	2,238	(92)	(38)	2,108

2.1.2.2 IFRS 9 – Financial instruments: impacts on income statement at December 31, 2017

The impact of the application of IFRS 9 on net income Group share amounted to a negative €92 million (negative €129 million before tax) at December 31, 2017.

The impact on net income was primarily due to a one-off transition effect resulting from the application of IFRS 9, paragraph 7.2.1, which requires assets that were derecognized in 2017, particularly trade receivables, to continue to be accounted for under IAS 39 rather than IFRS 9. As a result, the recognition of expected credit losses on the initial

recognition of new receivables (mainly trade receivables) in 2017 had a one-off negative impact of €113 million on gross income for the period, presented in non-recurring income.

It should be noted that after transition, recurring income may be impacted primarily by significant changes in the credit rating of our counterparties, for example in the event of a financial crisis

2.1.2.3 IFRS 15 – Revenue from Contracts with Customers: impacts on income statement at December 31, 2017

The main impacts on the Group's consolidated revenues are related to presentation. The impact of the new standard on current operating income is not material.

The three main issues concerning the Group are presented below. The first two, which represent €9,526 million are related to presentation and have no impact on the Group's current operating income:

- in certain countries where the Group acts as energy provider without being in charge of energy distribution, the analysis under IFRS 15 may lead to recognizing only energy sales as revenues. In some situations, the accounting treatment under IFRS 15 leads to a decrease in revenues corresponding to distribution without any impact on the energy margin, since the related expenses are decreased accordingly. At December 31, 2017, the related revenue restatement amounted to a negative €3,803 million, with operating expenses decreasing by the same amount. The countries that are most concerned are Belgium (for the distribution of gas and electricity as well as for the transportation of electricity) and France (for the distribution of electricity). Even if there is no impact at Group level for gas in France, there is an impact on the revenue breakdown by reportable segment: under IFRS 15, the revenues on gas distribution are no longer recognized by the provider (in the France reportable segment) but by the distributor (in the Europe Infrastructures reportable segment). At December 31, 2017, these revenues amounted to €1,957 million;
- commodities sales transactions which are within the scope of IFRS 9 – *Financial Instruments*, are outside the scope of IFRS 15. The sales under the related contracts that result in a physical delivery are therefore presented on a separate line from IFRS 15 revenues. At December 31, 2017, these sales amounted to €5,723 million;
- the new standard has modified the timing of revenue recognition for certain types of activities (such as operation and maintenance of power plants or provision of production capacities). However, this did not have a material impact on income at December 31, 2017.

2.2 Classification of upstream liquefied natural gas (LNG) activities as "Discontinued operations"

On July 13, 2018, the Group finalized the disposal of its upstream liquefied natural gas (LNG) activities to Total (see Note 5.1.4 "Disposal of ENGIE's liquefied natural gas (LNG) activities").

In accordance with IFRS 5, the upstream LNG activities are presented as "Discontinued operations" in the Group's income statement, statement of comprehensive income and statement of cash flows at December 31, 2017

Other assets held for sale at December 31, 2018 do not meet the definition of "Discontinued operations" and therefore have not been restated.

2.3 2017 comparative financial statements

2.3.1 Income statement at December 31, 2017

<i>In millions of euros</i>	Dec. 31, 2017 published	IFRS 9 impacts	IFRS 15 impacts	IFRS 5 - LNG	Dec. 31, 2017 restated

NOTE 3 MAIN SUBSIDIARIES AT DECEMBER 31, 2018

Accounting standards

Controlled entities (subsidiaries) are fully consolidated in accordance with IFRS 10 – *Consolidated Financial Statements*. An investor (the Group) controls an entity and therefore must consolidate it if all of the following three criteria are met:

- it has the ability to direct the relevant activities of the entity;
- it has the rights and is exposed to variable returns from its involvement with the entity;
- it has the ability to use its power over the entity to affect the investor's return.

3.1 List of main subsidiaries at December 31, 2018

The following lists are made available by the Group to third parties, pursuant to Regulation No. 2016-09 of the French accounting standards authority (ANC) issued on December 2, 2016:

- list of companies included in consolidation;
- list of companies excluded from consolidation because their individual and cumulative incidence on the Group's consolidated accounts is not material. They correspond to entities deemed not significant as regards the Group's main key figures (revenues, total equity, etc), shell companies or entities that have ceased all activities and are undergoing liquidation/closure proceedings;
- list of main non-consolidated interests.

This information is available on the Group's website (www.engie.com, Investors/Regulated information section). Non-consolidated companies are classified under non-current financial assets (see Note 17.1.1.1) under "Equity instruments at fair value".

The list of the main subsidiaries presented below was determined, as regards operating entities, based on their contribution to Group revenues, EBITDA, net income and net debt. The main equity-accounted investments (associates and joint ventures) are presented in Note 4 "Investments in entities accounted for using the equity method".

"FC" indicates the full consolidation method.

Some entities such as ENGIE SA, ENGIE Energie Services SA or Electrabel SA comprise both operating activities and headquarters functions which report to management teams of different reportable segments. In the following tables, these operating activities and headquarters functions are shown within their respective reportable segments under their initial company name followed by a (*) sign.

North America

Company name	Activity	Country	% interest		Consolidation method	
			Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017

3.2 Significant judgments exercised when assessing control

The Group primarily considers the following information and criteria when determining whether it has control over an entity:

- governance arrangements: voting rights and whether the Group is represented in the governing bodies, majority rules and veto rights;
- whether substantive or protective rights are granted to shareholders, particularly in relation to the entity's relevant activities;
- the consequences of a "deadlock" clause;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity.

The Group exercised its judgment regarding the entities and sub-groups described below.

Entities in which the Group has the majority of the voting rights

GRTgaz (Infrastructures Europe): 74.6%

In addition to the analysis of the shareholder agreement with Société d'Infrastructures Gazières, a subsidiary of *Caisse des Dépôts et Consignations* (CDC), which owns 24.8% of the share capital of GRTgaz, the Group also assessed the rights granted to the French Energy Regulatory Commission (*Commission de régulation de l'énergie* – CRE). As a regulated activity, GRTgaz has a dominant position on the gas transportation market in France. Accordingly, since the transposition of the Third European Directive of July 13, 2009 into French law (Code de l'énergie -Energy Code) of May 9, 2011, GRTgaz has been subject to independence rules as concerns its directors and senior management team. The French Energy Code confers certain powers on the CRE in the context of its duties to control the proper functioning of the gas markets in France, including verifying the independence of the members of the Board of Directors and senior management and assessing the

choice of investments. The Group considers that it exercises control over GRTgaz and its subsidiaries (including Elengy) in view of its current ability to appoint the majority of the members of the Board of Directors and take decisions about the relevant activities, especially in terms of the level of investment and planned financing.

Entities in which the Group does not have the majority of the voting rights

In the entities in which the Group does not have a majority of the voting rights, judgment is exercised with regard to the following items, in order to assess whether there is a situation of *de facto* control:

- dispersion of the shareholding structure: number of voting rights held by the Group relative to the number of rights held respectively by the other vote holders and their dispersion;
- voting patterns at shareholders' meetings: the percentages of voting rights exercised by the Group at shareholders' meetings in recent years;
- governance arrangements: representation in the governing body with strategic and operational decision-making power over the relevant activities;
- rules for appointing key management personnel;
- contractual relationships and material transactions.

The main fully consolidated entities in which the Group does not have the majority of the voting rights are Compagnie Nationale du Rhône (49.98%) and Gaztransport & Technigaz (40.4%).

Compagnie Nationale du Rhône ("CNR" – France): 49.98%

The Group holds 49.98% of the share capital of CNR, with CDC holding 33.2%, and the balance (16.82%) being dispersed among around 200 local authorities. In view of the current provisions of the French "Murcef" law, under which a majority of CNR's share capital must remain under public ownership, the Group is unable to hold more than 50% of the share capital. However, the Group considers that it exercises *de facto* control as it holds the majority of the voting rights exercised at shareholders' meetings due to the widely dispersed shareholding structure and the absence of evidence of the minority shareholders acting in concert.

Gaztransport & Technigaz ("GTT" – Others): 40.4%

Since GTT's initial public offering in February 2014, ENGIE has been the largest shareholder in the company with a 40.4% stake, the free float representing around 49% of the share capital. The Group holds the majority of the voting rights exercised at shareholders' meetings in view of the widely dispersed shareholding structure and the absence of evidence of minority shareholders acting in concert. ENGIE also holds the majority of the seats on the Board of Directors. The Group considers that it exercises *de facto* control over GTT, based on an IFRS 10 criteria.

3.3 Subsidiaries with material non-controlling interests

The following table shows the non-controlling interests in Group entities that are deemed to be material, the respective contributions to equity and net income at December 31, 2018 and December 31, 2017, as well as the dividends paid to non-controlling interests of these significant subsidiaries:

Corporate name	Activity	Percentage interest of non-controlling interests		Net income/(loss) of non-controlling interests		Equity of non-controlling interests		Dividends paid to non-controlling interests	
		Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017

NOTE 4 INVESTMENTS IN ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD

Accounting standards

The Group accounts for its investments in associates (entities over which the Group has significant influence) and joint ventures using the equity method. Under IFRS 11 – Joint Arrangements, a joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.

The respective contributions of associates and joint ventures in the statement of financial position, the income statement and the statement of comprehensive income at December 31, 2018 and December 31, 2017 are as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Statement of financial position		
Investments in associates	4,590	5,118
Investments in joint ventures	3,256	2,488
INVESTMENTS IN ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	7,846	7,606
Income statement		
Share in net income/(loss) of associates	88	263
Share in net income/(loss) of joint ventures	273	159
SHARE IN NET INCOME/(LOSS) OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	361	422
Statement of comprehensive income		
Share of associates in "Other comprehensive income/(loss)"	132	113
Share of joint ventures in "Other comprehensive income/(loss)"	26	(7)
SHARE OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD IN "OTHER COMPREHENSIVE INCOME/(LOSS)"	158	106

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

Significant judgments

The Group primarily considers the following information and criteria in determining whether it has joint control or significant influence over an entity:

- governance arrangements: whether the Group is represented in the governing bodies, majority rules and veto rights;
- whether substantive or protective rights are granted to shareholders, particularly in relation to the entity's relevant activities:
This can be difficult to determine in the case of "project management" or "one-asset" entities, as certain decisions concerning the relevant activities are made upon the creation of the joint arrangement and remain valid throughout the project. Accordingly, the decision-making analysis relates to the relevant residual activities of the entity (those that significantly affect the variable returns of the entity);
- the consequences of a "deadlock" clause;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity:
This can also involve analyzing the Group's contractual relations with the entity, in particular the conditions in which these contracts are entered into, their duration as well as the management of conflicts of interest that may arise when the entity's governing body casts votes.

The Group exercised its judgment regarding the following entities and sub-groups:

Project management entities in the Middle East

The significant judgments made in determining the consolidation method to be applied to these project management entities concerned the risks and rewards relating to contracts between ENGIE and the entity concerned, as well as an analysis of the residual relevant activities over which the entity retains control after its creation. The Group considers that it has significant influence or joint control over these entities, since the decisions taken throughout the term of the project about the relevant activities such as refinancing, or the renewal or amendment of significant contracts (sales, purchases, operating and maintenance services) require, depending on the case, the unanimous consent of two or more parties sharing control.

SUEZ Group (32.06%)

With effect from July 22, 2013, the date on which the SUEZ shareholders' agreement expired, ENGIE no longer controls SUEZ but exercises significant influence over the company. In particular, this is because: (i) the Group does not have a majority of members on SUEZ's Board of Directors, (ii) at Shareholders' Meetings, although SUEZ's shareholder base is fragmented and ENGIE holds a large interest, past voting shows that ENGIE alone did not have the majority at Ordinary and Extraordinary Shareholders' Meetings between 2010 and 2018 and (iii) the operational transition agreements (essentially relating to a framework agreement governing purchases and IT) were entered into on an arm's length basis.

Joint ventures in which the Group holds an interest of more than 50%

Tihama (60%)

ENGIE holds a 60% stake in the Tihama cogeneration plant in Saudi Arabia and its partner Saudi Oger holds 40%. The Group considers that it has joint control over Tihama since the decisions about its relevant activities, including for example the preparation of the budget and amendments to major contracts, etc., require the unanimous consent of the parties sharing control.

Joint control – difference between joint ventures and joint operations

Classifying a joint arrangement requires the Group to use its judgment to determine whether the entity in question is a joint venture or a joint operation. IFRS 11 requires an analysis of "other facts and circumstances" when determining the classification of jointly controlled entities.

The IFRS Interpretations Committee (IFRS IC) (November 2014) decided that for an entity to be classified as a joint operation, other facts and circumstances must give rise to direct enforceable rights to the assets, and obligations for the liabilities, of the joint arrangement.

In view of this position and its application to our analyses, the Group has no material joint operations at December 31, 2018.

4.1 Investments in associates

4.1.1 Contribution of material associates and of associates that are not material to the Group taken individually

The table hereafter shows the contribution of each material associate along with the aggregate contribution of associates deemed not material taken individually, in the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from companies accounted for using the equity method" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material associates. These criteria include the contribution to the consolidated line items "Share in net income/(loss) of associates" and "Investments in associates", the total assets

NOTE 4 INVESTMENTS IN ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD

of associates in Group share, and associates carrying major projects in the study or construction phase for which the related investment commitments are material.

Corporate name	Activity	Capacity	Percentage interest of investments in associates		Carrying amount of investments in associates		Share in net income/(loss) of associates		Other comprehensive income/(loss) of associates		Dividends received from associates	
			Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017	Dec. 31, 2018	Dec. 31, 2017
In millions of euros												
SUEZ Group (Other)	Water and waste processing		32.06	31.96	1,968	2,083	55	100	21	99	130	119
Energia Sustentável Do Brasil (Latin America, Brazil)	Hydro power plant	3,750 MW	40.00	40.00	646	784	(57)	(23)	-	-	-	-
Project management entities in the Middle East (Africa/Asia, Saudi Arabia, Bahrain, Qatar, United Arab Emirates, Oman, Kuwait) ⁽¹⁾	Gas-fired power plants and seawater desalination facilities				1,004	868	97	157	96	(16)	97	96
GASAG (Europe excluding France & Benelux, Germany)	Gas and heat networks		31.57	31.57	261	247	18	14	1	4	4	2
Other investments in associates that are not material taken individually					710	1,136	(25)	14	14	26	104	60
INVESTMENTS IN ASSOCIATES					4,590	5,118	88	263	132	113	334	278

- (1) Investments in associates operating gas-fired power plants and seawater desalination facilities in the Arabian Peninsula have been grouped together under "Project management entities in the Middle East". This includes around 40 associates operating thermal power plants with a total installed capacity of 28,020 MW (at 100%) and a further 1,507 MW (at 100%) in capacity under construction. These associates have fairly similar business models and joint arrangements: the project management entities selected as a result of a competitive bidding process develop, build and operate power generation plants and seawater desalination facilities. The entire output of these facilities is sold to government-owned companies under power and water purchase agreements, over periods generally spanning 20 to 30 years.
- In accordance with their contractual arrangements, the corresponding plants are recognized as property, plant and equipment or as financial receivables whenever substantially all of the risks and rewards associated with the assets are transferred to the buyer of the output. This treatment complies with IFRIC 4 and IAS 17. The shareholding structure of these entities systematically includes a government-owned company based in the same country as the project management entity. The Group's percentage interest and percentage voting rights in each of these entities varies between 20% and 50%.

The share in net income/(loss) of associates includes a net non-recurring loss for a total amount of €155 million in 2018 (compared to a net non-recurring loss of €43 million in 2017), mainly including changes in the fair value of derivative instruments and disposal gains and losses, net of tax (see Note 6.2 "Net recurring income Group share").

4.1.2 Financial information regarding material associates

The tables below provide condensed financial information for the Group's main associates. The amounts shown have been determined in accordance with IFRS, before the elimination of intragroup items and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the associate performed at the date of acquisition at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE".

<i>In millions of euros</i>	Revenues	Net income/(loss)	Other comprehensive income/(loss)	Total comprehensive income/(loss)	Current assets	Non-current assets	Current liabilities	Non-current liabilities	Total equity	% interest of Group	Total equity attributable to ENGIE
AT DECEMBER 31, 2018											
SUEZ Group ⁽¹⁾	17,331	335	(103)	232	10,872	22,681	11,664	12,896	8,993	32.06	1,968
Energia Sustentável Do Brasil	564	(142)	-	(142)	199	4,388	544	2,428	1,615	40.00	646
Project management entities in the Middle East	4,254	467	406	873	2,572	21,401	3,775	16,263	3,934		1,004
GASAG	1,196	56	3	59	798	1,733	1,508	196	827	31.57	261
AT DECEMBER 31, 2017											
SUEZ Group ⁽¹⁾	15,783	296	(195)	101	10,314	22,517	10,920	12,889	9,022	31.96	2,083
Energia Sustentável Do Brasil	789	(58)	(1)	(58)	269	4,976	591	2,695	1,960	40.00	784
Project management entities in the Middle East	4,147	633	87	720	2,512	20,958	3,979	16,219	3,272		868
GASAG	1,106	46	12	58	780	1,676	1,500	173	782	31.58	247

(1) The data indicated in the table for SUEZ correspond to financial information published by SUEZ. Total SUEZ equity attributable to the Group amounts to €6,392 million based on the published financial statements of SUEZ and €6,139 million based on the financial statements of ENGIE. The difference in these amounts mainly reflects the non-inclusion of the share in deeply-subordinated perpetual notes issued by SUEZ in total equity attributable to ENGIE, partly offset by the fair value measurement of the assets and liabilities of SUEZ at the date the Group changed its consolidation method (July 22, 2013).

SUEZ is the only material listed associate. Based on the closing share price at December 31, 2018, the market value of this interest was €2,297 million.

4.1.3 Transactions between the Group and its associates

The data below set out the impact of transactions with associates on the Group's 2018 consolidated financial statements.

<i>In millions of euros</i>	Purchases of goods and services	Sales of goods and services	Net financial income (excluding dividends)	Trade and other receivables	Loans and receivables at amortized cost	Trade and other payables	Borrowings and debt
Project management entities in the Middle East	-	237	(3)	33	69	4	-
Contassur ⁽¹⁾	-	-	-	167	2	-	-
Energia Sustentável Do Brasil	126	-	-	-	76	10	-
Other	29	4	8	17	182	2	1
AT DECEMBER 31, 2018	154	241	4	217	329	16	1

(1) Contassur is a life insurance company accounted for using the equity method. Contassur offers insurance contracts, chiefly with pension funds that cover post-employment benefit obligations for Group employees and also employees of other companies mainly engaged in regulated activities in the electricity and gas sector in Belgium. Insurance contracts entered into by Contassur represent reimbursement rights recorded within "Other assets" in the statement of financial position. These reimbursement rights totaled €168 million at December 31, 2018 (€159 million at December 31, 2017).

4.2 Investments in joint ventures

4.2.1 Contribution of material joint ventures and of joint ventures that are not material to the Group taken individually

The table below shows the contribution of each material joint venture along with the aggregate contribution of joint ventures deemed not material taken individually to the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from entities accounted for using the equity method" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material joint ventures. These criteria include the contribution to the line items "Share in net income/(loss) of joint ventures" and "Investments in joint ventures", the Group's share in total assets of joint ventures, and joint ventures conducting major projects in the study or construction phase for which the related investment commitments are material.

Corporate name	Activity	Capacity	Percentage interest of investments in joint ventures		Carrying amount of investments in joint ventures		Share in net income/(loss) of joint ventures		Other comprehensive income/(loss) of joint ventures		Dividends received from joint ventures

INVESTMENTS IN JOINT VENTURES					3,256	2,488	273	159	26	(7)	244	188

The share in net income/(loss) of joint ventures includes non-recurring income of €6 million in 2018 (non-recurring income of €18 million in 2017), resulting chiefly from changes in the fair value of derivatives, impairment losses and disposal gains and losses, net of tax (see Note 6.2 "Net recurring income Group share").

4.2.2 Financial information regarding material joint ventures

The amounts shown have been determined in accordance with IFRS before the elimination of intragroup items and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the joint venture performed at the date of acquisition at the level of ENGIE, as required by IAS 28. All amounts are

presented based on a 100% interest with the exception of "Total equity attributable to ENGIE" in the statement of financial position.

(1) Equity Group share amounts to €649 million for the Portuguese sub-group. The share of this €649 million attributable to ENGIE is therefore €325 million.

(2) Equity Group share amounts to €586 million for the WSW Energie und Wasser AG sub-group. The share of this €586 million attributable to ENGIE is therefore €193million. This amount is increased by an additional share of €11 million in respect of a non-controlling interest held directly by ENGIE in a subsidiary of this sub-group (and is therefore not included in the €586 million in equity attributable to the owners of the parent).

4.2.3 Transactions between the Group and its joint ventures

The data below set out the impact of transactions with joint ventures on the Group's 2018 consolidated financial statements.

<i>In millions of euros</i>	Purchases of goods and services	Sales of goods and services	Net financial income (excluding dividends)	Trade and other receivables	Loans and receivables at amortized cost	Trade and other payables	Borrowings and debt

4.3 Other information on investments accounted for using the equity method

4.3.1 Unrecognized share of losses of associates and joint ventures

Cumulative unrecognized losses of associates (corresponding to the cumulative amount of losses exceeding the carrying amount of investments in the associates concerned) including other comprehensive income/(loss), amounted to €171 million in 2018 (€218 million in 2017). Unrecognized losses relating to fiscal year 2018 amounted to €18 million.

These unrecognized losses mainly correspond to (i) the negative fair value of derivative instruments designated as interest rate and commodity hedges ("Other comprehensive income/(loss)") contracted by associates in Asia Pacific in connection with the financing of construction projects for power generation plants and (ii) cumulative losses arising on the Tirreno Power joint venture.

4.3.2 Commitments and guarantees given by the Group in respect of entities accounted for using the equity method

At December 31, 2018, the main commitments and guarantees given by the Group in respect of entities accounted for using the equity method concern the following two companies and groups of companies:

- Energia Sustentável do Brasil ("Jirau"), for an aggregate amount of BRL 4,341 million (€975 million).

At December 31, 2018, the amount of loans granted by Banco Nacional de Desenvolvimento Econômico e Social, the Brazilian Development Bank, to Energia Sustentável do Brasil amounted to BRL 10,852 million (€2,439 million). Each partner stands as guarantor for this debt to the extent of its ownership interest in the consortium;

- the project management entities in the Middle East and Africa, for an aggregate amount of €1,035 million.

Commitments and guarantees given by the Group in respect of these project management entities chiefly correspond to:

- an equity contribution commitment (capital/subordinated debt) for €147 million. These commitments only concern entities acting as holding companies for projects in the construction phase,
- letters of credit to guarantee debt service reserve accounts for an aggregate amount of €237 million. The project financing set up in certain entities can require those entities to maintain a certain level of cash within the company (usually enough to service its debt for six months). This is particularly the case when the financing is without recourse. This level of cash may be replaced by letters of credit,
- collateral given to lenders in the form of pledged shares in the project management entities, for an aggregate amount of €261million,
- performance bonds and other guarantees for an amount of €390 million.

NOTE 5 MAIN CHANGES IN GROUP STRUCTURE

Accounting standards

In accordance with IFRS 5 - *Non-Current Assets Held for Sale and Discontinued Operations*, assets or groups of assets held for sale are presented separately on the face of the statement of financial position and are measured at the lower of their carrying amount and fair value less costs to sell.

An asset is classified as "held for sale" when its sale is highly probable within twelve months from the date of classification, when it is available for immediate sale under its present condition and when the management is committed to a plan to sell the asset and an active program to locate a buyer and complete the plan has been initiated. To assess whether a sale is highly probable, the Group takes into consideration among other things indications of interest and offers received from potential buyers as well as specific execution risks attached to certain transactions.

Assets or group of assets are presented as discontinued operations in the Group's consolidated financial statements when they are classified as "held for sale" and represent a separate major line of business under IFRS 5.

5.1 Disposals carried out in 2018

As part of its transformation plan, on February 25, 2016, the Group presented a €15 billion asset disposal program in order to reduce its exposure to high CO₂ emitting activities and merchant activities over the 2016-2018 period.

The table below shows the impact of the main disposals and sale agreements of 2018 on the Group's net debt, excluding partial disposals with respect to DBSO⁽¹⁾ activities:

<i>In millions of euros</i>	Disposal price	Reduction in net debt
Disposal of the Loy Yang B coal power plant (Australia)	471	330
Disposal of the exploration-production activities	921	1,913
Disposal of gas distribution activities (Hungary)	147	198
Disposal of LNG activities	1,202	1,144
Other disposals that are not material taken individually	285	353
Classification of Glow activities under "Assets held for sale" - Thailand	-	723
Classification of Langa activities under "Assets held for sale" - France	-	270
TOTAL	3,026	4,931

The €4,931 million reduction in net debt at December 31, 2018 is in addition to the €8,976 million decrease previously recognized at December 31, 2017 as part of the asset disposal program, representing a total of €13,907 million to date. Additional disposals in the process of completion at December 31, 2018 are described in Note 5.2.

5.1.1 Disposal of the Loy Yang B coal-fired power plant (Australia)

On January 15, 2018, the Group completed the sale of the Loy Yang B coal-fired power plant in Australia, for which it received a payment of €471 million corresponding to the sale price of the entire interest in Loy Yang B. An amount corresponding to 30% of this price was paid to Mitsui in the form of dividends.

The transaction reduced the Group's net debt by €624 million (the impact of the derecognition of Loy Yang B's net debt totaling €294 million following its classification under "Assets held for sale" at December 31, 2017, plus the payment of €330 million received in 2018 for the 70% interest sold). The loss on disposal totaled €87 million for 2018, mainly

(1) Develop, Build, Share and Operate.

corresponding to the reclassification from other comprehensive income to the income statement of translation adjustments and net investment hedges relating to the portfolio.

5.1.2 Disposal of the exploration-production business

On February 15, 2018, the Group completed the sale of its 70% interest in ENGIE E&P International (EPI) to Neptune Energy and received a payment of €921 million, corresponding to the sale price of all of its shares.

The combined effects of the transaction and of the cash generated by these activities since January 1, 2018 have reduced the Group's net debt by €1,913 million. The disposal gain before tax, recognized in "Net income/(loss) relating to discontinued operations" (see Note 5.2.3), amounted to €65 million in 2018.

Following the transaction, the Group still holds a residual 46% interest in ENGIE E&P Touat B.V. (Other sector), which holds a 65% stake in the Touat gas field under development in Algeria. This interest is now accounted for using the equity method.

5.1.3 Disposal of the gas distribution business (Hungary)

On January 11, 2018, following the success of the negotiations initiated in the second half of 2015 with the Hungarian State, the Group completed the sale of its entire interest in its Hungarian gas distribution subsidiary Égaz-Dégaz to Nemzeti Közművek Zártkörűen Működő Részvénytársaság (NKM) - a Hungarian state-owned company. The transaction reduced the Group's net debt by €198 million, with no material disposal gain.

5.1.4 Disposal of ENGIE's liquefied natural gas (LNG) activities

On July 13, 2018, the Group completed the sale of its upstream LNG activities to Total: liquefaction, shipping (including the Gazocéan subsidiary) and international LNG trading operations.

The combined effects of the transaction and of the cash generated by these LNG upstream activities since January 1, 2018 have reduced the Group's net debt by €1,144 million excluding any additional future payments to be received. The disposal gain before tax, recognized in "Net income/(loss) relating to discontinued operations" (see Note 5.2.3), amounted to €1,193 million at December 31, 2018.

5.2 Assets held for sale and discontinued operations

Total "Assets classified as held for sale" and total "Liabilities directly associated with assets classified as held for sale" amounted to €3,798 million and €2,130 million, respectively, at December 31, 2018.

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Property, plant and equipment, net	2,661	5,307
Other assets	1,137	1,380
TOTAL ASSETS CLASSIFIED AS HELD FOR SALE	3,798	6,687
<i>of which Assets relating to discontinued operations</i>	-	5,471
Borrowings and debt	1,019	418
Other liabilities	1,111	2,953
TOTAL LIABILITIES DIRECTLY ASSOCIATED WITH ASSETS CLASSIFIED AS HELD FOR SALE	2,130	3,371
<i>of which Liabilities directly associated with assets relating to discontinued operations</i>	-	2,705

All assets classified as held for sale at December 31, 2017 (exploration-production activities and the Loy Yang B power plant in Australia) were sold in 2018 (see Note 5.1, Disposals carried out in 2018).

At December 31, 2018 these assets and liabilities related to Glow's activities in Thailand, the solar parks run by Langa group in France and renewable energy assets in Mexico.

5.2.1 Disposal of ENGIE's interest in Glow

On June 20, 2018, ENGIE signed a share purchase agreement with Thailand-based Global Power Synergy Public Company Ltd. (GPSC) for the sale of its 69.1% interest in Glow, an independent power producer listed on the Stock Exchange of Thailand (Africa/Asia segment) and the Group classified it as an asset held for sale at the same date. The transaction translates into net proceeds of €2.5 billion for ENGIE and is expected to result in a total €3.2 billion reduction in ENGIE's consolidated net debt.

This reclassification under "Assets held for sale" reduced the Group's net debt by €723 million at December 31, 2018. Given the expected capital gain from the sale, no value adjustments were made at December 31, 2018. Glow's contribution to "Net income/(loss) Group share" was €165 million for 2018 and €138 million for 2017.

The transaction is expected to be completed during first-half 2019. The disposal gain is expected to be in the range of €1.5 billion.

5.2.2 Langa group asset disposal program

On December 21, 2018, the Group signed a sale agreement with Predica for the solar parks operated or under construction by Langa (France segment) to FEIH2 (a joint venture 80%-owned by Predica and 20%-owned by the ENGIE Group).

At December 31, 2018, the Group considered that the sale of these assets was highly probable in view of the progress made in the divestiture process and, as a result, classified the assets under "Assets held for sale". In view of the expected disposal gain, no value adjustments were recorded at December 31, 2018.

This reclassification under "Assets held for sale" reduced the Group's net debt by €270 million at December 31, 2018. The assets' contribution to net income Group share in 2018 was marginal.

The transaction is expected to be completed in fourth-quarter 2019.

5.2.3 Financial information on discontinued operations

Income from discontinued operations

<i>In millions of euros</i>	Dec 31, 2018	Dec 31, 2017
Revenues from contracts with customers	2,163	5,021
Revenues from other contracts	65	52
REVENUES	2,229	5,073
Purchases	(2,102)	(3,326)
Personnel costs	(35)	(237)
Depreciation, amortization and provisions	(18)	(86)
Other operating expenses	(44)	(322)
Other operating income	(5)	16
CURRENT OPERATING INCOME	25	1,119
Share in net income of entities accounted for using the equity method	2	11
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	27	1,130
Mark-to-market on commodity contracts other than trading instruments	(221)	(381)
Impairment losses	(1)	(138)
Restructuring costs	-	(3)
Changes in scope of consolidation	1,258	(15)
Other non-recurring items	(2)	369
INCOME/(LOSS) FROM OPERATING ACTIVITIES	1,062	961
Financial expenses	(20)	(88)
Financial income	7	27
NET FINANCIAL INCOME/(LOSS)	(14)	(61)
Income tax expense	21	(533)
NET INCOME/(LOSS) RELATING TO DISCONTINUED OPERATIONS	1,069	366
Net income/(loss) relating to discontinued operations, Group share	1,045	273
Non-controlling interests relating to discontinued operations	24	93

Income from discontinued operations relates to ENGIE's upstream LNG activities (see Note 5.1.4) and to exploration production activities, including the disposal gain (see Note 5.1.2).

Revenues generated by discontinued operations (LNG and EPI) with ENGIE Group companies totaled €880 million in 2018 (versus €1,959 million in 2017).

As required by IFRS 5, ENGIE has no longer recognized any depreciation and amortization expense on the property, plant and equipment and intangible assets of LNG activities (as of April 1, 2018) and of EPI activities (as of May 11, 2017). The savings generated by this change amounted to €36 million before tax (primarily relating to EPI) in 2018.

Net income relating to discontinued operations also includes €22 million of costs incurred specifically in connection with the LNG transaction.

Comprehensive income from discontinued operations

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2018 Owners of the parent	Dec. 31, 2018 Non- controlling interests	Dec. 31, 2017	Dec. 31, 2017 Owners of the parent	Dec. 31, 2017 Non- controlling interests

Cash flow from (used in) financing activities excluding intercompany transactions	1,284	(49)
Intercompany transactions with ENGIE on borrowings	(7)	(223)
CASH FLOW FROM (USED IN) FINANCING ACTIVITIES	1,278	(272)
Effects of changes in exchange rates and other	3	(11)
TOTAL CASH FLOW FOR THE PERIOD	15	(49)
CASH AND CASH EQUIVALENTS AT BEGINNING OF PERIOD	15	65
CASH AND CASH EQUIVALENTS AT END OF PERIOD	-	15

Cash flows from discontinued operations relate to ENGIE's upstream LNG activities (see Note 5.1.4) and to exploration-production activities (see Note 5.1.2).

5.3 Acquisitions carried out in 2018

Various other acquisitions, equity transactions and disposals took place in 2018. They included the purchase of (i) companies in the renewable energy sector (wind and solar power) and in the services sector (microgrid, heating and cabling network) in the United States, (ii) the Langa group (an independent producer in solar, wind, biogas and biomass power in the renewable energy sector) as well as the purchase of a majority interest in Electro Power Systems (EPS, a company listed on Euronext which specializes in energy storage solutions and microgrids that enable intermittent renewable sources to be transformed into a stable power source) in France, and (iii) Piora FM SA (an airport services company) in Switzerland. In addition, on December 6, 2018, the Group finalized its acquisition of Compañía Americana de Multiservicios (CAM), the leading installation, operation and maintenance services provider in the electricity and telecommunications sectors in Latin America.

NOTE 6 FINANCIAL INDICATORS USED IN FINANCIAL COMMUNICATION

The purpose of this note is to present the main non-GAAP financial indicators used by the Group as well as their reconciliation with the aggregates of the IFRS consolidated financial statements.

6.1 EBITDA

The reconciliation between EBITDA and current operating income after share in net income of entities accounted for using the equity method is as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	5,126	5,172
Net depreciation and amortization/Other	3,882	3,966
Share-based payments (IFRS 2)	79	37
Non-recurring share in net income of entities accounted for using the equity method	149	24
EBITDA	9,236	9,199

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

6.2 Net recurring income Group share

Net recurring income Group share is a financial indicator used by the Group in its financial reporting to present net income Group share adjusted for unusual or non-recurring items.

This financial indicator therefore excludes:

- all items presented between the lines "Current operating income after share in net income of entities accounted for using the equity method" and "Income/(loss) from operating activities", i.e. "Mark-to-market on commodity contracts other than trading instruments", "Impairment losses", "Restructuring costs", "Changes in scope of consolidation" and "Other non-recurring items". These items are defined in Note 10 "Income/(loss) from operating activities"
- the following components of net financial income/(loss): the impact of debt restructuring, compensation payments on the early unwinding of derivative instruments net of the reversal of the fair value of these derivatives that were settled early, changes in the fair value of derivative instruments which do not qualify as hedges under IFRS 9 – *Financial Instruments: Recognition and Measurement*, as well as the ineffective portion of derivative instruments that qualify as hedges;
- the income tax impact of the items described above, determined using the statutory income tax rate applicable to the relevant tax entity;
- the recovery from the French State of the 3% tax on dividends in 2017 and the impact of tax rate changes in France and in the United States and other non-recurring measures in 2017 (see Note 12.1.2);
- net non-recurring items included in "Share in net income of entities accounted for using the equity method". The excluded items correspond to the non-recurring items as defined above.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 6 FINANCIAL INDICATORS USED IN FINANCIAL COMMUNICATION

The reconciliation of net income/(loss) with net recurring income Group share is as follows:

In millions of euros	Notes	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
NET INCOME/(LOSS) GROUP SHARE		1,033	1,320
NET INCOME/(LOSS) RELATING TO DISCONTINUED OPERATIONS, GROUP SHARE		1,045	273
NET INCOME/(LOSS) RELATING TO CONTINUED OPERATIONS, GROUP SHARE		(12)	1,047
Non-controlling interests relating to continued operations		572	695
NET INCOME/(LOSS) RELATING TO CONTINUED OPERATIONS		560	1,741
Reconciliation items between CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD and INCOME/(LOSS) FROM OPERATING ACTIVITIES			
		2,481	2,437
Mark-to-market on commodity contracts other than trading instruments	10	223	(29)
Impairment losses	10	1,798	1,298
Restructuring costs	10	162	669
Changes in scope of consolidation	10	150	(752)
Other non-recurring items	10	147	1,252
Other adjusted items		207	(1,198)
Ineffective portion of derivatives qualified as fair value hedges	11.3	3	2
Gains/(losses) on debt restructuring and early unwinding of derivative financial instruments	11.2	(7)	98
Change in fair value of derivatives not qualified as hedges and ineffective portion of derivatives qualified as cash flow hedges	11.3	183	187
Non recurring income/(loss) from debt instruments and equity instruments	11.3	26	-
Recovery from the French State of the 3% tax on dividends		-	(408)
Tax rate changes in France, in the United States and other non-recurring measures		-	(479)
Other adjusted tax impacts		(147)	(622)
Non-recurring income included in share in net income of entities accounted for using the equity method		149	24
NET RECURRING INCOME RELATING TO CONTINUED OPERATIONS		3,248	2,980
Net recurring income relating to continued operations attributable to non-controlling interests		790	746
NET RECURRING INCOME RELATING TO CONTINUED OPERATIONS, GROUP SHARE		2,458	2,233
Net recurring income relating to discontinued operations, Group share ⁽²⁾		(33)	285
NET RECURRING INCOME GROUP SHARE		2,425	2,518

- (1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").
- (2) The reconciliation of "net income/(loss) relating to discontinued operations, Group share" with "net recurring income relating to discontinued operations, Group share" at December 31, 2018 is mainly due to the gain on the disposal of the exploration-production activities, to the MtM on commodity contracts other than trading instruments recorded by upstream LNG activities and to miscellaneous disposal costs.

6.3 Industrial capital employed

The reconciliation of industrial capital employed with items in the statement of financial position is as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
(+) Property, plant and equipment and intangible assets, net	55,635	57,566
(+) Goodwill	17,809	17,285
(-) <i>Goodwill Gaz de France - SUEZ and International Power⁽²⁾</i>	(7,610)	(7,715)
(+) IFRIC 4 and IFRIC 12 receivables	1,550	1,548
(+) Investments in entities accounted for using the equity method	7,846	7,606
(-) <i>Goodwill arising on the International Power combination⁽²⁾</i>	(151)	(144)
(+) Trade and other receivables, net	15,613	13,127
(-) <i>Margin calls^(2, 3)</i>	(1,669)	(1,110)
(+) Inventories	4,158	4,161
(+) Assets from contracts with customers	7,411	6,930
(+) Other current and non-current assets	9,811	9,073
(+) Deferred tax	(4,349)	(4,361)
(+) <i>Cancellation of deferred tax on other recyclable items⁽²⁾</i>	(247)	(236)
(-) Provisions	(21,813)	(21,715)
(+) <i>Actuarial gains and losses in shareholders' equity (net of deferred tax)⁽²⁾</i>	2,637	2,438
(-) Trade and other payables	(19,759)	(16,404)
(+) <i>Margin calls^(2, 3)</i>	1,681	473
(-) Liabilities from contracts with customers	(3,634)	(3,575)
(-) Other current and non-current liabilities	(13,507)	(12,579)
INDUSTRIAL CAPITAL EMPLOYED	51,412	52,370

- (1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").
- (2) For the purpose of calculating industrial capital employed, the amounts recorded in respect of these items have been adjusted from those appearing in the statement of financial position.
- (3) Margin calls included in "Trade and other receivables, net" and "Trade and other payables" correspond to advances received or paid as part of collateralization agreements set up by the Group to reduce its exposure to counterparty risk on commodity transactions.

6.4 Cash flow from operations (CFFO)

The reconciliation of cash flow from operations (CFFO) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Cash generated from operations before income tax and working capital requirements	8,464	8,150
Tax paid	(757)	(905)
Change in working capital requirements	149	1,613
Interest received on non-current financial assets	26	75
Dividends received on non-current financial assets	52	171
Interest paid	(727)	(744)
Interest received on cash and cash equivalents	79	107
Change in financial assets at fair value through income	(289)	(197)
(+) <i>Change in financial assets at fair value through income recorded in the statement of financial position and other</i>	303	238
CASH FLOW FROM OPERATIONS (CFFO)	7,300	8,509

- (1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

6.5 Capital expenditures (CAPEX)

The reconciliation of capital expenditures (CAPEX) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Acquisitions of property, plant and equipment and intangible assets	6,202	5,778
Acquisitions of controlling interests in entities, net of cash and cash equivalents acquired	983	692
(+) <i>Cash and cash equivalents acquired</i>	83	30
Acquisitions of investments in entities accounted for using the equity method and joint operations	338	1,311
Acquisitions of equity and debt instruments	283	247
Change in loans and receivables originated by the Group and other	251	856
(+) <i>Other</i>	11	3
Change in ownership interests in controlled entities	18	(1)
(+) <i>Payments received in respect of the disposal of non-controlling interests</i>	-	222
TOTAL CAPITAL EXPENDITURE (CAPEX)	8,169	9,137

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

6.6 Net debt

Net debt is presented in Note 17.3 "Net debt".

6.7 Economic net debt

Economic net debt is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
NET DEBT	17	21,102	22,520
Internal debt of discontinued operations	17	-	1,732
NET DEBT (excluding internal debt of discontinued operations)		21,102	20,788
Future minimum operating lease payments	23	2,087	3,463
(-) <i>discontinued operations</i>		-	(1,132)
Provisions for back-end of the nuclear fuel cycle	20	6,170	5,914
Provisions for dismantling of plant and equipment	20	6,081	5,728
Provisions for site rehabilitation	20	222	313
Post-employment benefit - Pension	21	1,970	1,763
(-) <i>discontinued operations</i>		-	(14)
(-) <i>Infrastructures regulated companies</i>		60	40
Post-employment benefit - Reimbursement rights	21	(167)	(158)
Post-employment benefit - Others benefits	21	4,293	4,278
(-) <i>discontinued operations</i>		-	(34)
(-) <i>Infrastructures regulated companies</i>		(2,572)	(2,420)
Deferred tax assets for pension and related obligations	12	(1,374)	(1,318)
(-) <i>discontinued operations</i>		-	11
(-) <i>Infrastructures regulated companies</i>		601	578
Plan assets relating to nuclear provisions, inventories of uranium and a receivable of Electrabel towards EDF Belgium	17 & 27	(2,883)	(2,672)
ECONOMIC NET DEBT		35,590	35,127

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

NOTE 7 SEGMENT INFORMATION

7.1 Operating segments and reportable segments

ENGIE is organized into 23 Business Units (BUs) or operating segments primarily based on a region-centered approach within a single country or group of countries. Each Business Unit corresponds to an "operating segment" whose operational and financial performance is regularly reviewed by the Group's Executive Committee, which is the Group's "chief operating decision maker" within the meaning of IFRS 8.

These operating segments are grouped into nine reportable segments to present the Group's segment information: North America, Latin America, Africa/Asia, Benelux, France, Europe excluding France & Benelux, Infrastructures Europe, GEM & LNG and Other.

Exploration & Production (E&P) and LNG have been sold (see Note 5 "*Main changes in Group structure*"). As a result, the reportable segment "GEM & LNG" has been renamed "GEM" and from now on only includes the activities of the GEM Business Unit.

7.1.1 Description of reportable segments

- **North America:** includes power generation, energy services and natural gas and electricity sales activities in the United States, Canada and Puerto Rico.
- **Latin America:** groups together the activities of (i) the Brazil BU and (ii) the Latin America BU (Argentina, Chile, Mexico and Peru). The subsidiaries concerned are involved in the centralized power generation and gas chain businesses, and energy services.
- **Africa/Asia:** groups together the activities of the following BUs: (i) Asia-Pacific (Australia, New Zealand, Thailand, Singapore, Indonesia and Laos), (ii) China, (iii) Africa (Morocco, South Africa) and (iv) the Middle East, South and Central Asia and Turkey (including India and Pakistan). In all of these regions, the Group is active in electricity generation and sales, gas distribution and sales, energy services and seawater desalination in the Arabian peninsula.
- **Benelux:** includes the Group's activities in Belgium, the Netherlands and Luxembourg: (i) power generation using its nuclear power plants and renewable power generation facilities, (ii) natural gas and electricity sales and (iii) energy services.
- **France:** groups together the activities of the following BUs: (i) France BtoB: energy sales and services for buildings and industry, cities and regions and major infrastructures, (ii) France BtoC: sales of energy and related services to individual and professional customers, (iii) France Renewable Energy: development, construction, financing, operation and maintenance of all renewable power generation assets in France, and (iv) France Networks, which designs, finances, builds and operates decentralized energy production and distribution facilities (heating and cooling networks).
- **Europe excluding France & Benelux:** groups together the activities of the following BUs: (i) United Kingdom (management of renewable power generation assets and the portfolio of distribution assets, supply of energy services and solutions, etc.) and (ii) North, South and Eastern Europe (sales of natural gas and electricity and related energy services and solutions, operation of renewable power generation assets, management of distribution networks).
- **Infrastructures Europe:** groups together the GRDF, GRTgaz, Elengy and Storengy BUs, which operate natural gas transportation, storage and distribution networks and facilities, and LNG terminals, mainly in France and Germany. They also sell access rights to these infrastructures to third parties.
- **GEM:** the aim of the GEM BU is to manage and optimize the Group's portfolios of physical and contractual assets (excluding gas infrastructures), particularly on the European market, on behalf of the BUs that hold power generation assets. It is also responsible for sales of energy to major pan-European and national industrial clients, and leverages its expertise in the energy-related financial markets to provide solutions to third parties.
- **Other:** includes the activities of the following BUs: (i) Generation Europe, comprising the Group's thermal power generation activities in Europe, (ii) Tractebel (engineering companies specializing in energy, hydraulics and infrastructures), (iii) GTT (specialized in the design of cryogenic membrane confinement systems for sea

transportation and storage of LNG, both on land and at sea), as well as the Group's holding and corporate activities which include the entities centralizing the Group's financing requirements, energy sales to BtoB in France (*Entreprises & Collectivités*) and the contribution of the associate SUEZ.

The main commercial relationships between the reportable segments are as follows:

- relationships between the "Infrastructures Europe" reportable segment and the users of these infrastructures, i.e. the "GEM", "France" and "Other" (E&C) reportable segments: services relating to the use of the Group's gas infrastructures in France are billed based on regulated fees applicable to all network users;
- relationships between the "GEM" reportable segment and the "France", "Benelux" and "Europe excluding France & Benelux" reportable segments: the "GEM" reportable segment manages the Group's natural gas supply contracts and sells gas at market prices to commercial companies within the "Other" (E&C), "France", "Benelux" and "Europe excluding France & Benelux" reportable segments. As regards electricity, GEM manages and optimizes the power stations and sales portfolios on behalf of entities that hold power generation assets and deducts a percentage of the energy margin in return for providing these services. The revenues and margins related to power generation activities (minus the percentage deducted by GEM) are reported by the segments that hold power generation assets ("France", "Benelux", "Europe excluding France & Benelux" and "Generation Europe" within the "Other" reportable segment);
- relationships between the "Generation Europe" segment, which is part of the "Other" reportable segment, and the commercial entities in the "France", "Benelux" and "Europe excluding France & Benelux" reportable segments: a portion of the power generated by thermal assets within the "Generation Europe" BU is sold to commercial entities from these segments at market prices.

Due to the variety of its businesses and their geographical location, the Group serves a very diverse range of situations and customer types (industry, local authorities and individual customers). Accordingly, no external customer represents individually 10% or more of the Group's consolidated revenues.

7.2 Key indicators by reportable segment

Key indicators by reportable segments (except for 2017 industrial capital employed), presented hereafter, no longer take into account the contribution of activities classified as "Discontinued activities" in accordance with IFRS 5 (see Note 5 "Main changes in Group structure"). In addition, comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

REVENUES

In millions of euros	Dec. 31, 2018			Dec. 31, 2017

TOTAL	60,596	59,576	51,412	52,370

NOTE 8 REVENUES

8.1 Revenues

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Revenues from contracts with customers	56,388	53,073
Revenues from other contracts	4,208	6,503
REVENUES	60,596	59,576

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

Realized but not yet metered revenues (so called un-metered revenues) mainly relate to France and Belgium for an amount of €3,108 million at December 31, 2018 (€3,034 at December 31, 2017).

8.1.1 Revenues from contracts with customers

Accounting standards

Revenues from contracts with customers concern revenues from contracts that fall within the scope of IFRS 15. Revenues are recognized when the customer obtains control of goods or services promised in the contract, for the amount of consideration to which an entity expects to be entitled in exchange for said promised goods or services.

A contractual analysis of the Group's sale contracts has led to the application of the following revenue recognition principles.

- Gas, electricity and other energies**
 Revenues from sales of gas, electricity and other energies are recognized upon delivery of the power to the retail, business or industrial customer.
 Power deliveries are monitored in real time or on a deferred basis for those customers whose energy consumption is metered during the accounting period, in which case the portion of not yet metered revenues "in the meter" is estimated on the closing date.
- Gas, electrical and other energy infrastructures**
 Revenues derived by gas and electricity infrastructure operators upon providing transportation or distribution or storage capacities, are recognized on a straight-line basis over the contract term.
 In the countries where the Group acts as an energy provider (supplier) without being in charge of its distribution or transportation, mainly in France and Belgium, an analysis of the energy sales contracts and of the related regulatory frame is carried out to determine whether the distribution or transportation services invoiced to the customers have to be excluded from the revenue recognized under IFRS 15.
 Judgment may be exercised by the Group for this analysis in order to determine whether the energy provider acts as an agent or a principal for the gas or electricity distribution or transportation services re-invoiced to the customers. The main criteria used by the Group to exercise its judgment and conclude, in certain countries, that the energy provider acts as an agent of the infrastructure operator are: who is primarily responsible for fulfillment of the distribution or transportation services? Has the energy provider the ability to commit to capacity reservation contracts towards the infrastructure operator? To what extent does the energy provider have discretion in establishing the price for the distribution or transportation services?
- Constructions, installations, Operations and Maintenance (O&M), facility management (FM) and other services**
 Constructions and installations contracts mainly concern assets built on the premises of customers such as cogeneration units, heaters or other energy-efficiency assets. The related revenues are usually recognized according to the percentage of completion on the basis of the costs incurred.

O&M contracts generally require the Group to perform services ensuring the availability of assets generating energy. These services are performed over time and the related revenues are recognized according to the percentage of completion on the basis of the costs incurred.

FM generally involves managing and integrating a great number of different services, outsourced by the customers. The consideration due to FM suppliers can either be fixed or variable depending on the number of hours or on another indicator, irrespective of the nature of the services provided. Hence, the related revenues are recognized according to the percentage of completion on the basis of the costs incurred or of the number of hours performed.

The table below shows a breakdown of revenues by type of accounting principles:

<i>In millions of euros</i>	Sales of gas	Sales of electricity and other energies	Sales of services linked to infrastructures	Constructions, installations, O&M, FM and other services	Revenues from contracts with customers	Revenues from other contracts	Dec. 31, 2018
North America	592	1,858	-	900	3,350	33	3,383
Latin America	461	3,522	322	197	4,501	138	4,639
Africa/Asia	452	2,605	31	806	3,894	121	4,014
Benelux	1,341	2,143	14	3,038	6,537	153	6,690
France	3,164	4,040	105	7,675	14,983	200	15,183
Europe excluding France & Benelux	1,901	3,425	233	3,798	9,357	170	9,527
Infrastructures Europe	155	-	5,092	200	5,447	247	5,694

Others	1,422	2,085	85	971	4,562	883	5,445
TOTAL REVENUES	11,551	19,659	5,688	16,176	53,073	6,503	59,576

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

8.1.2 Revenues from other contracts

Accounting standards

If it is not possible to conclude from the contractual analysis that the contract falls within the scope of IFRS 15, the revenues are then accounted for as non-IFRS 15 revenues.

Non-IFRS 15 revenues are presented on a separate line of the income statement. They include the following items:

- commodity sales transactions within the scope of IFRS 9 – *Financial Instruments* and give rise to a physical delivery;
- proprietary trading transactions and energy trading carried out on behalf of customers, shown on a net basis after netting sales and purchases;

- lease or concession income, as well as any financing component of operational services.

In 2018, commodities sales transactions within the scope of IFRS 9 and giving rise to physical deliveries amounted to €3,408 million (€5,712 million in 2017). Revenues generated on other transactions which are not in the scope of IFRS 15 were not material.

8.2 Trade and other receivables, assets and liabilities from contracts with customers

Accounting standards

On initial recognition, trade and other receivables are recorded at their transaction price as defined in IFRS 15.

A contract asset is an entity's right to consideration in exchange for goods or services that have been transferred to a customer but for which payment is not yet due or is contingent on the satisfaction of a specific condition stipulated in the contract. When an amount becomes due, it is transferred to receivables.

A receivable is recorded when the entity has an unconditional right to consideration. A right to consideration is unconditional if only the passage of time is required before payment of that consideration.

A contract liability is an entity's obligation to transfer goods or services to a customer for which the entity has already received consideration from the customer. The liability is derecognized upon recognition of the corresponding revenue.

Trade and other receivables and contract assets are tested for impairment in accordance with the provisions of IFRS 9 on expected credit losses.

The impairment model for financial assets is based on the expected credit loss model. To calculate expected losses, the Group uses a matrix approach for trade receivables and contract assets, for which the change in credit risk is monitored on a portfolio basis. An individual approach is used for large customers and other large counterparties, for which the change in credit risk is monitored on an individual basis.

See Note 18 "Risks arising from financial instruments" for the Group's assessment of counterparty risk.

8.2.1 Trade and other receivables, assets and from contracts with customers

En millions d'euros	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
	Non-current	Current	Total	Non-current	Current	Total
Trade and other receivables, net	-	15,613	15,613	-	13,127	13,127
of which IFRS 15	-	7,552	7,552	-	7,009	7,009
of which non-IFRS15	-	8,060	8,060	-	6,118	6,118
Assets from contracts with customers	-	7,411	7,411	-	6,930	6,930

(1) Comparative data at December 31, 2017 and at January 1, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

The table below shows expected credit losses on trade and other receivables and contract assets:

In millions of euros	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
	Gross	Allowances and expected credit losses	Net	Gross	Allowances and expected credit losses	Net
Trade and other receivables, net	16,689	(1,076)	15,613	14,208	(1,081)	13,127
Assets from contracts with customers	7,419	(8)	7,411	6,943	(12)	6,930
TOTAL	24,108	(1,085)	23,023	21,150	(1,094)	20,057

(1) Comparative data at December 31, 2017 and at January 1, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

Expected impairment and credit losses on trade and other receivables and contract assets amounted to €1,085 million in 2018 (€1,094 million in 2017).

Information on the age of receivables past due but not impaired and on counterparty risk are provided in Note 18.2 "Counterparty risk".

Current assets from contracts with customers include accrued income and unbilled revenues (for €6,377 million at December 31, 2018) and delivered, un-metered and unbilled gas and electricity ("energy in the meter") (for €1,034 million at December 31, 2018, mainly in France, Benelux and Latin America, representing 1.7% of annual revenues). The reportable segments that reported the greatest amounts of contract assets at December 31, 2018 are France (€2,730 million), Europe excluding France & Benelux (€1,436 million), Benelux (€859 million) and GEM (€556 million).

For customers whose energy consumption is metered during the accounting period, particularly customers supplied with low-voltage electricity or low-pressure gas, the gas supplied but not yet metered at the reporting date is estimated based on historical data, consumption statistics and estimated selling prices.

For sales on networks used by a large number of grid operators, the Group are allocated a certain volume of energy transiting through the networks by the grid managers. As the final allocations are sometimes only known several months down the line, revenue figures cannot be determined with absolute certainty. However, the Group has developed measuring and modeling tools allowing it to estimate revenues with a reasonable degree of accuracy and subsequently ensure that risks of error associated with estimating quantities sold and the related revenues can be considered as immaterial.

In France and Belgium, un-metered revenues ("gas in the meter") is calculated using a direct method taking into account customers' estimated consumption based on the last invoice or metering not yet billed. These estimates are in line with the volume of energy allocated by the grid managers over the same period. The average price is used to measure "gas in the meter" and takes account of the category of customer and the age of the delivered unbilled "gas in the meter". The portion of unbilled revenues at the reporting date varies according to the assumptions about volume and average price.

"Electricity in the meter" is also determined using a direct allocation method similar to that used for gas, but taking into account specific factors related to electricity consumption. It is also measured on a customer-by-customer basis or by customer type.

8.2.2 Liabilities from contracts with customers

In millions of euros	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
	Non-current	Current	Total	Non-current	Current	Total
Liabilities from contracts with customers	36	3,598	3,634	258	3,317	3,575

(1) Comparative data at December 31, 2017 and at January 1, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

Current liabilities from contracts with customers include advances and downpayments received for €1,713 million at December 31, 2018 and deferred revenues for €1,885 million.

The segments reporting the greatest amounts of contract liabilities are France (€2,048 million) – particularly BtoB (€1,172 million) – Europe excluding France & Benelux (€626 million) and Benelux (€387 million). These are the segments for which revenues are recognized over time, thereby generating a difference in timing between the payments received and the completion of the services.

The classification of Glow in Thailand under "assets held for sale" reduced contract liabilities by €291 million.

8.3 Revenues relating to performance obligations not yet satisfied

Revenues relating to performance obligations only partially satisfied at December 31, 2018 amounted to €10,886 million.

They mainly concern the United Kingdom (€6,102 million) and France BtoB (€2,902 million) BUs. These BUs handle a large number of construction, installation, maintenance and facility management contracts under which revenues are recognized over time. The Benelux, Tractebel Engineering and NECST BUs will also be recognizing revenues over the next three years for performance obligations satisfied over time.

NOTE 9 OPERATING EXPENSES

9.1 Personnel costs

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Short-term benefits	(9,998)	(9,510)
Share-based payments (see Note 24)	(86)	(44)
Costs related to defined benefit plans (see Note 21.3.4)	(407)	(355)
Costs related to defined contribution plans (see Note 21.4)	(133)	(142)
PERSONNEL COSTS	(10,624)	(10,051)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

9.2 Depreciation, amortization and provisions

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Depreciation and amortization (see Notes 15 and 16)	(3,882)	(3,966)
Net change in write-downs of inventories, trade receivables and other assets	-	(67)
Net change in provisions (see Note 20)	296	245
DEPRECIATION, AMORTIZATION AND PROVISIONS	(3,586)	(3,787)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

At December 31, 2018, depreciation and amortization mainly break down as €837 million for intangible assets and €3 048 million for property, plant and equipment.

NOTE 10 FROM CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD TO INCOME/(LOSS) FROM OPERATING ACTIVITIES

Accounting standards

Current operating income is an indicator used by the Group to present “a level of operational performance that can be used as part of an approach to forecast recurring performance” (this complies with ANC Recommendation 2013-03 on the format of financial statements of entities applying IFRS). Current operating income is a sub-total which helps in better understanding the Group’s performance because it excludes items which are inherently difficult to predict due to their unusual, abnormal or non-recurring nature. For the Group, such items relate to mark-to-market on commodity contracts other than trading instruments, impairment losses, restructuring costs, scope effect transactions and other non-recurring items and are defined as follows:

- “Mark-to-market on commodity contracts other than trading instruments” corresponds to the changes in the fair value (mark-to-market) of financial instruments related to commodities, such as gas and electricity, which do not qualify as either trading or hedging instruments. These contracts are used in economic hedges of operating transactions in the energy sector. The changes in the fair value of these instruments have to be recognized through profit or loss under IFRS 9. Since they can be material and difficult to predict, they are presented on a separate line of the consolidated income statement;
- “Impairment losses” include impairment losses on goodwill, other intangible assets, property, plant and equipment and investments in entities consolidated using the equity method of accounting;
- “Restructuring costs” concern costs corresponding to a restructuring program planned and controlled by management that materially changes either the scope of a business undertaken by the entity, or the manner in which that business is conducted, based on the criteria set out in IAS 37;
- “Changes in the scope of consolidation”. This line includes:
 - direct costs related to acquisitions of controlling interests,
 - in a business combination achieved in stages, remeasurement at fair value at the acquisition date of the previously held interest,
 - subsequent changes in the fair value of contingent consideration,
 - gains or losses from disposals of investments which result in a change of consolidation method, as well as any impact from the remeasurement of retained interests with the exception of gains and losses arising from transactions realized in the framework of “*Develop, Build, Share & Operate*” (DBSO) or “*Develop, Share, Build & Operate*” (DSBO) business models. These transactions on renewable activities are recognized in the current operating income as they are part of the recurring rotation of the Group’s capital employed;
- “Other non-recurring items” notably include gains and losses on disposals of non-current assets.

NOTE 10 FROM CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD TO INCOME/(LOSS) FROM OPERATING ACTIVITIES

The transition from Current operating income after share in net income of entities accounted for using the equity method to Income/(loss) from operating activities is detailed hereunder:

In millions of euros	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	5,126	5,172
Mark-to-market on commodity contracts other than trading instruments	(223)	29
Impairment losses	(1,798)	(1,298)
Restructuring costs	(162)	(669)
Changes in scope of consolidation	(150)	752
Other non-recurring items	(147)	(1,252)
INCOME/(LOSS) FROM OPERATING ACTIVITIES	2,645	2,735

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

10.1 Mark-to-market on commodity contracts other than trading instruments

In 2018, this item represents a net expense of €223 million, compared with net income of €29 million in 2017. It mainly reflects the changes in the fair value of (i) electricity and natural gas sale and purchase contracts falling within the scope of IFRS 9 and (ii) financial instruments used as economic hedges but not eligible for hedge accounting.

This expense is due to (i) a negative price effect related to changes in the forward prices of the underlying commodities, notably in gas, coupled with (ii) the negative impact of the settlement of positions over the period with a positive fair value at December 31, 2017.

10.2 Impairment losses

In millions of euros	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
Impairment losses:		
Goodwill (see Note 14.1)	(14)	(481)
Property, plant and equipment and other intangible assets (see Notes 15 and 16)	(1,609)	(952)
Investments in entities accounted for using the equity method and related provisions	(209)	(31)
TOTAL IMPAIRMENT LOSSES	(1,831)	(1,463)
Reversal of impairment losses:		
Property, plant and equipment and other intangible assets	33	165
Financial assets	-	1
TOTAL REVERSALS OF IMPAIRMENT LOSSES	33	166
TOTAL	(1,798)	(1,298)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

Net impairment losses amounted to €1,798 million in 2018 and related primarily to property, plant and equipment. After taking into account the deferred tax effects and the share of impairment losses attributable to non-controlling interests, the impact of these impairment losses on net income Group share for 2018 amounted to €1,540 million.

Impairment tests are performed in accordance with the conditions described in Note 14.3.

10.2.1 Impairment losses recognized in 2018

Net impairment losses amounted to €1,798 million in 2018 and mainly concerned:

- **Generation Europe CGU assets**

In 2018, the Group recognized €646 million in net impairment losses against thermal power generation assets in Europe, owing to the downward revision of cash flow projections for certain portfolio assets in an unfavorable

economic environment. The main assumptions and key estimates used to determine the value of assets are discount rates, estimated demand for electricity and changes in the price of CO₂, fuel and electricity beyond the liquidity period, in addition to the regulatory environment and the operating life of the assets concerned.

Coal-fired power plants in Europe have been subject to unfavorable conditions, including the expected impact of the stricter regulatory environment, which has resulted in lower captured margins over the long term, impacting the profitability of these assets.

- **Belgian nuclear power assets**

Further developments in 2018 led the Group to now distinguish nuclear power plants where there is no longer any possibility of extending their operating life from those whose operating life may still be extended beyond 2025. In view of this backdrop accentuated by the prolonged outages at certain power plants and the changes to the management methods of the plants as the end of their operating lives draws near, the Group has aligned its forecasts with the nuclear plants' maintenance schedule, as updated for the next three years. Consequently, the Group recognized impairment losses of €615 million in 2018 against plants whose operating life may no longer be extended.

- **Other impairment losses**

Other impairment losses recognized by the Group mainly concern:

- an investment in the Africa/Asia segment in respect of which an impairment loss of €209 million was recognized based on the revised forecasts;
- gas infrastructure facilities in Europe, in respect of which an €87 million impairment loss was recognized after the life expectancy of certain facilities was revised and their dismantling date consequently brought forward;
- thermal power generation assets in Latin America, in respect of which a €71 million impairment loss was recognized after their operating lives were revised.

10.2.2 Impairment losses recognized in 2017

Net impairment losses amounted to €1,298 million in 2017, and mainly concerned:

- the Storengy CGU for €494 million, including €338 million against goodwill following the regulation of storage activities in France;
- thermal power generation assets in Europe for €317 million, mainly due to the expected impact of a stricter regulatory environment for coal-fired power plants.

After taking into account the deferred tax effects and the share of impairment losses attributable to non-controlling interests, the impact of these impairment losses on net income Group share for 2017 amounted to €1,129 million.

10.3 Restructuring costs

Restructuring costs totaled €162 million in 2018, mainly including:

- costs related to various staff reduction plans (€54 million);
- costs related to decisions to relinquish several premises, restructure agencies and close facilities (€63 million);
- various other restructuring costs (€45 million).

In 2017, restructuring costs totaled €669 million, including €509 million related to staff reduction plans as part of the Group's transformation plan as well as measures to adapt to economic conditions, €108 million related to the shutdown of production and closure of some facilities and €53 million in other miscellaneous restructuring costs.

10.4 Changes in scope of consolidation

The impact of changes in the scope of consolidation in 2018 was a negative €150 million and mainly comprised (i) the €87 million negative impact of the sale of the Loy Yang B thermal power plant in Australia, primarily in respect of items of other comprehensive income recycled to the income statement, and (ii) the €27 million negative impact of the sale of LNG operations in the United States.

The impact of changes in the scope of consolidation in 2017 was a positive €752 million, and mainly comprised gains on the disposal of (i) the thermal merchant power plant portfolio in the United States for €540 million, (ii) the Group's interest in NuGen for €93 million, (iii) a thermal power plant portfolio in the United Kingdom for €61 million, and (iv) the Polaniec power plant in Poland for €57 million.

10.5 Other non-recurring items

Other non-recurring items totaling a negative €147 million in 2018, mainly included asset scrapping, costs related to site closures and other miscellaneous costs.

In 2017, other non-recurring items mainly included the €1,243 million expense corresponding to the change in the accounting treatment of long-term gas supply contracts and transport and storage contracts implemented by the GEM BU.

NOTE 11 NET FINANCIAL INCOME/(LOSS)

In millions of euros	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
	Expense	Income	Total	Expense	Income	Total
Cost of net debt	(713)	85	(628)	(812)	134	(678)
Gains and losses on debt restructuring transactions and from the early unwinding of derivative financial instruments	(108)	115	7	(181)	83	(98)
Other financial income and expenses	(1,161)	400	(761)	(1,134)	522	(611)
NET FINANCIAL INCOME/(LOSS)	(1,981)	600	(1,381)	(2,127)	739	(1,388)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

11.1 Cost of net debt

The main items of the cost of net debt break down as follows:

In millions of euros	Expense	Income	Total	
			Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
Interest expense on gross debt and hedges	(844)	-	(844)	(915)
Foreign exchange gains/losses on borrowings and hedges	-	4	4	21
Ineffective portion of derivatives qualified as fair value hedges	(3)	-	(3)	(2)
Gains and losses on cash and cash equivalents and liquid debt instruments held for cash investment purposes	-	81	81	113
Capitalized borrowing costs	134	-	134	104
COST OF NET DEBT	(713)	85	(628)	(678)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

The decrease in the cost of net debt is mainly due to a slight reduction in the volume of average debt since the end of 2017, to the positive impacts of debt financing transactions realized by the Group and to active interest-rate management (see Note 17.3.3 "Financial instruments – Main events of the period").

At December 31, 2018, the average cost of debt after hedging came out at 2.68% compared with 2.63% at December 31, 2017.

11.2 Gains and losses on debt restructuring transactions and from the early unwinding of derivative financial instruments

The main effects of debt restructuring break down as follows:

In millions of euros	Expense	Income	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
Impact of early unwinding of derivative financial instruments on the income statement	(108)	102	(6)	-
Of which cash payments made on the unwinding of swaps	(108)	-	(108)	(83)
Of which reversal of the negative fair value of these derivatives that were settled early	-	102	102	83
Impact of debt restructuring transactions on the income statement	-	13	13	(98)
Of which early refinancing transactions expenses	-	13	13	(98)
GAINS AND LOSSES ON DEBT RESTRUCTURING TRANSACTIONS AND THE EARLY UNWINDING OF DERIVATIVE FINANCIAL INSTRUMENTS	(108)	115	7	(98)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

The Group carried out a number of early refinancing transactions (see Note 17.3.3. "Financial instruments – Main events of the period").

11.3 Other financial income and expenses

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Other financial expenses		
Income/(loss) from debt instruments and equity instruments	(84)	(12)
Change in fair value of derivatives not qualified as hedges	(183)	(187)
Gains and losses on the designation and inefficiency of economic hedges on other financial items	(2)	(1)
Unwinding of discounting adjustments to other long-term provisions	(538)	(493)
Net interest expense on post-employment benefits and other long-term benefits	(112)	(118)
Interest on trade and other payables	(39)	(48)
Other financial expenses	(203)	(275)
TOTAL	(1,161)	(1,134)
Other financial income		
Income/(loss) from debt instruments and equity instruments	73	77
Interest income on trade and other receivables	52	29
Interest income on loans and receivables at amortized cost	111	151
Other financial income	164	265
TOTAL	400	522
OTHER FINANCIAL INCOME AND EXPENSES, NET	(761)	(611)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

At December 31, 2017, "Other financial income" notably included interest relating to the recovery from the French State of the 3% tax on dividends as well as interest relating to the dispute opposing Electrabel and E.ON in respect of the Belgian and German nuclear contribution payments for an amount of €87 million.

NOTE 12 INCOME TAX EXPENSE

Accounting standards

The Group calculates taxes in accordance with prevailing tax legislation in the countries where income is taxable.

In accordance with IAS 12, deferred taxes are recognized according to the liability method on temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their tax bases, using tax rates that have been enacted or substantively enacted by the reporting date. However, under the provisions of IAS 12, no deferred tax is recognized for temporary differences arising from goodwill for which impairment losses are not deductible for tax purposes, or from the initial recognition of an asset or liability in a transaction which (i) is not a business combination and (ii) at the time of the transaction, affects neither accounting income nor taxable income. In addition, deferred tax assets are only recognized to the extent that it is probable that taxable income will be available against which the deductible temporary differences can be utilized.

A deferred tax liability is recognized for all taxable temporary differences associated with investments in subsidiaries, associates, joint ventures and branches, except if the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

Net balances of deferred taxes are calculated based on the tax position of each company or on the total income of companies included within the relevant consolidated tax group, and are presented in assets or liabilities for their net amount per tax entity.

Deferred taxes are reviewed at each reporting date to take into account factors including the impact of changes in tax laws and the prospects of recovering deferred tax assets arising from deductible temporary differences.

Deferred tax assets and liabilities are not discounted.

Tax effects relating to coupon payments on deeply-subordinated perpetual notes are recognized in profit or loss.

12.1 Actual income tax expense recognized in the income statement

12.1.1 Breakdown of actual income tax expense recognized in the income statement

The tax expense recognized in the income statement for 2018 amounts to €704 million (€395 million income tax income in 2017). It breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Current income taxes	(712)	(367)
Deferred taxes	9	761
TOTAL INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(704)	395

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

12.1.2 Reconciliation of theoretical income tax expense with actual income tax expense

A reconciliation of theoretical income tax expense with the Group's actual income tax expense is presented below:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Net income/(loss)	1,629	2,108
Share in net income of entities accounted for using the equity method	361	422
Net income from discontinued operations	1,069	366
Income tax expense	(704)	395
Income/(loss) before income tax expense and share in net income of associates (A)	903	925
Of which French companies	1,434	(744)
Of which companies outside France	(531)	1,669
Statutory income tax rate of the parent company (B)	34.4%	34.4%
THEORETICAL INCOME TAX EXPENSE (C) = (A) X (B)	(311)	(318)
Reconciling items between theoretical and actual income tax expense		
Difference between statutory tax rate applicable to the parent and statutory tax rate in force in jurisdictions in France and abroad	42	112
Permanent differences ⁽²⁾	(72)	(287)
Income taxed at a reduced rate or tax-exempt ⁽³⁾	123	460
Additional tax expense ⁽⁴⁾	(74)	(241)
Effect of unrecognized deferred tax assets on tax loss carry-forwards and other tax-deductible temporary differences ⁽⁵⁾	(968)	(564)
Recognition or utilization of tax income on previously unrecognized tax loss carry-forwards and other tax-deductible temporary differences ⁽⁶⁾	370	241
Impact of changes in tax rates ⁽⁷⁾	54	518
Tax credits and other tax reductions ⁽⁸⁾	185	506
Other ⁽⁹⁾	(53)	(32)
INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(704)	395

- (1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").
- (2) Includes mainly the disallowable impairment losses on goodwill, the disallowable operating expenses, the deduction of interest expenses arising from hybrid debts and effects relating to the cap on allowable interest on borrowings in France.
- (3) Reflects notably capital gains on disposals of securities exempt from tax or taxed at a reduced rate in some tax jurisdictions, the impact of the specific tax regimes used by some entities, the disallowable impairment losses and capital losses on securities, and the impact of the untaxed income from remeasuring previously-held (or retained) equity interests in connection with acquisitions and changes in consolidation methods.
- (4) Includes mainly tax on dividends resulting from the parent company tax regime, the exceptional income tax to compensate the reimbursement from the French State of the 3% tax on the dividends in 2017, the withholding tax on dividends and interest levied in several tax jurisdictions, allocations to provisions for income tax, and regional and flat-rate corporate taxes.
- (5) Includes (i) the cancellation of the net deferred tax asset position for some tax entities in the absence of sufficient profit being forecast and (ii) the impact of disallowable impairment losses on the assets.
- (6) Includes the impact of the recognition of net deferred tax asset positions for some tax entities.
- (7) Includes mainly the impact of tax rate changes on the deferred tax balances in France (see below) and in the United States in 2017.
- (8) Includes notably the reversals of provisions for tax litigation, tax credits in France and other tax reductions and the impact of deductible notional interest in Belgium. In 2017, includes the refund of €376 million relating to the 3% tax on dividends paid previously in cash by the French companies.
- (9) Includes mainly the correction of previous tax charges.

The 2018 French Finance Law approved on December 30, 2017 plans a tax rate decrease to 25.82% as of 2022 for all French tax entities (tax rate of 25.00%, plus the 3.3% social contribution). Deferred tax recorded by the French entities which is expected to reverse after 2022 was re-measured at this new rate in the December 31, 2017 accounts. This resulted in a positive impact of €550 million on non-recurring income and a negative impact of €91 million on deferred tax recognized in the statement of comprehensive income. However, the deferred tax balances, which expire in 2019, have been maintained at the 32.02% rate, without taking into consideration the fact that the 34.43% rate will be maintained for 2019, as already announced but not yet approved by Parliament at December 31, 2018.

12.1.3 Analysis of the deferred tax income/(expense) recognized in the income statement, by type of temporary difference

In millions of euros	Impact in the income statement	
	Dec. 31, 2018	Dec. 31, 2017 (1)
Deferred tax assets:		
Tax loss carry-forwards and tax credits	302	(118)
Pension and related obligations	2	(68)
Non-deductible provisions	(77)	(25)
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(141)	(240)
Measurement of financial instruments at fair value (IAS 32/IFRS 9)	845	(288)
Other	38	(72)
TOTAL	969	(811)
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(249)	671
Measurement of financial instruments at fair value (IAS 32/IFRS 9)	(751)	741
Other	116	125
TOTAL	(884)	1,537
DEFERRED TAX INCOME/(EXPENSE)	85	726
Of which continued activities	9	761

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

The deferred tax income recorded in 2017 derives notably from the future tax rate decrease approved in France.

12.2 Deferred tax income/(expense) recognized in "Other comprehensive income"

Net deferred tax income/(expense) recognized in "Other comprehensive income" is broken down by component as follows:

In millions of euros	Dec. 31, 2018	Dec. 31, 2017 (1)
Equity and debt instruments	(1)	37
Actuarial gains and losses	68	(95)
Net investment hedges	(14)	(86)
Cash flow hedges on other items	71	(116)
Cash flow hedges on net debt	(10)	2
TOTAL EXCLUDING SHARE OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	114	(257)
Share of entities accounted for using the equity method	(20)	3
Discontinued operations	(81)	(81)
TOTAL	13	(336)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

12.3 Deferred taxes presented in the statement of financial position

12.3.1 Change in deferred taxes

Changes in deferred taxes recognized in the statement of financial position, after netting deferred tax assets and liabilities by tax entity, break down as follows:

<i>In millions of euros</i>	Assets	Liabilities	Net position
At December 31, 2017⁽¹⁾	854	(5,215)	(4,361)
Impact on net income for the year	969	(884)	85
Impact on other comprehensive income items	127	(128)	(1)
Impact of changes in scope of consolidation	(207)	199	(9)
Impact of translation adjustments	(3)	(24)	(27)
Transfers to assets and liabilities classified as held for sale	(222)	161	(60)
Other	28	(4)	24
Impact of netting by tax entity	(481)	481	-
AT DECEMBER 31, 2018	1,066	(5,415)	(4,349)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

12.3.2 Analysis of the net deferred tax position recognized in the statement of financial position (before netting deferred tax assets and liabilities by tax entity), by type of temporary difference

Accounting standards

Measurement of recognized tax loss carry-forwards

Deferred tax assets are recognized on tax loss carry-forwards when it is probable that taxable profit will be available against which the tax loss carry-forwards can be utilized. The probability that taxable profit will be available against which the unused tax losses can be utilized, is based on taxable temporary differences relating to the same taxation authority and the same taxable entity and estimates of future taxable profits. These estimates and utilizations of tax loss carry-forwards were prepared on the basis of profit and loss forecasts over a six-year tax projection period as included in the medium-term business plan validated by the Management, unless exception justified by a particular context and, if necessary, on the basis of additional forecasts.

<i>In millions of euros</i>	Statement of financial position at	
	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
Deferred tax assets:		
Tax loss carry-forwards and tax credits	1,765	1,652
Pension obligations	1,374	1,318
Non-deductible provisions	371	312
Difference between the carrying amount of PP&E and intangible assets and their tax bases	787	974
Measurement of financial instruments at fair value (IAS 32/IFRS 9)	3,398	2,736
Other	545	555
TOTAL	8,239	7,547
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(8,773)	(8,657)
Measurement of financial instruments at fair value (IAS 32/IFRS 9)	(3,343)	(2,629)
Other	(472)	(623)
TOTAL	(12,588)	(11,908)
NET DEFERRED TAX ASSETS/(LIABILITIES)	(4,349)	(4,361)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

12.4 Unrecognized deferred taxes

At December 31, 2018, the tax effect of tax losses and tax credits eligible for carry-forward but not utilized and not recognized in the statement of financial position amounted to €3,216 million (€3,144 million at December 31, 2017). Most of these unrecognized tax losses relate to companies based in countries which allow losses to be carried forward indefinitely (mainly Belgium and Luxembourg) or up to nine years in the Netherlands. These tax loss carry-forwards did not give rise to the recognition of deferred tax due to the absence of sufficient profit forecasts in the medium term.

The tax effect of other tax-deductible temporary differences not recorded in the statement of financial position was €1,364 million at end-December 2018 versus €1,246 million at end-December 2017.

NOTE 13 EARNINGS PER SHARE

Accounting standards

Basic earnings per share is calculated by dividing net income Group share for the year by the weighted average number of ordinary shares outstanding during the year. The average number of ordinary shares outstanding during the year is the number of ordinary shares outstanding at the beginning of the year, adjusted by the number of ordinary shares bought back or issued during the year.

For diluted earnings per share calculation, the weighted average number of shares and basic earnings per share are adjusted to take into account the impact of the conversion or exercise of any dilutive potential ordinary shares (options, warrants and convertible bonds, etc.).

	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
Numerator (in millions of euros)		
Net income/(loss) Group share	1,033	1,320
<i>Of which Net income/(loss) relating to continued activities, Group share</i>	<i>(12)</i>	<i>1,047</i>
Interest from deeply-subordinated perpetual notes	(145)	(144)
Net income used to calculate earnings per share	889	1,176
<i>Of which Net income/(loss) relating to continued activities, Group share, used to calculate earnings per share</i>	<i>(156)</i>	<i>903</i>
Impact of dilutive instruments	-	-
Diluted net income/(loss) Group share	889	1,176
Denominator (in millions of shares)		
Average number of outstanding shares	2,396	2,396
Impact of dilutive instruments:		
Bonus share plans reserved for employees	11	9
Diluted average number of outstanding shares	2,407	2,405
Earnings per share (in euros)		
Basic earnings/(loss) per share	0.37	0.49
<i>Of which Basic earnings/(loss) Group share relating to continued activities per share</i>	<i>(0.07)</i>	<i>0.38</i>
Diluted earnings/(loss) per share	0.37	0.49
<i>Of which Diluted earnings/(loss) Group share relating to continued activities per share</i>	<i>(0.06)</i>	<i>0.38</i>

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

In compliance with IAS 33 – *Earnings per Share*, earnings per share and diluted earnings per share are based on net income/(loss) Group share after deduction of payments to bearers of deeply-subordinated perpetual notes (see Note 19.2.1).

The Group's dilutive instruments included in the calculation of diluted earnings per share include bonus shares and performance shares granted in the form of ENGIE securities.

NOTE 14 GOODWILL

Accounting standards

Recognition of goodwill

Goodwill is measured as the excess of the aggregate of:

- (i) the consideration transferred;
- (ii) the amount of any non-controlling interests in the acquiree; and
- (iii) in a business combination achieved in stages, the acquisition-date fair value of the previously held equity interest in the acquiree;

over the net acquisition-date fair value of the identifiable assets acquired and liabilities assumed. The key assumptions and estimates used to determine the fair value of assets acquired and liabilities assumed include the market outlook for the measurement of future cash flows as well as applicable discount rates. These assumptions reflect management's best estimates.

The amount of goodwill recognized at the acquisition date cannot be adjusted after the end of the measurement period.

Goodwill relating to interests in associates is recorded under "Investments in entities accounted for using the equity method".

Risk of impairment

Goodwill is not amortized but tested for impairment each year in accordance with IAS 36, or more frequently where an indication of impairment is identified. Impairment tests are carried out at the level of cash-generating units (CGUs) or groups of CGUs which constitute groups of assets which generate cash flows that are largely independent from cash flows generated by other CGUs.

The method used to carry out these impairment tests are described in paragraph 14.3.

Impairment losses in relation to goodwill cannot be reversed and are shown as "Impairment losses" in the income statement.

Indicators of impairment (goodwill, intangible assets and property plant and equipment)

The main indicators of impairment used by the Group are:

- Using external sources of information
 - A decline in an asset's value over the period that is significantly more than would be expected from the passage of time or normal use;
 - Significant adverse changes that have taken place over the period, or will take place in the near future, in the technological market, economic or legal environment in which the entity operates or in the market to which an asset is dedicated;
 - An increase over the period in market interest rates or other market rates of return on investments if such increase is likely to affect the discount rate used in calculating an asset's value in use and decrease its recoverable amount materially;
 - The carrying amount of the net assets of the entity exceeds its market capitalization;
- Using internal sources of information
 - Evidence of obsolescence or physical damage to an asset
 - Significant changes in the extent to which, or manner in which, an asset is used or is expected to be used, that have taken place in the period or soon hereafter and that will have an adverse effect on it. These

changes include the asset becoming idle, plans to dispose of an asset sooner than expected, reassessing its useful life as finite rather than indefinite or plans to restructure the operations for which the asset belong;

- Internal reports that indicate that the economic performance of an asset is, or will be, worse than expected.

14.1 Movements in the carrying amount of goodwill

<i>In millions of euros</i>	Net amount
At December 31, 2016	17,372
Impairment losses	(481)
Changes in scope of consolidation and Other	775
Transfer to Assets classified as held for sale	(32)
Translation adjustments	(350)
At December 31, 2017⁽¹⁾	17,285
Impairment losses	(14)
Changes in scope of consolidation and Other	745
Transfer to Assets classified as held for sale	(216)
Translation adjustments	9
AT DECEMBER 31, 2018	17,809

(1) Comparative data at December 31, 2017 and at January 1, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

The impact of changes in the scope of consolidation at December 31, 2018 relates primarily to:

- the recognition of goodwill arising on the acquisition of Langa Group (€241 million), Infinity Renewables (€94 million) and Electro Power System (€57 million);
- the derecognition of goodwill in an amount of €109 million relating to the disposal of wind and solar fields in France (negative impact of €71 million), and gas distribution activities in Hungary (negative impact of €29 million).

Following the classification of the Company's interest in Glow, the electricity production project in Thailand, as assets held for sale (see Note 5.2 "Assets held for sale and discontinued operations"), the carrying amount of the corresponding goodwill was transferred to "Assets classified as held for sale" in the statement of financial position.

The decrease in this caption in 2017 related chiefly to the recognition of impairment losses against goodwill totaling €481 million, including €338 million against the Storengy CGU and €141 million allocated to the group of assets held for sale which comprises the Loy Yang B power plant, the derecognition of goodwill relating to assets sold for €127 million, translation adjustments for €350 million, offset by the recognition of goodwill arising on the acquisitions for €674 million and the increase in the fair value of the financial liability representing the put option granted by the Group on non-controlling interests in La Compagnie du Vent, with a matching entry of €131 million in goodwill.

14.2 Goodwill CGUs

The table below shows “material” goodwill CGUs at December 31, 2018:

<i>In millions of euros</i>	Operating segment	Dec. 31, 2018
MATERIAL CGUs		
Benelux	Benelux	4,258
GRDF	Infrastructures Europe	4,009
France Renewable Energy	France	1,085
United Kingdom	Europe excl. France & Benelux	1,045
France BtoC	France	1,044
OTHER SIGNIFICANT CGUs		
North America	North America	875
France BtoB	France	731
Northern, Southern and Central Europe	Europe excl. France & Benelux	644
Generation Europe	Other	629
OTHER CGUs		3,490
TOTAL		17,809

14.3 Impairment testing of goodwill CGUs

All goodwill CGUs are tested for impairment based on data as of end-June, completed by a review of events arisen in the second half of the year. In most cases, the recoverable amount of CGUs is determined by reference to a value in use that is calculated using cash flow projections drawn up on the basis of the 2019 budget and the 2020-2021 medium-term business plan, as approved by the Executive Committee and the Board of Directors, and on extrapolated cash flows beyond that time frame.

Cash flow projections are determined on the basis of macroeconomic assumptions (inflation, exchange rates and growth rates) and price forecasts resulting from the Group's reference scenario for 2022-2040. The forecasts that feature in the reference scenario were approved by the Executive Committee in December 2018. The forecasts and projections included in the reference scenario were determined on the basis of the following inputs:

- forward market prices over the liquidity period for fuel (coal, oil and gas), CO₂ and electricity on each market;
- beyond this period, medium- and long-term energy prices were determined by the Group based on macroeconomic assumptions and fundamental supply and demand equilibrium models, the results of which are regularly compared against forecasts prepared by external energy sector specialists. Long-term projections for CO₂ prices are those presented in the “Canfin, Grandjean et Mestrallet” report published in July 2016. More specifically, medium- and long-term electricity prices were determined by the Group using electricity demand forecasting models, medium- and long-term forecasts of fuel and CO₂ prices, and expected trends in installed capacity and in the technology mix of the production assets within each power generation system.

The discount rates used correspond to the weighted average cost of capital, which is adjusted in order to reflect the business, market, country and currency risk relating to each goodwill CGU reviewed. The discount rates used are consistent with available external information sources. The post-tax rates used in 2018 to measure the value in use of the goodwill CGUs for discounting future cash flows ranged between 3.7% and 11.3%, compared with a range of between 4.7% and 12.5% in 2017. The discount rates used for the main goodwill CGUs are shown in Notes 14.3.1 “Material CGUs” and 14.3.2 “Other significant CGUs”, below.

14.3.1 Material CGUs

This section presents the method for determining value in use, the key assumptions underlying the valuation, and the sensitivity analyses for the impairment tests on CGUs where the amount of goodwill represents more than 5% of the Group's total goodwill at December 31, 2018.

14.3.1.1 Benelux CGU

The goodwill allocated to the Benelux CGU amounted to €4,258 million at December 31, 2018. The Benelux CGU includes the Group's activities in Belgium, the Netherlands and Luxembourg: (i) power generation activities using its nuclear power plants and wind farms, (ii) natural gas and electricity sales activities, and (iii) energy services activities, as well as drawing rights on the Chooz B and Tricastin power plants in France.

Key assumptions used for the impairment test

The cash flow projections for the Benelux CGU are based on a large number of key assumptions, such as the long-term prices for fuel and CO₂, expected trends in gas and electricity demand and in electricity prices, the market outlook, and changes in the regulatory environment (especially concerning nuclear capacities in Belgium and the extension of drawing rights agreements for French nuclear plants). The key assumptions also include the discount rate used to calculate the value in use of this goodwill CGU.

The 2018 value in use of the activities included in this CGU was calculated using the cash flow projections drawn up on the basis of the 2019 budget and the 2020-2021 medium-term business plan. Cash flow projections for the period beyond the medium-term business plan were determined as described below:

Activities	Assumptions applied beyond the term of the business plan ⁽¹⁾
Nuclear power generation in Belgium	For Doel 1, Doel 2 and Tihange 1, cash flow projection over the residual useful life of 50 years. For the second generation reactors Doel 3 and Tihange 2, cash flow projection over the residual useful life of 40 years. For the second generation reactors Doel 4 and Tihange 3, extension of the operating life for a period of 20 years.
Drawing rights on Chooz B et Tricastin power plants	Cash flow projection over the remaining term of existing contract plus assumption that drawing rights will be extended for a further 10 years.
Energy retail and service activities	Cash flow projection over the duration of the business plan at mid term, plus application of a terminal value based on a normative cash flow using a long-term growth rate of 1.9%

(1) Assumptions unchanged from December 31, 2017.

The discount rates applied to these cash flows ranged from 5.8% to 8.5%, depending on the risk profiles of each business activity.

The most important assumptions concerning the Belgian regulatory environment relate to the operating life of existing nuclear reactors and the level of royalties and nuclear contributions paid to the Belgian State.

The impairment test took into account the 10-year extension (through 2025) of the operating life of Tihange 1, Doel 1 and Doel 2, as well as the capital expenditure required for the extension of Doel 1 and Doel 2, annual royalties totaling €20 million in respect of said extension and the new conditions for determining the nuclear contribution that will apply to second-generation reactors (Doel 3 and 4, Tihange 2 and 3) through their 40th year of operation, as defined in the December 29, 2016 law.

As regards second-generation reactors, the principle of a gradual phase-out of nuclear power and the schedule for this phase-out, with the shutdown of the reactors Doel 3 in 2022, Tihange 2 in 2023 and Tihange 3 and Doel 4 in 2025, after 40 years of operation, were reaffirmed in the law of June 18, 2015 and by the energy pact approved by the government on March 30, 2018. The pact is supplemented by a federal energy strategy based on four objectives: the safeguarding of supplies, the impact on climate, the impact on energy prices, and the safety of power plants. A monitoring committee has been set up and will meet each year to evaluate the achievement of these objectives and, where applicable, make recommendations to policymakers so that corrective action may be taken.

However, in view of (i) the extension of the operating life of Tihange 1, Doel 1 and Doel 2 beyond 40 years, (ii) the importance of nuclear power generation in the Belgian energy mix, (iii) the lack of a sufficiently detailed and attractive industrial plan enticing energy utilities to invest in replacement thermal capacity, and (iv) CO₂ emissions reduction targets, the Group considers that nuclear power will still be needed to guarantee the energy equilibrium in Belgium after 2025. Accordingly, in calculating value in use, the Group assumes a 20-year extension of the operating life of half of its second generation reactors, while taking into account a mechanism of nuclear contributions to be paid to the Belgian government. Should the circumstances described above change in the future, the Group may adapt its industrial scenarios accordingly.

In France, the Group included an assumption that its drawing rights on the Tricastin and Chooz B nuclear plants expiring in 2021 and 2037, respectively, would be extended by 10 years. Although no such decision has been taken by the government and the nuclear safety authority, the Group considers that extending the reactors' operating life is the most credible and likely scenario at this point in time. This is also consistent with the expected French energy mix featured in the Group's reference scenario.

Results of the impairment test

At December 31, 2018, the recoverable amount of the goodwill CGU was higher than its carrying amount. Furthermore, the Group recognized impairment losses of €615 million against nuclear reactors (see Note 10.2 "Impairment losses").

Sensitivity analyses

A decrease of €10/MWh in electricity prices for nuclear power generation would lead to an additional impairment loss of around €1,200 million. Conversely, an increase of €10/MWh in electricity prices would have a positive impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU.

An increase of 50 basis points in the discount rates used would have a negative 49% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 53% impact on the calculation.

Various transformational scenarios were considered concerning nuclear power generation in Belgium:

- the disappearance of the entire nuclear component from the portfolio in 2025 after 50 years of operation in the case of Tihange 1, Doel 1 and Doel 2, and 40 years of operation for the second-generation reactors would have a strongly adverse impact on the results of the test, with the recoverable amount falling significantly below the carrying amount. In this scenario, the impairment risk would represent around €1,700 million;
- if the life of half of the second-generation reactors were to be extended by ten years and the entire nuclear component subsequently disappear, the recoverable amount would fall below the carrying amount and the impairment risk would represent €547 million.

14.3.1.2 GRDF CGU

The total amount of goodwill allocated to the GRDF CGU was €4,009 million at December 31, 2018. The GRDF CGU groups together the Group's regulated natural gas distribution activities in France.

The value in use of the GRDF CGU was calculated using the cash flow projections drawn up on the basis of the 2019 budget, the 2020-2021 medium-term business plan, and cash flow projections for the 2022-2024 period. The terminal value corresponds to the expected Regulated Asset Base (RAB) with no premium at the end of 2024. The RAB is the value assigned by the French Energy Regulation Commission (CRE) to the assets operated by the distributor. It is the sum of the future pre-tax cash flows, discounted at a rate that equals the pre-tax rate of return guaranteed by the regulator.

The cash flow projections are drawn up based on the tariff for public natural gas distribution networks, known as the "ATRD 5 tariff", which entered into effect for a period of four years on July 1, 2016, and on the overall level of investments agreed by the CRE as part of its decision on the ATRD 5 tariff.

Given the regulated nature of the businesses grouped within the GRDF CGU, a reasonable change in any of the valuation inputs would not result in the recoverable amount falling below the carrying amount.

14.3.1.3 France Renewable Energy CGU

The goodwill allocated to the France Renewable Energy CGU amounted to €1,085 million at December 31, 2018. The France Renewable Energy CGU groups together the development, construction, financing, operation and maintenance of all of the renewable power generation assets in France (hydraulic, wind and photovoltaic).

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2019 budget and the 2020-2021 medium-term business plan. For the hydraulics business, a terminal value was calculated by extrapolating the cash flows beyond that period based on the reference scenario adopted by the Group.

The main assumptions and key estimates relate primarily to discount rates, assumptions on the renewal of the hydropower concession agreements and changes in the sales prices of electricity beyond the liquidity period.

The discount rates applied are between 5.1% and 8.3%, depending on whether they relate to regulated assets or merchant activities.

Value in use of the Compagnie Nationale du Rhône and SHEMA was calculated based on assumptions including the extension or renewal of a tender process for the concession agreements, as well as on the conditions of a potential extension.

The cash flows for the periods covered by the renewal of the concession agreements are based on a number of assumptions relating to the economic and regulatory conditions for operating these assets (royalty rates, required level of investment, etc.) during this period.

A decrease of €10/MWh in electricity prices for hydropower generation would have a negative 47% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of €10/MWh in electricity prices would have a positive 47% impact on the calculation.

An increase of 50 basis points in the discount rates used would have a negative 47% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 63% impact on the calculation.

If the Compagnie Nationale du Rhône hydropower concession agreements are not renewed beyond 2023, this would have a strong adverse impact on the results of the test, with the recoverable amount falling significantly below the carrying amount. In this scenario, the impairment risk would represent around €0.9 billion.

14.3.1.4 United Kingdom CGU

The goodwill allocated to the United Kingdom CGU amounted to €1,045 million at December 31, 2018. The United Kingdom CGU includes activities in (i) renewable power generation (hydraulic, wind and solar), (ii) gas and electricity sales, and (iii) services to individual and professional customers in the United Kingdom.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2019 budget and the 2020-2021 medium-term business plan. A terminal value was calculated for the services and energy sales businesses by extrapolating the cash flows beyond that period using a long-term growth rate of 2% per year.

The main assumptions and key estimates relate primarily to discount rates and changes in price beyond the liquidity period.

The discount rates applied are between 5.7% and 9.0%.

An increase of 50 basis points in the discount rates used would have a negative 44% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 60% impact on the calculation.

A decrease of 10% in the margin captured by power generation assets would have a negative 69% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. An increase of 10% in the margin captured would have a positive 69% impact on this calculation.

14.3.1.5 France BtoC CGU

The goodwill allocated to the France BtoC CGU amounted to €1,044 million at December 31, 2018. The France BtoC CGU groups together sales of energy and related services to individual and professional customers in France.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2019 budget and the 2020-2021 medium-term business plan. A terminal value was calculated by extrapolating the cash flows beyond that period using a long-term growth rate of 1.8%.

The main assumptions and key estimates relate primarily to discount rates, expected trends in gas and electricity demand in France, changes in the Group's market share and sales margin forecasts.

The discount rates applied are between 6.5% and 8.5%.

An increase of 50 basis points in the discount rates used would have a negative 22% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 29% impact on the calculation.

A decrease of 5% in the margin on gas and electricity sales activities would have a negative 14% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 5% in the margin on gas and electricity sales activities would have a positive 14% impact on the calculation.

14.3.2 Other significant CGUs

The table below sets out the assumptions used to determine the recoverable amount of the other main CGUs.

CGU	Reportable segment	Measurement	Discount rate
North America	North America	DCF + DDM	4.0% - 11.3%
Generation Europe	Other	DCF + DDM	3.7% - 9.1%
Northern, Southern and Eastern Europe	Europe excl. France & Benelux	DCF + DDM	4.8% - 10.9%
France BtoB	France	DCF + DDM	7.1% - 7.7%

DDM refers to the discounted dividend model.

14.3.2.1 North America CGU

The goodwill allocated to the North America CGU amounted to €875 million at December 31, 2018. The North America CGU mainly comprises:

- Canada, which includes activities in (i) renewable, thermal power generation (wind and biomass), (ii) services to individual and professional customers;
- The United States, which includes activities in (i) gas and electricity sales, (ii) services to individual and professional customers and (iii) thermal power generation;
- Puerto Rico, which includes an investment in EcoElectrica, a key energy industry player in Puerto Rico's economy (see Note 4.2 "Investments in joint ventures"). Despite the difficult financial environment in Puerto Rico, ENGIE does not have any information at December 31, 2018 on the basis of which the Group would modify its valuation assumptions regarding its share in these assets.

The wind and solar energy production activities acquired in the United States in 2018 make up an independent goodwill CGU.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2019 budget and the 2020-2021 medium-term business plan. A terminal value was calculated for the services and energy sales businesses using EBITDA multiples as a basis.

The main assumptions and key estimates relate primarily to discount rates and changes in captured margins beyond the liquidity period.

The discount rates applied are between 4.0% and 11.3%.

An increase of 50 basis points in the discount rates used would have a negative impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain slightly above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive impact on the calculation.

A decrease of 5% in the margin on gas and electricity sales activities would have a negative 45% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 5% in the margin on gas and electricity sales activities would have a positive 45% impact on the calculation.

A decrease of 5% in service activities would have a negative 37% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 5% in the margin on gas and electricity sales activities would have a positive 37% impact on the calculation.

14.3.2.2 Generation Europe CGU

The goodwill allocated to the Generation Europe CGU amounted to €629 million at December 31, 2018. The Generation Europe CGU groups together the thermal power generation activities in Europe.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2019 budget and the 2020-2021 medium-term business plan. Beyond this three-year period, cash flows were projected over the useful lives of the assets based on the reference scenario adopted by the Group.

The discount rates applied to these cash flow projections ranged between 3.7% and 9.1%.

The main assumptions and key estimates relate primarily to discount rates, estimated demand for electricity and changes in the price of CO₂, fuel and electricity beyond the liquidity period.

Results of the impairment test

At December 31, 2018, the recoverable amount of the Generation Europe goodwill CGU was higher than its carrying amount.

Sensitivity analyses

An increase of 50 basis points in the discount rates used would have a negative 13% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 13% impact on the calculation.

A decrease of 10% in the margin captured by thermal power plants would have a negative 17% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. An increase of 10% in the margin captured would have a positive 17% impact on this calculation.

14.3.2.3 Other significant goodwill CGUs

For the other significant goodwill CGUs, there is a considerable difference between their recoverable amount and their carrying amount at December 31, 2018.

14.4 Goodwill segment information

The carrying amount of goodwill can be analyzed as follows by operating segment:

<i>In millions of euros</i>	Dec. 31, 2018
North America	997
Latin America	740
Africa-Asia	649
Benelux	4,258
France	3,273
Europe excl. France & Benelux	1,689
Infrastructures Europe	5,000
Other	1,203
TOTAL	17,809

NOTE 15 INTANGIBLE ASSETS

Accounting standards

Initial measurement

Intangible assets are carried at cost less any accumulated amortization and any accumulated impairment losses.

Amortization

Intangible assets are amortized on the basis of the expected pattern of consumption of the estimated future economic benefits embodied in the asset. Amortization is calculated mainly on a straight-line basis over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Concession rights	10	30
Customer portfolio	10	40
Other intangible assets	1	50

Intangible assets with an indefinite useful life are not amortized but are tested for impairment annually.

Risk of impairment

In accordance with IAS 36, impairment tests are carried out on items of property, plant and equipment and intangible assets where there is an indication that the assets may be impaired. Such indications may be based on events or changes in the market environment, or on internal sources of information. Intangible assets that are not amortized are tested for impairment annually.

Impairment indicators

Property, plant and equipment and intangible assets with finite useful lives are only tested for impairment when there is an indication that they may be impaired. This is generally the result of significant changes in the environment in which the assets are operated or when economic performance is lower than expected.

Main impairment indicators used by the Group are described in Note 14 "Goodwill".

Impairment

Items of property, plant and equipment and intangible assets are tested for impairment at the level of the individual asset or cash-generating unit (CGU), as appropriate and, determined in accordance with IAS 36. If the recoverable amount of an asset is lower than its carrying amount, the carrying amount is written down to the recoverable amount by recording an impairment loss. Upon recognition of an impairment loss, the depreciable amount and possibly the useful life of the asset concerned is revised.

Impairment losses recorded in relation to property, plant and equipment or intangible assets may be subsequently reversed if the recoverable amount of the asset increases to exceed the carrying amount. The increased carrying amount of an item of property, plant or equipment following the reversal of an impairment loss may not exceed the carrying amount that would have been determined (net of depreciation/amortization) had no impairment loss been recognized in prior periods.

Measurement of recoverable amount

In order to review the recoverable amount of property, plant and equipment and intangible assets, the assets are grouped, where appropriate, into CGUs and the carrying amount of each CGU is compared with its recoverable amount.

For operating entities which the Group intends to hold on a long-term and going concern basis, the recoverable amount of a CGU corresponds to the higher of its fair value less costs to sell and its value in use. Value in use is primarily determined based on the present value of future operating cash flows including a terminal value. Standard valuation techniques are used based on the following main economic assumptions:

- market perspectives and developments in the regulatory framework;
- discount rates based on the specific characteristics of the operating entities concerned;
- terminal values in line with available market data specific to the operating segments concerned and growth rates associated with these terminal values, not to exceed the inflation rate.

Discount rates are determined on a post-tax basis and applied to post-tax cash flows. The recoverable amounts calculated on the basis of these discount rates are the same as the amounts obtained by applying the pre-tax discount rates to cash flows estimated on a pre-tax basis, as required by IAS 36.

For operating entities which the Group has decided to sell, the related recoverable amount of the assets concerned is based on market value less costs of disposal. Where negotiations are ongoing, this value is determined based on the best estimate of their outcome as of the reporting date.

In the event of a decline in value, the impairment loss is recorded in the consolidated income statement under "Impairment losses".

AT DECEMBER 31, 2018	2,204	632	3,883	6,718

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

Following the classification of the Group's interest in Glow (power generation in Thailand) under "Assets held for sale" (see Note 5.2 "Assets held for sale and discontinued operations"), the carrying amount of the corresponding intangible assets was transferred to "Assets classified as held for sale" in the statement of financial position at December 31, 2018.

15.1.1 Intangible rights arising on concession contracts

Accounting standards

IFRIC 12 – *Service concession arrangements* deals with the treatment to be applied by the concession operator in respect of certain concession arrangements.

For a concession arrangement to fall within the scope of IFRIC 12, usage of the infrastructure must be controlled by the concession grantor. This requirement is satisfied when the following two conditions are met:

- the grantor controls or regulates what services the operator must provide with the infrastructure, to whom it must provide them, and at what price; and
- the grantor controls any residual interest in the infrastructure at the end of the term of the arrangement, for example retains the right to take back the infrastructure at the end of the concession.

The intangible asset model according to IFRIC 12§17 applies if the operator receives a right (a license) to charge the users, or the grantor, depending on the use made of the public service. There is no unconditional right to receive cash as the amounts depend on the extent to which the public uses the service.

Concession infrastructures that do not meet the requirements of IFRIC 12 are presented as property, plant and equipment. This is the case of the distribution infrastructures of gas in France. The related assets are recognized in accordance with IAS 16, given that GRDF operates its network under long-term concession arrangements, most of which are mandatorily renewed upon expiration pursuant to French law No. 46-628 of April 8, 1946.

15.1.2 Capacity entitlements

The Group has acquired capacity entitlements from power stations operated by third parties. These power station capacity rights were acquired in connection with transactions or within the scope of the Group's involvement in financing the construction of certain power stations. In consideration, the Group received the right to purchase a share of the production over the useful life of the underlying assets. These rights are amortized over the useful life of the underlying assets, not to exceed 50 years. The Group currently holds entitlements in the Chooz B and Tricastin power plants in France and in the virtual power plant (VPP) in Italy.

15.1.3 Others

At December 31, 2018, this caption mainly relates to software and licenses for €985 million, as well as to intangible assets (client portfolio) acquired as a result of business combinations and capitalized acquisition costs for customer contracts for €1,000 million.

15.2 Information regarding research and development costs

Accounting standards

Research costs are expensed as incurred.

Development costs are capitalized when the asset recognition criteria set out in IAS 38 are met. Capitalized development costs are amortized over the useful life of the intangible asset recognized.

Research and development activities primarily relate to various studies regarding technological innovation, improvements in plant efficiency, safety, environmental protection, service quality, and the use of energy resources.

Research and development costs, excluding technical assistance costs, totaled €182 million in 2018, of which €25 million expenses related to in-house projects in the development phase that meet the criteria for recognition as an intangible asset as defined in IAS 38.

NOTE 16 PROPERTY, PLANT AND EQUIPMENT

Accounting standards

Initial recognition and subsequent measurement

Items of property, plant and equipment are recognized at historical cost less any accumulated depreciation and any accumulated impairment losses.

The carrying amount of these items is not revalued as the Group has elected not to apply the allowed alternative method, which consists of regularly revaluing one or more categories of property, plant and equipment.

Investment subsidies are deducted from the gross value of the assets concerned.

In accordance with IAS 16, the initial cost of the item of property, plant and equipment includes an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, when the entity has a present, legal or constructive obligation to dismantle the item or restore the site. A corresponding provision for this obligation is recorded for the amount of the asset component.

Property, plant and equipment acquired under finance leases are carried in the consolidated statement of financial position at the lower of market value and the present value of the related minimum lease payments, in accordance with IAS 17. The corresponding liability is recognized under borrowings. These assets are depreciated using the same methods and useful lives as set out below.

Borrowing costs that are directly attributable to the construction of the qualifying asset are capitalized as part of the cost of that asset.

Cushion gas

“Cushion” gas injected into underground storage facilities is essential for ensuring that reservoirs can be operated effectively, and is therefore inseparable from these reservoirs. Unlike “working” gas which is included in inventories (see Note 27.2 “Inventories”), cushion gas is reported in Other Property, Plant and Equipment.

Depreciation

In accordance with the components approach, each significant component of an item of property, plant and equipment with a different useful life from that of the main asset to which it relates is depreciated separately over its own useful life.

Property, plant and equipment is depreciated mainly using the straight-line method over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Plant and equipment		
• Storage - Production - Transport - Distribution	5	60 ^(*)
• Installation - Maintenance	3	10
• Hydraulic plant and equipment	20	65
Other property, plant and equipment	2	33

(*)Excluding cushion gas.

The range of useful lives is due to the diversity of the assets in each category. The minimum periods relate to smaller equipment and furniture, while the maximum periods concern network infrastructures and storage facilities. In accordance with the law of January 31, 2003 adopted by the Belgian Chamber of Representatives with respect to the gradual phase-out of nuclear energy for the industrial production of electricity, the useful lives of nuclear power stations were reviewed and adjusted prospectively to 40 years as from 2003, except for Tihange, Doel 1 and Doel 2 for which the operating lives have been extended by 10 years.

Fixtures and fittings relating to hydro plants operated by the Group are depreciated over the shorter of the contract term and the useful life of the assets, taking into account the renewal of the concession period if such renewal is considered to be reasonably certain.

Risk of impairment

See Note 15 "Intangible assets".

Impairment indicators

See Note 14 "Goodwill".

CARRYING AMOUNT								
At December 31, 2017⁽¹⁾	588	2,579	41,554	115	1,291	4,653	280	51,062
AT DECEMBER 31, 2018	541	2,501	39,345	129	1,026	5,102	273	48,917

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement financial information").

In 2018, the net decrease in “Property, plant and equipment” takes into account:

- the classification under “Assets held for sale” (see Note 5.2 “Assets held for sale and discontinued operations”) for a negative €2,550 million of the Group’s interest in Glow (power generation in Thailand), the Langa group’s operating wind farms in France and solar fields in Mexico. The carrying amount of these property, plant and equipment, has been transferred to “Assets classified as held for sale” in the statement of financial position at December 31, 2018;
- depreciation for a total negative amount of €3,048 million;
- impairment losses amounting to €1,561 million, mainly related to thermal power generation assets in Europe (€1,268 million) and Latin America (€71 million), and gas infrastructure sites in France (€87 million);
- changes in the scope of consolidation for a negative €434 million, mainly resulting from the DBSO⁽¹⁾ activities relating to wind and solar farms in France (negative impact of €411 million), gas distribution activities in Hungary (negative impact of €155 million), LNG activities (negative impact of €110 million euros), slightly offset by the acquisition of the Langa group in France (€206 million);
- partly offset by maintenance and development investments for a total amount of €5,302 million mainly relating to the construction of plants and development of wind and solar farms in Latin America and France, the extension of transportation and distribution networks in the Infrastructures Europe segment.

In 2017, the net increase in “Property, plant and equipment” mainly resulted from:

- the transfer of the carrying amount of property, plant and equipment to “Assets held for sale” of Loy Yang B assets in the process being sold at December 31, 2017 and of exploration-production activities under discontinued operations for a negative total amount of €5,137 million;
- maintenance and development investments for a total amount of €5,062 million mainly related to the construction of plants and development of wind and solar farms in Latin America and France, and the extension of transportation and distribution networks in the Infrastructures Europe segment;
- depreciation for a total negative amount of €3,384 million;
- negative net translation adjustments of €1,738 million, mainly resulting from the US dollar (negative impact of €963 million) and the Brazilian real (negative impact of €439 million);
- impairment losses amounting to €719 million, mainly related to thermal power generation assets (€510 million) and gas storage facilities in Germany (€156 million);
- changes in the scope of consolidation for a negative €664 million, mainly resulting from the DBSO activities relating to wind and solar fields in France (negative impact of €277 million), and the disposal of power generation plants in the United-Kingdom (negative impact of €186 million).

16.2 Pledged and mortgaged assets

Items of property, plant and equipment pledged by the Group to guarantee borrowings and debt amounted to €1,298 million at December 31, 2018 compared to €2,185 million at December 31, 2017.

The decrease mainly related to the classification of Glow assets in Thailand under “Assets held for sale”. The secured debt, on the other hand, was classified as “Liabilities held for sale” (see Note 5.2).

16.3 Contractual commitments to purchase property, plant and equipment

In the ordinary course of their operations, some Group companies have entered into commitments to purchase, and the related third parties to deliver, property, plant and equipment. These commitments relate mainly to orders for equipment, and material related to the construction of energy production units and to service agreements.

(1) Develop Build Share and Operate.

Investment commitments made by the Group to purchase property, plant and equipment totaled €1,415 million at December 31, 2018 compared to €1,988 million at December 31, 2017.

16.4 Other information

Borrowing costs for 2018 included in the cost of property, plant and equipment amounted to €134 million at December 31, 2018 compared to €104 million at December 31, 2017.

NOTE 17 FINANCIAL INSTRUMENTS

17.1 Financial assets

Accounting standards

In accordance with the principles of IFRS 9 - *Financial Instruments*, financial assets are recognized and measured either at amortized cost, at fair value through equity or at fair value through profit or loss based on the following two criteria:

- a first criterion relating to the contractual cash flows characteristics of the financial asset. The analysis of the contractual cash flows characteristics allows to determine whether these cash flows are “only payments of principal and interest on the outstanding amounts” (known as “SPPI” test or Solely Payment of Principal and Interest);
- a second criterion relating to the business model used by the Group to manage its financial assets. IFRS 9 defines three different business models. A first business model whose objective is to hold assets in order to collect contractual cash flows (hold to collect), a second model whose objective is achieved by both collecting contractual cash flows and selling financial assets (hold to collect and sell) and other business models.

The identification of the business model and the analysis of the contractual cash flows characteristics require judgment to ensure that the financial assets are classified in the appropriate category.

Where the financial asset is an investment in an equity instrument and is not held for trading, the Group may irrevocably elect to present the gains and losses on that investment in other comprehensive income.

Except for trade receivables, which are measured at their transaction price in accordance with IFRS 15, financial assets are measured, on initial recognition, at their fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs that are directly attributable to their acquisition.

At each reporting period, financial assets measured using the amortized cost method or at fair value through other comprehensive income (with a recycling mechanism) are subject to an impairment test based on the expected credit losses method.

Financial assets also include derivatives that are measured at fair value in accordance with IFRS 9.

In accordance with IAS 1, the Group presents current and non-current assets and current and non-current liabilities separately in the statement of financial position. In view of the majority of the Group's activities, it was considered that the criterion to be used to classify assets is the expected time to realize the asset or settle the liability: the asset is classified as current if this period is less than 12 months and as non-current if it is more than 12 months after the reporting period.

The following table presents the Group's different categories of financial assets, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
		Non-current	Current	Total	Non-current	Current	Total
Other financial assets	17.1	6,193	2,290	8,483	5,586	2,010	7,596

TOTAL		8,886	44,692	53,578	8,535	38,374	46,908

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

17.1.1 Other financial assets

17.1.1.1 Equity instruments at fair value

Accounting standards

Equity instruments at fair value through other comprehensive income (OCI)

Under IFRS 9 an irrevocable election can be made to present in other comprehensive income subsequent changes in the fair value of an investment in an equity instrument that is not held for trading. This choice is made on an instrument-by-instrument basis. Amounts presented in other comprehensive income should not be transferred to profit or loss including proceeds of disposals. However, IFRS 9 authorizes the transfer of the accumulated profits and losses to another component of equity. Dividends from such investments are recognized in profit or loss unless the dividend clearly represents the recovery of a portion of the cost of the investment.

The equity instruments recognized under this line item mainly concern investments in companies that are not controlled by the Group and for which OCI measurement has been selected given their strategic and long-term nature.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost, plus transaction costs.

At each reporting date, for listed securities, the fair value is determined based on the quoted market price at the reporting date. For unlisted securities, fair value is measured using valuation models based primarily on the latest market transactions, the discounting of dividends or cash flows and the net asset value.

Equity instruments at fair value through profit or loss

Equity instruments that are held for trading or for which the Group has not elected for measurement at fair value through other comprehensive income are measured at fair value through profit or loss.

This category mainly includes investments in companies not controlled by the Group.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost.

At each reporting date, for listed and unlisted securities, the same measurement method as described above should be applied.

<i>In millions of euros</i>	Equity instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Total

Increase	50	170	220
Decrease	(62)	(118)	(179)
Changes in fair value	35	(46)	(10)
Changes in scope of consolidation, foreign exchange translation and other	(15)	(34)	(50)
AT DECEMBER 31, 2018	742	365	1,107

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

Equity instruments amounted to €1,107 million at December 31, 2018 of which €62 million in listed securities relating to equity instruments at fair value through other comprehensive income.

At December 31, 2018 the net book value of equity instruments at fair value through other comprehensive income amounted to €742 million. This amount mainly includes shares held by the group as minority interest in Nord Stream AG for an amount of €478 million.

In 2018, the Group received €55 million of dividends including €38 million from equity instruments at fair value through other comprehensive income (of which €1 million from shares sold in 2018) and €15 million from equity instruments at fair value through income (of which €3 million from shares sold in 2018).

17.1.1.2 Debt instruments at fair value

Accounting standards

Debt instruments at fair value through other comprehensive income

Financial assets that are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets and for which the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the outstanding amount (SPPI), are measured at fair value through OCI (with recycling mechanism). This involves a measurement through profit or loss for interest (at amortized cost using the effective interest method), depreciations and foreign exchange gains and losses, and through OCI (with recycling mechanism) for other gains or losses.

This category mainly includes bonds and financial deposits (step-up deposits).

Fair value gains and losses on these instruments are recognized in other comprehensive income, except for the following items which are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

When the financial asset is derecognized, the cumulative gain or loss that was previously recognized in other comprehensive income is reclassified from equity to profit or loss.

Debt instruments at fair value through profit or loss

Financial assets whose contractual cash flows do not consist solely of payments of principal and interest on the amount outstanding (SPPI) or that are held in view of an "other" business model are measured at fair value through profit or loss.

The Group's investments in UCITS are accounted for in this caption. They are considered as debt instruments, according to IAS 32 - *Financial Instruments: Presentation*, given the existence of an obligation for the issuer to redeem units, on

simple request of the holder. They are measured at fair value through profit or loss because the contractual cash flows characteristics do not meet the SPPI test.

<i>In millions of euros</i>	Debt instruments at fair value through other comprehensive income	Debt instruments at fair value through income	Liquid debt instruments held for cash investment purposes at fair value through other comprehensive income	Liquid debt instruments held for cash investment purposes at fair value through income	Total

AT DECEMBER 31, 2018	1,025	525	922	307	2,779

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

At December 31, 2018, the debt instruments at fair value amounted to €2,779 million including €1,947 million of debt instruments at fair value through other comprehensive income and €832 million of debt instruments at fair value through income (respectively €1,786 million and €857 million at December 31, 2017).

Debt instruments at fair value at December 31, 2018 include bonds and money market funds held by Synatom for €1,492 million and liquid instruments deducted from gross debt for €1,229 million (respectively €1,441 million and €1,138 million at December 31, 2017).

17.1.1.3 Loans and receivables at amortized cost

Accounting standards

Loans and receivables held by the Group under a business model consisting in holding the instrument in order to collect the contractual cash flows, and whose contractual cash flows consist solely of payments of principal and interest on the principal amount outstanding (SPPI test) are measured at amortized cost. Interest is calculated using the effective interest method.

The following items are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

Leasing security deposits are presented in this caption and recognized at their nominal value.

<i>In millions of euros</i>	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
	Non-current	Current	Total	Non-current	Current	Total
Loans granted to affiliated companies	1,498	121	1,619	990	97	1,087
Other receivables at amortized cost	675	241	916	672	107	779
Amounts receivable under concession contracts	544	68	612	571	82	653
Amounts receivable under finance leases	661	89	750	735	72	807
Margin calls on derivatives hedging borrowings - assets	-	699	699	-	500	500
TOTAL	3,378	1,218	4,596	2,968	858	3,826

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

The increase in “Loans and receivables at amortized cost” in 2018 includes the €247 million loan granted to Neptune Energy as part of the sale of the exploration-production business. This item also includes the financing of the Nord Stream 2 pipeline project for a nominal amount of €298 million (excluding capitalized interests and expected credit losses).

The table below shows impairment and expected credit losses on loans and receivables at amortized cost:

In millions of euros	Dec. 31, 2018				Dec. 31, 2017 ⁽¹⁾			
	Gross	Amortized cost	Impairment and expected credit losses ⁽²⁾	Net	Gross	Amortized cost	Impairment and expected credit losses ⁽²⁾	Net
Loans granted to affiliated companies	1,808	86	(275)	1,619	1,293	19	(225)	1,087
Other receivables at amortized cost	924	1	(10)	916	789	-	(10)	779
Amounts receivable under concession contracts	614	-	(1)	612	655	-	(2)	653
Amounts receivable under finance leases	783	1	(34)	750	839	1	(33)	807
Margin calls on derivatives hedging borrowings - assets	699	-	-	699	500	-	-	500
TOTAL	4,827	88	(319)	4,596	4,076	21	(270)	3,826

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 “Restatement of 2017 comparative data”).

(2) Including impairment on the Argentine State receivables, attributable to SUEZ (see Note 28.1.1 “Concessions in Buenos Aires and Santa Fe”).

Information on the age of past due receivables and on counterparty risk associated with loans and receivables at amortized cost are provided in Note 18.2 “Counterparty risk”.

Net gains and losses recognized in the income statement relating to loans and receivables at amortized cost break down as follows:

In millions of euros	Interest income	Post-acquisition measurement	
		Foreign currency translation	Expected credit loss
At December 31, 2018	263	(21)	(41)
At December 31, 2017 ⁽¹⁾	248	(13)	(8)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as “Discontinued operations” of ENGIE’s upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 “Restatement of 2017 comparative data”).

No material expected credit losses were recognized against loans and receivables at amortized cost at December 31, 2018 and December 31, 2017.

17.1.2 Trade and other receivables, assets from contracts with customers

Information on trade and other receivables and assets from contracts with customers are provided in Note 8.2.

17.1.3 Cash and cash equivalents

Accounting principles

This item includes cash equivalents as well as short-term investments that are considered to be readily convertible into a known amount of cash and where the risk of a change in their value is deemed to be negligible based on the criteria set out in IAS 7.

Bank overdrafts are not included in the calculation of cash and cash equivalents and are recorded under “Short-term borrowings”.

Cash and cash equivalent items are subject to impairment tests in accordance with the expected credit losses model of IFRS 9.

Cash and cash equivalents totaled €8,700 million at December 31, 2018 (€8,929 million at December 31, 2017).

This amount included funds related to the green bond issues, which remain unallocated to the funding of eligible projects (see section 5 of the Registration Document).

This amount also included at December 31, 2018 €121 million in cash and cash equivalents subject to restrictions (€141 million at December 31, 2017). Cash and cash equivalents subject to restrictions include notably €62 million of cash equivalents set aside to cover the repayment of borrowings and debt as part of project financing arrangements in certain subsidiaries.

Gains recognized in respect of "Cash and cash equivalents" amounted to €73 million at December 31, 2018 compared to €104 million at December 31, 2017.

17.1.4 Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material

As indicated in Note 20.2 "Nuclear dismantling liabilities", the Belgian law of April 11, 2003, amended by the law of April 25, 2007, granted the Group's wholly-owned subsidiary Synatom responsibility for managing and investing funds received from operators of nuclear power plants in Belgium and designed to cover the costs of dismantling nuclear power plants and managing radioactive fissile material.

Pursuant to the law, Synatom may lend up to 75% of these funds to operators of nuclear plants provided that they meet certain financial criteria – particularly in terms of credit quality. The funds that cannot be lent to operators are either lent to entities meeting the credit quality criteria set by the law or invested in financial assets such as bonds and money market funds.

Loans to entities outside the Group and other cash investments are shown in the table below:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Loans to third parties	512	516
Loan to Eso/Elia	454	454
Loan to Ores Assets	40	41
Loan to Sibelga	18	22
Others loans and receivables at amortized cost	163	23
Debt instruments - restricted cash	163	23
Equity and debt instruments at fair value	1,539	1,483
Equity instruments at fair value through other comprehensive income	47	41
Debt instruments at fair value through other comprehensive income	1,025	861
Debt instruments at fair value through income	467	580
TOTAL	2,214	2,022

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

Loans to entities outside the Group and the cash subject to restriction held by money market funds are shown in the statement of financial position as "Loans and receivables at amortized cost". Bonds and money market funds held by Synatom are shown as "equity instruments at fair value through other comprehensive income", "debt instruments at fair value through other comprehensive income" or "debt instruments at fair value through income" (see Note 17.1 "Financial assets").

17.1.5 Transfer of financial assets

At December 31, 2018, the outstanding amount of transferred financial assets (as well as the risks to which the Group remains exposed following the transfer of those financial assets) as part of transactions leading to either (i) all or part of

those assets being retained in the statement of financial position, or (ii) their full deconsolidation while retaining a continuing involvement in these financial assets, was not material in terms of the Group's indicators.

In 2018, the Group carried out disposals without recourse to financial assets as part of transactions leading to full derecognition, for an outstanding amount of €872 million at December 31, 2018.

17.1.6 Financial assets and equity instruments pledged as collateral for borrowings and debt

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Financial assets and equity instruments pledged as collateral	3,447	3,602

This item mainly includes the carrying amount of equity instruments pledged as collateral for borrowings and debt.

17.2 Financial liabilities

Accounting standards

Borrowings and other financial liabilities are measured at amortized cost using the effective interest rate method.

On initial recognition, any issue or redemption premiums and discounts and issuing costs are added to/deducted from the nominal value of the borrowings concerned. These items are taken into account when calculating the effective interest rate and are therefore recorded in the consolidated income statement over the life of the borrowings using the amortized cost method.

As regards structured debt instruments that do not have an equity component, the Group may be required to separate an “embedded” derivative instrument from its host contract. When an embedded derivative is separated from its host contract, the initial carrying amount of the structured instrument is broken down into an embedded derivative component, corresponding to the fair value of the embedded derivative, and a financial liability component, corresponding to the difference between the amount of the issue and the fair value of the embedded derivative. The separation of components upon initial recognition does not give rise to any gains or losses.

The debt is subsequently recorded at amortized cost using the effective interest method while the derivative is measured at fair value, with changes in fair value recognized in profit or loss.

Financial liabilities are recognized either:

- as “Amortized cost liabilities” for borrowings, trade payables and other creditors, and other financial liabilities;
- as “Liabilities measured at fair value through profit or loss” for derivative financial instruments and for financial liabilities designated as such.

The following table presents the Group’s different financial liabilities at December 31, 2018, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
		Non-current	Current	Total	Non-current	Current	Total
Borrowings and debt	17.2	26,434	5,745	32,178	25,292	8,175	33,467
Trade and other payables	17.2	-	19,759	19,759	-	16,404	16,404
Liabilities from contracts with customers	8.2	36	3,598	3,634	258	3,317	3,575
Derivative instruments	17.4	2,785	11,510	14,295	2,980	8,720	11,700
Other financial liabilities	17.2	46	-	46	32	-	32
TOTAL		29,301	40,612	69,913	28,562	36,617	65,179

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 “Restatement of 2017 comparative data”).

17.2.1 Trade and other payables

In millions of euros	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
Trade payables	19,192	15,983
Payable on fixed assets	568	422
TOTAL	19,759	16,404

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 “Restatement of 2017 comparative data”).

The carrying amount of these financial liabilities represents a reasonable estimate of their fair value.

17.2.2 Liabilities from contracts with customers

Information on liabilities from contracts with customers are provided in Note 8.2.

17.2.3 Borrowings and debt

In millions of euros	Dec. 31, 2018			Dec. 31, 2017 ⁽¹⁾		
	Non-current	Current	Total	Non-current	Current	Total
Bond issues	21,444	1,202	22,645	20,062	2,175	22,237

BORROWINGS AND DEBT	26,434	5,745	32,178	25,292	8,175	33,467

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

The fair value of gross borrowings and debt amounted to €33,651 million at December 31, 2018, compared with a carrying amount of €32,178 million.

Financial income and expenses relating to borrowings and debt are detailed in Note 11 "Net financial income/(loss)".

Borrowings and debt are analyzed in Note 17.3 "Net debt".

17.2.4 Other financial liabilities

At December 31, 2018, other financial liabilities amounted to €46 million (compared to €32 million at December 31, 2017), mainly corresponding to debt resulting from uncalled share capital of entities accounted for using the equity method.

17.3 Net debt

17.3.1 Net debt by type

NET DEBT EXCLUDING THE IMPACT OF AMORTIZED COST, DERIVATIVE INSTRUMENTS AND MARGIN CALLS	25,796	(4,584)	21,212	24,626	(2,351)	22,275

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

(2) This item corresponds to the revaluation of the interest rate component of debt in a qualified fair value hedging relationship.

(3) This item represents the interest rate component of the fair value of derivatives hedging borrowings in a designated fair value hedging relationship. It also represents the exchange rate and outstanding accrued interest rate components of the fair value of all debt-related derivatives irrespective of whether or not they qualify as hedges.

Net debt excluding internal debt of discontinued operations amounted to €20,788 million at December 31, 2017 (see Notes 5.1.2 "Disposal of the exploration-production business" and 5.1.4 "Disposal of ENGIE's liquefied natural gas (LNG) activities").

17.3.2 Reconciliation between net debt and cash flow from (used in) financing activities

In millions of euros	Dec. 31, 2017 ⁽¹⁾	Cash flow from financing activities	Cash flow from operating and investing activities and variation of cash and cash equivalents	Change in fair value	Translation adjustments	Change in scope of consolidation and others	Dec. 31, 2018
Outstanding borrowings	32,401	(589)	-	-	41	(658)	31,195

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

17.3.3 Main events of the period

17.3.3.1 Impact of changes in the scope of consolidation and in exchange rates on net debt

In 2018, changes in exchange rates resulted in a €19 million increase in net debt, including a €124 million decrease in relation to the Brazilian real, which was offset by a €151 million increase in debt denominated in US dollars.

Changes in the scope of consolidation (including the cash impact of acquisitions and disposals) led to a €2,605 million decrease in net debt, reflecting:

- disposals of assets over the period, which reduced net debt by €3,938 million, notably including the disposal of the exploration-production business, upstream liquefied natural gas (LNG) activities, the Loy Yang B power plant in Australia and the gas distribution business in Hungary (see Note 5.1 "Disposals carried out in 2018");
- the classification of Glow under "Assets held for sale" (see Note 5.2.1 "Disposal of ENGIE's interest in Glow") and assets held by the Langa group (see Note 5.2.2 "Disposal of Langa group asset disposal program") which reduced net debt by €993 million;
- acquisitions carried out in 2018 (chiefly in the United States with the purchase of companies in the renewable energy and services sectors and in France with the purchase of the Langa group, Priora FM SA and a majority interest in Electro Power Systems), which increased net debt by €2,326 million (see Note 5.3 "Acquisitions carried out in 2018").

17.3.3.2 Financing and refinancing transactions

The Group carried out the following main transactions in 2018:

- on June 22, 2018, ENGIE SA issued €750 million worth of bonds maturing in June 2028 with a 1.421% coupon;
- on September 19, 2018, ENGIE SA issued €1 billion worth of bonds:
 - a €500 million tranche maturing in September 2025 with a 0.875% coupon,
 - a €500 million tranche maturing in September 2033 with a 1.875% coupon;
- the redemption of the following bonds, which matured in 2018:
 - ENGIE SA redeemed the €644 million worth of bonds that matured on February 18, 2018 with a 5.125% coupon,
 - ENGIE SA redeemed the €729 million worth of bonds that matured on June 1, 2018 with a 2.25% coupon,
 - ENGIE SA redeemed the €150 million worth of bonds that matured on October 17, 2018 with a 3.046% coupon;
- on July 5, July 11 and October 16, 2018, ENGIE SA carried out private issues in the amounts of €75 million, AUD 85 million (€53 million) and €50 million, maturing in 2038, 2033 and 2027 respectively;
- on June 6, 2018, ENGIE gave notice that it had exercised the annual prepayment option for the €600 million tranche of deeply-subordinated notes (representing a total amount of €621 million including the accrued coupon) that had previously been recognized in equity in an amount of €584 million. ENGIE SA redeemed the bonds on July 10, 2018;
- on December 5, 2018, ENGIE gave notice that it had exercised the annual prepayment option for the GBP 300 million tranche of deeply-subordinated notes (representing a total amount of €352 million including the accrued coupon) that had previously been recognized in equity in an amount of €340 million;
- on December 12, 2018, Electrabel SA repaid the €300 million bank loan with a variable 3-month Euribor coupon;
- ENGIE Brasil Energia carried out the following transactions:
 - on June 28, 2018, ENGIE Brasil Energia carried out four bond issues totaling BRL 1,802 million (€401 million). BRL 782 million of these issues will mature in 2023 and BRL 1,020 million in 2027;
 - on July 25, 2018, ENGIE Brasil Energia carried out two bond issues totaling BRL 746 million (€161 million). BRL 515 million of these issues will mature in 2025 and BRL 231 million in 2028;
 - on August 27, 2018, ENGIE Brasil Energia took out 11 bank loans to finance wind farm projects totaling BRL 730 million (€153 million) and maturing in 2035;
 - in April 2018 and November 2018, ENGIE Brasil Energia took out four bank loans totaling USD 400 million including €174 million maturing in 2020 and €174 million in 2021;
 - in August 2018 and December 2018, ENGIE Brasil Energia took out bank loans totaling BRL 635 million (€143 million) maturing in January 2036;
 - on June 29, 2018, ENGIE Brasil Energia partially redeemed bonds in an amount of BRL 1,685 million (€375 million).

17.4 Derivative instruments

Accounting standards

Derivative financial instruments are measured at fair value. This fair value is determined on the basis of market data, available from external contributors. In the absence of an external benchmark, a valuation based on internal models recognized by market participants and favoring data directly derived from observable data such as OTC quotations will be used.

The change in fair value of derivative financial instruments is recorded in the income statement except when they are designated as hedging instruments in a cash flow hedge or net investment hedge. In this case, changes in the value of the hedging instruments are recognized directly in equity, excluding the ineffective portion of the hedges.

The Group uses derivative financial instruments to manage and reduce its exposure to market risks arising from fluctuations in interest rates, foreign currency exchange rates and commodity prices, mainly for gas and electricity. The use of derivative instruments is governed by a Group policy for managing interest rate, currency and commodity risks (see *Note 18 – Risks arising from financial instruments*).

Derivative financial instruments are contracts (i) whose value changes in response to the change in one or more observable variables, (ii) that do not require any material initial net investment, and (iii) that are settled at a future date.

Derivative instruments therefore include swaps, options, futures and swaptions, as well as forward commitments to purchase or sell listed and unlisted securities, and firm commitments or options to purchase or sell non-financial assets that involve physical delivery of the underlying.

For purchases and sales of electricity and natural gas, the Group systematically analyzes whether the contract was entered into in the “normal” course of operations and therefore falls outside the scope of IFRS 9. This analysis consists firstly in demonstrating that the contract is entered into and continues to be held for the purpose of physical delivery or receipt of the commodity in accordance with the Group’s expected purchase, sale or usage requirements.

The second step is to demonstrate that the Group has no practice of settling similar contracts on a net basis and that these contracts are not equivalent to written options. In particular, in the case of electricity and gas sales allowing the buyer a certain degree of flexibility concerning the volumes delivered, the Group distinguishes between contracts that are equivalent to capacity sales considered as transactions falling within the scope of ordinary operations and those that are equivalent to written financial options, which are accounted for as derivative financial instruments.

Only contracts that meet all of the above conditions are considered as falling outside the scope of IFRS 9. Adequate specific documentation is compiled to support this analysis.

Embedded derivatives

The main Group contracts that may contain embedded derivatives are contracts with clauses or options potentially affecting the contract price, volume or maturity. This is the case primarily with contracts for the purchase or sale of non-financial assets, whose price is revised based on an index, the exchange rate of a foreign currency or the price of an asset other than the contract’s underlying.

An embedded derivative is a component of a hybrid (combined) instrument that also includes a non-derivative host contract – with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

If a hybrid contract contains a host that is an asset within the scope of IFRS 9, the Group applies the presentation and measurements requirements described in paragraph 17.1. to the entire hybrid contract.

Conversely, when a hybrid contract contains a host that is not an asset within the scope of IFRS 9, an embedded derivative shall be separated from the host and accounted for as a derivative if, and only if:

- the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host;
- a separate instrument within the same terms as the embedded derivative would meet the definition of a derivative; and
- the hybrid contract is not measured at fair value with changes in fair value recognized in profit or loss (i.e. a derivative that is embedded in a financial liability at fair value through profit or loss is not separated).

If an embedded derivative is separate from the host contract, it shall be measured at fair value and fair value changes are recognized in profit or loss (except if the embedded derivative is documented in a hedge relationship).

Hedging instruments: recognition and presentation

Derivative instruments qualifying as hedging instruments are recognized in the consolidated statement of financial position and measured at fair value. However, their accounting treatment varies according to whether they are classified as (i) a fair value hedge of an asset or liability; (ii) a cash flow hedge or (iii) a hedge of a net investment in a foreign operation.

Fair value hedges

A fair value hedge is defined as a hedge of the exposure to changes in fair value of a recognized asset or liability such as a fixed-rate loan or borrowing, or of assets, liabilities or an unrecognized firm commitment denominated in a foreign currency. The gain or loss from remeasuring the hedging instrument at fair value is recognized in income. The gain or loss on the hedged item attributable to the hedged risk adjusts the carrying amount of the hedged item and is also recognized in income even if the hedged item is in a category in respect of which changes in fair value are recognized through other comprehensive income. These two adjustments are presented net in the consolidated income statement, with the net effect corresponding to the ineffective portion of the hedge.

Cash flow hedges

A cash flow hedge is a hedge of the exposure to variability in cash flows that could affect the Group's income. The hedged cash flows may be attributable to a particular risk associated with a recognized financial or non-financial asset or a highly probable forecast transaction.

The portion of the gain or loss on the hedging instrument that is determined to be an effective hedge is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in income. The gains or losses accumulated in equity are reclassified to the consolidated income statement under the same caption as the loss or gain on the hedged item – i.e. current operating income for operating cash flows and financial income or expenses for other cash flows – in the same periods in which the hedged cash flows affect income.

If the hedging relationship is discontinued, in particular because the hedge is no longer considered effective, the cumulative gain or loss on the hedging instrument remains recognized in equity until the forecast transaction occurs. However, if a forecast transaction is no longer expected to occur, the cumulative gain or loss on the hedging instrument is immediately recognized in income.

Hedge of a net investment in a foreign operation

In the same way as for a cash flow hedge, the portion of the gain or loss on the hedging instrument that is determined to be an effective hedge of the currency risk is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in income. The gains or losses accumulated in other comprehensive income are transferred to the consolidated income statement when the investment is liquidated or sold.

Hedging instruments: identification and documentation of hedging relationships

The hedging instruments and hedged items are designated at the inception of the hedging relationship. The hedging relationship is formally documented in each case, specifying the hedging strategy, the hedged risk and the method used to assess hedge effectiveness. Only derivative contracts entered into with external counterparties are considered as being eligible for hedge accounting.

Hedge effectiveness is assessed and documented at the inception of the hedging relationship and on an ongoing basis throughout the periods for which the hedge was designated.

Hedge effectiveness is demonstrated both prospectively and retrospectively using various methods, based mainly on a comparison between changes in fair value or cash flows between the hedging instrument and the hedged item. Methods based on an analysis of statistical correlations between historical price data are also used.

Derivative instruments not qualifying for hedge accounting: recognition and presentation

These items mainly concern derivative financial instruments used in economic hedges that have not been – or are no longer – documented as hedging relationships for accounting purposes.

When a derivative financial instrument does not qualify or no longer qualifies for hedge accounting, changes in fair value are recognized directly in income, under “Mark-to-market” or “Mark-to-market on commodity contracts other than trading instruments” below current operating income for derivative instruments with non-financial assets as the underlying, and in financial income or expenses for currency, interest rate and equity derivatives.

Derivative instruments not qualifying for hedge accounting used by the Group in connection with proprietary commodity trading activities and other derivatives expiring in less than 12 months are recognized in the consolidated statement of financial position in current assets and liabilities, while derivatives expiring after this period are classified as non-current items.

Fair value measurement

The fair value of instruments listed on an active market is determined by reference to the market price. In this case, these instruments are presented in level 1 of the fair value hierarchy.

The fair value of unlisted financial instruments for which there is no active market and for which observable market data exist is determined based on valuation techniques such as option pricing models or the discounted cash flow method.

Models used to evaluate these instruments take into account assumptions based on market inputs:

- the fair value of interest rate swaps is calculated based on the present value of future cash flows;
- the fair value of forward foreign exchange contracts and currency swaps is calculated by reference to current prices for contracts with similar maturities by discounting the future cash flow spread (difference between the forward exchange rate under the contract and the forward exchange rate recalculated in line with the new market conditions applicable to the nominal amount);
- the fair value of currency and interest rate options is calculated using option pricing models;
- commodity derivatives contracts are valued by reference to listed market prices based on the present value of future cash flows (commodity swaps or commodity forwards) and option pricing models (options), for which market price volatility may be a factor. Contracts with maturities exceeding the depth of transactions for which prices are observable, or which are particularly complex, may be valued based on internal assumptions;
- exceptionally, for complex contracts negotiated with independent financial institutions, the Group uses the values established by its counterparties.

These instruments are presented in level 2 of the fair value hierarchy except when the evaluation is based mainly on data that are not observable; in which case they are presented in level 3 of the fair value hierarchy. Most often, this is the case for derivatives with a maturity that falls outside the observability period for market data relating to the underlying or when some parameters such as the volatility of the underlying are not observable.

Except in case of enforceable master netting arrangements or similar agreements, counterparty risk is included in the fair value of financial derivative instrument assets and liabilities. It is calculated according to the “expected loss” method and takes into account the exposure at default, the probability of default and the loss given default. The probability of default is determined on the basis of credit ratings assigned to each counterparty (“historical probability of default” approach).

Derivative instruments recognized in assets and liabilities are measured at fair value and broken down as follows:

In millions of euros	Dec. 31, 2018						Dec. 31, 2017 ⁽¹⁾					
	Assets			Liabilities			Assets			Liabilities		
	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total
Derivatives hedging borrowings	678	42	720	259	66	325	610	63	673	293	59	352
Derivatives hedging commodities	1,409	10,608	12,018	1,311	11,405	12,716	1,532	7,231	8,763	1,475	8,544	10,018
Derivatives hedging other items ⁽²⁾	606	28	634	1,215	38	1,254	806	83	889	1,212	118	1,329
TOTAL	2,693	10,679	13,372	2,785	11,510	14,295	2,949	7,378	10,326	2,980	8,720	11,700

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 “Restatement of 2017 comparative data”).

(2) Derivatives hedging other items mainly include the interest rate component of interest rate derivatives (not qualifying as hedges or qualifying as cash flow hedges) that are excluded from net debt, as well as net investment hedge derivatives.

17.4.1 Offsetting of derivative instrument assets and liabilities

The net amount of derivative instruments after taking into account enforceable master netting arrangements or similar agreements, whether or not they are set off in accordance with Section 42 of IAS 32, are presented in the table below:

In millions of euros	Dec. 31, 2018					Dec. 31, 2017				
	Gross amount	NET AMOUNT RECOGNIZED IN THE STATEMENT OF FINANCIAL POSITION ⁽²⁾		Other offsetting agreements ⁽³⁾	TOTAL NET AMOUNT	Gross amount	NET AMOUNT RECOGNIZED IN THE STATEMENT OF FINANCIAL POSITION ^(1,2)		Other offsetting agreements ⁽³⁾	TOTAL NET AMOUNT
Assets										
Derivatives hedging commodities	12,588		12,018	(8,409)	3,608	9,177		8,763	(5,061)	3,703
Derivatives hedging borrowings and other items	1,354		1,354	(384)	970	1,563		1,563	(315)	1,248
Liabilities										
Derivatives hedging commodities	(13,286)		(12,716)	10,448	(2,268)	(10,432)		(10,018)	7,221	(2,798)
Derivatives hedging borrowings and other items	(1,579)		(1,579)	601	(978)	(1,682)		(1,682)	393	(1,289)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 “Restatement of 2017 comparative data”).

(2) Net amount recognized in the statement of financial position after taking into account offsetting agreements that meet the criteria set out in Section 42 of IAS 32.

(3) Other offsetting agreements include collateral and other guarantee instruments, as well as offsetting agreements that do not meet the criteria set out in Section 42 of IAS 32.

17.5 Fair value of financial instruments by level in the fair value hierarchy

17.5.1 Financial assets

The table below shows the allocation of financial instruments carried in assets to the different levels in the fair value hierarchy:

In millions of euros	Dec. 31, 2018				Dec. 31, 2017 ⁽¹⁾			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Other financial assets (excluding loans and receivables at amortized cost)	3,887	1,554	-	2,332	3,493	976	277	1,937
Equity instruments at fair value through other comprehensive income	742	62	-	680	733	55	-	678
Equity instruments at fair value through income	365	-	-	365	393	37	-	356
Debt instruments at fair value through other comprehensive income	1,947	1,025	-	922	1,786	884	-	902
Debt instruments at fair value through income	832	467	-	365	580	-	277	-
Derivative instruments	13,372	38	12,912	422	10,326	21	9,993	313
Derivatives hedging borrowings	720	-	720	-	673	-	673	-
Derivatives hedging commodities - relating to portfolio management activities ⁽²⁾	2,075	-	2,036	39	2,001	-	1,969	32
Derivatives hedging commodities - relating to trading activities ⁽²⁾	9,943	38	9,522	383	6,763	21	6,461	281
Derivatives hedging other items	634	-	634	-	889	-	889	-
TOTAL	17,259	1,593	12,912	2,754	13,820	997	10,270	2,249

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

(2) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and a power contract that are measured at fair value and relating to trading activities.

A definition of these three levels is presented in Note 17.4 "Derivative instruments".

Other financial assets (excluding loans and receivables at amortized cost)

At December 31, 2018, changes in level 3 equity and debt instruments at fair value can be analyzed as follows:

In millions of euros	Equity instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Debt instruments at fair value through other comprehensive income	Debt instruments at fair value through income	Other financial assets (excluding loans and receivables at amortized cost)
At December 31, 2017⁽¹⁾	678	356	902	277	2,213
Acquisitions	44	170	170	85	469
Disposals	(61)	(81)	(145)	(2)	(290)
Changes in fair value	34	(46)	-	-	(11)
Changes in scope of consolidation, foreign currency translation and other changes	(15)	(34)	(5)	6	(49)
At December 31, 2018	680	365	922	365	2,332
Gains/(losses) recorded in income relating to instruments held at the end of the period					-

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

Derivative instruments

At December 31, 2018, changes in level 3 derivative instruments commodities can be analyzed as follows:

<i>In millions of euros</i>	Net Asset/(Liability)
At December 31, 2017	(188)
Changes in fair value recorded in income	29
Settlements	87
Transfer out of level 3 to levels 1 and 2	(6)
Net fair value recorded in income	(79)
Deferred Day-One gains/(losses)	(4)
At December 31, 2018	(83)

17.5.2 Financial liabilities

The table below shows the allocation of financial instruments carried in liabilities to the different levels in the fair value hierarchy:

<i>In millions of euros</i>	Dec. 31, 2018				Dec. 31, 2017⁽¹⁾			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Borrowings used in designated fair value hedges	5,358	-	5,358	-	5,217	-	5,217	-
Borrowings not used in designated fair value hedges	28,293	19,028	9,265	-	30,352	19,478	10,874	-
Derivative instruments	14,295	26	13,764	505	11,700	26	11,173	501
Derivatives hedging borrowings	325	-	325	-	352	-	352	-
Derivatives hedging commodities - relating to portfolio management activities ⁽²⁾	2,124	-	2,075	49	2,210	-	2,140	70
Derivatives hedging commodities - relating to trading activities ⁽²⁾	10,592	26	10,110	456	7,808	26	7,351	431
Derivatives hedging other items	1,254	-	1,254	-	1,329	-	1,329	-
TOTAL	47,946	19,054	28,387	505	47,269	19,504	27,264	501

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

(2) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and a power contract that are measured at fair value and relating to trading activities.

A definition of these three levels is presented in Note 17.4 "Derivative instruments".

Borrowings used in designated fair value hedges

This caption includes bonds in a designated fair value hedging relationship which are presented in level 2 in the above table. Only the interest rate component of the bonds is remeasured, with fair value determined by reference to observable inputs.

Borrowings not used in designated fair value hedges

Listed bond issues are included in level 1.

Other borrowings not used in a designated hedging relationship, which are presented in level 2 in the above table. The fair value of these borrowings is determined on the basis of future discounted cash flows and relies on directly or indirectly observable data.

NOTE 18 RISKS ARISING FROM FINANCIAL INSTRUMENTS

The Group mainly uses derivative instruments to manage its exposure to market risks. Financial risk management procedures are set out in Chapter 2 “Risk factors” of the Registration Document.

18.1 Market risks

18.1.1 Commodity risk

Commodity risk arises primarily from the following activities:

- portfolio management; and
- trading.

The Group has identified primarily two types of commodity risks: price risk resulting from fluctuations in market prices, and volume risk inherent to the business.

In the ordinary course of its operations, the Group is exposed to commodity risks on natural gas, electricity, coal, oil and oil products, other fuels, CO₂ and other “green” products. The Group is active on these energy markets either for supply purposes or to optimize and secure its energy production chain and its energy sales. The Group also uses derivatives to offer hedging instruments to its clients and to hedge its own positions.

18.1.1.1 Portfolio management activities

Portfolio management seeks to optimize the market value of assets (power plants, gas and coal supply contracts, energy sales and gas storage and transportation) over various time frames (short-, medium- and long-term). Market value is optimized by:

- guaranteeing supply and ensuring the balance between physical needs and resources;
- managing market risks (price, volume) to unlock optimum value from portfolios within a specific risk framework.

The risk framework aims to safeguard the Group’s financial resources over the budget period and smooth out medium-term earnings (over three or five years, depending on the maturity of each market). It encourages portfolio managers to take out economic hedges on their portfolio.

Sensitivities of the commodity-related derivatives portfolio used as part of the portfolio management activities as at December 31, 2018 are detailed in the table below. They are not representative of future changes in consolidated earnings and equity, insofar as they do not include the sensitivities relating to the purchase and sale contracts for the underlying commodities.

Sensitivity analysis⁽¹⁾

In millions of euros	Changes in price	Dec. 31, 2018		Dec. 31, 2017	
		Pre-tax impact on income	Pre-tax impact on equity	Pre-tax impact on income	Pre-tax impact on equity
Oil-based products	+USD 10/bbl	60	-	307	197
Natural gas	+€3/MWh	961	1	(17)	(48)
Electricity	+€5/MWh	65	(26)	145	(30)
Coal	+USD 10/ton	9	2	33	2
Greenhouse gas emission rights	+€2/ton	37	1	53	-
EUR/USD	+10%	67	(2)	102	(233)
EUR/GBP	+10%	87	-	69	2

(1) The sensitivities shown above apply solely to financial commodity derivatives used for hedging purposes as part of the portfolio management activities.

The change in sensitivity on natural gas compared to December 31, 2017 is mainly related to the sale of the upstream LNG activities, whose long exposure offset the short exposure of the gas supply activities.

18.1.1.2 Trading activities

The Group's trading activities are primarily conducted within:

- ENGIE Global Markets and ENGIE Energy Management. The purpose of these wholly-owned companies is to (i) assist Group entities in optimizing their asset portfolios; (ii) create and implement energy price risk management solutions for internal and external customers;
- ENGIE SA for the optimization of part of its long-term gas supply contracts, of a power exchange contract and of part of its gas sales contracts with retail entities in France and Benelux and with power generation facilities in France and Belgium.

Revenues from trading activities totaled €526 million at December 31, 2018 (€349 million at December 31, 2017).

The use of Value at Risk (VaR) to quantify market risk arising from trading activities provides a transversal measure of risk taking all markets and products into account. VaR represents the maximum potential loss on a portfolio over a specified holding period based on a given confidence interval. It is not an indication of expected results but is back-tested on a regular basis.

The Group uses a one-day holding period and a 99% confidence interval to calculate VaR, as well as stress tests, in accordance with banking regulatory requirements.

The VaR shown below corresponds to the global VaR of the Group's trading entities.

Value at Risk

In millions of euros	Dec. 31, 2018	2018 average ⁽¹⁾	2018 maximum ⁽²⁾	2018 minimum ⁽²⁾	2017 average ⁽¹⁾
Trading activities	13	10	21	4	9

(1) Average daily VaR.

(2) Maximum and minimum daily VaR observed in 2018.

18.1.2 Hedges of commodity risks

The Group enters into cash flow hedges, using derivative instruments (firm or option contracts) contracted over the counter or on organized markets, to reduce its commodity risks that relate mainly to future cash flows from contracted or expected sales and purchases of commodities. These instruments may be settled net or involve physical delivery of the underlying.

The Group applies cash flow hedge accounting as defined by IFRS 9 only for a minor part of the aforementioned hedge transactions. The disposal of the Group's upstream liquefied natural gas activities and of the exploration-production business (70% interest in EPI) in 2018 further reduced the materiality of hedge accounting for commodity risks.

The fair values of commodity derivatives at December 31, 2018 and December 31, 2017 are indicated in the table below:

In millions of euros	Dec. 31, 2018				Dec. 31, 2017 ⁽¹⁾			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Derivative instruments relating to portfolio management activities	1,409	666	(1,311)	(813)	1,532	468	(1,475)	(736)
Cash flow hedges	46	56	(61)	(129)	186	62	(208)	(110)
Other derivative instruments	1,364	610	(1,249)	(684)	1,346	406	(1,267)	(625)
Derivative instruments relating to trading activities	-	9,943	-	(10,592)	-	6,763	-	(7,808)
TOTAL	1,409	10,608	(1,311)	(11,405)	1,532	7,231	(1,475)	(8,544)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

See also Note 17.4 “Derivative instruments”.

The fair values shown in the table above reflect the amounts for which assets could be exchanged, or liabilities settled, at the end of the reporting period. They are not representative of expected future cash flows insofar as positions (i) are sensitive to changes in prices; (ii) can be modified by subsequent transactions; and (iii) can be offset by future cash flows arising on the underlying transactions.

18.1.2.1 Cash flow hedges

The fair values of cash flow hedges by type of commodity are as follows:

In millions of euros	Dec. 31, 2018				Dec. 31, 2017 ⁽¹⁾			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Natural gas	20	15	(1)	(3)	14	12	-	(10)
Electricity	1	3	(44)	(120)	3	7	(44)	(52)
Coal	7	3	-	-	8	4	-	-
Oil	-	-	-	-	145	1	-	(1)
Other ⁽²⁾	18	35	(16)	(6)	16	38	(164)	(47)
TOTAL	46	56	(61)	(129)	186	62	(208)	(110)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 “Restatement of 2017 comparative data”).

(2) Includes mainly foreign currency hedges on commodities.

Notional amounts (net)⁽¹⁾

Notional amounts and maturities of cash flow hedges are as follows:

	Unit	Total at Dec. 31, 2018	2019	2020	2021	2022	2023	Beyond 5 years
Natural gas	GWh	5,619	3,258	2,361	-	-	-	-
Electricity	GWh	(8,028)	(4,601)	(2,241)	(1,186)	-	-	-
Coal	Thousands of tons	220	128	92	-	-	-	-
Oil-based products	Thousands of barrels	-	-	-	-	-	-	-
Forex	Millions of euros	65	25	21	18	-	-	-
Greenhouse gas emission rights	Thousands of tons	1,050	900	150	-	-	-	-

(1) Long/(short) position.

At December 31, 2018, a loss of €35 million was recognized in equity in respect of cash flow hedges, versus a loss of €24 million at December 31, 2017. A loss of €20 million was reclassified from equity to income in 2018, compared to a loss of €185 million in 2017.

Gains and losses arising from the ineffective portion of hedges are taken through profit or loss. This represented a gain of €8 million in 2018, compared to a loss of €6 million in 2017.

18.1.2.2 Other commodity derivatives

Other commodity derivatives include:

- commodity purchase and sale contracts that were not entered into or are no longer held for the purpose of the receipt or delivery of commodities in accordance with the Group’s expected purchase, sale or usage requirements;
- embedded derivatives; and
- derivative financial instruments that are not eligible for hedge accounting in accordance with IFRS 9 or for which the Group has elected not to apply hedge accounting.

18.1.3 Currency risk

The Group is exposed to currency risk, defined as the impact on its statement of financial position and income statement of fluctuations in exchange rates affecting its operating and financing activities. Currency risk comprises (i) transaction risk arising in the ordinary course of business, (ii) specific transaction risk related to investments, mergers and acquisitions or disposal projects, and (iii) translation risk arising from the conversion in euros of income statement and statement of financial position items from subsidiaries with a functional currency other than the euro. The main translation risk exposures correspond, in order, to assets in American dollars, Brazilian real and pounds sterling.

18.1.3.1 Financial instruments by currency

The following tables present a breakdown by currency of outstanding gross debt and net debt, before and after hedging:

Outstanding gross debt

	Dec. 31, 2018		Dec. 31, 2017	
	Before hedging	After hedging	Before hedging	After hedging
EUR	68%	76%	69%	79%
USD	12%	14%	12%	11%
GBP	8%	1%	7%	0%
Other currencies	12%	9%	12%	10%
TOTAL	100%	100%	100%	100%

Net debt

	Dec. 31, 2018		Dec. 31, 2017	
	Before hedging	After hedging	Before hedging	After hedging
EUR	63%	75%	65%	80%
USD	15%	18%	16%	14%
GBP	12%	1%	9%	(1)%
Other currencies	10%	6%	10%	7%
TOTAL	100%	100%	100%	100%

18.1.3.2 Currency risk sensitivity analysis

Sensitivity analysis to currency risk on financial income/(loss) – excluding the income statement translation impact of foreign subsidiaries – was performed based on all financial instruments managed by the treasury department and representing a currency risk (including derivative financial instruments).

Sensitivity analysis to currency risk on equity was performed based on all financial instruments qualified as net investment hedges at the reporting date.

For currency risk, sensitivity corresponds to a 10% rise or fall in exchange rates of foreign currencies against the euro compared to closing rates.

	Dec. 31, 2018		
	Impact on income	Impact on equity	
<i>In millions of euros</i>	+10% ⁽¹⁾	-10% ⁽¹⁾	+10% ⁽¹⁾
Exposures denominated in a currency other than the functional currency of companies carrying the liabilities on their statements of financial position ⁽²⁾	(18)	18	NA
Financial instruments (debt and derivatives) qualified as net investment hedges ⁽³⁾	NA	NA	137

(1) +(-)10%: depreciation (appreciation) of 10% on all foreign currencies against the euro.

(2) Excluding derivatives qualified as net investment hedges.

(3) This impact is countered by the offsetting change in the net investment hedged.

18.1.4 Interest rate risk

The Group seeks to manage its borrowing costs by limiting the impact of interest rate fluctuations on its income statement. The Group's policy is therefore to arbitrate between fixed rates, floating rates and capped floating rates for its net debt. The interest rate mix may shift within a range defined by the Group Management in line with market trends.

In order to manage the interest rate structure for its net debt, the Group uses hedging instruments, particularly interest rate swaps and options. At December 31, 2018, the Group had a portfolio of interest rate options (caps) protecting it from a rise in short-term interest rates for the euro.

The Group has a portfolio of 2019 and 2020 forward interest rate pre-hedges with respective 18- and 10-year maturities to protect the refinancing interest rate on a portion of its debt.

18.1.4.1 Analysis of financial instruments by type of interest rate

The following tables present a breakdown by type of interest rate of outstanding gross debt and net debt before and after hedging.

Outstanding gross debt

	Dec. 31, 2018		Dec. 31, 2017	
	Before hedging	After hedging	Before hedging	After hedging
Floating rate	23%	43%	29%	39%
Fixed rate	77%	57%	71%	61%
TOTAL	100%	100%	100%	100%

Net debt

	Dec. 31, 2018		Dec. 31, 2017	
	Before hedging	After hedging	Before hedging	After hedging
Floating rate	(11)%	19%	(1)%	14%
Fixed rate	111%	81%	101%	86%
TOTAL	100%	100%	100%	100%

18.1.4.2 Interest rate risk sensitivity analysis

Sensitivity was analyzed based on the Group's net debt position (including the impact of interest rate and foreign currency derivatives relating to net debt) at the reporting date.

For interest rate risk, sensitivity corresponds to a 100-basis-point rise or fall in the yield curve compared to year-end interest rates.

In millions of euros	Dec. 31, 2018			
	Impact on income		Impact on equity	
	+100 basis points	-100 basis points	+100 basis points	-100 basis points
Net interest expense on floating-rate net debt (nominal amount) and on floating-rate leg of derivatives	(40)	39	NA	NA
Change in fair value of derivatives not qualifying as hedges	51	(65)	NA	NA
Change in fair value of derivatives qualifying as cash flow hedges	NA	NA	321	(412)

18.1.5 Currency and interest rate hedges

18.1.5.1 Currency risk management

Foreign currency exchange risk (or “FX” risk) is reported and managed based on a Group-wide approach, reflected in a dedicated Group policy that is validated by Group Management. The policy distinguishes between the three following main sources of currency risk:

- **Regular transaction risk**

Regular transaction risk corresponds to the potential negative financial impact of currency fluctuations on business and financial operations denominated in a currency other than the functional currency.

The management of regular transaction risk is fully delegated to the subsidiaries for their scope of activities, while the risks related to central activities are managed at corporate level.

FX risks related to operational activities are systematically hedged when the related cash flows are certain, with a hedging horizon that corresponds at least to the medium-term plan horizon. For cash flows that are not certain, in their entirety, the hedge is initially based on a “no regret” volume. Exposures are monitored and managed based on the sum of nominal cash flows in FX, including highly probable amounts and related hedges.

For FX risks related to financial activities, all significant exposures related to cash, financial debts, etc. are systematically hedged. Exposures are monitored based on the net sum of balance sheet items in FX.

- **Project transaction risk**

Specific project transaction risk corresponds to the potential negative financial impact of FX fluctuations on specific major operations such as investment projects, acquisitions, disposals and restructuring projects, involving multiple currencies.

The management of these FX risks includes the definition and implementation of hedging transactions, taking into account the likelihood of the risk (including probability of project completion) and its evolution, the availability of hedging instruments and their associated cost. Management’s aim is to ensure the viability and the profitability of the transactions.

- **Translation risk**

Translation risk corresponds to the potential negative financial impact of FX fluctuations concerning consolidated entities with a functional currency other than the euro. It relates to the translation of their income and expenses and their net assets.

Translation risk is managed centrally, with a focus on securing the net asset value.

The pertinence of hedging this translation risk is assessed regularly for each currency (as a minimum) or set of assets in the same currency, taking into account notably the value of the assets and the hedging costs.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating currency risk:

- derivative instruments: these mostly correspond to over-the-counter contracts and include FX forward transactions, FX swaps, currency swaps, cross currency swaps, plain vanilla FX options or combinations (calls, puts or collars);
- monetary items such as debt, cash and loans.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and in some cases the amount of the future cash flows in foreign currency that are being hedged.

18.1.5.2 Interest rate risk management

The Group is exposed to interest rate risk through its financing and investing activities. Interest rate risk is defined as a financial risk resulting from fluctuations in base interest rates that may increase the cost of debt and affect the viability of investments. Base interest rates are market interest rates, such as EURIBOR, LIBOR, etc., that do not include the borrower's credit spread.

A Group-wide approach on interest rate risk management is reflected in a dedicated Group policy that is validated by Group Management. This policy distinguishes between the two following main sources of interest rate risk:

- **Interest rate risk relating to Group net debt**

Interest rate risk relating to Group net debt designates the financial impact of base rate movements on the debt and cash portfolio from recurring financing activities. This risk is mainly managed centrally.

Risk management objectives are, in order of importance:

- to protect the long term viability of assets;
- to optimize financing costs and ensure competitiveness; and
- to minimize uncertainty on the cost of debt.

The evolution of the interest rate risk is managed actively by monitoring the market rates and their effect on the Group's gross and net debt.

- **Project interest rate risk**

Specific project interest rate risk corresponds to the potential negative financial impact of base rate movements on specific major operations such as investment projects, acquisitions, disposals and restructuring projects. Interest rate risk after the closing of an operation is considered as regular (see paragraph "Interest rate risk" above).

Managing interest rate risk for specific project transactions aims to protect the economic viability of projects, acquisitions, disposals and restructuring initiatives against adverse changes in interest rates. It may include the implementation of hedging transactions, depending on a number of factors including the likeliness of completion, the availability of hedging instruments and their associated cost.

Hedging instruments and sources of hedge ineffectiveness

The Group uses principally the following risk management levers for mitigating interest rate risk:

- derivative instruments: these mostly correspond to over-the-counter contracts allowing to manage base interest rates. Such instruments include:
 - swaps, to change the nature of interest payments on debts, typically from fixed to floating rates or vice versa, and
 - plain vanilla interest rate options;
- caps, floors and collars that allow the impact of interest rate fluctuations to be limited by setting minimum and/or maximum limits on floating interest rates.

Sources of hedge ineffectiveness are mainly related to changes in the credit quality of the counterparties and related charges, as well as potential gaps in settlement dates and in indices between the derivative instruments and the related underlying exposures.

18.1.5.3 Currency and interest rate hedges

The Group has elected to apply hedge accounting whenever possible and suitable for currency risk and interest rate risk management and also manages a portfolio of undesignated derivative instruments, corresponding to economic hedges relating to net debt and foreign currency exposures.

The Group uses the three hedge accounting methods: cash flow hedging, fair value hedging and net investment hedging.

In general, the Group does not frequently reset hedging relationships, does not designate specific risk components as a hedged item and does not designate credit exposures as measured at fair value through income.

The Group qualifies interest rate or cross currency swaps transforming fixed-rate debt into floating-rate debt as fair value hedges.

Cash flow hedges are mainly used to hedge future cash flows in foreign currency, floating-rate debt as well as future refinancing requirements.

Net investment hedging instruments are mainly FX swaps and forwards.

The fair values of derivatives (excluding commodity instruments) at December 31, 2018 and December 31, 2017 are indicated in the table below:

	Dec. 31, 2018				Dec. 31, 2017 ⁽¹⁾			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
<i>In millions of euros</i>								
Derivatives hedging borrowings	678	42	(259)	(66)	610	63	(293)	(59)
Fair value hedges	521	1	(29)	(1)	449	9	(38)	-
Cash flow hedges	24	-	(191)	-	15	1	(191)	-
Derivative instruments not qualifying for hedge accounting	133	42	(39)	(65)	147	53	(64)	(59)
Derivatives hedging other items	606	28	(1,215)	(38)	806	83	(1,212)	(118)
Fair value hedges	-	-	-	-	-	-	-	-
Cash flow hedges	21	1	(284)	(4)	128	5	(375)	(37)
Net investment hedges	1	-	(5)	-	54	-	(8)	-
Derivative instruments not qualifying for hedge accounting	583	27	(927)	(34)	625	78	(830)	(80)
TOTAL	1,283	71	(1,474)	(105)	1,417	146	(1,505)	(177)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

See also Note 17.4 "Derivative instruments".

The fair values shown in the table above reflect the amounts relating to the price that would be received for the sale of an asset or paid for the transfer of a liability between market participants in the normal course of business. They are not representative of expected future cash flows insofar as positions (i) are sensitive to changes in prices or to changes in credit ratings, (ii) can be modified by subsequent transactions, and (iii) can be offset by future cash flows arising on the underlying transactions.

Amount, timing and uncertainty of future cash flows

The following tables provide a profile of the timing at December 31, 2018 of the nominal amount of the hedging instruments, and, if applicable, the average price or rate of the hedging instrument:

In millions of euros

Buy/Sell	Interest rate type	Derivative instrument type	Currency	Total	2019	2020	2021	2022	2023	Beyond 5 years

			EUR	45,484	13,056	11,751	7,589	5,972	2,482	4,635

The tables presented above exclude currency derivatives (except for cross currency swaps - CCS). These hedges are mainly short term, with maturity dates aligned with those of the hedged items.

Pursuant to the FX and interest rate risk management policy, FX sensitivity is presented in Note 18.1.3.2 "Currency risk sensitivity analysis" and the average cost of debt is 2.68% as presented in Note 11.1 "Cost of net debt".

Effects of hedge accounting on the Group's financial position and performance

The following tables show:

- the carrying amounts of the hedging instruments (financial assets separately from financial liabilities), with reference to the line item in the statement of financial position that includes the hedging instrument; and
- the nominal amounts of the hedging instruments.

Currency derivatives

In millions of euros	Dec. 31, 2018				Dec. 31, 2017	
	Fair value			Nominal	Fair value	Nominal
	Assets	Liabilities	Total	Total	Total	Total
Cash flow hedges	45	(380)	(335)	3,268	(167)	3,285
Net investment hedges	1	(5)	(3)	1,114	47	3,370
Derivative instruments not qualifying for hedge accounting	82	(105)	(23)	10,996	(76)	5,161
TOTAL	128	(489)	(361)	15,379	(197)	11,815

Interest rate derivatives

In millions of euros	Dec. 31, 2018				Dec. 31, 2017	
	Fair value			Nominal	Fair value	Nominal
	Assets	Liabilities	Total	Total	Total	Total
Fair value hedges	521	(30)	491	4,846	420	4,941
Cash flow hedges	1	(99)	(98)	1,434	(287)	1,550
Derivative instruments not qualifying for hedge accounting	703	(960)	(257)	25,216	(55)	21,792
TOTAL	1,226	(1,090)	136	31,496	78	28,283

The fair values shown in the table above are positive for an asset and negative for a liability.

Hedge inefficiency is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedge. The fair value of the hedging instruments at December 31, 2018 reflects the cumulative change in the fair value of the hedging instruments since inception of the hedges. For fair value hedges, the same principle applies to the hedged items.

Fair value hedges

The following tables concerning fair value hedges show:

- the carrying amounts of the hedged items and the accumulated amounts of fair value adjustments included in these carrying amounts, financial assets separately from financial liabilities, and with reference to the line item in the statement of financial position that includes the hedged items;
- the nominal amounts of the hedging instruments;
- the accumulated amount of fair value hedge adjustments remaining in the statement of financial position for any hedged items that have ceased to be adjusted for hedging gains and losses in accordance with paragraph 6.5.10 of IFRS 9; and
- the ineffective portion of the hedge recognized in the statement of profit or loss.

In millions of euros	Nominal amount	Fair value	Line item of the statement of financial position	Change in fair value used for calculating hedge ineffectiveness ⁽¹⁾	Ineffective portion recognized in profit or loss	Line item of the income statement
Hedging instruments	4,941	420	Derivatives hedging borrowings	420	(2)	Cost of net debt

In millions of euros	Outstanding amount	Impact of fair value hedge ^(1,2)	Line item of the statement of financial position	Change in value used for calculating hedge ineffectiveness
Hedged items	4,951	365	Long-term and short-term borrowings	142

(1) The difference between the fair value used to determine the ineffective portion relating to hedging instruments and that relating to the hedged items corresponds to the amortized cost of borrowings and debt that are part of fair value hedge relationship.

(2) Of which €153 million relating to hedging items that have ceased to be adjusted as a result of fair value hedge discontinuance.

Cash flow hedges

The following tables concerning cash flow hedges show:

- the change in fair value of the hedged item used as the basis for recognizing hedge ineffectiveness for the period;
- the balances in the cash flow hedge reserve for continuing hedges;
- the balances remaining in the cash flow hedge reserve for hedging relationships for which hedge accounting is no longer applied;
- the ineffective portion of the hedge recognized in the statement of profit or loss; and
- the gains and losses recognized in and reclassified from equity.

<i>In millions of euros</i>	Nominal amount	Fair value	Line item of the statement of financial position	Change in fair value used for calculating hedge ineffectiveness	Change in the value of the hedging instrument recognized in equity ⁽¹⁾	Ineffective portion recognized in profit or loss ⁽¹⁾	Line item of the income statement	Amount reclassified from the hedge reserve to profit or loss ⁽¹⁾	Line item of the income statement
			Derivatives hedging borrowings/ other items				Other financial income and expenses/ Income/(loss) from operating activities		Other financial income and expenses/ Income/(loss) from operating activities
Hedging instruments	4,835	(454)		(291)	65	(1)		127	
<i>(1) Gains/(losses).</i>									

<i>In millions of euros</i>	Change in fair value used for calculating hedge ineffectiveness	Cash flow hedge reserve - hedge accounting still applied	Cash flow hedge reserve - hedge accounting no longer applied
Hedged items	290	(265)	(459)

Foreign currency and interest rate derivatives designated as cash flow hedges can be analyzed as follows by maturity:

At December 31, 2018

<i>In millions of euros</i>	Total	2019	2020	2021	2022	2023	Beyond 5 years

Net investment hedges

The following tables concerning net investment hedges show:

- the change in fair value of the hedged item used as the basis for recognizing hedge ineffectiveness for the period;
- the balances in the foreign currency translation reserve for continuing hedges;
- the balances remaining in the foreign currency translation reserve for hedging relationships for which hedge accounting is no longer applied;
- the ineffective portion of the hedge recognized in the statement of profit or loss; and
- the gains and losses recognized in and reclassified from equity.

<i>In millions of euros</i>	Nominal amount	Fair value	Line item of the statement of financial position	Change in fair value used for calculating hedge ineffectiveness	Change in the value of the hedging instrument recognized in equity ⁽¹⁾	Ineffectiveness recognized in profit or loss ⁽¹⁾	Line item of the income statement	Amount reclassified from the hedge reserve to profit or loss ⁽¹⁾	Line item of the income statement

18.2 Counterparty risk

Due to its financial and operational activities, the Group is exposed to the risk of default of its counterparties (customers, suppliers, EPC contractors, partners, intermediaries, and banks). Default could affect payments, goods delivery and/or asset performance.

The principles of counterparty risk management are set out in the Group counterparty risk policy, which:

- assigns roles and responsibilities for managing and controlling counterparty risk at different levels (Corporate, BU or entity), and ensures operational procedures are in place and consistent across the Group;
- characterizes counterparty risk and the mechanisms by which it impacts the economic performance and financial statements of the Group;
- defines indicators, reporting and control mechanisms to ensure a visibility and to provide tools for financial performance management; and

- provides guidelines on the use of mitigating mechanisms such as collaterals and guarantees, which are widely used by some businesses.

Depending on the nature of the business, the Group is exposed to different types of counterparty risk. As a result some businesses use collateral instruments – particularly the Energy Management business, where the use of margin calls and other types of financial collateral (standardized legal framework) is a market standard. In addition, other businesses may request guarantees from their counterparties in certain cases (parent company guarantees, bank guarantees, etc.).

Under the new standard IFRS 9, the Group has defined and applied a Group-wide methodology which includes the two different approaches:

- a portfolio approach, for which the Group determines that:
 - coherent customer portfolios and sub-portfolios have to be considered (i.e., portfolios that have comparable credit risk and/or comparable payment behavior), taking into account different aspects:
 - public or private counterparties,
 - residential or BtoB counterparties,
 - geography,
 - type of activity,
 - size of the counterparty,
 - any other aspects the Group may consider relevant, and
 - impairment rates must be determined based on historical ageing balances and, when correlation is proven and documentation possible, the historical data must be adjusted by forward-looking elements;
- an individualized approach for significant counterparties, for which the Group has set rules for defining the stage of the concerned asset for Expected Credit Loss (ECL) calculations:
 - stage 1 covers financial assets that have not deteriorated significantly since initial recognition. The ECL for stage 1 is calculated on a 12-month basis,
 - stage 2 covers financial assets for which the credit risk has significantly increased. The ECL for stage 2 is calculated on a lifetime basis. The decision to move an asset from stage 1 to stage 2 is based on certain criteria such as:
 - a significant downgrade of the counterparty's creditworthiness and/or its parent company and/or its guarantor (if any),
 - significant adverse change in the regulatory environment,
 - changes in political or country-related risk, and
 - any other aspect the Group may consider relevant.

Regarding financial assets that are more than 30 days past due, the move to stage 2 is not systematically applied as long as the Group has reasonable and supportable information that demonstrates that, even if payments become more than 30 days past due, this does not represent a significant increase in the credit risk since initial recognition.

- stage 3 covers assets for which default has already been observed, such as:
 - when there is evidence of significant and ongoing financial difficulty of the counterparty,
 - when there is evidence of failure in credit support from a parent company to its subsidiary (in this case the subsidiary is the Group's counterparty at risk),
 - when a Group entity has initiated legal proceedings against the counterparty for non-payment.

Regarding financial assets that are more than 90 days past due, the presumption can be rebutted if the Group has reasonable and supportable information that demonstrates that even if payments become more than 90 days past due, this does not indicate counterparty default.

The ECL formula applicable in stages 1 and 2 is $ECL = EAD \times PD \times LGD$, where:

- for 12-month ECL, Exposure At Default (EAD) equals the carrying amount of the financial asset, to which the relevant Probability of Default (PD) and the Loss Given Default (LGD) are applied;

- for lifetime ECL, the calculation method consists in identifying the evolution of exposure for each year, especially the expected timing and amount of the contractual repayments, and then applying to each repayment the relevant PD and the LGD, and discounting the figures obtained. ECL is then the sum of the discounted figures; and
- probability of default: is the likelihood of default over a particular time horizon (in stage 1, this time horizon is 12 months after the reporting period; in stage 2 this time horizon is the entire lifetime of the financial asset). This information is based on external data from a well-known rating agency. The PD depends on the time horizon and of the rating of the counterparty. The Group uses external ratings if they are available; ENGIE's credit risk experts determine an internal rating for major counterparties with no external rating.

LGD levels are notably based on Basel standards:

- 75% for subordinated assets; and
- 45% for standard assets.

For assets considered as of strategic importance for the counterparty, such as essential public services or goods, the LGD parameter is set at 30%.

The Group has decided that write-off applies in the following situations:

- for assets for which a legal recovery procedure is pending: no write-off to be applied as long as the procedure is ongoing;
- for assets for which no legal recovery procedure is pending: write-off should be booked once the trade receivable is 3 years overdue (5 years overdue for public counterparties).

18.2.1 Operating activities

Counterparty risk arising on operating activities is managed via standard mechanisms such as third-party guarantees, netting agreements and margin calls, using dedicated hedging instruments or special prepayment and debt recovery procedures, particularly for retail customers.

Under the Group's policy, each business unit is responsible for managing counterparty risk, although the Group continues to manage the biggest counterparty exposures centrally.

The credit rating of large- and mid-sized counterparties with which the Group has exposures above a certain threshold is measured based on a specific rating process, while a simplified credit scoring process is used for commercial customers with which the Group has fairly low exposures. These processes are based on formally documented, consistent methods across the Group. Consolidated exposures are monitored by counterparty and by segment (credit rating, sector, etc.) using standard indicators (payment risk, mark-to-market exposure).

The Group's Energy Market Risk Committee (CRME) consolidates and monitors the Group's exposure to its main energy counterparties on a quarterly basis and ensures that the exposure limits set for these counterparties are respected.

18.2.1.1 Trade and other receivables, contract assets

The following tables concerning exposure to counterparty risk of "Trade and other receivables" and "Contract assets" show:

- the allocation of the outstanding amount according to the approach chosen (individual or collective) for monitoring expected credit losses;
- the breakdown of the outstanding amount relating to "Trade and other receivables" and "Contract assets" monitored according to the individual approach:
 - by risk level (levels 1, 2 and 3),
 - by counterparty type (investment grade versus other);

- the breakdown of the outstanding amount relating to “Trade and other receivables” and “Contract assets” monitored according to the collective approach between past due assets and assets neither impaired nor past due.

Total outstanding exposures presented in the tables hereafter do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €2,547 million and €13 million respectively for “Trade and other receivables” and “Contract assets” at December 31, 2018 (compared to €2,114 million and €12 million at December 31, 2017).

Outstanding exposure breaks down as follows by type of monitoring approach:

		Dec. 31, 2018			Dec. 31, 2017		
		Individual approach	Collective approach	Total	Individual approach	Collective approach	Total
<i>In millions of euros</i>							
Trade and other receivables, net	Gross	10,339	3,804	14,142	8,548	3,546	12,094
	Expected credit losses	(323)	(754)	(1,076)	(352)	(729)	(1,081)
TOTAL		10,016	3,050	13,066	8,196	2,817	11,013
Assets from contracts with customers	Gross	3,052	4,381	7,432	2,757	4,073	6,831
	Expected credit losses	(7)	(1)	(8)	(7)	(5)	(12)
TOTAL		3,045	4,379	7,424	2,750	4,068	6,818

Individual approach

Outstanding “Trade and other receivables” and “Contract assets” exposures monitored according to the individual approach break down as follows by risk level:

		Dec. 31, 2018				Dec. 31, 2017			
		Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total
<i>In millions of euros</i>									
Trade and other receivables, net	Gross	9,694	422	222	10,339	7,821	455	272	8,548
	Expected credit losses	(107)	(71)	(145)	(323)	(103)	(76)	(173)	(352)
TOTAL		9,587	352	77	10,016	7,718	379	99	8,196
Assets from contracts with customers	Gross	2,730	261	61	3,052	2,047	507	203	2,757
	Expected credit losses	(6)	-	(1)	(7)	(5)	-	(1)	(7)
TOTAL		2,725	261	59	3,045	2,042	507	202	2,750

Outstanding “Trade and other receivables” and “Contract assets” exposures monitored according to the individual approach break down as follows by counterparty type:

		Dec. 31, 2018			Dec. 31, 2017		
		Investment Grade ⁽¹⁾	Other	Total	Investment Grade ⁽¹⁾	Other	Total
<i>In millions of euros</i>							
Trade and other receivables, net	Gross	9,161	1,178	10,339	7,258	1,290	8,548
	Expected credit losses	(205)	(118)	(323)	(164)	(189)	(352)
TOTAL		8,956	1,060	10,016	7,094	1,101	8,196
Assets from contracts with customers	Gross	2,358	694	3,052	1,780	977	2,757
	Expected credit losses	(4)	(3)	(7)	(6)	(1)	(7)
TOTAL		2,354	691	3,045	1,774	976	2,750

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's.

Collective approach

Outstanding past due "Trade and other receivables" and "Contract assets" exposures monitored according to the collective approach break down as follows:

In millions of euros		0 to 6 months	6 to 12 months	beyond	Total past due assets at Dec. 31, 2018
Trade and other receivables, net	Gross	730	146	368	1,243
	Expected credit losses	(18)	(19)	(243)	(281)
TOTAL		711	126	125	962
Assets from contracts with customers	Gross	34	3	4	42
	Expected credit losses	-	-	-	-
TOTAL		34	3	4	42

In millions of euros		0 to 6 months	6 to 12 months	beyond	Total past due assets at Dec. 31, 2017
Trade and other receivables, net	Gross	730	135	517	1,381
	Expected credit losses	(19)	(26)	(230)	(274)
TOTAL		711	109	287	1,107
Assets from contracts with customers	Gross	75	-	-	75
	Expected credit losses	-	-	-	-
TOTAL		75	-	-	75

18.2.1.2 Commodity derivatives

In the case of commodity derivatives, counterparty risk arises from positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

In millions of euros	Dec. 31, 2018		Dec. 31, 2017	
	Investment Grade ⁽³⁾	Total	Investment Grade ⁽³⁾	Total
Gross exposure ⁽¹⁾	9,325	12,027	7,309	8,764
Net exposure ⁽²⁾	2,701	3,683	2,913	3,705
% of credit exposure to "Investment Grade" counterparties	73.4%		78.6%	

- (1) Corresponds to the maximum exposure, i.e. the value of the derivatives shown under assets (positive fair value).
 (2) After taking into account the liability positions with the same counterparties (negative fair value), collateral, netting agreements and other credit enhancement techniques.
 (3) Investment Grade corresponds to transactions with counterparties that are rated at least BBB- by Standard & Poor's, Baa3 by Moody's, or equivalent by Dun & Bradstreet. "Investment Grade" is also determined based on an internal rating tool that has been rolled out within the Group, and covers its main counterparties.

18.2.2 Financing activities

For its financing activities, the Group has put in place procedures for managing and monitoring risk based on (i) the accreditation of counterparties according to external credit ratings, objective market data (credit default swaps, market capitalization) and financial structure, and (ii) counterparty risk exposure limits.

To reduce its counterparty risk exposure, the Group drew increasingly on a structured legal framework based on master agreements (including netting clauses) and collateralization contracts (margin calls).

The oversight procedure for managing counterparty risk arising from financing activities is managed by a Middle Office that operates independently of the Group's Treasury department and reports to the Finance division.

18.2.2.1 Loans and receivables at amortized cost

The following tables concerning exposure to counterparty risk of “Loans and receivables at amortized cost” show the breakdown of the outstanding exposure:

- by risk level (levels 1, 2 and 3);
- by counterparty type (investment grade versus other).

Total outstanding exposures presented in tables hereafter do not include impacts relating to VAT or to any other item not subject to credit risk, which amount at December 31, 2018 to €809 million (compared to €533 million at December 31, 2017).

Outstanding exposure breaks down as follows by risk level:

In millions of euros	Dec. 31, 2018				Dec. 31, 2017			
	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total
Gross	3,402	466	233	4,100	2,799	517	245	3,561
Expected credit losses	(91)	-	(227)	(319)	(36)	-	(232)	(269)
TOTAL	3,311	466	5	3,781	2,763	517	13	3,293

Outstanding exposure breaks down as follows by counterparty type:

In millions of euros	Dec. 31, 2018			Dec. 31, 2017		
	Investment Grade ⁽¹⁾	Other	Total	Investment Grade ⁽¹⁾	Other	Total
Gross	2,003	2,098	4,100	2,079	1,482	3,561
Expected credit losses	(86)	(233)	(319)	(21)	(247)	(269)
TOTAL	1,917	1,865	3,781	2,058	1,235	3,293

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's.

18.2.2.2 Counterparty risk arising from investing activities and the use of derivative financial instruments

The Group is exposed to counterparty risk arising from investments of surplus cash and from the use of derivative financial instruments. In the case of financial instruments at fair value through income, counterparty risk arises on instruments with a positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

At December 31, 2018, total outstanding exposure to credit risk amounted to €9,634 million.

In millions of euros	Dec. 31, 2018				Dec. 31, 2017			
	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non Investment Grade ⁽²⁾	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non Investment Grade ⁽²⁾
Exposure	9,634	85.0%	6.0%	8.0%	10,009	84.0%	9.0%	7.0%

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's or Baa3 by Moody's.

(2) Most of these two exposures is carried by consolidated companies that include non-controlling interests, or by Group companies that operate in emerging countries, where cash cannot be pooled and is therefore invested locally.

Furthermore, at December 31, 2018, Crédit Agricole Corporate and Investment Bank (CACIB) is the main Group counterparty and represents 29% of cash surpluses. This relates mainly to a depositary risk.

18.3 Liquidity risk

In the context of its operating activities, the Group is exposed to a risk of having insufficient liquidity to meet its contractual obligations. As well as the risks inherent in managing working capital requirements (WCR), margin calls are required in certain market activities.

The Group has set up a quarterly committee tasked with managing and monitoring liquidity risk throughout the Group, by maintaining a broad range of investments and sources of financing, preparing forecasts of cash investments and divestments, and performing stress tests on the margin calls put in place when commodity, interest rate and currency derivatives are negotiated.

The Group centralizes virtually all financing needs and cash flow surpluses of the companies it controls, as well as most of their medium- and long-term external financing requirements. Centralization is provided by financing vehicles (long-term and short-term) and by dedicated Group cash pooling vehicles based in France, Belgium and Luxembourg.

Surpluses held by these structures are managed in accordance with a uniform policy. Unpooled cash surpluses are invested in instruments selected on a case-by-case basis in light of local financial market imperatives and the financial strength of the counterparties concerned.

The onslaught of successive financial crises since 2008 and the ensuing rise in counterparty risk prompted the Group to tighten its investment policy with the aim of keeping an extremely high level of liquidity and protecting invested capital and a daily monitoring of performance and counterparty risks for both investment types, allowing the Group to take immediate action where required in response to market developments. Consequently, 78% of cash pooled at December 31, 2018 was invested in overnight bank deposits and standard money market funds with daily liquidity.

The Group's financing policy is based on:

- centralizing external financing;
- diversifying sources of financing between credit institutions and capital markets;
- achieving a balanced debt repayment profile.

The Group seeks to diversify its sources of financing by carrying out public or private bond issues within the scope of its Euro Medium Term Notes program. It also issues negotiable commercial paper in France and in the United States.

At December 31, 2018, bank loans accounted for 17% of gross debt (excluding overdrafts and the impact of derivatives and amortized cost), while the remaining debt was raised on capital markets (including €22,645 million in bonds, or 74% of gross debt).

Outstanding negotiable commercial paper issues represented 9% of gross debt, or €2,894 million at December 31, 2018. As negotiable commercial paper is relatively inexpensive and highly liquid, it is used by the Group in a cyclical or structural fashion to finance its short-term cash requirements. However, the refinancing of all outstanding negotiable commercial paper remains secured by confirmed bank lines of credit allowing the Group to continue to finance its activities if access to this financing source were to dry up.

Available cash, comprising cash and cash equivalents and liquid debt instruments dedicated to cash investments, totaled €9,935 million at December 31, 2018, of which 70% was invested in the Eurozone.

The Group also has access to confirmed credit lines. These facilities are appropriate for the scale of its operations and for the timing of contractual debt repayments. Confirmed credit facilities had been granted for a total of €13,297 million at December 31, 2018, of which €13,232 million was available. 95% of available credit facilities are centralized. None of these centralized facilities contain a default clause linked to covenants or minimum credit ratings.

At December 31, 2018, all the entities of the Group whose debt is consolidated comply with the covenants and declarations included in their financial documentation, except for some non-significant entities for which compliance actions are being implemented.

18.3.1 Undiscounted contractual payments relating to financial activities

At December 31, 2018, undiscounted contractual payments on net debt excluding the impact of derivatives, margin calls and amortized cost break down as follows by maturity:

At December 31, 2018

<i>In millions of euros</i>	Total	2019	2020	2021	2022	2023	Beyond 5 years
Bond issues	22,645	1,202	2,496	1,778	2,613	2,675	11,882
Bank borrowings	4,620	349	952	411	401	345	2,163
Negotiable commercial paper	2,894	2,894	-	-	-	-	-
Drawdowns on credit facilities	66	33	17	2	2	2	11
Liabilities under finance leases	380	118	92	82	10	9	70
Other borrowings	125	51	20	19	4	5	26

At December 31, 2017

<i>In millions of euros</i>	Total	2018	2019	2020	2021	2022	Beyond 5 years
OUTSTANDING BORROWINGS AND DEBT	32,427	7,714	1,408	3,380	2,239	3,070	14,617
Assets related to financing, liquid debt instruments dedicated to cash investments and cash and cash equivalents	(10,128)	(10,069)	-	(3)	(2)	-	(54)
NET DEBT EXCLUDING THE IMPACT OF AMORTIZED COST, DERIVATIVE INSTRUMENTS AND MARGIN CALLS	22,300	(2,355)	1,408	3,377	2,237	3,070	14,563

At December 31, 2018, undiscounted contractual interest payments on outstanding borrowings and debt break down as follows by maturity:

At December 31, 2018

<i>In millions of euros</i>	Total	2019	2020	2021	2022	2023	Beyond 5 years
Undiscounted contractual interest flows on outstanding borrowings and debt	9,335	894	825	734	619	534	5,730

At December 31, 2017

<i>In millions of euros</i>	Total	2018	2019	2020	2021	2022	Beyond 5 years
Undiscounted contractual interest flows on outstanding borrowings and debt	9,500	930	808	741	651	531	5,839

At December 31, 2018, undiscounted contractual payments on outstanding derivatives (excluding commodity instruments) recognized in assets and liabilities break down as follows by maturity (net amounts):

At December 31, 2018

<i>In millions of euros</i>	Total	2019	2020	2021	2022	2023	Beyond 5 years
Derivatives (excluding commodity instruments)	(138)	(16)	37	93	59	(29)	(282)

At December 31, 2017

<i>In millions of euros</i>	Total	2018	2019	2020	2021	2022	Beyond 5 years
Derivatives (excluding commodity instruments)	(105)	(156)	(106)	(62)	(55)	(12)	286

To better reflect the economic substance of these transactions, the cash flows linked to the derivatives recognized in assets and liabilities shown in the table above relate to net positions.

The maturities of the Group's undrawn credit facility programs are analyzed in the table below:

At December 31, 2018

<i>In millions of euros</i>	Total	2019	2020	2021	2022	2023	Beyond 5 years
Confirmed undrawn credit facility programs	13,232	760	1,263	429	5,514	5,012	255

Of these undrawn programs, an amount of €2,894 million is allocated to covering commercial paper issues.

At December 31, 2018, no single counterparty represented more than 5% of the Group's confirmed undrawn credit lines.

At December 31, 2017

<i>In millions of euros</i>	Total	2018	2019	2020	2021	2022	Beyond 5 years
Confirmed undrawn credit facility programs	13,389	704	540	1,421	5,018	5,515	191

18.3.2 Undiscounted contractual payments relating to operating activities

The table below provides an analysis of undiscounted fair values due and receivable in respect of commodity derivatives recorded in assets and liabilities at the statement of financial position date.

The Group provides an analysis of residual contractual maturities for commodity derivative instruments included in its portfolio management activities. Derivative instruments relating to trading activities are considered to be liquid in less than one year, and are presented under current items in the statement of financial position.

At December 31, 2018

<i>In millions of euros</i>	Total	2019	2020	2021	2022	2023	Beyond 5 years
Derivative instruments carried in liabilities							
<i>Relating to portfolio management activities</i>	(2,114)	(811)	(780)	(342)	(108)	(37)	(36)
<i>Relating to trading activities</i>	(10,579)	(10,579)	-	-	-	-	-
Derivative instruments carried in assets

18.3.3 Commitments relating to commodity purchase and sale contracts entered into within the ordinary course of business

Some Group operating companies have entered into long-term contracts, some of which include “take-or-pay” clauses. These consist of firm commitments to purchase (sell) specified quantities of gas, electricity or steam as well as related services, in exchange for a firm commitment from the other party to deliver (purchase) said quantities and services. These contracts were documented as falling outside the scope of IFRS 9. The table below shows the main future commitments arising from contracts entered into by the GEM, Latin America and North America reportable segments (expressed in TWh):

<i>In TWh</i>	Total at Dec. 31, 2018	2019	2020-2023	Beyond 5 years	Total at Dec. 31, 2017
Firm purchases	(3,070)	(500)	(994)	(1,576)	(5,680)
Firm sales	1,329	337	503	489	2,046

NOTE 19 EQUITY

19.1 Share capital

	Number of shares			Value (in millions of euros)		
	Total	Treasury stock	Outstanding	Share capital	Additional	Treasury stock
AT DECEMBER 31, 2016	2,435,285,011	(37,522,838)	2,397,762,173	2,435	32,506	(761)
Purchase/disposal of treasury stock	-	(9,335,181)	(9,335,181)	-	-	(122)
AT DECEMBER 31, 2017	2,435,285,011	(46,858,019)	2,388,426,992	2,435	32,506	(883)
Link 2018 worldwide employee share plan	6,036,166	26,655,602	32,691,768	6	60	459
Cancellation of treasury stock shares	(6,036,166)	6,036,166	-	(6)	-	81
Purchase of shares from the French State	-	(11,111,111)	(11,111,111)	-	-	(152)
Delivery of treasury stock (bonus)	-	1,386,192	1,386,192	-	-	35
AT DECEMBER 31, 2018	2,435,285,011	(23,891,170)	2,411,393,841	2,435	32,565	(460)

Changes in the number of shares during 2018 resulted from:

- employee share issuances as part of the “Link 2018” worldwide employee share plan. All in all, 30.9 million shares were subscribed and 1.8 million bonus shares were awarded under employee contribution schemes, representing a total of 32.7 million shares. At August 2, 2018 the transaction resulted in the sale to employees of 26.7 million shares partly repurchased from the French State in September 2017 (€153 million) and in July 2018 (€152 million) for a total amount of 22.2 million shares, on the one hand, and in a capital increase for €66 million, on the other. This last amount is broken down into a capital increase for €6 million and additional paid-in capital for €60 million;
- an equity decrease of €81 million broken down into a €6 million capital decrease and a €75 million decrease in consolidated reserves;
- the delivery of treasury stock for 1.4 million shares as part of bonus share plans.

Changes in the number of shares during 2017 result from net treasury stock acquisitions for 9 million shares, mainly repurchased from the French State in accordance with its share transfer program (0.46% of ENGIE’s share capital). These shares have been allocated to the employee savings transactions planned by the Group.

19.1.1 Potential share capital and instruments providing a right to subscribe for new ENGIE SA shares

At December 31, 2017, the last stock subscription option plan came to an end.

Shares to be allocated under bonus share plans, performance share award plans as well as the stock purchase option plans, described in Note 24 “Share-based payments”, are covered by existing ENGIE SA shares.

19.1.2 Treasury stock

Accounting standards

Treasury shares are recognized at acquisition cost and deducted from equity. Gains and losses on disposals of treasury shares are recorded directly in equity and do not therefore impact income for the period.

The Group has a stock repurchase program as a result of the authorization granted to the Board of Directors by the Ordinary and Extraordinary Shareholders’ Meeting of May 18, 2018. This program provides for the repurchase of up to 10% of the shares comprising the share capital of ENGIE SA at the date of the said Shareholders’ Meeting. The aggregate amount of acquisitions net of expenses under the program may not exceed €7.3 billion, and the purchase price must be less than €30 per share excluding acquisition costs.

At December 31, 2018, the Group held 23.9 million treasury shares, allocated in full to cover the Group's share commitments to employees and corporate officers.

The liquidity agreement signed with an investment service provider assigns to the latter the role of operating on the market on a daily basis, to buy or sell ENGIE SA shares, in order to ensure liquidity and an active market for the shares on the Paris and Brussels stock exchanges. To date, the resources allocated to the implementation of this agreement amount to €150 million.

19.2 Other disclosures concerning additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (Group share)

Total additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (including net income for the fiscal year), amounted to €36,547 million at December 31, 2018, including €32,565 million in additional paid-in capital.

Consolidated reserves include the cumulative income of the Group, the legal and statutory reserves of ENGIE SA, the cumulative actuarial gains and losses, net of tax and change in fair value of equity instruments at fair value through OCI.

Under French law, 5% of the net income of French companies must be allocated to the legal reserve until the latter reaches 10% of share capital. This reserve can only be distributed to shareholders in the event of liquidation. The ENGIE SA legal reserve amounts to €244 million.

The cumulative actuarial gains and losses Group share represent losses of €3,275 million at December 31, 2018 (losses of €3,095 million at December 31, 2017). Deferred taxes relating to these actuarial gains and losses amount to €790 million at December 31, 2018 (€744 million at December 31, 2017).

19.2.1 Issuance of deeply-subordinated perpetual notes

On January 16, 2018, ENGIE SA carried out an issue of green deeply-subordinated perpetual notes for an amount of €1 billion offering a coupon of 1.375% with an annual reimbursement option from April 2023.

In accordance with the provisions of IAS 32 – *Financial Instruments – Presentation*, and given their characteristics, these instruments were accounted for in equity in the Group's consolidated financial statements for a total amount of €989 million.

On June 6, 2018, ENGIE gave notice of the annual prepayment option of the €600 million tranche (a total amount of €621 million accrued interest included), previously recognized in equity for a net amount of €584 million. ENGIE SA made the reimbursement on July 10, 2018.

On December 5, 2018, ENGIE gave notice of the annual prepayment option of the GBP 300 million tranche (a total amount of €352 million accrued interest included), previously recognized in equity for a net amount of €340 million.

At December 31, 2018 the level of deeply-subordinated notes amounted to €3,750 million.

The coupons ascribed to the owners of these notes, of which €145 million was paid in 2018, are accounted for as a deduction from equity in the Group's consolidated financial statements; the relating tax saving is accounted for in the income statement.

19.2.2 Distributable capacity of ENGIE SA

ENGIE SA's distributable capacity totaled €33,320 million at December 31, 2018 (compared with €33,969 million at December 31, 2017), after deducting the interim dividend paid on 12 October 2018 for a total amount of €892 million, including €32,565 million of additional paid-in capital.

19.2.3 Dividends

The table below shows the dividends and interim dividends paid by ENGIE SA in respect of 2017 and 2018.

	Amount distributed (in millions of euros)	Net dividend per share (in euros)
In respect of 2017		
Interim dividend (paid on October 13, 2017)	836	0.35
Remaining dividend for 2017 (paid on May 24, 2018)	836	0.35
Remaining additional dividend for 2017 (paid on May 24, 2018)	11	0.07
In respect of 2018		
Interim dividend (paid on October 12, 2018)	892	0.37

The Shareholders' Meeting of May 18, 2018 approved the distribution of a total dividend of €0.70 per share in respect of 2017. In accordance with Article 26.2 of the bylaws, a dividend increase of 10% (€0.07 per share) has been allocated to shares registered in the name of the holder for at least two years at December 31, 2017, provided they are held in this form by the same shareholder until the payment date. This 10% increase may only apply, for any one shareholder, for a number of shares not representing more than 0.5% of the capital.

As an interim dividend of €0.35 per share was paid on October 13, 2017, for an amount of €836 million, ENGIE SA settled the remaining dividend balance of €0.35 per share in cash on May 24, 2018, for an amount of €836 million, for shares benefiting from an ordinary dividend, as well as the remaining €0.42 per share for shares benefiting from the bonus dividend. In addition, the Board of Directors' Meeting of July 26, 2018 approved the payment of an interim dividend of €0.37 per share payable on October 12, 2018 for a total amount of €892 million.

Proposed dividend in respect of 2018

Shareholders at the Shareholders' Meeting convened to approve the ENGIE Group financial statements for the year ended December 31, 2018, will be asked to approve a dividend of €1.12 per share, representing a total payout of €2,701 million based on the number of shares outstanding at December 31, 2018. This proposed dividend per share includes an ordinary dividend of €0.75 per share and an exceptional dividend of €0.37 per share. It will be increased by 10% for all shares held for at least two years on December 31, 2018 and up to the 2018 dividend payment date. Based on the number of outstanding shares on December 31, 2018, this increase is valued at €24 million.

Subject to approval by the Shareholders' Meeting of May 17 2019, this dividend, net of the interim dividend paid (€892 million), will be detached on May 21, 2019 and paid on May 23, 2019 for an estimated amount of €1,809 million, outstanding shares excluded. It is not recognized as a liability in the financial statements at December 31, 2018, since the financial statements at the end of 2018 are presented before the appropriation of earnings.

19.3 Total gains and losses recognized in equity (Group share)

All the items shown in the table below correspond to cumulative gains and losses (Group share) at December 31, 2018 and December 31, 2017, which are recyclable to income in subsequent periods.

In millions of euros	Dec. 31, 2018	Dec. 31, 2017 ⁽¹⁾
Debt instruments	28	(1)
Net investment hedges	(313)	(320)
Cash flow hedges (excl. commodity instruments)	(725)	(542)
Commodity cash flow hedges	(30)	(37)
Deferred taxes on the items above	244	201
Share of entities accounted for using the equity method in recyclable items, net of tax	(223)	(473)
Translation adjustments	(1,130)	(1,063)
Recyclable items relating to discontinued operations, net of tax	-	(6)
TOTAL RECYCLABLE ITEMS	(2,149)	(2,240)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

19.4 Capital management

ENGIE SA seeks to optimize its financial structure at all times by pursuing an optimal balance between its net debt and its EBITDA. The Group's key objective in managing its financial structure is to maximize value for shareholders and reduce the cost of capital, while ensuring that the Group has the financial flexibility required to continue its expansion. The Group manages its financial structure and makes any necessary adjustments in light of prevailing economic conditions. In this context, it may choose to adjust the amount of dividends paid to shareholders, reimburse a portion of capital, carry out share buybacks (see Note 19.1.2 "*Treasury stock*"), issue new shares, launch share-based payment plans, recalibrate its investment budget, or sell assets in order to scale back its net debt.

The Group's policy is to maintain an "A" rating by the rating agencies. To achieve this, it manages its financial structure in line with the indicators usually monitored by these agencies, namely the Group's operating profile, financial policy and a series of financial ratios. One of the most commonly used ratios is the ratio where the numerator includes operating cash flows less net financial expense and taxes paid, and the denominator includes adjusted net financial debt. Net debt is mainly adjusted for nuclear provisions, provisions for unfunded pension plans and operating lease commitments.

The Group's objectives, policies and processes for managing capital have remained unchanged over the past few years.

ENGIE SA is not obliged to comply with any minimum capital requirements except those provided for by law.

NOTE 20 PROVISIONS

Accounting standards

General principles related to the recognition of a provision

The Group recognizes a provision where it has a present obligation (legal or constructive) towards a third party arising from past events and where it is probable that an outflow of resources will be necessary to settle the obligation with no expected consideration in return.

A provision for restructuring costs is recognized when the general criteria for setting up a provision are met, i.e. when the Group has a detailed formal plan relating to the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

Provisions with a maturity of over 12 months are discounted when the effect of discounting is material. The Group's main long-term provisions are provisions for the back-end of the nuclear fuel cycle, provisions for dismantling facilities and provisions for site restoration costs. The discount rates used reflect current market assessments of the time value of money and the risks specific to the liability concerned. Expenses with respect to unwinding the discount on the provision are recognized as other financial income and expenses.

Estimates of provisions

Parameters having a significant influence on the amount of provisions, and particularly, but not solely, those relating to the back-end of the nuclear fuel cycle and to the dismantling of nuclear facilities, as well as those relating to the dismantling of gas infrastructures in France, include:

- cost estimates (notably the retained scenario for managing radioactive nuclear fuel consumed) (*see Note 20.2*);
- the timing of expenditure (notably, for nuclear power generation activities, the timetable for reprocessing radioactive nuclear fuel consumed and for dismantling facilities as well as the timetable for the end of gas operations regarding the main gas infrastructure businesses in France) (*see Notes 20.2 and 20.3*);
- and the discount rate applied to cash flows.

These parameters are based on information and estimates deemed by the Group to be the most appropriate as of today.

Modifications to certain parameters could lead to a significant adjustment in these provisions.

<i>In millions of euros</i>	Dec. 31, 2017 ⁽¹⁾	Additions	Reversals (utilizations)	Reversals (surplus provisions)	Changes in scope of consolidation	Impact of unwinding discount adjustments	Translation adjustments	Other	Dec. 31, 2018	Non- current	Current
Post-employment and other long-term benefits	6,142	294	(399)	(8)	-	113	(9)	238	6,371	6,264	107
Back-end of the nuclear fuel cycle	5,914	102	(52)	-	-	207	-	-	6,170	6,114	57

TOTAL PROVISIONS	21,715	882	(1,317)	(173)	(327)	554	(26)	505	21,813	19,194	2,620

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

(2) Of which €5,337 million in provisions for dismantling nuclear facilities, compared to €5,159 million at December 31, 2017.

The impact of unwinding discount adjustments in respect of post-employment and other long-term benefits relates to the interest expense on the benefit obligation, net of the interest income on plan assets.

The "Other" column mainly comprises actuarial gains and losses arising on post-employment benefit obligations in 2018 which are recorded in "Other comprehensive income" as well as provisions recorded against a dismantling or site rehabilitation asset.

Additions, reversals and the impact of unwinding discounting adjustments are presented as follows in the consolidated income statement:

<i>In millions of euros</i>	Dec. 31, 2018
Income/(loss) from operating activities	555
Other financial income and expenses	(541)
Income taxes	59
Income/(loss) from discontinued operations	(18)
TOTAL	55

The different types of provisions and the calculation principles applied are described below.

20.1 Post-employment benefits and other long-term benefits

See Note 21 "Post-employment benefits and other long-term benefits" for a description of the main pension plans and other post-employment and long-term benefits.

20.2 Nuclear power generation activities

In the context of its nuclear power generation activities, the Group assumes obligations relating to the back-end of the nuclear fuel cycle and the dismantling of nuclear facilities.

20.2.1 Legal framework

The Belgian law of April 11, 2003 granted Group subsidiary Synatom responsibility for managing provisions set aside to cover the costs of dismantling nuclear power plants and managing radioactive fissile material from such plants. The tasks of the Commission for Nuclear Provisions set up pursuant to the above-mentioned law is to oversee the process of computing and managing these provisions. The Commission also issues opinions on the maximum percentage of funds that Synatom can lend to operators of nuclear plants and on the types of assets in which Synatom may invest its outstanding funds (see Note 17.1.4 "Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material").

To enable the Commission for Nuclear Provisions to carry out its work in accordance with the law, Synatom is required to submit a report every three years describing the core inputs used to measure these provisions.

Synatom submitted its triennial report to the Commission for Nuclear Provisions on September 12, 2016. The Commission issued its opinion on December 12, 2016 based on the prior opinion given by ONDRAF, the Belgian agency for radioactive waste and enriched fissile material.

If any changes are observed from one triennial report to another that could materially impact the financial inputs used, the industrial scenario, estimated costs or their timing, the Commission for Nuclear Provisions may decide to revise its opinion.

The provisions related to nuclear power generation activities are measured taking into account the prevailing contractual and legal framework, which sets the operating life of the Tihange 1 reactor and the Doel 1 and 2 reactors at 50 years, and the other reactors at 40 years.

The provisions take into account all existing or planned environmental regulatory requirements on a European, national and regional level. If new legislation were to be introduced in the future, the cost estimates used as a basis for the calculations could vary. However, the Group is not aware of any planned legislation on this matter which could materially impact the amount of the provisions, other than the matters described in Note 20.2.2 below.

The estimated provision amounts also include margins for contingencies and other risks in order to take into account the degree of control of techniques related to dismantling and radioactive spent fuel management, being understood that contingency margins for the disposal of waste are determined by ONDRAF and included in its fees. Thus, the Group considers that the provisions approved by the Commission for Nuclear Provisions take into account all currently available information to manage the contingencies and other risks associated with processes such as dismantling nuclear facilities and managing radioactive spent fuel.

Based on the information disclosed in Notes 20.2.2 and 20.2.3 below, core inputs for measuring provisions including management scenarios, implementation program and timetable, detailed technical analyses (physical and radiological inventories), estimation methods and timing of expenditures, as well as discount rates, are those approved by the Commission for Nuclear Provisions in 2016.

Consequently, changes in provisions in the Group's financial statements in 2018 therefore mainly relate to recurring items linked to the passage of time (the unwinding of discounting adjustments) and provisions for fuel spent during the year.

20.2.2 Provisions for the back-end of the nuclear fuel cycle

Accounting standards

Allocations to the provisions for the back-end of the nuclear fuel cycle are computed based on the average unit cost of the quantities expected to be used up to the end of the operating life of the plants, applied to quantities used at the closing date. An annual allocation is also recognized with respect to unwinding the discount on the provisions.

When spent nuclear fuel is removed from a reactor and temporarily stored on-site, it remains radioactive and requires processing. There are two scenarios for managing radioactive spent fuel:

- either based essentially on reprocessing;
- or based essentially on conditioning without reprocessing.

ENGIE considers that the "mixed" scenario adopted by the Commission for Nuclear Provisions in 2016 continues to apply, whereby around one-quarter of total fuel is reprocessed, and the rest disposed of directly without reprocessing.

Furthermore, ONDRAF proposed on February 9, 2018 that geological storage be adopted as the national policy for managing high-level and/or long-lived radioactive waste. The proposal is subject to the approval of the Belgian government after obtaining the opinion of the Federal Agency for Nuclear Control (*Agence Fédérale de Contrôle Nucléaire – AFCN*).

The provisions booked by the Group for nuclear fuel processing and storage cover all of the costs linked to the “mixed” scenario, including on-site storage, transportation, reprocessing, conditioning, storage and geological removal. They are calculated based on the following inputs:

- storage costs primarily comprise the costs of building and operating additional dry storage facilities and operating existing facilities, along with the costs of purchasing containers;
- part of the radioactive spent fuel is transferred for reprocessing. The resulting plutonium and uranium is sold to a third party;
- radioactive spent fuel that has not been reprocessed is to be conditioned, which requires conditioning facilities to be built according to ONDRAF's approved criteria;
- the reprocessing residues and conditioned radioactive spent fuel are transferred to ONDRAF;
- the cost of burying fuel in deep geological repositories is estimated by ONDRAF;
- the long-term obligation is calculated using estimated internal costs and external costs assessed based on offers received from third parties;
- the discount rate used is 3.5% and was calculated based on an inflation rate of 2.0% (actual rate of 1.5%). It is based on an analysis of trends in and average, past and prospective benchmark long-term rates.

The costs effectively incurred in the future may, however, differ from the estimates in terms of their nature and timing of payment. The provisions may be subsequently adjusted in line with changes in the above-mentioned inputs and related cost estimates. In particular:

- As regards the partial reprocessing scenario, Belgium's current legal framework does not prescribe methods for managing nuclear waste. The reprocessing of radioactive spent fuel was suspended following a resolution adopted by the House of Representatives in 1993. The scenario adopted is based on the assumption that the Belgian government will allow Synatom to reprocess spent fuel and that an agreement will be reached between Belgium and France designating Orano (formerly Areva) as responsible for these reprocessing operations. The Commission's 2016 opinion recommends that the necessary steps be officially initiated to ensure that this partial reprocessing scenario is implemented.

A scenario assuming the direct disposal of waste without reprocessing would lead to a decrease in the provision compared to the provision resulting from the “mixed” scenario currently used and approved by the Commission for Nuclear Provisions.

- The Belgian government has not yet taken a decision as to whether the medium- and high-level radioactive waste should be buried in a deep geological repository or stored over the long term. In accordance with the European Directive, in 2015 the government submitted its proposed national program for the management of spent fuel and radioactive waste to the European Commission. This program was approved by ministerial order in 2016, based on the assumption that the waste would be buried in a deep clay layer at Boom. This assumption was accepted by the Commission for Nuclear Provisions in 2016 although to date, there is no accredited site in Belgium where the waste may be buried. However, the Commission for Nuclear Provisions asked for a scenario to be developed that includes the creation of a storage facility concept that the authorities would be likely to authorize.

In these conditions, in 2018 ONDRAF's Board of Directors adopted a new reference scenario for the geological storage of this waste, based on a new architecture and a potentially greater burial depth, on condition that a suitable site could be identified in Belgium. On that basis and in accordance with the procedures set out in the Royal Decree of March 30, 1981 “determining the tasks and setting the operational procedures of the public agency for the management of radioactive waste and fissile material”, ONDRAF set the new fees to be charged for the management and storage of high-level and/or long-lived waste. These fees were approved by ONDRAF's Board of Directors on September 28, 2018 and notified to the Commission for Nuclear Provisions and Synatom. However, they have yet to be integrated in the agreements to be entered into by ONDRAF and the nuclear waste producers, including Electrabel and Synatom.

The new technical arrangements will result in the following:

- Estimated costs of €8.0 billion based on 2017 economic conditions, meaning a twofold increase in the cost of geological storage of waste compared with the cost assumptions used in the 2016 proposal submitted to the Commission for Nuclear Provisions. This amount includes technical optimizations for €2.7 billion, based on 2017 economic conditions, to be confirmed by a special working group by 2020.
- Significant delays in the payment schedule for the various expenses related to the conditioning and storage of nuclear waste. These delays could be as long as 35 years for some expense categories, such as facilities for conditioning radioactive spent fuel and for the removal of conditioned fuel, thus reducing the net present value of the expenses and, therefore, the impact of the increase in burial costs on the measurement of nuclear provisions.

ONDRAF has asked the Commission for Nuclear Provisions to ensure that provisions are sufficient to cover the expenses for the back end of the nuclear fuel cycle, should the optimizations subject to expert appraisal fail to materialize.

Given the expected trend in assumptions for geological waste storage costs, reprocessed volumes, unit reprocessing costs and the timetable for operations, the Group believes, based on information available to date, that the impact of the new technical scenario on the provisions for the back-end cycle should not significantly alter the net present value of its commitments as estimated today.

The amount of provisions for radioactive spent fuel at December 31, 2018 therefore remained based on the industrial scenarios and cash flow projections approved by the Commission for Nuclear Provisions in December 2016 at the time of the last triennial report.

The new estimate, taking into account the new fees and timetable, will be included in Synatom's proposal to be submitted to the Commission for Nuclear Provisions no later than at the time of the next triennial report in 2019.

Sensitivity

Provisions for the back-end of the nuclear fuel cycle remain sensitive to assumptions regarding costs, the timing of operations and expenditure, as well as to discount rates. Based on the new scenario notified by ONDRAF:

- a 10% increase in ONDRAF fees for the removal of high-level and/or long lived waste would lead to an increase in provisions of approximately €140 million at unchanged contingency margins;
- a five-year advance in ONDRAF's program for high-level and/or long-lived radioactive waste conditioning and removal would lead to an increase in provisions of approximately €90 million. A five-year delay in the payment schedule for these various expenses would lead to a decrease of a similar amount;
- a change of ten basis points in the discount rate used could lead to an adjustment of approximately €190 million in provisions for the back-end of the nuclear fuel cycle. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

These sensitivities are calculated on a purely financial basis and should therefore be interpreted with appropriate caution in view of the variety of other inputs – some of which may be interdependent – included in the evaluation.

20.2.3 Provisions for dismantling nuclear facilities

Accounting standards

A provision is recognized when the Group has a present legal or constructive obligation to dismantle facilities or to restore a site. The present value of the engagement at the time of commissioning represents the initial amount of the provision for dismantling with, as counterpart, an asset for the same amount which is included in the carrying amount of the facilities concerned. This asset is depreciated over the operating life of the facilities. Adjustments to the provision due to subsequent changes in (i) the expected outflow of resources, (ii) the timing of dismantling expenses or (iii) the discount rate, are deducted from or, subject to specific conditions, added to the cost of the corresponding asset. The impacts of unwinding the discount are recognized in expenses for the period.

Nuclear power plants have to be dismantled at the end of their operating life. Provisions are set aside in the Group's accounts to cover all costs relating to (i) the shutdown phase, which involves removing radioactive spent fuel from the site and (ii) the dismantling phase, which consists of decommissioning and cleaning up the site.

The dismantling strategy is based on the facilities being dismantled (i) immediately after the reactor is shut down, (ii) on a "serial" rather than on a site-by-site basis, and (iii) completely, the land being subsequently returned to greenfield status.

Provisions for dismantling nuclear facilities are calculated based on the following inputs:

- costs payable over the long term are calculated by reference to the estimated costs for each nuclear facility, based on a study conducted by independent experts under the assumption that the facilities will be dismantled "in series";
- an inflation rate of 2.0% is applied until the dismantling obligations expire in order to determine the value of the future obligation;
- a discount rate of 3.5% (including inflation of 2.0%) is applied to determine the net present value (NPV) of the obligation. This rate is the same as that used for the back-end of the nuclear fuel cycle;
- the operating life is 50 years for Tihange 1 and Doel 1 and 2, and 40 years for the other facilities;
- the start of the technical shutdown procedures depends on the facility concerned and on the timing of operations for the nuclear reactor as a whole. The shutdown procedures are immediately followed by dismantling operations.

The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment. The provisions may be subsequently adjusted in line with changes in the above-mentioned inputs. The assumptions used have a significant impact on the related implementation costs. However, these inputs and assumptions are based on information and estimates which the Group deems reasonable to date and which have been approved by the Commission for Nuclear Provisions.

The scenario adopted is based on a dismantling program and on timetables that have to be approved by the nuclear safety authorities.

Provisions are also recognized for the Group's share of the expected dismantling costs for the nuclear facilities in which it has drawing rights.

Sensitivity

Based on currently applied inputs for estimating costs and the timing of payments, a change of ten basis points in the discount rate used could lead to an adjustment of approximately €60 million in dismantling provisions. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

This sensitivity is calculated on a purely financial basis and should therefore be interpreted with appropriate caution in view of the variety of other inputs – some of which may be interdependent – included in the evaluation.

20.3 Dismantling of non-nuclear plant and equipment and site rehabilitation

20.3.1 Dismantling obligations arising on other non-nuclear plant and equipment

Certain plant and equipment, including conventional power stations, transmission and distribution pipelines, storage facilities and LNG terminals, have to be dismantled at the end of their operational lives. This obligation is the result of prevailing environmental regulations in the countries concerned, contractual agreements, or an implicit Group commitment.

Based on estimates of proven and probable gas reserves through 2260 using current production levels, dismantling provisions for gas infrastructures in France have a present value near zero.

20.3.2 Hazelwood Power Station & Mine (Australia)

Following the Group and its partner Mitsui's announcement in November 2016 of their decision to close the coal-fired Hazelwood Power Station, the adjoining mine was shut down in late March 2017. The Group holds a 72% interest in the 1,600 MW power station, which was previously fully consolidated and has been consolidated on joint operation since September 2018.

At end-2018, the Group's share (72%) of the provision covering the obligation to dismantle and rehabilitate the mine amounted to €310 million.

Dismantling and site rehabilitation work was initiated in 2017 and includes site rehabilitation, with the purpose of ensuring long-term land and wall stability, the demolition and dismantling of all of the site's industrial facilities, the monitoring of environmental incidents and any related remediation plans, as well as long-term site monitoring.

Several laws that have a direct or indirect impact on mine rehabilitation and on the agencies that administer the laws are currently being reformed. Consequently, the ultimate regulatory obligations could be revised during the life of the project and could therefore have an impact on provisions.

The average discount rate used to determine the amount of the provisions is 4.22%.

The amount of the provision recognized is based on the Group's best current estimate of the dismantling and rehabilitation costs that Hazelwood is expected to incur. However, the amount of this provision may be adjusted in the future to take into account any changes in the key inputs.

20.4 Litigation and tax risks

This caption includes essentially provisions for commercial litigation, and tax claims and disputes.

20.5 Other contingencies

This caption includes notably provisions for onerous contracts relating to storage and transport capacity reservation contracts recognized in 2017 (see Note 10.5).

NOTE 21 POST-EMPLOYMENT BENEFITS AND OTHER LONG-TERM BENEFITS

Accounting principles

Depending on the laws and practices in force in the countries where the Group operates, Group companies have obligations in terms of pensions, early retirement payments, retirement bonuses and other benefit plans. Such obligations generally apply to all employees within the companies concerned.

The Group's obligations in relation to pensions and other employee benefits are recognized and measured in compliance with IAS 19. Accordingly:

- the cost of defined contribution plans is expensed based on the amount of contributions payable in the period;
- the Group's obligations concerning pensions and other employee benefits payable under defined benefit plans are assessed on an actuarial basis using the projected unit credit method. These calculations are based on assumptions relating to mortality, staff turnover and estimated future salary increases, as well as the economic conditions specific to each country or entity of the Group. Discount rates are determined by reference to the yield, at the measurement date, on investment grade corporate bonds in the related geographical area (or on government bonds in countries where no representative market for such corporate bonds exists).

Pension commitments are measured on the basis of actuarial assumptions. The Group considers that the assumptions used to measure its obligations are relevant and documented. However, any change in these assumptions could have a significant impact on the resulting calculations.

Provisions are recorded when commitments under these plans exceed the fair value of plan assets. Where the value of plan assets (capped where appropriate) is greater than the related commitments, the surplus is recorded as an asset under "Other assets" (current or non-current).

As regards post-employment benefit obligations, actuarial gains and losses are recognized in other comprehensive income. Where appropriate, adjustments resulting from applying the asset ceiling to net assets relating to overfunded plans are treated in a similar way. However, actuarial gains and losses on other long-term benefits such as long-service awards, are recognized immediately in income.

Net interest on the net defined benefit liability (asset) is presented in net financial income/(loss).

21.1 Description of the main pension plans

21.1.1 Companies belonging to the Electricity and Gas Industries sector in France

Since January 1, 2005, the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*) has operated the pension, disability, death, occupational accident and occupational illness benefit plans for electricity and gas industry (hereinafter "EGI") companies in France. The CNIEG is a social security legal entity under private law placed under the joint responsibility of the ministries in charge of social security and the budget.

Employees and retirees of EGI sector companies have been fully affiliated to the CNIEG since January 1, 2005. The main affiliated Group entities are ENGIE SA, GRDF, GRTgaz, ELENGY, STORENGY, ENGIE Thermique France, CPCU, CNR and SHEM.

Following the funding reform of the special EGI pension plan introduced by Law No. 2004-803 of August 9, 2004 and its implementing decrees, specific benefits (pension benefits on top of the standard benefits payable under ordinary law) already vested at December 31, 2004 ("past specific benefits") were allocated between the various EGI entities. Past specific benefits (benefits vested at December 31, 2004) relating to regulated transmission and distribution businesses

("regulated past specific benefits") are funded by the levy on gas and electricity transmission and distribution services (*Contribution Tarifaire d'Acheminement*) and therefore no longer represent an obligation for the ENGIE Group. Unregulated past specific benefits (benefits vested at December 31, 2004) are funded by EGI sector companies to the extent defined by Decree No. 2005-322 of April 5, 2005.

The special EGI pension plan is a legal pension plan available to new entrants.

The specific benefits vested under the plan since January 1, 2005 are wholly financed by EGI sector companies in proportion to their respective weight in terms of payroll costs within the EGI sector.

As this plan represents a defined benefit plan, the Group has set aside a pension provision in respect of specific benefits payable to employees of unregulated activities and specific benefits vested by employees of regulated activities since January 1, 2005. This provision also covers the Group's early retirement obligations. The provision amount may be subject to fluctuations based on the weight of the Group's companies within the EGI sector.

Pension benefit obligations and other "mutualized" obligations are assessed by the CNIEG.

At December 31, 2018, the projected benefit obligation in respect of the special pension plan for EGI sector companies amounted to €3.2 billion.

The duration of the pension benefit obligation of the EGI pension plan is 20 years.

21.1.2 Companies belonging to the electricity and gas sector in Belgium

In Belgium, the rights of employees in electricity and gas sector companies, principally Electrabel, Laborelec, ENGIE CC and some ENGIE Energy Management Trading employee categories, are governed by collective bargaining agreements.

These agreements, applicable to "wage-rated" employees recruited prior to June 1, 2002 and managerial staff recruited prior to May 1, 1999, specify the benefits entitling employees to a supplementary pension equivalent to 75% of their most recent annual income, for a full career and in addition to the statutory pension. These top-up pension payments provided under defined benefit plans are partly reversionary. In practice, the benefits are paid in the form of a lump sum for the majority of plan participants. Most of the obligations resulting from these pension plans are financed through pension funds set up for the electricity and gas sector and by certain insurance companies. Pre-funded pension plans are financed by employer and employee contributions. Employer contributions are calculated annually based on actuarial assessments.

The projected benefit obligation relating to these plans represented around 15% of total pension obligations and related liabilities at December 31, 2018. The average duration is 10 years.

"Wage-rated" employees recruited after June 1, 2002 and managerial staff (i) recruited after May 1, 1999 or (ii) having opted for the transfer through defined contribution plans, are covered under defined contribution plans. Prior to January 1, 2017, the law specified a minimum average annual return (3.75% on wage contributions and 3.25% on employer contributions) when savings are liquidated.

The law on supplementary pensions, approved on December 18, 2016 and enforced on January 1, 2017 henceforth specifies a minimum rate of return, depending on the actual rate of return of Belgian government bonds, within a range of 1.75%-3.25% (the rates are now identical for employee and employer contributions). In 2018, the minimum rate of return stood at 1.75%.

An expense of €24 million was recognized in 2018 in respect of these defined contribution plans (€31 million in 2017).

21.1.3 Multi-employer plans

Employees of some Group companies are affiliated to multi-employer pension plans.

Under multi-employer plans, risks are pooled to the extent that the plan is funded by a single contribution rate determined for all affiliated companies and applicable to all employees.

Multi-employer plans are particularly common in the Netherlands, where employees are normally required to participate in a compulsory industry-wide plan. These plans cover a significant number of employers, thereby limiting the impact of potential default by an affiliated company. In the event of default, the vested rights are maintained in a special compartment and are not transferred to the other members. Refinancing plans may be set up to ensure the funds are balanced.

The ENGIE Group accounts for multi-employer plans as defined contribution plans.

The expense recognized in 2018 in respect of multi-employer pension plans was stable as compared to 2017 at €70 million.

21.1.4 Other pension plans

Most other Group companies also grant their employees retirement benefits. In terms of financing, pension plans within the Group are almost equally split between defined benefit and defined contribution plans.

The Group's main pension plans outside France, Belgium and the Netherlands concern:

- the United Kingdom: the large majority of defined benefit pension plans is now closed to new entrants and future benefits no longer vest under these plans. All entities run a defined contribution scheme. The pension obligations of International Power's subsidiaries in the United Kingdom are covered by the special Electricity Supply Pension Scheme (ESPS). The assets of this defined benefit scheme are invested in separate funds. Since June 1, 2008, the scheme has been closed and a defined contribution plan was set up for new entrants;
- Germany: the Group's German subsidiaries have closed their defined benefit plans to new entrants and now offer defined contribution plans;
- Brazil: ENGIE Brasil Energia operates its own pension scheme. This scheme has been split into two parts, one for the (closed) defined benefit plan, and the other for the defined contribution plan that has been available to new entrants since the beginning of 2005.

21.2 Description of other post-employment benefit obligations and other long-term benefits

21.2.1 Other benefits granted to current and former EGI sector employees

Other benefits granted to EGI sector employees are:

Post-employment benefits:

- reduced energy prices;
- end-of-career indemnities;
- bonus leave;
- death capital benefits.

Long-term benefits:

- allowances for occupational accidents and illnesses;
- temporary and permanent disability allowances;
- long-service awards.

The Group's main obligations are described below.

21.2.1.1 Reduced energy prices

Under Article 28 of the national statute for electricity and gas industry personnel, all employees (current and former employees, provided they meet certain length-of-service conditions) are entitled to benefits in kind which take the form of reduced energy prices known as "employee rates".

This benefit entitles employees to electricity and gas supplies at a reduced price. For retired employees, this provision represents a post-employment defined benefit. Retired employees are only entitled to the reduced rate if they have completed at least 15 years' service within EGI sector companies.

In accordance with the agreements signed with EDF in 1951, ENGIE provides gas to all current and former employees of ENGIE and EDF, while EDF supplies electricity to these same beneficiaries. ENGIE pays (or benefits from) the balancing contribution payable in respect of its employees as a result of energy exchanges between the two utilities.

The obligation to provide energy at a reduced price to current and former employees is measured as the difference between the energy sale price and the preferential rate granted.

The provision set aside in respect of reduced energy prices stood at €3.0 billion at December 31, 2018. The duration of the obligation is 21 years.

21.2.1.2 End-of-career indemnities

Retiring employees (or their dependents in the event of death during active service) are entitled to end-of-career indemnities, which increase in line with the length of service within the EGI sector.

21.2.1.3 Compensation for occupational accidents and illnesses

EGI sector employees are entitled to compensation for accidents at work and occupational illnesses. These benefits cover all employees or the dependents of employees who die as a result of occupational accidents or illnesses, or injuries suffered on the way to work.

The amount of the obligation corresponds to the likely present value of the benefits to be paid to current beneficiaries, taking into account any reversionary annuities.

21.2.2 Other benefits granted to employees of the gas and electricity sector in Belgium

Electricity and gas sector companies also grant other employee benefits such as the reimbursement of medical expenses, electricity and gas price reductions, as well as length-of-service awards and early retirement schemes. These benefits are not prefunded, with the exception of the special "*allocation transitoire*" termination indemnity, considered as an end-of-career indemnity.

21.2.3 Other collective agreements

Most other Group companies also grant their staff post-employment benefits (early retirement plans, medical coverage, benefits in kind, etc.) and other long-term benefits such as jubilee and length-of-service awards.

21.3 Defined benefit plans

21.3.1 Amounts presented in the statement of financial position and statement of comprehensive income

In accordance with IAS 19, the information presented in the statement of financial position relating to post-employment benefit obligations and other long-term benefits results from the difference between the gross projected benefit obligation and the fair value of plan assets. A provision is recognized if this difference is positive (net obligation), while a prepaid benefit cost is recorded in the statement of financial position when the difference is negative, provided that the conditions for recognizing the prepaid benefit cost are met.

Changes in provisions for post-employment benefits and other long-term benefits, plan assets and reimbursement rights recognized in the statement of financial position are as follows:

<i>In millions of euros</i>	Provisions	Plan assets	Reimbursement rights
At December 31, 2016	(6,422)	69	130
Exchange rate differences	31	17	-
Transfer to "Liabilities directly associated with assets classified as held for sale"	233	-	-
Changes in scope of consolidation and other	(86)	8	-
Actuarial gains and losses	92	5	13
Periodic pension cost of continued operations	(427)	(50)	3
Periodic pension cost of discontinued operations	(28)	-	-
Asset ceiling	2	-	-
Contributions/benefits paid	464	53	12
At December 31, 2017	(6,142)	101	159
Exchange rate differences	(22)	-	-
Changes in scope of consolidation and other	95	(26)	(12)
Actuarial gains and losses	(237)	7	8
Periodic pension cost of continued operations	(457)	(68)	3
Asset ceiling	-	-	-
Contributions/benefits paid	392	93	11
AT DECEMBER 31, 2018	(6,371)	108	168

Plan assets and reimbursement rights are presented in the statement of financial position under "Other non-current assets" or "Other current assets".

The cost recognized for the period amounted to €525 million in 2018 (€477 million in 2017). The components of this defined benefit cost in the period are set out in Note 21.3.4 "Components of the net periodic pension cost".

The Eurozone represented 97% of the Group's net obligation at December 31, 2018 (compared to 96% at December 31, 2017).

Cumulative actuarial gains and losses recognized in equity amounted to €3,472 million at December 31, 2018, compared to €3,327 million at December 31, 2017.

Net actuarial differences arising in the period and presented on a separate line in the statement of comprehensive income represented a net actuarial loss of €231 million in 2018 and a net actuarial gain of €99 million in 2017.

21.3.2 Change in benefit obligations and plan assets

The table below shows the amount of the Group's projected benefit obligations and plan assets, changes in these items during the periods presented, and their reconciliation with the amounts reported in the statement of financial position:

In millions of euros	Dec. 31, 2018				Dec. 31, 2017			
	Pension benefit obligations ⁽¹⁾	Other post-employment benefit obligations ⁽²⁾	Long-term benefit obligations ⁽³⁾	Total	Pension benefit obligations ⁽¹⁾	Other post-employment benefit obligations ⁽²⁾	Long-term benefit obligations ⁽³⁾	Total
A - CHANGE IN PROJECTED BENEFIT OBLIGATION								
Projected benefit obligation at January 1	(7,653)	(3,739)	(539)	(11,931)	(7,945)	(3,731)	(556)	(12,232)
Service cost	(308)	(62)	(42)	(412)	(278)	(57)	(46)	(381)

Transfer to "liabilities directly associated with assets classified as held for sale"	-	-	-	-	(222)	-	-	(222)
Other (of which translation adjustments)	(11)	-	-	(11)	(105)	-	-	(105)
Fair value of plan assets at December 31	B 5,767	-	-	5,767	5,904	-	-	5,904
C - FUNDED STATUS	A+B (1,945)	(3,794)	(499)	(6,239)	(1,749)	(3,739)	(539)	(6,027)
Asset ceiling	(25)	-	-	(25)	(14)	-	-	(14)
NET BENEFIT OBLIGATION	(1,970)	(3,794)	(499)	(6,263)	(1,763)	(3,739)	(539)	(6,041)
ACCRUED BENEFIT LIABILITY	(2,078)	(3,794)	(499)	(6,371)	(1,865)	(3,739)	(538)	(6,142)
PREPAID BENEFIT COST	108	-	-	108	101	-	-	101

(1) Pensions and retirement bonuses.

(2) Reduced energy prices, healthcare, gratuities and other post-employment benefits.

(3) Length-of-service awards and other long-term benefits.

21.3.3 Change in reimbursement rights

Changes in the fair value of reimbursement rights relating to plan assets managed by Contassur are as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Fair value at January 1	159	130
Interest income on plan assets	3	3
Financial actuarial gains and losses	8	13
Actual return	11	16
Curtailments/settlements	(12)	-
Employer contributions	18	16
Employee contributions	-	-
Benefits paid	(7)	(3)
Other	-	-
FAIR VALUE AT DECEMBER 31	168	159

21.3.4 Components of the net periodic pension cost

The net periodic cost recognized in respect of defined benefit obligations for the years ended December 31, 2018 and 2017 breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Current service cost	412	360
Actuarial gains and losses ⁽¹⁾	(1)	(14)
Plan amendments	(2)	6
Gains or losses on pension plan curtailments, terminations and settlements	(1)	2
Non-recurring items	(2)	1
Total recognized under current operating income after share in net income of entities accounted for using the equity method	407	355
Net interest expense	117	122
Total accounted for under net financial income/(loss)	117	122
TOTAL	525	477

(1) On the long-term benefit obligation.

21.3.5 Funding policy and strategy

When defined benefit plans are funded, the related plan assets are invested in pension funds and/or with insurance companies, depending on the investment practices specific to the country concerned. The investment strategies underlying these defined benefit plans are aimed at striking the right balance between return on investment and acceptable levels of risk.

The objectives of these strategies are twofold: to maintain sufficient liquidity to cover pension and other benefit payments; and as part of risk management, to achieve a long-term rate of return higher than the discount rate or, where appropriate, at least equal to future required returns.

When plan assets are invested in pension funds, investment decisions are the responsibility of the fund management concerned. For French companies, where plan assets are invested with an insurance company, the latter manages the investment portfolio for unit-linked policies or euro-denominated policies, in a manner adapted to the risk and long-term profile of the liabilities.

The funding of these obligations at December 31 for each of the periods presented can be analyzed as follows:

<i>In millions of euros</i>	Projected benefit obligation	Fair value of plan assets	Asset ceiling	Total net obligation
Underfunded plans	(5,648)	4,294	(23)	(1,377)
Overfunded plans	(1,375)	1,473	(2)	96
Unfunded plans	(4,977)	-	-	(4,977)
AT DECEMBER 31, 2018	(12,000)	5,767	(25)	(6,258)
Underfunded plans	(5,876)	4,505	(9)	(1,380)
Overfunded plans	(1,286)	1,399	(5)	108
Unfunded plans	(4,768)	-	-	(4,768)
AT DECEMBER 31, 2017	(11,930)	5,904	(14)	(6,041)

The allocation of plan assets by principal asset category can be analyzed as follows:

<i>In %</i>	Dec. 31, 2018	Dec. 31, 2017
Equity investments	27	27
Sovereign bond investments	25	24
Corporate bond investments	27	28
Money market securities	4	3
Real estate	2	2
Other assets	15	17
TOTAL	100	100

All plan assets were quoted on an active market at December 31, 2018.

The actual return on assets of EGI sector companies stood at a negative 5% in 2018.

The actual return on plan assets of Belgian entities amounted to approximately 3% in Group insurance and a negative 5% in pension funds.

The allocation of plan asset categories by geographic area of investment can be analyzed as follows:

<i>In %</i>	Europe	North America	Latin America	Asia - Oceania	Rest of the World	Total
Equity investments	57	26	3	11	4	100
Sovereign bond investments	77	2	21	-	-	100
Corporate bond investments	76	18	1	3	1	100
Money market securities	67	-	4	-	29	100
Real estate	90	-	7	-	3	100
Other assets	12	8	3	3	73	100

21.3.6 Actuarial assumptions

Actuarial assumptions are determined individually by country and company in conjunction with independent actuaries. Weighted discount rates for the main actuarial assumptions are presented below:

		Pension benefit obligations		Other post-employment benefit obligations		Long-term benefit obligations		Total benefit obligations	
		2018	2017	2018	2017	2018	2017	2018	2017
Discount rate	Eurozone	2.0%	1.9%	2.1%	2.0%	1.6%	1.8%	1.9%	1.9%
	UK Zone	2.5%	2.6%	-	-	-	-	-	-
Inflation rate	Eurozone	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%
	UK Zone	3.3%	3.2%	-	-	-	-	-	-

21.3.6.1 Discount and inflation rate

The discount rate applied is determined based on the yield, at the date of the calculation, investment grade corporate bonds with maturities mirroring the term of the plan.

The rates were determined for each monetary area based on data for AA corporate bond yields. For the Eurozone, data (from Bloomberg) are extrapolated on the basis of government bond yields for long maturities.

According to the Group's estimates, a 100-basis-point increase or decrease in the discount rate would result in a change of approximately 16% in the projected benefit obligation.

The inflation rates were determined for each monetary area. A 100-basis-point increase or decrease in the inflation rate (with an unchanged discount rate) would result in a change of approximately 13% in the projected benefit obligation.

21.3.6.2 Other assumptions

The increase in the rate of medical costs (including inflation) was estimated at 2.8%.

A 100-basis-point change in the assumed increase in medical costs would have the following impacts:

<i>In millions of euros</i>	100 basis point increase	100 basis point decrease
Impact on expenses	-	-
Impact on pension obligations	6	(5)

21.3.7 Estimated employer contributions payable in 2019 under defined benefit plans

The Group expects to pay around €265 million in contributions into its defined benefit plans in 2019, including €126 million for EGI sector companies. Annual contributions in respect of EGI sector companies will be made by reference to rights vested in the year, taking into account the funding level for each entity in order to even out contributions over the medium term.

21.4 Defined contribution plans

In 2018, the Group recorded a €133 million expense in respect of amounts paid into Group defined contribution plans (€142 million in 2017). These contributions are recorded under "Personnel costs" in the consolidated income statement.

NOTE 22 FINANCE LEASES

Accounting principles

Leases are analyzed based on the situations and indicators set out in IAS 17 in order to determine whether they constitute operating leases or finance leases.

A finance lease is defined as a lease which transfers substantially all the risks and rewards incidental to the ownership of the related asset to the lessee.

The following main factors are considered by the Group to assess whether or not a lease transfers substantially all the risks and rewards incidental to ownership: whether (i) the lessor transfers ownership of the asset to the lessee by the end of the lease term; (ii) the lessee has an option to purchase the asset and if so, the conditions applicable to exercising that option; (iii) lease term is for the major part of the economic life of the asset; (iv) the asset is of a highly specialized nature; and (v) the present value of minimum lease payments amounts to at least substantially all of the fair value of the leased asset.

Accounting for finance leases

On initial recognition, assets held under finance leases are recorded as property, plant and equipment and the related liability is recognized under borrowings. At inception of the lease, finance leases are recorded at amounts equal to the fair value of the leased asset or, if lower, the present value of the minimum lease payments.

Accounting for arrangements that contain a lease

IFRIC 4 deals with the identification of services and take-or-pay sales or purchasing contracts that do not take the legal form of a lease but convey rights to customers/suppliers to use an asset or a group of assets in return for a payment or a series of fixed payments. Contracts meeting these criteria should be identified as either operating leases or finance leases. In the latter case, a finance receivable should be recognized to reflect the financing deemed to be granted by the Group where it is considered as acting as lessor and its customers as lessees.

The Group is concerned by this interpretation mainly with respect to:

- some energy purchase and sale contracts, particularly where the contract conveys to the purchaser of the energy an exclusive right to use a production asset;
- certain contracts with industrial customers relating to assets held by the Group.

22.1 Finance leases for which ENGIE acts as lessee

The carrying amounts of property, plant and equipment held under finance leases are broken down into different categories depending on the type of asset concerned.

The main finance lease agreements concluded by the Group primarily concern power plants in the Latin America segment (mostly ENGIE Energía Perú – Peru) and ENGIE Cofely's cogeneration plants.

The undiscounted and present values of future minimum lease payments break down as follows:

In millions of euros	Dec. 31, 2018		Dec. 31, 2017	
	Undiscounted value	Present value	Undiscounted value	Present value
Year 1	125	121	155	151
Years 2 to 5 inclusive	209	193	334	306
Beyond year 5	69	61	27	20
TOTAL	403	376	516	477

The following table provides a reconciliation of liabilities under finance leases as reported in the statement of financial position (see Note 17.2.3 “Borrowings and debt”) with undiscounted future minimum lease payments by maturity:

<i>In millions of euros</i>	Total	Year 1	Years 2 to 5 inclusive	Beyond year 5
Liabilities under finance leases	380	118	193	69
Impact of discounting future repayments of principal and interest	23	7	16	-
UNDISCOUNTED FUTURE MINIMUM LEASE PAYMENTS	403	125	209	69

22.2 Finance leases for which ENGIE acts as lessor

These leases mainly fall within the scope of IFRIC 4 guidance on the interpretation of IAS 17. They concern (i) energy purchase and sale contracts where the contract conveys an exclusive right to use a production asset; and (ii) certain contracts with industrial customers relating to assets held by the Group.

The Group has recognized finance lease receivables, notably for cogeneration plants for Wapda and NTDC (Uch – Pakistan) and Lanxess (Electrabel – Belgium).

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Undiscounted future minimum lease payments	919	1,013
Unguaranteed residual value accruing to the lessor	27	27
TOTAL GROSS INVESTMENT IN THE LEASE	946	1,041
Unearned financial income	170	197
NET INVESTMENT IN THE LEASE (STATEMENT OF FINANCIAL POSITION)	777	844
<i>Of which present value of future minimum lease payments</i>	758	828
<i>Of which present value of unguaranteed residual value</i>	19	16

Undiscounted future minimum lease payments receivable under finance leases can be analyzed as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Year 1	182	130
Years 2 to 5 inclusive	420	456
Beyond year 5	317	427
TOTAL	919	1,013

NOTE 23 OPERATING LEASES

Accounting standards

All leases that do not meet the definition of a finance lease are classified as operating leases.

Payments made under operating leases are recognized as an expense on a straight-line basis over the lease term.

23.1 Operating leases for which ENGIE acts as lessee

The Group has entered into operating leases mainly in connection with miscellaneous buildings and fittings.

Operating lease income and expenses for 2018 and 2017 can be analyzed as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Minimum lease payments	(686)	(642)
Contingent lease payments	(13)	(17)
Sub-letting income	-	(1)
Sub-letting expenses	(29)	(35)
Other operating lease expenses	(99)	(94)
TOTAL	(828)	(789)

(1) Comparative data at December 31, 2017 have been restated due to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities (see Note 2 "Restatement of 2017 comparative data").

The present values of future minimum lease payments under non-cancelable operating leases can be analyzed as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Year 1	353	459
Years 2 to 5 inclusive	839	1,159
Beyond year 5	895	696
TOTAL	2,087	2,314

(1) Comparative data at December 31, 2017 have been restated due to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities (see Note 2 "Restatement of 2017 comparative data").

23.2 Operating leases for which ENGIE acts as lessor

These leases fall mainly within the scope of IFRIC 4 guidance on the interpretation of IAS 17. They primarily concern power plants operated in the Africa/Asia segment.

Operating lease income for 2018 and 2017 can be analyzed as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Minimum lease payments	126	271
Contingent lease payments	-	6
TOTAL	126	277

(1) Comparative data at December 31, 2017 have been restated due to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities (see Note 2 "Restatement of 2017 comparative data").

NOTE 23 OPERATING LEASES

The present values of future minimum lease payments receivable under non-cancelable operating leases can be analyzed as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Year 1	31	286
Years 2 to 5 inclusive	72	58
Beyond year 5	67	3
TOTAL	170	347

(1) Comparative data at December 31, 2017 have been restated due to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities (see Note 2 "Restatement of 2017 comparative data").

NOTE 24 SHARE-BASED PAYMENTS

Accounting standards

Under IFRS 2, share-based payments made in consideration for services provided are recognized as personnel costs. These services are measured at the fair value of the instruments awarded.

The fair value of bonus share plans is estimated by reference to the share price at the grant date, taking into account the fact that no dividend is payable over the vesting period, and based on the estimated turnover rate for the employees concerned and the probability that the Group will meet its performance targets. The fair value measurement also takes into account the non-transferability period associated with these instruments. The cost of shares granted to employees is expensed over the vesting period of the rights and offset against equity.

A Monte Carlo pricing model is used for performance shares granted on a discretionary basis and subject to external performance criteria.

Expenses recognized in respect of share-based payments break down as follows:

In millions of euros	Note	Expense for the year	
		Dec. 31, 2018	Dec. 31, 2017
Employee share issues ⁽¹⁾	24.2	31	1
Bonus/performance share plans	24.3	46	36
Other Group companies' plans		3	1
TOTAL		80	38

(1) Including Share Appreciation Rights set up within the scope of employee share issues in certain countries.

24.1 Stock option plans

No new ENGIE stock option grants were approved by the Group's Board of Directors in either 2018 or 2017.

At December 31, 2017, the last stock purchase plan expired.

24.2 Link 2018

24.2.1 Description of available ENGIE share plans

In 2018, Group employees and former Group employees were entitled to purchase ENGIE shares as part of the "LINK 2018" worldwide employee share ownership plan. The offering mainly involved the sale of treasury shares, including 22.2 million shares bought back from the French State following the private placements carried out in (see Note 19.1). Employees could subscribe to either:

- the Link Classique Plan: this plan allows employees to subscribe to shares at a discount, either directly or via an employee mutual fund and with an employer top-up contribution;
- the Link Multiple Plan: under this plan, employees may subscribe to shares at a discount, either directly or via an employee mutual fund, and also benefit from any increase in the share price (leverage effect) in addition to the amounts invested. Through a Swap Agreement with a bank, employees are guaranteed to recover 100% of the invested amount as well as a minimum capitalized return;
- the Link+ Plan: under this plan, employees may subscribe to shares at a discount, either directly or via an employee mutual fund, and also benefit from any increase in the share price (higher leverage effect than the Link Multiple Plan) in addition to the amounts invested. This plan is subject to a lock-up period of ten years. Through a Swap Agreement with a bank, employees are guaranteed to recover 100% of the invested amount as well as a guaranteed minimum capitalized return;

- Share Appreciation Rights (SARs): this leveraged plan entitles beneficiaries who purchase shares to receive a cash bonus equal to the increase in the share price after a period of five years. The resulting employee liability is covered by warrants.

The Link Classique Plan and the Link+ Plan featured an employer contribution under the terms and conditions described below:

- participating French employees were entitled to bonus ENGIE shares depending on the amount of their own contribution to the plans:
 - the Link Classique Plan: for an employee contribution of €150, the employer contribution corresponded to 200% of this amount ; for an additional employee contribution of €150, the employer contribution represented 100% of the amount. The employer contribution was capped at €450;
 - the Link+ Plan: for an employee contribution of €100, the employer contribution corresponded to 300% of this amount.
- for employees in other countries, ENGIE shares were granted through a bonus share award plan, subject to the still being employed with the Group and depending on their own contribution to the plan:
 - for an employee contribution of €150, two bonus shares were granted for every one share subscribed;
 - for employee contributions from €150 to €300, one bonus share was granted for every share subscribed.

The bonus shares will be awarded to employees on August 2, 2023, provided that they are still employed by the ENGIE Group.

24.2.2 Accounting impacts

Subscription price for the 2018 plan represents the average closing price of the ENGIE share on the NYSE Euronext Paris Eurolist market over the 20 trading days between May 24, 2018 and June 20, 2018 inclusive. The reference price is set at €13.65 less 20% for the Link Classique and the Link Multiple plans, i.e. €10.92 and less 30% for the Link+ plan, i.e. €9.56.

The expense recognized in the consolidated financial statements in respect of the Link Classique, Link Multiple and Link+ plans corresponds to the difference between the fair value of the shares subscribed and the subscription price. The fair value takes into account the lock-up period of five or ten years, as provided for by French legislation. It also considers the opportunity cost implicitly borne by ENGIE under the leveraged share ownership plan in allowing its employees to benefit from more attractive financial conditions than those that would have been available to them as individual investors.

The following assumptions were applied:

	5 years	10 years
Risk-free interest rate	0.26%	0.88%
Spread applicable to the retail banking network	3.64%	3.60%
Employee financing cost	3.90%	4.48%
Share lending cost	1.00%	1.50%
Share price at grant date	13.65	13.65
Volatility spread	1.90%	7.50%

The accounting impacts are break down as follows:

	Link Classique	Link Multiple	Link+	Link+ France - additional employer's contribution	Link Classique France - additional employer's contribution	Total
Amount subscribed (in millions of euros)	24	187	111	-	-	321
Number of shares subscribed (in millions of shares)	2.2	17.1	11.6	0.9	0.9	32.7
Discount (€/share)	2.7	2.7	4.1	13.7	13.7	-
Non-transferability restriction (€/share)	(3.3)	(3.3)	(7.6)	(7.6)	(3.3)	-
Opportunity cost (€/share)	-	0.3	1.0	-	-	-
Cost for the Group (in millions of euros)	-	4	12	6	9	31

Subscriptions to the Link 2018 worldwide employee share ownership plan totaled €321 million and break down as follows:

- the sale of treasury shares to employees amounted to €255 million;
- a capital increase and additional paid-in capital of €66 million (excluding issuance costs). This amount is broken down into €4 million for Link Classique and €62 million for Link Multiple.

The Group recognized a total expense of €31 million for 2018 in respect of the 30.9 million shares subscribed and 1.8 million bonus shares awarded under employer contributions.

The accounting impact of cash-settled Share Appreciation Rights consists in recognizing a payable to the employee over the vesting period, with a corresponding adjustment recorded in income. At December 31, 2018, the fair value of the liability relating to the 2014 and 2018 awards amounted to €0.8 million.

24.3 Bonus shares and performance shares

24.3.1 New awards in 2018

ENGIE Performance Share plan of December 11, 2018

On December 11, 2018, the Board of Directors approved the award of 5 million performance shares to members of the Group's executive and senior management, breaking down into three tranches:

- performance shares vesting on March 14, 2022, subject to a further one-year lock-up period;
- performance shares vesting on March 14, 2022, without a lock-up period; and
- performance shares vesting on March 14, 2023, without a lock-up period.

In addition to a condition requiring employees to be employed with the Group at the vesting date, each tranche is made up of instruments subject to three different conditions, excluding the first 150 performance shares granted to beneficiaries (excluding top management) which are exempt from performance conditions. The performance conditions, each of which accounts for one-third of the total grant, are as follows:

- a market performance condition relating to ENGIE's Total Shareholder Return compared to that of a reference panel of ten companies, as assessed between November 2018 and January 2022;
- two internal performance conditions relating to net recurring income Group share and to Return On Capital Employed (ROCE) in 2020 and 2021.

As part of this plan, performance shares without conditions were also awarded to the winners of the Innovation and Incubation programs (21,150 shares awarded).

ENGIE Bonus Share plan of August 2, 2018

As part of the Link 2018 employee share plan, bonus shares were awarded to subscribers of the Link Classique plan (outside France), with two bonus shares awarded for €150 of shares purchased, and one bonus share awarded for shares purchased beyond €150 and up to €300. A total of 301,816 shares were awarded under this plan, subject to the employees still being employed with the ENGIE Group on August 2, 2023.

24.3.2 Fair value of bonus share plans with or without performance conditions

The following assumptions were used to calculate the fair value of the new plans awarded by ENGIE in 2018:

Award date	Vesting date	End of the lock-up period	Price at the award date	Expected dividend	Financing cost for the employee	Non-transferability cost	Market-related performance condition	Fair value per unit
August 2, 2018	August 2, 2023	August 2, 2023	14.0	0.75	NA	NA	no	10.28
Weighted average fair value of the August 2, 2018 plan								10.28
December 11, 2018	March 14, 2022	March 14, 2023	12.3	0.75	4.4%	0.32	yes	8.95
December 11, 2018	March 14, 2022	March 14, 2022	12.3	0.75	4.4%	0.32	yes	9.32
December 11, 2018	March 14, 2022	March 14, 2022	12.3	0.75	4.4%	0.40	no	10.00
December 11, 2018	March 14, 2023	March 14, 2023	12.3	0.75	4.4%	0.32	yes	8.62
Weighted average fair value of the December 11, 2018 plan								8.90

24.3.3 Review of internal performance conditions applicable to the plans

In addition to the condition of continuing employment within the Group, eligibility for certain bonus share and performance share plans is subject to an internal performance condition. When this condition is not fully met, the number of bonus shares granted to employees is reduced in accordance with the plans' regulations, leading to a decrease in the total expense recognized in relation to the plans in accordance with IFRS 2. Performance conditions are reviewed at each reporting date.

24.3.4 Free share plans with or without performance conditions in force at December 31, 2018, and impact on income

The expense recorded during the year on plans in effect was as follows:

	Expense for the year (In millions of euros)	
	Dec. 31, 2018	Dec. 31, 2017
Bonus share plans	-	-
Performance share plans	46	36
of which expense for the year	46	37
of which reversal for performance conditions not achieved	-	(1)
TOTAL	46	36

NOTE 25 RELATED PARTY TRANSACTIONS

This note describes material transactions between the Group and its related parties.

Compensation payable to key management personnel is disclosed in Note 26 “Executive compensation”.

Transactions with joint ventures and associates are described in Note 4 “Investments in entities accounted for using the equity method”.

Only material transactions are described below.

25.1 Relations with the French State and with entities owned or partly owned by the French State

25.1.1 Relations with the French State

On July 30, 2018, the French State sold to ENGIE a 0.46% in the Group's share capital (11.1 million shares for €151.7 million). Consequently, the share of ENGIE owned by the French State decreased from 24.10% to 23.64%, allowing it to appoint four representatives to the Group's 19-member Board of Directors (instead of five previously).

Since August 2018, the French State has held 34.51% of the Group's theoretical voting rights (or 34.79% of the exercisable voting rights) compared to 34.87% at the end of July 2018, and 28.07% at the end of December 2017.

The French State holds a golden share aimed at protecting France's critical interests and ensuring the continuity and safeguarding of supplies in the energy sector. The golden share is granted to the French State indefinitely and entitles it to veto decisions taken by ENGIE if it considers they could harm France's interests.

Public service engagements in the energy sector are defined by the law of January 3, 2003.

On November 6, 2015, the French State and ENGIE renewed the public service contract which sets out how such engagements are implemented, the Group's public service obligations and the conditions for rate regulation in France:

- as part of its public service obligations, the Group reaffirmed its commitments in terms of security of supply, quality of customer relations, solidarity and assistance to low-income customers, sustainable development and protection of the environment, as well as in terms of research;
- regarding the conditions for rate regulation in France, the contract confirms the overall regulatory framework for setting and changing natural gas tariffs in France, according to the Decree of December 18, 2009, which notably forecasts rate changes based on costs incurred, while also defining the transitional framework following the elimination of regulated natural gas tariffs for business customers.

Transmission rates on the GRTgaz transportation network and the gas distribution network in France, rates for accessing the French LNG terminals, as well as revenues related to storage capacity are all regulated.

25.1.2 Relations with EDF

Following the creation on July 1, 2004 of the French gas and electricity distribution network operator (EDF Gaz de France Distribution), Gaz de France SA and EDF entered into an agreement on April 18, 2005 setting out their relationship as regards the distribution business. The December 7, 2006 law on the energy sector reorganized the natural gas and electricity distribution networks. Enedis SA (previously ERDF SA), a subsidiary of EDF SA, and GRDF SA, a subsidiary of ENGIE SA, were created on January 1, 2007 and January 1, 2008, respectively, and act in accordance with the agreement previously signed by the two incumbent operators.

25.2 Relations with the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*)

The Group's relations with the CNIEG, which manages all old-age, death and disability benefits for active and retired employees of the Group who belong to the special EGI pension plan, employees of EDF and Non-Nationalized Companies (*Entreprises Non Nationalisées – ENN*), are described in Note 21 "Post-employment benefits and other long-term benefits".

NOTE 26 EXECUTIVE COMPENSATION

The executive compensation presented below includes the compensation of the members of the Group's Executive Committee and Board of Directors.

The Executive Committee had 11 members at December 31, 2018 (12 members at December 31, 2017).

Their compensation breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017
Short-term benefits	21	17
Post-employment benefits	6	8
Shared-based payments	5	6
Termination benefits	0	-
TOTAL	32	31

The amount of pension benefit obligations in respect of members of the Group's Executive Committee stood at €29 million at December 31, 2018, being specified that this is an estimated amount as these commitments are, as a rule, not individualized. The Group has a policy of financing pension obligations through hedging assets, without these being specifically dedicated to the retirement obligations of a dedicated population.

NOTE 27 WORKING CAPITAL REQUIREMENTS, INVENTORIES, OTHER ASSETS AND OTHER LIABILITIES

Accounting standards

In accordance with IAS 1, the Group's current and non-current assets and liabilities are shown separately in the consolidated statement of financial position. For most of the Group's activities, the breakdown into current and non-current items is based on when assets are expected to be realized, or liabilities extinguished. Assets expected to be realized or liabilities extinguished within 12 months of the reporting date are classified as current, while all other items are classified as non-current.

27.1 Composition of change in working capital requirements

<i>In millions of euros</i>	Change in working capital requirements at Dec. 31, 2018	Change in working capital requirements at Dec. 31, 2017 ⁽¹⁾
Inventories	(268)	(487)
Trade and other receivables, net	(2,311)	732
Trade and other payables, net	2,177	7
Tax and employee-related receivables/payables	237	102
Margin calls and derivative instruments hedging commodities relating to trading activities	197	993
Other	117	267
TOTAL	149	1,613

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 and to the classification as "Discontinued operations" of ENGIE's upstream liquefied natural gas (LNG) activities sold in July 2018 (see Note 2 "Restatement of 2017 comparative data").

27.2 Inventories

Accounting standards

Inventories are measured at the lower of cost and net realizable value. Net realizable value corresponds to the estimated selling price in the ordinary course of business, less the estimated costs of completion and the estimated costs necessary to make the sale.

The cost of inventories is determined based on the first-in, first-out method or the weighted average cost formula.

Nuclear fuel purchased is consumed in the process of producing electricity over a number of years. The consumption of this nuclear fuel inventory is recorded based on estimates of the quantity of electricity produced per unit of fuel.

Gas inventories

Gas injected into underground storage facilities includes working gas, which can be withdrawn without adversely affecting the subsequent operation of the reservoirs, and cushion gas, which is inseparable from the reservoirs and essential for their operation (see Note 16).

Working gas is classified in inventories and measured at weighted average purchase cost upon entering the transportation network regardless of its source, including any regasification costs.

Group inventory outflows are valued using the weighted average unit cost method.

An impairment loss is recognized when the net realizable value of inventories is lower than their weighted average cost.

Certain inventories are used for trading purposes and are recognized at fair value less the estimated costs necessary to make the sale in accordance with IAS 2. Any changes in this fair value are recognized in the consolidated income statement for the year to which they occur.

Greenhouse gas emissions rights

European Directive 2003/87/EC establishes a greenhouse gas (GHG) emissions allowance trading scheme within the European Union. Under the Directive, each year the sites concerned have to surrender a number of allowances equal to the total GHG emissions of their installations during the previous calendar year. As there are no specific rules under IFRS dealing with the accounting treatment of GHG emissions allowances, the Group decided to apply the following principles:

- emission rights are classified as inventories, as they are consumed in the production process;
- emission rights purchased on the market are recognized at acquisition cost;
- emission rights granted free of charge are recorded in the statement of financial position for a value of nil.

The Group records a liability at the year-end in the event that it does not have enough emission rights to cover its GHG emissions during the year. This liability is measured at the market value of the allowances required to meet its obligations at the year-end or based on the price of future contracts concluded to hedge this lack of emission rights.

Energy savings certificates (ESC)

In the absence of current IFRS Standards or IFRIC Interpretations on accounting for energy savings certificates (ESC), the following principles are applied:

- in the event that the number of ESCs held exceeds the obligation at the reporting date, they are accounted in inventories; otherwise, a liability is recorded;
- ESC inventories are valued at weighted average cost (acquisition cost for ESCs acquired or cost incurred for ESCs generated internally).

<i>In millions of euros</i>	Dec. 31, 2018	Dec. 31, 2017⁽¹⁾
Inventories of natural gas, net	1,274	1,423
Inventories of uranium	595	575
CO ₂ emission rights, green certificates and energy saving certificates, net	654	650
Inventories of commodities other than gas and other inventories, net	1,635	1,513
TOTAL	4,158	4,161

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

27.3 Other assets and other liabilities

<i>In millions of euros</i>	Dec. 31, 2018				Dec. 31, 2017⁽¹⁾			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Other assets and liabilities	474	9,337	(960)	(12,529)	566	8,508	(1,007)	(11,531)
Tax receivables/payables	-	6,999	-	(7,449)	-	6,529	-	(6,685)
Employee receivables/payables	275	72	(5)	(2,461)	259	27	(3)	(2,376)
Dividend receivables/payables	-	12	-	(170)	-	6	-	(119)
Other	198	2,255	(954)	(2,449)	306	1,946	(1,004)	(2,351)

(1) Comparative data at December 31, 2017 have been restated due to the application of IFRS 9 and IFRS 15 (see Note 2 "Restatement of 2017 comparative data").

At December 31, 2018, other non-current assets also include a receivable towards EDF Belgium in respect of nuclear provisions amounting to €74 million (€75 million at December 31, 2017).

NOTE 28 LEGAL AND ANTI-TRUST PROCEEDINGS

The Group is party to a number of legal and anti-trust proceedings with third parties or with legal and/or administrative authorities (including tax authorities) in the normal course of its business.

Provisions recorded in respect of these proceedings totaled €629 million at December 31, 2018 (€703 million at December 31, 2017).

The main disputes and investigations presented hereafter are recognized as liabilities or give rise to contingent assets or liabilities.

In the normal course of its business, the Group is also involved in a number of disputes and investigations before state courts, arbitral tribunals or regulatory authorities. The disputes and investigations that could have a material impact on the Group are presented below.

28.1 Latin America

28.1.1 Concessions in Buenos Aires and Santa Fe

In 2003, ENGIE and its joint shareholders, water distribution concession operators in Buenos Aires and Santa Fe, initiated two arbitration proceedings against the Argentinean State before the International Center for Settlement of Investment Disputes (ICSID). The purpose of these proceedings was to obtain compensation for the loss in value of investments made since the start of the concession, in accordance with bilateral investment protection treaties.

As a reminder, prior to the stock market listing of SUEZ Environnement Company, ENGIE and SUEZ (formerly SUEZ Environnement) entered into an agreement providing for the economic transfer to SUEZ of the rights and obligations relating to the ownership interests held by ENGIE in Aguas Argentinas and Aguas Provinciales de Santa Fe, including the rights and obligations resulting from the arbitration proceedings.

On April 9, 2015, the ICSID ordered the Argentinean State to pay USD 405 million in respect of termination of the Buenos Aires water distribution and treatment concession contracts (including USD 367 million to ENGIE and its subsidiaries), and on December 4, 2015, to pay USD 225 million in respect of termination of the Santa Fe concession contracts. The Argentinean State sought the annulment of these awards. By decision dated May 5, 2017, the claim for the annulment of the Buenos Aires award was rejected. The claim to annul the award in the Santa Fe case was rejected by a decision dated December 14, 2018. Consequently, the two ICSID awards, which are a step in the settlement of the dispute, are now final.

28.1.2 Planned construction of an LNG terminal in Uruguay

GNLS SA, a joint subsidiary of Marubeni and ENGIE, was selected in 2013 to build an offshore LNG terminal in Uruguay. On November 20, 2013, GNLS contracted out the design and construction of the terminal to Construtora OAS SA. Following a number of problems and defects, GNLS terminated the contract in March 2015 and made use of its guarantees. OAS challenged the termination of the contract but did not take action against GNLS. OAS went bankrupt in Uruguay on April 8, 2015. In September 2015, GNLS and the authorities agreed to cancel the planned construction.

On May 24, 2017, OAS and GNLS appeared before the Uruguayan courts in a conciliation process at the request of OAS. The conciliation process was unsuccessful. OAS then threatened to call GNLS before the Uruguayan courts to claim damages. Since GNLS had incurred significant losses as a result of the termination of the contract, it filed a request for arbitration on August 22, 2017 in accordance with the terms of the contract providing for dispute resolution in Madrid by the ICC International Court of Arbitration, claiming a principal amount of USD 373 million. OAS responded by summoning GNLS before the Montevideo Commercial Court, claiming USD 311 million in damages. ENGIE was officially named as a party to the proceedings on December 5, 2018. Both proceedings are still pending.

28.2 Benelux

28.2.1 Resumption and extension of operations at the nuclear reactors

Various associations have brought actions before the Constitutional Court, the *Conseil d'État* and the ordinary courts against the laws and administrative decisions authorizing the extension of operations at the Doel 1 and 2 and Tihange 1 reactors. On June 22, 2017, the Constitutional Court referred the case to the Court of Justice of the European Union for a preliminary ruling. The Brussels Court of Appeal dismissed Greenpeace's claims in a decision dated June 12, 2018. The other actions are still pending.

In addition, some local authorities and various organizations have challenged the authorization to restart operations at the Tihange 2 reactor. On November 9, 2018, the *Conseil d'État* rejected the action brought by some German local authorities seeking the annulment of this decision. Civil proceedings are still ongoing before the Brussels Court of First Instance.

28.2.2 Claim by the Dutch tax authorities related to interest deductibility

Based on a disputable interpretation of a statutory modification that came into force in 2007, the Dutch tax authorities refuse the deductibility of a portion (€1.1 billion) of the interest paid on financing contracted for the acquisition of investments made in the Netherlands since 2000. Following the Dutch tax authorities' rejection of the administrative claim against the 2007 tax assessment, action was brought before the Arnhem Court of First Instance in June 2016. On October 4, 2018, the court ruled in favor of the tax authorities. However, given that ENGIE Energie Nederland Holding BV considers the court's reasoning to be contradictory and disputable, both in light of Dutch and European law, it has appealed the decision.

28.2.3 Claim by the Dutch tax authorities related to power plant impairment losses

The Dutch tax authorities plan to disallow the tax deduction of asset impairment losses reported by ENGIE Energie Nederland NV on its 2010-2013 tax returns. The authorities challenged both the period of coverage of the impairment losses and the amount. Accordingly, they added back the full amount of the accumulated asset impairment losses over the abovementioned period, i.e., an amount of €1.9 billion. ENGIE has contested the tax authorities' position as regards both the period and the amount and filed an appeal in November 2018.

28.3 France

28.3.1 Withholding tax

In their tax deficiency notice dated December 22, 2008, the French tax authorities questioned the tax treatment of the non-recourse sale by SUEZ (now ENGIE) of a withholding tax (*précompte*) receivable in 2005 for an amount of €995 million (receivable relating to withholding tax paid in respect of the 1999-2003 fiscal years). In May 2016, the French tax authorities issued an assessment notice for part of the resulting corporate income tax, in an amount of €89.6 million. ENGIE paid this sum and filed an application to institute proceedings before the Montreuil Administrative Court in July 2017.

Regarding the dispute over the *précompte* itself, on February 1, 2016, the *Conseil d'État* dismissed the appeal before the Court of Cassation seeking the repayment of the *précompte* in respect of the 1999, 2000 and 2001 fiscal years, and cases seeking the repayment of the *précompte* in respect of the 2002, 2003 and 2004 fiscal years are still pending before the appellate courts.

Furthermore, after ENGIE and several French groups lodged a complaint, on April 28, 2016, the European Commission issued a reasoned opinion to the French State as part of infringement proceedings, setting out its view that the *Conseil d'État* did not comply with European Union law when handing down decisions in disputes regarding the *précompte*, such as those involving ENGIE. On July 10, 2017, the European Commission referred the matter to the Court of Justice of the European Union on the grounds of France's failure to comply. On October 4, 2018, the Court of Justice of the European

Union ruled partially in favor of the European Commission. Following this decision, France must revisit its methodology in order to determine the *précompte* repayment amounts used in closed and pending court cases.

28.4 Europe excluding France & Benelux

28.4.1 Spain – Punica

In the Punica case (investigation into the awarding of contracts), 12 Cofely España employees as well as the company itself were placed under investigation by the examining judge in charge of the case. The criminal investigation is in progress and is scheduled to be closed by March 30, 2022.

28.4.2 Italy – Vado Ligure

On March 11, 2014, the Court of Savona seized and closed down the VL3 and VL4 coal-fired production units at the Vado Ligure thermal power plant belonging to Tirreno Power S.p.A. (TP), a company which is 50%-owned by the ENGIE Group. This decision was taken as part of a criminal investigation against the present and former executive managers of TP into environmental infringements and public health risks. The investigation was closed on July 20, 2016. The case was referred to the Savone Court to be tried on the merits. The proceedings began on December 11, 2018 and will continue through 2019.

28.4.3 Italy – Tax dispute relating to excise duties and ENGIE Italia VAT (formerly GDF SUEZ Energie)

In 2017, the Italian tax authorities challenged the excise duty waiver for gas transfers carried out by ENGIE Italia for industrial customers in Italy on the grounds that it did not have a certificate for these customers. The authorities plan to issue a tax reassessment for a total amount of €126 million (excise duties, VAT, late payment penalties and interest). ENGIE Italia has challenged the legality of this procedure both in light of Italian and European law and in any event deems the sanction to be disproportionate compared to a formal requirement.

In 2018, ENGIE Italia launched an appeal with the Perugia Court of First Instance requesting the cancellation of the tax reassessment notice.

In October 2018, the Court of First Instance dismissed the cancellation request, simply applying an outdated ministerial decree and ignoring ENGIE Italia's legal arguments.

ENGIE Italia appealed the ruling in November 2018.

28.5 Infrastructures Europe

28.5.1 Commissioning

In the dispute between GRDF and various gas suppliers, in a decision dated June 2, 2016, the Paris Court of Appeal (i) recalled that the risk of unpaid compensation for the "transmission" part of the agreement with the end customer should be borne by the grid manager and not the gas supplier; (ii) held that the compensation for customer management services provided by the supplier on behalf of the grid manager should be fair and commensurate with the grid manager's cost savings; and (iii) ordered GRDF to bring its transmission agreements into compliance with these principles. GRDF appealed the decision handed down by the Court of Appeal before the Court of Cassation. On January 18, 2018, the Energy Regulatory Commission (*Commission de Régulation de l'Énergie* – CRE) published a decision setting the rate for access to the grids for management services provided to single contract customers from January 1, 2018. This compensation is included in the costs covered by the transmission rate and is therefore ultimately borne by the grids' users. On June 18, 2018, the CRE's Standing Committee for Disputes and Sanctions (*Comité de règlement des différends et des sanctions* – CoRDs), which has been tasked by the Court of Appeal to evaluate the amount of the customer management

services, instructed GRDF to propose to Direct Energie (retroactively since 2005 and going forward) and to ENI (retroactively since June 2, 2016 and going forward) a new addendum providing for compensation of €91 per year for T3, T4 and TP customers, and €8.10 per year for T1 and T2 customers. Both GRDF on the one hand and Direct Energie and ENI on the other have appealed the decision dated June 18, 2018 before the Paris Court of Appeal. The CRE has been asked to submit its observations by December 2018. A decision may be handed down during the second quarter of 2019.

Regarding the customer management services carried out on behalf of the grid manager in the electricity sector (in this case ERDF, now ENEDIS), following proceedings brought by ENGIE, in a decision of July 13, 2016, the *Conseil d'État* also ruled that the same principle whereby the grid manager pays compensation to the supplier should apply. In the same decision, the *Conseil d'État* denied the CRE the right to set a customer threshold beyond which the compensation would not be payable, which until then prevented ENGIE from receiving any compensation. In light of this decision, ENGIE brought an action against ENEDIS with the purpose of obtaining payment for these customer management services. ENGIE also brought an action before the *Conseil d'État* against the CRE's decision of October 26, 2017 in respect of the compensation for customer management services in the electricity sector, seeking the annulment of the decision for the period prior to January 1, 2018 only.

28.6 Other

28.6.1 Luxembourg – State aid investigation

On September 19, 2016, the European Commission announced its decision to open an investigation into whether or not two private rulings granted by the Luxembourg State in 2008 and 2010 covering two similar transactions between several of the Group's Luxembourg subsidiaries constituted State aid. On June 20, 2018, the European Commission adopted a final, unfavorable decision deeming that Luxembourg had provided ENGIE with State aid. On September 4, 2018, ENGIE requested the annulment of the decision before the European Courts, thereby challenging the existence of a selective advantage. As these proceedings do not have a suspensive effect, ENGIE paid a sum of €123 million into an escrow account on October 22, 2018 for one of the proceedings in question, no aid actually having been paid in the other transaction. Following the proceedings before the European Courts, this sum will be returned to ENGIE or paid to the Luxembourg State depending on whether or not the Commission's decision is annulled.

28.6.2 United Kingdom – State aid investigation regarding Gibraltar

On October 7, 2016, the European Commission announced its decision to open a state aid investigation against the United Kingdom with regard to Gibraltar's tax system. The decision covers Gibraltar's tax ruling practices and cited 165 tax rulings, which could constitute State aid. One of the rulings was obtained by a subsidiary of International Power Ltd in 2011 as part of the dismantling of a facility in Gibraltar. ENGIE contested this decision on November 25, 2016, pending the Commission's final decision.

28.6.3 Claim against sales tax adjustments in Brazil

On December 14, 2018, the Brazilian tax authorities issued tax deficiency notices to Engie Brasil Energia for fiscal years 2014, 2015 and 2016, considering that it was liable for the PIS and COFINS federal sales taxes on the amounts reimbursed to it in respect of certain fuels used by thermo-power generation plants. The adjustments were for an aggregate amount of BRL 480 million, comprising BRL 229 million of tax plus interest and penalties.

Engie Brasil Energia is contesting these tax deficiency notices and filed a tax claim in January 2019.

NOTE 29 SUBSEQUENT EVENTS

No significant subsequent events have occurred since the closing of the accounts at December 31, 2018.

NOTE 30 FEES PAID TO THE STATUTORY AUDITORS AND TO MEMBERS OF THEIR NETWORKS

Pursuant to Article 222-8 of the General Regulations of the French Financial Markets Authority (AMF), the following table presents information on the fees paid by ENGIE SA, its fully consolidated subsidiaries and joint operations to each of the auditors in charge of auditing the annual and consolidated financial statements of the ENGIE Group.

The Shareholders' Meeting of ENGIE SA of April 28, 2014 decided to renew the terms of office of Deloitte and EY as Statutory Auditors for a six-year period from 2014 to 2019.

1 ENGIE 2019 RESULTS

The previously published financial data presented hereafter have been restated to take into account impacts resulting from the transition method used for the application of IFRS 16 – Leases. A reconciliation of the reported data with the restated comparative data is presented in section 6 of the management report for key financial indicators and Note 1 “Accounting framework and basis for preparing the consolidated financial statements”.

ENGIE financial information at December 31, 2019

2019 net recurring income Group share guidance achieved
EUR 0.80 dividend per share to be proposed at the AGM (+7% vs. 2018)

- Net recurring income Group share (NRIGs) of €2.7 billion, up 9%, and 11% on an organic ⁽¹⁾ basis.
- Current operating income (COI) of €5.7 billion, up 11%, and 14% on an organic basis, mainly driven by Nuclear, Others (notably Energy Management), Thermal and Renewables, partially offset by Supply and Networks. EBITDA of €10.4 billion, up 7%, and 8% on an organic basis.
- Financial net debt increased by €2.7 billion mainly due to growth investments, notably the TAG acquisition, which closed in H1. Financial net debt / EBITDA ratio of 2.5x.
- For fiscal year 2019, it will be proposed to the AGM to increase the dividend to €0.80 per share, up 7% versus 2018 ordinary dividend.
- 2020 net recurring income Group share (NRIGs) expected to be between €2.7 billion – €2.9 billion ⁽²⁾. For 2022, ENGIE anticipates a NRIGs CAGR in the range of 6-8% (to reach €3.2 billion and €3.4 billion).

Key Financial data at December 31, 2019

In billions of euros	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	60.1	57.0	+5.4%	+4.1%
Adjusted revenues ⁽¹⁾	64.1	60.6	+5.8%	+4.7%
EBITDA	10.4	9.7	+6.8%	+8.1%
CURRENT OPERATING INCOME (COI)	5.7	5.2	+11.1%	+14.4%
Net recurring income relating to continued operations, Group share ⁽¹⁾	2.7	2.5	+9.3%	+11.1%
Net income, Group share	1.0	1.0		
Cash Flow From Operations (CFFO) ⁽²⁾	7.6	7.7	(0.2)	
Financial net debt	25.9	23.3	2.7 vs Dec. 31, 2018	

(1) In Q4 2019, the Group has implemented a new IFRS pronouncement related to commodity derivatives and requiring a change in presentation of Revenues with no impact on other performance indicators. For comparability with previous communications, adjusted revenues are also provided based on the former definition. For more information please refer to Note 1 to the 2019 consolidated financial statements.

(2) Cash flow from operations = Free cash flow before maintenance Capex.

In 2019, the drivers of the gross COI evolution were as follows:

- **Nuclear** was driven by higher availability of Belgian production units and slightly more favorable achieved prices;
- In business line **Others**, increasing Energy Management results were mainly driven by the partial sale of a gas supply contract, performance of market activities and gas contract renegotiations;

(1) Organic variation: gross variation without scope and foreign exchange effect.

(2) These targets and this indication assume average weather conditions in France, full pass through of supply costs in French regulated gas tariffs, no significant accounting changes, no major regulatory or macroeconomic changes, commodity price assumptions based on market conditions as of December 31, 2019 for the non-hedged part of the production, no change in the nuclear provision legal and regulatory framework, average foreign exchange rates as follows for 2020: €/USD: 1.13; €/BRL: 4.57 and dilution from the €4 billion disposal plan for 2020-22.

- **Client Solutions** results benefited from the contribution of acquisitions and the performance of decentralized energy activities, partly offset by investments in business development capability and some operational restructuring actions;
- **Networks** was impacted by several negative effects outside France (mainly one-offs and temperature) as well as several adverse factors in France that were expected and are mostly temporary (mainly tariff smoothing in transmission). Networks also benefited from the first year contribution of the TAG gas transmission pipeline in Brazil, acquired in mid-2019;
- **Renewables** benefited from higher Brazilian hydro prices and increasing commissioning of renewable capacity (3.0 GW in 2019). The target of 9 GW to be commissioned from 2019 to 2021 is now fully secured;
- Supply activities continued to be impacted by a difficult market context, mainly from margin contractions in French retail, by positive 2018 one-offs in Benelux and adverse temperature effects in Australia and France;
- **Thermal** was impacted by the disposal of Glow partly offset by Power Purchase Agreement (PPA) performance and positive market price conditions in Chile as well as the reinstatement of the capacity remuneration mechanism in the United Kingdom.

ENGIE continued to pursue its strategic focus on the energy transition in 2019.

In **Client Solutions**, ENGIE and its partners won commercial contracts for the University of Iowa (United States), government buildings in Ottawa (Canada), a “smart region” around Angers (France) and industrial buildings in Singapore. In addition, ENGIE made several acquisitions including Conti in North America, Otto Industries in Germany and Powerlines in Austria. ENGIE Impact was created to bring large customers with solutions to build their sustainability roadmap and accelerate their energy transition.

In **Networks**, ENGIE announced on June 13, 2019 that the consortium in which it holds a majority stake completed the acquisition of a 90% shareholding in TAG, the largest gas transmission network owner in Brazil. TAG has a portfolio of long-term contracts providing an attractive earnings stream and improves diversification of ENGIE’s geographic footprint in Networks activities. In January 2020, ENGIE also further strengthened its position in Brazil by announcing the acquisition of a project of a 1,800 km power transmission line. Finally, ENGIE gained visibility on the financial outlook of its French gas networks activities with the conclusion of the regulatory reviews between the end of 2019 and the beginning of 2020.

In **Renewables**, 3.0 GW of renewable capacity was commissioned and the 9 GW commissioning target, over 2019-21, is now fully secured. The new joint-venture in Mexico with Tokyo Gas and the strategic partnership signed with Edelweiss Infrastructures Yield in India at the beginning of 2020 demonstrate ENGIE’s ability to deploy the DBSO ⁽¹⁾ model and attract partners for the development of its portfolio. In addition, ENGIE, along with financial partners, won a bid to acquire a 1.7 GW hydroelectric portfolio from EDP in Portugal. Finally, in January 2020, ENGIE reached an agreement with EDPR for the 50/50 joint-venture in offshore wind to create a global offshore wind player.

In **Thermal**, ENGIE continued to execute its carbon footprint reduction strategy, with coal now approximately 4% of global power generation capacity, following the disposal of its 69.1% stake in Glow in Thailand and Laos (3.2 GW of generation capacity, of which 1.0 GW is coal), ending its participation in coal in the Asia-Pacific region, and the disposal of its German and Dutch coal assets (capacity of 2.3 GW).

In **Nuclear**, an arrangement on Belgian nuclear provisions was reached reducing uncertainty for all parties regarding the level of provisions and their funding.

1.1 Analysis of financial results at December 31, 2019

1.1.1. Revenues of €60,1 billion

Revenues were €60.1 billion, up 5.4% on a gross basis and 4.1% on an organic basis.

(1) Develop, Build, Share & Operate.

Reported revenue growth was driven by scope effects, including various acquisitions in Client Solutions (primarily in the United States with Conti, France and Latin America with CAM) and in BtoB Supply in the US, partially offset by the disposals of ENGIE's stake in Glow in Thailand in March 2019 and of BtoB Supply activities in Germany at the end of 2018. This growth also includes a slightly positive foreign exchange effect, mainly due to the appreciation of the US dollar, partly offset by the depreciation of the Argentinian peso and the Brazilian real against the euro.

Organic revenue growth was primarily driven by Supply revenues in North America, France and Europe, growth in Client Solutions in Europe, energy management services and favorable market conditions for Global Energy Management (GEM) activities and strong momentum in Latin America (PPA portfolio growth in Chile as well as commissioning of new wind and solar farms in Brazil). This growth was partially offset by lower revenues from Supply activities in the UK and Australia and from Thermal activities in Europe.

Clients Solutions revenues were up 11% on a gross basis and 3% on an organic basis, benefiting from a positive effect of acquisitions and favorable market context for industrial clients in Europe.

1.1.2. EBITDA of €10.4 billion

EBITDA was €0.4 billion, up 6.8% on a gross basis and 8.1% on an organic basis.

These gross and organic variations are overall in line with the current operating income growth, except for the increase in depreciation mainly due to the commissioning of assets in Latin America and in France, especially in Networks which are not taken into account at EBITDA level.

In addition, Lean 2021, which contributes to the organic increase at EBITDA and COI levels, exceeded the 2019 targets and is on track to meet the target set for 2021.

1.1.3. Current operating income (COI) of €5.7 billion

Current operating income amounted to €5.7 billion, up 11.1% on a reported basis and 14.4% on an organic basis.

The reported COI growth includes a positive foreign exchange effect, mainly due to the appreciation of the US dollar, partly offset by the depreciation of the Argentinian peso and the Brazilian real against the euro. This positive effect is partly offset by an aggregate negative scope effect, including the disposal of the 69.1% stake in Glow in Thailand and Laos, partly offset by various acquisitions predominantly in Networks (TAG) and in Client Solutions.

Organic COI performance varied across the Group's business lines:

In millions of euros	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Client Solutions	1,090	1,010	+7.9% ⁽¹⁾	-0.9%
Networks	2,327	2,401	-3.1%	-5.6%
Renewables	1,190	1,129	+5.4%	+7.5%
Thermal	1,260	1,423	-11.5%	+7.2%
Nuclear	(314)	(1,051)	+70.1%	+70.1%
Supply	345	539	-36.0%	-33.5%
Others	(172)	(297)	+42.1%	+41.6%
TOTAL	5,726	5,154	+11.1%	+14.4%

(1) Excluding the impact from the 2019 SUEZ one-offs, this gross evolution would have been c. +7% (c. € +10 million net positive impact: positive outcome on Argentina court case, restructuring costs and asset write-downs).

- **Client Solutions** reported a 1% organic COI decrease, impacted by headwinds in specific segments and an increase in development costs notably on newer growth businesses. These effects were partly offset by an increased contribution from SUEZ and decentralized energy activities.
- **Networks** reported a 6% organic COI decrease, mainly due to gas distribution activities with 2018-19 negative one-off effects recorded outside of France and negative temperature effects in France and in Europe, only partially offset by a commissioning costs provision reversal and tariff increases in France. Gas transmission activities in France also suffered from a negative volume effect due to the merger of the North and South gas market zones and from a negative price effect resulting from tariff smoothing.

- **Renewables** reported an 8% organic COI increase, primarily driven by higher prices for hydroelectric power generation in Brazil and in France and the 3.0 GW commissioning of new capacities since January 1, 2019, notably in Brazil (0.5 GW), the United States (0.5 GW), Spain (0.4 GW), Mexico (0.3 GW), India (0.3 GW), France (0.3 GW) and Egypt (0.3 GW). These positive effects were partly offset by lower DBSO margins compared to the high level of DBSO transactions in 2018 and lower hydroelectric power generation in France.
- **Thermal** showed a 7% organic COI increase, mainly attributable to the PPA portfolio growth and positive market price conditions in Chile. In addition, the reinstatement of the capacity remuneration mechanism in the United Kingdom, as well as and the favorable impact of the gas spreads in Europe were positive. These effects were partially offset by the expiry of a PPA in Turkey in April 2019. The amount of liquidated damages received was roughly stable in 2019 versus 2018.
- **Nuclear** delivered a 70% organic COI growth, benefiting from higher availability rates in Belgium following 2018 unplanned outages (+2,720bps and +62% volumes produced) and better achieved prices (+2€/MWh).
- **Supply** COI reduced by 34% on an organic basis, primarily driven by margin pressures on French gas and electricity retail contracts, a commissioning costs accrual reversal (related to the coverage of the cost to serve customers handled by energy suppliers during the French market opening, from 2007 to 2016, fully offset by a symmetrical provision reversal for Gas distribution in France), 2018 positive one-offs in Benelux and negative temperature effects in Australia and in France. These effects were partly offset by higher business margins in France.
- **Others** business line delivered 42% organic COI growth, mainly reflecting GEM's good performance coming from the partial sale of a gas supply contract to Shell and a positive impact from gas contract renegotiations and overall favorable market conditions, as well as lower Corporate costs.

Organic COI performance varied across segments:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
France	2,861	3,057	-6.4%	-7.0%
France excluding Infrastructures	903	1,039	-13.1%	-15.2%
France Infrastructures	1,957	2,018	-3.0%	-2.8%
Rest of Europe	684	46	+1,400.5%	+1,121.9%
Latin America	1,694	1,359	+24.6%	+20.2%
USA & Canada	159	153	+3.9%	-5.5%
Middle East, Asia & Africa	559	896	-37.6%	-9.1%
Others	(231)	(357)		
TOTAL	5,726	5,154	+11.1%	+14.4%

Based on the reportable segments, the organic COI growth was led by the **Rest of Europe** (mainly driven by the recovery of Nuclear activities with better availability and higher prices, the reinstatement of the capacity remuneration mechanism in the United Kingdom, the favorable impact of gas spreads in Europe; partly offset by 2018 positive one-offs including Liquidated Damages received, difficulties in Benelux and the UK in Supply activities and in Client Solutions with some loss-making contracts), by the **Others** segment (mainly due to GEM's good performance in market activities and an increased contribution from SUEZ) and by **Latin America** (notably due to the favorable impact of LDs received in Thermal activities in 2019, higher prices for hydroelectric power generation and commissioning of new wind and solar assets in Brazil and in Mexico as well as PPA portfolio growth in Chile).

These positive impacts were partly offset by an organic COI decrease in **Middle East, Africa & Asia** (mainly driven by headwinds in Supply in Australia and Africa, in Networks in Turkey, partly offset by positive contribution of Thermal generation and Renewables activities), in France (for France excluding Infrastructures, mainly due to lower DBSO margins compared to the 2018 high level, margin pressure in Supply activities and lower hydroelectric power generation partly offset by higher hydro prices, increased wind and solar contributions and improved profitability in Client Solutions activities; for France Infrastructures, mainly due to the lower contribution of transmission and distribution activities) and in **USA & Canada** (mainly driven by Client Solutions, notably due to negative one-offs booked in 2019, lower contribution from Thermal activities due to lower capacity prices; partly offset by higher DBSO margins and commissioned asset contributions in Renewable activities).

1.1.4. Net recurring income relating to continued operations, Group share of €2.7 billion and Net income Group share of €1.0 billion

Net recurring income relating to continued operations, Group share amounted to €2.7 billion compared with €2.5 billion in 2018. This increase was mainly driven by the continued improvement in the current operating income partly offset by higher taxes, mainly due to the 2018 positive effect from the recognition of deferred tax assets and slightly higher recurring financial costs, reflecting the modification in the business mix (higher debt in Brazil).

Net income Group share amounted to €1.0 billion in 2019, stable year-on-year, as a result of the increase in Net recurring income and gains on disposals, mainly resulting from the Glow transaction, which offset the impact of the triennial review of nuclear provisions in Belgium and minor negative mark-to-market variation.

1.1.5. Financial net debt of €25.9 billion

Financial net debt stood at €25.9 billion, up €2.7 billion compared to December 31, 2018. This variation is attributed to (i) capital expenditures over the period (EUR 10.0 billion ⁽¹⁾, including the €1.5 billion expenditures for the TAG transaction in Brazil), (ii) dividends paid to ENGIE SA shareholders (€1.8 billion) and to non-controlling interests (€0.7 billion) and (iii) other elements (€0.6 billion) mainly related to foreign exchange rates, new right-of-use assets and mark-to-market variations. These items were partly offset by (i) cash flow from operations (€7.6 billion) and (ii) the impacts of the portfolio rotation program (€2.8 billion, mainly related to the Glow disposal).

Cash flow from operations ⁽²⁾ amounted to €7.6 billion, down €0.2 billion. The decrease stemmed predominantly from working capital requirement variations (€1.3 billion negative impact), mainly caused by margin calls on derivatives and mark-to-market variation of financial derivatives, partly offset by the increase of operating cash flow (€0.9 billion) and lower tax and interests payments (€0.2 billion).

At the end of December 2019, the **financial net debt to EBITDA** ratio amounted to 2.5x. Excluding the TAG acquisition which was not included in the 2019 guidance and which contributed only partially to the 2019 EBITDA, this ratio amounted to 2.4x, stable compared to the end of 2018 and on the target of less than or equal to 2.5x. The average cost of gross debt was 2.70%, slightly up compared to the end of 2018, notably due to new borrowings in Brazil.

At the end of December 2019, the **economic net debt** ⁽³⁾ to EBITDA ratio stood at 4.0x. Excluding the TAG acquisition, this ratio stood at 3.8x, slightly increasing compared to December 2018.

1.2 Financial targets

The targets for the financial years ended 31 December 2020 and 2022 set forth below are based on data, assumptions and estimates considered to be reasonable by the Group at the date of issuance of this document.

These data and assumptions may evolve or be amended due to uncertainties related to the economic, financial, accounting, competitive, regulatory and tax environment or other factors that the Group may not be aware of at the date of registration of the management report. In addition, the fulfilment of forecasts requires the success of the Group's strategy. The Group therefore makes no commitment or warranty regarding the fulfilment of the forecasts set out in this section.

The targets presented below and the underlying assumptions, also been prepared in accordance with the provisions of Delegated Regulation (EU) No 2019/980 supplementing Regulation (EU) No 2017/1129 and the ESMA recommendations on forecasts.

(1) Net of DBSO partial sell-downs.

(2) Cash flow from operations = Free cash flow before maintenance CAPEX.

(3) Economic net debt amounted to €41.1 billion at the end of December 2019 (compared with €35.7 billion at the end of December 2018); it includes, in particular, nuclear provisions and post-employment benefits.

The targets presented below result from the budget and medium-term plan process as described in Note 13 to the consolidated financial statements; they have been prepared on a comparable basis with historical financial information and in accordance with the accounting methods applied to the Group's consolidated financial statements for the year ended December 31, 2019 (including IFRS 16 and IFRIC 23, which the Group has applied as from January 1, 2019) described in the consolidated financial statements.

Assumptions

- strategy: confirmation and deepening of the Group ambition to establish ENGIE as a leading force in the energy and climate transition;
- acquisitions and disposals: no significant change in the Group scope of consolidation beyond acquisitions or disposals already announced or impacts specifically mentioned in the targets below;
- foreign exchange rates:
 - 2020: average annual €/US Dollar and €/Brazilian real foreign exchange rates at 1.13 and 4.57 respectively,
 - 2021 and 2022: average annual €/US Dollar and €/Brazilian real foreign exchange rates at 1.16 and 4.57, respectively;
- Belgium nuclear assets availability: 74%, 93% and 94% for 2020, 2021 and 2022, respectively (rates computed on the basis of the installed capacity, assuming Doel 3 closure in October 2022);
- regulated tariffs in France Infrastructures:
 - distribution, transport and storage : tariffs as published by the CRE in January 2020,
 - regasification: estimated updated tariffs as from 2021; the CRE tariff review will take place in 2020;
- regulated gas & power tariffs in France: full pass through of supply costs;
- commodity prices: based on market conditions as of December 31, 2019 (notably for European outright power, forwards at 44, 47, 48 €/MWh in 2020, 2021 and 2022 respectively) for the non-hedged part of the production (20%, 46% and 77% in 2020, 2021 and 2022 respectively);
- climate: normalized conditions in France (gas distribution and energy supply + normalized hydro production), hydrology in Brazil to improve by 2022;
- recurring effective tax rate: 31% in 2020, reducing by ~300bps through 2022;
- employee benefit provisions discount rates: based on market conditions as of December 31, 2019, as disclosed in Note 20 to the consolidated financial statements;
- no significant accounting changes compared to 2019;
- no major regulatory and macro-economic changes compared to 2019.

2020 and 2022 financial targets

ENGIE anticipates 2020 **net recurring income, Group share to be between €2.7 and €2.9 billion.**

This guidance is based on an indicative EBITDA range of €10.5 to €10.9 billion and COI range of €5.8 to €6.2 billion.

COI Indicative expectations by Business Line for 2020:

In millions of euros	Dec. 31, 2019	COI 2019-2020 ⁽¹⁾	Key drivers
Client Solutions	1,090	+	Organic revenues and margin growth, new acquisitions
Networks	2,327	-	Increase from TAG offset by decreases in new remuneration rates
Renewables	1,190	++	Hydro volume and prices in France and decision in Brazil on compensation for past losses due to low hydro dispatch. Wind & Solar increase due to DBSO and COD of assets
Thermal	1,260	--	Scope impact and decreasing spreads
Nuclear	(314)	+	Higher achieved prices, lower volumes
Supply	345	++	Positive effect from negative 2019 one-offs and normalized temperatures in 2020

(1) A single + or – sign accounts for single digit growth or decrease; double ++ or -- signs account for a double-digit growth or decrease.

For 2020 and over the long term, ENGIE anticipates an economic net debt/EBITDA ratio below or equal to 4.0x and remains committed to a strong investment grade rating.

For 2022, ENGIE anticipates **net recurring income, Group share to grow at a CAGR ⁽¹⁾ range of 6-8%** (i.e. between €3.2 and 3.4 billion). This guidance is based on an indicative CAGR range for EBITDA between 2-4% and for COI between 4-6%.

For the 2020-2022 period, ENGIE expects to invest €10 billion ⁽²⁾ in growth, €8 billion in maintenance and €4 billion in the Synatom financial Capex for the full funding of the nuclear waste provision by 2025. Disposals are expected to amount to €4 billion, primarily aiming at further reducing CO₂ emissions and simplifying geographical footprint and structure.

1.3 Dividend policy

For **fiscal year 2019**, ENGIE confirms the payment of a **€0.80 per share dividend** representing a payout ratio of 72%, **payable in cash**.

The annual dividend will be paid at one time, after the Ordinary General Meeting (OGM) approving the annual accounts.

For the future, ENGIE confirms the **medium-term dividend policy, in the range of 65 to 75% NRIs payout ratio**.

(1) CAGR: Compound Annual Growth Rate.

(2) Net of DBSO partial sell-downs.

2 BUSINESS TRENDS

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)

2.1 France

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	21,423	20,448	+4.8%	+3.2%
Total revenues (incl. intra-group transactions)	22,736	21,760	+4.5%	
EBITDA	5,211	5,329	-2.2%	-2.4%
Net depreciation and amortization/Other	(2,351)	(2,272)		
CURRENT OPERATING INCOME (COI)	2,861	3,057	-6.4%	-7.0%

2.1.1. France excluding Infrastructures

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	15,854	14,998	+5.7%	+4.4%
EBITDA	1,672	1,775	-5.8%	-6.5%
Net depreciation and amortization/Other	(769)	(736)		
CURRENT OPERATING INCOME (COI)	903	1,039	-13.1%	-15.2%

Volumes sold

<i>In TWh</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)
Gas sales	83.2	88.3	-5.8%
Electricity sales	38.8	39.0	-0.5%

France climatic adjustment

<i>In TWh</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	Total change in TWh
Climate adjustment volumes (negative figure = warm climate, positive figure = cold climate)	(3.6)	(2.9)	(0.7)

Revenues in the France excluding Infrastructures segment amounted to €15,854 million, up 5.7% on a reported basis and 4.4% on an organic basis. Organic growth can be explained by higher revenues in the BtoC power segment and BtoB services businesses. Acquisitions in BtoB services also contributed significantly to growth on a reported basis (in particular Powerlines, Pierre Guerin, Endel SRA and Sodelem).

Gas sales volumes in the BtoC segment decreased by 5.1 TWh compared to 2018, of which 0.7 TWh related to a negative temperature effect, mainly as a result of the end of regulated gas tariffs. The BtoC power portfolio recorded a significant increase of 1.6 TWh, whereas volumes produced by power generation and France Networks dropped by 1.8 TWh.

Current operating income was €903 million, down 13.1% on a reported basis and 15.2% on an organic basis. This drop was mainly due to lower DBSO (Develop, Build, Share & Operate) margins in 2019, and higher operating expenses (OPEX) in the BtoC segment to support the development of gas and power market offers. 2019 results were also affected by the impact of lower hydroelectric power generation. These underperformances were partly offset by higher prices for hydro power, higher wind and solar production, and a good organic performance in BtoB activities thanks to new contracts and increased profitability.

2.1.2. France Infrastructures

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	5,569	5,450	+2.2%	+0.1%
Total revenues (incl. intra-group transactions)	6,548	6,575	-0.4%	
EBITDA	3,539	3,554	-0.4%	-0.4%
Net depreciation and amortization/Other	(1,582)	(1,536)		
CURRENT OPERATING INCOME (COI)	1,957	2,018	-3.0%	-2.8%

Revenues in the France Infrastructures segment amounted to €5,569 million, €119 million above 2018. The increase was driven by terminalling activities, which benefited from the outsourcing of LNG activities as well as tariff increases in distribution activities, and by transmission activities, although growth was limited by tariff smoothing and lower subscribed capacity. These favorable impacts were partly offset by a decrease in storage activities with a reduction in buy/sale operations in France following the introduction of new regulations in 2018, offset by international activities.

Current operating income for the period was €1,957 million, down 2.8% on an organic basis. In transmission activities, this decrease was due to negative price effects in France – mainly tariff smoothing – and Germany. To a lesser extent, storage activities were impacted by customer penalties in France due to a temporarily deteriorated operating performance as well as to negative price effects in Germany, while terminalling activities were impacted by tariff changes. Growth in distribution activities partly offset these effects, with tariff hikes more than offsetting mild climate and other changes in OPEX.

2.2 Rest of Europe

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	17,270	16,946	+1.9%	+2.4%
EBITDA	1,750	1,081	+61.9%	+59.4%
Net depreciation and amortization/Other	(1,066)	(1,036)		
CURRENT OPERATING INCOME (COI)	684	46		

Revenues in the Rest of Europe segment amounted to €17,270 million, up 2.4% on an organic basis. This growth was driven by Supply and Client Solutions activities, whereas Thermal revenues decreased.

Supply activities benefited from positive price effects in Belgium, the Netherlands and Romania, partly offset by Supply activities in the United Kingdom and Germany due to the divestments in the German Retail BtoB portfolio in 2018.

The increase in Client Solutions mainly arose from Belgium's installation and energy efficiency segments, Central Europe which benefited from positive scope effects in Germany as a result notably of the acquisition of OTTO (January 2019), and organic growth in Spain mainly in installation activities.

Current operating income amounted to €684 million. The reported growth of €639 million was mainly driven by Nuclear activities and a slight increase in Renewables. Client Solutions remained stable compared to last year, while Supply, Networks and Thermal activities were down.

Nuclear activities benefited from higher availability rates in Belgium (2018 had been impacted by a high number of days of unplanned outages) and better achieved prices. Renewable activities benefited from good performances in wind onshore activities in Benelux.

Client Solutions reported a lower contribution from asset-light activities as a result of a significant drop notably in the United Kingdom and Benelux due to contract renegotiations and legacy loss-making contracts, but achieved a better performance in asset-based activities mainly in the Generation Europe BU through its cogeneration units as well as in the North, South and Eastern Europe BU in Italy and Germany.

The decrease in Thermal activities mainly arose from higher positive one-offs in 2018, lower coal spreads partially offset by better gas spreads, and capacity market reinstatement in the United Kingdom. Supply activities decreased in Benelux and the United Kingdom, and Networks activities decreased in Germany.

2.3 Latin America

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	5,341	4,639	+15.1%	+10.9%
EBITDA	2,221	1,789	+24.2%	+19.1%
Net depreciation and amortization/Other	(527)	(430)		
CURRENT OPERATING INCOME (COI)	1,694	1,359	+24.6%	+20.2%

Revenues in the Latin America segment totaled €5,341 million, up 15.1% on a reported basis and 10.9% organically. Reported growth comprises the positive effect of a Client Solutions entity acquired at the end of last year (CAM), partially offset by a negative net foreign exchange effect, with the depreciation of the Brazilian real (-2.4%) and Argentinian peso (-36.0%) being partially offset by the appreciation of the US dollar (+5.5%), Mexican peso (+5.3%) and Peruvian sol (+3.9%). In Chile, business was positively impacted by the ramp-up of new Power Purchase Agreements with distribution companies. In Brazil, organic growth was mainly driven by the commissioning of wind and solar farms and a new thermal unit, and the effect of inflation on PPA contracts.

Current operating income totaled €1,694 million, up 24.6% on a reported basis and 20.2% on an organic basis. Reported growth benefited from the positive impact of the acquisition in June 2019 of a gas transportation entity in Brazil (TAG). The organic growth was due to the favorable impact of liquidated damages received in Chile and Brazil in 2019, and the positive organic effects mentioned above for revenues. These impacts were partially offset by a positive one-off recorded in 2018 in Mexico.

2.4 USA & Canada

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	4,545	3,355	+35.5%	+10.1%
EBITDA	291	252	+15.6%	+4.5%
Net depreciation and amortization/Other	(132)	(99)		
CURRENT OPERATING INCOME (COI)	159	153	+3.9%	-5.5%

Revenues in the USA & Canada segment came in at €4,545 million, up 35.5% on a reported basis. In addition to positive foreign exchange effects, revenues benefited from scope-in effects relating to recent acquisitions in Client Solutions and Retail BtoB (Plymouth Rock) in the United States. The 10.1% organic growth was mainly the result of positive price effects on BtoB power sales in the United States with no effect at current operating income level.

Current operating income totaled €159 million, down 5.5% on an organic basis compared to 2018. The main reasons for the decrease were a lower operational performance in Client Solutions due to loss-making contracts, set-up costs for ENGIE Impact and lower capacity prices in Thermal activities. These effects were partly offset by the progressive ramp-up of Renewables activities in the United States, including the DBSO sell down of a wind project (Live Oak) and contributions from two wind projects commissioned in 2019.

2.5 Middle East, Asia & Africa

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	2,914	4,014	-27.4%	-6.7%
EBITDA	727	1,133	-35.9%	-12.5%
Net depreciation and amortization/Other	(168)	(237)		
CURRENT OPERATING INCOME (COI)	559	896	-37.6%	-9.1%

Revenues for the Middle East, Africa & Asia segment totaled €2,914 million, down 27.4% on a reported basis and 6.7% organically. The reported decrease was mainly due to the disposal of Glow (Thailand) in March 2019, a weakened performance in Supply (mainly Simply Energy in Australia), as well as lower revenues in Client Solutions in Africa and Australia. The decrease was partly offset by acquisitions in the Middle East (Cofely Besix) and Asia (RCS Engineering), and positive foreign exchange effects.

Electricity sales decreased by 27 TWh to 16.8 TWh, with reduced volumes mostly due to the sale of Glow and Loy Yang B.

Current operating income totaled €559 million, down 37.6% on a reported basis and 9.1% organically. The gross reported decrease was due to the negative impact of the disposal of Glow and Loy Yang B, partly offset by positive foreign exchange effects. The organic decrease notably reflects difficulties (i) in Supply in Australia and Africa, (ii) in Networks partly related to a positive provision reversal in Turkey in 2018, and to a lesser extent (iii) in Services activities. The decrease was partly offset by the positive contribution of Thermal Generation and the positive impact of Renewables activities, including liquidated damages for the Willogoleche wind farm in Australia.

2.6 Others

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)	% change (organic basis)
Revenues	8,565	7,565	+13.2%	+7.5%
EBITDA	166	119	+39.7%	-9.9%
Net depreciation and amortization/Other	(397)	(476)		
CURRENT OPERATING INCOME/(LOSS) (COI)	(231)	(357)	+35.4%	+23.5%

The Others reportable segment includes (i) GEM, (ii) Tractebel, (iii) GTT, (iv) Hydrogen, as well as (v) the Group's holding and corporate activities which include the entities centralizing the Group's financing requirements, *Entreprises & Collectivités (E&C)* and the contribution of SUEZ (associate).

Revenues for the Others reportable segment amounted to €8,565 million. The 13.2% reported growth compared to 2018 represented €1,000 million, mainly driven by GEM due to a favorable market context and E&C mainly due to an increase in power volumes and average prices (up €910 million gross for both GEM & E&C).

Current operating loss amounted to €231 million euros, representing a €126 million improvement compared to 2018. This improvement was mainly due to a strong performance by GEM in market activities, the partial transfer of a gas supply contract, gas contract renegotiations and the Certinergy acquisition in February 2019, partially offset by a sluggish performance by storage activities in bearish markets. Current operating income/(loss) also benefited from positive one-offs at SUEZ and in connection with the Link 2018 employee shareholding plan. These favorable impacts were partly offset by a decline in margins for Tractebel Engineering.

3 OTHER INCOME STATEMENT ITEMS

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 with IFRS 16	% change (reported basis)
CURRENT OPERATING INCOME (COI)	5,726	5,154	+11.1%
(+) Mark-to-Market on commodity contracts other than trading instruments	(426)	(223)	
Current operating income including operating MtM and share in net income of equity method entities	5,300	4,932	+7.5%
Impairment losses	(1,770)	(1,798)	
Restructuring costs	(218)	(162)	
Changes in scope of consolidation	1,604	(150)	
Other non-recurring items	(1,240)	(147)	
Income/(loss) from operating activities	3,676	2,674	+37.5%
Net financial income/(loss)	(1,387)	(1,414)	
Income tax benefit/(expense)	(640)	(702)	
NET INCOME/(LOSS) RELATING TO CONTINUED OPERATIONS	1,649	558	
NET INCOME/(LOSS) RELATING TO DISCONTINUED OPERATIONS	-	1,067	
NET INCOME/(LOSS)	1,649	1,624	+1.5%
Net income/(loss) Group share	984	1,029	
Of which Net income/(loss) relating to continued operations, Group share	984	(14)	
Of which Net income/(loss) relating to discontinued operations, Group share	-	1,043	
Non-controlling interests	664	595	
Of which Non-controlling interests relating to continued operations	664	572	
Of which Non-controlling interests relating to discontinued operations	-	24	

Income from operating activities amounted to €3,676 million in 2019, representing an increase compared with 2018, mainly due to (i) gains on asset disposals (principally relating to the disposal of ENGIE's interest in Glow), (ii) the improvement in current operating income, (iii) partly offset by the recognition of additional costs related to the triennial review of nuclear provisions in Belgium.

Income from operating activities was also affected by:

- net impairment losses of €1,770 million in 2019 compared with €1,798 million in 2018, mainly relating to Belgian nuclear power assets (including €638 million on dismantling assets for nuclear facilities whose operating life may not be extended, recognized against the provision, as part of the triennial review of nuclear provisions) and thermal power generation assets in Latin America and the Middle East (see Note 9.1);
- restructuring costs of €218 million (compared with €162 million in 2018) (see Note 9.2);
- positive scope effects of €1,604 million, mainly relating to the disposal of ENGIE's interest in Glow;
- other non-recurring items for a negative €1,240 million, mainly including the €1,166 million net expense related to additions to provisions for the back-end of the nuclear fuel cycle as part of the triennial review of nuclear provisions in Belgium.

The **net financial loss** amounted to €1,387 million in 2019, compared with €1,414 million the previous year (see Note 10).

The **income tax expense** for 2019 amounted to €640 million (versus €702 million in 2018). It includes an income tax benefit of €471 million arising on non-recurring taxable items (versus €147 million in 2018), mainly comprising mark-to-market losses recognized by ENGIE SA. The effective tax rate decreased significantly in 2019 (35.8% versus 78.1% in 2018), mainly due to the non-taxation of proceeds from the Glow disposal. Adjusted for these non-recurring items, the effective recurring tax rate was 28.2%, up on the 2018 rate of 23.7% mainly due to the impact of more positive one-off effects in 2018 than in 2019.

Net income relating to continued operations attributable to non-controlling interests amounted to €664 million, compared with €595 million in 2018. The increase was mainly due to lower impairment losses compared to the previous year on coal assets in Germany, partly offset by the deconsolidation of ENGIE's interest in Glow as from March 14, 2019 following its disposal.

4 CHANGES IN NET FINANCIAL DEBT

Net financial debt stood at €25.9 billion, up 2.7 billion compared to December 31, 2018. This increase is mainly attributable to (i) capital expenditure over the period (€10.0 billion⁽¹⁾), including €1.5 billion in expenditure for the TAG transaction in Brazil), (ii) dividends paid to ENGIE SA shareholders (€1.8 billion) and to non-controlling interests (€0.7 billion) and (iii) other items (€0.6 billion) mainly related to foreign exchange rates, new leased right-of-use assets and mark-to-market variations. These items were partly offset by (i) cash flow from operations (€7.6 billion) and (ii) the impacts of the portfolio rotation program (€3.0 billion, mainly related to the completion of the disposal of the stake in Glow).

Changes in net financial debt break down as follows:

In millions of euros

- (1) Capital expenditure net of DBSO proceeds.
- (2) Excluding DBSO proceeds.
- (3) See Note 18.2.1 "Issuance of deeply-subordinated perpetual notes".

	Development CAPEX (net of DBSO)
	Financial CAPEX
	Change in Synatom investments
	Maintenance CAPEX

(1) Net of DBSO proceeds.

4 CHANGES IN NET FINANCIAL DEBT

The net financial debt to EBITDA ratio came out at 2.50 at December 31, 2019.

<i>In millions of euros</i>	Dec. 31, 2019	Jan. 1, 2019 with IFRS 16
Net financial debt	25,919	23,268
EBITDA	10,366	9,702
NET DEBT/EBITDA RATIO	2.50	2.40

The economic net debt to EBITDA ratio stood at 3.96 at December 31, 2019.

<i>In millions of euros</i>	Dec. 31, 2019	Jan. 1, 2019 with IFRS 16
Economic net debt	41,078	35,669
EBITDA	10,366	9,702
ECONOMIC NET DEBT/EBITDA RATIO	3.96	3.68

4.1 Cash flow from operations (CFFO)

Cash flow from operations (CFFO) amounted to €7.6 billion, down €0.2 billion. The decrease stemmed predominantly from working capital requirement variations (€1.2 billion negative impact) caused by margin calls on derivatives and mark-to-market variation of financial derivatives, partly offset by the increase of operating cash flow (€0.9 billion) and lower tax and interests paid (€0.2 billion).

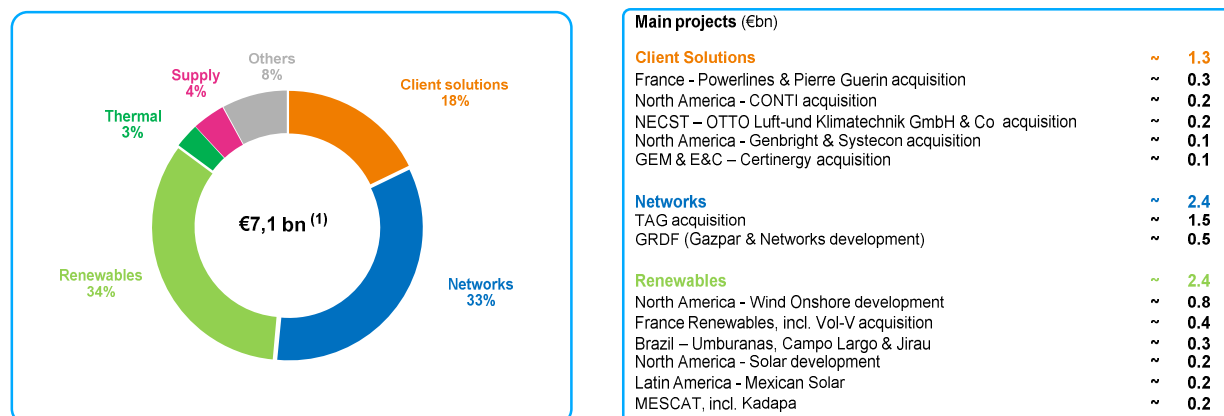

4.2 Net investments

Capital expenditure (CAPEX) amounted to €10,042 million, breaking down as follows by segment:

In millions of euros

Growth capital expenditure amounted to €7,117 million, breaking down as follows by Business Line:

(1) Net of disposals under DBSO operations, excluding Corporate, and Synatom reallocated to maintenance expenditure.

The **geography/Business Line matrix** for capital expenditures is presented hereunder:

In millions of euros	Client Solutions	Networks	Renewables	Thermal	Nuclear	Supply	Others	TOTAL at Dec. 31, 2019
France	423	1,709	481	-	-	151	-	2,764

TOTAL CAPEX	1,537	1,814	1,986	813	750	454	289	7,643

Net investments amounted to €7,586 million and include:

- growth capital expenditure for €7,117 million. This mainly stemmed from (i) the acquisition in Infrastructures, in consortium with the Caisse de Dépôt et Placement du Québec (CDPQ), of a 90% stake in Transportadora Associada de Gás S.A. (TAG) in Brazil (€1,557 million, including acquisition costs), of the energy services company Conti in North America (€178 million), and in Client Solutions of the OTTO Luft-und Klimatechnik GmbH & Co facilities and services company in Germany (€149 million), (ii) the development in Infrastructures of blending and development projects in the natural gas distribution and transportation network in France (€685 million), (iii) investments in Renewables relating to the development of wind and photovoltaic farms in the United States (approximately €1 billion), Mexico (€345 million), Brazil (€307 million) and India (€139 million), and (iv) the financing of the Nord Stream 2 pipeline project (€433 million);
- gross maintenance capital expenditure amounting to €2,627 million;
- the €227 million increase in Synatom investments;
- new leased right-of-use assets recognized over the period (€539 million);

- changes in the scope of consolidation for the period relating to acquisitions and disposals of subsidiaries for €138 million; and
- proceeds from disposals representing an inflow of €3,132 million, mainly relating to the disposal of ENGIE's interest in Glow in Thailand.

4.3 Dividends and movements in treasury stock

Dividends and movements in treasury stock during the period amounted to €2,522 million and included:

- €1,833 million in dividends paid by ENGIE SA to its shareholders, which corresponds to the balance of the 2018 dividend (€0.75 per share for shares with rights to an ordinary and exceptional dividend and €0.86 per share for shares with rights to a dividend mark-up) paid in May 2019;
- dividends paid by various subsidiaries to their non-controlling interests in an amount of €538 million, the payment of interest on hybrid debt for €150 million and movements in treasury stock.

4.4 Net financial debt at December 31, 2019

Excluding amortized cost but including the impact of foreign currency derivatives, at December 31, 2019 a total of 74% of net financial debt was denominated in euros, 15% in US dollars and 10% in Brazilian real.

Including the impact of financial instruments, 79% of net financial debt is at fixed rates.

The average maturity of the Group's net financial debt is 11.2 years.

At December 31, 2019, the Group had total undrawn confirmed credit lines of €13.0 billion.

5 OTHER ITEMS IN THE STATEMENT OF FINANCIAL POSITION

<i>In millions of euros</i>	Dec. 31, 2019	Jan. 1, 2019 with IFRS 16 & IFRIC 23	Net change
Non-current assets	99,297	93,818	5,479
Of which goodwill	18,665	17,809	856
Of which property, plant and equipment and intangible assets, net	58,996	57,776	1,220
Of which investments in equity method entities	9,216	7,846	1,370
Current assets	60,496	61,994	(1,498)
Of which assets classified as held for sale	468	3,809	(3,340)
Total equity	38,037	40,930	(2,893)
Provisions	25,115	21,512	3,603
Borrowings	38,544	34,345	4,199
Other liabilities	58,097	59,024	(928)
Of which liabilities directly associated with assets classified as held for sale	92	2,141	(2,049)

The carrying amount of **property, plant and equipment and intangible assets** was €59.0 billion, up €1.2 billion compared with December 31, 2018. The increase was primarily the result of acquisitions and development capital expenditure during the period (€7.4 billion positive impact), translation adjustments (€0.1 billion positive impact), partly offset by depreciation and amortization charges (€4.3 billion negative impact), impairment losses (€1.7 billion negative impact), changes in the scope of consolidation (€0.8 billion negative impact), the classification of renewable energy assets in Mexico and green gas production assets in operation in France as “Assets classified as held for sale” (€0.4 billion negative impact), and disposals (€0.2 billion negative impact).

Goodwill increased by €0.9 billion to €18.7 billion, mainly due to acquisitions made by the following BUs: France BtoB, France Renewables, Northern, Southern and Eastern Europe, and Latin America, partly offset by the recognition of impairment losses on the disposal of the coal-fired power plants in Germany and the Netherlands (see Note 4.1.2).

Total equity amounted to €38.0 billion, a decrease of €2.9 billion compared with December 31, 2018. The decrease stemmed mainly from the payment of the cash dividend (€2.3 billion negative impact, including €1.8 billion of dividends paid by ENGIE SA to its shareholders and €0.5 billion paid to non-controlling interests), other items of comprehensive income (€1.8 billion negative impact), and the effect of the deconsolidation of Glow following its disposal (€0.5 billion negative impact), partly offset by net income for the period (€1.6 billion positive impact).

Provisions increased by €3.6 billion to €25.1 billion compared with December 31, 2018. This increase stemmed mainly from the impacts of the triennial review of nuclear provisions in Belgium (which added €2.1 billion to the total amount) (see Note 19), actuarial losses on provisions for post-employment benefits and other long-term benefits (which added €1.1 billion to the total amount) owing to the fall in discount rates over the period (see Note 20).

At December 31, 2019, assets and liabilities classified under “**Assets classified as held for sale**” and “**Liabilities directly associated with assets classified as held for sale**” comprised renewable energy assets in Mexico and green gas production assets in operation in France.

6 ADJUSTMENT OF COMPARATIVE INFORMATION

The aforementioned 2018 figures have been adjusted in respect of:

- the application of the IFRIC position on commodity derivative accounting, leading the Group to review the presentation of some items of the income statement (with no impact on net income, equity or the current operating income indicator used in the management dialogue and financial communication) (see *restatements presented in Note 1 to the consolidated financial statements*);
- the transition method used for the application of IFRS 16 – Leases (see hereunder);

in order to make them comparable to the 2019 figures.

The adjustments relating to the application of IFRS 16 on the income statement and certain Group key indicators are as follows:

In millions of euros	Dec. 31, 2018 new presentation ⁽¹⁾	IFRS 16	Dec. 31, 2018 new presentation with IFRS 16

7 PARENT COMPANY FINANCIAL STATEMENTS

The figures provided below relate to the financial statements of ENGIE SA, prepared in accordance with French GAAP and applicable regulations.

Revenues for ENGIE SA in 2019 totaled €17,282 million, a decrease compared to 2018 (€27,833 million), mainly due to lower gas sales to other gas operators.

The net operating loss was €931 million at December 31, 2019, an improvement of €127 million compared with a loss of €1,058 million in 2018. Energy margin increased by €143 million, thanks to lower supply costs and continued growth in the electricity business.

Net financial income amounted to €1,192 million, €2,525 million less than in 2018 when dividend payments and income from receivables were €2,449 million higher.

Non-recurring items represented a loss of €835 million, mainly comprising impairment of equity investments.

The income tax benefit amounted to €377 million compared to a benefit of €549 million in 2018, including a tax consolidation benefit of €294 million.

The net loss for the year came out at €196 million.

Shareholders' equity amounted to €34,594 million at end-2019 compared with €36,616 million at end-2018. The €2,022 million decrease was mainly due to the 2019 net loss of €196 million and to the dividend payment of €1,833 million.

At December 31, 2019, borrowings and debt stood at €39,234 million, and cash and cash equivalents totaled €9,891 million (of which €7,753 relating to subsidiaries' current accounts).

Information relating to payment terms

Pursuant to the application of Article D.441-4 of the French Commercial Code, companies whose annual financial statements are subject to a statutory audit must publish information regarding supplier and customer payment terms. The purpose is to demonstrate that there is no significant failure to comply with such terms.

<i>Of which Diluted earnings/(loss) relating to continued operations per share</i>		0.34	(0.07)
<i>Of which Diluted earnings/(loss) relating to discontinued operations per share</i>		-	0.43

(1) Data presented at December 31, 2019 have been prepared in accordance with the new income statement presentation adopted by the Group. Comparative data at December 31, 2018 have been reclassified in accordance with this new presentation (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

NB: The amounts shown in the tables are expressed in millions of euros. In certain cases, rounding may cause non-material discrepancies in the totals.

ENGIE SA, the parent company of the Group, is a French *société anonyme* with a Board of Directors that is subject to the provisions of Book II of the French Commercial Code (*Code de Commerce*), as well as to all other provisions of French law applicable to French commercial companies. It was incorporated on November 20, 2004 for a period of 99 years.

It is governed by current and future laws and by regulations applicable to *sociétés anonymes* and its bylaws.

The Group is headquartered at 1 place Samuel de Champlain, 92400 Courbevoie (France).

ENGIE shares are listed on the Paris, Brussels and Luxembourg stock exchanges.

On February 26, 2020, the Group's Board of Directors approved and authorized for issue the consolidated financial statements of the Group for the year ended December 31, 2019.

NOTE 1 ACCOUNTING FRAMEWORK AND BASIS FOR PREPARING THE CONSOLIDATED FINANCIAL STATEMENTS

1.1 Accounting standards

Pursuant to European Regulation (EU) 2019/980 dated March 14, 2019, financial information concerning the assets, liabilities, financial position, and profit and loss of ENGIE has been provided for the last two reporting periods (ended December 31, 2018 and 2019). This information was prepared in accordance with European Regulation (EC) 1606/2002 "on the application of international accounting standards" dated July 19, 2002. The Group's consolidated financial statements for the year ended December 31, 2019 have been prepared in accordance with IFRS Standards as published by the International Accounting Standards Board and endorsed by the European Union ⁽¹⁾.

The accounting standards applied in the consolidated financial statements for the year ended December 31, 2019 are consistent with the policies used to prepare the consolidated financial statements for the year ended December 31, 2018, except for those described in § 1.1.1 below.

1.1.1 IFRS Standards, amendments or IFRIC Interpretations applicable in 2019

1.1.1.1 IFRS 16 – Leases and IFRIC 23 – Uncertainty over Income Tax Treatments

- **IFRS 16 – Leases**

In January 2016, the IASB issued a new standard on leases. IFRS 16 – *Leases* replaces IAS 17 – *Leases* along with its interpretations (IFRIC 4 – *Determining whether an Arrangement contains a Lease*, SIC 15 – *Operating Leases-Incentives* and SIC 27 – *Evaluating the Substance of Transactions Involving the Legal Form of a Lease*).

Under the new standard, on the lessee side, all lease commitments, for which no exemption applies due to the contract's short term and/or the low value of the assets leased, will be recognized on the balance sheet, without distinguishing operating leases from finance leases. Previously, only the latter were recognized in the balance sheet of the lessee. As a result, an amount representing the right-of-use asset during the lease period is recognized as an asset and a debt corresponding to the present value of fixed lease payments as a liability, in the balance sheet. In the income statement, rental expenses previously recognized for operating leases are partially replaced by depreciation of the right-of-use asset and by financial expenses related to the interest on the lease liability. The

(1) Available on the European Commission's website: http://ec.europa.eu/internal_market/accounting/ias/index_en.htm.

presentation of the cash flow statement is also impacted with an improvement in cash flows from operating activities against an increase in cash flows from financing activities.

On the lessor's side, the accounting principles are substantially unchanged compared to IAS 17. Lessors will continue to classify leases either as operating or finance leases using similar principles as under IAS 17. IFRS 16 does not as such have an impact for leases where the Group is the lessor.

The Group adopted IFRS 16 – *Leases* from January 1, 2019, using the modified retrospective approach. Under this method, comparative information is not restated and the cumulative effect of initial application is recognized in equity as an adjustment to opening balance of retained earnings for the current period.

On applying IFRS 16 for the first time, on January 1, 2019, the Group chose to use the following practical expedients permitted by the standard:

- not to reassess whether a contract previously assessed under IAS 17 and IFRIC 4 contains a lease (“the grand-fathering clause”);
- adjust the right-of-use assets by the amount of the provisions for onerous leases recognized in the statement of financial position as at December 31, 2018 (rather than performing an impairment test);
- exclude initial direct costs from the measurement of the right-of-use assets;
- use a single discount rate for a portfolio of leases with reasonably similar characteristics; and
- use hindsight, for example when determining the lease term, if the contract contains options to extend or terminate the lease.

On the other hand, the Group decided not to exclude leases for which the residual lease term ends within 12 months of the transition date.

Assessment of the lease term, including whether a renewal option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised, was made on a case-by-case basis.

The Group uses the recognition exemptions allowed by the standard, and therefore does not recognize any right-of-use assets and liabilities for leases with a lease term of 12 months or less (“short-term leases”), or for leases for which the underlying asset is of a low value (“low-value asset”).

The Group does not apply the practical expedient allowed by the standard, which permits the application of a portfolio approach for leases with similar characteristics, nor the one which makes it possible not to separate lease and services components.

Lease liabilities were measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate at January 1, 2019. The weighted average incremental borrowing rate applied to the lease liabilities on January 1, 2019 was 1.43% (see *Note 15 “Property, plant and equipment” for more information on the methodology used to determine the weighted average incremental borrowing rate*).

The impacts on transition of newly recognized assets and liabilities on the consolidated statement of financial position, for leases where the Group acts as lessee, are summarized below:

<i>In millions of euros</i>	Jan. 1, 2019
Right-of-use assets presented in Property, plant and equipment	3,045
Finance leases reclassified under Right-of-use assets	(905)
Other current and non-current assets	(31)
TOTAL ASSETS	2,110
TOTAL EQUITY	(11)
Lease liabilities presented in Short and long term borrowings	2,167
Other current and non-current liabilities	(46)
TOTAL EQUITY AND LIABILITIES	2,110

Newly recognized right-of-use assets mainly concern the following types of assets:

<i>In millions of euros</i>	Jan. 1, 2019
Real estate	1,782
Vehicles	206
Others	153
TOTAL	2,141

For leases previously classified as finance leases, and as required by the standard, the Group did not change the carrying amounts of existing assets and liabilities at the date of initial application (i.e., the right-of-use assets and lease liabilities equal the lease assets and liabilities recognized under IAS 17). These commitments were reclassified as right-of-use assets for a net amount of €905 million, mainly relating to power plants in Latin America.

In the consolidated income statement, the reversal of the rental expenses under leases previously considered as operating leases results in an increase in EBITDA, in depreciation and in financial expenses.

The difference between (i) the commitments relating to operating leases under IAS 17 for which ENGIE acts as lessee, disclosed in the Group's consolidated financial statements at December 31, 2018 (see Note 23.1 "Operating leases – for which ENGIE acts as lessee") with an amount of €2,087 million and (ii) the liability accounted for as a lease liability in accordance with IFRS 16 at January 1, 2019 which amounts to €2,546 million corresponds to (i) leases previously classified as finance leases for €380 million and (ii) the discounting effect for €79 million.

- **IFRIC 23 – Uncertainty over Income Tax Treatments**

IFRIC 23 clarifies the requirements of IAS 12 – *Income Taxes*. What is clarified is how income taxes are recognized and measured where there is an uncertainty regarding the treatment of an item, regarding the determination of taxable profit or loss, the tax bases of assets and liabilities, unused tax losses, unused tax credits and tax rates.

The Group has applied IFRIC 23 – *Uncertainty over Income Tax Treatments* since January 1, 2019, without restating comparative information. This interpretation has no material impact on the Group's consolidated financial statements.

- **Impact of the application of IFRS 16 and IFRIC 23 on the consolidated statement of financial position at January 1, 2019**

Impacts relating to the first-time application of IFRS 16 and IFRIC 23 on the statement of financial position at January 1, 2019 are presented hereunder:

<i>In millions of euros</i>	Dec. 31, 2018 published	IFRS 16 & IFRIC 23	Jan. 1, 2019 with IFRS 16 & IFRIC 23

1.1.1.2 Other IFRS Standards, amendments or IFRIC Interpretations

The other amendments and interpretations applicable as from 2019 have no significant impact on the Group's consolidated financial statements.

- Amendments to IFRS 9 – *Financial Instruments: Prepayment Features with Negative Compensation*.
- Amendments to IAS 28 – *Investments in Associates and Joint Ventures: Long-term Interests in Associates and Joint Ventures*.
- Amendments to IAS 19 – *Employee Benefits: Plan Amendment, Curtailment or Settlement*.

- Annual improvements to IFRSs - 2015-2017 cycle.

1.1.1.3 Other pronouncements

In its agenda decision of March 2019, the IFRS Interpretations Committee (IFRIC) concluded that, due to the characteristics of particular contracts entered into to buy or sell non-financial items, accounted for as derivatives under IFRS 9, and settled by either delivering or taking delivery of the non-financial items, said contracts have to be accounted for on a single line of the consolidated income statement, including their changes in fair value as well as the effects of their physical settlement.

This agenda decision applies to the Group's derivative financial instruments relating to commodities, including gas and electricity, used in economic hedging relationships but which are not qualified as such under IFRS.

The Group's practice was up to now, to present the changes in the fair value (mark-to-market or MtM) of commodity derivatives, not qualified as either trading or hedging instruments under IFRS, below "Current operating income after share in net income of equity method entities". At physical settlement, gains and losses were reclassified in operating income together with the economically hedged item, so that the operating performance of the transactions concerned is recognized at the hedged rate.

Following the IFRIC decision, the Group changed its accounting policy as from the year ended December 31, 2019, with no impact on net income, equity or the current operating income indicator used in the management dialogue and financial communication. The Group therefore now presents unrealized income/(loss) relating to the concerned derivatives, whether it represents a seller or buyer position, on the same line as realized income/(loss) arising from their physical settlement, i.e. under "Purchases and operating derivatives" within the indicator now named "Current operating income including operating MtM and share in net income of equity method entities". Thus:

- MtM on commodity contracts other than trading instruments, previously presented under "Income/(loss) from operating activities", is now included in "Purchases and operating derivatives";
- commodity sale transactions giving rise to physical delivery and used for economic hedging purposes which fall within the scope of IFRS 9, previously presented under "Revenues from other contracts" are now presented as a deduction from the "Purchases" line.

The performance management indicator (COI), which is defined as excluding operating MtM, is now calculated and reconciled to "Current operating income including operation MtM and share in net income of equity method entities" in Note 5 "Financial indicators used in financial communication".

The Group has also decided to improve the presentation by nature of the other items of "Current operating income including operating MtM and share in net income of equity method entities", without impacting the total for this indicator.

The reconciliation between the old and new presentation of the income statement at December 31, 2018 is summarized below:

In millions of euros	Dec. 31, 2018 old presentation	Operating MtM ⁽¹⁾	Commodity sales transactions ⁽²⁾	Taxes ⁽³⁾	Other expenses ⁽⁴⁾	Dec. 31, 2018 new presentation	
Revenues from contracts with customers	56,388	-	(221)	-	-	56,167	Revenues from contracts with customers
Revenues from other contracts	4,208	-	(3,408)	-	-	801	Revenues from other
REVENUES	60,596	-	(3,629)	-	-	56,967	REVENUES
Purchases	(32,190)	(223)	3,629	314	(10,190)	(38,660)	Purchases and operating derivatives
Personnel costs	(10,624)	-	-	-	-	(10,624)	Personnel costs
Depreciation, amortization and provisions	(3,586)	-	-	-	-	(3,586)	Depreciation, amortization and provisions
Taxes	-	-	-	(1,069)	-	(1,069)	Taxes
Other operating expenses	(10,981)	-	-	755	10,226	-	Other operating expenses
Other operating income	1,550	-	-	-	(36)	1,514	Other operating income
CURRENT OPERATING INCOME	4,765	(223)	-	-	-	4,542	Current operating income including operating MtM
Share in net income of entities accounted for using the equity method	361	-	-	-	-	361	Share in net income of equity method entities
CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF ENTITIES ACCOUNTED FOR USING THE EQUITY METHOD	5,126	(223)	-	-	-	4,903	Current operating income including operating MtM and share in net income of equity method entities
Mark-to-market on commodity contracts other than trading instruments	(223)	223	-	-	-	-	
Impairment losses	(1,798)	-	-	-	-	(1,798)	Impairment losses
Restructuring costs	(162)	-	-	-	-	(162)	Restructuring costs
Changes in scope of consolidation	(150)	-	-	-	-	(150)	Changes in scope of consolidation
Other non-recurring items	(147)	-	-	-	-	(147)	Other non-recurring items
INCOME/(LOSS) FROM OPERATING ACTIVITIES	2,645	-	-	-	-	2,645	INCOME/(LOSS) FROM OPERATING ACTIVITIES

- (1) Reclassification under "Purchases" of the unrealized income/(loss) (MtM) on derivatives not qualified as trading.
(2) Reclassification under "Purchases" of the realized income/(loss) on physical commodity contracts not qualified as IFRS 15 contracts.
(3) Accounted for under a single dedicated line for operating tax effects and taxes (excluding social security contributions presented within personnel costs and excluding income tax presented on a dedicated mine).
(4) Reclassification of other operating expenses according to their nature.

Revenues without a change in accounting policy consequent to the IFRIC decision would have stood at €64,137 million at December 31, 2019.

1.1.2 IFRS Standards, amendments or IFRIC Interpretations effective in 2020 and that the Group has elected to early adopt

- Amendments to IFRS 9 – Financial Instruments ; IAS 39 – Financial Instruments: recognition and measurement ; IFRS 7 – Financial Instruments: Disclosures – Interest rate benchmark reform (See Note 17.1.5.2) ⁽¹⁾.

(1) These standards, amendments and interpretations have not yet been adopted by the European Union.

1.1.3 IFRS Standards, amendments or IFRIC Interpretations effective in 2020 and that the Group has elected not to early adopt

- Amendments to IFRS 3 – *Business Combinations: Definition of a Business* ⁽¹⁾.
- Amendments to IAS 1 – *Presentation of Financial Statements* and IAS 8 – *Accounting Policies, Changes in Accounting Estimates and Errors: Definition of Material*.
- IFRS 17 – *Insurance Contracts* ⁽¹⁾.

The impact of these standards and amendments is currently being assessed.

1.2 Measurement and presentation basis

1.2.1 Historical cost convention

The Group's consolidated financial statements are presented in euros and have been prepared using the historical cost convention, except for financial instruments that are accounted for under the financial instrument categories defined by IFRS 9.

1.2.2 Chosen options

1.2.2.1 Reminder of IFRS 1 transition options

The Group used some of the options available under IFRS 1 for its transition to IFRS in 2005. The options that continue to have an impact on the consolidated financial statements are:

- translation adjustments: the Group elected to reclassify cumulative translation adjustments within consolidated equity at January 1, 2004;
- business combinations: the Group elected not to restate business combinations that took place prior to January 1, 2004 in accordance with IFRS 3.

1.2.2.2 Business combinations

Business combinations carried out prior to January 1, 2010 were accounted for in accordance with IFRS 3 prior to the revision. In accordance with IFRS 3 revised, these business combinations have not been restated.

Since January 1, 2010, the Group applies the purchase method as defined in IFRS 3 revised, which consists in recognizing the identifiable assets acquired and liabilities assumed at their fair values at the acquisition date, as well as any non-controlling interests in the acquiree. Non-controlling interests are measured either at fair value or at the entity's proportionate interest in the net identifiable assets of the acquiree. The Group determines on a case-by-case basis which measurement option to be used to recognize non-controlling interests.

1.2.2.3 Consolidated statement of cash flows

The consolidated statement of cash flows is prepared using the indirect method starting from net income.

"Interest received on non-current financial assets" is classified within investing activities because it represents a return on investments. "Interest received on cash and cash equivalents" is shown as a component of financing activities because

(1) These standards, amendments and interpretations have not yet been adopted by the European Union.

the interest can be used to reduce borrowing costs. This classification is consistent with the Group's internal organization, where debt and cash are managed centrally by the Group treasury department.

As impairment losses on current assets are considered to be definitive losses, changes in current assets are presented net of impairment.

Cash flows relating to the payment of income tax are presented on a separate line.

1.2.3 Foreign currency transactions

1.2.3.1 Translation of foreign currency transactions

Foreign currency transactions are recorded in the functional currency at the exchange rate prevailing on the date of the transaction.

Functional currency is the currency of the primary economic environment in which an entity operates, which in most cases corresponds to local currency. However, certain entities may have a functional currency different from the local currency when that other currency is used for an entity's main transactions and better reflects its economic environment.

At each reporting date:

- monetary assets and liabilities denominated in foreign currencies are translated at year-end exchange rates. The resulting translation gains and losses are recorded in the consolidated income statement for the year to which they relate;
- non-monetary assets and liabilities denominated in foreign currencies are recognized at the historical cost applicable at the date of the transaction.

1.2.3.2 Translation of the financial statements of subsidiaries with a functional currency other than the euro (the presentation currency)

The statements of financial position of these subsidiaries are translated into euros at the official year-end exchange rates. Income statement and cash flow statement items are translated using the average exchange rate for the year. Any differences arising from the translation of the financial statements of these subsidiaries are recorded under "Translation adjustments" as other comprehensive income.

Goodwill and fair value adjustments arising on the acquisition of foreign entities are classified as assets and liabilities of those foreign entities and are therefore denominated in the functional currencies of the entities and translated at the year-end exchange rate.

1.2.4 Use of estimates and judgments

1.2.4.1 Estimates

The preparation of consolidated financial statements requires the use of estimates and assumptions to determine the value of assets and liabilities and contingent assets and liabilities at the reporting date, as well as income and expenses reported during the period.

Developments in the economic and financial environment prompted the Group to step up its risk oversight procedures and include an assessment of these risks in measuring financial instruments and performing impairment tests. The Group's estimates used in business plans and determination of discount rates used in impairment tests and for calculating provisions, take into account the environment and the important market volatility.

Accounting estimates are made in a context that remains sensitive to energy market developments, therefore making it difficult to apprehend medium-term economic prospects.

Due to uncertainties inherent in the estimation process, the Group regularly revises its estimates in light of currently available information. Final outcomes could differ from those estimates.

The key estimates used in preparing the Group's consolidated financial statements relate mainly to:

- measurement of the fair value of assets acquired and liabilities assumed in a business combination (see Note 4);
- measurement of revenue not yet metered, so called un-metered revenue (see Note 7);
- measurement of recognized tax loss carry-forwards (see Note 11);
- measurement of the recoverable amount of goodwill (see Note 13), other intangible assets (see Note 14) and property, plant and equipment (see Note 15);
- financial instruments (see Notes 16 and 17);
- measurement of provisions, particularly for back-end of nuclear fuel cycle, dismantling obligations, disputes, pensions and other employee benefits (see Notes 19 and 20).

1.2.4.2 Judgment

As well as relying on estimates, Group management also makes judgments to define the appropriate accounting policies to apply to certain activities and transactions, particularly when the effective IFRS Standards and IFRIC Interpretations do not specifically deal with the related accounting issues.

In particular, the Group exercised its judgment in assessing:

- the type of control (see Note 2);
- the performance obligations of sales contracts (see Note 7);
- how revenue is recognized for distribution or transmission services invoiced to clients (see Note 7);
- the identification of "own use contracts" as defined by IFRS 9 within non-financial purchase and sales contracts (electricity, gas, etc.) (see Note 16);
- the determination of whether arrangements are / or contain a lease (see Notes 15 and 16);
- the regrouping of operating segments for the presentation of reportable segments; and in the context of defining the various Business Lines (see Note 6).

Entities for which judgment on the nature of control has been exercised are listed in Note 2 "Main subsidiaries at December 31, 2019" and Note 3 "Investments in equity method entities".

Accounting standards

Accounting standards are presented in the Notes to which they relate in the form of an insert.

NOTE 2 MAIN SUBSIDIARIES AT DECEMBER 31, 2019

Accounting standards

Controlled entities (subsidiaries) are fully consolidated in accordance with IFRS 10 – *Consolidated Financial Statements*. An investor (the Group) controls an entity and therefore must consolidate it if all of the following three criteria are met:

- it has the ability to direct the relevant activities of the entity;
- it has the rights and is exposed to variable returns from its involvement with the entity;
- it has the ability to use its power over the entity to affect the investor's return.

2.1 List of main subsidiaries at December 31, 2019

The following lists are made available by the Group to third parties, pursuant to Regulation No. 2016-09 of the French accounting standards authority (ANC) issued on December 2, 2016:

- list of companies included in consolidation;
- list of companies excluded from consolidation because their individual and cumulative incidence on the Group's consolidated accounts is not material. They correspond to entities deemed not significant as regards the Group's main key figures (revenues, total equity, etc), shell companies or entities that have ceased all activities and are undergoing liquidation/closure proceedings;
- list of main non-consolidated interests.

This information is available on the Group's website (www.engie.com, Investors/Regulated information section). Non-consolidated companies are classified under non-current financial assets (see Note 16.1.1.1) under "Equity instruments at fair value".

The list of the main subsidiaries consolidated under the full consolidation method presented below was determined, as regards operating entities, based on their contribution to Group revenues, EBITDA, net income and net debt. The main equity-accounted investments (associates and joint ventures) are presented in Note 3 "Investments in equity method entities".

Some entities such as ENGIE SA, ENGIE Energie Services SA or Electrabel SA comprise both operating activities and headquarters functions which report to management teams of different reportable segments. In the following tables, these operating activities and headquarters functions are shown within their respective reportable segments under their initial company name followed by a (*) sign.

2.2 Significant judgments exercised when assessing control

The Group primarily considers the following information and criteria when determining whether it has control over an entity:

- governance arrangements: voting rights and whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities;
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity.

The Group exercised its judgment regarding the entities and sub-groups described below.

Entities in which the Group has the majority of the voting rights

GRTgaz (France Infrastructures): 74.6%

In addition to the analysis of the shareholder agreement with Société d'Infrastructures Gazières, a subsidiary of *Caisse des Dépôts et Consignations* (CDC), which owns 24.8% of the share capital of GRTgaz, the Group also assessed the rights granted to the French Energy Regulatory Commission (*Commission de régulation de l'énergie* – CRE). As a regulated activity, GRTgaz has a dominant position on the gas transportation market in France. Accordingly, since the transposition of the Third European Directive of July 13, 2009 into French law (Code de l'énergie -Energy Code) of May 9, 2011, GRTgaz has been subject to independence rules as concerns its directors and senior management team. The French Energy Code confers certain powers on the CRE in the context of its duties to control the proper functioning of the gas markets in France, including verifying the independence of the members of the Board of Directors and senior management and assessing the choice of investments. The Group considers that it exercises control over GRTgaz and its subsidiaries (including Elengy) in view of its current ability to appoint the majority of the members of the Board of Directors and take decisions about the relevant activities, especially in terms of the level of investment and planned financing.

Entities in which the Group does not have the majority of the voting rights

In the entities in which the Group does not have a majority of the voting rights, judgment is exercised with regard to the following items, in order to assess whether there is a situation of *de facto* control:

- dispersion of the shareholding structure: number of voting rights held by the Group relative to the number of rights held respectively by the other vote holders and their dispersion;
- voting patterns at shareholders' meetings: the percentages of voting rights exercised by the Group at shareholders' meetings in recent years;
- governance arrangements: representation in the governing body with strategic and operational decision-making power over the relevant activities;
- rules for appointing key management personnel;
- contractual relationships and material transactions.

The main fully consolidated entities in which the Group does not have the majority of the voting rights are Compagnie Nationale du Rhône (49.98%) and Gaztransport & Technigaz (40.4%).

Compagnie Nationale du Rhône ("CNR" – France excluding Infrastructures): 49.98%

The Group holds 49.98% of the share capital of CNR, with CDC holding 33.2%, and the balance (16.82%) being dispersed among around 200 local authorities. In view of the current provisions of the French "Murcef" law, under which a majority of CNR's share capital must remain under public ownership, the Group is unable to hold more than 50% of the share capital. However, the Group considers that it exercises *de facto* control as it holds the majority of the voting rights exercised at shareholders' meetings due to the widely dispersed shareholding structure and the absence of evidence of the minority shareholders acting in concert.

Gaztransport & Technigaz (“GTT” – Others): 40.4%

Since GTT's initial public offering in February 2014, ENGIE has been the largest shareholder in the company with a 40.4% stake, the free float representing around 49% of the share capital. The Group holds the majority of the voting rights exercised at shareholders' meetings in view of the widely dispersed shareholding structure and the absence of evidence of minority shareholders acting in concert. ENGIE also holds the majority of the seats on the Board of Directors. The Group considers that it exercises *de facto* control over GTT, based on an IFRS 10 criteria.

2.3 Subsidiaries with material non-controlling interests

The following table shows the non-controlling interests in Group entities that are deemed to be material, the respective contributions to equity and net income at December 31, 2019 and December 31, 2018, as well as the dividends paid to non-controlling interests of these significant subsidiaries:

Corporate name	Activity	Percentage interest of non-controlling interests		Net income/(loss) of non-controlling interests		Equity of non-controlling interests		Dividends paid to non-controlling interests	
		Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾	Dec. 31, 2019	Dec. 31, 2018
In millions of euros									
GRTgaz Group (France Infrastructures, France)	Regulated gas transportation activities and management of LNG terminals	25.4	25.4	89	99	1,076	1,133	120	158

Other subsidiaries with non-controlling interests				154	41	1,159	1,131	78	331
TOTAL				664	595	4,950	5,391	453	882

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 “Accounting framework and basis for preparing the consolidated financial statements”).

(2) Engie Energía Chile, Engie Brasil Energia, Gaztransport & Technigaz and Engie Energía Perú are listed in their respective countries.

(3) The disposal of Glow Group was finalized on March 14, 2019 (see Note 4 “Main changes in Group structure”).

2.3.1 Condensed financial information on subsidiaries with material non-controlling interests

The condensed financial information concerning these subsidiaries presented in the table below is based on a 100% interest and is shown before intragroup eliminations.

	GRTgaz Group		ENGIE Energía Chile Group		Glow Group ⁽¹⁾		ENGIE Romania Group

NOTE 3 INVESTMENTS IN EQUITY METHOD ENTITIES

Accounting standards

The Group accounts for its investments in associates (entities over which the Group has significant influence) and joint ventures using the equity method. Under IFRS 11 – *Joint Arrangements*, a joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.

The respective contributions of associates and joint ventures in the statement of financial position, the income statement and the statement of comprehensive income at December 31, 2019 and December 31, 2018 are as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Statement of financial position		
Investments in associates	4,646	4,590
Investments in joint ventures	4,570	3,256
INVESTMENTS IN EQUITY METHOD ENTITIES	9,216	7,846
Income statement		
Share in net income/(loss) of associates	255	88
Share in net income/(loss) of joint ventures	245	273
SHARE IN NET INCOME/(LOSS) OF EQUITY METHOD ENTITIES	500	361
Statement of comprehensive income		
Share of associates in "Other comprehensive income/(loss)"	(123)	132
Share of joint ventures in "Other comprehensive income/(loss)"	(158)	26
SHARE OF EQUITY METHOD ENTITIES IN "OTHER COMPREHENSIVE INCOME/(LOSS)"	(281)	158

Significant judgments

The Group primarily considers the following information and criteria in determining whether it has joint control or significant influence over an entity:

- governance arrangements: whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities. This can be difficult to determine in the case of "project management" or "one-asset" entities, as certain decisions concerning the relevant activities are made upon the creation of the joint arrangement and remain valid throughout the project. Accordingly, the rights' analysis relates to the relevant residual activities of the entity (those that significantly affect the variable returns of the entity);
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity. This can also involve analyzing the Group's contractual relations with the entity, in particular the conditions in which these contracts are entered into, their duration as well as the management of conflicts of interest that may arise when the entity's governing body casts votes.

The Group exercised its judgment regarding the following entities and sub-groups:

Project management entities in the Middle East

The significant judgments made in determining the consolidation method to be applied to these project management entities related to the risks and rewards relating to contracts between ENGIE and the entity concerned, as well as an analysis of the residual relevant activities over which the entity retains control after its creation. The Group considers that it has significant influence or joint control over these entities, since the decisions taken throughout the term of the project about the relevant activities such as refinancing, or the renewal or amendment of significant contracts (sales, purchases, operating and maintenance services) require, depending on the case, the unanimous consent of two or more parties sharing control.

SUEZ Group (32.06%)

Since the SUEZ shareholders' agreement expired on July 22, 2013, ENGIE no longer controls SUEZ but exercises significant influence over the SUEZ group. In particular, this is because: (i) the Group does not have a majority of members on SUEZ's Board of Directors, (ii) at Shareholders' Meetings, although SUEZ's shareholder base is fragmented and ENGIE holds a large interest, past voting shows that ENGIE alone did not have the majority at Ordinary and Extraordinary Shareholders' Meetings between 2010 and 2019.

Transportadora Asociada de Gas S.A. ("TAG" - Latin America): 58.5% holding interest (directly and indirectly) representing a net interest in of 49.3%

The Group exercises joint control over TAG (*see Note 4.3.1*).

Joint ventures in which the Group holds an interest of more than 50%

Tihama (60%)

ENGIE holds a 60% stake in the Tihama cogeneration plant in Saudi Arabia and its partner Saudi Oger holds 40%. The Group considers that it has joint control over Tihama since the decisions about its relevant activities, including for example the preparation of the budget and amendments to major contracts, etc., require the unanimous consent of the parties sharing control.

Joint control – difference between joint ventures and joint operations

Classifying a joint arrangement requires the Group to use its judgment to determine whether the entity in question is a joint venture or a joint operation. IFRS 11 requires an analysis of "other facts and circumstances" when determining the classification of jointly controlled entities.

The IFRS Interpretations Committee (IFRS IC) (November 2014) decided that for an entity to be classified as a joint operation, other facts and circumstances must give rise to direct enforceable rights to the assets, and obligations for the liabilities, of the joint arrangement.

In view of this position and its application to our analyses, the Group has no material joint operations at December 31, 2019.

3.1 Investments in associates

3.1.1 Contribution of material associates and of associates that are not material to the Group taken individually

The table hereafter shows the contribution of each material associate along with the aggregate contribution of associates deemed not material taken individually, in the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from equity method entities" line of the statement of cash flows.

NOTE 3 INVESTMENTS IN EQUITY METHOD ENTITIES

The Group used qualitative and quantitative criteria to determine material associates. These criteria include the contribution to the consolidated line items “Share in net income/(loss) of associates” and “Investments in associates”, the total assets of associates in Group share, and associates carrying major projects in the study or construction phase for which the related investment commitments are material.

Corporate name	Activity	Capacity	Percentage interest of investments in associates		Carrying amount of investments in associates		Share in net income/(loss) of associates		Other comprehensive income/(loss) of associates		Dividends received from associates	
			Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018
In millions of euros												
SUEZ Group (Other)	Water and waste processing		32.06	32.06	1,953	1,968	113	55	(37)	21	129	130
Project management entities in the Middle East (Middle-East, Asia & Africa, Saudi Arabia, Bahrain, Qatar, United Arab Emirates, Oman, Kuwait) ⁽¹⁾	Gas-fired power plants and seawater desalination facilities				950	1,004	79	97	(96)	96	77	97
Energia Sustentável Do Brasil (Latin America, Brazil)	Hydro power plant	3 750 MW	40.00	40.00	659	646	(49)	(57)	-	-	-	-
GASAG (Rest of Europe, Germany)	Gas and heat networks		31.57	31.57	233	261	16	18	(17)	1	9	4
Other investments in associates that are not material taken individually					852	710	96	(25)	27	14	61	104
INVESTMENTS IN ASSOCIATES					4,646	4,590	255	88	(123)	132	277	334

(1) Investments in associates operating gas-fired power plants and seawater desalination facilities in the Arabian Peninsula have been grouped together under “Project management entities in the Middle East”. This includes around 40 associates operating thermal power plants with a total installed capacity of 27,632 MW (at 100%) and a further 1,507 MW (at 100%) in capacity under construction. These associates have fairly similar business models and joint arrangements: the project management entities selected as a result of a competitive bidding process develop, build and operate power generation plants and seawater desalination facilities. The entire output of these facilities is sold to government-owned companies under power and water purchase agreements, over periods generally spanning 20 to 30 years.

In accordance with their contractual arrangements, the corresponding plants are recognized as property, plant and equipment or as financial receivables whenever substantially all of the risks and rewards associated with the assets are transferred to the buyer of the output. This treatment complies with IFRIC 4 and IFRS 16. The shareholding structure of these entities systematically includes a government-owned company based in the same country as the project management entity. The Group's percentage interest and percentage voting rights in each of these entities varies between 20% and 50%.

The share in net income/(loss) of associates includes a net non-recurring loss for a total amount of €79 million in 2019 (compared to a net non-recurring loss of €155 million in 2018), mainly including changes in the fair value of derivative instruments and disposal gains and losses, net of tax (see Note 5.3 “Net recurring income Group share”).

3.1.2 Financial information regarding material associates

The tables below provide condensed financial information for the Group's main associates. The amounts shown have been determined in accordance with IFRS, before the elimination of intragroup items and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the associate performed at the date of acquisition at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE".

In millions of euros	Revenues	Net income/(loss)	Other comprehensive income/(loss)	Total comprehensive income/(loss)	Current assets	Non-current assets	Current liabilities	Non-current liabilities	Total equity	% interest of Group	Total equity attributable to ENGIE
AT DECEMBER 31, 2019											
SUEZ Group ⁽¹⁾	18,015	352	(58)	294	11,481	24,153	12,098	14,248	9,288	32.06	1,953
Project management entities in the Middle East	3,778	390	(409)	(19)	2,851	21,053	3,543	16,644	3,717	-	950
Energia Sustentável Do Brasil	578	(123)	-	(123)	204	4,137	304	2,388	1,648	40.00	659
GASAG	1,251	51	(54)	(2)	850	1,847	1,757	203	736	31.57	233
AT DECEMBER 31, 2018											
SUEZ Group ⁽¹⁾	17,331	335	(103)	232	10,872	22,681	11,664	12,896	8,993	32.06	1,968
Project management entities in the Middle East	4,254	467	406	873	2,572	21,401	3,775	16,263	3,934	-	1,004
Energia Sustentável Do Brasil	564	(142)	-	(142)	199	4,388	544	2,428	1,615	40.00	646
GASAG	1,196	56	3	59	798	1,733	1,508	196	827	31.57	261

(1) The data indicated in the table for SUEZ correspond to financial information published by SUEZ. Total SUEZ equity attributable to the Group amounts to €6,463 million based on the published financial statements of SUEZ and €6,092 million based on the financial statements of ENGIE. The difference in these amounts mainly reflects the non-inclusion of the share in deeply-subordinated perpetual notes issued by SUEZ in total equity attributable to ENGIE, partly offset by the fair value measurement of the assets and liabilities of SUEZ at the date the Group changed its consolidation method (July 22, 2013).

SUEZ is the only material listed associate. Based on the closing share price at December 31, 2019, the market value of this interest was €2,686 million.

3.1.3 Transactions between the Group and its associates

The data below set out the impact of transactions with associates on the Group's 2019 consolidated financial statements.

In millions of euros	Purchases of goods and services	Sales of goods and services	Net financial income (excluding dividends)	Trade and other receivables	Loans and receivables at amortized cost	Trade and other payables	Borrowings and debt
Project management entities in the Middle East	-	254	-	36	130	2	-
Contassur ⁽¹⁾	-	-	-	160	2	-	-
Energia Sustentável Do Brasil	140	-	-	-	29	10	-
Other	65	35	28	14	264	10	760
AT DECEMBER 31, 2018	205	289	28	211	426	21	760

(1) Contassur is a life insurance company accounted for using the equity method. Contassur offers insurance contracts, chiefly with pension funds that cover post-employment benefit obligations for Group employees and also employees of other companies mainly engaged in regulated activities in the electricity and gas sector in Belgium. Insurance contracts entered into by Contassur represent reimbursement rights recorded within "Other assets" in the statement of financial position. These reimbursement rights totaled €161 million at December 31, 2019 (€168 million at December 31, 2018).

3.2 Investments in joint ventures

3.2.1 Contribution of material joint ventures and of joint ventures that are not material to the Group taken individually

The table below shows the contribution of each material joint venture along with the aggregate contribution of joint ventures deemed not material taken individually to the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from entities accounted for using the equity method" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material joint ventures. These criteria include the contribution to the line items "Share in net income/(loss) of joint ventures" and "Investments in joint ventures", the Group's share in total assets of joint ventures, and joint ventures conducting major projects in the study or construction phase for which the related investment commitments are material.

Corporate name	Activity	Capacity	Percentage interest of investments in joint ventures		Carrying amount of investments in joint ventures		Share in net income/(loss) of joint ventures		Other comprehensive income/(loss) of joint ventures		Dividends received from joint ventures	
			Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018
In millions of euros												
Transportadora Associada de Gás S.A. (TAG) (Latin America, Brazil)	Gas transmission network		58.50	-	1,364	-	44	-	(71)	-	159	-

EcoEléctrica (USA & Canada, Puerto Rico)	Combined-cycle gas-fired power plant and LNG terminal	507 MW	50.00	50.00	395	416	25	34	-	-	59	104
Portfolio of power generation assets in Portugal (Rest of Europe, Portugal)	Electricity generation	2 909 MW	50.00	50.00	312	325	39	44	(2)	1	50	49
WSW Energie und Wasser AG (Rest of Europe, Germany)	Electricity distribution and generation	142 MW	33.10	33.10	207	204	(4)	11	-	-	4	3
Tihama Power Generation Co (Middle-East, Asia & Africa, Saudi Arabia)	Electricity generation	1 599 MW	60.00	60.00	108	163	32	34	(5)	1	86	-
Ohio State Energy Partners (USA & Canada, Unites States)	Services		50.00	50.00	114	129	2	5	(10)	5	9	4
Megal GmbH (France Infrastructures, Germany)	Gas transmission network		49.00	49.00	79	91	2	6	-	-	14	13
Transmisora Eléctrica del Norte (Latin America, Chile)	Electricity transmission line		50.00	50.00	80	85	7	7	(10)	8	-	-
Other investments in joint ventures that are not material taken individually					1,171	1,134	55	92	(61)	11	35	31
INVESTMENTS IN JOINT VENTURES					4,570	3,256	245	273	(158)	26	439	244

The share in net income/(loss) of joint ventures includes non-recurring loss of €14 million in 2019 (non-recurring income of €6 million in 2018), resulting chiefly from changes in the fair value of derivatives, impairment losses and disposal gains and losses, net of tax (see Note 5.3 "Net recurring income Group share").

3.2.2 Financial information regarding material joint ventures

The amounts shown have been determined in accordance with IFRS before the elimination of intragroup items and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the joint venture performed at the date of acquisition at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE" in the statement of financial position.

AT DECEMBER 31, 2019	28	278	11	49	585	7	5

3.3 Other information on investments accounted for using the equity method

3.3.1 Unrecognized share of losses of associates and joint ventures

Cumulative unrecognized losses of associates (corresponding to the cumulative amount of losses exceeding the carrying amount of investments in the associates concerned) including other comprehensive income/(loss), amounted to €113 million in 2019 (€171 million in 2018). This decrease resulted from (i) unrecognized income relating to fiscal year 2019 amounting to €89 million and (ii) changes in other comprehensive income.

These unrecognized losses correspond to the negative fair value of derivative instruments designated as interest rate and commodity hedges ("Other comprehensive income/(loss)") contracted by associates in the Middle-East, Africa & Asia reportable segment in connection with the financing of construction projects for power generation plants.

3.3.2 Commitments and guarantees given by the Group in respect of equity method entities

At December 31, 2019, the main commitments and guarantees given by the Group in respect of equity method entities concern:

- Energia Sustentável do Brasil ("Jirau"), for an aggregate amount of BRL 4,210 million (€930 million).
At December 31, 2019, the amount of loans granted by Banco Nacional de Desenvolvimento Econômico e Social, the Brazilian Development Bank, to Energia Sustentável do Brasil amounted to BRL 10,525 million (€2,325 million). Each partner stands as guarantor for this debt to the extent of its ownership interest in the consortium;
- TAG for performance bonds and other guarantees for an amount of €176 million;
- The project management entities in the Middle East and Africa, for an aggregate amount of €917 million.

Commitments and guarantees given by the Group in respect of these project management entities chiefly correspond to:

- an equity contribution commitment (capital/subordinated debt) for €101 million. These commitments only concern entities acting as holding companies for projects in the construction phase,
- letters of credit to guarantee debt service reserve accounts for an aggregate amount of €200 million. The project financing set up in certain entities can require those entities to maintain a certain level of cash within the company (usually enough to service its debt for six months). This is particularly the case when the financing is without recourse. This level of cash may be replaced by letters of credit,
- collateral given to lenders in the form of pledged shares in the project management entities, for an aggregate amount of €266 million,
- performance bonds and other guarantees for an amount of €350 million.

NOTE 4 MAIN CHANGES IN GROUP STRUCTURE

Accounting standards

In accordance with IFRS 5 - *Non-Current Assets Held for Sale and Discontinued Operations*, assets or groups of assets held for sale are presented separately on the face of the statement of financial position and are measured and accounted for at the lower of their carrying amount and fair value less costs to sell.

An asset is classified as “held for sale” when its sale is highly probable within twelve months from the date of classification, when it is available for immediate sale under its present condition and when the management is committed to a plan to sell the asset and an active program to locate a buyer and complete the plan has been initiated. To assess whether a sale is highly probable, the Group takes into consideration among other things indications of interest and offers received from potential buyers as well as specific execution risks attached to certain transactions.

Furthermore, assets or group of assets are presented as discontinued operations in the Group’s consolidated financial statements when they are classified as “held for sale” and represent a separate major line of business under IFRS 5.

4.1 Disposals carried out in 2019

The Group unveiled its 2019-2021 strategy on February 28, 2019 and on the same occasion announced a €6 billion asset disposal program as part of its continued transformation.

The table below shows the impact of the main disposals and sale agreements of 2019 on the Group’s net debt, excluding partial disposals with respect to DBSO ⁽¹⁾ activities:

<i>In millions of euros</i>	Disposal price	Reduction in net debt
Disposal of ENGIE's interest in Glow - Thailand	2,591	2,466
Disposal of German and Dutch coal-fired power plants	213	106
Other disposals that are not material taken individually	606	522
TOTAL	3,410	3,094

Additional disposals in the process of completion at December 31, 2019 are described in Note 4.2 “Assets held for sale”.

4.1.1 Disposal of ENGIE's interest in Glow (Thailand)

On March 14, 2019, the Group completed the sale of its 69.1% interest in Glow to Global Power Synergy Public Company Ltd. (GPSC), having received official approval from Thailand's Energy Regulatory Commission on March 8, 2019. This transaction followed an initial agreement entered into by ENGIE and GPSC in June 2018.

The combined effects of the transaction and of the cash generated by these activities since January 1, 2019 have reduced the Group’s net debt by €2,466 million. The disposal gain before tax amounted to €1,580 million in 2019, of which €143 million corresponds to the recycling to the income statement of items from the statement of comprehensive income (translation adjustments for €351 million and hedges for a negative €208 million).

(1) *Develop, Build, Share and Operate*, a model used in renewable energies based on the continuous rotation of capital employed, for which the impacts of disposals are recorded as deduction from CAPEX within current operating income.

4.1.2 Disposal of ENGIE's interest in coal-fired power plants in Germany and the Netherlands

On November 29, 2019, the Group finalized the disposal to Riverstone Holdings LLC, an international investment fund specializing in energy, of the coal-fired power plants of Farge, Zolling and Wilhelmshaven in Germany and Rotterdam in the Netherlands, with a total installed capacity of 2,345 MW.

This transaction resulted in a €106 million reduction in ENGIE's net debt at December 31, 2019 (and €84 million to be received in 2020). The disposal loss before tax amounted to €26 million at December 31, 2019, following a negative value adjustment of €121 million, mainly corresponding to goodwill.

4.2 Assets held for sale

Total "Assets classified as held for sale" and total "Liabilities directly associated with assets classified as held for sale" amounted to €468 million and €92 million, respectively, at December 31, 2019.

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
Property, plant and equipment, net and intangible assets	378	2,661
Other assets	90	1,137
TOTAL ASSETS CLASSIFIED AS HELD FOR SALE	468	3,798
Borrowings and debt	26	1,019
Other liabilities	65	1,111
TOTAL LIABILITIES DIRECTLY ASSOCIATED WITH ASSETS CLASSIFIED AS HELD FOR SALE	92	2,130

(1) Data published at December 31, 2018 was not restated due to the transition approach used when applying IFRS 16 and IFRIC 23 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

The assets related to Glow (Thailand), solar parks in operation by Langa in France, and renewable energy assets in Mexico, recorded in "Assets classified as held for sale" at December 31, 2018, were sold in 2019 (see Note 4.1 "Disposals carried out in 2019").

Assets classified as held for sale at December 31, 2019 include renewable energy assets in Mexico and green gas production assets in operation in France. These transactions are expected to be completed in first-half 2020. Given the expected capital gains from the disposal, no value adjustment has been recorded.

4.3 Acquisitions carried out in 2019

4.3.1 Acquisition of a 58.5% interest in Transportadora Asociada de Gás S.A. (TAG) in Brazil

In early April 2019, a consortium comprising ENGIE (32.5%), ENGIE Brasil Energia (32.5%) and Caisse de Dépôt et Placement du Québec (CDPQ) (35%), won the bidding process initiated by Petrobras for the acquisition of a 90% interest in Transportadora Asociada de Gás S.A. (TAG).

ENGIE therefore holds a 58.5% interest in TAG directly and indirectly, representing a net interest of 49.3% for the Group. The other TAG shareholders are CDPQ with 31.5% and Petrobras, which has retained a 10% stake.

The acquisition price was USD 8.6 billion, of which USD 5.3 billion was financed by debt external to the consortium and USD 2.4 billion by the shareholders. The impact of the acquisition on the Group's net debt was €1.6 billion (including acquisition costs).

The transaction was completed on June 13, 2019.

TAG owns the largest natural gas transportation network in Brazil, a key country in ENGIE's recently unveiled strategy, and will provide the Group with a steady contractual income stream. TAG's assets include 4,500 kilometers of gas pipelines, representing 47% of the country's gas infrastructure.

The Group has joint control over TAG since the decisions about its relevant activities, including for example preparation of the budget and medium-term plan, investments, operations and maintenance, are taken by majority vote requiring the consent of both ENGIE and CDPQ. Consequently, this interest is accounted for using the equity method.

4.3.2 Other transactions in 2019

Various other acquisitions were made in 2019, including OTTO Luft-und Klimatechnik GmbH & Co, a German ventilation installation and services company; SUEZ's nuclear maintenance business (formerly SRA SAVAC); Vol V Biomasse, which operates across the entire biomethane value chain; TIKO, a developer of smart energy management systems for the residential market; a controlling interest in Cofely Besix Facility Management (CBFM); and Conti, an energy services company in North America.

These various acquisitions increased net debt by €1.6 billion.

In addition, on December 19, 2019, the Group and its consortium partners Crédit Agricole Assurances and Mirova (a subsidiary of Natixis Investment Managers) announced that they had won a competitive process conducted by EDP for the acquisition of Portugal's second largest hydroelectric portfolio. ENGIE owns 40% of the consortium, while Crédit Agricole Assurances and Mirova, through managed funds, own 35% and 25%, respectively. A net debt impact of approximately €650 million is anticipated for ENGIE. This investment will be accounted for using the equity method. Closing of the transaction is expected during the second half of 2020.

Finally, ENGIE has also announced the acquisition of Renvico in Italy, a company that operates in the field of renewable energy, specializing in wind farm management. The closing of the transaction is expected to occur in 2020.

NOTE 5 FINANCIAL INDICATORS USED IN FINANCIAL COMMUNICATION

The purpose of this note is to present the main non-GAAP financial indicators used by the Group as well as their reconciliation with the indicators of the IFRS consolidated financial statements. Published data at December 31, 2018, presented below, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 “Accounting framework and basis for preparing the consolidated financial statements”⁽¹⁾).

5.1 EBITDA

The reconciliation between EBITDA and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec 31, 2018⁽¹⁾
Current operating income including operating MtM and share in net income of equity method entities	5,300	4,903
Mark-to-market on commodity contracts other than trading instruments	426	223
Net depreciation and amortization/Other	4,497	3,882
Share-based payments (IFRS 2)	51	79
Non-recurring share in net income of equity method entities	93	149
EBITDA	10,366	9,236

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 “Accounting framework and basis for preparing the consolidated financial statements”).

5.2 Current operating income (COI)

The reconciliation between current operating income (COI) and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec 31, 2018⁽¹⁾
Current operating income including operating MtM and share in net income of equity method entities	5,300	4,903
(-) Mark-to-market on commodity contracts other than trading instruments	426	223
CURRENT OPERATING INCOME (COI)	5,726	5,126

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 “Accounting framework and basis for preparing the consolidated financial statements”).

From 2020, the composition of COI will be homogenized with that of EBITDA to exclude, in line with ENGIE's accounting policies, the non-recurring share in net income of equity method entities (negative €93 million in 2019 and negative €149 million in 2018), resulting in an adjusted COI of €5,819 million and €5,275 million at December 31, 2019 and December 31, 2018 respectively.

5.3 Net recurring income Group share

Net recurring income Group share is a financial indicator used by the Group in its financial reporting to present net income Group share adjusted for unusual or non-recurring items.

This financial indicator therefore excludes:

- all items presented between the lines “Current operating income including operating MtM and share in net income of equity method entities” and “Income/(loss) from operating activities”, i.e. “Impairment losses”, “Restructuring

(1) Comparative data including the impact relating to the application of IFRS 16 are presented in Section 1 of this 2019 Annual Financial Report.

costs”, “Changes in scope of consolidation” and “Other non-recurring items”. These items are defined in Note 9 “Other items of income/(loss) from operating activities”;

- mark-to-market on commodity contracts other than trading instruments;
- the following components of net financial income/(loss): the impact of debt restructuring, compensation payments on the early unwinding of derivative instruments net of the reversal of the fair value of these derivatives that were settled early, changes in the fair value of derivative instruments that do not qualify as hedges under IFRS 9 – *Financial Instruments*, as well as the ineffective portion of derivative instruments that qualify as hedges;
- the income tax impact of the items described above, determined using the statutory income tax rate applicable to the relevant tax entity;
- net non-recurring items included in “Share in net income of equity method entities”. The excluded items correspond to the non-recurring items as defined above.

The reconciliation of net income/(loss) with net recurring income Group share is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2019	Dec 31, 2018 ⁽¹⁾
NET INCOME/(LOSS) GROUP SHARE		984	1,033
NET INCOME/(LOSS) RELATING TO DISCONTINUED OPERATIONS, GROUP SHARE		-	1,045
NET INCOME/(LOSS) RELATING TO CONTINUED OPERATIONS, GROUP SHARE		984	(12)
Non-controlling interests relating to continued operations		664	572
NET INCOME/(LOSS) RELATING TO CONTINUED OPERATIONS		1,649	560
Reconciliation items between CURRENT OPERATING INCOME AFTER SHARE IN NET INCOME OF EQUITY METHOD ENTITIES and INCOME/(LOSS) FROM OPERATING ACTIVITIES		1,623	2,258
<i>Impairment losses</i>	9.1	1,770	1,798
<i>Restructuring costs</i>	9.2	218	162
<i>Changes in scope of consolidation</i>	9.3	(1,604)	150
<i>Other non-recurring items</i>	9.4	1,240	147
Other adjusted items		154	430
<i>Mark-to-market on commodity contracts other than trading instruments</i>	8.1	426	223
<i>Ineffective portion of derivatives qualified as fair value hedges</i>	10	3	3
<i>Gains/(losses) on debt restructuring and early unwinding of derivative financial instruments</i>	10	(6)	(7)
<i>Change in fair value of derivatives not qualified as hedges and ineffective portion of derivatives qualified as cash flow hedges</i>	10	223	183
<i>Non-recurring income/(loss) from debt instruments and equity instruments</i>	10	(115)	26
<i>Other adjusted tax impacts</i>		(470)	(147)
<i>Non-recurring income/(loss) included in share in net income of equity method entities</i>		93	149
NET RECURRING INCOME RELATING TO CONTINUED OPERATIONS		3,426	3,248
Net recurring income relating to continued operations attributable to non-controlling interests		743	790
NET RECURRING INCOME RELATING TO CONTINUED OPERATIONS, GROUP SHARE		2,683	2,458
Net recurring income/(loss) relating to discontinued operations, Group share		-	(33)
NET RECURRING INCOME GROUP SHARE		2,683	2,425

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 “Accounting framework and basis for preparing the consolidated financial statements”).

5.4 Industrial capital employed

The reconciliation of industrial capital employed with items in the statement of financial position is as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
(+) Property, plant and equipment and intangible assets, net	58,996	55,635
(+) Goodwill	18,665	17,809
(-) <i>Goodwill Gaz de France - SUEZ and International Power ⁽²⁾</i>	(7,650)	(7,610)
(+) IFRIC 4, IFRS 16 and IFRIC 12 receivables	1,737	1,550
(+) Investments in equity method entities	9,216	7,846
(-) <i>Goodwill arising on the International Power combination ⁽²⁾</i>	(154)	(151)
(+) Trade and other receivables, net	15,180	15,613
(-) <i>Margin calls ^{(2) (3)}</i>	(2,023)	(1,669)
(+) Inventories	3,617	4,158
(+) Assets from contracts with customers	7,831	7,411
(+) Other current and non-current assets	10,601	9,811
(+) Deferred tax	(3,771)	(4,349)
(+) <i>Cancellation of deferred tax on other recyclable items ⁽²⁾</i>	(571)	(247)
(-) Provisions	(25,115)	(21,813)
(+) <i>Actuarial gains and losses in shareholders' equity (net of deferred tax) ⁽²⁾</i>	3,507	2,637
(-) Trade and other payables	(19,109)	(19,759)
(+) <i>Margin calls ^{(2) (3)}</i>	1,996	1,681
(-) Liabilities from contracts with customers	(4,330)	(3,634)
(-) Other current and non-current liabilities	(14,298)	(13,507)
INDUSTRIAL CAPITAL EMPLOYED	54,325	51,412

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) For the purpose of calculating industrial capital employed, the amounts recorded in respect of these items have been adjusted from those appearing in the statement of financial position.

(3) Margin calls included in "Trade and other receivables, net" and "Trade and other payables" correspond to advances received or paid as part of collateralization agreements set up by the Group to manage counterparty risk on commodity transactions.

5.5 Cash flow from operations (CFFO)

The reconciliation of cash flow from operations (CFFO) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec 31, 2018 ⁽¹⁾
Cash generated from operations before income tax and working capital requirements	9,863	8,464
Tax paid	(575)	(757)
Change in working capital requirements	(1,110)	149
Interest received on non-current financial assets	28	26
Dividends received on non-current financial assets	67	52
Interest paid	(780)	(727)
Interest received on cash and cash equivalents	82	79
Change in financial assets at fair value through income	(135)	(289)
(+) <i>Change in financial assets at fair value through income recorded in the statement of financial position</i>	135	303
CASH FLOW FROM OPERATIONS (CFFO)	7,574	7,300

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

5.6 Capital expenditure (CAPEX)

The reconciliation of capital expenditure (CAPEX) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec 31, 2018 ⁽¹⁾
Acquisitions of property, plant and equipment and intangible assets	6,524	6,202
Acquisitions of controlling interests in entities, net of cash and cash equivalents acquired	864	983
(+) <i>Cash and cash equivalents acquired</i>	229	83
Acquisitions of investments in equity method entities and joint operations	1,746	338
Acquisitions of equity and debt instruments	595	283
Change in loans and receivables originated by the Group and other	532	251
(+) <i>Other</i>	8	11
Change in ownership interests in controlled entities	12	18
(+) <i>Payments received in respect of the disposal of non-controlling interests</i>	-	-
(-) Disposal impacts relating to DBSO ⁽²⁾ activities	(468)	(526)
TOTAL CAPITAL EXPENDITURE (CAPEX)	10,042	7,643

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements"), but now includes the impact of disposals carried out in the context of the Group's DBSO activities.

(2) Develop, Build, Share & Operate.

5.7 Net financial debt

The reconciliation of net financial debt with items in the statement of financial position is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
(+) Long-term borrowings	16.2 & 16.3	30,002	26,434
(+) Short-term borrowings	16.2 & 16.3	8,543	5,745
(+) Derivative instruments - carried in liabilities	16.4	15,575	14,295
(-) <i>Derivative instruments hedging commodities and other items</i>		(15,350)	(13,970)
(-) Other financial assets	16.1	(9,568)	(8,483)
(+) <i>Loans and receivables at amortized cost not included in net financial debt</i>		4,870	3,844
(+) <i>Equity instruments at fair value</i>		1,297	1,107
(+) <i>Debt instruments at fair value not included in net financial debt</i>		1,899	1,551
(-) Cash and cash equivalents	16.1	(10,519)	(8,700)
(-) Derivative instruments - carried in assets	16.4	(14,272)	(13,372)
(+) <i>Derivative instruments hedging commodities and other items</i>		13,443	12,652
NET FINANCIAL DEBT		25,919	21,102

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

5.8 Economic net debt

Economic net debt is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
NET DEBT	16	25,919	21,102
Future minimum operating lease payments ⁽²⁾			2,087
Provisions for back-end of the nuclear fuel cycle	19	7,611	6,170
Provisions for dismantling of plant and equipment	19	7,329	6,081
Provisions for site rehabilitation	19	237	222
Post-employment benefit - Pension	20	2,427	1,970
(-) <i>Infrastructures regulated companies</i>		(93)	60
Post-employment benefit - Reimbursement rights	20	(160)	(167)
Post-employment benefit - Other benefits	20	5,001	4,293
(-) <i>Infrastructures regulated companies</i>		(3,080)	(2,572)
Deferred tax assets for pension and related obligations	11	(1,635)	(1,374)
(-) <i>Infrastructures regulated companies</i>		759	601
Plan assets relating to nuclear provisions, inventories of uranium and a receivable of Electrabel towards EDF Belgium	16 & 24	(3,236)	(2,884)
ECONOMIC NET DEBT		41,078	35,590

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) As from January 1, 2019, commitments related to lease liabilities are included in net debt due to the application of IFRS 16.

NOTE 6 SEGMENT INFORMATION

6.1 Strengthening of ENGIE's organizational structure

In the first half of 2019, ENGIE unveiled its ambition to become the world leader in the zero carbon transition for its customers and announced measures to strengthen its organizational structure in order to accelerate the implementation of its strategy.

The Group has kept its current decentralized organizational structure based on 24 Business Units (BUs), which are essentially geographical, in order to remain close to its customers and foster initiative, and has strengthened this structure by creating four new Global Business Lines (GBLs): Client Solutions, Networks, Renewables and Thermal.

The role of these GBLs is to support the local teams and encourage cross-cutting performance by proposing an inter-BU strategy for their business, contributing to decisions on the allocation of resources between BUs, identifying and managing the key cross-cutting digital and excellence programs, identifying and implementing worldwide partnerships, and supporting, measuring and presenting the global performance of their business activities. These GBLs plus the Supply and Nuclear business activities form the Group's six core Business Lines (BLs).

The Group now operates on a matrix structure with the BUs forming the primary axis and the BLs the secondary axis.

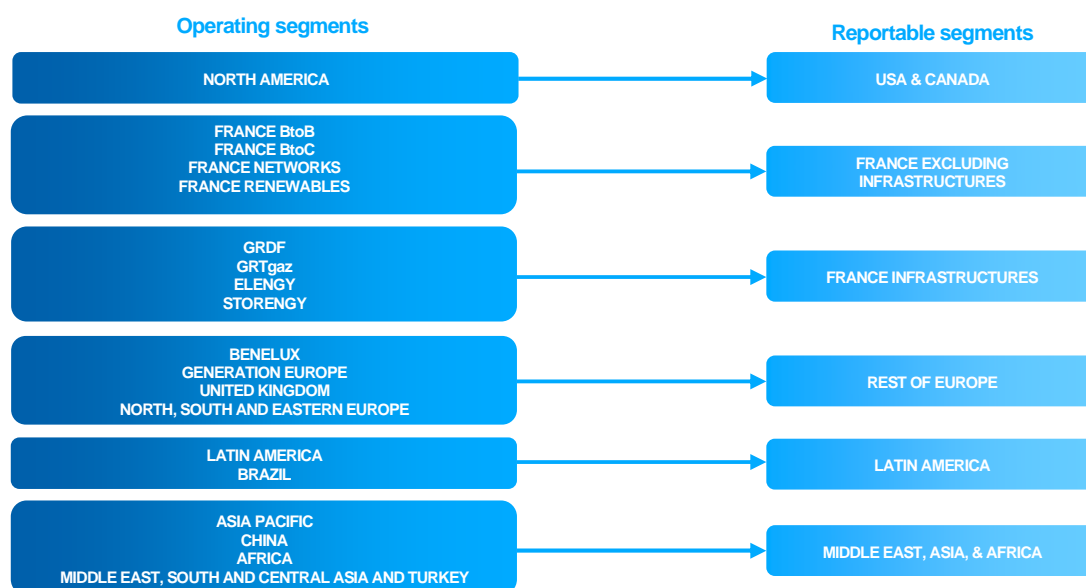

6.2 Operating segments and reportable segments

6.2.1 Definition of reportable segments

In accordance with IFRS 8, the Group has redefined its reportable and operating segments following these organizational developments and the deep changes to the BU business portfolios upon completion of the 2016-2018 transformation plan.

Each BU corresponds to an "operating segment" whose operational and financial performance is regularly reviewed by the Group's Executive Committee, which remains the Group's "chief operating decision maker" within the meaning of IFRS 8. The 24 BUs have now been regrouped into seven reportable segments reflecting the geographic areas where the Group operates:

- one reportable segment corresponding to the USA & Canada operating segment;
- five reportable segments corresponding to groups of operating segments;

- furthermore “Others” comprises operating segments that cannot be grouped together (Global Energy Management, Tractebel, GTT, Hydrogen) as well as the activities of *Entreprises & Collectivités (E&C)* due to the specificity of their businesses and markets or due to their particular risk profile, as well as the Group’s holding and corporate activities.

In order to determine how to group together the operating segments, as set out above, the Group exercised its judgment to decide whether two or more operating segments could be grouped together in the same reportable segment. The following key factors were examined to assess the similarity of the operating segments’ economic characteristics:

- nature of business and services;
- regulatory environment;
- economic environment in which the relevant activities operate (market maturity, growth prospects, political risks, etc.);
- risk profiles of the activities;
- how the activities fit into the Group’s strategy and new business model.

The Group decided to organize the operating segments within the reportable segments for the following reasons:

- the France BtoB, France BtoC, France Networks and France Renewables operating segments have been grouped together within the **France excluding Infrastructures** reportable segment, which encompasses all the French downstream energy businesses (energy services and gas and electricity sales and distribution to BtoB, BtoT and BtoC customers), and the increasingly decentralized renewable energy generation activities. These are complementary unregulated businesses that are supported by a well-developed local network and primarily aim to develop a combined offering for local customers: energy services, decentralized production resources and combined gas and electricity supply contracts. These BUs also operate within an environment driven by the “energy transition for green growth” law (LTECV);
- the GRDF, GRTgaz, Storengy and Elengy operating segments, which comprise the gas infrastructure businesses in Europe (distribution, transport, storage and LNG terminals), have been grouped together within the **France Infrastructures** reportable segment, as they are all regulated businesses with similar risk profiles and margins;
- the Benelux, Generation Europe, United Kingdom and North, South and Eastern Europe operating segments have been grouped together within the **Rest of Europe** reportable segment as these BUs, which comprise all of the Group’s European energy activities excluding France, have a similar business mix (energy production, supply, sale and services), operate in mature energy markets, and are undergoing transformation as part of the energy transition, with rapid development in renewable energy and client solutions;
- the Latin America and Brazil operating segments have been grouped together within the **Latin America** reportable segment, as these segments share similar growth prospects with a substantial proportion of their revenue generated by electricity sales under long-term agreements;
- the Asia-Pacific, China, Africa and Middle East, Southern and Central Asia and Turkey operating segments have been grouped together within the **Middle East, Asia & Africa** reportable segment, as all these regions have high power generation requirements and consequently represent significant growth prospects for the Group in the energy and energy services businesses. They operate in markets driven by the energy transition, with rapid development in renewable energy and client solutions.

6.2.2 Description of reportable segments

- **France excluding Infrastructures:** encompasses the activities of the following BUs: (i) France BtoB: energy sales and services for buildings and industry, cities and regions and major infrastructures, (ii) France BtoC: sales of energy and related services to individual and professional customers, (iii) France Renewables: development, construction, financing, operation and maintenance of all renewable power generation assets in France and (iv) France Networks, which designs, finances, builds and operates decentralized energy production and distribution facilities (heating and cooling networks).
- **France Infrastructures:** encompasses the GRDF, GRTgaz, Elengy and Storengy BUs, which operate natural gas transportation, storage and distribution networks and facilities, and LNG terminals, mainly in France. They also sell access rights to these terminals.

- **Rest of Europe:** encompasses the activities of the following BUs: (i) Benelux (Group's business in Belgium, Netherlands and Luxembourg: nuclear and renewable electricity generation, sales of natural gas and electricity and energy services activities), (ii) Generation Europe, which comprises the Group's thermal electricity generation activities in Europe, (iii) United Kingdom (management of renewable energy generation assets and the portfolio of distribution assets, supply of energy services and solutions, etc.) and (iv) North, South and Eastern Europe (sales of natural gas and electricity and related energy services and solutions, operation of renewable energy generation assets, management of distribution networks).
- **Latin America:** encompasses the activities of (i) the Brazil BU and (ii) the Latin America BU (Argentina, Chile, Mexico and Peru). The subsidiaries concerned are involved in centralized power generation, including renewable energy, gas chain activities (including infrastructure), and energy services.
- **USA & Canada:** encompasses power generation, energy services and natural gas and electricity sales activities in the United States, Canada and Puerto Rico.
- **Middle East, Asia & Africa:** encompasses the activities of the following BUs: (i) Asia-Pacific (Australia, New Zealand, Thailand, Singapore and Indonesia), (ii) China, (iii) Africa (mainly Morocco and South Africa) and (iv) the Middle East, South and Central Asia and Turkey (including India and Pakistan). In all of these regions, the Group is active in electricity generation and sales, gas distribution and sales, energy services and seawater desalination in the Arabian Peninsula.
- **Others:** encompasses the activities of (i) GEM, whose role is to manage and optimize, on behalf of the BUs that hold power generation assets, the Group's physical and contractual asset portfolios (excluding gas infrastructure), particularly in the European market, to sell energy to major pan-European and national industrial companies, and to provide solutions related to its expertise in the financial energy markets to third parties, (ii) Tractebel (engineering companies specialized in energy, hydraulics and infrastructure), (iii) GTT (specialized in the design of cryogenic membrane confinement systems for sea transportation and storage of LNG, both onshore and offshore), (iv) Hydrogen (design of renewable hydrogen-based zero carbon energy solutions), as well as (v) the Group's holding and corporate activities which include the entities centralizing the Group's financing requirements, *Entreprises & Collectivités* (E&C) and the contribution of the associate SUEZ.

The main commercial relationships between the reportable segments are as follows:

- relationships between the "France Infrastructures" reportable segment and the users of those infrastructures, i.e. the "France excluding Infrastructures" and "Others" (GEM and E&C) reportable segments: services relating to the use of the Group's gas infrastructures in France are billed based on regulated rates (or revenues) applicable to all users. Revenue and margins related to GRDF business continue to fall within the scope of "France Infrastructures";
- relationships between the "Others" (GEM) reportable segment and the "France excluding Infrastructures" and "Rest of Europe" reportable segments: GEM manages the Group's natural gas supply contracts and sells gas at market prices to commercial companies within the "France excluding Infrastructures" and "Rest of Europe" reportable segments. As regards electricity, GEM manages and optimizes the power stations and sales portfolios on behalf of entities that hold power generation assets and deducts a percentage of the energy margin in return for providing these services. The revenue and margins related to power generation activities (minus the percentage deducted by GEM) are reported by the segments that hold power generation assets ("France excluding Infrastructures" and "Rest of Europe");
- relationships between the "Generation Europe" operating segment, which is part of the "Rest of Europe" reportable segment, and the commercial entities in the "France excluding Infrastructures" reportable segment: a portion of the power generated by thermal assets within the "Generation Europe" BU is sold to commercial entities from these segments at market prices.

Due to the variety of its businesses and their geographical location, the Group serves a very diverse range of situations and customer types (industry, local authorities and individual customers). Accordingly, no external customer represents individually 10% or more of the Group's consolidated revenues.

6.2.3 Key indicators by reportable segment ⁽¹⁾

In accordance with IFRS 8, comparative segment information at December 31, 2018 has been restated in order to present this information in accordance with the new segment structure introduced by the Group on January 1, 2019.

However, it has not been restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements"), in accordance with the transition options of the standard, applicable as from January 1, 2019.

REVENUES

In millions of euros	Dec. 31, 2019 ⁽¹⁾			Dec. 31, 2018 ⁽¹⁾		
	External revenues	Intra-Group Revenues	Total	External revenues	Intra-Group Revenues	Total
France excluding Infrastructures	15,854	334	16,188	14,998	188	15,186

6.3 Key indicators by Business Line**6.3.1 Definition of Business Lines**

- **Client Solutions** (excluding BtoC clients): encompasses services and service packages such as design, engineering, works, operation, installation, maintenance and facility management, as well as asset management activities such as heating and cooling networks, dedicated energy generation assets (decentralized energy delivered directly to the client). It also includes the Group's interest in the SUEZ group.
- **Networks**: comprises the Group's electricity and gas infrastructure activities and projects. These activities include the management and development of (i) gas and electricity transportation networks in Europe and Latin America and natural gas distribution networks in Europe, Asia and the American continent, (ii) natural gas underground storage in Europe, and (iii) regasification infrastructure in France and Chile. Apart from the historical infrastructure management activities, its asset portfolio also contributes to the challenges of energy decarbonization and network greening (gradual integration of green gas, hydrogen based projects, geothermal projects, energy as a service, etc.).
- **Renewables**: comprises all centralized renewable energy generation activities, including financing, construction and operation of renewable energy facilities, using various energy sources such as hydroelectric, onshore wind, photovoltaic solar, biomass, offshore wind, geothermal and biogas. The energy produced is fed into the grid and sold either on the open or regulated market or through electricity sale agreements.
- **Thermal**: encompasses all the Group's centralized energy generation activities using thermal assets, whether contracted or not. It includes the operation of power plants fueled mainly by gas and coal, as well as pump-operated storage plants. The energy produced is fed into the grid and sold either on the open or regulated market or through electricity sale agreements. It includes the financing, construction and operation of desalination plants, whether or not connected to power plants.
- **Nuclear**: encompasses all of the Group's nuclear power generation activities, with seven reactors in Belgium (four in Doel and three in Tihange) and drawing rights in France.
- **Supply**: encompasses all the Group's activities relating to the sale of gas and electricity to end customers, whether professional or individual. It also includes all the Group's activities in services for residential clients.

Others encompasses (i) energy management and optimization activities, (ii) the GTT BU, and (iii) corporate and holding activities.

6.3.2 Key indicators by Business Line

EBITDA

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾

TOTAL CAPITAL EXPENDITURE (CAPEX)	10,042	7,643

6.4 Key indicators by geographic area

The amounts set out below are analyzed by:

- destination of products and services sold for revenues;
- geographic location of consolidated companies for industrial capital employed.

In millions of euros	Revenues ⁽¹⁾		Industrial capital employed	
	Dec. 31, 2019	Dec. 31, 2018	Dec. 31, 2019	Dec. 31, 2018 ⁽²⁾
France	24,223	23,661	31,831	30,543
Belgium	5,894	5,098	(6,026)	(3,254)
Other EU countries	14,631	14,196	8,363	7,188
Other European countries	989	815	490	386
North America	5,273	3,838	4,419	2,881
Asia, Middle East & Oceania	3,867	4,776	3,355	3,337
South America	4,759	4,197	10,920	9,515
Africa	422	385	971	816
TOTAL	60,058	56,967	54,325	51,412

(1) Data presented at December 31, 2019 have been prepared in accordance with the new income statement presentation adopted by the Group. Comparative data at December 31, 2018 have been reclassified in accordance with this new presentation (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

NOTE 7 REVENUES

7.1 Revenues

Accounting standards

Revenues from contracts with customers concern revenues from contracts that fall within the scope of IFRS 15. Revenues are recognized when the customer obtains control of goods or services promised in the contract, for the amount of consideration to which an entity expects to be entitled in exchange for said promised goods or services.

A contractual analysis of the Group's sale contracts has led to the application of the following revenue recognition principles.

- **Gas, electricity and other energies**
Revenues from sales of gas, electricity and other energies are recognized upon delivery of the power to the retail, business or industrial customer.
Power deliveries are monitored in real time or on a deferred basis for those customers whose energy consumption is metered during the accounting period, in which case the portion of not yet metered revenues "in the meter" is estimated on the closing date.
- **Gas, electrical and other energy infrastructures**
Revenues derived by gas and electricity infrastructure operators upon providing transportation or distribution or storage capacities, are recognized on a straight-line basis over the contract term.
In the countries where the Group acts as an energy provider (supplier) without being in charge of its distribution or transportation, mainly in France and Belgium, an analysis of the energy sales contracts and of the related regulatory framework is carried out to determine whether the distribution or transportation services invoiced to the customers have to be excluded from the revenues recognized under IFRS 15.
Judgment may be exercised by the Group for this analysis in order to determine whether the energy provider acts as an agent or a principal for the gas or electricity distribution or transportation services re-invoiced to the customers. The main criteria used by the Group to exercise its judgment and conclude, in certain countries, that the energy provider acts as an agent of the infrastructure operator are as follows: who is primarily responsible for fulfillment of the distribution or transportation services? Does the energy provider have the ability to commit to capacity reservation contracts towards the infrastructure operator? To what extent does the energy provider have discretion in establishing the price for the distribution or transportation services?
- **Constructions, installations, Operations and Maintenance (O&M), facility management (FM) and other services**
Constructions and installations contracts mainly concern assets built on the premises of customers such as cogeneration units, heaters or other energy-efficiency assets. The related revenues are usually recognized according to the percentage of completion on the basis of the costs incurred.
O&M contracts generally require the Group to perform services ensuring the availability of assets generating energy. These services are performed over time and the related revenues are recognized according to the percentage of completion on the basis of the costs incurred.
FM generally involves managing and integrating a great number of different services, outsourced by customers. The consideration due to FM suppliers can either be fixed or variable depending on the number of hours or on another indicator, irrespective of the nature of the services provided. Hence, the related revenues are recognized according to the percentage of completion on the basis of the costs incurred or of the number of hours performed.

If it is not possible to conclude from the contractual analysis that the contract falls within the scope of IFRS 15, the revenues are then accounted for as non-IFRS 15 revenues.

NOTE 7 REVENUES

Revenues from other contracts, corresponding to revenues from operations that do not fall within the scope of IFRS 15, presented in the "Others" column include lease or concession income, as well as any financial component of operating services.

The table below shows a breakdown of revenues by type of accounting principles:

<i>In millions of euros</i>	Sales of gas	Sales of electricity and other energies	Sales of services linked to infrastructures	Constructions, installations, O&M, FM and other services	Others	Dec. 31, 2019 ⁽¹⁾
France excluding Infrastructures	3,207	4,160	144	8,338	5	15,854

(1) Data presented at December 31, 2019 have been prepared in accordance with the new income statement presentation adopted by the Group. Comparative data at December 31, 2018 have been reclassified in accordance with this new presentation (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

7.2 Trade and other receivables, assets and liabilities from contracts with customers

Accounting standards

On initial recognition, trade and other receivables are recorded at their transaction price as defined in IFRS 15.

A contract asset is an entity's right to consideration in exchange for goods or services that have been transferred to a customer but for which payment is not yet due or is contingent on the satisfaction of a specific condition stipulated in the contract. When an amount becomes due, it is transferred to receivables.

A receivable is recorded when the entity has an unconditional right to consideration. A right to consideration is unconditional if only the passage of time is required before payment of that consideration.

A contract liability is an entity's obligation to transfer goods or services to a customer for which the entity has already received consideration from the customer. The liability is derecognized upon recognition of the corresponding revenue.

Trade and other receivables and assets from contracts with customers are tested for impairment in accordance with the provisions of IFRS 9 on expected credit losses.

The impairment model for financial assets is based on the expected credit loss model. To calculate expected losses, the Group uses a matrix approach for trade receivables and assets from contracts with customers, for which the change in credit risk is monitored on a portfolio basis. An individual approach is used for large customers and other large counterparties, for which the change in credit risk is monitored on an individual basis.

See Note 17 "Risks arising from financial instruments" for the Group's assessment of counterparty risk.

7.2.1 Trade and other receivables and assets from contracts with customers

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Trade and other receivables, net	15,180	15,613
Of which IFRS 15	7,385	7,552
Of which non-IFRS15	7,795	8,060
Assets from contracts with customers	7,831	7,411
Accrued income and unbilled revenues	6,783	6,377
Energy in the meter ^{(1) (2)}	1,048	1,034

(1) i.e. 1.7% of annual revenues.

(2) Net of advance payments.

In 2019, the segments reporting the greatest amounts of assets from contracts were France excluding Infrastructures (€2,884 million, mainly in France BtoB and BtoC), Rest of Europe (€2,708 million, mainly in Benelux, Germany and the United Kingdom) and Others (€1,017 million mainly BU GEM).

<i>In millions of euros</i>	Dec. 31, 2019			Dec. 31, 2018		
	Allowances and expected credit losses			Allowances and expected credit losses		
	Gross	Net		Gross	Net	
Trade and other receivables, net	16,277	(1,097)	15,180	16,689	(1,076)	15,613
Assets from contracts with customers	7,848	(17)	7,831	7,419	(8)	7,411
TOTAL	24,125	(1,114)	23,011	24,108	(1,085)	23,023

Gas and electricity in the meter

For customers whose energy consumption is metered during the accounting period, the gas supplied but not yet metered at the reporting date is estimated based on historical data, consumption statistics and estimated selling prices.

For sales on networks used by a large number of grid operators, the Group is allocated a certain volume of energy transiting through the networks by the grid managers. As the final allocations are sometimes only known several months down the line, revenue figures cannot be determined with absolute certainty. However, the Group has developed measuring and modeling tools allowing it to estimate revenues with a reasonable degree of accuracy and subsequently ensure that risks of error associated with estimating quantities sold and the related revenues can be considered as immaterial.

In France and Belgium, un-metered revenues ("gas in the meter") are calculated using a direct method taking into account customers' estimated consumption based on the last invoice or metering not yet billed. These estimates are in line with the volume of energy allocated by the grid managers over the same period. The average price is used to measure "gas in the meter" and takes account of the category of customer and the age of the delivered unbilled "gas in the meter". The portion of unbilled revenues at the reporting date varies according to the assumptions about volume and average price.

"Electricity in the meter" is also determined using a direct allocation method similar to that used for gas, but taking into account specific factors related to electricity consumption. It is also measured on a customer-by-customer basis or by customer type.

Realized but not yet metered revenues ("un-metered revenues") mainly related to France and Belgium for an amount of €3,275 million at December 31, 2019 (€3,108 at December 31, 2018).

7.2.2 Liabilities from contracts with customers

<i>In millions of euros</i>	Dec. 31, 2019			Dec. 31, 2018		
	Non-current	Current	Total	Non-current	Current	Total
Liabilities from contracts with customers	45	4,286	4,330	36	3,598	3,634
Advances and downpayments received	11	2,190	2,201	-	1,713	1,713
Deferred revenues	34	2,096	2,129	36	1,885	1,921

In 2019, the segments reporting the greatest amounts of revenues recognized over time are France excluding Infrastructures (€2,382 million, mainly in France BtoB and BtoC) and Rest of Europe (€1,295 million, mainly in Benelux, Germany and the United Kingdom).

7.3 Revenues relating to performance obligations not yet satisfied

Revenues relating to performance obligations only partially satisfied at December 31, 2019 amounted to €16,792 million. They mainly concern the United Kingdom (€7,441 million) and France BtoB (€5,052 million) BUs. These BUs handle a large number of construction, installation, maintenance and facility management contracts under which revenues are recognized over time. The Benelux, Tractebel Engineering and North, South and Eastern Europe BUs will also be recognizing revenues over the next three years for performance obligations satisfied over time.

NOTE 8 OPERATING EXPENSES

Accounting standards

Operating expenses include:

- purchases and commodity hedges including:
 - the purchase of commodities and associated costs (infrastructure, transport, storage, etc.),
 - the realized impact, as well as the change in fair value (MtM), of commodity transactions, with or without physical delivery, that fall within the scope of IFRS 9 - *Financial Instruments* and that do not qualify as trading or hedging. These contracts are set up as part of economic hedges of operating transactions in the energy sector;
- purchases of services and other items such as subcontracting and interim expenses, lease expenses (short-term lease contracts or leases with low underlying asset value), concession expenses, etc.;
- personnel costs;
- depreciation, amortization, and provisions; and
- taxes.

8.1 Purchases and operating derivatives

<i>In millions of euros</i>	Dec. 31, 2019 ⁽¹⁾	Dec. 31, 2018 ⁽¹⁾⁽²⁾
Purchases and other income and expenses on operating derivatives other than trading ⁽³⁾	(29,340)	(28,431)
Service and other purchases ⁽⁴⁾	(10,609)	(10,229)
PURCHASES AND OPERATING DERIVATIVES	(39,950)	(38,660)

- (1) Data presented at December 31, 2019 have been prepared in accordance with the new income statement presentation adopted by the Group. Comparative data at December 31, 2018 have been restated in accordance with this new definition (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").
- (2) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").
- (3) Of which a net expense of €426 million at December 31, 2019 relating to MtM on commodity contracts other than trading (compared to a net expense of €223 million at December 31, 2018).
- (4) Of which €258 million in lease expenses, relating to short term lease contracts and leases with a low underlying asset value, accounted for in accordance with IFRS 16 at December 31, 2019 (compared to €828 million lease expenses accounted for in accordance with IAS 17 at December 31, 2018).

8.2 Personnel costs

<i>In millions of euros</i>	Notes	Dec. 31, 2019	Dec. 31, 2018
Short-term benefits		(10,933)	(9,998)
Share-based payments	21	(56)	(86)
Costs related to defined benefit plans	20.3.4	(368)	(407)
Costs related to defined contribution plans	20.4	(121)	(133)
PERSONNEL COSTS		(11,478)	(10,624)

8.3 Depreciation, amortization and provisions

<i>In millions of euros</i>	Notes	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
Depreciation and amortization	14 & 15	(4,497)	(3,882)
Net change in write-downs of inventories, trade receivables and other assets		(104)	-
Net change in provisions	19	208	296
DEPRECIATION, AMORTIZATION AND PROVISIONS		(4,393)	(3,586)

At December 31, 2019, depreciation and amortization mainly break down as €943 million for intangible assets and €3,554 million for property, plant and equipment.

NOTE 9 OTHER ITEMS OF INCOME/(LOSS) FROM OPERATING ACTIVITIES

Accounting standards

Other items of Income/(loss) from operating activities include:

- “Impairment losses” include impairment losses on goodwill, other intangible assets, property, plant and equipment and investments in entities consolidated using the equity method of accounting;
- “Restructuring costs” concern costs corresponding to a restructuring program planned and controlled by management that materially changes either the scope of a business undertaken by the entity, or the manner in which that business is conducted, based on the criteria set out in IAS 37;
- “Changes in the scope of consolidation”. This line includes:
 - direct costs related to acquisitions of controlling interests,
 - in a business combination achieved in stages, remeasurement at fair value at the acquisition date of the previously held interest,
 - subsequent changes in the fair value of contingent consideration,
 - gains or losses from disposals of investments which result in a change of consolidation method, as well as any impact from the remeasurement of retained interests with the exception of gains and losses arising from transactions realized in the framework of “Develop, Build, Share & Operate” (DBSO) or “Develop, Share, Build & Operate” (DSBO) business models. These transactions on renewable activities are recognized in current operating income as they are part of the recurring rotation of the Group’s capital employed;
- “Other non-recurring items” notably include gains and losses on disposals of non-current assets.

9.1 Impairment losses

<i>In millions of euros</i>	Notes	Dec. 31, 2019	Dec. 31, 2018
Impairment losses:			
Goodwill	13.1	(116)	(14)
Property, plant and equipment and other intangible assets	14 & 15	(1,735)	(1,609)
Investments in equity method entities and related provisions		-	(209)
TOTAL IMPAIRMENT LOSSES		(1,851)	(1,831)
Reversal of impairment losses:			
Property, plant and equipment and other intangible assets		61	33
Investments in equity method entities and related provisions		20	-
TOTAL REVERSALS OF IMPAIRMENT LOSSES		81	33
TOTAL		(1,770)	(1,798)

Net impairment losses amounted to €1,770 million in 2019, relating to property, plant and equipment and goodwill. After taking into account the deferred tax effects and the share of impairment losses attributable to non-controlling interests, the impact of these impairment losses on net income Group share for 2019 amounted to €1,579 million.

Impairment tests are performed in accordance with the conditions described in Note 13.3.

9.1.1 Impairment losses recognized in 2019

Net impairment losses amounted to €1,770 million in 2019 and mainly concerned:

- **Belgian nuclear power assets**

As a result of continued investment in extending the operating life of the nuclear power plants to 50 years and the increase in dismantling assets related to the revision of dismantling provisions (see Note 19.2 “Nuclear dismantling liabilities”), the carrying amount of the nuclear power plants increased significantly in 2019 in a context of falling prices. Given the impairment losses recognized in the past (see Note 10.2.1 to the consolidated financial statements for the year ended December 31, 2018), nuclear assets were tested for impairment distinguishing between nuclear power plants where there is no longer any possibility of extending their operating life and those whose operating life may still be extended beyond 2025.

In these conditions, the Group has updated its forecasts in line with the maintenance schedule for nuclear power plants reviewed for the next three years and in line with the adaptation of their management method as they approach the end of their lifetime. The Group recognized impairment losses of €1,023 million in 2019 against plants whose operating life may no longer be extended, including €639 million in respect of dismantling assets corresponding to the increase in nuclear dismantling provisions.

- **Other impairment losses**

Other impairment losses recognized by the Group mainly concerned:

- thermal power generation assets in Latin America for €165 million, following the anticipated shutdown of these plants;
- the decision to mothball a thermal power generation asset in the Middle East for €135 million, in an unfavorable economic environment;
- the intangible asset of €111 million corresponding to the France BtoC client portfolio value. This value was affected by the 2019 law, which enacts the end of regulated gas tariffs from 2023;
- value adjustments of several coal-fired power plants in Germany and the Netherlands in connection with their disposal (see Note 4.1 “Disposals carried out in 2019”) for €148 million mainly recorded against all of the goodwill allocated to the assets sold for €108 million.

9.1.2 Impairment losses recognized in 2018

Net impairment losses amounted to €1,798 million in 2018, and mainly concerned:

- thermal power generation assets in Europe (€646 million), mainly due to the expected impact of a stricter regulatory environment for coal-fired power plants;
- Belgian nuclear power assets (€615 million), in respect of the nuclear plants whose operating life will not be extended;
- other impairment losses related to an investment in the Africa/Asia reportable segment (€209 million), gas infrastructure facilities in Europe (€87 million) and thermal power generation assets in Latin America (€71 million).

After taking into account the deferred tax effects and the share of impairment losses attributable to non-controlling interests, the impact of these impairment losses on net income Group share for 2018 amounted to €1,540 million.

9.2 Restructuring costs

In 2019, restructuring costs totaled €218 million (versus €162 million in 2018). Restructuring costs in both years mainly included costs related to staff reduction plans and measures to adapt to economic situations, as well as the shutdown of production, the closure or restructuring of certain facilities and other miscellaneous restructuring costs.

9.3 Changes in scope of consolidation

The impact of changes in the scope of consolidation in 2019 was a positive €1,604 million and mainly comprised (i) the positive impact of the sale of Glow for €1,580 million, including €143 million in respect of items of other comprehensive income recycled to the income statement (translation adjustments for €351 million and hedges for a negative €208 million).

The impact of changes in the scope of consolidation in 2018 was a negative €150 million and mainly comprised (i) the €87 million negative impact of the sale of the Loy Yang B thermal power plant in Australia, primarily in respect of items of other comprehensive income recycled to the income statement, and (ii) the €27 million negative impact of the sale of LNG operations in the United States.

9.4 Other non-recurring items

Other non-recurring items totaling a negative €1,240 million in 2019, mainly included the non-recurring impact of the nuclear provision review (back-end of the cycle) and other miscellaneous expenses for a negative €1,166 million.

In 2018, other non-recurring items totaling a negative €147 million mainly included asset scrapping, costs related to site closures and other miscellaneous expenses.

NOTE 10 NET FINANCIAL INCOME/(LOSS)

<i>In millions of euros</i>	Expense	Income	Dec. 31, 2019	Expense	Income	Dec. 31, 2018 ⁽¹⁾
<i>Interest expense on gross debt and hedges</i>	(894)	-	(894)	(828)	-	(828)

<i>Capitalized borrowing costs</i>	106	-	106	134	-	134
Cost of net debt	(790)	114	(676)	(697)	85	(611)
Cost of lease liabilities ⁽²⁾	(48)	-	(48)	(16)	-	(16)
<i>Cash payments made on the unwinding of swaps</i>	(62)	-	(62)	(108)	-	(108)
<i>Reversal of the negative fair value of these early unwound derivative financial instruments</i>	-	62	62	-	102	102
<i>Expenses on debt restructuring transactions</i>	-	6	6	-	13	13
Gains/(losses) on debt restructuring and early unwinding of derivative financial instruments	(62)	68	6	(108)	115	7
<i>Net interest expense on post-employment benefits and other long-term benefits</i>	(121)	-	(121)	(112)	-	(112)
<i>Unwinding of discounting adjustments to other long-term provisions</i>	(566)	-	(566)	(538)	-	(538)
<i>Change in fair value of derivatives not qualified as hedges and ineffective portion of derivatives qualified as cash flow hedges</i>	(223)	-	(223)	(185)	-	(185)
<i>Income/(loss) from debt instruments and equity instruments</i>	(34)	212	179	(84)	73	(11)
<i>Interest income on loans and receivables at amortized cost</i>	-	169	169	-	111	111
<i>Other</i>	(457)	350	(107)	(241)	216	(25)
Other financial income and expenses	(1,400)	731	(669)	(1,161)	400	(761)
NET FINANCIAL INCOME/(LOSS)	(2,300)	913	(1,387)	(1,981)	600	(1,381)

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) At December 31, 2018, the cost of lease liabilities corresponds to interest on finance leases previously classified in "Cost of net debt".

The increase in the cost of net debt was mainly due to the increasing weight of debt in Brazil in relation with the acquisition of TAG (see Note "4.3.1 Acquisition of a 58.5% interest in Transportadora Associada de Gás S.A. (TAG) in Brazil") since December 31, 2018, partly offset by the positive impacts of debt financing transactions carried out by the Group and to active interest-rate management (see Note 16.3.3 "Financial instruments – Main events of the period").

At December 31, 2019, the average cost of debt after hedging came out at 2.70% compared with 2.68% at December 31, 2018.

NOTE 11 INCOME TAX EXPENSE

Accounting standards

The Group calculates taxes in accordance with prevailing tax legislation in the countries where income is taxable.

In accordance with IAS 12, deferred taxes are recognized according to the liability method on temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their tax bases, using tax rates that have been enacted or substantively enacted by the reporting date. However, under the provisions of IAS 12, no deferred tax is recognized for temporary differences arising from goodwill for which impairment losses are not deductible for tax purposes, or from the initial recognition of an asset or liability in a transaction which (i) is not a business combination and (ii) at the time of the transaction, affects neither accounting income nor taxable income. In addition, deferred tax assets are only recognized to the extent that it is probable that taxable income will be available against which the deductible temporary differences can be utilized.

A deferred tax liability is recognized for all taxable temporary differences associated with investments in subsidiaries, associates, joint ventures and branches, except if the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

Net balances of deferred taxes are calculated based on the tax position of each company or on the total income of companies included within the relevant consolidated tax group, and are presented in assets or liabilities for their net amount per tax entity.

Deferred taxes are reviewed at each reporting date to take into account factors including the impact of changes in tax laws and the prospects of recovering deferred tax assets arising from deductible temporary differences.

Deferred tax assets and liabilities are not discounted.

Tax effects relating to coupon payments on deeply-subordinated perpetual notes are recognized in profit or loss.

11.1 Actual income tax expense recognized in the income statement

11.1.1 Breakdown of actual income tax expense recognized in the income statement

The tax expense recognized in the income statement for 2019 amounts to €640 million (€704 million income tax expense in 2018). It breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
Current income taxes	(761)	(712)
Deferred taxes	121	9
TOTAL INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(640)	(704)

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

11.1.2 Reconciliation of theoretical income tax expense with actual income tax expense

A reconciliation of theoretical income tax expense with the Group's actual income tax expense is presented below:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
Net income/(loss)	1,649	1,629
Share in net income of equity method entities	500	361
Net income from discontinued operations	-	1,069
Income tax expense	(640)	(704)
Income/(loss) before income tax expense and share in net income of associates (A)	1,790	903
Of which French companies	285	1,434
Of which companies outside France	1,505	(531)
Statutory income tax rate of the parent company (B)	34.4%	34.4%
THEORETICAL INCOME TAX EXPENSE (C) = (A) X (B)	(616)	(311)
Reconciling items between theoretical and actual income tax expense		
Difference between statutory tax rate applicable to the parent and statutory tax rate in force in jurisdictions in France and abroad	215	42
Permanent differences ⁽²⁾	(23)	(72)
Income taxed at a reduced rate or tax-exempt ⁽³⁾	533	123
Additional tax expense ⁽⁴⁾	(123)	(74)
Effect of unrecognized deferred tax assets on tax loss carry-forwards and other tax-deductible temporary differences ⁽⁵⁾	(867)	(968)
Recognition or utilization of tax income on previously unrecognized tax loss carry-forwards and other tax-deductible temporary differences ⁽⁶⁾	212	370
Impact of changes in tax rates ⁽⁷⁾	(55)	54
Tax credits and other tax reductions ⁽⁸⁾	101	185
Other ⁽⁹⁾	(16)	(53)
INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(640)	(704)

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) Includes mainly disallowable impairment losses on goodwill, disallowable operating expenses, the deduction of interest expenses arising from hybrid debts and effects relating to the cap on allowable interest on borrowings in France in 2018.

(3) Reflects notably capital gains on disposals of securities exempt from tax or taxed at a reduced rate in some tax jurisdictions, the impact of the specific tax regimes used by some entities, disallowable impairment losses and capital losses on securities, and the impact of untaxed income from remeasuring previously-held (or retained) equity interests in connection with acquisitions and changes in consolidation methods.

(4) Includes mainly tax on dividends resulting from the parent company tax regime, withholding tax on dividends and interest levied in several tax jurisdictions, allocations to provisions for income tax, and regional and flat-rate corporate taxes.

(5) Includes (i) the cancellation of the net deferred tax asset position for some tax entities in the absence of sufficient profit being forecast and (ii) the impact of disallowable impairment losses on fixed assets.

(6) Includes the impact of the recognition of net deferred tax asset positions for some tax entities.

(7) Includes mainly the impact of tax rate changes on deferred tax balances in France.

(8) Includes notably reversals of provisions for tax litigation, tax credits in France and other tax reductions.

(9) Includes mainly the correction of previous tax charges.

11.1.3 Analysis of the deferred tax income/(expense) recognized in the income statement, by type of temporary difference

<i>In millions of euros</i>	Impact in the income statement	
	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
Deferred tax assets:		
Tax loss carry-forwards and tax credits	572	302
Pension and related obligations	28	2
Non-deductible provisions	(137)	(77)
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(93)	(141)
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	(1,360)	845
Other	(36)	38
TOTAL	(1,028)	969
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(239)	(249)
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	1,661	(751)
Other	(273)	116
TOTAL	1,149	(884)
DEFERRED TAX INCOME/(EXPENSE)	121	85
<i>Of which continued activities</i>	121	9

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

11.2 Deferred tax income/(expense) recognized in "Other comprehensive income"

Net deferred tax income/(expense) recognized in "Other comprehensive income" is broken down by component as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Equity and debt instruments	(2)	(1)
Actuarial gains and losses	256	68

Cash flow hedges on other items	218	71
Cash flow hedges on net debt	10	(10)
TOTAL EXCLUDING SHARE OF EQUITY METHOD ENTITIES	494	114
Share of equity method entities	81	(20)
Discontinued operations	-	(81)
TOTAL	575	13

11.3 Deferred taxes presented in the statement of financial position

11.3.1 Change in deferred taxes

Changes in deferred taxes recognized in the statement of financial position, after netting deferred tax assets and liabilities by tax entity, break down as follows:

<i>In millions of euros</i>	Assets	Liabilities	Net position
AT DECEMBER 31, 2018 ⁽¹⁾	1,066	(5,415)	(4,349)
IFRS 16 (see Note 1)	-	4	4
AT JANUARY 1, 2019 including IFRS 16	1,066	(5,410)	(4,345)
Impact on net income/(loss) for the year	(1,028)	1,149	121
Impact on other comprehensive income items	482	38	520
Impact of changes in scope of consolidation	(86)	29	(57)
Impact of translation adjustments	10	(27)	(17)
Other	(115)	121	7
Impact of netting by tax entity	531	(531)	-
AT DECEMBER 31, 2019	860	(4,631)	(3,771)

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

11.3.2 Analysis of the net deferred tax position recognized in the statement of financial position (before netting deferred tax assets and liabilities by tax entity), by type of temporary difference

Accounting standards

Measurement of recognized tax loss carry-forwards

Deferred tax assets are recognized on tax loss carry-forwards when it is probable that taxable profit will be available against which the tax loss carry-forwards can be utilized. The probability that taxable profit will be available against which the unused tax losses can be utilized, is based on taxable temporary differences relating to the same taxation authority and the same taxable entity and estimates of future taxable profits. These estimates and utilizations of tax loss carry-forwards were prepared on the basis of profit and loss forecasts over a six-year tax projection period as included in the medium-term business plan validated by Management, subject to exceptions justified by a particular context and, if necessary, on the basis of additional forecasts.

<i>In millions of euros</i>	Statement of financial position at	
	Dec. 31, 2019	Dec. 31, 2018 ⁽¹⁾
Deferred tax assets:		
Tax loss carry-forwards and tax credits	2,118	1,765
Pension obligations	1,635	1,374
Non-deductible provisions	268	371
Difference between the carrying amount of PP&E and intangible assets and their tax bases	763	787
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	2,199	3,398
Other	518	545
TOTAL	7,502	8,239
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(8,953)	(8,773)
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	(1,700)	(3,343)
Other	(620)	(472)
TOTAL	(11,273)	(12,588)
NET DEFERRED TAX ASSETS/(LIABILITIES)	(3,772)	(4,349)

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

11.4 Unrecognized deferred taxes

At December 31, 2019, the tax effect of tax losses and tax credits eligible for carry-forward but not utilized and not recognized in the statement of financial position amounted to €3,836 million (€3,216 million at December 31, 2018). Most of these unrecognized tax losses relate to companies based in countries which allow losses to be carried forward indefinitely (mainly Belgium and Luxembourg) or for up to nine or six years in the Netherlands depending on the year these losses were realized. These tax loss carry-forwards did not give fully or partially rise to the recognition of deferred tax due to the absence of sufficient profit forecasts in the medium term.

The tax effect of other tax-deductible temporary differences not recorded in the statement of financial position was €929 million at end-December 2019 versus €1,364 million at end-December 2018.

NOTE 12 EARNINGS PER SHARE

Accounting standards

Basic earnings per share is calculated by dividing net income Group share for the year by the weighted average number of ordinary shares outstanding during the year. The average number of ordinary shares outstanding during the year is the number of ordinary shares outstanding at the beginning of the year, adjusted by the number of ordinary shares bought back or issued during the year.

For the diluted earnings per share calculation, the weighted average number of shares and basic earnings per share are adjusted to take into account the impact of the conversion or exercise of any dilutive potential ordinary shares (options, warrants and convertible bonds, etc.).

In compliance with IAS 33 – *Earnings per Share*, earnings per share and diluted earnings per share are based on net income/(loss) Group share after deduction of payments to bearers of deeply-subordinated perpetual notes (see Note 18.2.1 “Issuance of deeply-subordinated perpetual notes”).

The Group's dilutive instruments included in the calculation of diluted earnings per share include bonus shares and performance shares granted in the form of ENGIE securities.

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 “Accounting framework and basis for preparing the consolidated financial statements”).

NOTE 13 GOODWILL

Accounting standards

Goodwill is measured as the difference between:

- on the one hand the sum of:
 - the consideration transferred,
 - the amount of non-controlling interests in the acquire, and
 - in a business combination achieved in stages, the acquisition-date fair value of the previously held equity interest in the acquiree;
- on the other hand the net fair value of the identifiable assets acquired and liabilities assumed. The key assumptions and estimates used to determine the fair value of assets acquired and liabilities assumed include the market outlook for the measurement of future cash flows as well as applicable discount rates. These assumptions reflect management's best estimates at acquisition date.

The amount of goodwill recognized at the acquisition date cannot be adjusted after the end of the 12 month measurement period.

Goodwill relating to interests in associates is recorded under "Investments in equity method entities".

Risk of impairment

Goodwill is not amortized but tested for impairment each year in accordance with IAS 36, or more frequently where an indication of impairment is identified. Impairment tests are carried out at the level of cash-generating units (CGUs) or groups of CGUs, which constitute groups of assets which generate cash flows that are largely independent from cash flows generated by other CGUs.

Goodwill is impaired if the net carrying amount of the CGU to which the goodwill is allocated is greater than the recoverable amount of that CGU. The methods used to carry out these impairment tests are described in paragraph 13.3.

Impairment losses in relation to goodwill cannot be reversed and are shown as "Impairment losses" in the income statement.

Indicators of goodwill impairment

The main indicators of impairment used by the Group are:

- using external sources of information
 - a decline in an asset's value over the period that is significantly more than would be expected from the passage of time or normal use,
 - significant adverse changes that have taken place over the period, or will take place in the near future, in the technological market, economic or legal environment in which the entity operates or in the market to which an asset is dedicated,
 - an increase over the period in market interest rates or other market rates of return on investments if such increase is likely to affect the discount rate used in calculating an asset's value in use and decrease its recoverable amount materially,
 - the carrying amount of the net assets of the entity exceeds its market capitalization;
- using internal sources of information
 - evidence of obsolescence or physical damage to an asset,

- significant changes in the extent to which, or manner in which, an asset is used or is expected to be used, that have taken place in the period or soon hereafter and that will have an adverse effect on it. These changes include the asset becoming idle, plans to dispose of an asset sooner than expected, reassessing its useful life as finite rather than indefinite or plans to restructure the operations for which the asset belong,
- internal reports that indicate that the economic performance of an asset is, or will be, worse than expected.

13.1 Movements in the carrying amount of goodwill

<i>In millions of euros</i>	Net amount
AT DECEMBER 31, 2018	17,809
Impairment losses	(116)
Changes in scope of consolidation and Other	876
Translation adjustments	96
AT DECEMBER 31, 2019	18,665

Changes in the period were mainly attributable to (i) the impact of changes in the scope of consolidation primarily relating to the recognition of goodwill arising on the acquisition of Powerlines Group GmbH (€160 million), OTTO Luft-und Klimatechnik GmbH & Co (€137 million), Compañía Americana de Multiservicios (€78 million), CN'Air's Houat group (€77 million) and Pierre Guerin (€69 million), and to (ii) the recognition of an impairment loss amounting to €108 million relating to the disposal of coal-fired power plants in Germany and the Netherlands.

13.2 Goodwill CGUs

The table below shows “material” goodwill CGUs at December 31, 2019:

<i>In millions of euros</i>	Operating segment	Dec. 31, 2019
MATERIAL CGUs		
Benelux	Rest of Europe	4,260
GRDF	France Infrastructures	4,009
France Renewable Energy	France excl. Infrastructures	1,194
United Kingdom	Rest of Europe	1,115
OTHER SIGNIFICANT CGUs		
France BtoB	France excl. Infrastructures	1,052
France BtoC	France excl. Infrastructures	1,046
North America	USA & Canada	986
Northern, Southern and Central Europe	Rest of Europe	818
GRTgaz	France Infrastructures	614
Generation Europe	Rest of Europe	521
OTHER CGUs		3,051
TOTAL		18,665

13.3 Impairment testing of goodwill CGUs

All goodwill CGUs are tested for impairment based on data as of end-June, plus a review of events arisen in the second half of the year. In most cases, the recoverable amount of CGUs is determined by reference to a value in use that is calculated using cash flow projections drawn up on the basis of the 2020 budget and the 2021-2022 medium-term business plan, as approved by the Executive Committee and the Board of Directors, and on extrapolated cash flows beyond that time frame.

Cash flow projections are determined on the basis of macroeconomic assumptions (inflation, exchange rates and growth rates) and price forecasts resulting from the Group's reference scenario for 2023-2040. The forecasts that feature in the reference scenario were approved by the Executive Committee in December 2019. The forecasts and projections included in the reference scenario were determined on the basis of the following inputs:

- forward market prices over the liquidity period for fuel (coal, oil and gas), CO₂ and electricity on each market;

- beyond this period, medium- and long-term energy prices were determined by the Group based on macroeconomic assumptions and fundamental supply and demand equilibrium models, the results of which are regularly compared against forecasts prepared by external energy sector specialists. Long-term projections for CO₂ are in line with the 2050 targets of climate neutrality set by the European commission as part of the “green deal” published in December 2019. More specifically, medium- and long-term electricity prices were determined by the Group using electricity demand forecasting models, medium- and long-term forecasts of fuel and CO₂ prices, and expected trends in installed capacity and in the technology mix of the production assets within each power generation system.

Discount rate

The discount rates used correspond to the weighted average cost of capital, which is adjusted in order to reflect the business, market, country and currency risk relating to each goodwill CGU reviewed. The discount rates used are consistent with available external information sources. The post-tax rates used in 2019 to measure the value in use of the goodwill CGUs for discounting future cash flows ranged between 3.1% and 13.1%, compared with a range of between 3.7% and 11.3% in 2018. The discount rates used for the main goodwill CGUs are shown below:

(1) The valuation methods used are the discounted cash flows (DCF) method and the discounted dividend model (DDM) method.

13.3.1 Material CGUs

This section presents the method for determining value in use, the key assumptions underlying the valuation, and the sensitivity analyses for the impairment tests on the Group's main goodwill CGUs at December 31, 2019.

13.3.1.1 Benelux CGU

The goodwill allocated to the Benelux CGU amounted to €4,260 million at December 31, 2019. The Benelux CGU includes the Group's activities in Belgium, the Netherlands and Luxembourg: (i) power generation activities using its nuclear power plants and wind farms, (ii) natural gas and electricity sales activities, and (iii) energy services activities, as well as drawing rights on the Chooz B and Tricastin power plants in France.

Key assumptions used for the impairment test

The cash flow projections for the Benelux CGU are based on a large number of key assumptions, such as the long-term prices for fuel and CO₂, expected trends in gas and electricity demand and in electricity prices, the market outlook, and changes in the regulatory environment (especially concerning nuclear capacities in Belgium and the extension of drawing rights agreements for French nuclear plants). The key assumptions also include the discount rate used to calculate the value in use of this goodwill CGU.

Cash flow projections for the period beyond the medium-term business plan were determined as described below:

Activities	Assumptions applied beyond the term of the business plan ⁽¹⁾
Nuclear power generation in Belgium	For Doel 1, Doel 2 and Tihange 1, cash flow projection over the residual useful life of 50 years. For the second generation reactors Doel 3 and Tihange 2, cash flow projection over the residual useful life of 40 years. For the second generation reactors Doel 4 and Tihange 3, extension of the operating life for a period of 20 years.
Drawing rights on Chooz B et Tricastin power plants	Cash flow projection over the remaining term of existing contract plus assumption that drawing rights will be extended for a further 10 years.
Energy retail and service activities	Cash flow projection over the duration of the business plan at mid-term, plus application of a terminal value based on a normative cash flow using a long-term growth rate of 1.9%

(1) Assumptions unchanged from December 31, 2018.

The most important assumptions concerning the Belgian regulatory environment relate to the operating life of existing nuclear reactors and the level of royalties and nuclear contributions paid to the Belgian State.

The impairment test took into account the 10-year extension (through 2025) of the operating life of Tihange 1, Doel 1 and Doel 2, annual royalties totaling €20 million in respect of said extension and the new conditions for determining the nuclear contribution that will apply to second-generation reactors (Doel 3 and 4, Tihange 2 and 3) through their 40th year of operation, as defined in the December 29, 2016 law.

As regards second-generation reactors, the principle of a gradual phase-out of nuclear power and the schedule for this phase-out, with the shutdown of the reactors Doel 3 in 2022, Tihange 2 in 2023 and Tihange 3 and Doel 4 in 2025, after 40 years of operation, were reaffirmed in the law of June 18, 2015 and by the energy pact approved by the government on March 30, 2018. The pact is supplemented by a federal energy strategy based on four objectives: the safeguarding of supplies, the impact on climate, the impact on energy prices, and the safety of power plants. A monitoring committee has been set up to evaluate the achievement of these objectives and, where applicable, make recommendations to policymakers so that corrective action may be taken.

However, in view of (i) the extension of the operating life of Tihange 1, Doel 1 and Doel 2 beyond 40 years, (ii) the importance of nuclear power generation in the Belgian energy mix, (iii) the lack of a sufficiently detailed and attractive industrial plan enticing energy utilities to invest in replacement thermal capacity, and (iv) CO₂ emissions reduction targets, the Group considers that nuclear power will still be needed to guarantee the energy equilibrium in Belgium after 2025. Accordingly, in calculating value in use, the Group assumes a 20-year extension of the operating life of half of its second-generation reactors, while taking into account a mechanism of nuclear contributions to be paid to the Belgian government. Should the circumstances described above change in the future, the Group may adapt its industrial scenarios accordingly.

In France, the Nuclear Safety Authority authorized a fourth 10-yearly inspection for the Tricastin nuclear power plants, allowing a 10-year extension of the operating life of these reactors. The Group therefore included an assumption that its drawing rights on the Tricastin and Chooz B nuclear plants expiring in 2021 and 2037, respectively, would be extended by 10 years. This extension assumption had also been taken into account in 2018 as the Group considered that extending the reactors' operating life was the most credible and likely scenario at this point in time. This was also consistent with the expected French energy mix featured in the Group's reference scenario.

Results of the impairment test

At December 31, 2019, the recoverable amount of the goodwill CGU was higher than its carrying amount. Furthermore, the Group recognized impairment losses of €1,022 million against nuclear reactors (see Note 9.1 "Impairment losses"), including €638 million on dismantling assets for nuclear facilities whose operating life may no longer be extended, the recognition of which follows the triennial review of nuclear provisions (see Note 19.2 "Nuclear power generation activities").

Sensitivity analyses

A decrease of €10/MWh in electricity prices for nuclear power generation would lead to an additional impairment loss of around €0.5 billion. Conversely, an increase of €10/MWh in electricity prices would have a positive impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU.

An increase of 50 basis points in the discount rates used would have a negative 54% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 57% impact on the calculation.

Various transformational scenarios were considered concerning nuclear power generation in Belgium:

- the disappearance of the entire nuclear component from the portfolio in 2025 after 50 years of operation in the case of Tihange 1, Doel 1 and Doel 2, and 40 years of operation for the second-generation reactors would have a strongly adverse impact on the results of the test, with the recoverable amount falling significantly below the carrying amount. In this scenario, the impairment risk would represent around €1.5 billion;
- if the life of half of the second-generation reactors were to be extended by ten years and the entire nuclear component subsequently disappear, the recoverable amount would fall below the carrying amount and the impairment risk would represent €0.6 billion.

13.3.1.2 GRDF CGU

The total amount of goodwill allocated to the GRDF CGU was €4,009 million at December 31, 2019. The GRDF CGU groups together the Group's regulated natural gas distribution activities in France.

The terminal value used to calculate the value in use corresponds to the expected Regulated Asset Base (RAB) with no premium at the end of 2025. The RAB is the value assigned by the French Energy Regulation Commission (CRE) to the assets operated by the distributor. It is the sum of the future pre-tax cash flows, discounted at a rate that equals the pre-tax rate of return guaranteed by the regulator.

The cash flow projections are drawn up based on the tariff for public natural gas distribution networks, known as the "ATRD 6 tariff", which will enter into effect for a period of four years on July 1, 2020, and on the overall level of investments agreed by the CRE as part of its decision on the "ATRD 5 tariff".

Given the regulated nature of the businesses grouped within the GRDF CGU, a reasonable change in any of the valuation inputs would not result in impairment losses.

13.3.1.3 France Renewable Energy CGU

The goodwill allocated to the France Renewable Energy CGU amounted to €1,194 million at December 31, 2019. The France Renewable Energy CGU groups together the development, construction, financing, operation and maintenance of all of the renewable power generation assets in France (hydraulic, wind and photovoltaic).

For the hydraulics business, the terminal value was determined to calculate the value in use by extrapolating the cash flows beyond that period based on the reference scenario adopted by the Group.

The main assumptions and key estimates relate primarily to discount rates, assumptions on the renewal of the hydropower concession agreements and changes in the sales prices of electricity beyond the liquidity period.

Value in use of the Compagnie Nationale du Rhône and SHEM was calculated based on assumptions including the extension or renewal of a tender process for the concession agreements, as well as on the conditions of a potential extension.

The cash flows for the periods covered by the renewal of the concession agreements are based on a number of assumptions relating to the economic and regulatory conditions for operating these assets (royalty rates, required level of investment, etc.) during this period.

A decrease of €10/MWh in electricity prices for hydropower generation would have a negative 73% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of €10/MWh in electricity prices would have a positive 71% impact on the calculation.

An increase of 50 basis points in the discount rates used would have a negative 48% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 65% impact on the calculation.

If the Compagnie Nationale du Rhône hydropower concession agreements are not renewed beyond 2023, this would have a strong adverse impact on the results of the test, with the recoverable amount falling significantly below the carrying amount. In this scenario, the impairment risk would represent around €1.3 billion.

13.3.1.4 United Kingdom CGU

The goodwill allocated to the United Kingdom CGU amounted to €1,115 million at December 31, 2019. The United Kingdom CGU includes activities in (i) renewable power generation (hydraulic, wind and solar), (ii) gas and electricity sales, and (iii) services to individual and professional customers in the United Kingdom.

The terminal value used to calculate the value in use of the services and energy sales businesses was determined by extrapolating the cash flows beyond that period using a long-term growth rate of 2% per year.

The main assumptions and key estimates relate primarily to discount rates and changes in price beyond the liquidity period.

An increase of 50 basis points in the discount rates used would have a negative 52% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 40% impact on the calculation.

A decrease of 10% in the margin captured by power generation assets would have a negative 21% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. An increase of 10% in the margin captured would have a positive 21% impact on this calculation.

13.3.2 Other significant CGUs

13.3.2.1 North America CGU

The goodwill allocated to the North America CGU amounted to €986 million at December 31, 2019. The North America CGU mainly comprises:

- Canada, which includes activities in (i) renewable power generation (wind and biomass), (ii) services to individual and professional customers;
- the United States, which includes activities in (i) gas and electricity sales, (ii) services to individual and professional customers and (iii) thermal power generation;
- Puerto Rico, which includes an investment in EcoElectrica, a key energy industry player in Puerto Rico's economy (see Note 3.2 "Investments in joint ventures"). Despite the difficult financial environment in Puerto Rico, ENGIE does not have any information at December 31, 2019 on the basis of which the Group would modify its valuation assumptions regarding its share in these assets.

The wind and solar energy production activities acquired in the United States in 2018 make up an independent goodwill CGU.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2020 budget and the 2021-2022 medium-term business plan. A terminal value was calculated for the services and energy sales businesses using EBITDA multiples as a basis.

The main assumptions and key estimates relate primarily to discount rates and changes in captured margins beyond the liquidity period.

An increase of 50 basis points in the discount rates used would have a negative impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive impact on the calculation.

A decrease of 10% in the margin on gas and electricity sales activities would have a negative 18% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 10% in the margin on gas and electricity sales activities would have a positive 18% impact on the calculation.

A decrease of 10% in service activities would have a negative 8% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 10% in the margin on gas and electricity sales activities would have a positive 8% impact on the calculation.

13.3.2.2 Generation Europe CGU

The goodwill allocated to the Generation Europe CGU amounted to €521 million at December 31, 2019. The Generation Europe CGU groups together the thermal power generation activities in Europe.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2020 budget and the 2021-2022 medium-term business plan. Beyond this three-year period, cash flows were projected over the useful lives of the assets based on the reference scenario adopted by the Group.

The main assumptions and key estimates relate primarily to discount rates, estimated demand for electricity and changes in the price of CO₂, fuel and electricity beyond the liquidity period.

Results of the impairment test

At December 31, 2019, the recoverable amount of the Generation Europe goodwill CGU was higher than its carrying amount.

Sensitivity analyses

An increase of 50 basis points in the discount rates used would have a negative 15% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 18% impact on the calculation.

A decrease of 10% in the margin captured by thermal power plants would have a negative 24% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. An increase of 10% in the margin captured would have a positive 24% impact on this calculation.

13.3.2.3 Other significant goodwill CGUs

For the other significant goodwill CGUs, there is a considerable difference between their recoverable amount and their carrying amount at December 31, 2019.

13.4 Goodwill segment information

The carrying amount of goodwill can be analyzed as follows by reportable segment:

<i>In millions of euros</i>	Dec. 31, 2019
France excluding Infrastructures	3,705
France Infrastructures	5,006
Rest of Europe	6,713
Latin America	820
USA & Canada	1,103
Middle East, Asia & Africa	741
Others	576
TOTAL	18,665

NOTE 14 INTANGIBLE ASSETS

Accounting standards

Initial measurement

Intangible assets are carried at cost less any accumulated amortization and any accumulated impairment losses.

Amortization

Intangible assets are amortized on the basis of the expected pattern of consumption of the estimated future economic benefits embodied in the asset. Amortization is calculated mainly on a straight-line basis over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Concession rights	10	30
Customer portfolio	10	40
Other intangible assets	1	50

Intangible assets with an indefinite useful life are not amortized but are tested for impairment annually.

Risk of impairment

In accordance with IAS 36, impairment tests are carried out on items of property, plant and equipment and intangible assets where there is an indication that the assets may be impaired. Such indications may be based on events or changes in the market environment, or on internal sources of information. Intangible assets that are not amortized are tested for impairment annually.

Impairment indicators

Property, plant and equipment and intangible assets with finite useful lives are only tested for impairment when there is an indication that they may be impaired. This is generally the result of significant changes in the environment in which the assets are operated or when economic performance is lower than expected.

Main impairment indicators used by the Group are described in Note 13 "Goodwill".

Impairment

Items of property, plant and equipment and intangible assets are tested for impairment at the level of the individual asset or cash-generating unit (CGU), as appropriate and, determined in accordance with IAS 36. If the recoverable amount of an asset is lower than its carrying amount, the carrying amount is written down to the recoverable amount by recording an impairment loss. Upon recognition of an impairment loss, the depreciable amount and possibly the useful life of the asset concerned is revised.

Impairment losses recorded in relation to property, plant and equipment or intangible assets may be subsequently reversed if the recoverable amount of the asset increases to exceed the carrying amount. The increased carrying amount of an item of property, plant or equipment following the reversal of an impairment loss may not exceed the carrying amount that would have been determined (net of depreciation/amortization) had no impairment loss been recognized in prior periods.

Measurement of recoverable amount

In order to review the recoverable amount of property, plant and equipment and intangible assets, the assets are grouped, where appropriate, into CGUs and the carrying amount of each CGU is compared with its recoverable amount.

For operating entities which the Group intends to hold on a long-term and going concern basis, the recoverable amount of a CGU corresponds to the higher of its fair value less costs to sell and its value in use. Value in use is primarily determined based on the present value of future operating cash flows including a terminal value. Standard valuation techniques are used based on the following main economic assumptions:

- market perspectives and developments in the regulatory framework;
- discount rates based on the specific characteristics of the operating entities concerned;
- terminal values in line with available market data specific to the operating segments concerned and growth rates associated with these terminal values, not to exceed the inflation rate.

Discount rates are determined on a post-tax basis and applied to post-tax cash flows. The recoverable amounts calculated on the basis of these discount rates are the same as the amounts obtained by applying the pre-tax discount rates to cash flows estimated on a pre-tax basis, as required by IAS 36.

For operating entities which the Group has decided to sell, the related recoverable amount of the assets concerned is based on market value less costs of disposal. Where negotiations are ongoing, this value is determined based on the best estimate of their outcome as of the reporting date.

In the event of a decline in value, the impairment loss is recorded in the consolidated income statement under "Impairment losses".

Intangible rights arising on concession contracts

IFRIC 12 – *Service concession arrangements* deals with the treatment to be applied by the concession operator in respect of certain concession arrangements.

For a concession arrangement to fall within the scope of IFRIC 12, usage of the infrastructure must be controlled by the concession grantor. This requirement is satisfied when the following two conditions are met:

- the grantor controls or regulates what services the operator must provide with the infrastructure, to whom it must provide them, and at what price; and
- the grantor controls any residual interest in the infrastructure at the end of the term of the arrangement, for example retains the right to take back the infrastructure at the end of the concession.

The intangible asset model according to paragraph 17 of IFRIC 12 applies if the operator receives a right (a license) to charge the users, or the grantor, depending on the use made of the public service. There is no unconditional right to receive cash as the amounts depend on the extent to which the public uses the service.

Concession infrastructures that do not meet the requirements of IFRIC 12 are presented as property, plant and equipment. This is the case of gas distribution infrastructures in France. The related assets are recognized in accordance with IAS 16, given that GRDF operates its network under long-term concession arrangements, most of which are mandatorily renewed upon expiration pursuant to French law No. 46-628 of April 8, 1946.

Research and development costs

Research costs are expensed as incurred.

Development costs are capitalized when the asset recognition criteria set out in IAS 38 are met. Capitalized development costs are amortized over the useful life of the intangible asset recognized.

CARRYING AMOUNT				
AT DECEMBER 31, 2018 ⁽¹⁾	2,204	632	3,883	6,718
AT DECEMBER 31, 2019	2,182	727	4,129	7,038

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

In 2019, the net increase in "Intangible assets" was mainly attributable to investments for a total of €1,271 million, partially offset by amortization for a total of €943 million. Changes in scope of consolidation of €124 million relate mainly to the acquisition of OTTO Luft-und Klimatechnik GmbH & Co for €26 million, of the energy services companies Conti in North America for €34 million and of Certinergy for €51 million.

14.1.1 Impairment

At December 31, 2019, this caption notably relates to impairment losses recognized on Customer relationship in France following the adoption of the law enacting the end of regulated sales tariffs and rising rates of portfolio attrition for €111 million.

14.1.2 Capacity entitlements

The Group has acquired capacity entitlements from power stations operated by third parties. These power station capacity rights were acquired in connection with transactions or within the scope of the Group's involvement in financing the construction of certain power stations. In consideration, the Group received the right to purchase a share of the production over the useful life of the underlying assets. These rights are amortized over the useful life of the underlying assets, not to exceed 50 years. The Group currently holds entitlements in the Chooz B and Tricastin power plants in France and in the virtual power plant (VPP) in Italy.

14.1.3 Other

At December 31, 2019, this caption mainly relates to software and licenses for €1,218 million, as well as intangible assets in progress for €636 million and intangible assets (client portfolio) acquired as a result of business combinations and capitalized acquisition costs for customer contracts for €2,007 million.

14.2 Information regarding research and development costs

Research and development activities primarily relate to various studies regarding technological innovation, improvements in plant efficiency, safety, environmental protection, service quality, and the use of energy resources.

Research and development costs, excluding technical assistance costs, totaled €189 million in 2019, of which €23 million in expenses related to in-house projects in the development phase that meet the criteria for recognition as an intangible asset as defined in IAS 38.

NOTE 15 PROPERTY, PLANT AND EQUIPMENT

Accounting standards

Initial recognition and subsequent measurement

Items of property, plant and equipment are recognized at historical cost less any accumulated depreciation and any accumulated impairment losses.

The carrying amount of these items is not revalued as the Group has elected not to apply the allowed alternative method, which consists of regularly revaluing one or more categories of property, plant and equipment.

Investment subsidies are deducted from the gross value of the assets concerned.

In accordance with IAS 16, the initial cost of the item of property, plant and equipment includes an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, when the entity has a present, legal or constructive obligation to dismantle the item or restore the site. A corresponding provision for this obligation is recorded for the amount of the asset component.

Borrowing costs that are directly attributable to the construction of the qualifying asset are capitalized as part of the cost of that asset.

Leases

Until December 31, 2018, only leases classified as finance leases for which the Group acts as a lessee, were recorded as an asset in the balance sheet in accordance with the principles of IAS 17 – *Leases*. A lease qualifies as a finance lease when all the risks and rewards incidental to the ownership of the related asset are substantially transferred to the lessee.

As indicated in Note 1.1.1 “IFRS Standards, amendments or IFRIC interpretations applicable in 2019” from January 1, 2019 the Group applies IFRS 16 – *Leases* to account for lease contracts where the Group acts as a lessee.

In accordance with IFRS 16, the Group recognizes a right-of-use asset and a corresponding lease liability with respect to contracts considered as a lease in which the Group acts as lessee, except for leases with a term of 12 months or less (“short-term leases”), and leases for which the underlying asset is of a low value (“low-value asset”). Payments associated with these leases are recognized on a straight-line basis as expenses in profit and loss. The lease contracts in the Group mainly concern real estate, vehicles and other equipment.

The right-of-use asset is initially measured at cost, which comprises the initial amount of the lease liability adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred and an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received.

The lease liability is initially measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate. This rate is calculated based on the Group's incremental borrowing rate adjusted in accordance with IFRS 16, taking into account (i) the economic environment of the subsidiaries, and in particular their credit risk, (ii) the currency in which the contract is concluded and (iii) the duration of the contract at inception (or the remaining duration for contracts existing upon the initial application of IFRS 16). The methodology applied to determine the incremental borrowing rate reflects the profile of the lease payments (duration method).

The lease term is assessed, including whether a renewal option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised, on a case-by-case basis. The lease term is reassessed if a significant event or a significant change in circumstances that is within the control of the lessee occurs and may affect the assessment made. In determining the enforceable period of a lease, the Group applies a broad interpretation of the

term penalty and takes into consideration, not only contractual penalties arising from termination, but also ancillary costs that could arise in case of an early termination of the lease.

Cushion gas

“Cushion” gas injected into underground storage facilities is essential for ensuring that reservoirs can be operated effectively, and is therefore inseparable from these reservoirs. Unlike “working” gas which is included in inventories (see Note 24.2 “Inventories”), cushion gas is reported in other property, plant and equipment.

Depreciation

In accordance with the components approach, each significant component of an item of property, plant and equipment with a different useful life from that of the main asset to which it relates is depreciated separately over its own useful life.

Property, plant and equipment is depreciated mainly using the straight-line method over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Plant and equipment		
• Storage - Production - Transport - Distribution	5	60 ^(*)
• Installation - Maintenance	3	10
• Hydraulic plant and equipment	20	65
Other property, plant and equipment	2	33

(*)Excluding cushion gas.

The range of useful lives is due to the diversity of the assets in each category. The minimum periods relate to smaller equipment and furniture, while the maximum periods concern network infrastructures and storage facilities. In accordance with the law of January 31, 2003 adopted by the Belgian Chamber of Representatives with respect to the gradual phase-out of nuclear energy for the industrial production of electricity, the useful lives of nuclear power stations were reviewed and adjusted prospectively to 40 years as from 2003, except for Tihange 1, Doel 1 and Doel 2 for which the operating lives have been extended by 10 years.

Fixtures and fittings relating to hydro plants operated by the Group are depreciated over the shorter of the contract term and the useful life of the assets, taking into account the renewal of the concession period if such renewal is considered to be reasonably certain.

The right-of-use asset related to leases is depreciated using the straight-line method from the commencement date to the end of the lease term, unless the lease transfers ownership of the underlying asset to the Group by the end of the lease term. In that case the right-of-use asset is depreciated over the useful life of the underlying asset, which is determined on the same basis as that used for property, plant and equipment mentioned above.

Risk of impairment

See Note 14 “Intangible assets”.

Impairment indicators

See Note 13 “Goodwill”.

AT DECEMBER 31, 2019	564	2,495	40,135	147	1,273	3,815	3,014	515	51,958

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

In 2019, the net increase in "Property, plant and equipment" essentially takes into account :

- maintenance and development investments for a total amount of €5,587 million mainly related to the construction and the development of wind and solar farms in the United States, in Latin America and in India, as well as the extension of the transportation and distribution networks in the France Infrastructure segment;
- changes in the scope of consolidation amounting to a negative €918 million, predominantly related to DBSO ⁽¹⁾ activities relating to wind farms in the United States (negative €234 million), in Mexico (negative €137 million) and in France (negative €195 million), the disposal of the active solar installations of the company Langa (negative €256 million), and the disposal of the coal-fired power plants in Germany and the Netherlands (a negative €280 million), partially offset by the acquisition of a biomethane project in France (positive €92 million);
- positive net translation adjustments of €128 million, mainly resulting from the US dollar (positive impact of €129 million), the pound sterling (positive impact of €87 million) and the Brazilian real (negative impact of €75 million);
- partly offset by depreciation for a total negative impact of €3,554 million;
- the classification under "Assets held for sale" of solar fields in Mexico (negative €285 million) and assets in the renewable energies in France (negative €87 million);
- impairment losses amounting to €1,532 million mainly related to:
 - Belgian nuclear power assets for a negative €1,022 million (see Note 9.1.1 "Impairment losses recognized in 2019");

(1) Develop, Build, Share & Operate.

- the disposal of various coal-fired power plants in the Netherlands and in Germany for a negative €148 million, €108 million of which charged to the entire goodwill allocated to “assets held for sale” and €40 million to property, plant and equipment;
- the coal-fired power plants in Latin America for a negative €165 million due to the planned disconnection and discontinuation of operations of two coal-based energy generation units in Chile combined with the commitment to gradually decommission of coal-fired plants in Chile;
- the gas-steam turbines in the Middle-East, Asia & Africa reportable segment for which a permanent mothballing strategy is adopted due to the poor economic context for a negative €135 million.

15.2 Pledged and mortgaged assets

Items of property, plant and equipment pledged by the Group to guarantee borrowings and debt amounted to €2,261 million at December 31, 2019 compared to €1,298 million at December 31, 2018.

The increase mainly relates to thermoelectric and wind assets in Brazil for €950 million and renewable assets in France for €46 million.

15.3 Contractual commitments to purchase property, plant and equipment

In the ordinary course of their operations, some Group companies have entered into commitments to purchase, and the related third parties to deliver, property, plant and equipment. These commitments relate mainly to orders for equipment, and material related to the construction of energy production units and to service agreements.

Investment commitments made by the Group to purchase property, plant and equipment totaled €1,384 million at December 31, 2019 compared to €1,415 million at December 31, 2018.

15.4 Other information

Borrowing costs for 2019 included in the cost of property, plant and equipment amounted to €106 million at December 31, 2019 compared to €134 million at December 31, 2018.

NOTE 16 FINANCIAL INSTRUMENTS

16.1 Financial assets

Accounting standards

In accordance with the principles of IFRS 9 - *Financial Instruments*, financial assets are recognized and measured either at amortized cost, at fair value through equity or at fair value through profit or loss based on the following two criteria:

- a first criterion relating to the contractual cash flows characteristics of the financial asset. The analysis of contractual cash flow characteristics makes it possible to determine whether these cash flows are “only payments of principal and interest on the outstanding amounts” (known as “SPPI” test or Solely Payments of Principal and Interest);
- a second criterion relating to the business model used by the Group to manage its financial assets. IFRS 9 defines three different business models. A first business model whose objective is to hold assets in order to collect contractual cash flows (hold to collect), a second model whose objective is achieved by both collecting contractual cash flows and selling financial assets (hold to collect and sell) and other business models.

The identification of the business model and the analysis of the contractual cash flows characteristics require judgment to ensure that the financial assets are classified in the appropriate category.

Where the financial asset is an investment in an equity instrument and is not held for trading, the Group may irrevocably elect to present the gains and losses on that investment in other comprehensive income.

Except for trade receivables, which are measured at their transaction price in accordance with IFRS 15, financial assets are measured, on initial recognition, at fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs that are directly attributable to their acquisition.

At the end of each reporting period, financial assets measured using the amortized cost method or at fair value through other comprehensive income (with a recycling mechanism) are subject to an impairment test based on the expected credit losses method.

Financial assets also include derivatives that are measured at fair value in accordance with IFRS 9.

In accordance with IAS 1, the Group presents current and non-current assets and current and non-current liabilities separately in the statement of financial position. In view of the majority of the Group's activities, it was considered that the criterion to be used to classify assets is the expected time to realize the asset or settle the liability: the asset is classified as current if this period is less than 12 months and as non-current if it is more than 12 months after the reporting period.

The following table presents the Group's different categories of financial assets, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2019			Dec. 31, 2018		
		Non-current	Current	Total	Non-current	Current	Total
Other financial assets	16.1	7,022	2,546	9,567	6,193	2,290	8,483
Equity instruments at fair value through other comprehensive income		921	-	921	742	-	742
Equity instruments at fair value through income		377	-	377	365	-	365
Debt instruments at fair value through other comprehensive income ⁽¹⁾		1,072	77	1,149	1,108	840	1,947
Debt instruments at fair value through income		871	397	1,268	600	233	832
Loans and receivables at amortized cost		3,782	2,072	5,854	3,378	1,218	4,596
Trade and other receivables	7.2	-	15,180	15,180	-	15,613	15,613
Assets from contracts with customers	7.2	15	7,816	7,831	-	7,411	7,411
Cash and cash equivalents ⁽¹⁾		-	10,519	10,519	-	8,700	8,700
Derivative instruments	16.4	4,137	10,134	14,272	2,693	10,679	13,372
TOTAL		11,174	46,194	57,369	8,886	44,692	53,578

(1) In 2019, the Group modified the accounting of certain financial assets deducted from net financial debt to reflect the Group's management policy regarding investments and liquidity risk of the Group, and thus reclassified these assets as cash and cash equivalents for an amount of €619 million at December 31, 2019. This change had no impact on net financial debt.

16.1.1 Other financial assets

16.1.1.1 Equity instruments at fair value

Accounting standards

Equity instruments at fair value through other comprehensive income (OCI)

Under IFRS 9 an irrevocable election can be made to present in other comprehensive income subsequent changes in the fair value of an investment in an equity instrument that is not held for trading. This choice is made on an instrument-by-instrument basis. Amounts presented in other comprehensive income should not be transferred to profit or loss including proceeds of disposals. However, IFRS 9 authorizes the transfer of the accumulated profits and losses to another component of equity. Dividends from such investments are recognized in profit or loss unless the dividend clearly represents the recovery of a portion of the cost of the investment.

The equity instruments recognized under this line item mainly concern investments in companies that are not controlled by the Group and for which OCI measurement has been selected given their strategic and long-term nature.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost, plus transaction costs.

At each reporting date, for listed securities, fair value is determined based on the quoted market price at the reporting date. For unlisted securities, fair value is measured using valuation models based primarily on the latest market transactions, the discounting of dividends or cash flows and the net asset value.

Equity instruments at fair value through profit or loss

Equity instruments that are held for trading or for which the Group has not elected for measurement at fair value through other comprehensive income are measured at fair value through profit or loss.

This category mainly includes investments in companies not controlled by the Group.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost.

At each reporting date, for listed and unlisted securities, the same measurement method as described above should be applied.

<i>In millions of euros</i>	Equity instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Total
AT DECEMBER 31, 2018	742	365	1,107
Increase	226	170	396
Decrease	(111)	(24)	(135)
Changes in fair value	92	(23)	69
Changes in scope of consolidation, translation adjustments and other	(28)	(112)	(140)
AT DECEMBER 31, 2019	921	377	1,297
Dividends	65	7	72

Equity instruments break down as €222 million of listed equity instruments and €1,075 million of unlisted equity instruments. This amount mainly includes shares held by the Group as a minority interest in Nord Stream AG for an amount of €478 million.

16.1.1.2 Debt instruments at fair value

Accounting standards

Debt instruments at fair value through other comprehensive income

Financial assets that are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets and for which the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the outstanding amount (SPPI), are measured at fair value through OCI (with a recycling mechanism). This involves a measurement through profit or loss for interest (at amortized cost using the effective interest method), impairment and foreign exchange gains and losses, and through OCI (with a recycling mechanism) for other gains or losses.

This category mainly includes bonds.

Fair value gains and losses on these instruments are recognized in other comprehensive income, except for the following items which are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

When the financial asset is derecognized, the cumulative gain or loss that was previously recognized in other comprehensive income is reclassified from equity to profit or loss.

Debt instruments at fair value through profit or loss

Financial assets whose contractual cash flows do not consist solely of payments of principal and interest on the amount outstanding (SPPI) or that are held in view of an "other" business model are measured at fair value through profit or loss.

The Group's investments in UCITS are accounted for in this caption. They are considered as debt instruments, according to IAS 32 - *Financial Instruments: Presentation*, given the existence of an obligation for the issuer to redeem units, at the request of the holder. They are measured at fair value through profit or loss because the contractual cash flows characteristics do not meet the SPPI test.

<i>In millions of euros</i>	Debt instruments at fair value through other comprehensive income	Liquid debt instruments held for cash investment purposes at fair value through other comprehensive income	Debt instruments at fair value through income	Liquid debt instruments held for cash investment purposes at fair value through income	Total
AT DECEMBER 31, 2018	1,025	922	525	307	2,779
Increase	647	10	430	197	1,284
Decrease	(617)	(306)	(269)	-	(1,193)
Changes in fair value	102	-	75	3	181
Changes in scope of consolidation, translation adjustments and other ⁽¹⁾	(20)	(614)	-	-	(634)
AT DECEMBER 31, 2019	1,138	11	761	507	2,417

(1) Of which €619 million of financial instruments deducted from net financial debt and reclassified from "Other financial assets" to "Cash and cash equivalents" (see Note 16.1 "Financial assets").

Debt instruments at fair value at December 31, 2019 include bonds and money market funds held by Synatom for €1,846 million and liquid instruments deducted from net financial debt for €518 million (respectively €1,492 million and €1,229 million at December 31, 2018).

16.1.1.3 Loans and receivables at amortized cost

Accounting standards

Loans and receivables held by the Group under a business model consisting in holding the instrument in order to collect the contractual cash flows, and whose contractual cash flows consist solely of payments of principal and interest on the principal amount outstanding (SPPI test) are measured at amortized cost. Interest is calculated using the effective interest method.

The following items are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

The Group enters into services or take-or-pay contracts that are or contain a lease and under which the Group acts as lessor and its customers as lessees. Leases are analyzed in accordance with IFRS 16 in order to determine whether they constitute an operating lease or a finance lease. Whenever the terms of the lease transfer substantially all the risk and rewards of ownership of the related asset, the contract is classified as a finance lease and a finance receivable is recognized to reflect the financing deemed to be granted by the Group to the customer.

Leasing security deposits are presented in this caption and recognized at their nominal value.

Please refer to Note 17 "Risks arising from financial instruments" regarding the assessment of counterparty risk.

<i>In millions of euros</i>	Dec. 31, 2019			Dec. 31, 2018		
	Non-current	Current	Total	Non-current	Current	Total
Loans granted to affiliated companies	2,293	172	2,465	1,498	121	1,619
Other receivables at amortized cost	302	1,697	1,998	675	940	1,614
Amounts receivable under concession contracts	588	65	653	544	68	612
Amounts receivable under finance leases	599	138	738	661	89	750
TOTAL	3,782	2,072	5,854	3,378	1,218	4,596

"Loans and receivables at amortized cost" includes notably the €311 million loan granted to Neptune Energy as part of the sale of the exploration-production business. This item also includes the financing of the Nord Stream 2 pipeline project for

a nominal amount of €298 million (excluding capitalized interest and expected credit losses) for the first tranche and €433 million for the second tranche.

Impairment and expected credit losses against loans and receivables at amortized cost stood at €139 million at December 31, 2019 (€319 million at December 31, 2018). This amount includes notably the impairment on the Argentine State receivable related to the concessions granted to Aguas Provinciales de Santa Fe, attributable to SUEZ (see Note 25.4.1 Concessions in Buenos Aires and Santa Fe).

Net gains and losses recognized in the income statement relating to loans and receivables at amortized cost break down as follows:

<i>In millions of euros</i>	Interest income	Post-acquisition measurement	
		Foreign currency translation	Expected credit loss
At December 31, 2019	233	(38)	4
At December 31, 2018	263	(21)	(41)

No material expected credit losses were recognized against loans and receivables at amortized cost at December 31, 2019 and December 31, 2018.

Amounts receivable under finance leases

These contracts refer to lease contracts in which ENGIE acts as lessor, classified as finance leases in accordance with IFRS 16. They concern (i) energy purchase and sale contracts where the contract conveys an exclusive right to use a production asset; and (ii) certain contracts with industrial customers relating to assets held by the Group.

The Group has recognized finance lease receivables, notably for cogeneration plants for Wapda and NTDC (Uch - Pakistan) and Lanxess (Electrabel - Belgium).

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Undiscounted future minimum lease payments	878	919
Unguaranteed residual value accruing to the lessor	8	27

NET INVESTMENT IN THE LEASE (STATEMENT OF FINANCIAL POSITION)	792	777
<i>Of which present value of future minimum lease payments</i>	787	758
<i>Of which present value of unguaranteed residual value</i>	6	19

Undiscounted minimum lease payments receivable under finance leases can be analyzed as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Year 1	118	182
Years 2 to 5 inclusive	470	420
Beyond year 5	290	317
TOTAL	878	919

16.1.2 Trade and other receivables, assets from contracts with customers

Information on trade and other receivables and assets from contracts with customers are provided in Note 7.2. "Trade and other receivables, assets and liabilities from contracts with customers".

16.1.3 Cash and cash equivalents

Accounting standards

This item includes cash equivalents as well as short-term investments that are considered to be readily convertible into a known amount of cash and where the risk of a change in their value is deemed to be negligible based on the criteria set out in IAS 7.

Bank overdrafts are not included in the calculation of cash and cash equivalents and are recorded under "Short-term borrowings".

Cash and cash equivalent items are subject to impairment tests in accordance with the expected credit losses model of IFRS 9.

Cash and cash equivalents totaled €10,519 million at December 31, 2019 (€8,700 million at December 31, 2018).

This amount included funds related to the green bond issues, which remain unallocated to the funding of eligible projects (*see section 5 of the Universal Registration Document*).

At December 31, 2019, this amount also included €86 million in cash and cash equivalents subject to restrictions (€121 million at December 31, 2018), including €63 million of cash equivalents set aside to cover the repayment of borrowings and debt as part of project financing arrangements in certain subsidiaries.

Gains recognized in respect of "Cash and cash equivalents" amounted to €76 million at December 31, 2019 compared to €73 million at December 31, 2018.

16.1.4 Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material

As indicated in Note 19.2 "Obligations relating to nuclear power generation activities", the Belgian law of April 11, 2003, amended by the law of April 25, 2007, granted the Group's wholly-owned subsidiary Synatom responsibility for managing and investing funds received from operators of nuclear power plants in Belgium and designed to cover the costs of dismantling nuclear power plants and managing radioactive fissile material.

Pursuant to the law, Synatom may lend up to 75% of these funds to nuclear power plant operators provided that certain credit quality criteria are met. The funds that cannot be lent to nuclear operators are invested in assets to cover the liabilities.

Following the triennial review of nuclear provisions carried out by Belgium's Commission for Nuclear Provisions (*see Note 19.2 "Obligations relating to nuclear power generation activities"*), Electrabel undertook not to take out any further loans in respect of provisions for the back-end nuclear fuel cycle and to repay all of the loans taken out for that purpose by 2025. Over the next five years, therefore, Synatom will invest in financial assets to cover future costs of managing radioactive fissile material, up to the amount of the corresponding provisions, i.e., about €6 billion more than the assets set aside to cover those provisions at December 31, 2019, plus the annual recurring charge arising from the unwinding of the discount on those provisions and the additional quantities of fuel consumed.

The financial assets covering future costs of dismantling nuclear facilities and managing radioactive fissile material are either loans to legal entities that meet the credit quality criteria required by law or other external assets with sufficient diversification and spread to minimize the risk. The Commission for Nuclear Provisions issues an opinion on the asset classes in which Synatom may invest. Synatom has also undertaken to develop an Investment Department, appoint two outside directors to its Board and set up an Audit Committee.

Loans to entities outside the Group and other cash investments are shown in the table below:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Loans to third parties	467	512
Loan to Eso/Elia	453	454
Loan to Ores Assets	-	40
Loan to Sibelga	14	18
Others loans and receivables at amortized cost	85	163
Debt instruments - restricted cash	85	163
Equity and debt instruments at fair value	2,054	1,539
Equity instruments at fair value through other comprehensive income	207	47
Debt instruments at fair value through other comprehensive income	1,138	1,025
Debt instruments at fair value through income	709	467
TOTAL	2,606	2,214

Loans to entities outside the Group and the cash subject to restriction held by money market funds are shown in the statement of financial position as “Loans and receivables at amortized cost”. Bonds and money market funds held by Synatom are shown as “equity instruments at fair value through other comprehensive income”, “debt instruments at fair value through other comprehensive income” or “debt instruments at fair value through income” (see Note 16.1 “Financial assets”).

16.1.5 Transfer of financial assets

At December 31, 2019, the outstanding amount of transferred financial assets (as well as the risks to which the Group remains exposed following the transfer of those financial assets) as part of transactions leading to either (i) all or part of those assets being retained in the statement of financial position, or (ii) their full deconsolidation while retaining a continuing involvement in these financial assets, was not material in terms of the Group's indicators.

In 2019, the Group carried out disposals without recourse to financial assets as part of transactions leading to full derecognition, for an outstanding amount of €944 million at December 31, 2019.

16.1.6 Financial assets and equity instruments pledged as collateral for borrowings and debt

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Financial assets and equity instruments pledged as collateral	4,471	3,447

This item mainly includes the carrying amount of equity instruments pledged as collateral for borrowings and debt.

16.2 Financial liabilities

Accounting standards

Borrowings and other financial liabilities are measured at amortized cost using the effective interest rate method.

On initial recognition, any issue or redemption premiums and discounts and issuing costs are added to/deducted from the nominal value of the borrowings concerned. These items are taken into account when calculating the effective interest rate and are therefore recorded in the consolidated income statement over the life of the borrowings using the amortized cost method.

As regards structured debt instruments that do not have an equity component, the Group may be required to separate an “embedded” derivative instrument from its host contract. When an embedded derivative is separated from its host contract, the initial carrying amount of the structured instrument is broken down into an embedded derivative component, corresponding to the fair value of the embedded derivative, and a financial liability component, corresponding to the difference between the amount of the issue and the fair value of the embedded derivative. The separation of components upon initial recognition does not give rise to any gains or losses.

The debt is subsequently recorded at amortized cost using the effective interest method while the derivative is measured at fair value, with changes in fair value recognized in profit or loss.

Financial liabilities are recognized either:

- as “Amortized cost liabilities” for borrowings, trade payables and other creditors, and other financial liabilities;
- as “Liabilities measured at fair value through profit or loss” for derivative financial instruments and for financial liabilities designated as such.

The following table presents the Group’s different financial liabilities at December 31, 2019, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2019			Dec. 31, 2018 ⁽¹⁾		
		Non-current	Current	Total	Non-current	Current	Total
Borrowings and debt		30,002	8,543	38,544	26,434	5,745	32,178
Trade and other payables	16.2	-	19,109	19,109	-	19,759	19,759
Liabilities from contracts with customers	7.2	45	4,286	4,330	36	3,598	3,634
Derivative instruments	16.4	5,129	10,446	15,575	2,785	11,510	14,295
Other financial liabilities		38	-	38	46	-	46
TOTAL		35,213	42,383	77,596	29,301	40,612	69,913

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 “Accounting framework and basis for preparing the consolidated financial statements”).

16.2.1 Trade and other payables

In millions of euros	Dec. 31, 2019	Dec. 31, 2018
Trade payables	18,683	19,192
Payable on fixed assets	426	568
TOTAL	19,109	19,759

The carrying amount of these financial liabilities represents a reasonable estimate of their fair value.

16.2.2 Liabilities from contracts with customers

Information on liabilities from contracts with customers are provided in Note 7.2. "Trade and other receivables, assets and liabilities from contracts with customers".

16.3 Net financial debt

16.3.1 Net financial debt by type

In millions of euros		Dec. 31, 2019			Dec. 31, 2018 ⁽¹⁾		
		Non-current	Current	Total	Non-current	Current	Total
Borrowings and debt	Bond issues	23,262	2,753	26,015	21,444	1,202	22,645
	Bank borrowings	4,229	1,063	5,292	4,272	349	4,620
	Negotiable commercial paper		3,233	3,233		2,894	2,894
	Lease liabilities ⁽²⁾	1,935	578	2,512	262	118	380
	Other borrowings ⁽³⁾	576	668	1,244	456	718	1,174
	Bank overdrafts and current account	-	247	247	-	464	464
	BORROWINGS AND DEBT	30,002	8,543	38,544	26,434	5,745	32,178
Other financial assets	Other financial assets deducted from net financial debt ⁽⁴⁾	(213)	(1,289)	(1,502)	(288)	(1,694)	(1,982)
Cash and cash equivalents	Cash and cash equivalents ⁽⁵⁾	-	(10,519)	(10,519)	-	(8,700)	(8,700)
Derivative instruments	Derivatives hedging borrowings ⁽⁶⁾	(521)	(83)	(604)	(419)	24	(395)
NET FINANCIAL DEBT		29,267	(3,348)	25,919	25,727	(4,625)	21,102

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) At December 31, 2018, lease liabilities corresponds to liabilities under finance leases.

(3) This item corresponds to the revaluation of the interest rate component of debt in a qualified fair value hedging relationship.

(4) This item notably corresponds to assets related to financing, liquid debt instruments held for cash investment purposes and margin calls on derivatives hedging borrowings - carried in assets.

(5) Of which €619 million of financial instruments deducted from net financial debt and reclassified from "Other financial assets" to "Cash and cash equivalent". (see Note 16.1 "Financial assets"), with no impact on net financial debt.

(6) This item represents the interest rate component of the fair value of derivatives hedging borrowings in a designated fair value hedging relationship. It also represents the exchange rate and outstanding accrued interest rate components of the fair value of all debt-related derivatives irrespective of whether or not they qualify as hedges.

The fair value of gross borrowings and debt (excluding lease liabilities) amounted to €38,893 million at December 31, 2019, compared with a carrying amount of €35,057 million.

Financial income and expenses related to borrowings and debt are presented in Note 10 "Net financial income/(loss)".

16.3.2 Reconciliation between net financial debt and cash flow from (used in) financing activities

		Dec. 31, 2018 ⁽¹⁾	Cash flow from financing activities	Cash flow from operating and investing activities and variation of cash and cash equivalents	Change in fair value	Translation adjustments	Change in scope of consolidation and others	Dec. 31, 2019
<i>In millions of euros</i>								
Borrowings and debt	Bond issues	22,645	3,210	-	-	170	(10)	26,015
	Bank borrowings	4,620	705	-	-	13	(46)	5,292
	Negotiable commercial paper	2,894	317	-	-	22	-	3,233
	Lease liabilities ⁽²⁾	380	(551)	-	-	9	2,674	2,512
	Other borrowings	1,174	133	-	66	19	(147)	1,244
	Bank overdrafts and current account	464	(150)	-	-	(2)	(65)	247
BORROWINGS AND DEBT		32,178	3,664	-	66	231	2,405	38,544
Other financial assets	Other financial assets deducted from net financial debt ⁽³⁾	(1,982)	(135)	-	(8)	2	620	(1,502)
Cash and cash equivalents	Cash and cash equivalents ⁽³⁾	(8,700)	-	(1,306)	-	(34)	(479)	(10,519)
Derivative	Derivatives hedging borrowings	(395)	(75)	-	25	(155)	(5)	(604)
NET FINANCIAL		21,102	3,454	(1,306)	83	45	2,542	25,919

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) Lease liabilities: the amount of 551 million included into column "Cash flow from financing activities" corresponds to lease payments, excluding interest (total cash outflow for leases amounted to €590 million of which €39 million relating to interest). The amount included in the column "Changes in scope of consolidation and others" mainly correspond to the first-time application of IFRS 16.

(3) Cash and cash equivalents: the amount in column "Changes in scope of consolidation and others" mainly corresponds to the reclassification of financial assets amounting to €619 million from "Other financial assets" to "Cash and cash equivalents" (see Note 16.1 "Financial assets").

16.3.3 Main events of the period

16.3.3.1 Impact of changes in the scope of consolidation and in exchange rates on net financial debt

In 2019, changes in exchange rates resulted in a €45 million increase in net financial debt, including a €88 million increase in relation to the US dollar, which was offset by a €36 million decrease in debt denominated in Brazilian real and €20 million in pounds sterling.

Changes in the scope of consolidation (including the cash impact of acquisitions and disposals) led to a €78 million increase in net financial debt, reflecting:

- disposals of assets over the period, which reduced net financial debt by €3,094 million, notably including the disposal of the interest in GLOW, of coal-fired power plants in Germany and the Netherlands and assets held by Langa in France (see Note 4.1 "Disposals carried out in 2019");
- the classification of renewable energy assets in Mexico and green gas production assets in France under "Assets held for sale" (see Note 4.2 "Assets held for sale") which reduced net financial debt by €26 million;
- acquisitions carried out in 2019 which increased net financial debt by €3,198 million mainly due to the acquisition of a 90% interest in Transportadora Asociada de Gás S.A. (TAG) in Brazil, of Conti in the North America and OTTO Luft-und Klimatechnik GmbH & Co in Germany (see Note 4.3 "Acquisitions carried out in 2019").

16.3.3.2 Financing and refinancing transactions

The Group carried out the following main transactions in 2019:

- on June 21, 2019, ENGIE SA issued €1.5 billion worth of bonds:
 - a €750 million tranche maturing in June 2027 with a 0.375% coupon,
 - a €750 million tranche maturing in June 2039 with a 1.375% coupon;
- on September 4, 2019, ENGIE SA issued €750 million worth of bonds maturing in March 2027 with a 0% coupon;
- on October 24, 2019, ENGIE SA issued €1.5 billion worth of bonds:
 - a €900 million tranche, a green bond maturing in October 2030 with a 0.5% coupon,
 - a €600 million tranche maturing in October 2041 with a 1.25% coupon;
- ENGIE SA redeemed the €775 million worth of bonds that matured on January 24, 2019 with a 6.875% coupon;
- on December 5, 2018, ENGIE SA gave notice that it had exercised the annual prepayment option for the GBP 300 million tranche of deeply-subordinated notes (representing a total amount of €352 million including the accrued coupon) that had previously been recognized in equity in a net amount of €340 million with a 4.625% coupon. ENGIE SA redeemed the bonds on January 10, 2019;
- on May 21, 2019, ENGIE Brasil Energia carried out a bond issue of BRL 2,500 million (€547 million) maturing in November 2020;
- on July 15, 2019, ENGIE Brasil Energia carried out the following refinancing transactions
 - a BRL1 596 million (€360 million) worth of bonds including two tranches of BRL952 million maturing in July 2026 and two tranches of BRL644 million maturing in July 2029,
 - a partial redemption of the bond issued on May 21, 2019 for an amount of BRL1 500 million (€338 million) maturing in November 2020 ;
- on May 17, 2019, ENGIE Brasil Energia took out three bank loans totaling €252 million maturing in May 2022 including two bank loans totaling USD 150 million and a bank loan of BRL 534 million;;
- on November 26, 2019, ENGIE Brasil Energia took out 18 bank loans totaling BRL 1,197 million (€263 million) maturing in December 2038;
- on November 30, 2019, ENGIE Brasil Energia took out a bank loan of BRL 795 million (€176 million) maturing in January 2036.

16.4 Derivative instruments

Accounting standards

Derivative financial instruments are measured at fair value. This fair value is determined on the basis of market data, available from external contributors. In the absence of an external benchmark, a valuation based on internal models recognized by market participants and favoring data directly derived from observable data such as OTC quotations will be used.

The change in fair value of derivative financial instruments is recorded in the income statement except when they are designated as hedging instruments in a cash flow hedge or net investment hedge. In this case, changes in the value of the hedging instruments are recognized directly in equity, excluding the ineffective portion of the hedges.

The Group uses derivative financial instruments to manage and reduce its exposure to market risks arising from fluctuations in interest rates, foreign currency exchange rates and commodity prices, mainly for gas and electricity. The use of derivative instruments is governed by a Group policy for managing interest rate, currency and commodity risks (see Note 17 – *Risks arising from financial instruments*).

Derivative financial instruments are contracts (i) whose value changes in response to the change in one or more observable variables, (ii) that do not require any material initial net investment, and (iii) that are settled at a future date.

Derivative instruments therefore include swaps, options, futures and swaptions, as well as forward commitments to purchase or sell listed and unlisted securities, and firm commitments or options to purchase or sell non-financial assets that involve physical delivery of the underlying.

For purchases and sales of electricity and natural gas, the Group systematically analyzes whether the contract was entered into in the “normal” course of operations and therefore falls outside the scope of IFRS 9. This analysis consists firstly in demonstrating that the contract is entered into and continues to be held for the purpose of physical delivery or receipt of the commodity in accordance with the Group’s expected purchase, sale or usage requirements.

The second step is to demonstrate that the Group has no practice of settling similar contracts on a net basis and that these contracts are not equivalent to written options. In particular, in the case of electricity and gas sales allowing the buyer a certain degree of flexibility concerning the volumes delivered, the Group distinguishes between contracts that are equivalent to capacity sales considered as transactions falling within the scope of ordinary operations and those that are equivalent to written financial options, which are accounted for as derivative financial instruments.

Only contracts that meet all of the above conditions are considered as falling outside the scope of IFRS 9. Adequate specific documentation is compiled to support this analysis.

Embedded derivatives

The main Group contracts that may contain embedded derivatives are contracts with clauses or options potentially affecting the contract price, volume or maturity. This is the case primarily with contracts for the purchase or sale of non-financial assets, whose price is revised based on an index, the exchange rate of a foreign currency or the price of an asset other than the contract’s underlying.

An embedded derivative is a component of a hybrid (combined) instrument that also includes a non-derivative host contract – with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

If a hybrid contract contains a host that is an asset within the scope of IFRS 9, the Group applies the presentation and measurements requirements described in paragraph 17.1. to the entire hybrid contract.

Conversely, when a hybrid contract contains a host that is not an asset within the scope of IFRS 9, an embedded derivative shall be separated from the host and accounted for as a derivative if, and only if:

- the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host;
- a separate instrument within the same terms as the embedded derivative would meet the definition of a derivative; and
- the hybrid contract is not measured at fair value with changes in fair value recognized in profit or loss (i.e., a derivative that is embedded in a financial liability at fair value through profit or loss is not separated).

If an embedded derivative is separate from the host contract, it shall be measured at fair value and fair value changes are recognized in profit or loss (except if the embedded derivative is documented in a hedge relationship).

Hedging instruments: recognition and presentation

Derivative instruments qualifying as hedging instruments are recognized in the consolidated statement of financial position and measured at fair value. However, their accounting treatment varies according to whether they are classified as (i) a fair value hedge of an asset or liability; (ii) a cash flow hedge or (iii) a hedge of a net investment in a foreign operation.

Fair value hedges

A fair value hedge is defined as a hedge of the exposure to changes in fair value of a recognized asset or liability such as a fixed-rate loan or borrowing, or of assets, liabilities or an unrecognized firm commitment denominated in a foreign currency. The gain or loss from remeasuring the hedging instrument at fair value is recognized in income. The gain or loss on the hedged item attributable to the hedged risk adjusts the carrying amount of the hedged item and is also recognized in income even if the hedged item is in a category in respect of which changes in fair value are recognized through other comprehensive income. These two adjustments are presented net in the consolidated income statement, with the net effect corresponding to the ineffective portion of the hedge.

Cash flow hedges

A cash flow hedge is a hedge of the exposure to variability in cash flows that could affect the Group's income. The hedged cash flows may be attributable to a particular risk associated with a recognized financial or non-financial asset or a highly probable forecast transaction.

The portion of the gain or loss on the hedging instrument that is determined to be an effective hedge is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in income. The gains or losses accumulated in equity are reclassified to the consolidated income statement under the same caption as the loss or gain on the hedged item – i.e., current operating income for operating cash flows and financial income or expenses for other cash flows – in the same periods in which the hedged cash flows affect income.

If the hedging relationship is discontinued, in particular because the hedge is no longer considered effective, the cumulative gain or loss on the hedging instrument remains recognized in equity until the forecast transaction occurs. However, if a forecast transaction is no longer expected to occur, the cumulative gain or loss on the hedging instrument is immediately recognized in income.

Hedge of a net investment in a foreign operation

In the same way as for a cash flow hedge, the portion of the gain or loss on the hedging instrument that is determined to be an effective hedge of the currency risk is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in income. The gains or losses accumulated in other comprehensive income are transferred to the consolidated income statement when the investment is liquidated or sold.

Hedging instruments: identification and documentation of hedging relationships

The hedging instruments and hedged items are designated at the inception of the hedging relationship. The hedging relationship is formally documented in each case, specifying the hedging strategy, the hedged risk and the method used to assess hedge effectiveness. Only derivative contracts entered into with external counterparties are considered as being eligible for hedge accounting.

Hedge effectiveness is assessed and documented at the inception of the hedging relationship and on an ongoing basis throughout the periods for which the hedge was designated.

Hedge effectiveness is demonstrated both prospectively and retrospectively using various methods, based mainly on a comparison between changes in fair value or cash flows between the hedging instrument and the hedged item. Methods based on an analysis of statistical correlations between historical price data are also used.

Derivative instruments not qualifying for hedge accounting: recognition and presentation

These items mainly concern derivative financial instruments used in economic hedges that have not been – or are no longer – documented as hedging relationships for accounting purposes.

When a derivative financial instrument does not qualify or no longer qualifies for hedge accounting, changes in fair value are recognized directly in income under (i) current operating income for derivative instruments with non-financial assets as the underlying, and (ii) financial income or expenses for currency, interest rate and equity derivatives.

Derivative instruments not qualifying for hedge accounting used by the Group in connection with proprietary commodity trading activities and other derivatives expiring in less than 12 months are recognized in the consolidated statement of financial position in current assets and liabilities, while derivatives expiring after this period are classified as non-current items.

Fair value measurement

The fair value of instruments listed on an active market is determined by reference to the market price. In this case, these instruments are presented in level 1 of the fair value hierarchy.

The fair value of unlisted financial instruments for which there is no active market and for which observable market data exist is determined based on valuation techniques such as option pricing models or the discounted cash flow method.

Models used to evaluate these instruments take into account assumptions based on market inputs:

- the fair value of interest rate swaps is calculated based on the present value of future cash flows;
- the fair value of forward foreign exchange contracts and currency swaps is calculated by reference to current prices for contracts with similar maturities by discounting the future cash flow spread (difference between the forward exchange rate under the contract and the forward exchange rate recalculated in line with the new market conditions applicable to the nominal amount);
- the fair value of currency and interest rate options is calculated using option pricing models;
- commodity derivatives are valued by reference to listed market prices based on the present value of future cash flows (commodity swaps or commodity forwards) and option pricing models (options), for which market price volatility may be a factor. Contracts with maturities exceeding the depth of transactions for which prices are observable, or which are particularly complex, may be valued based on internal assumptions;
- exceptionally, for complex contracts negotiated with independent financial institutions, the Group uses the values established by its counterparties.

These instruments are presented in level 2 of the fair value hierarchy except when the evaluation is based mainly on data that are not observable; in which case they are presented in level 3 of the fair value hierarchy. Most often, this is the case for derivatives with a maturity that falls outside the observability period for market data relating to the underlying or when certain inputs such as the volatility of the underlying are not observable.

Except in case of enforceable master netting arrangements or similar agreements, counterparty risk is included in the fair value of financial derivative instrument assets and liabilities. It is calculated according to the “expected loss” method and takes into account the exposure at default, the probability of default and the loss given default. The probability of default is determined on the basis of credit ratings assigned to each counterparty (“historical probability of default” approach).

Derivative instruments recognized in assets and liabilities are measured at fair value and broken down as follows:

In millions of euros	Dec. 31, 2019						Dec. 31, 2018					
	Assets			Liabilities			Assets			Liabilities		
	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total
Derivatives hedging borrowings	705	124	829	183	41	225	678	42	720	259	66	325
Derivatives hedging commodities	2,484	9,993	12,476	3,011	10,360	13,371	1,409	10,608	12,018	1,311	11,405	12,716
Derivatives hedging other items ⁽¹⁾	949	17	966	1,934	45	1,980	606	28	634	1,215	38	1,254
TOTAL	4,137	10,134	14,272	5,129	10,446	15,575	2,693	10,679	13,372	2,785	11,510	14,295

(1) Derivatives hedging other items mainly include the interest rate component of interest rate derivatives (not qualifying as hedges or qualifying as cash flow hedges) that are excluded from net financial debt, as well as net investment hedge derivatives.

16.4.1 Offsetting of derivative instrument assets and liabilities

The net amount of derivative instruments after taking into account enforceable master netting arrangements or similar agreements, whether or not they are set off in accordance with paragraph 42 of IAS 32, are presented in the table below:

In millions of euros		Dec. 31, 2019				Dec. 31, 2018			
		Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount	Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount
Assets	Derivatives hedging commodities	13,121	12,476	(7,704)	4,772	12,588	12,018	(8,409)	3,609
	Derivatives hedging borrowings and other items	1,795	1,795	(399)	1,397	1,354	1,354	(384)	970
Liabilities	Derivatives hedging commodities	(14,015)	(13,371)	9,872	(3,499)	(13,285)	(12,716)	10,449	(2,267)
	Derivatives hedging borrowings and other items	(2,204)	(2,204)	899	(1,305)	(1,579)	(1,579)	601	(978)

(1) Net amount recognized in the statement of financial position after taking into account offsetting agreements that meet the criteria set out in paragraph 42 of IAS 32.

(2) Other offsetting agreements include collateral and other guarantee instruments, as well as offsetting agreements that do not meet the criteria set out in paragraph 42 of IAS 32.

16.5 Fair value of financial instruments by level in the fair value hierarchy

16.5.1 Financial assets

The table below shows the allocation of financial instruments carried in assets to the different levels in the fair value hierarchy:

In millions of euros	Dec. 31, 2019				Dec. 31, 2018			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Other financial assets (excluding loans and receivables at amortized cost)	3,714	2,069	-	1,645	3,887	1,554	-	2,332
Equity instruments at fair value through other comprehensive income	921	222	-	698	742	62	-	680
Equity instruments at fair value through income	377	-	-	377	365	-	-	365
Debt instruments at fair value through other comprehensive income	1,149	1,138	-	11	1,947	1,025	-	922
Debt instruments at fair value through income	1,268	709	-	559	832	467	-	365
Derivative instruments	14,272	8	12,993	1,270	13,372	38	12,912	422
Derivatives hedging borrowings	829	-	829	-	720	-	720	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	3,521	-	2,928	593	2,075	-	2,036	39
Derivatives hedging commodities - relating to trading activities ⁽¹⁾	8,955	8	8,271	677	9,943	38	9,522	383
Derivatives hedging other items	966	-	966	-	634	-	634	-
TOTAL	17,986	2,077	12,993	2,916	17,259	1,593	12,912	2,754

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and a power contract that are measured at fair value and relate to trading activities.

A definition of these three levels is presented in Note 16.4 "Derivative instruments".

Other financial assets (excluding loans and receivables at amortized cost)

Changes in level 3 equity and debt instruments at fair value can be analyzed as follows:

In millions of euros	Equity instruments at fair value through other comprehensive income	Debt instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Debt instruments at fair value through income	Other financial assets (excluding loans and receivables)
AT DECEMBER 31, 2018	680	922	365	365	2,332
Acquisitions	43	10	170	231	455
Disposals	(73)	(306)	(24)	(42)	(446)
Changes in fair value	76	-	(23)	5	58
Changes in scope of consolidation, foreign currency translation and other changes ⁽¹⁾	(28)	(614)	(112)	-	(755)
AT DECEMBER 31, 2019	698	11	377	559	1,645
Gains/(losses) recorded in income relating to instruments held at the end of the period					51

(1) Of which €619 million of financial instruments deducted from net financial debt and reclassified from "Other financial assets" to "Cash and cash equivalents" (see Note 16.1 "Financial assets").

Derivative instruments

Changes in level 3 derivative instruments commodities can be analyzed as follows:

<i>In millions of euros</i>	Net Asset/(Liability)
AT DECEMBER 31, 2018	(99)
Changes in fair value recorded in income	178
Settlements	(10)
Transfer out of level 3 to levels 1 and 2	(29)
Net fair value recorded in income	40
Deferred Day-One gains/(losses)	49
AT DECEMBER 31, 2019	89

16.5.2 Financial liabilities

The table below shows the allocation of financial instruments carried in liabilities to the different levels in the fair value hierarchy:

<i>In millions of euros</i>	Dec. 31, 2019				Dec. 31, 2018			
	Total	Level	Level	Level	Total	Level	Level	Level
Borrowings used in designated fair value hedges	6,510	-	6,510	-	5,358	-	5,358	-
Borrowings not used in designated fair value hedges	32,382	22,763	9,620	-	28,293	19,028	9,265	-
Derivative instruments	15,575	102	14,292	1,181	14,295	26	13,764	505
Derivatives hedging borrowings	225	-	225	-	325	-	325	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	4,136	-	3,697	440	2,124	-	2,075	49
Derivatives hedging commodities - relating to trading activities ⁽¹⁾	9,234	102	8,391	741	10,592	26	10,110	456
Derivatives hedging other items	1,980	-	1,980	-	1,254	-	1,254	-
TOTAL	54,468	22,865	30,422	1,181	47,946	19,054	28,387	505

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and a power contract that are measured at fair value and relating to trading activities.

A definition of these three levels is presented in Note 16.4 "Derivative instruments".

Borrowings used in designated fair value hedges

This caption includes bonds in a designated fair value hedging relationship, which are presented in level 2 in the above table. Only the interest rate component of the bonds is remeasured, with fair value determined by reference to observable inputs.

Borrowings not used in designated fair value hedges

Listed bond issues are included in level 1.

Other borrowings not used in a designated hedging relationship, are presented in level 2 in the above table. The fair value of these borrowings is determined on the basis of future discounted cash flows and relies on directly or indirectly observable data.

NOTE 17 RISKS ARISING FROM FINANCIAL INSTRUMENTS

The Group mainly uses derivative instruments to manage its exposure to market risks. Financial risk management procedures are set out in Chapter 2 “Risk factors” of the Universal Registration Document.

17.1 Market risks

17.1.1 Commodity risk

Commodity risk arises primarily from the following activities:

- portfolio management; and
- trading.

The Group has identified primarily two types of commodity risks: price risk resulting from fluctuations in market prices, and volume risk inherent to the business.

In the ordinary course of its operations, the Group is exposed to commodity risks on natural gas, electricity, coal, oil and oil products, other fuels, CO₂ and other “green” products. The Group is active on these energy markets either for supply purposes or to optimize and secure its energy production chain and its energy sales. The Group also uses derivatives to offer hedging instruments to its clients and to hedge its own positions.

17.1.1.1 Portfolio management activities

Portfolio management seeks to optimize the market value of assets (power plants, gas and coal supply contracts, energy sales and gas storage and transportation) over various timeframes (short-, medium- and long-term). Market value is optimized by:

- guaranteeing supply and ensuring the balance between physical needs and resources;
- managing market risks (price, volume) to unlock optimum value from portfolios within a specific risk framework.

The risk framework aims to safeguard the Group’s financial resources over the budget period and smooth out medium-term earnings (over three or five years, depending on the maturity of each market). It encourages portfolio managers to take out economic hedges on their portfolio.

Sensitivities of the commodity-related derivatives portfolio used as part of the portfolio management activities as at December 31, 2019 are detailed in the table below. They are not representative of future changes in consolidated earnings and equity, insofar as they do not include the sensitivities relating to the purchase and sale contracts for the underlying commodities.

Sensitivity analysis ⁽¹⁾

In millions of euros	Changes in price	Dec. 31, 2019		Dec. 31, 2018	
		Pre-tax impact on income	Pre-tax impact on equity	Pre-tax impact on income	Pre-tax impact on equity
Oil-based products	+USD 10/bbl	40	234	60	-
Natural gas	+€3/MWh	225	471	961	1
Electricity	+€5/MWh	82	(47)	65	(26)
Coal	+USD 10/ton	(2)	-	9	2
Greenhouse gas emission rights	+€2/ton	(89)	19	37	1
EUR/USD	+10%	(25)	(99)	67	(2)
EUR/GBP	+10%	33	-	87	-

(1) The sensitivities shown above apply solely to financial commodity derivatives used for hedging purposes as part of the portfolio management activities.

The sensitivity of shareholders' equity to changes in gas and oil product prices is due to the application of cash flow hedge accounting to certain supply hedges within marketing operations since 2019.

17.1.1.2 Trading activities

The Group's trading activities are primarily conducted within:

- ENGIE Global Markets and ENGIE Energy Management. The purpose of these wholly-owned companies is to (i) assist Group entities in optimizing their asset portfolios; (ii) create and implement energy price risk management solutions for internal and external customers;
- ENGIE SA for the optimization of part of its long-term gas supply contracts, of a power exchange contract and of part of its gas sales contracts with retail entities in France and Benelux and with power generation facilities in France and Belgium.

Revenues from trading activities totaled €684 million at December 31, 2019 (€526 million at December 31, 2018).

The use of Value at Risk (VaR) to quantify market risk arising from trading activities provides a transversal measure of risk taking all markets and products into account. VaR represents the maximum potential loss on a portfolio over a specified holding period based on a given confidence interval. It is not an indication of expected results but is back-tested on a regular basis.

The Group uses a one-day holding period and a 99% confidence interval to calculate VaR, as well as stress tests, in accordance with banking regulatory requirements.

The VaR shown below corresponds to the global VaR of the Group's trading entities.

Value at Risk

In millions of euros	Dec. 31, 2019	2019 average ⁽¹⁾	2019 maximum ⁽²⁾	2019 minimum ⁽²⁾	2018 average ⁽¹⁾
Trading activities	12	14	26	6	10

(1) Average daily VaR.

(2) Maximum and minimum daily VaR observed in 2019.

17.1.2 Hedges of commodity risks

Hedging instruments and sources of hedge ineffectiveness

The Group enters into cash flow hedges, using derivative instruments (firm or option contracts) contracted over the counter or on organized markets, to reduce its commodity risks which relate mainly to future cash flows from contracted or expected sales and purchases of commodities. These instruments may be settled net or involve physical delivery of the underlying.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and potential mismatches in settlement dates and indices between the derivative instruments and the associated underlying exposures.

The fair values of commodity derivatives are indicated in the table below:

In millions of euros	Dec. 31, 2019				Dec. 31, 2018			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Derivative instruments relating to portfolio management activities	2,484	1,037	(3,011)	(1,125)	1,409	666	(1,311)	(813)
Cash flow hedges	1,893	292	(1,953)	(557)	46	56	(61)	(129)
Other derivative instruments	591	746	(1,058)	(568)	1,364	610	(1,249)	(684)
Derivative instruments relating to trading activities	-	8,955	-	(9,234)	-	9,943	-	(10,592)
TOTAL	2,484	9,993	(3,011)	(10,360)	1,409	10,608	(1,311)	(11,405)

The fair values shown in the table above reflect the amounts for which assets could be exchanged, or liabilities settled, at the end of the reporting period. They are not representative of expected future cash flows insofar as positions (i) are sensitive to changes in prices; (ii) can be modified by subsequent transactions; and (iii) can be offset by future cash flows arising on the underlying transactions.

17.1.2.1 Cash flow hedges

The fair values of cash flow hedges by type of commodity are as follows:

In millions of euros	Dec. 31, 2019				Dec. 31, 2018			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Natural gas	1,814	235	(1,937)	(550)	20	15	(1)	(3)
Electricity	14	35	(9)	(5)	1	3	(44)	(120)
Coal	-	1	(1)	-	7	3	-	-
Oil	51	-	-	-	-	-	-	-
Other ⁽¹⁾	14	21	(6)	(2)	18	35	(16)	(6)
TOTAL	1,893	292	(1,953)	(557)	46	56	(61)	(129)

(1) Includes mainly foreign currency hedges on commodities.

Notional amounts (net) ⁽¹⁾

Notional amounts and maturities of cash flow hedges are as follows:

	Unit	2020	2021	2022	2023	2024	Beyond 5 years	Total at Dec. 31, 2019
Natural gas	GWh	212,024	123,387	23,887	4,827	2,147	-	366,272
Electricity	GWh	(4,461)	(3,787)	(1,384)	-	-	-	(9,632)
Coal	Thousands of tons	60	45	20	-	-	-	125
Oil-based products	Thousands of barrels	-	(12,476)	(12,476)	(12,476)	(12,476)	-	(49,902)
Forex	Millions of euros	21	20	4	-	-	-	45
Greenhouse gas emission rights	Thousands of tons	150	-	-	-	-	-	150

(1) Long/short position.

Effects of hedge accounting on the Group's financial position and performance

In millions of euros	Dec. 31, 2019			Dec. 31, 2018		
	Fair Value		Nominal	Fair value		Nominal
	Assets	Liabilities		Total	Total	
Cash flow hedges	2,184	(2,510)	(325)	4,967	(88)	(244)
TOTAL	2,184	(2,510)	(325)	4,967	(88)	(244)

The fair values represented above are positive for assets and negative for liabilities.

In millions of euros	Nominal amount	Fair Value	Change in fair value used for calculating hedge effectiveness	Change in the value of the hedging instrument recognized in equity ⁽¹⁾	Ineffective portion recognized in profit or loss ⁽¹⁾	Amount reclassified from the hedge reserve to profit or loss ⁽¹⁾	Line item of profit or loss
Cash flow hedges							Current operating income including operating MtM
Hedging instruments	4,967	(325)		(781)	-	-	
Hedged items			(744)				

(1) Gains/(losses).

Hedge inefficiency is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedge. The fair value of the hedging instruments at

December 31, 2019 reflects the cumulative change in the fair value of the hedging instruments since inception of the hedges.

Maturity of commodity derivatives designated as cash flow hedges

<i>In millions of euros</i>	2020	2021	2022	2023	2024	Beyond 5 years	Dec. 31, 2019	Dec. 31, 2018

Amounts presented in the statement of changes in equity and the statement of comprehensive income

The following table provides a reconciliation of each component of equity and an analysis of other comprehensive income:

<i>In millions of euros</i>	Cash flow hedge	Derivatives hedging commodities
At December 31, 2018		(71)
Effective portion recognized in equity		(781)
Amount reclassified from hedge reserve to profit or loss		-
Translation differences		-
Changes in scope of consolidation and other		1
At December 31, 2019		(837)

17.1.2.2 Other commodity derivatives

Other commodity derivatives include:

- commodity purchase and sale contracts that were not entered into or are no longer held for the purpose of the receipt or delivery of commodities in accordance with the Group's expected purchase, sale or usage requirements;
- embedded derivatives; and
- derivative financial instruments that are not eligible for hedge accounting in accordance with IFRS 9 or for which the Group has elected not to apply hedge accounting.

17.1.3 Currency risk

The Group is exposed to currency risk, defined as the impact on its statement of financial position and income statement of fluctuations in exchange rates affecting its operating and financing activities. Currency risk comprises (i) transaction risk arising in the ordinary course of business, (ii) specific transaction risk related to investments, mergers and acquisitions or disposal projects, and (iii) translation risk arising from the conversion into euros of income statement and statement of financial position items from subsidiaries with a functional currency other than the euro. The main translation risk exposures correspond, in order, to assets in US dollars, Brazilian real and pounds sterling.

17.1.3.1 Financial instruments by currency

The following tables present a breakdown by currency of outstanding borrowings and debt and net financial debt, before and after hedging:

17.1.3.2 Currency risk sensitivity analysis

A sensitivity analysis to currency risk on financial income/(loss) – excluding the income statement translation impact of foreign subsidiaries – was performed based on all financial instruments managed by the treasury department and representing a currency risk (including derivative financial instruments).

A sensitivity analysis to currency risk on equity was performed based on all financial instruments qualified as net investment hedges at the reporting date.

For currency risk, sensitivity corresponds to a 10% rise or fall in exchange rates of foreign currencies against the euro compared to closing rates.

In millions of euros	Dec. 31, 2019		
	Impact on income		Impact on equity
	+10% ⁽¹⁾	-10% ⁽¹⁾	+10% ⁽¹⁾
Exposures denominated in a currency other than the functional currency of companies carrying the liabilities on their statements of financial position ⁽²⁾	(20)	20	NA
Financial instruments (debt and derivatives) qualified as net investment hedges ⁽³⁾	NA	NA	216

(1) +(-)10%: depreciation (appreciation) of 10% of all foreign currencies against the euro.

(2) Excluding derivatives qualified as net investment hedges.

(3) This impact is countered by the offsetting change in the net investment hedged.

17.1.4 Interest rate risk

The Group seeks to manage its borrowing costs by limiting the impact of interest rate fluctuations on its income statement. The Group's policy is therefore to arbitrate between fixed rates, floating rates and capped floating rates for its net debt. The interest rate mix may shift within a range defined by the Group Management in line with market trends.

In order to manage the interest rate structure for its net debt, the Group uses hedging instruments, particularly interest rate swaps and options. At December 31, 2019, the Group had a portfolio of interest rate options (caps) protecting it from a rise in short-term interest rates for the euro.

The Group has a portfolio of 2020 and 2021 forward interest rate pre-hedges with respective 10- and 20/21-year maturities to protect the refinancing interest rate on a portion of its debt.

17.1.4.1 Analysis of financial instruments by type of interest rate

The following tables present a breakdown by type of interest rate of outstanding borrowings and debt and net financial debt before and after hedging.

17.1.4.2 Interest rate risk sensitivity analysis

Sensitivity was analyzed based on the Group's net debt position (including the impact of interest rate and foreign currency derivatives relating to net debt) at the reporting date.

For interest rate risk, sensitivity corresponds to a 100-basis-point rise or fall in the yield curve compared to year-end interest rates.

In millions of euros	Dec. 31, 2019			
	Impact on income		Impact on equity	
	+100 basis points	-100 basis points	+100 basis points	-100 basis points
Net interest expense on floating-rate net debt (nominal amount) and on floating-rate leg of derivatives	(49)	48	NA	NA
Change in fair value of derivatives not qualifying as hedges	78	(98)	NA	NA
Change in fair value of derivatives qualifying as cash flow hedges	NA	NA	403	(513)

17.1.5 Currency and interest rate hedges

17.1.5.1 Currency risk management

Foreign currency exchange risk (or "FX" risk) is reported and managed based on a Group-wide approach, reflected in a dedicated Group policy that is approved by Group Management. The policy distinguishes between the three following main sources of currency risk:

- Regular transaction risk**

Regular transaction risk corresponds to the potential negative financial impact of currency fluctuations on business and financial operations denominated in a currency other than the functional currency.

The management of regular transaction risk is fully delegated to the subsidiaries for their scope of activities, while the risks related to central activities are managed at corporate level.

FX risks related to operational activities are systematically hedged when the related cash flows are certain, with a hedging horizon that corresponds at least to the medium-term plan horizon. For cash flows that are not certain, in their entirety, the hedge is initially based on a "no regret" volume. Exposures are monitored and managed based on the sum of nominal cash flows in FX, including highly probable amounts and related hedges.

For FX risks related to financial activities, all significant exposures related to cash, financial debts, etc. are systematically hedged. Exposures are monitored based on the net sum of balance sheet items in FX.

- **Project transaction risk**

Specific project transaction risk corresponds to the potential negative financial impact of FX fluctuations on specific major operations such as investment projects, acquisitions, disposals and restructuring projects, involving multiple currencies.

The management of these FX risks includes the definition and implementation of hedging transactions, taking into account the likelihood of the risk (including probability of project completion) and its evolution, the availability of hedging instruments and their associated cost. Management's aim is to ensure the viability and the profitability of the transactions.

- **Translation risk**

Translation risk corresponds to the potential negative financial impact of FX fluctuations concerning consolidated entities with a functional currency other than the euro. It relates to the translation of their income and expenses and their net assets.

Translation risk is managed centrally, with a focus on securing the net asset value.

The pertinence of hedging this translation risk is assessed regularly for each currency (as a minimum) or set of assets in the same currency, taking into account notably the value of the assets and the hedging costs.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating currency risk:

- derivative instruments: these mostly correspond to over-the-counter contracts and include FX forward transactions, FX swaps, currency swaps, cross currency swaps, plain vanilla FX options or combinations (calls, puts or collars);
- monetary items such as debt, cash and loans.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and in some cases the amount of the future cash flows in foreign currency that are being hedged.

17.1.5.2 Interest rate risk management

The Group is exposed to interest rate risk through its financing and investing activities. Interest rate risk is defined as a financial risk resulting from fluctuations in base interest rates that may increase the cost of debt and affect the viability of investments. Base interest rates are market interest rates, such as EURIBOR, LIBOR, etc., that do not include the borrower's credit spread.

As part of the interest rate benchmark reform, the Group has elected to apply the transition reliefs permitted by the IASB in the amendments of IFRS 7 and IFRS 9 (Phase 1) which allow the uncertainties caused by the interest rate benchmark reform not to be taken into account in the "highly probable" requirement. The Group is following the status of the project prepared by the IASB in order to assess the impact of the interest rate reform (Phase 2). The Group's risk exposure is mainly related to the highly probable requirement in transactions for which the interest rate is based on US LIBOR.

A Group-wide approach on interest rate risk management is reflected in a dedicated Group policy that is approved by Group Management. This policy distinguishes between the two following main sources of interest rate risk:

- **Interest rate risk relating to Group net debt**

Interest rate risk relating to Group net debt designates the financial impact of base rate movements on the debt and cash portfolio from recurring financing activities. This risk is mainly managed centrally.

Risk management objectives are, by order of importance:

- to protect the long term viability of assets;
- to optimize financing costs and ensure competitiveness; and
- to minimize uncertainty on the cost of debt.

Interest rate risk is managed actively by monitoring changes in market rates and their impact on the Group's gross and net debt.

- **Project interest rate risk**

Specific project interest rate risk corresponds to the potential negative financial impact of base rate movements on specific major operations such as investment projects, acquisitions, disposals and restructuring projects. Interest rate risk after the closing of an operation is considered as regular (see "Interest rate risk" above).

Interest rate risk is managed for specific project transactions in order to protect the economic viability of projects, acquisitions, disposals and restructuring initiatives against adverse changes in interest rates. It may include the implementation of hedging transactions, depending on a number of factors including the likeliness of completion, the availability of hedging instruments and their associated cost.

Hedging instruments and sources of hedge ineffectiveness

The Group uses principally the following risk management levers for mitigating interest rate risk:

- derivative instruments: these mostly correspond to over-the-counter contracts that are used to manage base interest rates. Such instruments include:
 - swaps, to change the nature of interest payments on debts, typically from fixed to floating rates or vice versa, and
 - plain vanilla interest rate options;
- caps, floors and collars that allow the impact of interest rate fluctuations to be limited by setting minimum and/or maximum limits on floating interest rates.

Sources of hedge ineffectiveness are mainly related to changes in the credit quality of the counterparties and related charges, as well as potential gaps in settlement dates and in indices between the derivative instruments and the related underlying exposures.

17.1.5.3 Currency and interest rate hedges

The Group has elected to apply hedge accounting whenever possible and suitable for currency risk and interest rate risk management and also manages a portfolio of undesignated derivative instruments, corresponding to economic hedges relating to net debt and foreign currency exposures.

The Group uses the three hedge accounting methods: cash flow hedging, fair value hedging and net investment hedging.

In general, the Group does not frequently reset hedging relationships, does not designate specific risk components as a hedged item and does not designate credit exposures as measured at fair value through income.

The Group qualifies interest rate or cross currency swaps transforming fixed-rate debt into floating-rate debt as fair value hedges.

Cash flow hedges are mainly used to hedge future cash flows in foreign currency, floating-rate debt as well as future refinancing requirements.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 17 RISKS ARISING FROM FINANCIAL INSTRUMENTS

Net investment hedging instruments are mainly FX swaps and forwards.

The fair values of derivatives (excluding commodity instruments) are indicated in the table below:

	Dec. 31, 2019				Dec. 31, 2018			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
<i>In millions of euros</i>								
Derivatives hedging borrowings	705	124	(183)	(41)	678	42	(259)	(66)
<i>Fair value hedges</i>	530	81	(54)	(1)	521	1	(29)	(1)
<i>Cash flow hedges</i>	55	-	(93)	(7)	24	-	(191)	-
<i>Derivative instruments not qualifying for hedge accounting</i>	120	43	(36)	(34)	133	42	(39)	(65)
Derivatives hedging other items	949	17	(1,934)	(45)	606	28	(1,215)	(38)
<i>Cash flow hedges</i>	25	-	(571)	(4)	21	1	(284)	(4)
<i>Net investment hedges</i>	33	-	(6)	-	1	-	(5)	-
<i>Derivative instruments not qualifying for hedge accounting</i>	891	17	(1,357)	(41)	583	27	(927)	(34)
TOTAL	1,654	142	(2,118)	(86)	1,283	71	(1,474)	(105)

The fair values shown in the table above reflect the amounts relating to the price that would be received for the sale of an asset or paid for the transfer of a liability between market participants in the normal course of business. They are not representative of expected future cash flows insofar as positions (i) are sensitive to changes in prices or to changes in credit ratings, (ii) can be modified by subsequent transactions, and (iii) can be offset by future cash flows arising on the underlying transactions.

Amount, timing and uncertainty of future cash flows

The following tables provide a profile of the timing at December 31, 2019 of the nominal amount of hedging instruments:

<i>In millions of euros</i>										
Buy/Sell	Interest rate type	Derivative instrument type	Currency	Total	2020	2021	2022	2023	2024	Beyond 5 years

Cash flow hedges	77	(381)	(305)	3,814	(335)	3,268
Net investment hedges	33	(6)	27	3,027	(3)	1,114
Derivative instruments not qualifying for hedge accounting	70	(77)	(6)	8,985	(23)	10,996
TOTAL	180	(464)	(284)	15,827	(361)	15,379

Interest rate derivatives

<i>In millions of euros</i>	Dec. 31, 2019				Dec. 31, 2018	
	Fair value			Nominal amount	Fair value	Nominal amount
	Assets	Liabilities	Total	Total	Total	Total
Fair value hedges	611	(55)	556	6,089	491	4,846
Cash flow hedges	-	(290)	(290)	3,649	(98)	1,434
Derivative instruments not qualifying for hedge accounting	998	(1,391)	(393)	21,487	(257)	25,216
TOTAL	1,609	(1,736)	(126)	31,224	136	31,496

The fair values shown in the table above are positive for an asset and negative for a liability.

In millions of euros		Nominal and outstanding amount	Fair value ⁽¹⁾	Change in fair value used for calculating hedge ineffectiveness	Change in the value of the hedging instrument recognized in equity ⁽²⁾	Ineffective portion recognized in profit or loss ⁽²⁾	Amount reclassified from the hedge reserve to profit or loss ⁽²⁾	Line item of the income statement
Fair value hedges	Hedging instruments	6,089	556	556	NA	(3)	NA	Cost of net debt
	Hedged items ^{(3) (4)}	6,034	353	1,152	NA		NA	
Cash flow hedges	Hedging instruments	4,702	(433)	(583)	320	(5)	(82)	Other financial income and expenses / Income/(loss) from operating activities
	Hedged items			580				
Net investment hedges	Hedging instruments	1,114	(3)	36	61	NA	(90)	Other financial income and expenses / Income/(loss) from operating activities
	Hedged items			(36)				

(1) The adjustment of the fair value of hedged items is presented as long term and short-term borrowings and debt for an amount of €353 million.

(2) Gains/(losses)

(3) The difference between the fair value used to determine the ineffective portion relating to hedging instruments and that relating to the hedged items corresponds to the amortized cost of borrowings and debt that are part of a fair value hedge relationship.

(4) Of which €126 million relating to hedging items that have ceased to be adjusted as a result of disqualification as a fair value hedge.

Hedge inefficiency is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedge. The fair value of the hedging instruments at December 31, 2019 reflects the cumulative change in the fair value of the hedging instruments since inception of the hedges. For fair value hedges, the same principle applies to the hedged items.

Foreign currency and interest rate derivatives designated as cash flow hedges can be analyzed as follows by maturity

In millions of euros	2020	2021	2022	2023	2024	Beyond 5 years	Total at Dec. 31, 2019	Total at Dec. 31, 2018

(1) Cash flow hedges for given periods.

(2) Cash flow hedges for given transactions.

(3) Of which €-425 million of cash flow hedge reserves for which hedge accounting is no longer applied.

(4) All of the reserves relate to continuing hedging relationships.

17.2 Counterparty risk

Due to its financial and operational activities, the Group is exposed to the risk of default of its counterparties (customers, suppliers, EPC contractors, partners, intermediaries, and banks). Default could affect payments, goods delivery and/or asset performance.

The principles of counterparty risk management are set out in the Group counterparty risk policy, which:

- assigns roles and responsibilities for managing and controlling counterparty risk at different levels (Corporate, BU or entity), and ensures operational procedures are in place and consistent across the Group;
- characterizes counterparty risk and the mechanisms by which it impacts the economic performance and financial statements of the Group;
- defines indicators, reporting and control mechanisms to ensure visibility and to provide tools for financial performance management; and
- provides guidelines on the use of mitigating mechanisms such as collateral and guarantees, which are widely used by some businesses.

Depending on the nature of the business, the Group is exposed to different types of counterparty risk. As a result some businesses use collateral instruments – particularly the Energy Management business, where the use of margin calls and other types of financial collateral (standardized legal framework) is a market standard. In addition, other businesses may request guarantees from their counterparties in certain cases (parent company guarantees, bank guarantees, etc.).

Under the new standard IFRS 9, the Group has defined and applied a Group-wide methodology including the two different approaches:

- a portfolio approach, whereby the Group determines that:
 - coherent customer portfolios and sub-portfolios have to be considered (i.e., portfolios that have comparable credit risk and/or comparable payment behavior), taking into account different aspects:
 - public or private counterparties,
 - residential or BtoB counterparties,
 - geography,
 - type of activity,
 - size of the counterparty,
 - any other aspects the Group may consider relevant, and
 - impairment rates must be determined based on historical aging balances and, when correlation is proven and documentation possible, historical data must be adjusted by forward-looking elements;
- an individualized approach for significant counterparties, for which the Group has set rules for defining the stage of the concerned asset for Expected Credit Loss (ECL) calculations:
 - stage 1 covers financial assets that have not deteriorated significantly since initial recognition. The ECL for stage 1 is calculated on a 12-month basis,
 - stage 2 covers financial assets for which the credit risk has significantly increased. The ECL for stage 2 is calculated on a lifetime basis. The decision to move an asset from stage 1 to stage 2 is based on certain criteria such as:
 - a significant downgrade in the counterparty's creditworthiness and/or its parent company and/or its guarantor (if any),
 - significant adverse change in the regulatory environment,
 - changes in political or country-related risk, and
 - any other aspect the Group may consider relevant.

Regarding financial assets that are more than 30 days past due, the move to stage 2 is not systematically applied as long as the Group has reasonable and supportable information that demonstrates that, even if payments become more than 30 days past due, this does not represent a significant increase in the credit risk since initial recognition.

- stage 3 covers assets for which default has already been observed, such as:
 - when there is evidence of significant and ongoing financial difficulty of the counterparty,
 - when there is evidence of failure in credit support from a parent company to its subsidiary (in this case the subsidiary is the Group's counterparty at risk),
 - when a Group entity has initiated legal proceedings against the counterparty for non-payment.

Regarding financial assets that are more than 90 days past due, the presumption can be rebutted if the Group has reasonable and supportable information that demonstrates that even if payments become more than 90 days past due, this does not indicate counterparty default.

The ECL formula applicable in stages 1 and 2 is $ECL = EAD \times PD \times LGD$, where:

- for 12-month ECL, Exposure At Default (EAD) equals the carrying amount of the financial asset, to which the relevant Probability of Default (PD) and the Loss Given Default (LGD) are applied;
- for lifetime ECL, the calculation method consists in identifying changes in exposure for each year, especially the expected timing and amount of the contractual repayments, and then applying to each repayment the relevant PD and the LGD, and discounting the figures obtained. ECL is then the sum of the discounted figures; and
- probability of default: is the likelihood of default over a particular time horizon (in stage 1, this time horizon is 12 months after the reporting period; in stage 2 this time horizon is the entire lifetime of the financial asset). This information is based on external data from a well-known rating agency. The PD depends on the time horizon and of the rating of the counterparty. The Group uses external ratings if they are available; ENGIE's credit risk experts determine an internal rating for major counterparties with no external rating.

LGD levels are notably based on Basel standards:

- 75% for subordinated assets; and
- 45% for standard assets.

For assets considered to be of strategic importance for the counterparty, such as essential public services or goods, LGD is set at 30%.

The Group has decided that write-offs apply in the following situations:

- assets for which a legal recovery procedure is pending: should not be written off as long as the procedure is ongoing;
- assets for which no legal recovery procedure is pending: should be written off once the trade receivable is 3 years overdue (5 years overdue for public counterparties).

17.2.1 Operating activities

Counterparty risk arising on operating activities is managed via standard mechanisms such as third-party guarantees, netting agreements and margin calls, using dedicated hedging instruments or special prepayment and debt recovery procedures, particularly for retail customers.

Under the Group's policy, each business unit is responsible for managing counterparty risk, although the Group continues to manage the biggest counterparty exposures centrally.

The credit rating of large- and mid-sized counterparties with which the Group has exposures above a certain threshold is measured based on a specific rating process, while a simplified credit scoring process is used for commercial customers with which the Group has fairly low exposures. These processes are based on formally documented, consistent methods across the Group. Consolidated exposures are monitored by counterparty and by segment (credit rating, sector, etc.) using standard indicators (payment risk, mark-to-market exposure).

The Group's Energy Market Risk Committee (CRME) consolidates and monitors the Group's exposure to its main energy counterparties on a quarterly basis and ensures that the exposure limits set for these counterparties are respected.

17.2.1.1 Trade and other receivables, assets from contracts with customers

Total outstanding exposures presented in the tables hereafter do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €2,898 million and €1 million respectively for "Trade and other receivables" and "Assets from contract with customers" at December 31, 2019 (compared to €2,547 million and €13 million at December 31, 2018).

	Expected credit losses	(1)	-	-	-	-
TOTAL		4,379	43	3	4	51

17.2.1.2 Commodity derivatives

In the case of commodity derivatives, counterparty risk arises from positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

		Dec. 31, 2019		Dec. 31, 2018	
In millions of euros		Investment Grade ⁽¹⁾	Total	Investment Grade ⁽¹⁾	Total
Gross exposure ⁽²⁾		9,849	12,466	9,325	12,027
Net exposure ⁽³⁾		3,501	4,422	2,701	3,683
% of credit exposure to "Investment Grade" counterparties		79.2%		73.4%	

- (1) Investment Grade corresponds to transactions with counterparties that are rated at least BBB- by Standard & Poor's, Baa3 by Moody's, or equivalent by Dun & Bradstreet. "Investment Grade" is also determined based on an internal rating tool that has been rolled out within the Group, and covers its main counterparties.
- (2) Corresponds to the maximum exposure, i.e., the value of the derivatives shown under assets (positive fair value).
- (3) After taking into account the liability positions with the same counterparties (negative fair value), collateral, netting agreements and other credit enhancement techniques.

17.2.2 Financing activities

For its financing activities, the Group has put in place procedures for managing and monitoring risk based on (i) the accreditation of counterparties according to external credit ratings, objective market data (credit default swaps, market capitalization) and financial structure, and (ii) counterparty risk exposure limits.

To reduce its counterparty risk exposure, the Group drew increasingly on a structured legal framework based on master agreements (including netting clauses) and collateralization contracts (margin calls).

The oversight procedure for managing counterparty risk arising from financing activities is managed by a Middle Office that operates independently of the Group's Treasury department and reports to the Finance division.

17.2.2.1 Loans and receivables at amortized cost

The total outstanding exposures presented in the tables hereafter do not include impacts relating to VAT or to any other item not subject to credit risk, which amount at December 31, 2019 to €899 million (compared to €809 million at December 31, 2018).

		Dec. 31, 2019					
In millions of euros		Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Total by counterparty type
Gross		4,257	564	49	4,870	2,772	4,870
Expected credit losses		(53)	(56)	(30)	(139)	(36)	(139)
TOTAL		4,204	508	19	4,731	2,736	4,731

In millions of euros	Dec. 31, 2018						
	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Other	Total by counterparty type
Gross	3,402	466	233	4,100	2,003	2,098	4,100
Expected credit losses	(91)	-	(227)	(319)	(86)	(233)	(319)
TOTAL	3,311	466	5	3,781	1,917	1,865	3,781

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's.

17.2.2.2 Counterparty risk arising from investing activities and the use of derivative financial instruments

The Group is exposed to counterparty risk arising from investments of surplus cash and from the use of derivative financial instruments. In the case of financial instruments at fair value through income, counterparty risk arises on instruments with a positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

In millions of euros	Dec. 31, 2019				Dec. 31, 2018			
	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non-Investment Grade ⁽²⁾	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non-Investment Grade ⁽²⁾
Exposure	10,686	85.7%	4.7%	9.6%	9,634	85.0%	6.0%	8.0%

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's or Baa3 by Moody's.

(2) Most of these two exposures is carried by consolidated companies that include non-controlling interests, or by Group companies that operate in emerging countries, where cash cannot be pooled and is therefore invested locally.

Furthermore, at December 31, 2019, Crédit Agricole Corporate and Investment Bank (CACIB) is the main Group counterparty and represents 30% of cash surpluses. This relates mainly to a depositary risk.

17.3 Liquidity risk

In the context of its operating activities, the Group is exposed to a risk of having insufficient liquidity to meet its contractual obligations. As well as the risks inherent in managing working capital requirements (WCR), margin calls are required in certain market activities.

The Group has set up a quarterly committee tasked with managing and monitoring liquidity risk throughout the Group, by maintaining a broad range of investments and sources of financing, preparing forecasts of cash investments and divestments, and performing stress tests on the margin calls put in place when commodity, interest rate and currency derivatives are negotiated.

The Group centralizes virtually all financing needs and cash flow surpluses of the companies it controls, as well as most of their medium- and long-term external financing requirements. Centralization is provided by financing vehicles (long-term and short-term) and by dedicated Group cash pooling vehicles based in France, Belgium and Luxembourg.

Surpluses held by these structures are managed in accordance with a uniform policy. Unpooled cash surpluses are invested in instruments selected on a case-by-case basis in light of local financial market imperatives and the financial strength of the counterparties concerned.

The onslaught of successive financial crises since 2008 and the ensuing rise in counterparty risk prompted the Group to tighten its investment policy with the aim of keeping an extremely high level of liquidity and protecting invested capital and a daily monitoring of performance and counterparty risks for both investment types, allowing the Group to take immediate action where required in response to market developments. Consequently, 76% of cash pooled at December 31, 2019 was invested in overnight bank deposits and standard money market funds with daily liquidity.

The Group's financing policy is based on:

- centralizing external financing;
- diversifying sources of financing between credit institutions and capital markets;

- achieving a balanced debt repayment profile.

The Group seeks to diversify its sources of financing by carrying out public or private bond issues within the scope of its Euro Medium Term Notes program. It also issues negotiable commercial paper in France and in the United States. As negotiable commercial paper is relatively inexpensive and highly liquid, it is used by the Group in a cyclical or structural fashion to finance its short-term cash requirements. However, the refinancing of all outstanding negotiable commercial paper remains secured by confirmed bank lines of credit – mainly centralized – allowing the Group to continue to finance its activities if access to this financing source were to dry up. These facilities are appropriate for the scale of its operations and for the timing of contractual debt repayments.

Diversifying sources of financing and liquidity

In millions of euros

(1) Net amount of negotiable commercial paper.

(2) Cash corresponds to cash and cash equivalents, other financial assets deducted from net financial debt, net of bank overdrafts and current accounts, of which 64% was invested in the Eurozone.

At December 31, 2019, all the entities of the Group whose debt is consolidated complied with the covenants and declarations included in their financial documentation, except for some non-significant entities for which compliance actions are being implemented. None of these centralized facilities contain a default clause linked to covenants or minimum credit ratings.

17.3.1 Undiscounted contractual payments relating to financial activities

Undiscounted contractual payments on outstanding borrowings and debt break down as follows by maturity:

In millions of euros	2020	2021	2022	2023	2024	Beyond 5 years	Total at Dec. 31, 2019	Total at Dec. 31, 2018
Bond issues	2,753	1,805	2,628	2,600	1,156	15,074	26,015	22,645
Bank borrowings	1,063	465	694	368	233	2,469	5,292	4,620
Negotiable commercial paper	3,233	-	-	-	-	-	3,233	2,894
Lease liabilities	491	446	311	245	218	1,075	2,512	380
Other borrowings	33	19	155	6	6	41	261	191
Bank overdrafts and current accounts	247	-	-	-	-	-	247	464

Other financial assets and cash and cash equivalents deducted from net financial debt have a liquidity of less than 1 year.

Undiscounted contractual interest payments on outstanding borrowings and debt break down as follows by maturity:

<i>In millions of euros</i>	2020	2021	2022	2023	2024	Beyond 5 years	Total at Dec. 31, 2019	Total at Dec. 31, 2018
Undiscounted contractual interest flows on outstanding borrowings and debt	1,023	798	703	613	508	6,227	9,872	9,335

Undiscounted contractual payments on outstanding derivatives (excluding commodity instruments) break down as follows by maturity:

<i>In millions of euros</i>	2020	2021	2022	2023	2024	Beyond 5 years	Total at Dec. 31, 2019	Total at Dec. 31, 2018
Derivatives (excluding commodity instruments)	(215)	(136)	(124)	33	(11)	217	(237)	(138)

To better reflect the economic substance of these transactions, the cash flows linked to the derivatives recognized in assets and liabilities shown in the table above relate to net positions.

Group's undrawn credit facility programs

<i>In millions of euros</i>	2020	2021	2022	2023	2024	Beyond 5 years	Total at Dec. 31, 2019	Total at Dec. 31, 2018
Confirmed undrawn credit facility programs	1,200	582	5,837	204	5,000	196	13,019	13,232

Of these undrawn programs, an amount of €3,233 million is allocated to covering commercial paper issues.

At December 31, 2019, no single counterparty represented more than 5% of the Group's confirmed undrawn credit lines.

17.3.2 Undiscounted contractual payments relating to operating activities

The table below provides an analysis of undiscounted fair values due and receivable in respect of commodity derivatives recorded in assets and liabilities at the statement of financial position date.

The Group provides an analysis of residual contractual maturities for commodity derivative instruments included in its portfolio management activities. Derivative instruments relating to trading activities are considered to be liquid in less than one year, and are presented under current items in the statement of financial position.

<i>In millions of euros</i>	2020	2021	2022	2023	2024	Beyond 5 years	Total at Dec. 31, 2019	Total at Dec. 31, 2018
Derivative instruments carried in liabilities								
relating to portfolio management	(1,135)	(2,171)	(360)	(224)	(86)	(452)	(4,428)	(2,114)
relating to trading activities	(9,238)	-	-	-	-	-	(9,238)	(10,579)
Derivative instruments carried in assets								
relating to portfolio management	1,042	1,634	316	120	35	215	3,363	2,080
relating to trading activities	8,954	-	-	-	-	-	8,954	9,952
TOTAL	(376)	(537)	(43)	(104)	(51)	(237)	(1,349)	(661)

17.3.3 Commitments relating to commodity purchase and sale contracts entered into within the ordinary course of business

Some Group operating companies have entered into long-term contracts, some of which include “take-or-pay” clauses. These consist of firm commitments to purchase or sell specified quantities of gas, electricity or steam as well as related services, in exchange for a firm commitment from the other party to deliver or purchase said quantities and services. These contracts were documented as falling outside the scope of IFRS 9. The table below shows the main future commitments arising from contracts entered into by Others (GEM BU) and Latin America (expressed in TWh):

<i>In TWh</i>	2020	2021-2024	Beyond 5 years	Total at Dec. 31, 2019	Total at Dec. 31, 2018
Firm purchases	(370)	(910)	(1,218)	(2,498)	(3,070)
Firm sales	480	613	480	1,573	1,329

NOTE 18 EQUITY

18.1 Share capital

	Number of shares			Value (in millions of euros)		
	Total	Treasury stock	Outstanding	Share capital	Additional paid-in capital	Treasury stock
AT DECEMBER 31, 2018	2,435,285,011	(23,891,170)	2,411,393,841	2,435	32,565	(460)
Dividend paid in cash	-	-	-	-	(1,096)	-
Purchase/disposal of treasury stock	-	1,737,451	1,737,451	-	-	29
Delivery of treasury stock (bonus)	-	-	-	-	-	-
Revaluation	-	-	-	-	-	128
AT DECEMBER 31, 2019	2,435,285,011	(22,153,719)	2,413,131,292	2,435	31,470	(303)

Changes in the number of shares during 2019 result solely from the disposal of for 1.7 million treasury shares, as part of bonus share plans.

18.1.1 Potential share capital and instruments providing a right to subscribe for new ENGIE SA shares

Since 2017, the Group no longer has any stock purchase option plan.

Shares to be allocated under the performance share award plans described in Note 21 "Share-based payments" are covered by existing ENGIE SA shares.

18.1.2 Treasury stock

Accounting standards

Treasury shares are recognized at acquisition cost and deducted from equity. Gains and losses on disposals of treasury shares are recorded directly in equity and do not therefore impact income for the period.

The Group has a stock repurchase program as a result of the authorization granted to the Board of Directors by the Ordinary and Extraordinary Shareholders' Meeting of May 17, 2019. This program provides for the repurchase of up to 10% of the shares comprising the share capital of ENGIE SA at the date of the said Shareholders' Meeting. The aggregate amount of acquisitions net of expenses under the program may not exceed €7.3 billion, and the purchase price must be less than €30 per share excluding acquisition costs.

At December 31, 2019, the Group held 22.2 million treasury shares. To date, 20.4 million shares have been allocated to cover the Group's share commitments to employees and corporate officers.

The liquidity agreement signed with an investment service provider assigns to the latter the role of operating on the market on a daily basis, to buy or sell ENGIE SA shares, in order to ensure liquidity and an active market for the shares on the Paris and Brussels stock exchanges. To date, the resources allocated to the implementation of this agreement amount to €150 million.

18.2 Other disclosures concerning additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (Group share)

Total additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (including net income for the fiscal year), amounted to €34,014 million at December 31, 2019, including €31,470 million in additional paid-in capital.

Consolidated reserves include the cumulative income of the Group, the legal and statutory reserves of ENGIE SA, cumulative actuarial gains and losses, net of tax and the change in fair value of equity instruments at fair value through OCI.

Under French law, 5% of the net income of French companies must be allocated to the legal reserve until the latter reaches 10% of share capital. This reserve can only be distributed to shareholders in the event of liquidation. The ENGIE SA legal reserve amounts to €244 million.

18.2.1 Issuance of deeply-subordinated perpetual notes

On January 28, 2019, ENGIE SA carried out an early refinancing of deeply-subordinated perpetual notes, resulting in:

- an issue of green deeply-subordinated perpetual notes for an amount of €1 billion offering a coupon of 3.25% with an annual reimbursement option from February 2025, accounted for in equity for a net amount of €983 million;
- notification of a partial early redemption proposal for the €1 billion tranche (coupon 3%) for a total amount of €839 million. The first reimbursement option for this hybrid debt was planned for June 2019. The Group made a squeeze-out for the balance of €161 million since it reimbursed more than 80% of this hybrid debt. ENGIE SA reimbursed the balance on March 12, 2019.

On July 8, 2019, ENGIE SA also carried out a second early refinancing of deeply-subordinated perpetual notes, resulting in:

- an issue of a green deeply-subordinated perpetual notes for an amount of €500 million offering a coupon of 1.625% with an annual reimbursement option from July 2025, accounted for in equity for a net amount of €495 million;
- notification of a partial early redemption proposal for €750 million (4.75% coupon) for a total amount of €337 million. The first reimbursement option for this hybrid debt was planned for July 2021.

In accordance with the provisions of IAS 32 – *Financial Instruments – Presentation*, and given their characteristics, these new instruments were accounted for in equity in the Group's consolidated financial statements for a total amount of €1,478 million.

At December 31, 2019 the nominal value of the deeply-subordinated notes amounted to €3,913 million.

In 2019, the Group paid €150 million to the owners of these notes, including €108 million relating to coupons and €42 million for early repayment compensation. This amount is accounted for as a deduction from equity in the Group's consolidated financial statements; the relating tax saving is accounted for in the income statement.

18.2.2 Distributable capacity of ENGIE SA

ENGIE SA's distributable capacity totaled €31,290 million at December 31, 2019 (compared with €33,320 million at December 31, 2018), after deducting the interim dividend paid on May 23, 2019 for a total amount of €1,833 million, including €31,470 million of additional paid-in capital.

18.2.3 Dividends

The table below shows the dividends and interim dividends paid by ENGIE SA in respect of 2018 and 2019.

	Amount distributed (in millions of euros)	Net dividend per share (in euros)
In respect of 2018		
Interim dividend (paid on October 12, 2018)	892	0.37
Remaining dividend for 2018 (paid on May 23, 2019)	917	0.38
Exceptional dividend for 2018 (paid on May 23, 2019)	893	0.37
Remaining additional dividend for 2018 (paid on May 23, 2019)	24	0.11
In respect of 2019		
Interim dividend	-	-

The Shareholders' Meeting of May 17, 2019 approved the distribution of a total dividend of €1.12 per share in respect of 2018. In accordance with Article 26.2 of the bylaws, a dividend increase of 10% (€0.11 per share) has been allocated to shares registered in the name of the holder for at least two years at December 31, 2018, provided they are held in this form by the same shareholder until the payment date. This 10% increase may only apply, for any one shareholder, for a number of shares not representing more than 0.5% of the capital.

As an interim dividend of €0.37 per share was paid on October 12, 2018, for an amount of €892 million. ENGIE SA settled the remaining dividend balance of €0.75 per share in cash on May 23, 2019, for an amount of €1,810 million, for shares benefiting from an ordinary dividend, as well as the remaining €0.86 per share for shares benefiting from the bonus dividend for an amount of €24 million, i.e., a total dividend of €1,833 million.

Proposed dividend in respect of 2019

Shareholders at the Shareholders' Meeting convened to approve the ENGIE Group financial statements for the year ended December 31, 2019, will be asked to approve a dividend of €0.80 per share, representing a total payout of €1,931 million based on the number of shares outstanding at December 31, 2019. It will be increased by 10% for all shares held for at least two years on December 31, 2019 and up to the 2019 dividend payment date. Based on the number of outstanding shares on December 31, 2019, this increase is valued at €17 million.

Subject to approval by the Shareholders' Meeting of May 14 2020, this dividend, net of the interim dividend paid will be detached on May 18, 2020 and paid on May 20, 2020. It is not recognized as a liability in the financial statements at December 31, 2019, since the financial statements at the end of 2019 were presented before the appropriation of earnings.

18.3 Total gains and losses recognized in equity (Group share)

All items shown in the table below correspond to cumulative gains and losses (Group share) at December 31, 2019 and December 31, 2018, which are recyclable to income in subsequent periods.

In millions of euros	Dec. 31, 2019	Dec. 31, 2018
Debt instruments	76	28
Net investment hedges	(284)	(313)
Cash flow hedges (excl. commodity instruments)	(958)	(725)
Commodity cash flow hedges	(837)	(30)
Deferred taxes on the items above	505	244
Share of equity method entities in recyclable items, net of tax	(462)	(223)
TOTAL RECYCLABLE ITEMS BEFORE TRANSLATION ADJUSTMENTS	(1,961)	(1,019)
Translation adjustments	(1,098)	(1,130)
TOTAL RECYCLABLE ITEMS	(3,060)	(2,149)

18.4 Capital management

ENGIE SA seeks to optimize its financial structure at all times by pursuing an optimal balance between its net financial debt and its EBITDA. The Group's key objective in managing its financial structure is to maximize value for shareholders

and reduce the cost of capital, while ensuring that the Group has the financial flexibility required to continue its expansion. The Group manages its financial structure and makes any necessary adjustments in light of prevailing economic conditions. In this context, it may choose to adjust the amount of dividends paid to shareholders, reimburse a portion of capital, carry out share buybacks (see *Note 18.1.2 "Treasury stock"*), issue new shares, launch share-based payment plans, recalibrate its investment budget, or sell assets in order to scale back its net debt.

The Group's policy is to maintain an "A" rating by the rating agencies. To achieve this, it manages its financial structure in line with the indicators usually monitored by these agencies, namely the Group's operating profile, financial policy and a series of financial ratios. One of the most commonly used ratios is the ratio where the numerator includes operating cash flows less net financial expense and taxes paid, and the denominator includes adjusted net financial debt. Net financial debt is mainly adjusted for nuclear provisions, provisions for unfunded pension plans and operating lease commitments.

The Group's objectives, policies and processes for managing capital have remained unchanged over the past few years.

ENGIE SA is not obliged to comply with any minimum capital requirements except those provided for by law.

NOTE 19 PROVISIONS

Accounting standards

General principles related to the recognition of a provision

The Group recognizes a provision where it has a present obligation (legal or constructive) towards a third party arising from past events and where it is probable that an outflow of resources will be necessary to settle the obligation with no expected consideration in return.

A provision for restructuring costs is recognized when the general criteria for setting up a provision are met, i.e. when the Group has a detailed formal plan relating to the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

Provisions with a maturity of over 12 months are discounted when the effect of discounting is material. The Group's main long-term provisions are provisions for the back-end of the nuclear fuel cycle, provisions for dismantling facilities and provisions for site restoration costs. The discount rates used reflect current market assessments of the time value of money and the risks specific to the liability concerned. Expenses with respect to unwinding the discount on the provision are recognized as other financial income and expenses.

Estimates of provisions

Factors having a significant influence on the amount of provisions, and particularly, but not solely, those relating to the back-end of the nuclear fuel cycle, to the dismantling of nuclear facilities and of gas infrastructures in France, include:

- cost estimates (notably the retained scenario for managing radioactive nuclear fuel consumed) (*see Note 19.2*);
- the timing of expenditure (notably, for nuclear power generation activities, the timetable for reprocessing radioactive nuclear fuel consumed and for dismantling facilities as well as the timetable for the end of gas operations regarding the main gas infrastructure businesses in France) (*see Notes 19.2 and 19.3*); and
- the discount rate applied to cash flows.

These factors are based on information and estimates deemed by the Group to be the most appropriate as of today.

Modifications to certain factors could lead to a significant adjustment in these provisions.

NOTE 19 PROVISIONS

<i>In millions of euros</i>	Post-employment and other long-term benefits	Back-end of the nuclear fuel cycle	Dismantling of plant and equipment ⁽²⁾ and Site rehabilitation	Other contingencies	Total
AT DECEMBER 31, 2018 ⁽¹⁾	6,371	6,170	6,303	2,969	21,813
IFRS 16 & IFRIC 23 (see Note 1)	-	-	-	(301)	(301)
AT JANUARY 1, 2019 with IFRS 16 & IFRIC 23	6,371	6,170	6,303	2,667	21,512
Additions	285	1,362	72	467	2,187
Utilizations	(331)	(164)	(150)	(677)	(1,322)
Reversals	(1)	-	(1)	(47)	(48)
Changes in scope of consolidation	(41)	-	(73)	60	(54)
Impact of unwinding discount adjustments	123	220	213	24	580

Non-current	7,346	7,487	7,550	433	22,817
Current	135	123	15	2,024	2,298

(1) Published data at December 31, 2018 were not restated due to the transition method used for the application of IFRS 16 and IFRIC 23 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

(2) Of which €6,573 million in provisions for dismantling nuclear facilities, compared to €5,337 million at December 31, 2018.

The impact of unwinding discount adjustments in respect of post-employment and other long-term benefits relates to the interest expense on the benefit obligation, net of the interest income on plan assets.

The "Other" line mainly comprises actuarial gains and losses arising on post-employment benefit obligations in 2019, which are recorded in "Other comprehensive income" as well as provisions recorded against a dismantling or site rehabilitation asset.

Additions, utilizations, reversals and the impact of unwinding discount adjustments are presented as follows in the consolidated income statement:

<i>In millions of euros</i>	Dec. 31, 2019
Income/(loss) from operating activities	(823)
Other financial income and expenses	(573)
TOTAL	(1,397)

The different types of provisions and the calculation principles applied are described below.

19.1 Post-employment benefits and other long-term benefits

See Note 20 "Post-employment benefits and other long-term benefits".

19.2 Obligations relating to nuclear power generation activities

In the context of its nuclear power generation activities, the Group assumes obligations relating to the management of the back-end nuclear fuel cycle and the dismantling of nuclear facilities.

19.2.1 Legal framework

The Belgian law of April 11, 2003 granted Group subsidiary Synatom responsibility for managing provisions set aside to cover the costs of dismantling nuclear power plants and managing spent nuclear fuel in those plants. The tasks of the Commission for Nuclear Provisions (CNP) set up pursuant to the above-mentioned law is to oversee the process of computing and managing these provisions.

To enable the Commission for Nuclear Provisions to carry out its work in accordance with the above-mentioned law, Synatom is required to submit a report every three years describing the core inputs used to measure these provisions. If any changes are observed from one triennial report to another that could materially impact the financial inputs used, i.e., the industrial scenario, estimated costs and timing, the Commission may revise its opinion.

Synatom submitted its triennial report to the Commission on September 12, 2019. The Commission issued its opinion on December 12, 2019 based on the opinion given by ONDRAF, the Belgian agency for radioactive waste and enriched fissile material. The CNP's findings take into account:

- the impact of the new baseline scenario for the long-term management of Class B and C radioactive waste (medium and high level) in Belgium, agreed by ONDRAF in June 2018, which is estimated at a gross amount of €10.7 billion;
- ONDRAF's recommendations as regards including various certain or probable costs;
- the scenario prepared ahead of the shutdown and dismantling of nuclear power plants based on industrial experience, and in particular the ongoing dismantling in Germany;
- the financial calculation based on lower discount rates to obtain a prudent estimate of the provisions required today to cover expenditure that will only be incurred in some cases in more than 70 years' time.

The CNP's decision includes a decrease in discount rates to reflect the current low interest rate environment. This means that Belgian nuclear plant owners will have to set aside larger amounts as of now. Discount rates, which were set at 3.50% at December 31, 2018, have been reduced at December 31, 2019 to 2.5% for dismantling, for which expenditure will begin as of next year, and 3.25% for spent nuclear fuel, for which expenditure will be incurred over the coming decades.

All in all, the opinion of the Commission for Nuclear Provisions and the obligations related to projects to dispose of nuclear waste have resulted in a €2.1 billion increase in the ENGIE Group's nuclear provisions, in addition to the recurring annual discount unwinding charge and provisions for additional quantities of fuel consumed during the year.

The provisions recognized by the Group were measured taking into account the prevailing contractual and legal framework, which sets the operating life of the Tihange 1 reactor and the Doel 1 and 2 reactors at 50 years, and the other reactors at 40 years.

The provisions set aside take into account all existing or planned environmental regulatory requirements on a European, national and regional level. If new legislation were to be introduced in the future, the cost estimates used as a basis for the calculations could vary. However, the Group is not aware of any planned legislation on this matter that could materially impact the amount of the provisions.

The estimated provision amounts include margins for contingencies and other risks that may arise in connection with dismantling and radioactive spent fuel management procedures. The contingency margins relating to the disposal of waste are determined by ONDRAF and built into its fees. The Group also estimates appropriate margins for each cost category.

The Group considers that, to the best of its knowledge, the provisions approved by the Commission take into account all currently available information to manage the contingencies and other risks associated with processes such as dismantling nuclear facilities and managing radioactive spent fuel.

19.2.2 Provisions for the back-end of the nuclear fuel cycle

Accounting standards

Allocations to the provisions for the back-end of the nuclear fuel cycle are computed based on the average unit cost of the quantities expected to be used up to the end of the operating life of the plants, applied to quantities used at the closing date. An annual allocation is also recognized with respect to unwinding the discount on the provisions.

When spent nuclear fuel is removed from a reactor and temporarily stored on-site, it requires conditioning and potentially reprocessing to separate the most active radionuclides, before being consigned to long-term storage.

ONDRAF proposed on February 9, 2018 that geological storage be adopted as the national policy for managing high-level and/or long-lived radioactive waste. The proposal is subject to the approval of the Belgian government after obtaining the opinion of the Federal Agency for Nuclear Control (*Agence Fédérale de Contrôle Nucléaire – AFCN*).

In addition, ENGIE considers that the “mixed” scenario adopted by the Commission for Nuclear Provisions continues to apply, whereby the fuel containing the most active radionuclides is reprocessed, and the rest disposed of directly without reprocessing.

The provisions booked by the Group for nuclear fuel processing and storage cover all of the costs linked to the “mixed” scenario, including on-site storage, transportation, reprocessing, conditioning, storage and geological disposal. They are calculated based on the following principles and inputs:

- storage costs primarily comprise the costs of building and operating additional dry storage facilities and operating existing facilities, along with the costs of purchasing containers;
- part of the radioactive spent fuel is transferred for reprocessing. The resulting plutonium and uranium is sold to a third party;
- radioactive spent fuel that has not been reprocessed is to be conditioned, which requires conditioning facilities to be built according to ONDRAF's approved criteria. ONDRAF's recommendations as regards the cost of these facilities have been fully taken into account;
- the reprocessing residues and conditioned spent fuel are transferred to ONDRAF; the cost of burying fuel in deep geological repositories is estimated by ONDRAF and evaluated not based on the amount of the fees set by ONDRAF in 2018 based on a total disposal facility cost of €8.0 billion²⁰¹⁷, but using a “virtual prudential tariff” established by ONDRAF at the request of the Commission for Nuclear Provisions, based on a total disposal facility cost of €10.7 billion²⁰¹⁷ excluding potential areas for optimization subject to appraisal; The estimated cost of the AFCN's preliminary recommendation as regards an additional well has also been included based on ONDRAF recommendations.
- the long-term obligation is calculated using estimated internal costs and external costs assessed based on offers received from third parties;
- the new baseline scenario includes ONDRAF's updated scenario, which is delayed by about 30 years compared with the scenario used in 2016, with geological storage beginning in about 2070 and ending in about 2135, and the intermediate reprocessing and conditioning storage delayed accordingly;
- the discount rate used is reduced to 3.25%. It takes into account (i) an analysis of trends in long-term benchmark rates and their historical and forecast averages, (ii) the extension of the life of the liabilities based on the new ONDRAF scenario, and (iii) the undertakings relating to the funding of those provisions made by Electrabel to Synatom (see Note 16.1.4 “Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material”);
- an inflation rate assumption of 2.0% (actual rate of 1.25%).

The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment. In its opinion to the Commission for Nuclear Provisions, ONDRAF pointed out the uncertainty over some costs, which in principle are covered by the contingency margins, but for which the Commission will set up a work and further analysis program as of 2020. The provisions may be subsequently adjusted in line with changes in the above-mentioned inputs and related cost estimates. Belgium's current legal framework does not permit partial reprocessing and has not yet confirmed the adoption of geological storage as the policy for managing medium and high level nuclear waste.

As regards the partial reprocessing scenario, following a resolution adopted by the House of Representatives in 1993, reprocessing contracts that had not already begun were suspended and then terminated in 1998. The scenario adopted is based on the assumption that the Belgian government will allow Synatom to reprocess spent fuel and that an agreement will be reached between Belgium and France designating Orano (formerly Areva) as responsible for these reprocessing operations. A scenario assuming the direct disposal of waste without reprocessing would lead to a decrease in the provision compared to the provision resulting from the “mixed” scenario currently used and approved by the Commission for Nuclear Provisions.

The Belgian government has not yet taken a decision as to whether the waste should be buried in a deep geological repository or stored over the long term. On November 27, 2019, the European Commission sent a reasoned opinion to Belgium under the breach procedure provided for in Article 258 of the Treaty on the Functioning of the European Union, on the grounds that Belgium had not adopted a national program for managing radioactive waste in compliance with various requirements set out in the directive on spent fuel and radioactive waste (Council directive 2011/70/Euratom). At this stage, therefore, there is only one national program for the safe storage of spent fuel pending reprocessing or long-term storage.

The scenario adopted by the Commission for Nuclear Provisions is based on the assumption that the waste will be buried in a deep geological repository at a site yet to be identified and classified in Belgium.

Sensitivity

Provisions for the back-end of the nuclear fuel cycle remain sensitive to assumptions regarding costs, the timing of operations and expenditure, as well as to discount rates:

- a 10% increase in ONDRAF fees above the virtual prudential tariff requested by the Commission for Nuclear Provisions for the removal of high-level and/or long-lived waste would lead to an increase in provisions of approximately €170 million based on unchanged contingency margins;
- a five-year advance in ONDRAF's expenditure on temporary storage, conditioning and long-term storage for high-level and/or long-lived radioactive waste would lead to an increase in provisions of approximately €165 million. A five-year delay in the payment schedule for these various expenses would lead to a decrease of less than €165 million;
- a change of 10 basis points in the discount rate used could lead to an adjustment of approximately €250 million in provisions for the back-end of the nuclear fuel cycle. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

These sensitivities are calculated on a purely financial basis and should therefore be interpreted with appropriate caution in view of the variety of other inputs – some of which may be interdependent – included in the evaluation.

19.2.3 Provisions for dismantling nuclear facilities

Accounting standards

A provision is recognized when the Group has a present legal or constructive obligation to dismantle facilities or to restore a site. The present value of the engagement at the time of commissioning represents the initial amount of the provision for dismantling with, as counterpart, an asset for the same amount, which is included in the carrying amount of the facilities concerned. This asset is depreciated over the operating life of the facilities. Adjustments to the provision due to subsequent changes in (i) the expected outflow of resources, (ii) the timing of dismantling expenses or (iii) the discount rate, are deducted from or, subject to specific conditions, added to the cost of the corresponding asset. The impacts of unwinding the discount are recognized in expenses for the period.

A provision is also recorded for nuclear units for which the Group holds a capacity right up to its share of the expected decommissioning costs to be borne by the Group.

Nuclear power plants have to be dismantled at the end of their operating life. Provisions are set aside in the Group's financial statements to cover all costs relating to (i) the shutdown phase, which involves removing radioactive spent fuel from the site and (ii) the dismantling phase, which consists of decommissioning and cleaning up the site.

The dismantling strategy is based on the facilities being dismantled (i) immediately after the reactor is shut down, (ii) on a mass basis rather than on a site-by-site basis, and (iii) completely, the land being subsequently returned to greenfield status.

Provisions for dismantling nuclear facilities are calculated based on the following principles and inputs:

- costs payable over the long term are calculated by reference to the estimated costs for each nuclear facility, based on a study conducted by independent experts under the assumption that the facilities will be dismantled on a mass basis;
- fees for handling Class A and B dismantling waste are determined using the 'virtual prudential tariff' established by ONDRAF at the request of the Commission for Nuclear Provisions and include the margins recommended by ONDRAF for waste reclassification risk given the uncertainty over the definition of the criteria for classification in those classes;

- for the various phases, margins for usual contingencies, reviewed by ONDRAF and the Commission for Nuclear Waste, are included;
- an inflation rate of 2.0% is applied until the dismantling obligations expire in order to determine the value of the future obligation;
- a discount rate reduced to 2.5% (including inflation of 2.0%) is applied to determine the present value (NPV) of the obligation. It is different from the rate used to calculate the provision for processing spent nuclear fuel due to the major differences in horizon of the two liabilities after taking into account ONDRAF's new scenario;
- the operating life is 50 years for Tihange 1 and Doel 1 and 2, and 40 years for the other facilities;
- the start of the technical shutdown procedures depends on the facility concerned and on the timing of operations for the nuclear reactor as a whole. The shutdown procedures are immediately followed by dismantling operations.

The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment. In its opinion to the Commission for Nuclear Provisions, ONDRAF pointed out the uncertainty over some costs, which in principle are covered by the contingency margins, but for which the Commission will set up a work and further analysis program as of 2020. The provisions may be subsequently adjusted in line with changes in the above-mentioned inputs. However, these inputs and assumptions are based on information and estimates which the Group deems reasonable to date and which have been approved by the Commission for Nuclear Provisions.

The scenario adopted is based on a dismantling program and on timetables that have to be approved by the nuclear safety authorities.

Sensitivity

Based on currently applied inputs for estimating costs and the timing of payments, a change of 10 basis points in the discount rate used could lead to an adjustment of approximately €60 million in dismantling provisions. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

This sensitivity is calculated on a purely financial basis and should therefore be interpreted with appropriate caution in view of the variety of other inputs – some of which may be interdependent – included in the evaluation.

19.3 Dismantling of non-nuclear plant and equipment and site rehabilitation

19.3.1 Dismantling obligations arising on other non-nuclear plant and equipment

Certain plant and equipment, including conventional power stations, transmission and distribution pipelines, storage facilities and LNG terminals, have to be dismantled at the end of their operational lives. This obligation is the result of prevailing environmental regulations in the countries concerned, contractual agreements, or an implicit Group commitment.

Based on estimates of proven and probable gas reserves through 2260 using current production levels, dismantling provisions for gas infrastructures in France have a present value near zero.

19.3.2 Hazelwood Power Station & Mine (Australia)

The Group and its partner Mitsui announced in November 2016 their decision to close the coal-fired Hazelwood Power Station, and cease coal extraction operations from the adjoining mine from late March 2017. The Group holds a 72% interest in the former 1,600 MW power station and adjoining mine, which was previously fully consolidated and has been consolidated on joint operation since September 2018.

At December 31, 2019, the Group's share (72%) of the provision covering the obligation to dismantle and rehabilitate the mine amounted to €280 million.

Dismantling and site rehabilitation work commenced in 2017 and focused on: managing site contamination; planning site-wide environmental clean-up; the demolition and dismantling of all of the site's industrial facilities, including the former

power station; and ongoing aquifer pumping and designated earthworks within the mine to ensure mine floor and batter stability with a view to long-term rehabilitation into a pit lake.

Several laws that have a direct or indirect impact on mine rehabilitation and on the agencies that administer the laws are currently being reformed. Consequently, the ultimate regulatory obligations are likely to be revised during the life of the project and could therefore have an impact on provisions.

The average discount rate used to determine the amount of the provisions is 3.17%.

The amount of the provision recognized is based on the Group's best current estimate of the demolition and rehabilitation costs that Hazelwood is expected to incur. However, the amount of this provision may be adjusted in the future to take into account any changes in the key inputs.

19.4 Other contingencies

This caption includes essentially provisions for commercial litigation, tax claims and disputes (except income tax, under the rule of IFRIC 23) as well as provisions for onerous contracts relating to storage and transport capacity reservation contracts.

NOTE 20 POST-EMPLOYMENT BENEFITS AND OTHER LONG-TERM BENEFITS

Accounting standards

Depending on the laws and practices in force in the countries where the Group operates, Group companies have obligations in terms of pensions, early retirement payments, retirement bonuses and other benefit plans. Such obligations generally apply to all employees within the companies concerned.

The Group's obligations in relation to pensions and other employee benefits are recognized and measured in compliance with IAS 19. Accordingly:

- the cost of defined contribution plans is expensed based on the amount of contributions payable in the period;
- the Group's obligations concerning pensions and other employee benefits payable under defined benefit plans are assessed on an actuarial basis using the projected unit credit method. These calculations are based on assumptions relating to mortality, staff turnover and estimated future salary increases, as well as the economic conditions specific to each country or entity of the Group. Discount rates are determined by reference to the yield, at the measurement date, on investment grade corporate bonds in the related geographical area (or on government bonds in countries where no representative market for such corporate bonds exists).

Pension commitments are measured on the basis of actuarial assumptions. The Group considers that the assumptions used to measure its obligations are relevant and documented. However, any change in these assumptions could have a significant impact on the resulting calculations.

Provisions are recorded when commitments under these plans exceed the fair value of plan assets. Where the value of plan assets (capped where appropriate) is greater than the related commitments, the surplus is recorded as an asset under "Other assets" (current or non-current).

As regards post-employment benefit obligations, actuarial gains and losses are recognized in other comprehensive income. Where appropriate, adjustments resulting from applying the asset ceiling to net assets relating to overfunded plans are treated in a similar way. However, actuarial gains and losses on other long-term benefits such as long-service awards, are recognized immediately in income.

Net interest on the net defined benefit liability (asset) is presented in net financial income/(loss).

20.1 Description of the main pension plans

20.1.1 Companies belonging to the Electricity and Gas Industries sector in France

Since January 1, 2005, the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*) has operated the pension, disability, death, occupational accident and occupational illness benefit plans for electricity and gas industry (hereinafter "EGI") companies in France. The CNIEG is a social security legal entity under private law placed under the joint responsibility of the ministries in charge of social security and the budget.

Employees and retirees of EGI sector companies have been fully affiliated to the CNIEG since January 1, 2005. The main affiliated Group entities are ENGIE SA, GRDF, GRTgaz, Elengy, Storengy, ENGIE Thermique France, CPCU, CNR and SHEM.

Following the funding reform of the special EGI pension plan introduced by Law No. 2004-803 of August 9, 2004 and its implementing decrees, specific benefits (pension benefits on top of the standard benefits payable under ordinary law) already vested at December 31, 2004 ("past specific benefits") were allocated between the various EGI entities. Past

specific benefits (benefits vested at December 31, 2004) relating to regulated transmission and distribution businesses ("regulated past specific benefits") are funded by the levy on gas and electricity transmission and distribution services (*Contribution Tarifaire d'Acheminement*) and therefore no longer represent an obligation for the ENGIE Group. Unregulated past specific benefits (benefits vested at December 31, 2004) are funded by EGI sector companies to the extent defined by Decree No. 2005-322 of April 5, 2005.

The special EGI pension plan is a legal pension plan available to new entrants.

The specific benefits vested under the plan since January 1, 2005 are wholly financed by EGI sector companies in proportion to their respective weight in terms of payroll costs within the EGI sector.

As this plan represents a defined benefit plan, the Group has set aside a pension provision in respect of specific benefits payable to employees of unregulated activities and specific benefits vested by employees of regulated activities since January 1, 2005. This provision also covers the Group's early retirement obligations. The provision amount may be subject to fluctuations based on the weight of the Group's companies within the EGI sector.

Pension benefit obligations and other "mutualized" obligations are assessed by the CNIEG.

At December 31, 2019, the projected benefit obligation in respect of the special pension plan for EGI sector companies amounted to €3.7 billion.

The duration of the pension benefit obligation of the EGI pension plan is 22 years.

20.1.2 Companies belonging to the electricity and gas sector in Belgium

In Belgium, the rights of employees in electricity and gas sector companies, principally Electrabel, Laborelec and some ENGIE Energy Management Trading and ENGIE CC employee categories, are governed by collective bargaining agreements.

These agreements, applicable to "wage-rated" employees recruited prior to June 1, 2002 and managerial staff recruited prior to May 1, 1999, specify the benefits entitling employees to a supplementary pension equivalent to 75% of their most recent annual income, for a full career and in addition to the statutory pension. These top-up pension payments provided under defined benefit plans are partly reversionary. In practice, the benefits are paid in the form of a lump sum for the majority of plan participants. Most of the obligations resulting from these pension plans are financed through pension funds set up for the electricity and gas sector and by certain insurance companies. Pre-funded pension plans are financed by employer and employee contributions. Employer contributions are calculated annually based on actuarial assessments.

The projected benefit obligation relating to these plans represented around 15% of total pension obligations and related liabilities at December 31, 2019. The average duration is nine years.

"Wage-rated" employees recruited after June 1, 2002 and managerial staff (i) recruited after May 1, 1999 or (ii) having opted for the transfer through defined contribution plans, are covered under defined contribution plans. Prior to January 1, 2017, the law specified a minimum average annual return (3.75% on wage contributions and 3.25% on employer contributions) when savings are liquidated.

The law on supplementary pensions, approved on December 18, 2016 and enforced on January 1, 2017 henceforth specifies a minimum rate of return, depending on the actual rate of return of Belgian government bonds, within a range of 1.75%-3.25% (the rates are now identical for employee and employer contributions). In 2019, the minimum rate of return stood at 1.75%.

An expense of €36 million was recognized in 2019 in respect of these defined contribution plans (€24 million in 2018).

20.1.3 Multi-employer plans

Employees of some Group companies are affiliated to multi-employer pension plans.

Under multi-employer plans, risks are pooled to the extent that the plan is funded by a single contribution rate determined for all affiliated companies and applicable to all employees.

Multi-employer plans are particularly common in the Netherlands, where employees are normally required to participate in a compulsory industry-wide plan. These plans cover a significant number of employers, thereby limiting the impact of potential default by an affiliated company. In the event of default, the vested rights are maintained in a special compartment and are not transferred to the other members. Refinancing plans may be set up to ensure the funds are balanced.

The ENGIE Group accounts for multi-employer plans as defined contribution plans.

The expense recognized in 2019 in respect of multi-employer pension plans was stable as compared to 2018 at €71 million.

20.1.4 Other pension plans

Most other Group companies also grant their employees retirement benefits. In terms of financing, pension plans within the Group are almost equally split between defined benefit and defined contribution plans.

The Group's main pension plans outside France, Belgium and the Netherlands concern:

- the United Kingdom: the large majority of defined benefit pension plans is now closed to new entrants and future benefits no longer vest under these plans. All entities run a defined contribution scheme. The pension obligations of International Power's subsidiaries in the United Kingdom are covered by the special Electricity Supply Pension Scheme (ESPS). The assets of this defined benefit scheme are invested in separate funds. Since June 1, 2008, the scheme has been closed and a defined contribution plan has been set up for new entrants;
- Germany: the Group's German subsidiaries have closed their defined benefit plans to new entrants and now offer defined contribution plans;
- Brazil: ENGIE Brasil Energia operates its own pension scheme. This scheme has been split into two parts, one for the (closed) defined benefit plan, and the other for the defined contribution plan that has been available to new entrants since the beginning of 2005.

20.2 Description of other post-employment benefit obligations and other long-term benefits

20.2.1 Other benefits granted to current and former EGI sector employees

Other benefits granted to EGI sector employees are:

Post-employment benefits:

- reduced energy prices;
- end-of-career indemnities;
- bonus leave;
- death capital benefits.

Long-term benefits:

- allowances for occupational accidents and illnesses;
- temporary and permanent disability allowances;
- long-service awards.

The Group's main obligations are described below.

20.2.1.1 Reduced energy prices

Under Article 28 of the national statute for electricity and gas industry personnel, all employees (current and former employees, provided they meet certain length-of-service conditions) are entitled to benefits in kind, which take the form of reduced energy prices known as “employee rates”.

This benefit entitles employees to electricity and gas supplies at a reduced price. For retired employees, this provision represents a post-employment defined benefit. Retired employees are only entitled to the reduced rate if they have completed at least 15 years’ service within EGI sector companies.

In accordance with the agreements signed with EDF in 1951, ENGIE provides gas to all current and former employees of ENGIE and EDF, while EDF supplies electricity to these same beneficiaries. ENGIE pays (or benefits from) the balancing contribution payable in respect of its employees as a result of energy exchanges between the two utilities.

The obligation to provide energy at a reduced price to current and former employees is measured as the difference between the energy sale price and the preferential rate granted.

The provision set aside in respect of reduced energy prices stood at €3.6 billion at December 31, 2019. The duration of the obligation is 23 years.

20.2.1.2 End-of-career indemnities

Retiring employees (or their dependents in the event of death during active service) are entitled to end-of-career indemnities, which increase in line with the length of service within the EGI sector.

20.2.1.3 Compensation for occupational accidents and illnesses

EGI sector employees are entitled to compensation for accidents at work and occupational illnesses. These benefits cover all employees or the dependents of employees who die as a result of occupational accidents or illnesses, or injuries suffered on the way to work.

The amount of the obligation corresponds to the likely present value of the benefits to be paid to current beneficiaries, taking into account any reversionary annuities.

20.2.2 Other benefits granted to employees of the gas and electricity sector in Belgium

Electricity and gas sector companies also grant other employee benefits such as the reimbursement of medical expenses, electricity and gas price reductions, as well as length-of-service awards and early retirement schemes. These benefits are not prefunded, with the exception of the special “*allocation transitoire*” termination indemnity, considered as an end-of-career indemnity.

20.2.3 Other collective agreements

Most other Group companies also grant their staff post-employment benefits (early retirement plans, medical coverage, benefits in kind, etc.) and other long-term benefits such as jubilee and length-of-service awards.

20.3 Defined benefit plans

20.3.1 Amounts presented in the statement of financial position and statement of comprehensive income

In accordance with IAS 19, the information presented in the statement of financial position relating to post-employment benefit obligations and other long-term benefits results from the difference between the gross projected benefit obligation and the fair value of plan assets. A provision is recognized if this difference is positive (net obligation), while a prepaid benefit cost is recorded in the statement of financial position when the difference is negative, provided that the conditions for recognizing the prepaid benefit cost are met.

Changes in provisions for post-employment benefits and other long-term benefits, plan assets and reimbursement rights recognized in the statement of financial position are as follows:

<i>In millions of euros</i>	Provisions	Plan assets	Reimbursement rights
AT DECEMBER 31, 2018	(6,371)	108	168
Exchange rate differences	7	(5)	-
Changes in scope of consolidation and other	96	(39)	8
Actuarial gains and losses	(1,142)	(7)	(18)
Periodic pension cost of continued operations	(427)	(66)	2
Asset ceiling	-	-	-
Contributions/benefits paid	356	63	1
AT DECEMBER 31, 2019	(7,481)	53	161

Plan assets and reimbursement rights are presented in the statement of financial position under “Other non-current assets” or “Other current assets”.

The cost recognized for the period amounted to €492 million in 2019 (€525 million in 2018). The components of this defined benefit cost in the period are set out in Note 20.3.4 “Components of the net periodic pension cost”.

The Eurozone represented 97% of the Group’s net obligation at December 31, 2019, unchanged compared to December 31, 2018).

Cumulative actuarial gains and losses recognized in equity amounted to €4,594 million at December 31, 2019, compared to €3,472 million at December 31, 2018.

Net actuarial differences arising in the period and presented on a separate line in the statement of comprehensive income represented a net actuarial loss of €1,149 million in 2019 and of €231 million in 2018.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 20 POST-EMPLOYMENT BENEFITS AND OTHER
LONG-TERM BENEFITS

20.3.2 Change in benefit obligations and plan assets

The table below shows the amount of the Group's projected benefit obligations and plan assets, changes in these items during the periods presented, and their reconciliation with the amounts reported in the statement of financial position:

In millions of euros	Dec. 31, 2019				Dec. 31, 2018			
	Pension benefit obligations ⁽¹⁾	Other post-employment benefit obligations ⁽²⁾	Long-term benefit obligations ⁽³⁾	Total	Pension benefit obligations ⁽¹⁾	Other post-employment benefit obligations ⁽²⁾	Long-term benefit obligations ⁽³⁾	Total
A - CHANGE IN PROJECTED BENEFIT OBLIGATION								
Projected benefit obligation at January 1	(7,713)	(3,794)	(499)	(12,006)	(7,653)	(3,739)	(539)	(11,931)

PREPAID BENEFIT COST	53	-	-	53	108	-	-	108

(1) Pensions and retirement bonuses.

(2) Reduced energy prices, healthcare, gratuities and other post-employment benefits.

(3) Length-of-service awards and other long-term benefits.

20.3.3 Change in reimbursement rights

The fair value of reimbursement rights relating to plan assets managed by amounted to €161 million at December 31, 2019 (€168 million at December 31, 2018).

20.3.4 Components of the net periodic pension cost

The net periodic cost recognized in respect of defined benefit obligations for the years ended December 31, 2019 and 2018 breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Current service cost	397	412
Actuarial gains and losses ⁽¹⁾	19	(1)
Plan amendments	-	(2)
Gains or losses on pension plan curtailments, terminations and settlements	(49)	(1)
Non-recurring items	-	(2)
Total accounted for under current operating income including operating MtM and share in net income of equity method entities	368	407
Net interest expense	125	117
Total accounted for under net financial income/(loss)	125	117
TOTAL	492	525

(1) On the long-term benefit obligation.

20.3.5 Funding policy and strategy

When defined benefit plans are funded, the related plan assets are invested in pension funds and/or with insurance companies, depending on the investment practices specific to the country concerned. The investment strategies underlying these defined benefit plans are aimed at striking the right balance between return on investment and acceptable levels of risk.

The objectives of these strategies are twofold: to maintain sufficient liquidity to cover pension and other benefit payments; and as part of risk management, to achieve a long-term rate of return higher than the discount rate or, where appropriate, at least equal to future required returns.

When plan assets are invested in pension funds, investment decisions are the responsibility of the fund management concerned. For French companies, where plan assets are invested with an insurance company, the latter manages the investment portfolio for unit-linked policies or euro-denominated policies, in a manner adapted to the risk and long-term profile of the liabilities.

The funding of these obligations at December 31 for each of the periods presented can be analyzed as follows:

<i>In millions of euros</i>	Projected benefit obligation	Fair value of plan assets	Asset ceiling	Total net obligation
Underfunded plans	(7,399)	5,616	(25)	(1,809)
Overfunded plans	(517)	553	-	36
Unfunded plans	(5,655)	-	-	(5,655)
AT DECEMBER 31, 2019	(13,571)	6,169	(25)	(7,428)
Underfunded plans	(5,648)	4,294	(23)	(1,377)
Overfunded plans	(1,375)	1,473	(2)	96
Unfunded plans	(4,977)	-	-	(4,977)
AT DECEMBER 31, 2018	(12,000)	5,767	(25)	(6,258)

The allocation of plan assets by principal asset category can be analyzed as follows:

In %	Dec. 31, 2019	Dec. 31, 2018
Equity investments	27	27
Sovereign bond investments	26	25
Corporate bond investments	27	27
Money market securities	3	4
Real estate	2	2
Other assets	15	15
TOTAL	100	100

All plan assets were quoted on an active market at December 31, 2019.

The actual return on assets of EGI sector companies stood at a positive 9% in 2019.

In 2019, the actual return on plan assets of Belgian entities amounted to approximately 3% in Group insurance and a positive 14% in pension funds.

The allocation of plan asset categories by geographic area of investment can be analyzed as follows:

In %	Europe	North America	Latin America	Asia - Oceania	Rest of the World	Total
Equity investments	58	26	3	10	3	100
Sovereign bond investments	76	1	22	-	2	100
Corporate bond investments	75	18	1	3	2	100
Money market securities	72	-	5	-	23	100
Real estate	86	-	7	-	6	100
Other assets	11	8	3	3	76	100

20.3.6 Actuarial assumptions

Actuarial assumptions are determined individually by country and company in conjunction with independent actuaries. Weighted discount rates for the main actuarial assumptions are presented below:

		Pension benefit obligations		Other post-employment benefit obligations		Long-term benefit obligations		Total benefit obligations	
		2019	2018	2019	2018	2019	2018	2019	2018
Discount rate	Eurozone	1.2%	2.0%	1.2%	2.1%	1.0%	1.6%	1.2%	1.9%
	UK Zone	1.7%	2.5%	-	-	-	-	-	-
Inflation rate	Eurozone	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%
	UK Zone	3.4%	3.3%	-	-	-	-	-	-

20.3.6.1 Discount and inflation rate

The discount rate applied is determined based on the yield, at the date of the calculation, investment grade corporate bonds with maturities mirroring the term of the plan.

The rates were determined for each monetary area based on data for AA corporate bond yields. For the Eurozone, data (from Bloomberg) are extrapolated on the basis of government bond yields for long maturities.

According to the Group's estimates, a 100-basis-point increase or decrease in the discount rate would result in a change of approximately 17% in the projected benefit obligation.

The inflation rates were determined for each monetary area. A 100-basis-point increase or decrease in the inflation rate (with an unchanged discount rate) would result in a change of approximately 16% in the projected benefit obligation.

20.3.6.2 Other assumptions

The increase in the rate of medical costs (including inflation) was estimated at 2.8%.

A 100-basis-point change in the assumed increase in medical costs would have the following impacts:

<i>In millions of euros</i>	100-basis-point increase	100-basis-point decrease
Impact on expenses	-	-
Impact on pension obligations	4	(5)

20.3.7 Estimated employer contributions payable in 2020 under defined benefit plans

The Group expects to pay around €200 million in contributions into its defined benefit plans in 2020, including €121 million for EGI sector companies. Annual contributions in respect of EGI sector companies will be made by reference to rights vested during the year, taking into account the funding level for each entity in order to even out contributions over the medium term.

20.4 Defined contribution plans

In 2019, the Group recorded a €121 million expense in respect of amounts paid into Group defined contribution plans (€133 million in 2018). These contributions are recorded under “Personnel costs” in the consolidated income statement.

NOTE 21 SHARE-BASED PAYMENTS

Accounting standards

Under IFRS 2, share-based payments made in consideration for services provided are recognized as personnel costs. These services are measured at the fair value of the instruments awarded.

The fair value of bonus share plans is estimated by reference to the share price at the grant date, taking into account the fact that no dividend is payable over the vesting period, and based on the estimated turnover rate for the employees concerned and the probability that the Group will meet its performance targets. The fair value measurement also takes into account the non-transferability period associated with these instruments. The cost of shares granted to employees is expensed over the vesting period of the rights and offset against equity.

A Monte Carlo pricing model is used for performance shares granted on a discretionary basis and subject to external performance criteria.

Expenses recognized in respect of share-based payments break down as follows:

In millions of euros	Expense for the year	
	Dec. 31, 2019	Dec. 31, 2018
Employee share issues ⁽¹⁾	(1)	(31)
Bonus/performance share plans ⁽²⁾	(48)	(46)
Other Group companies' plans	(2)	(3)
TOTAL	(51)	(80)

(1) Including Share Appreciation Rights set up within the scope of employee share issues in certain countries.

(2) Of which a reversal of €2 million in 2019 for failure to meet the condition of continuing employment within the Group.

21.1 Performance shares

21.1.1 New awards in 2019

ENGIE Performance Share plan of December 17, 2019

On December 17, 2019, the Board of Directors approved the award of 5 million performance shares to members of the Group's executive and senior management, breaking down into three tranches:

- performance shares vesting on March 14, 2023, subject to a one-year lock-up period;
- performance shares vesting on March 14, 2023, without a lock-up period; and
- performance shares vesting on March 14, 2024, without a lock-up period.

In addition to a condition requiring employees to be employed with the Group at the vesting date, each tranche is made up of instruments subject to three different conditions, excluding the first 150 performance shares granted to beneficiaries (excluding top management), which are exempt from performance conditions. The performance conditions, each of which accounts for one-third of the total grant, are as follows:

- a market performance condition relating to ENGIE's Total Shareholder Return compared to that of a reference panel of ten companies, as assessed between November 2019 and January 2023;
- two internal performance conditions relating to net recurring income Group share and to Return On Capital Employed (ROCE) in 2021 and 2022.

Under this plan, performance shares without conditions were also awarded to the winners of the Innovation and Incubation programs (18,000 shares awarded).

21.1.2 Fair value of bonus share plans with or without performance conditions

The following assumptions were used to calculate the fair value of the new plans awarded by ENGIE in 2019:

Award date	Vesting date	End of the lock-up period	Price at the award date	Expected dividend	Financing cost for the employee	Non-transferability cost	Market-related performance condition	Fair value per unit
December 17, 2019	March 14, 2023	March 14, 2024	14.7	0.75	4.3%	0.44	yes	11.03
December 17, 2019	March 14, 2023	March 14, 2023	14.7	0.75	4.3%	0.44	yes	11.55
December 17, 2019	March 14, 2023	March 14, 2023	14.7	0.75	4.3%	0.56	no	12.45
December 17, 2019	March 14, 2024	March 14, 2024	14.7	0.75	4.3%	0.44	yes	10.84
Weighted average fair value of the December 17, 2019 plan								11.01

21.1.3 Review of internal performance conditions applicable to the plans

In addition to the condition of continuing employment within the Group, eligibility for certain bonus share and performance share plans is subject to an internal performance condition. When this condition is not fully met, the number of bonus shares granted to employees is reduced in accordance with the plans' regulations, leading to a decrease in the total expense recognized in relation to the plans in accordance with IFRS 2. Performance conditions are reviewed at each reporting date.

NOTE 22 RELATED PARTY TRANSACTIONS

This note describes material transactions between the Group and its related parties.

Compensation payable to key management personnel is disclosed in Note 23 “Executive compensation”.

Transactions with joint ventures and associates are described in Note 3 “Investments in equity method entities”.

Only material transactions are described below.

22.1 Relations with the French State and with entities owned or partly owned by the French State

22.1.1 Relations with the French State

The French State’s interest in the Group at December 31, 2019 was unchanged from the previous year at 23.64%. This entitles it to three seats on the Board of Directors out of a total of 14 (compared to four out of a total of 19).

The French State holds 34.23% of the theoretical voting rights (34.47% of exercisable voting rights) compared with 34.51% at end-2018.

On May 22, 2019, the PACTE act (“Action plan for business growth and transformation”) was passed, enabling the French State to dispose of its ENGIE shares without restrictions.

In addition, the French State holds a golden share aimed at protecting France’s critical interests and ensuring the continuity and safeguarding of supplies in the energy sector. The golden share is granted to the French State indefinitely and entitles it to veto decisions taken by ENGIE if it considers they could harm France’s interests.

Public service engagements in the energy sector are defined by the law of January 3, 2003.

Transmission rates on the GRTgaz transportation network and the gas distribution network in France, as well as rates for accessing the French LNG terminals and revenues from storage capacities are all regulated.

The Law on Energy and Climate passed on November 8, 2019 will put an end to regulated gas tariffs and will restrict regulated electricity tariffs for consumers and small businesses. The final date for the discontinuation of regulated gas tariffs is July 1, 2023.

22.1.2 Relations with EDF

Following the creation on July 1, 2004 of the French gas and electricity distribution network operator (EDF Gaz de France Distribution), Gaz de France SA and EDF entered into an agreement on April 18, 2005 setting out their relationship as regards the distribution business. The December 7, 2006 law on the energy sector reorganized the natural gas and electricity distribution networks. Enedis SA (previously ERDF SA), a subsidiary of EDF SA, and GRDF SA, a subsidiary of ENGIE SA, were created on January 1, 2007 and January 1, 2008, respectively, and act in accordance with the agreement previously signed by the two incumbent operators.

22.2 Relations with the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*)

The Group’s relations with the CNIEG, which manages all old-age, death and disability benefits for active and retired employees of the Group who belong to the special EGI pension plan, employees of EDF and Non-Nationalized Companies (*Entreprises Non Nationalisées* – ENN), are described in Note 20 “Post-employment benefits and other long-term benefits”.

NOTE 23 EXECUTIVE COMPENSATION

The executive compensation presented below includes the compensation of the members of the Group's Executive Committee and Board of Directors.

The Executive Committee had 14 members at December 31, 2019 (11 members at December 31, 2018).

Their compensation breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2019	Dec. 31, 2018
Short-term benefits	21	21
Post-employment benefits	10	6
Share-based payments	5	5
Termination benefits	-	0
TOTAL	36	31

The amount of pension benefit obligations in respect of members of the Group's Executive Committee stood at €37 million at December 31, 2019, being specified that this is an estimated amount as these obligations are, as a rule, not individualized. The Group has a policy of financing pension obligations through hedging assets, without these being specifically allocated to the retirement obligations of a dedicated population.

NOTE 24 WORKING CAPITAL REQUIREMENTS, INVENTORIES, OTHER ASSETS AND OTHER LIABILITIES

Accounting standards

In accordance with IAS 1, the Group's current and non-current assets and liabilities are shown separately in the consolidated statement of financial position. For most of the Group's activities, the breakdown into current and non-current items is based on when assets are expected to be realized, or liabilities extinguished. Assets expected to be realized or liabilities extinguished within 12 months of the reporting date are classified as current, while all other items are classified as non-current.

24.1 Composition of change in working capital requirements

In millions of euros	Change in working capital requirements at Dec. 31, 2019	Change in working capital requirements at Dec. 31, 2018 ⁽¹⁾
Inventories	465	(268)
Trade and other receivables, net	802	(2,311)
Trade and other payables, net	(1,107)	2,177
Tax and employee-related receivables/payables	(36)	237
Margin calls and derivative instruments hedging commodities relating to trading activities	(981)	197
Other	(253)	117
TOTAL	(1,110)	149

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

24.2 Inventories

Accounting standards

Inventories are measured at the lower of cost and net realizable value. Net realizable value corresponds to the estimated selling price in the ordinary course of business, less the estimated costs of completion and the estimated costs necessary to make the sale.

The cost of inventories is determined based on the first-in, first-out method or the weighted average cost formula.

Nuclear fuel purchased is consumed in the process of producing electricity over a number of years. The consumption of this nuclear fuel inventory is recorded based on estimates of the quantity of electricity produced per unit of fuel.

Gas inventories

Gas injected into underground storage facilities includes working gas, which can be withdrawn without adversely affecting the subsequent operation of the reservoirs, and cushion gas, which is inseparable from the reservoirs and essential for their operation (see Note 15 "Property, plant and equipment").

Working gas is classified in inventories and measured at weighted average purchase cost upon entering the transportation network regardless of its source, including any regasification costs.

Group inventory outflows are valued using the weighted average unit cost method.

An impairment loss is recognized when the net realizable value of inventories is lower than their weighted average cost.

Certain inventories are used for trading purposes and are recognized at fair value less the estimated costs necessary to make the sale in accordance with IAS 2. Any changes in this fair value are recognized in the consolidated income statement for the year to which they occur.

Greenhouse gas emissions allowances

European Directive 2003/87/EC establishes a scheme for greenhouse gas (GHG) emissions allowance trading within the European Union. Under the Directive, each year the entities concerned must surrender a number of allowances equal to the total GHG emissions of their installations during the previous year. As there are no specific rules under IFRS dealing with the accounting treatment of GHG emissions allowances, the Group decided to apply the following principles:

- emissions allowances are classified as inventories, as they are consumed in the production process;
- emissions allowances purchased on the market are recognized at acquisition cost;
- emissions allowances granted free of charge are recorded in the statement of financial position for a value of nil.

The Group records a liability at the year-end in the event that it does not have enough emissions allowances to cover its GHG emissions during the year. This liability is measured at the market value of the allowances required to meet its obligations at the year-end or based on the price of future contracts concluded to hedge this lack of emissions allowances.

Energy savings certificates (ESC)

In the absence of current IFRS Standards or IFRIC Interpretations on accounting for energy savings certificates (ESC), the following principles are applied:

- in the event that the number of ESCs held exceeds the obligation at the reporting date, they are accounted for in inventories; otherwise, a liability is recorded;
- ESC inventories are valued at weighted average cost (acquisition cost for ESCs acquired or cost incurred for ESCs generated internally).

In millions of euros	Dec. 31, 2019	Dec. 31, 2018
Inventories of natural gas, net	1,104	1,274
Inventories of uranium	538	595
CO ₂ emissions allowances, green certificates and energy saving certificates, net	682	654
Inventories of commodities other than gas and other inventories, net	1,294	1,635
TOTAL	3,617	4,158

24.3 Other assets and other liabilities

In millions of euros	Dec. 31, 2019				Dec. 31, 2018 ⁽¹⁾			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Other assets and liabilities	384	10,216	(1,222)	(13,101)	474	9,337	(960)	(12,529)
Tax receivables/payables	-	6,986	-	(7,750)	-	6,999	-	(7,449)
Employee receivables/payables	214	39	(6)	(2,594)	275	72	(5)	(2,461)
Dividend receivables/payables	-	21	-	(104)	-	12	-	(170)
Other	171	3,170	(1,215)	(2,653)	198	2,255	(954)	(2,449)

(1) Published data at December 31, 2018, were not restated due to the transition method used for the application of IFRS 16 (see Note 1 "Accounting framework and basis for preparing the consolidated financial statements").

At December 31, 2019, other non-current assets also include a receivable towards EDF Belgium in respect of nuclear provisions amounting to €92 million (€74 million at December 31, 2018).

NOTE 25 LEGAL AND ANTI-TRUST PROCEEDINGS

The Group is party to a number of legal and anti-trust proceedings with third parties or with legal and/or administrative authorities (including tax authorities) in the normal course of its business.

The main disputes and investigations presented hereafter are recognized as liabilities or give rise to contingent assets or liabilities.

In the normal course of its business, the Group is involved in a number of disputes and investigations before state courts, arbitral tribunals or regulatory authorities. The disputes and investigations that could have a material impact on the Group are presented below.

25.1 France excluding Infrastructures

25.1.1 Withholding tax

In their tax deficiency notice dated December 22, 2008, the French tax authorities questioned the tax treatment of the non-recourse sale by SUEZ (now ENGIE) of a withholding tax (*précompte*) receivable in 2005 for an amount of €995 million (receivable relating to the *précompte* paid in respect of the 1999-2003 fiscal years). The Montreuil Administrative Court handed down a judgment in ENGIE's favor in April 2019, which led to the French tax authorities appealing the decision before the Versailles Court of Appeal in May 2019. Exchanges of pleadings between the parties are currently ongoing.

Regarding the dispute over the *précompte* itself, on February 1, 2016, the *Conseil d'État* dismissed the appeal before the Court of Cassation seeking the repayment of the *précompte* in respect of the 1999, 2000 and 2001 fiscal years, and the cases seeking the repayment of the *précompte* in respect of the 2002, 2003 and 2004 fiscal years are still pending before the courts of appeal.

Furthermore, after ENGIE and several French groups lodged a complaint, on April 28, 2016, the European Commission issued a reasoned opinion to the French State as part of infringement proceedings, setting out its view that the *Conseil d'État* did not comply with European Union law when handing down decisions in disputes regarding the *précompte*, such as those involving ENGIE. On July 10, 2017, the European Commission referred the matter to the Court of Justice of the European Union (CJEU) on the grounds of France's failure to comply. On October 4, 2018, the Court of Justice of the European Union ruled partially in favor of the European Commission. Following this decision, France must revisit its methodology in order to determine the *précompte* repayment amounts in closed and pending court cases.

25.2 France Infrastructures

25.2.1 Commissioning

In the dispute between GRDF and various gas suppliers, in a decision dated June 2, 2016, overturning a decision handed down in September 2014 by the Energy Regulatory Commission (*Commission de la Régulation de l'Énergie* – CRE)'s Standing Committee for Disputes and Sanctions (*Comité de règlement des différends et des sanctions* – CoRDs), the Paris Court of Appeal ruled that the transmission services delivered to suppliers should be, and should have been since the market was opened up, delivered to end customers. Prior to these rulings, only distributors provided delivery services to end customers in exchange for payment from the suppliers for customer management services, as there was only one contract.

Because the supplier now also provides customer management services associated with natural gas transmission on the distributors' behalf, the supplier has become the intermediary between the distributor and the end customer for delivery and transmission services. The contractual relations have therefore been completely reorganized, and as a result (i) the risk of unpaid compensation for the "transmission" part of the agreement with the end customer would henceforth be borne by the grid manager and not the gas supplier; (ii) the compensation for customer management services related to

transmission and distribution services provided by the supplier on behalf of the grid manager should be fair and commensurate with the grid manager's cost savings. The Paris Court of Appeal ordered GRDF to bring its transmission agreements into compliance with these principles and ordered the CoRDIS to evaluate the amount of the customer management services. GRDF appealed the decision handed down by the Court of Appeal before the Court of Cassation.

In March 2018, the Court of Cassation referred the case to the Court of Justice of the European Union (CJEU), asking it to rule as to whether the CoRDIS could apply these rulings retroactively under European law. The CJEU's attorney general submitted his conclusions in May 2019. The CJEU delivered its ruling on December 19, 2019, considering that the Gas Directive (Directive 2009/73/EC) does not prohibit dispute settlement authorities from making decisions with retroactive effects dating to before the date of the dispute. Following the ruling of the CJEU, the Court of Cassation has scheduled a hearing for April 2020. The Court of Cassation's ruling could be made before the end of first-half 2020.

In June 2018 the CoRDIS, which has been tasked by the Paris Court of Appeal with evaluating the amount of the customer management services, instructed GRDF to propose to Direct Energie and ENI a new addendum providing for compensation based on the pricing terms established by the CRE in its decisions of October 2017 and January 2018. Both GRDF on the one hand and Direct Energie and ENI on the other have appealed the ruling before the Paris Court of Appeal. GRDF disputes the compensation paid in the past, and in particular asserts that the supplier has already passed on the corresponding amounts to the end customers. On January 23, 2020, the Paris Court of Appeal handed down its decision in which it considered that the suppliers are the mandatory grid service providers for customer management and initiated further discussions on the amount of customer management for Direct Energie and ENI for the period 2005-2018.

Because in 2016 the Paris Court of Appeal considered that ENI had not requested retrospective compensation (its requests prior to 2016 referred only to the future), ENI lodged a claim with the CoRDIS in March 2017 seeking retroactive compensation (€87.8 million for the period from 2008 to 2016) for customer management services. The CoRDIS handed down its decision in July 2019 dismissing ENI's request. ENI has appealed this decision before the Paris Court of Appeal.

In May 2017, Direct Energie also lodged a claim with the Paris Commercial Court for abuse of a dominant position and material inequality in the contractual obligations provided for in the transmission agreements, initially seeking €89.5 million in damages for the period from 2009 to 2016. This claim has since been raised to €140 million. This is a claim for indemnification, unlike the claims before the CoRDIS, which are seeking compensation for customer management services in respect of distribution services.

The Paris Commercial Court handed down a decision in January 2019, ordering GRDF to pay Direct Energie €17 million.

GRDF and Direct Energie have appealed this decision and filed their preliminary submissions in June 2019.

In July 2019, ENI launched proceedings against GRDF before the Paris Commercial Court for abuse of a dominant position and material inequality on the grounds that GRDF had required ENI, without compensation, to perform customer management services in respect of distribution. ENI is seeking a little over €300 million.

Regarding the customer management services carried out on behalf of the grid manager in the electricity sector (in this case ERDF, now ENEDIS), following proceedings brought by ENGIE, in a decision of July 13, 2016, the *Conseil d'État* also ruled that the same principle whereby the grid manager pays compensation to the supplier should apply. In the same decision, the *Conseil d'État* denied the CRE the right to set a customer threshold beyond which the compensation would not be payable, which hitherto prevented ENGIE from receiving any compensation. In light of this decision, ENGIE brought an action against ENEDIS with the purpose of obtaining payment for these customer management services. The legislature has adopted a decision that retroactively validates the agreements entered into with ENEDIS. In a decision handed down on April 19, 2019, the Constitutional Court ruled that this provision was constitutional. The proceedings against ENEDIS are still underway. ENGIE had also brought action before the *Conseil d'État* against the CRE's decision of October 26, 2017 in respect of the compensation for customer management services in the electricity sector for the period prior to January 1, 2018, but has withdrawn from the proceedings.

25.3 Rest of Europe

25.3.1 Resumption and extension of operations at the nuclear power plants

Various associations have brought actions before the Constitutional Court, the *Conseil d'État* and the ordinary courts against the laws and administrative decisions authorizing the extension of operations at the Doel 1 and 2 and Tihange 1 reactors. The Brussels Court of Appeal dismissed Greenpeace's claims in a decision dated June 12, 2018. Greenpeace appealed this decision before the Court of Cassation. This appeal was rejected by a ruling of the Court of Cassation dated January 9, 2020, such that the decision by the Brussels Court of Appeal dated June 12, 2018 is now final. As for the action brought before the Constitutional Court, on June 22, 2017 the Court referred the case to the Court of Justice of the European Union (CJEU) for a preliminary ruling. In its decision of July 29, 2019, the CJEU ruled that the Belgian law extending the operating lives of the Doel 1 and Doel 2 reactors was adopted without having made the prior environmental evaluations required, but that the effects of the law extending the operating lives may be maintained temporarily in the event of a serious and significant threat of electricity shortage, and then only for the length of time that is strictly necessary to rectify this threat. The decision of the Constitutional Court is expected soon. In addition, the appeal before the *Conseil d'État* is still ongoing.

In addition, some local authorities and various organizations have challenged the authorization to restart operations at the Tihange 2 reactor. On November 9, 2018, the *Conseil d'État* rejected the action brought by some local German authorities seeking the annulment of this decision. Civil proceedings are still ongoing before the Brussels Court of First Instance.

25.3.2 Claim by the Dutch tax authorities related to interest deductibility

Based on a disputable interpretation of a statutory modification that came into force in 2007, the Dutch tax authorities refuse the deductibility of a portion (€1.1 billion) of the interest paid on financing contracted for the acquisition of investments made in the Netherlands since 2000. Following the Dutch tax authorities' rejection of the administrative claim against the 2007 tax assessment, action was brought before the Arnhem Court of First Instance in June 2016. On October 4, 2018, the court ruled in favor of the tax authorities. However, given that ENGIE Energie Nederland Holding BV considers the court's reasoning to be contradictory and disputable, both in light of Dutch and European law, it has appealed the decision.

25.3.3 Claim by the Dutch tax authorities related to power plant impairment losses

The Dutch tax authorities have disallowed the tax deduction of asset impairment losses reported by ENGIE Energie Nederland NV on its 2010-2013 tax returns. The authorities challenged both the period of coverage of the impairment losses and the amount. Accordingly, they added back the full amount of the accumulated asset impairment losses over the abovementioned period, i.e., an amount of €1.9 billion. ENGIE has contested the tax authorities position as regards both the period and the amount and filed an administrative appeal in November 2018, which was rejected in February 2019. ENGIE is considering whether to launch legal proceedings.

25.3.4 Transfer price of gas

The Belgian tax authorities' Special Tax Inspectorate has issued two tax deficiency notices in respect of taxable income for fiscal years 2012 and 2013 for an aggregate amount of €706 million, considering that the price applied for the supply of gas by ENGIE (then GDF SUEZ) to Electrabel S.A. was excessive. ENGIE and Electrabel S.A. are challenging this adjustment. Belgium and France have begun conciliation proceedings to settle the dispute.

25.3.5 Spain – Punica

In the Punica case (investigation into the awarding of contracts), 12 Cofely España employees, as well as the company itself were placed under investigation by the examining judge in charge of the case. The criminal investigation is in progress and is scheduled to be closed by June 6, 2020.

25.3.6 Italy – Vado Ligure

On March 11, 2014, the Court of Savona seized and closed down the VL3 and VL4 coal-fired production units at the Vado Ligure thermal power plant belonging to Tirreno Power S.p.A. (TP), a company which is 50%-owned by the ENGIE Group. This decision was taken as part of a criminal investigation against the present and former executive managers of TP into environmental infringements and public health risks. The investigation was closed on July 20, 2016. The case was referred to the Savone Court to be tried on the merits. The proceedings began on December 11, 2018 and will continue through 2020.

25.3.7 Italy – Tax dispute relating to excise duties and ENGIE Italia VAT (formerly GDF SUEZ Energie)

In 2017, the Italian tax authorities challenged the excise duty waiver for gas transfers carried out by ENGIE Italia for industrial customers in Italy on the grounds that it did not have a certificate for these customers. The authorities plan to issue a tax reassessment for a total amount of €126 million (excise duties, VAT, late payment penalties and interest). ENGIE Italia has challenged the legality of this procedure both in light of Italian and European law and in any event deems the sanction to be disproportionate compared to a formal requirement.

In 2018, ENGIE Italia launched an appeal with the Perugia Court of First Instance requesting the cancellation of the tax reassessment notice.

In October 2018, the Court of First Instance dismissed the cancellation request, simply applying an outdated ministerial decree and ignoring ENGIE Italia's legal arguments.

ENGIE Italia appealed the ruling in November 2018 and the Court of Appeal ruled in its favor in November 2019 on the grounds that the documents requested by the Italian tax authorities were not legal and that the authorities needed to take into account the factual situation of the taxpayer to determine its requirement to pay excise duties. The Italian tax authorities may refer the case to the Court of Cassation.

25.3.8 Italy – Competition procedure

On May 9, 2019, a fine of €38 million was jointly and severally imposed on ENGIE Servizi SpA and ENGIE Energy Services International S.A. by the Italian Competition Authority for certain alleged anti-competitive practices relating to the award of the Consip FM4 2014 contract. An appeal has been lodged with the Regional Administrative Court of Lazio (TAR Lazio). The TAR Lazio has suspended payment of the fine. The appeal proceedings are pending.

25.4 Latin America

25.4.1 Concessions in Buenos Aires and Santa Fe

In 2003, ENGIE and its joint shareholders, water distribution concession operators in Buenos Aires and Santa Fe, initiated two arbitration proceedings against the Argentinean State before the International Center for Settlement of Investment Disputes (ICSID). The purpose of these proceedings was to obtain compensation for the loss in value of investments made since the start of the concession, in accordance with bilateral investment protection treaties.

As a reminder, prior to the stock market listing of SUEZ Environnement Company, ENGIE and SUEZ (formerly SUEZ Environnement) entered into an agreement providing for the economic transfer to SUEZ of the rights and obligations relating to the ownership interests held by ENGIE in Aguas Argentinas and Aguas Provinciales de Santa Fe, including the rights and obligations resulting from the arbitration proceedings.

On April 9, 2015, the ICSID ordered the Argentinean State to pay USD 405 million in respect of the termination of the Buenos Aires water distribution and treatment concession contracts (including USD 367 million to ENGIE and its subsidiaries), and on December 4, 2015, to pay USD 225 million in respect of the termination of the Santa Fe concession

contracts. The Argentinean State sought the annulment of these awards. By decision dated May 5, 2017, the claim for the annulment of the Buenos Aires award was rejected. The claim to annul the award in the Santa Fe case was rejected by a decision dated December 14, 2018. Consequently, the two ICSID awards, which are a step in the settlement of the dispute, are now final.

The Argentinean government and the various shareholders of Aguas Argentinas entered into and implemented a settlement agreement in accordance with the arbitral award of April 9, 2015, handed down in respect of the water distribution and treatment concession contracts in Buenos Aires. In accordance with the above-mentioned agreement concerning the economic transfer to SUEZ of ENGIE's rights and obligations, SUEZ and its subsidiaries received €224.1 million in cash. Furthermore, the December 14, 2018 ruling pertaining to the water distribution and wastewater treatment concessions granted to Aguas Provinciales de Santa Fe has yet to be applied.

25.4.2 Planned construction of an LNG terminal in Uruguay

GNLS SA, a joint subsidiary of Marubeni and ENGIE, was selected in 2013 to build an offshore LNG terminal in Uruguay. On November 20, 2013, GNLS contracted out the design and construction of the terminal to Construtora OAS SA. Following a number of problems and defects, GNLS terminated the contract in March 2015 and made use of its guarantees. OAS challenged the termination of the contract but did not take action against GNLS. OAS went bankrupt in Uruguay on April 8, 2015. In September 2015, GNLS and the authorities agreed to cancel the planned construction.

On May 24, 2017, OAS and GNLS appeared before the Uruguayan courts in a conciliation process at the request of OAS. The conciliation process was unsuccessful. OAS then threatened to call GNLS before the Uruguayan courts to claim damages.

Since GNLS had incurred significant losses as a result of the termination of the contract, it filed a request for arbitration on August 22, 2017 in accordance with the terms of the contract providing for dispute resolution in Madrid by the ICC International Court of Arbitration, claiming a principal amount of USD 373 million. OAS responded by summoning GNLS before the Montevideo Commercial Court, claiming USD 311 million in damages. ENGIE was officially named as a party to the proceedings on December 5, 2018. Both proceedings are still pending.

25.4.3 Claim against sales tax adjustments in Brazil

On December 14, 2018, the Brazilian Tax Administration sent ENGIE Brasil Energia notices of tax assessment for the 2014, 2015 and 2016 fiscal years believing that the company was liable for PIS and COFINS taxes (federal value added taxes) on reimbursement of certain fuels used in the production of energy by thermoelectric plants. The adjustments amounted to a total of 492 million Brazilian reais, including 229 million Brazilian reais in taxes to which are added fines and interest.

ENGIE Brasil Energia disputes these notices of tax assessment and introduced tax claims in 2019, which the tax authorities have rejected, however. A final claim at administrative level (prior to possible appeals before tax courts at judicial level) was filed by ENGIE Brasil Energia in January 2020.

25.5 Other

25.5.1 Luxembourg – State aid investigation

On September 19, 2016, the European Commission announced its decision to open an investigation into whether or not two private rulings granted by the Luxembourg State in 2008 and 2010 covering two similar transactions between several of the Group's Luxembourg subsidiaries constituted State aid. On June 20, 2018, the European Commission adopted a final, unfavorable decision deeming that Luxembourg had provided ENGIE with State aid. On September 4, 2018, ENGIE requested the annulment of the decision before the European Courts, thereby challenging the existence of a selective advantage. As these proceedings do not have a suspensive effect, ENGIE paid a sum of €123 million into an escrow account on October 22, 2018 in respect of one of the two transactions in question, since no aid was actually received for

the other. Following the proceedings before the European Courts, this sum will be returned to ENGIE or paid to the Luxembourg State depending on whether or not the Commission's decision is annulled.

25.5.2 Poland – Competition procedure

On November 7, 2019, a fine of 172 million Polish zloty (€40 million) was imposed on ENGIE Energy Management Holding Switzerland AG (EEMHS) for failing to respond to a request for disclosure of documents from the Polish Competition Authority (UOKiK) in a proceeding initiated by the UOKiK which suspected a potential failure to notify by EEMHS and other financial investors involved in the financing of the Nord Stream 2 pipeline. EEMHS filed an appeal with the Competition Protection Court. The appeal proceedings are pending.

NOTE 26 SUBSEQUENT EVENTS

On January 22, 2020, the Group announced a partnership with Edelweiss Infrastructure Yield Plus Fund (EIYP) to sell the majority of its stake in solar assets in India. The completion of this transaction is expected to occur during the first half of 2020 and will allow ENGIE to reduce its net debt by more than €400 million.

In addition, on January 23, 2020, the Group announced that it had won a competitive tender launched by Sterlite for the acquisition of a 30-year greenfield concession project. The project comprises the construction, operation and maintenance of a 1,800 km electric power transmission line, a new substation and the expansion of three additional substations in northern Brazil. All necessary installation licenses have been secured to start construction in 2020. The total investment cost of the project is expected to be €750 million.

NOTE 27 FEES PAID TO THE STATUTORY AUDITORS AND TO MEMBERS OF THEIR NETWORKS

Pursuant to Article 222-8 of the General Regulations of the French Financial Markets Authority (AMF), the following table presents information on the fees paid by ENGIE SA, its fully consolidated subsidiaries and joint operations to each of the auditors in charge of auditing the annual and consolidated financial statements of the ENGIE Group.

The Shareholders' Meeting of ENGIE SA of April 28, 2014 decided to renew the terms of office of Deloitte and EY as Statutory Auditors for a six-year period from 2014 to 2019.

Statutory auditors' report on the consolidated financial statements

Year ended December 31, 2019

To the Shareholders' Meeting of ENGIE,

Opinion

In compliance with the engagement entrusted to us by your Shareholder's Meeting, we have audited the accompanying financial statements of ENGIE ("the Company") for the year ended December 31, 2019.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the Company as of December 31, 2019 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit Committee.

Basis for opinion

Audit framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the "Statutory Auditors' Responsibilities for the Audit of the consolidated Financial Statements" section of our report.

Independence

We conducted our audit in compliance with independence rules applicable to us, for the period from January 1, 2019 to the date of our report and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014 or in the French Code of Ethics (*Code de déontologie*) for statutory auditors.

Emphasis of matter

We draw attention to the following matter described in Note 1 to the consolidated financial statements relating to the change in accounting method relating to the first-time application from January 1st, 2019 of IFRS 16 "Lease Contracts" and the impacts of IFRIC's March 2019 decision related to the "physical settlement of contracts to buy or sell a non-financial item". Our opinion is not modified in respect of this matter.

Justification of Assessments - Key Audit Matters

In accordance with the requirements of Articles L.823-9 and R.823-7 of the French Commercial Code (*Code de commerce*) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon. We do not provide a separate opinion on specific elements, accounts or items of the consolidated financial statements.

■ Measurement of the recoverable amount of goodwill, intangible assets and property, plant & equipment

[notes 13, 14 and 15]

Key audit matter	Our response
<p>As of December 31, 2019, the net carrying amount of fixed assets (goodwill, intangible assets and property, plant & equipment) amounted to €77.7 billion (after recognition of impairment losses of €1.8 billion), or 48.6% of total assets.</p> <p>Fixed assets are comprised of:</p> <ul style="list-style-type: none"> – €18.7 billion of goodwill, mainly allocated to the Cash-Generating Units (CGU) Benelux (€4.3 billion), GRDF (€4 billion), France Renewable Energy (€1.2 billion), United Kingdom (€1.1 billion), France B to B (€1 billion) and France B to C (€1 billion); – €7 billion of intangible assets; – €52 billion of property, plant & equipment; <p>For operating entities which your Group intends to hold on a long-term and going concern basis, the recoverable amount corresponds, in most cases, to the value in use, determined based on :</p> <ul style="list-style-type: none"> – cash flow projections on the basis of the 2020 budget and 2021-2022 medium-term business plan approved by the Group's Executive Committee and the Board of Directors and, – beyond this time frame, extrapolated future cash flow projections determined on the basis of macroeconomic assumptions (inflation, exchange rates and growth rates) and price projections featured in the Group's reference scenario for 2023-2040 approved by the Executive Committee. <p>These recoverable amounts are based on key assumptions relating to market outlook and changes in the regulatory environment of which any modification could have a material impact on the amount of impairment losses to be recognized. Concerning the goodwill of the main CGU, measurement is based on the following assumptions :</p>	<p>We examined the definition of CGU as well as the allocation of goodwill to the different CGU.</p> <p>We assessed the Group's measures aiming to identify indications of impairment losses as well as Management's procedures for approving the estimates.</p> <p>We examined the data and the key assumptions used to determine the recoverable amount of assets, assessed the sensitivity of the measurements to these assumptions and verified the calculations performed by the Group with the support of our valuation experts.</p> <p>Our work mainly covered;</p> <ul style="list-style-type: none"> – the assumptions of the Group's long-term reference scenario (trends in electricity and gas prices and demand, price of CO₂, coal and oil, inflation) for which we have assessed the consistency with external studies carried out by international organizations or energy experts; – the operational and regulatory assumptions used to prepare cash flow forecasts for which we assessed the consistency of the asset's operating conditions and their intrinsic performance as well as the applicable regulations to date and their expected changes; – methods for determining cash flow forecasts for which we assessed: <ul style="list-style-type: none"> ○ the consistency of the baseline data with the budget, the medium-term business plan and beyond, the Group's long-term scenario ; ○ the consistency with past performances and market outlook ; – the discount rates for which we have examined the determination methods and the consistency with the underlying market assumptions, using internal specialists; – Management's sensitivity analysis to the key price, operational and regulatory assumptions for which we assessed the relevance;

- for the Benelux CGU, expected trends in the long-term electricity and gas demand, the price of CO₂, the price of electricity and fuel as well as changes in the regulatory environment for nuclear capacities in Belgium beyond 2025 and the extension of drawing rights agreements for French nuclear plants beyond their current legal terms ;
- for the Renewable Energy CGU, prospects and conditions of renewing the hydropower concession agreements in France ;
- the assessment of the highly probable nature of disposals decided by the Group and the elements considered to measure the recoverable amount;
- the appropriateness of the disclosure given in the notes, notably on sensitivity analyses carried out by the Group.

These measurements are sensitive to the applied macro-economic assumptions (inflation and discount rates).

For operating entities which the Group has decided to sell, the related recoverable amount of the assets concerned is based on market value less costs of disposal.

We considered the measurement of the recoverable amount of goodwill, intangible assets and property, plant & equipment to be a key audit matter due to their materiality in the Group's financial statements and because they require the use of assumptions and estimates to be assessed in a context which remains sensitive to trends in the energy market and whose consequences make the medium-term economic outlook difficult to anticipate.

■ **Measurement of provisions relating to the back-end of nuclear fuel cycle and to the dismantling of nuclear facilities in Belgium**

[note 19 and 19.2]

Key audit matter	Our response
<p>Your Group has obligations relating to the reprocessing and storage of radioactive nuclear fuel consumed and the dismantling of nuclear facilities operated in Belgium. Pursuant to the Belgian law of April 11, 2003, the management of corresponding provisions is entrusted to the Group's wholly-owned subsidiary Synatom which submits a report every three years to the Commission for Nuclear Provisions (CNP) describing the core inputs used to measure these provisions. The CNP issues its opinion based on the opinion issued by the Belgian agency for radioactive waste and enriched fissile material (ONDRAF) which reviews all of the characteristics and technical parameters of the report.</p> <p>The provisions, for the management of radioactive nuclear fuel and for the dismantling of nuclear facilities, are estimated from the current legal and contractual framework and on the basis of the opinion issued by the CNP on December 12, 2019.</p> <p>We considered the measurement of these provisions to be a key audit matter due to their amounts and their sensitivity to industrial scenarios used and estimates of related costs such as, in particular:</p> <ul style="list-style-type: none"> – concerning provisions relating to the back-end of nuclear fuel cycle, the decisions will be ultimately made by the Belgian government relating to the management of radioactive spent fuel (reprocessing of a portion of spent fuel or direct removal, without prior reprocessing) and long-term management of fuel (cost of burying fuel in deep geological repositories or long-term on-site storage), – concerning the provisions for the dismantling of nuclear facilities, the dismantling program and the timetables approved, or not, by the nuclear safety authorities. 	<p>We analyzed the findings, observations and recommendations made in the opinions of the ONDRAF and the CNP.</p> <p>We examined the basis on which these provisions were measured and assessed the sensitivity of measurements to the technical assumptions and industrial scenarios, notably for the management of radioactive fuel, as well as assumptions relating to costs, operations timetable and discount rates applied to cash flows.</p> <p>Our work mainly consisted in assessing :</p> <ul style="list-style-type: none"> – the consistency of industrial scenarios used with regard to the current legal and regulatory environment for the choice of nuclear policy remaining to be made in Belgium; – the consistency of forecasts of costs by nature and forecasts of cash outflows with available studies and quotes and, for dismantling, with a study of independent experts mandated by Synatom; – the level of margins for uncertainties and contingencies included in the provisions to take into account the degree of technical control over dismantling and management of radioactive fuel; – the consistency of the spent fuel volumes produced to date and the estimates of spent fuel volumes still to be produced with the Group's physical inventory and forecast data; – the methods for determining the discount rates used and their consistency with the underlying market assumptions. – the appropriateness of the disclosure given in the notes to the consolidated financial statements, notably on the sensitivity to measurement of the provisions to changes in key assumptions.

This measurement is sensitive to the applied macro-economic assumptions (inflation and discount rates).

■ **Valuation for provisions relating to commercial litigations, claims and tax risks**
[notes 19, 19.4 and 25]

Key audit matter	Our response
<p>Your Group is party to a number of legal and anti-trust proceedings with third parties or with legal and/or administrative authorities, including tax authorities, investigations before state courts, arbitral tribunals or regulated authorities, in the normal course of its business.</p> <p>The main disputes and investigations potentially having a significant impact on your Group are recognized as liabilities or give rise to contingent liabilities, as it is indicated in Note 25 to the consolidated financial statements.</p> <p>We have considered this topic as a key audit matter, provided the amounts at stake and the judgement required to determine the provisions for commercial litigations claims and tax risks, due to the regulatory context and the continuously changing market environment.</p>	<p>Our audit procedures consisted in:</p> <ul style="list-style-type: none"> – investigating the procedures implemented by your Group in order to identify all the litigations and risk exposures; – corroborating these analyses with the confirmations received from the lawyers; – evaluating the analysis of the probability of occurrence performed by your Group, as well as the assumptions used, and the supporting documentation with, if any, consultations received by third parties. We have recourse to our experts for the most complex analysis; – appreciating the appropriateness of the disclosure given in the notes to the consolidated financial statements.

■ **Estimate of gas and electricity unbilled and un-metered revenues (“energy in the meter”)**

[notes 7.1 and 7.2.1]

Key audit matter	Our response
<p>Your Group uses an estimate in revenue, relating to the sales on networks generated from customers whose energy consumption is metered during the accounting period. Since the meter readings provided by the grid operators and their final allocations to the Group are sometimes only known several months down the line, this means that revenue figures are only an estimate. As of December 31, 2019, the receivables relating to the energy in the meter (gas and electricity un-metered and unbilled revenue) amount to €3.3 billion and mainly concern France and Belgium.</p> <p>These receivables are determined on the basis of a method that takes into account an estimate of customers' consumption based on the previous bill, or the last metering not yet billed, in line with the volume of energy allocated by grid managers, using measurement and modeling tools developed by your Group.</p> <p>The volumes are measured at the average energy price, which takes account of the category of customers and the age of the delivered unbilled energy in the meter.</p> <p>Considering the amount of revenue at stake and the sensitivity of the estimates to assumptions regarding volumes and the average energy price, we considered the estimate of the portion of un-metered revenue at the year-end to be a key audit matter.</p>	<p>Our work, both in France and in Belgium, mainly consisted in:</p> <ul style="list-style-type: none"> – considering the internal control procedures implemented by the Group about the billing process, and the process enabling the reliability of the estimate about the energy in the metered revenue; – evaluating the models used by the Group and investigating the modality of the computation for the estimated volumes; we include a specialist in our audit team. <p>We also:</p> <ul style="list-style-type: none"> – compared the information about the volumes delivered and determined by the Group with the metering data provided by the grid operators; – examined that the modalities of the computation for the average price of the metered power take account of its anteriority and the different kinds of customers; – analyzed the coherence of the volumes delivered with the Energy Balance (which corresponds to the physical reality of the operations of allocations (revenues, injections and stocks) and resources (purchases, withdrawals and stocks) of energy on the networks) prepared by the Group; – assessed the regular clearance of the metered energy during the period; – assessed the age of the delivered but unbilled metered energy at the year-end.

Specific verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the information pertaining to the Group presented in the Board of Director's management report.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements.

We attest that the consolidated non-financial performance statement provided for by Article L. 225-102-1 of the French Commercial Code (*Code de commerce*) is included in the information pertaining to the Group presented in the management report, it being specified that, in accordance with Article L. 823-10 of said Code, we have not verified the fairness of the information contained in this declaration or its consistency with the consolidated financial statements that has to be subject to a report by an independent third party.

Report on Other Legal and Regulatory Requirements

Appointment of the Statutory Auditors

We were appointed as statutory auditors of ENGIE by your Shareholders' Meeting held on May 19, 2008 for ERNST & YOUNG et Autres and on July 16, 2008 for Deloitte & Associés.

As of December 31, 2019, we were in their twelfth year of total uninterrupted engagement.

ERNST & YOUNG Audit was previously statutory auditor between 1995 and 2007.

Responsibilities of Management and those charged with Governance for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union for implementing internal control it deems necessary for the preparation of the consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Board of Directors.

Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Objective and audit approach

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are

considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As specified in Article L. 823-10-1 of the French Commercial Code (*Code de commerce*), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control;
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the consolidated financial statements;
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein.
- Evaluates the overall presentation of the financial statements and whether the consolidated financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities of the Group to express an opinion on the consolidated financial statements. Is responsible for the direction, supervision and performance of the audit of the consolidated financial statements as well as for the audit opinion.

Report to the Audit Committee

We submit to the Audit Committee a report which includes, in particular, a description of the scope of the audit and the relating audit program implemented, as well as the results of our audit procedures. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters that we are required to describe in this report.

We also provide the Audit Committee with the declaration provided for in Article 6 of Regulation (EU) N° 537/2014, confirming our independence within the meaning of the rules applicable in

France such as they are set in particular by Articles L. 822-10 to L. 822-14 of the French Commercial Code (*Code de commerce*) and in the French Code of Ethics (*Code de déontologie*) for statutory auditors. When appropriate, we discuss with the Audit Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.

1 ENGIE 2020 RESULTS

ENGIE 2020 financial results

Progress at pace on new strategic direction towards accelerating the energy transition
Strong recovery from Q2 levels, with H2 organic performance similar to 2019

Business Highlights

- Major capital projects delivered with €4.0 billion growth Capex ⁽¹⁾
- Strong growth in Renewables with 3 GW commissioned and 2 GW acquired
- Sale of 29.9% shareholding in SUEZ completed
- Client Solutions and further strategic reviews launched towards Group simplification
- Employee consultation launched for potential creation of new leader in multi-technical services
- New ExCom announced
- Continued ESG progress, with commitment to finalize coal exit in Europe by 2025 and globally by 2027
- Decision to stop preparation works that would allow for the 20-year extension of two nuclear units beyond 2025
- Update on new strategic direction alongside Q1 results, on 18 May 2021

Financial performance

- 2020 NRIs in line with guidance, EBITDA and COI ⁽²⁾ above expectations
- Significant impact of COVID-19 in 2020 mainly on Client Solutions and Supply, with c. €1.2 billion total Group impact at COI level
- Negative FX impact of €0.3 billion at COI level, mainly due to BRL depreciation
- Net financial debt at €22.5 billion, down €3.5 billion versus last year, strong liquidity and strong investment grade rating maintained
- Impairment of nuclear assets, partially offset by capital gains on disposals, leading to NIgs of €-1.5 billion
- 2020 proposed dividend of €0.53 per share
- 2021 guidance ⁽³⁾: NRIs expected in the range of €2.3-2.5 billion

1.1 Key Financial figures at December 31, 2020

Net financial debt	22.5	25.9	-3.5 vs Dec. 31, 2019	-

(1) Organic variation: gross variation without scope and foreign exchange effect

(2) Cash flow from operations = Free cash flow before maintenance Capex.

(1) Net of DBSO (Develop, Build, Share and Operate) and of US tax equity proceeds

(2) New Current Operating Income (COI) definition excludes the non-recurring share in net income of equity method entities

(3) Main assumptions for these targets and indications: average weather in France for 2021, full pass through of supply costs in French regulated gas tariffs, no major regulatory or macro-economic changes, no change in Group accounting policies, market commodity prices as of 12/31/2020, average forex for 2021: €/£: 1.23; €/BRL: 6.27, up to 100 M€ dilution effect at the COI level from disposals not yet signed corresponding to approximately €2 billion reduction in net debt. Projections based on absence of stringent additional lockdown considered and gradual return to normal over 2021.

1.2 Financial targets

The forecasts for the financial year ended December 31, 2021, set forth below are based on data, assumptions and estimates considered to be reasonable by the Group at the date of issuance of this document.

These data and assumptions may evolve or be amended due to uncertainties related to the economic, financial, accounting, competitive, regulatory and tax environment or other factors that the Group may not be aware of at the date of registration of the management report. In addition, the fulfilment of forecasts requires the success of the Group's strategy. The Group therefore makes no commitment or warranty regarding the fulfilment of the forecasts set out in this section.

The forecasts presented below and the underlying assumptions, also been prepared in accordance with the provisions of Delegated Regulation (EU) No 2019/980 supplementing Regulation (EU) No 2017/1129 and the ESMA recommendations on forecasts.

The forecast presented below result from the budget and medium-term plan process as described in Note 13 to the consolidated financial statements at December 31, 2020; they have been prepared on a comparable basis with historical financial information and in accordance with the accounting methods applied to the Group's consolidated financial statements.

1.2.1. Assumptions

- strategy: confirmation and deepening of the Group ambition to establish ENGIE as a leading force in the energy and climate transition. The Group will focus on completing the strategic reviews underway to create value and re-allocate capital towards growth, particularly in Renewables, Networks, and Asset-based Client Solutions;
- sanitary conditions in line with those of Q4 2020, no stringent additional lockdown considered and gradual return to normal over 2021;
- disposals: COI dilution up to €100 million on top of impacts from already announced / closed disposals, corresponding to a € 2 billion net financial debt reduction;
- foreign exchange rates: 2021 average annual €/US Dollar and €/Brazilian real foreign exchange rates at 1.23 and 6.27 respectively;
- regulated tariffs in France Infrastructures:
 - distribution, transport and storage: tariffs as published by the CRE in January 2020,
 - regasification: tariffs as published by the CRE in January 2021;
- regulated gas and power tariffs in France: full pass through of supply costs;
- commodity prices: based on market conditions as of December, 2020 (80% of European outright power is hedged – captured prices: 46€/MWh);
- climate: normalized conditions in France (gas distribution and energy supply + normalized hydro production);
- recurring effective tax rate: 25%;
- employee benefit provisions discount rates: based on market conditions as of December 31, 2020, as disclosed in Note 20 to the consolidated financial statements at December;
- no significant accounting changes compared to 2020;
- no major regulatory and macro-economic changes compared to 2020.

1.2.2. 2021 Guidance

Overall financial performance in 2021 is expected to improve significantly after a COVID-19 impacted 2020, assuming no additional stringent lockdowns and a gradual easing of restrictions over 2021.

For 2021, ENGIE anticipates a Net Recurring Income group share in the range of €2.3 to 2.5 billion. This guidance is based on an indicative EBITDA range of €9.9 to 10.3 billion and a COI range of €5.2 to 5.6 billion.

Expectation by business line:

	Expected drivers for 2021 COI
Renewables	Growth in the US and France should benefit financial performance, partly offset by a lower contribution from rulings in Brazil relating to the recovery of past energy costs and a weaker BRL
Networks	Networks are expected to remain stable with the impact of the new, lower RAB remuneration rates in France offset by reversal of the warm temperature effect of 2020 and growth in Latin America
Client Solutions	Overall Client Solutions should demonstrate strong recovery from COVID-19, albeit with a relatively slower recovery for asset light activities, and benefit from y-o-y accretion from SUEZ and EV-Box disposals
Thermal	Expect normalization after a particularly strong 2020 performance in Europe
Supply	Expect strong recovery from COVID-19 and the reversal of the 2020 warm temperature effect. .
Nuclear	Much improved performance expected driven by better availability following LTO completions and higher achieved prices

Included within this guidance is an estimated impact that follows the extreme cold weather in Texas earlier this month. ENGIE is assessing the situation, which mainly affects Renewables and Supply activities. Overall ENGIE currently estimates a potential net negative impact at the Group COI and Net Recurring Income Group share levels of between €80 to 120 million.

Regarding disposals, ENGIE remains focused on executing at pace to simplify the Group; crystallize value and re-allocate capital towards strategic priorities. This guidance assumes disposals of around €2 billion with a related COI dilution of up to €0.1 billion, in addition to previously signed transactions such as the disposal of EVBox. With respect to investment, ENGIE expects to invest between €5.5 to 6.0 billion growth Capex, with over 90% in Renewables, Networks and Asset-based Client Solutions and €4.0 billion in maintenance including the funding of Belgian nuclear provisions Capex.

ENGIE remains committed to a strong investment grade rating and continues to target a leverage ratio of below or equal to 4.0x economic net debt to EBITDA over the long-term.

ENGIE will update the market on the implementation plan for its new strategic orientation and provide medium-term guidance on 18 May 2021.

1.3 Dividend proposed at top-end of payout ratio

The Board has reaffirmed the Group's dividend policy of NRIs payout ratio in the range of 65 to 75%.

For 2020, the Board has proposed a payout ratio of 75%, at the top end of the policy range. This translates to a dividend of €0.53 per share, which will be proposed for shareholder approval at AGM on the 20th of May.

1.4 Update on Belgian Nuclear Assets

Following the announcements of the Belgium government in Q4 2020, it has been decided to stop all the preparation works that would allow a 20-year extension of half of two units beyond 2025, as it seems unlikely that such an extension can take place given the technical and regulatory constraints. This change in lifetime assumption as well as changes in the commodity price scenario have led to an impairment of €2.9 billion for nuclear assets, which have been accounted as non-recurring items in the 2020 P&L.

ENGIE remains committed to Belgium and to contributing to the country's security of supply. Alongside renewables, the Group is also developing projects of up to 3 GW of gas-fired power plants. These projects could participate in the Belgian Capacity Remuneration Market through auctions in the second half of this year, once approved by the European authorities

1.5 Progress at pace on new strategic orientation

Following the announcement in July of a new strategic orientation to simplify the Group and accelerate growth in Renewables and Infrastructure assets, ENGIE has delivered progress at pace despite the challenging backdrop.

Progress on Group simplification and sharper strategic focus with disposal of SUEZ, launch of strategic reviews and rationalization

The disposal of 29.9% shareholding in SUEZ for €3.4 billion was completed in October, and ENGIE launched strategic reviews of a significant part of Client Solutions activities, GTT and ENGIE EPS.

In addition, ENGIE also progressed on geographic rationalization and strengthening its position in key countries. An example of this is the acquisition of an additional 7% shareholding in ENGIE Energia Chile, thereby reducing the level of minority holdings.

A strategic review of part of Client Solutions was launched towards the potential creation of a new leader in multi-technical services, which would benefit from scale and strong growth prospects. In February 2021, the employee consultation related to the proposed organization design for the new entity was launched. This consultation is expected to conclude by the end of the second quarter of 2021. The Group will consider next steps and review future ownership options for the potential new entity, in the second half of this year. ENGIE will consider all options to maximize value and will act in the interests of all stakeholders.

A new Executive Committee and simplified business organization

In January, the appointment of new Executive Committee (ExCom) was announced reflecting the intention to implement a simplified business organization focused on four businesses: Renewables, Networks, Client Solutions and Thermal & Supply. Along with the ExCom members responsible for functional activities and specific projects, the new leadership team is engaged in executing ENGIE's new strategic direction and enhancing the Group's performance culture.

1.6 Continued operational delivery and €4 billion growth investment, despite challenging backdrop

Operationally, the Group continuously adapted processes to ensure delivery of essential services, while maintaining high health and safety standards. Overall Capex amounted to €7.7 billion in 2020, including €4.0 billion of growth investments, €2.4 billion of maintenance Capex and €1.3 billion of nuclear funding.

See section 4 "Change in net financial debt" of this management report for more details.

1.7 Delivering on ESG goals, commitment to exit coal in Europe by 2025 and globally by 2027

Carbon neutrality is at the heart of ENGIE's purpose and central to its strategic direction.

In 2020, greenhouse gas emissions were reduced by 9% to 68 million tons from power generation benefitting mainly from the disposal of coal plants in Western Europe. ENGIE has today announced the commitment to exit all coal assets in Europe by 2025 and globally by 2027 including coal generation for DHC networks.

As a reminder, coal represents 4 GW of ENGIE's 101 GW centralized power generation portfolio.

ENGIE also increased the share of renewables in its portfolio to 31% in 2020 from 28% at the end of 2019 with the addition of 5 GW of renewables.

On gender diversity, there was a small increase in the number of women in the management and ENGIE had 24% women in management at the end of 2020.

1.8 Operational and financial overview

The Group's activities across Renewables, Networks, Thermal, Nuclear and Other activities demonstrated resilience, however, primarily due to the impacts experienced in H1, ENGIE's results for 2020 were down significantly with an estimated COI impact of c. €1.2 billion from COVID-19. More than 75% of this effect related to Client Solutions and Supply. In addition, warm temperature in France impacted Networks and Supply with a total negative COI impact of €160 million. The impact of foreign exchange was a total negative effect of €293 million, mainly driven by the depreciation of the Brazilian Real (with an average EUR/BRL rate of 5.90 in 2020 vs. 4.42 in 2019, representing a 34% depreciation). Net negative scope effect of €76 million mainly reflects the disposals of Glow in March 2019 and 29.9% shareholding in SUEZ in October 2020, partly offset by the acquisition, alongside with Caisse de Dépôt et Placement du Québec, of 90% of TAG in June 2019 and the remaining 10% in July 2020, together with various acquisitions in Renewables (like Renvico in Italy and in France) as well as in Client Solution (mainly Conti in the US and Powerlines in Europe).

Net recurring income Group share was at the lower end of the guidance range mainly due to higher contributions from entities with minorities (particularly in Latin America) and higher financial costs notably due to inflation and foreign exchange. These results also reflect negative tax effects and the fourth quarter dilution following the disposal of 29.9% shareholding in SUEZ.

1.8.1. COI contribution by reportable segment

COI contribution by reportable segment is presented hereunder and detailed in section 2 "Business trends" of this management report.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
France	2,229	2,862	-22.1%	-22.2%
<i>France excluding Infrastructures</i>	620	905	-31.5%	-32.0%
<i>France Infrastructures</i>	1,609	1,957	-17.8%	-17.8%
Rest of Europe	648	707	-8.3%	-9.9%
Latin America	1,542	1,696	-9.0%	+2.9%
USA & Canada	124	155	-20.3%	-6.3%
Middle East, Asia & Africa	518	619	-16.4%	+0.2%
Others	(483)	(221)		
TOTAL	4,578	5,819	-21.3%	-16.4%

1.8.2. COI contribution by Business line

COI contribution by Business line is as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Client Solutions	459	1,082	-57.5%	-57.6%
Networks	2,063	2,344	-12.0%	-14.0%
Renewables	1,070	1,195	-10.4%	+10.8%
Thermal	1,209	1,320	-8.4%	+1.4%
Nuclear	(111)	(314)	+64.7%	+64.7%
Supply	112	345	-67.7%	-65.5%
Others	(224)	(154)	-45.8%	-37.5%
TOTAL	4,578	5,819	-21.3%	-16.4%

Estimated COVID-19 impacts by Business Lines are as follows:

<i>In billions of euros</i>	Estimates at COI level	Nature
Client Solutions	(0.60)	Loss of revenues / contracts, bad debts, specific purchases
Networks	(0.07)	Lower volumes, lower capitalized costs, specific purchases
Renewables	(0.05)	Lower volumes dispatched
Thermal	(0.04)	Lower demand
Nuclear	(0.06)	Adjusted maintenance operations
Supply	(0.29)	Lower demand, unwinding of hedges, bad debts, lower B2C services
Others	(0.07)	Credit losses
TOTAL	(1.18)	Net of savings / action plans

These estimates have been prepared in accordance with a standard guidance applied across businesses under a dedicated oversight process (losses of revenues being inherently subject to more judgement than the identification of specific costs incurred), considering operating items only and are presented net of savings and mitigating management action plans. By definition these estimates exclude foreign exchange and commodity price effects incurred in the Group's various businesses, whether positive or negative.

1.8.2.1. Renewables

Renewables delivered +11% organic growth.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
EBITDA	1,559	1,724	-9.6%	+8.7%
COI	1,070	1,195	-10.4%	+10.8%
CAPEX	1,633	2,475	-34.0%	-
DBSO margins (COI contribution) ⁽¹⁾	101.0	189.0	-46.6%	-
Operational KPIs				
Commissioning (GW at 100%)	3.0	3.0	-	-

Renewable COI amounted to €1,070 million, up 11% on an organic basis. This organic growth was driven by: the positive effect from the "GFOM" ruling in Brazil (corresponding to the recovery of past energy costs, following the agreement on renegotiation of hydrological risk, which was finalised at the end of 2020) for approximately €165 million; improved prices for hydro power production in France; higher wind production mainly due to commissioning of new projects and the first effects of the tax equity financing signed in the US in Spring 2020. This organic growth was partly offset by lower DBSO margins and unfavourable energy allocation for hydro in Brazil.

Despite a challenging backdrop, ENGIE repeated the strong operational growth performance achieved in 2019 with the commissioning of 3 GW of renewable capacity in 2020. In addition, the Group also acquired 2 GW of operating assets in Europe: 1.7 GW hydro in Portugal, together with Crédit Agricole Assurances and Mirova, and 0.3 GW wind in Italy and France.

In the last two years, ENGIE's renewable capacity at 100% grew by 32%, mainly thanks to 6.0 GW of capacity commissioned and 2.1 GW acquired, reaching 31.1 GW at the end of 2020. Through renewable energy development, ENGIE provides its public and private customers with renewable energy supply under optimized contractual and financial arrangements, benefitting from the Group's long-term expertise in energy trading. The Group has further strengthened its positioning in the rapidly growing market of long-term corporate renewable power purchase agreements ("Green Corporate PPAs") with more than 1.5 GW of contracts signed in 2020.

With a relatively young portfolio of wind and solar assets (average age of 5 years) benefitting from long-term contracts (average residual duration of 15 years) that provide visibility of earnings, Renewables represent a key long-term growth engine for the Group.

3 GW of Renewables are currently under construction for commissioning in 2021 and ENGIE is on track to achieve its 2019 target of adding 9 GW of new capacity in three years by the end of 2021.

ENGIE and EDP Renováveis finalized the creation of Ocean Winds, a joint venture in the floating and fixed offshore wind energy sector equally. Ocean Winds will act as the exclusive investment vehicle of each partner to capture offshore wind opportunities around the world and aims to become a top five offshore global operator by combining the development potential of both partners. Since its creation, the company already commissioned the first 0.2 GW tranche of a fixed offshore wind farm in Belgium and WindFloat Atlantic, a 25 MW floating wind farm in Portugal. The latter is the world's first semi-submersible floating wind farm and constitutes an important achievement for the sector as floating wind technology contributes to the diversification of energy sources and provides access to untapped marine areas.

ENGIE announced the signing of an agreement to sell 49% of its equity interest in a 2.3 GW US renewables portfolio to Hannon Armstrong, a leading investor in climate change solutions. ENGIE will retain a controlling share in the portfolio and continue to manage the assets. When commissioned, this 2.3 GW portfolio, will comprise 1.8 GW onshore wind and 0.5 GW solar photovoltaic projects. ENGIE has secured nearly USD 2 billion of tax equity commitments for this portfolio. Tax equity financing is the traditional structure used in the US to support the development of renewable projects. This tax equity financing – the largest ever in the US – demonstrates ENGIE's successful development in this market.

ENGIE is also developing projects to drive the long-term energy transition: in early January 2021, ENGIE and Total signed a partnership to develop France's largest site for the production of green hydrogen from 100% renewable electricity. This partnership is one of many green hydrogen projects ENGIE is currently developing.

1.8.2.2. Networks

Networks mainly impacted by warmer temperature and higher D&A in France; international COI up significantly.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
EBITDA	3,850	4,026	+4.4%	-5.3%
COI	2,063	2,344	+12.0%	-14.0%
CAPEX	2,502	344	+27.4%	-
Operational KPIs				
Temperature effect (COI in millions of euros)	(135)	(36)	-99	-
Smart meters (m)	6.9	4.9	-	-
COVID-19 impacts (COI in billion of euros)	0.07	-	-	-

Networks COI at €2,063 million was down 14% on an organic basis. In France, performance was impacted by unusually mild temperature in H1 and by the negative effect of COVID-19 on distributed volumes, partly offset by lower levels of expenditure during lockdown. Higher D&A due to accelerated amortization of some gas distribution assets in France, which is value neutral over time as it is integrated in the regulated revenue, the non-reiteration of a positive internal Q4 2019 one-off as well as the first effects of the lower Regulated Asset Base (RAB) remuneration rate also contributed to the lower COI for French Networks. Of these impacts, negative volume effects will be recovered in the medium-term under the clawback accounts mechanism.

In Latin America, performance benefitted from higher contributions from TAG and from the two power transmission lines currently under construction in Brazil. In Europe (excluding France) and Asia, Networks faced some headwinds related to price and temperature effects.

Overall, the COVID-19 impact was limited and mainly focused on distribution activities, especially on French Networks.

With a RAB of just over €28 billion, ENGIE is one of the largest gas network operators in Europe, and has a growing networks business in Latin America. ENGIE maintained strong operational performance in 2020 with high levels of network safety and reliability in France and achieved high customer satisfaction rates of 91% for French gas distribution. Also in France, in line with the pick-up in activity levels, gas smart meter installation resumed with the installation of 2.0 million units in 2020 resulting in a total of 6.9 million meters installed at the end of 2020.

The development of renewable gases is a major area of focus for ENGIE. The Group sees a critical role of gas in enabling an affordable and smooth energy transition through the continued use of natural gas, and progressive increase in the use of renewable gases such as biomethane and hydrogen. For example, last year 91 additional biomethane production units

were connected to French gas grids, and over 85% of these were connected to GRDF. Altogether these units can contribute to a yearly production of up to 3.9TWh, equating to the annual gas consumption for heating approximately 1 million new-build homes in France. ENGIE has also started to adapt the existing gas transport networks by commissioning three 'reverse-flow' installations in 2020, that allow biomethane to travel from the distribution grid to gas storage units.

In Latin America, following the acquisition of 90% of TAG in June 2019, ENGIE successfully acquired the remaining 10% in July 2020 with its partner Caisse de Dépôt et Placement du Québec. In addition, ENGIE is also constructing two major electricity transmission lines in Brazil: 1,000 kilometres Gralha Azul project and the 1,800 kilometres Novo Estado project. Both projects include the construction of new substations and upgrades to existing substations and are expected to be commissioned in the second half of 2021.

1.8.2.3. Client Solutions

Client Solutions showed a strong recovery in H2 after a COVID-19 impacted H1.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	20,101	20,957	-4.1%	-6.4%
COI	459	1,082	-57.6%	-57.6%
CAPEX	992	1,624	-38.8%	-
Operational KPIs				
Projects backlog (in billion of euros)	12	11	+5.4%	-
DHC - Net installed capacity (GW)	15.2	13.9	+9.4%	-
COVID-19 impacts (COI in billion of euros)	0.60	-	-	-

Client Solutions had a relatively lower impact at the revenue level compared to COI, which was down significantly, mainly as a result of the COVID-19 crisis with a total estimated impact of c. €600 million for 2020.

A strong impact of COVID-19 was experienced in the Asset-light business model primarily in Europe and the US, mostly driven by loss of revenues and specific additional purchases. Cost-cutting and variabilising measures resulted in total Opex reduction of c. €0.3 billion.

COVID-19 impacted SUEZ results, and the results also reflect the sale of 29.9% shareholding in SUEZ at the beginning of October 2020.

Despite unfavourable temperature, District Heating and Cooling (DHC) and on-site generation activities remained resilient.

Notably, performance in H2 2020 showed a recovery with results similar to H2 2019 excluding the scope-out effect of SUEZ in Q4 2020. The impact of the COVID-19 restrictions was much lower in the second half, as restrictions were eased in France and activity levels were higher. In addition, activities also continued to benefit from cost actions launched in Q2.

Operationally, project backlog in Asset-light activities is higher than end of 2019 with postponed work remaining in the order book and benefitting also from the contribution of acquisitions. This positive KPI evolution provides visibility for 2021 however subject to COVID-19 restrictions.

Driven by decarbonization targets and growth in energy efficiency solutions, ENGIE sees a strong growth potential for heating and cooling networks, on-site generation and green mobility among other Asset-based Client Solutions. The Group already has leadership positions in all of these activities. In DHC networks, ENGIE is an international leader with 100 cooling networks with total installed capacity of 6.1 GW, and 300 heating networks of various size that distribute 19TWh per year.

ENGIE is also growing fast in green mobility with more than 50,000 EV charging points operated.

ENGIE announced in December 2020, that EVBox Group, a start-up acquired in 2017 and now a leading global provider of smart charging solutions for electric vehicles, would be listed on the NYSE in the coming weeks following close of a SPAC (Special Purpose Acquisition Company) transaction. This transaction would combine cash and equity. ENGIE would

retain more than 40% ownership of EVBox. ENGIE expects that the transaction will result in a net debt decrease of ca €0.2 billion and EVBox no longer being consolidated in its accounts, with ENGIE's remaining shareholding accounted by the equity method.

1.8.2.4. Thermal

Thermal delivered 1% organic growth despite material positive one-offs in 2019.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
EBITDA	1,646	1,763	-6.6%	+2.3%
COI	1,209	1,320	-8.4%	+1.4%

Thermal COI amounted to €1,209 million, up 1% organically despite the non-repeat of favourable operational one-offs in 2019, mainly liquidated damages received in Brazil and Chile. Thermal COI saw limited COVID-19 impact of c. €-40 million, mainly through lower demand in Chile and Peru. These negative impacts were more than offset by a better performance of the European merchant gas fleet driven by the higher contribution of ancillaries, mainly in Italy, as well as to higher spreads captured throughout Europe. Thermal COI also benefitted from the higher performance of the contracted generation activities in the Middle East, from the full-year impact of the commissioning of Pampa Sul in Brazil in June 2019 and from higher volumes dispatched at higher margins in Brazil.

Overall, the Thermal business showed strong resilience, as a result of its highly contracted portfolio outside Europe and the optionality value of its merchant fleet in Europe.

In August and November 2020, the de-mothballing of two CCGT units in the Netherlands for 0.7 GW showed the Thermal fleet's flexibility to take advantage of market opportunities.

In June 2020, the sale of a minority stake in New York's Astoria Energy merchant gas facilities was finalized.

In March 2020, the commissioning of Fadhili's 1.5 GW contracted gas power plant, a cogeneration plant in Saudi Arabia in which ENGIE has a 40% equity ownership, reaffirmed ENGIE's leading position as an independent power producer in the Middle East.

1.8.2.5. Supply

Supply performance impacted by COVID-19 and warm temperature.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
EBITDA	439	638	-31.2%	-
COI	112	345	+67.7%	+65.5%
French temperature effect (COI in million of euros)	(84)	(24)	(61.0)	-
COVID-19 impacts (COI in billion of euros)	0.29	-	-	-

Supply COI significantly decreased by €-233 million to €112 million. Financial performance was highly affected by COVID-19 (net c. €290 million) in Europe and in the US due to lower gas and electricity consumption during the lockdown periods (primarily B2B). The sharp and unexpected reduction in demand led to a negative volume effect, as related margins had not been booked, together with a negative price effect as power and gas hedged positions had to be unwound in a lower price environment. B2C services provided were also lower during the lockdowns and, as a result of the economic context, level of bad debts increased. Warm temperature in France and Benelux also contributed to the strong decrease.

These effects were only partially offset by various one-offs, dedicated COVID-19 related mitigation actions, better results in Romania and higher B2C gas margins in France.

Operationally, B2C power supply contract base grew by 186,000 in 2020, which contributed to the stability of the global B2C contract base at the level of 24.4 million contracts.

1.8.2.6. Nuclear

Nuclear – improved COI contribution mainly driven by better prices.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
EBITDA	415	192	+111.6%	+111.6%
COI	(111)	(314)	+64.7%	+64.7%
CAPEX	1,740.0	636.0	-	-
Operational KPIs				
Output (Belgium + France, @ share, TWh)	36.5	41.7	-5,2 TWh	-
Availability (Belgium at 100%)	+62,6%	+79,4%	-1680 bps	-

Nuclear COI reached €-111 million, up 65% organically benefitting mainly from a positive price effect and from lower operational expenditures. These positive effects were partly offset by lower volumes due to the last planned lifetime extension outages of Doel 1, Doel 2 and Tihange 1, and by higher depreciation. Nuclear COI saw COVID-19 impact of c. €-60 million.

1.8.2.7. Others

Others COI of €-224 million was €-70 million lower than in 2019. Year-on-year comparison was negatively impacted by the positive effect of the partial sale of a gas supply contract in 2019 and by the COVID-19 impact due to credit losses for GEM (Global Energy Management). These headwinds were partially offset by GEM's good performance in a context of high market volatility mainly in H1 and by the higher contribution of GTT thanks to a strong past order intake.

1.9 Strong Financial Position and Liquidity

ENGIE has maintained a strong liquidity position with €23.0 billion of liquidity (net cash + undrawn credit facilities – outstanding commercial paper) including €13.3 billion of cash, as of end of December 2020.

ENGIE has strengthened its leadership position in the green bond market having issued having issued €2.4 billion green bonds in 2020, for a total of €12 billion green bonds issued since 2014. With dynamic management of hybrids, ENGIE has an average outstanding amount of €3.9 billion and a current total coupon of €100 million per year, which is down c. -28% since 2017.

Net financial debt is presented in section 4 “Change in net financial debt” of this management report for more details.

Rating

ENGIE maintained a strong investment grade rating:

- On November 9th Moody's lowered its long-term rating to Baa1 with a stable outlook.
- On September 24th Fitch affirmed its long-term rating of A and changed the outlook from stable to negative.
- On April 24th S&P lowered its long-term rating to BBB+ and its short-term rating to A-2.

2 BUSINESS TRENDS

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	55,751	60,058	-7.2%	-5.7%
EBITDA	9,276	10,366	-10.5%	-6.5%
Net depreciation and amortization/Other	(4,698)	(4,547)		
CURRENT OPERATING INCOME (COI)	4,578	5,819	-21.3%	-16.4%

REVENUE TRENDS

Revenues amounted to €55.8 billion, down 7.2% on a gross basis and 5.7% on an organic basis.

The reported revenue decrease includes a negative foreign exchange effect, mainly due to the depreciation of the Brazilian real against the euro and to a lesser extent to the depreciation of the US dollar, Mexican peso and Argentinian peso against the euro only partly offset by an aggregate positive scope effect. Changes in the scope of consolidation included various acquisitions in Client Solutions, primarily in Europe with Powerlines and in the US with Conti, partly offset by the disposals of the stake in Glow in Thailand in March 2019, the B2C Supply activities in the UK at the beginning of 2020 and the coal assets in Germany and the Netherlands.

The organic revenue decrease was primarily driven by the COVID-19 crisis impacting mainly Supply and Client Solutions activities across all geographies. Mild temperature also weighed on revenues from Supply across Europe and in Australia, from French gas distribution and to a lesser extent from Client Solutions' Asset-based activities.

These impacts were only partly offset by higher revenues in Brazil thanks to construction revenues for the Gralha Azul and Novo Estado power transmission lines and the first full year of operation of the Pampa Sul thermal plant. In France, volume and price effects on power sales also partly offset the decrease in revenues.

In millions of euros

EBITDA TRENDS

EBITDA came in at €9.3 billion, down 10.5% on a gross basis and 6.5% on an organic basis.

These gross and organic changes are overall in line with the decrease in current operating income, except for the increase in depreciation/amortization attributable to (i) the increase in nuclear dismantling assets resulting from the triennial review of Belgian nuclear provisions that took place in late 2019, (ii) LTO works of Belgian first generation reactors and (iii) the amortization certain gas distribution assets in France, none of which are taken into account at EBITDA level.

In addition, the Lean 2021 plan continued to deliver results at EBITDA and COI levels, and is currently slightly exceeding objectives.

2.1 France

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	20,295	21,423	-5.3%	-6.7%
Total revenues (incl. intra-group transactions)	21,580	22,736	-5.1%	
EBITDA	4,680	5,212	-10.2%	-10.1%
Net depreciation and amortization/Other	(2,451)	(2,350)		
CURRENT OPERATING INCOME (COI)	2,229	2,862	-22.1%	-22.2%

2.1.1. France excluding Infrastructures

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	14,856	15,854	-6.3%	-8.2%
EBITDA	1,391	1,673	-16.9%	-16.9%
Net depreciation and amortization/Other	(771)	(768)		
CURRENT OPERATING INCOME (COI)	620	905	-31.5%	-32.0%

Volumes sold

<i>In TWh</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)
Gas sales	74.4	83.2	-10.6%
Electricity sales	39.6	38.8	+2.1%

France climatic adjustment

<i>In TWh</i>	Dec. 31, 2020	Dec. 31, 2019	Total change in TWh
Climate adjustment volumes (negative figure = warm climate, positive figure = cold climate)	(6.7)	(1.9)	(4.8)

Revenues for the France excluding Infrastructures segment amounted to €14,856 million, down 6.3% on a reported basis and 8.2% on an organic basis. The organic drop was driven by Client Solutions, which was affected by the COVID-19 crisis, climate and prices, and by Supply, with negative volume and price effects on gas sales, which were impacted by warm temperatures in the first half of the year. This decrease was only partially offset by positive volume and price effects on power sales. However, 2019 year-end acquisitions in Client Solutions (in particular Powerlines and Pierre Guerin), and the good performance of Renewables partly offset the organic decrease.

Gas sale volumes in the BtoC segment decreased by 8.8 TWh compared to 2019, of which 4.8 TWh related to a negative temperature effect and the remaining decrease due to the end of the commercialization of regulated tariff contracts. The BtoC power portfolio recorded a sales increase of +0.9 TWh in line with growth in the client portfolio. Power volumes sold by France Renewables also increased by +0.1 TWh.

Current operating income came in at €620 million, down 31.5% on a reported basis and 32.0% on an organic basis. The organic decrease was driven by the COVID-19 crisis, lower sell down margins in Renewables, and a warm temperature effect in the Supply and Client Solutions businesses. These decreases were partly offset by higher wind and higher hydro prices.

2.1.2. France Infrastructures

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	5,439	5,569	-2.3%	-2.4%
Total revenues (incl. intra-group transactions)	6,359	6,548	-2.9%	
EBITDA	3,290	3,539	-7.0%	-7.0%
Net depreciation and amortization/Other	(1,681)	(1,582)		
CURRENT OPERATING INCOME (COI)	1,609	1,957	-17.8%	-17.8%

Revenues for the France Infrastructures segment amounted to €5,439 million, down 2.3% on a reported basis. The decrease was driven by distribution activities, which were mainly impacted by record high winter temperatures, the adverse impact of the COVID-19 crisis on volumes and civil works revenues, as well as by lower revenues in storage activities impacted by the new ATS2 tariff since April 1 in France. These adverse impacts were partly offset by tariff changes in transmission and distribution activities in 2019 and 2020, and by higher volumes in regasification.

Current operating income for the period came in at €1,609 million, down 17.8% on a reported basis. Besides the decrease in revenues mentioned above, the change in Infrastructures COI was impacted by accelerated amortization in distribution and 2019 year-end positive one-offs. These adverse impacts were partly offset by lower energy expenses.

2.2 Rest of Europe

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	15,655	17,267	-9.3%	-8.2%
EBITDA	1,750	1,757	-0.4%	-0.5%
Net depreciation and amortization/Other	(1,102)	(1,050)		
CURRENT OPERATING INCOME (COI)	648	707	-8.3%	-9.9%

Revenues for the Rest of Europe segment amounted to €15,655 million, down 9.3% on a reported basis. This decrease was mainly driven by Supply, Client Solutions and Thermal. Taking into account the negative impact arising from the disposal of the BtoC supply business in the United Kingdom at the beginning of the year and of coal assets in Germany and in the Netherlands, revenues were down organically by 8.2%.

Supply activities decreased organically, impacted by the negative volume effects due to unfavorable climatic conditions and lower consumption related to the COVID-19 crisis. Client Solutions' asset-light activities were significantly affected by the business contraction resulting from the COVID-19 crisis, in particular during the first half of the year, with the main impacts being felt in Belgium and the United Kingdom.

Current operating income amounted to €648 million. The reported decrease of €59 million was mainly driven by Client Solutions and Supply, partly offset by Nuclear and Thermal activities.

Client Solutions reported a significant decrease in the contribution from asset-light activities notably in the UK, Benelux and Italy, mainly as a result of the COVID-19 crisis. **Supply** activities were negatively impacted by the warm climate and the impact of the COVID-19 crisis which entailed a drop in consumption by BtoB and BtoC professionals clients, partly offset by a better performance by Supply in Romania. The **Networks'** contribution decreased in Romania with the negative climate effect, the impact of the COVID-19 crisis on volumes and a reduction in the distribution tariff. On the other hand, **Nuclear** activities benefited from a higher energy margin – mainly thanks to a positive price effect and a higher contribution from French Nuke, partly offset by lower volumes due to planned lifetime extension outages of Doel 1 and Doel 2 – , and from lower operating expenses, these impacts being partly offset by higher depreciation and amortization. **Thermal** activities were also up compared to 2019, despite the disposal of coal activities in 2019, thanks to a good performance in Italy and to higher spreads and ancillaries. **Renewable** activities also recorded good performances mainly driven by the contribution from the Renvico wind portfolio in Italy acquired at the beginning of the year.

2.3 Latin America

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	4,774	5,341	-10.6%	+4.4%
EBITDA	2,014	2,221	-9.3%	+2.8%
Net depreciation and amortization/Other	(472)	(525)		
CURRENT OPERATING INCOME (COI)	1,542	1,696	-9.0%	+2.9%

Revenues for the Latin America segment totaled €4,774 million, down 10.6% on a reported basis and up +4.4% organically. The reported decrease includes the negative foreign exchange effects in Brazil with the Brazilian Real depreciating against the Euro by 29%, and negative foreign exchange effects in the rest of Latin America (depreciation of the USD, ARS and MXN). In Brazil, revenues grew organically thanks to the construction ramp up of the Gralha Azul and Novo Estado Power Transmission Lines (Networks) and thanks to Pampa Sul's first full year of operation (Thermal). In Latin America, revenues increased organically, mainly due to lower activity following the impact of the COVID-19 crisis in Thermal and in Asset Light services in all countries. Revenues were also negatively impacted by lower commodities prices in Thermal in Chile, lower PPA prices in Peru and lower prices in BtoB gas supply (with no impact on COI) in Mexico.

Current operating income totaled €1,542 million, down 9.0% on a reported basis and up 2.9% on an organic basis. The reported decrease includes the strong negative foreign exchange impact in Brazil and to a lesser extent in Latin America, partially offset by the positive scope impact of the acquisition of our gas transportation network in Brazil (TAG) in June 2019. Organically, Brazil reported a significant increase (+28.9%), mainly thanks to Renewables with the contribution of the "GFOM" compensation gain (compensation for hydro generation relocation costs), and Networks, which benefited from a better performance by TAG and from the construction margin on Power Transmission Lines. Thermal was relatively stable in Brazil, 2019 one-offs (Pampa Sul Liquidated Damages) being offset by higher coal generation and Pampa Sul (first full year of operation). Besides Brazil, the organic decrease was mainly due to Chile, with a positive one-off in 2019 (IEM plant delay Liquidated Damages) offsetting higher 2020 volumes, to lower power demand and PPA prices in Peru, and to lower gas volumes distributed in Argentina and Mexico

2.4 USA & Canada

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	4,229	4,457	-5.1%	-6.2%
EBITDA	245	269	-8.8%	+2.8%
Net depreciation and amortization/Other	(121)	(113)		
CURRENT OPERATING INCOME (COI)	124	155	-20.3%	-6.3%

Revenues for the USA & Canada segment reached €4,229 million, down 5.1% on a reported basis and 6.2% organically. The reported decrease was mainly driven by the expiration of a legacy LNG contract in 2019, the COVID-19 crisis impacting Client Solutions and Supply activities, and negative foreign exchange effects. This drop was partly offset by higher revenues from US universities and Renewable projects which are accelerating and by the positive scope-in effects in 2020 relating to recent acquisitions in Client Solutions, in particular Conti.

Current operating income amounted to €124 million, down 20.3% on a reported basis and 6.3% on an organic basis. The reported decrease was mainly due to the impact of the COVID-19 crisis, in particular in Supply activities and the end of the LNG contract mentioned above. These effects were partly offset by the contributions of several Renewables projects commissioned since last year, net of the 2019 DBSO disposal and an improvement in Thermal activities.

2.5 Middle East, Asia & Africa

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	2,382	2,937	-18.9%	-8.6%
EBITDA	600	725	-17.2%	-3.0%
Net depreciation and amortization/Other	(82)	(106)		
CURRENT OPERATING INCOME (COI)	518	619	-16.4%	+0.2%

Revenues for the Middle East, Africa & Asia segment totaled €2,382 million, down 18.9% on a reported basis and 8.6% organically. This reported decrease was mainly due to the disposal of Glow (Thailand) in March 2019, negative foreign exchange effects, and an organic decrease. Organically, Thermal decreased mainly due to the mothballing of the Baymina power plant in Turkey and price effects in Asia-Pacific. Client Solutions and Supply were both impacted by the COVID-19 crisis in Australia in addition to mild weather negatively affecting Supply.

Electricity sales decreased from 16.6 TWh to 14.7 TWh with the reduced volumes mostly due to the mothballing of Baymina power plant.

Current operating income totaled €518 million, down 16.4% on a reported basis and up 0.2% organically. The reported decrease included the negative impact of the disposal of Glow. COI remained stable organically thanks to Client Solutions (especially Tabreed, district heating and cooling supplier in the Middle East). This positive effect was offset by Supply activities in Africa and Australia (facing the COVID-19 crisis) and lower results in Networks in Thailand in relation to the oil price decrease. The stable overall performance of Thermal activities, with a downturn in Asia-Pacific, mainly at Pelican Point (lower prices and provisions), was fully offset by the good performance of our Gulf thermal portfolio in the Middle East.

2.6 Others

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)	% change (organic basis)
Revenues	8,417	8,633	-2.5%	-2.7%
EBITDA	(14)	182	-107.5%	-107.2%
Net depreciation and amortization/Other	(469)	(404)		
CURRENT OPERATING INCOME/(LOSS) (COI)	(483)	(221)	-118.4%	-78.2%

The Others reportable segment includes (i) GEM, (ii) Entreprises & Collectivités (E&C) (iii) Tractebel, (iv) GTT, (v) new businesses, as well as (vi) the Group's holding and corporate activities, which include the entities centralizing the Group's financing requirements and the contribution of SUEZ (until early October 2020) and Touat B.V. (associates).

Revenues for the Others reportable segment amounted to €8,417 million. The 2.5% reported decrease compared to last year was mainly driven by GEM with the reduction in gas prices in market operations as well as the positive one-off in 2019 following the partial sale of a gas supply contract to Shell. Lower sales in E&C due to the COVID-19 crisis and to a mild climate were offset to a large extent by the growth of the portfolio. These impacts were partly offset by higher revenues from GTT resulting from historic growth in the order book intake.

Current operating loss amounted to €483 million, representing a €262 million decrease compared to 2019. This decrease was mainly due the COVID-19 crisis impacting SUEZ and E&C, which was also impacted by a mild climate. GEM was impacted by the COVID-19 crisis, the impact being partly offset by the strong performance of market activities in the context of sharp volatility during the year (mainly in the first half). COI was also down for New Businesses and Tractebel. These negative impacts were partly offset by a stronger contribution from GTT.

3 OTHER INCOME STATEMENT ITEMS

The reconciliation between Current operating income (COI) and Net income/(loss) is presented below:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	% change (reported basis)
CURRENT OPERATING INCOME (COI)	4,578	5,819	-21.3%
(+) Mark-to-Market on commodity contracts other than trading instruments	199	(426)	
(+) Non-recurring share in net income of equity method entities	(137)	(93)	
Current operating income including operating MtM and share in net income of equity method entities	4,640	5,300	-12.4%
Impairment losses	(3,551)	(1,770)	
Restructuring costs	(343)	(218)	
Changes in scope of consolidation	1,640	1,604	
Other non-recurring items	(886)	(1,240)	
Income/(loss) from operating activities	1,501	3,676	-59.2%
Net financial income/(loss)	(1,678)	(1,387)	
Income tax benefit/(expense)	(715)	(640)	
NET INCOME/(LOSS)	(893)	1,649	-154.1%
Net recurring income/(loss) Group share	1,703	2,683	
Net income/(loss) Group share	(1,536)	984	
Non-controlling interests	644	664	

The reconciliation between Net recurring income/(loss) Group share and Net income/(loss) Group share is presented below:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Net recurring income/(loss) Group share	1,703	2,683
Impairment & Others	(4,736)	(2,659)
Restructuring costs	(343)	(218)
Changes in scope of consolidation	1,640	1,604
Mark-to-Market on commodity contracts other than trading instruments	199	(426)
Net income/(loss) Group share	(1,536)	984

Income from operating activities amounted to €1,501 million, representing a decrease compared with 2019, mainly due to (i) greater impairment losses, (ii) a deterioration in operating income, (iii) partially offset by lower other non-recurring items.

Income from operating activities was affected by:

- net impairment losses of €3,551 million (compared with €1,770 million in 2019), mainly relating to Belgian nuclear power assets (€2,860 million) due to the operating life of certain power plants not being extended beyond 2025 and updated price scenarios (see Note 9.1);
- restructuring costs of €343 million (compared with €218 million in 2019) (see Note 9.2);
- positive scope effects of €1,640 million, mainly relating to the disposal of 29.9% of ENGIE's interest in SUEZ (see Note 9.3);
- other non-recurring items for a negative €886 million, mainly relating to the initial one-off accounting impact of extending the trading management method launched by the GEM BU in 2017 to the rest of the Group's gas positions in Europe for a negative €726 million, as well as to the impacts of the review of the industrial site dismantling and rehabilitation provisions (see Note 9.4).

The **net financial loss** amounted to €1,678 million in 2020, compared with €1,387 million the previous year (see Note 10) despite a stable average cost of gross debt, due to a lower return on cash and unfavorable exchange rate effects.

The **income tax expense** for 2020 amounted to €715 million (versus €640 million in 2019). Adjusted for non-recurring items, the effective recurring tax rate was 32.5% in 2020, up on the 2019 rate of 28.2% mainly due to the revision of certain deferred tax positions following the updates to taxable income forecasts and regulatory developments in certain geographies. The overall effective tax rate decreased sharply in 2020 (a negative 98.1% versus a positive 35.8% in 2019), also impacted by the non-deductibility of most of the impairment losses recorded over the period and changes in tax risk provisions.

Net recurring income Group share amounted to €1.7 billion compared to €2.7 billion at 31 December 2019. This decrease was mainly due to the decline in current operating income and the increase of recurring financial charges as well as to the increase in the recurring effective tax rate from 28.2% to 32.5%.

Net income Group share amounted to a negative €1.5 billion, down €2.5 billion as a result of the decrease in net recurring income Group share, higher net impairment losses (of €3.6 billion in total) mainly relating to change in lifetime assumption for Belgian nuclear reactors and changes in the commodity price scenario for nuclear assets (€2.9 billion), and the extension of fair value accounting to an European gas contract and its related assets (€0.5 billion).

Net income relating non-controlling interests amounted to €644 million, (compared to €664 million in 2019) despite the sharp decrease in net income Group share, due to the relatively good performance of companies with non-controlling interests, particularly in South America.

4 CHANGES IN NET FINANCIAL DEBT

Net financial debt stood at €22.5 billion, down €3.5 billion compared with December 31, 2019. This decrease is mainly attributable to (i) cash flow from operations (€7.1 billion), (ii) the impacts of disposals during the period (€4.2 billion, primarily corresponding to the sale of part of the Group's interest in SUEZ SA for €3.4 billion, and of interests in Astoria 1 and 2 in the United States for €0.4 billion) and (iii) other items (€0.5 billion, mainly related to foreign exchange rates, partially offset by new leased right-of-use assets). These items were partially offset by (i) capital expenditure over the period (€7.7 billion⁽¹⁾), and (ii) dividends paid to non-controlling interests and movements in treasury stock (€0.6 billion). In 2020, ENGIE's dividend payment for the 2019 financial year (i.e. €1.9 billion) was cancelled.

Changes in net financial debt break down as follows:

In millions of euros

(1) Capital expenditure net of DBSO proceeds.

(2) Excluding DBSO proceeds.

At the end of December 2020, the net financial debt to EBITDA ratio amounted to 2.42, decreasing by 0.1x compared to the end of 2019. The average cost of gross debt was 2.38%, down 32bps compared to the end of 2019. This decrease is mainly explained by the positive effect induced by the deterioration of the exchange rate in Brazil and the lower debt

(1) Net of DBSO proceeds.

exposure in India, having led to a positive mix effect: the share of average centralised debt, which has a lower rate than the local debts, in the total average debt has increased.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Net financial debt	22,458	25,919
EBITDA	9,276	10,366
NET DEBT/EBITDA RATIO	2.42	2.50

At the end of December 2020, the net economic debt ⁽¹⁾ to EBITDA ratio stood at 4.03, stable compared to the end of 2019.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Economic net debt	37,420	41,078
EBITDA	9,276	10,366
ECONOMIC NET DEBT/EBITDA RATIO	4.03	3.96

4.1 Cash flow from operations (CFFO)

Cash flow from operations amounted to €7.1 billion, down €0.5 billion. This evolution resulted from the €-1.1 billion decrease in operating cash flow, partly offset by a positive variation in change in working capital requirements of €0.5 billion and by slightly lower net interests and tax paid. The positive variation in working capital requirements was mainly due to the variance in commodity related margin calls and financial derivatives for €0.9 billion, partly offset by a €-0.4 billion deterioration in operating working capital change notably due to an increase in Supply inventory partly compensated by a decrease in receivables.

(1) Economic net debt amounted to €37.4 billion at the end of December 2020, down €3.7 billion compared with the level at end of December 2019; it includes, in particular, nuclear provisions and post-employment benefits.

4.2 Net investments

Capital expenditure (CAPEX) amounted to €7,687 million, breaking down as follows by segment.

In millions of euros

Growth capital expenditure amounted to €4,0 billion, breaking down as follows by Business Line. Over 90% of growth investment was dedicated to Renewables, Networks and Asset-based Client Solutions activities in line with the new strategic direction announced in July.

(1) Net of disposals under DBSO operations, excluding Corporate, and Synatom reallocated to maintenance expenditure.

The **geography/Business Line matrix** for capital expenditure is presented hereunder:

<i>In millions of euros</i>	Client Solutions	Networks	Renewables	Thermal	Nuclear	Supply	Others	Dec. 31, 2020
France	384	1,743	247	-	-	123	-	2,496

Others	355	-	183	81	-	38	889	1,547
TOTAL CAPEX	1,621	3,446	2,475	517	636	458	889	10,042

Net investments amounted to €4,093 million and include:

- growth capital expenditure for €3,954 million (see above);
- gross maintenance capital expenditure amounting to €2,394 million;
- the €1,339 million increase in Synatom investments;
- new leased right-of-use assets recognized over the period (€584 million);
- changes in the scope of consolidation for the period relating to acquisitions and disposals of subsidiaries for €29 million; and
- proceeds from disposals representing an inflow of €4,148 million, mainly relating to the disposal of part of the Group's interest in SUEZ SA and of its interests in Astoria 1 and 2 in the United States.

4.3 Dividends and movements in treasury stock

Dividends and movements in treasury stock during the period amounted to €622 million (versus €2,522 million in 2019). This change is explained in particular by the cancellation of ENGIE's dividend payment for the 2019 fiscal year for €1.9 billion. Dividends and movements in treasury stock in 2020 include dividends paid by various subsidiaries to their non-controlling interests in an amount of €425 million and the payment of interest on hybrid debt for €187 million.

4.4 Net financial debt at December 31, 2020

Excluding amortized cost but including the impact of foreign currency derivatives, at December 31, 2020 a total of 81% of net financial debt was denominated in euros, 12% in US dollars and 9% in Brazilian real.

Including the impact of financial instruments, 98% of net financial debt is at fixed rates.

The average maturity of the Group's net financial debt is 12.0 years.

At December 31, 2020, the Group had total undrawn confirmed credit lines of €13.7 billion.

5 OTHER ITEMS IN THE STATEMENT OF FINANCIAL POSITION

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019	Net change
Non-current assets	93,095	99,297	(6,201)
Of which goodwill	15,943	18,665	(2,722)
Of which property, plant and equipment and intangible assets, net	57,085	58,996	(1,911)
Of which investments in equity method entities	6,760	9,216	(2,456)
Current assets	60,087	60,496	(409)
Of which assets classified as held for sale	1,292	468	823
Total equity	33,856	38,037	(4,181)
Provisions	27,073	25,115	1,958
Borrowings	37,939	38,544	(606)
Other liabilities	54,315	58,097	(3,781)
Of which liabilities directly associated with assets classified as held for sale	488	92	396

The carrying amount of **property, plant and equipment and intangible assets** was €57.1 billion, down €1.9 billion compared with December 31, 2019. This decrease was primarily the result of depreciation and amortization charges (€4.6 billion negative impact), translation adjustments (€2.2 billion negative impact, primarily attributed to the strong depreciation of the Brazilian real and the US dollar), impairment losses (€1.3 billion negative impact, primarily attributed to Belgian nuclear power assets), and the classification of renewable energy assets in India under “Assets classified as held for sale” (€0.6 billion negative impact), partially offset by acquisitions and development capital expenditure (€7.0 billion positive impact).

Goodwill decreased by €2.7 billion to €15.9 billion, mainly due to the recognition of impairment losses on Belgian nuclear power assets (see Note 13).

Investments in equity method entities decreased by €2.5 billion, primarily due to the disposal of a 29.9% stake in SUEZ.

Total equity amounted to €33.9 billion, a decrease of €4.2 billion compared with December 31, 2019. The decrease stemmed mainly from other comprehensive income (€3.0 billion negative impact, including a negative €2.1 billion of translation adjustments primarily attributed to the strong depreciation of the Brazilian real, a negative €1.6 billion of actuarial gains and losses, and a negative €0.4 billion corresponding to a decrease in the share of equity method entities in recyclable items, net of tax) and from net income for the period (€0.9 billion negative impact).

Provisions increased by €2.0 billion compared with December 31, 2019 to €27.1 billion. This increase stemmed mainly from actuarial losses on provisions for post-employment benefits and other long-term benefits (which added €1.5 billion to the provision amount) owing to the fall in discount rates over the period (see Note 20).

At December 31, 2020, assets and liabilities classified under “**Assets classified as held for sale**” and “**Liabilities directly associated with assets classified as held for sale**” mainly comprised renewable energy assets in India and Mexico and the Group’s interest in EV Charged BV (EVBox).

6 PARENT COMPANY FINANCIAL STATEMENTS

The figures provided below relate to the financial statements of ENGIE SA, prepared in accordance with French GAAP and applicable regulations.

Revenues for ENGIE SA in 2020 totaled €19,272 million, an increase compared to 2019 (€17,282 million), both on the gas and electricity markets.

The net operating loss amounted to €1,640 million in 2020, a deterioration of €709 million compared with a loss of €931 million in 2019. Energy margin increased by €205 million, thanks to lower supply costs and continued growth in the electricity business.

Net financial income amounted to €1,440 million, an increase of €248 million compared to 2019 due to higher dividends received and a decrease in the cost of net debt.

Non-recurring items represented a loss of €4,260 million, mainly comprising impairment of equity investments of which €5,186 million in impairment losses on Electrabel shares given the non-extension of the nuclear power plants in Belgium assumption of and unfavorable foreign exchange impact.

The income tax benefit amounted to €532 million versus an income tax benefit of €377 million in 2019, including a tax consolidation benefit of €461 million.

The net loss for the year came out at €3,928 million.

Shareholders' equity amounted to €30,702 million at end-2020 compared with €34,594 million at end-2019. The €3,892 million decrease was mainly due to the 2020 net loss of €3,928 million, since no dividend payment was made during the period.

At December 31, 2020, borrowings and debt stood at €38,158 million, and cash and cash equivalents totaled €11,615 million (of which €8,135 million relating to subsidiaries' current accounts).

Information relating to payment terms

Pursuant to Article D.441-4 of the French Commercial Code, companies whose annual financial statements are subject to a statutory audit must publish information regarding supplier and customer payment terms. The purpose is to demonstrate that there is no significant failure to comply with such terms.

ENGIE SA, the parent company of the Group, is a French société anonyme with a Board of Directors that is subject to the provisions of Book II of the French Commercial Code (Code de Commerce), as well as to all other provisions of French law applicable to French commercial companies. It was incorporated on November 20, 2004 for a period of 99 years.

It is governed by current and future laws and by regulations applicable to *sociétés anonymes* and its bylaws.

The Group is headquartered at 1 place Samuel de Champlain, 92400 Courbevoie (France).

ENGIE shares are listed on the Paris, Brussels and Luxembourg stock exchanges.

On February 25, 2021, the Group's Board of Directors approved and authorized for issue the consolidated financial statements of the Group for the year ended December 31, 2020.

NOTE 1 ACCOUNTING FRAMEWORK AND BASIS FOR PREPARING THE CONSOLIDATED FINANCIAL STATEMENTS

1.1 Accounting standards

Pursuant to European Regulation (EU) 2019/980 dated March 14, 2019, financial information concerning the assets, liabilities, financial position, and profit and loss of ENGIE has been provided for the last two reporting periods (ended December 31, 2019 and 2020). This information was prepared in accordance with European Regulation (EC) 1606/2002 "on the application of international accounting standards" dated July 19, 2002. The Group's consolidated financial statements for the year ended December 31, 2020 have been prepared in accordance with IFRS Standards as published by the International Accounting Standards Board and endorsed by the European Union ⁽¹⁾.

The accounting standards applied in the consolidated financial statements for the year ended December 31, 2020 are consistent with the policies used to prepare the consolidated financial statements for the year ended December 31, 2019, except for those described below.

1.1.1 IFRS Standards, amendments or IFRIC Interpretations applicable in 2020

- Amendments to IFRS 3 – *Business Combinations*: Definition of a Business;
- Amendments to IAS 1 – *Presentation of Financial Statements* and IAS 8 – *Accounting Policies, Changes in Accounting Estimates and Errors*: Definition of Material;
- Amendments to IFRS 9 – *Financial Instruments*; IAS 39 – *Financial Instruments: recognition and measurement*; IFRS 7 – *Financial Instruments*: Disclosures – Interest Rate Benchmark Reform;
- Amendments to IFRS 16 – *Leases*: COVID-19-related rent concessions.

These amendments have no significant impact on the Group's consolidated financial statements.

(1) Available on the European Commission's website: <http://eur-lex.europa.eu/legal-content/FR/TXT/?uri=CELEX:02002R1606-20080410>.

1.1.2 IFRS Standards, amendments or IFRIC Interpretations effective in 2021 and that the Group has elected to early adopt

- Amendments to IFRS 9 – *Financial Instruments*; IAS 39 – *Financial Instruments*: recognition and measurement; IFRS 7 – *Financial Instruments*: Disclosures; IFRS 4 – *Insurance contracts* and IFRS 16 – *Leases*: Interest Rate Benchmark Reform (Phase 2).

These amendments relating to the interest rate benchmark reform (see *Note 17*) have no significant impact on the Group's consolidated financial statements.

1.1.3 IFRS Standards, amendments or IFRIC Interpretations effective in 2021 and that the Group has elected not to early adopt

- Amendments to IAS 1 – *Presentation of Financial Statements*: Classification of Liabilities as Current or Non-Current ⁽¹⁾
- Amendments to IAS 16 – *Property, Plant and Equipment*: Proceeds before Intended Use ⁽¹⁾;
- Amendments to IAS 37 – *Provisions, Contingent Liabilities and Contingent Assets*: Onerous Contracts – Cost of Fulfilling a Contract ⁽¹⁾;
- Annual Improvements to IFRSs 2018-2020 Cycle ⁽¹⁾;
- IFRS 17 – *Insurance Contracts* (including amendments) ⁽¹⁾.

The impact of these standards and amendments is currently being assessed.

1.2 Measurement and presentation basis

1.2.1 Historical cost convention

The Group's consolidated financial statements are presented in euros and have been prepared using the historical cost convention, except for financial instruments that are accounted for under the financial instrument categories defined by IFRS 9.

1.2.2 Chosen options

1.2.2.1 Reminder of IFRS 1 transition options

The Group used some of the options available under IFRS 1 for its transition to IFRS in 2005. The options that continue to have an impact on the consolidated financial statements are:

- translation adjustments: the Group elected to reclassify cumulative translation adjustments within consolidated equity at January 1, 2004;
- business combinations: the Group elected not to restate business combinations that took place prior to January 1, 2004 in accordance with IFRS 3.

⁽¹⁾ As these standards and amendments have not yet been adopted by the European Union, this is a free translation.

1.2.2.2 Business combinations

Business combinations carried out prior to January 1, 2010 were accounted for in accordance with IFRS 3 prior to the revision. In accordance with IFRS 3 revised, these business combinations have not been restated.

Since January 1, 2010, the Group applies the purchase method as defined in IFRS 3 revised, which consists in recognizing the identifiable assets acquired and liabilities assumed at their fair values at the acquisition date, as well as any non-controlling interests in the acquiree. Non-controlling interests are measured either at fair value or at the entity's proportionate interest in the net identifiable assets of the acquiree. The Group determines on a case-by-case basis which measurement option to be used to recognize non-controlling interests.

1.2.2.3 Consolidated statement of cash flows

The consolidated statement of cash flows is prepared using the indirect method starting from net income.

"Interest received on non-current financial assets" is classified within investing activities because it represents a return on investments. "Interest received on cash and cash equivalents" is shown as a component of financing activities because the interest can be used to reduce borrowing costs. This classification is consistent with the Group's internal organization, where debt and cash are managed centrally by the Group treasury department.

As impairment losses on current assets are considered to be definitive losses, changes in current assets are presented net of impairment.

Cash flows relating to the payment of income tax are presented on a separate line.

1.2.3 Foreign currency transactions

1.2.3.1 Translation of foreign currency transactions

Foreign currency transactions are recorded in the functional currency at the exchange rate prevailing on the date of the transaction.

Functional currency is the currency of the primary economic environment in which an entity operates, which in most cases corresponds to local currency. However, certain entities may have a functional currency different from the local currency when that other currency is used for an entity's main transactions and better reflects its economic environment.

At each reporting date:

- monetary assets and liabilities denominated in foreign currencies are translated at year-end exchange rates. The resulting translation gains and losses are recorded in the consolidated income statement for the year to which they relate;
- non-monetary assets and liabilities denominated in foreign currencies are recognized at the historical cost applicable at the date of the transaction.

1.2.3.2 Translation of the financial statements of subsidiaries with a functional currency other than the euro (the presentation currency)

The statements of financial position of these subsidiaries are translated into euros at the official year-end exchange rates. Income statement and cash flow statement items are translated using the average exchange rate for the year. Any differences arising from the translation of the financial statements of these subsidiaries are recorded under "Translation adjustments" as other comprehensive income.

Goodwill and fair value adjustments arising on the acquisition of foreign entities are classified as assets and liabilities of those foreign entities and are therefore denominated in the functional currencies of the entities and translated at the year-end exchange rate.

1.3 Use of estimates and judgments

1.3.1 Estimates

The preparation of consolidated financial statements requires the use of estimates and assumptions to determine the value of assets and liabilities and contingent assets and liabilities at the reporting date, as well as income and expenses reported during the period.

Developments in the economic and financial environment, particularly relating to COVID-19, have prompted the Group to step up its risk oversight procedures, mainly in measuring financial instruments and performing impairment tests. The estimates used by the Group, among other things, to test for impairment and to measure provisions, take into account this environment and the sharp market volatility.

Accounting estimates are made in a context that remains sensitive to energy market developments, therefore making it difficult to apprehend medium-term economic prospects.

Due to uncertainties inherent in the estimation process, the Group regularly revises its estimates in light of currently available information. Final outcomes could differ from those estimates.

The key estimates used in preparing the Group's consolidated financial statements relate mainly to:

- measurement of the recoverable amount of goodwill (*see Note 13*), intangible assets (*see Note 14*), property, plant and equipment (*see Note 15*), and, in the context of COVID-19, factoring the uncertainty in measuring these recoverable amounts and their sensitivity to potential changes in key assumptions;
- measurement of the fair value of financial assets and liabilities, and, in the context of COVID-19, factoring the uncertainty surrounding the key assumptions used, mainly as regards the estimation of future cash flows (*see Notes 16 and 17*);
- measurement of provisions, particularly for the back-end of the nuclear fuel cycle, dismantling obligations, disputes, and pensions and other employee benefits (*see Notes 19 and 20*);
- measurement of the fair value of assets acquired and liabilities assumed in a business combination (*see Note 4*);
- measurement of un-metered revenues (energy in the meter), for which the valuation techniques have been impacted by changes in certain customers' consumption habits (*see Note 7*);
- measurement of recognized tax loss carry-forwards, taking into account, where applicable, in the context of COVID-19, taxable income revisions and projections (*see Note 11*).

1.3.2 Judgment

As well as relying on estimates, Group management also makes judgments to define the appropriate accounting policies to apply to certain activities and transactions, particularly when the IFRS Standards and IFRIC Interpretations in force do not specifically deal with the related accounting issues.

In particular, the Group exercised its judgment in:

- assessing the type of control (*see Notes 2 and 3*);
- identifying the performance obligations of sales contracts (*see Note 7*);
- determining how revenues are recognized for distribution or transmission services invoiced to customers (*see Note 7*);
- identifying "own use contracts" as defined by IFRS 9 within non-financial purchase and sale contracts (electricity, gas, etc.) (*see Note 16*);
- determining whether arrangements are or contain a lease (*see Notes 15 and 16*);

- grouping operating segments together for the presentation of reportable segments (*see Note 6*).

In the context of the COVID-19 crisis, the Group also exercised its judgment in assessing:

- the existence of a trigger event potentially leading to the impairment of goodwill, property, plant and equipment and/or intangible assets (*see Notes 9, 13, 14 and 15*);
- expected credit losses, mainly in order to update probabilities of default and other inputs in an uncertain context (*see Note 17*);
- the impacts on risks related to financial instruments, mainly liquidity risk and trends in interest rate, commodities and exchange rate markets (*see Note 17*);
- the consequences of hedging, particularly with regard to maintaining the highly probable nature of the hedged item (*see Note 17*);
- the application of enforceable rights and obligations associated with customer contracts, mainly with regard to future payment receipt probabilities and the measurement of the revenue recognized using the percentage of completion method (*see Note 7*).

1.3.3 Impacts of the COVID-19 crisis on the Group's position at December 31, 2020

The impacts of the COVID-19 crisis on the Group's operational and financial performance are presented in the management report.

In the context of the health crisis, the Group has taken special care in determining the accounting treatments applicable to the main issues and impacts of the crisis, for which IFRS accounting principles have been applied consistently with those previously used, particularly in relation to:

- **Impairment losses on non-financial assets**
The potential impairment of non-financial assets, particularly goodwill and investments consolidated using the equity method of accounting, was examined, particularly for those activities most affected by the COVID-19 crisis. In accordance with IAS 36 - *Impairment of Assets*, the Group performed an impairment test on goodwill, as well as on other non-financial assets for which indicators of potential impairment losses existed (*see Note 9.1 "Impairment losses" and Note 13 "Goodwill"*).
- **Impairment losses on financial assets: counterparty risk and expected credit losses**
The COVID-19 crisis gives rise to a potentially increased credit risk and may therefore affect the amount of impairment losses to be recognized in respect of expected credit losses. The Group is therefore monitoring payment receipts and counterparty risk more closely (*see Note 17 "Risks arising from financial instruments"*).
- **Financial assets and liabilities: measurement at fair value**
Faced with the crisis, the financial markets are very volatile, which affects the instruments held by the Group and measured at fair value. The fair value of these instruments incorporates data that reflect the way in which market participants would take into account the impacts of COVID-19, including the uncertainties inherent to the situation generated by the crisis (*see Note 16 "Financial instruments"*).
- **Liquidity risk and market risk**
Liquidity risk and trends in the interest rate, commodities and exchange rate markets were monitored carefully and the related information has been updated based on data available at December 31, 2020 (*see Note 17 "Risks arising from financial instruments"*).
- **Deferred tax assets**
ENGIE's deferred tax asset positions were reviewed in order to ensure their recoverability through future taxable income. The Group also monitored changes to legislation, revisions to income tax rates and other tax measures taken in response to the crisis (*see Note 11 "Income tax expense"*).

- **Provisions**

As certain activities were more impacted by COVID-19 than others, the Group decided to review whether any current obligations were likely to give rise to the recognition of provisions, particularly for onerous contracts (see *Note 19 "Provisions"*).

- **Performance indicators and presentation of COVID-19 impacts in the income statement**

The Group has neither adjusted its performance indicators, nor included new indicators to describe the impacts of COVID-19 (see *Note 5 "Financial indicators used in financial communication"*). Expenses directly related to the crisis are all classified, according to their nature, in current operating income, in accordance with the recommendations given in relation to the crisis, which mainly impacts revenues, irrespective of the Group's practice of items of an unusual, irregular or non-recurring nature below current operating income.

NOTE 2 MAIN SUBSIDIARIES AT DECEMBER 31, 2020

Accounting standards

Controlled entities (subsidiaries) are fully consolidated in accordance with IFRS 10 – *Consolidated Financial Statements*. An investor (the Group) controls an entity and therefore must consolidate it if all of the following three criteria are met:

- it has the ability to direct the relevant activities of the entity;
- it has the rights and is exposed to variable returns from its involvement with the entity;
- it has the ability to use its power over the entity to affect the investor's return.

2.1 List of main subsidiaries at December 31, 2020

The following lists are made available by the Group to third parties, pursuant to Regulation No. 2016-09 of the French accounting standards authority (ANC) issued on December 2, 2016:

- list of companies included in consolidation;
- list of companies excluded from consolidation because their individual and cumulative incidence on the Group's consolidated financial statements is not material. They correspond to entities deemed not significant as regards the Group's main key figures (revenues, total equity, etc), shell companies or entities that have ceased all activities and are undergoing liquidation/closure proceedings;
- list of main non-consolidated interests.

This information is available on the Group's website (www.engie.com, Investors/Regulated information section). Non-consolidated companies are classified under non-current financial assets (see Note 16.1.1.1) under "Equity instruments at fair value".

The list of the main subsidiaries consolidated under the full consolidation method presented below was determined, as regards operating entities, based on their contribution to Group revenues, EBITDA, net income and net debt. The main equity-accounted investments (associates and joint ventures) are presented in Note 3 "Investments in equity method entities".

Some entities such as ENGIE SA, ENGIE Energie Services SA or Electrabel SA comprise both operating activities and headquarters functions which report to management teams of different reportable segments. In the following tables, these operating activities and headquarters functions are shown within their respective reportable segments under their initial company name followed by a (*) sign.

2.2 Significant judgments exercised when assessing control

The Group primarily considers the following information and criteria when determining whether it has control over an entity:

- governance arrangements: voting rights and whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities;
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity.

The Group exercised its judgment regarding the entities and sub-groups described below.

Entities in which the Group has the majority of the voting rights

GRTgaz (France Infrastructures): 74.6%

In addition to the analysis of the shareholder agreement with Société d'Infrastructures Gazières, a subsidiary of *Caisse des Dépôts et Consignations* (CDC), which owns 24.8% of the share capital of GRTgaz, the Group also assessed the rights granted to the French Energy Regulatory Commission (*Commission de régulation de l'énergie* – CRE). As a regulated activity, GRTgaz has a dominant position on the gas transportation market in France. Accordingly, since the transposition of the Third European Directive of July 13, 2009 into French law (*Code de l'énergie* – Energy Code) on May 9, 2011, GRTgaz has been subject to independence rules as concerns its directors and senior management team. The French Energy Code confers certain powers on the CRE in the context of its duties to control the proper functioning of the gas markets in France, including verifying the independence of the members of the Board of Directors and senior management and assessing the choice of investments. The Group considers that it exercises control over GRTgaz and its subsidiaries (including Elengy) in view of its current ability to appoint the majority of the members of the Board of Directors and take decisions about the relevant activities, especially in terms of the level of investment and planned financing.

Entities in which the Group does not have the majority of the voting rights

In the entities in which the Group does not have a majority of the voting rights, judgment is exercised with regard to the following items, in order to assess whether there is a situation of *de facto* control:

- dispersion of the shareholding structure: number of voting rights held by the Group relative to the number of rights held respectively by the other vote holders and their dispersion;
- voting patterns at shareholders' meetings: the percentages of voting rights exercised by the Group at shareholders' meetings in recent years;
- governance arrangements: representation in the governing body with strategic and operational decision-making power over the relevant activities;
- rules for appointing key management personnel;
- contractual relationships and material transactions.

The main fully consolidated entities in which the Group does not have the majority of the voting rights are Compagnie Nationale du Rhône (49.98%) and Gaztransport & Technigaz (40.4%).

Compagnie Nationale du Rhône ("CNR" – France excluding Infrastructures): 49.98%

The Group holds 49.98% of the share capital of CNR, with CDC holding 33.2%, and the balance (16.82%) being dispersed among around 200 local authorities. In view of the current provisions of the French "Murcef" law, under which a majority of CNR's share capital must remain under public ownership, the Group is unable to hold more than 50% of the share capital. However, the Group considers that it exercises *de facto* control as it holds the majority of the voting rights exercised at shareholders' meetings due to the widely dispersed shareholding structure and the absence of evidence of the minority shareholders acting in concert.

Gaztransport & Technigaz (“GTT” – Others): 40.4%

Since GTT's initial public offering in February 2014, ENGIE has been the largest shareholder in the company with a 40.4% stake, the free float representing around 59% of the share capital. The Group holds the majority of the seats on the Board of Directors and the majority of the voting rights exercised at shareholders' meetings in view of the widely dispersed shareholding structure and the absence of evidence of minority shareholders acting in concert. The Group therefore considers that it exercises *de facto* control over GTT, based on an IFRS 10 criteria.

2.3 Subsidiaries with material non-controlling interests

The following table shows the non-controlling interests in Group entities that are deemed to be material, the respective contributions to equity and net income at December 31, 2020 and December 31, 2019, as well as the dividends paid to non-controlling interests of these significant subsidiaries:

Corporate name	Activity	Percentage interest of non-controlling interests		Net income/(loss) of non-controlling interests		Equity of non-controlling interests		Dividends paid to non-controlling interests	
		Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019 ⁽¹⁾	Dec. 31, 2020	Dec. 31, 2019
In millions of euros									
GRTgaz Group (France Infrastructures, France)	Regulated gas transportation activities and management of LNG terminals	25.4	25.4	95	89	1,029	1,076	80	120

NOTE 3 INVESTMENTS IN EQUITY METHOD ENTITIES

Accounting standards

The Group accounts for its investments in associates (entities over which the Group has significant influence) and joint ventures using the equity method. Under IFRS 11 – *Joint Arrangements*, a joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.

The respective contributions of associates and joint ventures in the statement of financial position, the income statement and the statement of comprehensive income at December 31, 2020 and December 31, 2019 are as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Statement of financial position		
Investments in associates	3,017	4,646
Investments in joint ventures	3,743	4,570
INVESTMENTS IN EQUITY METHOD ENTITIES	6,760	9,216
Income statement		
Share in net income/(loss) of associates	184	255
Share in net income/(loss) of joint ventures	369	245
SHARE IN NET INCOME/(LOSS) OF EQUITY METHOD ENTITIES	552	500
Statement of comprehensive income		
Share of associates in "Other comprehensive income/(loss)"	(28)	(123)
Share of joint ventures in "Other comprehensive income/(loss)"	(284)	(158)
SHARE OF EQUITY METHOD ENTITIES IN "OTHER COMPREHENSIVE INCOME/(LOSS)"	(312)	(281)

Significant judgments

The Group primarily considers the following information and criteria in determining whether it has joint control or significant influence over an entity:

- governance arrangements: whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities. This can be difficult to determine in the case of "project management" or "one-asset" entities, as certain decisions concerning the relevant activities are made upon the creation of the joint arrangement and remain valid throughout the project. Accordingly, the rights' analysis relates to the relevant residual activities of the entity (those that significantly affect the variable returns of the entity);
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity. This can also involve analyzing the Group's contractual relations with the entity, in particular the conditions in which these contracts are entered into, their duration as well as the management of conflicts of interest that may arise when the entity's governing body casts votes.

The Group exercised its judgment regarding the following entities and sub-groups:

Project management entities in the Middle East

The significant judgments made in determining the consolidation method to be applied to these project management entities related to the risks and rewards relating to contracts between ENGIE and the entity concerned, as well as an analysis of the residual relevant activities over which the entity retains control after its creation. The Group considers that it exercises significant influence or joint control over these entities, since the decisions taken throughout the term of the project about the relevant activities such as refinancing, or the renewal or amendment of significant contracts (sales,

purchases, operating and maintenance services) require, depending on the case, the unanimous consent of two or more parties sharing control.

SUEZ Group

The Group exercised significant influence over SUEZ Group until October 6, 2020, when the Group sold a 29.9% stake in SUEZ (see Note 4.1 "Disposals carried out in 2020").

Joint ventures in which the Group holds an interest of more than 50%

Tihama (60%)

ENGIE holds a 60% stake in the Tihama cogeneration plant in Saudi Arabia and its partner Saudi Oger holds 40%. The Group considers that it has joint control over Tihama since the decisions about its relevant activities, including for example the preparation of the budget and amendments to major contracts, etc., require the unanimous consent of the parties sharing control.

Transportadora Asociada de Gas S.A. ("TAG" - Latin America): 65.0% holding interest (directly and indirectly) representing a net interest in of 54.8%

The Group exercises joint control over TAG since the decisions about its relevant activities, including for example the preparation of the budget and medium-term plan, investments, operations and maintenance, etc., are taken a majority vote requiring the agreement of ENGIE and CDPQ. Consequently, this investment is accounted for using the equity method.

Joint control – difference between joint ventures and joint operations

Classifying a joint arrangement requires the Group to use its judgment to determine whether the entity in question is a joint venture or a joint operation. IFRS 11 requires an analysis of "other facts and circumstances" when determining the classification of jointly controlled entities.

The IFRS Interpretations Committee (IFRS IC) (November 2014) decided that for an entity to be classified as a joint operation, other facts and circumstances must give rise to direct enforceable rights to the assets, and obligations for the liabilities, of the joint arrangement.

In view of this position and its application to our analyses, the Group has no material joint operations at December 31, 2020.

3.1 Investments in associates

3.1.1 Contribution of material associates and of associates that are not material to the Group taken individually

The table hereafter shows the contribution of each material associate along with the aggregate contribution of associates deemed not material taken individually, in the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from equity method entities" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material associates. These criteria include the contribution to the consolidated line items "Share in net income/(loss) of associates" and "Investments in associates", the total assets of associates in Group share, and associates carrying major projects in the study or construction phase for which the related investment commitments are material.

Corporate name	Activity	Capacity	Percentage interest of investments in associates		Carrying amount of investments in associates		Share in net income/(loss) of associates		Other comprehensive income/(loss) of associates		Dividends received from associates	
			Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019
In millions of euros												
SUEZ Group (Other) ⁽¹⁾	Water and waste processing		-	32.06	-	1,953	-	113	-	(37)	-	129
Project management entities in the Middle East (Middle-East, Asia & Africa, Saudi Arabia, Bahrain, Qatar, United Arab Emirates, Oman, Kuwait) ⁽²⁾	Gas-fired power plants and seawater desalination facilities		-		803	950	184	79	(60)	(96)	107	77
Hydroelectric portfolio in Portugal	Hydro power plant	1688 MW	40.00		516		(6)		(11)		-	
Energia Sustentável Do Brasil (Latin America, Brazil)	Hydro power plant	3 750 MW	40.00	40.00	475	659	(17)	(49)	-	-	-	-
GASAG (Rest of Europe, Germany)	Gas and heat networks		31.57	31.57	239	233	12	16	15	(17)	16	9
Other investments in associates that are not material taken individually					984	852	9	96	27	27	145	61
INVESTMENTS IN ASSOCIATES					3,017	4,646	184	255	(28)	(123)	268	277

(1) On October 6, 2020, the Group sold 29.9% of its interest in the SUEZ Group (see Note 4.1 "Disposals carried out in 2020"). Following this disposal, the Group's residual stake in the SUEZ Group is presented in equity instruments.

(2) Investments in associates operating gas-fired power plants and seawater desalination facilities in the Arabian Peninsula have been grouped together under "Project management entities in the Middle East". This includes around 40 associates operating thermal power plants with a total installed capacity of 27,494 MW (at 100%).

These associates have fairly similar business models and joint arrangements: the project management entities selected as a result of a competitive bidding process develop, build and operate power generation plants and seawater desalination facilities. The entire output of these facilities is sold to government-owned companies under power and water purchase agreements, over periods generally spanning 20 to 30 years.

In accordance with their contractual arrangements, the corresponding plants are recognized as property, plant and equipment or as financial receivables whenever substantially all of the risks and rewards associated with the assets are transferred to the buyer of the output. This treatment complies with IFRIC 4 and IFRS 16. The shareholding structure of these entities systematically includes a government-owned company based in the same country as the project management entity. The Group's percentage interest and percentage voting rights in each of these entities varies between 20% and 50%.

The share in net income/(loss) of associates includes a net non-recurring loss for a total amount of €131 million in 2020 (compared to a net non-recurring loss of €79 million in 2019), mainly including changes in the fair value of derivative instruments and disposal gains and losses, net of tax (see Note 5.3 "Net recurring income Group share").

3.1.2 Financial information regarding material associates

The tables below provide condensed financial information for the Group's main associates. The amounts shown have been determined in accordance with IFRS, before the elimination of intragroup items and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the associate performed at the acquisition date at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE".

<i>In millions of euros</i>	Revenues	Net income/(loss)	Other comprehensive income/(loss)	Total comprehensive income/(loss)	Current assets	Non-current assets	Current liabilities	Non-current liabilities	Total equity	% interest of Group	Total equity attributable to ENGIE

GASAG	1,251	51	(54)	(2)	850	1,847	1,757	203	736	31.57	233

(1) The SUEZ group was sold on October 6, 2020 to VEOLIA.

3.1.3 Transactions between the Group and its associates

The data below set out the impact of transactions with associates on the Group's 2020 consolidated financial statements.

<i>In millions of euros</i>	Purchases of goods and services	Sales of goods and services	Net financial income (excluding dividends)	Trade and other receivables	Loans and receivables at amortized cost	Trade and other payables	Borrowings and debt
Project management entities in the Middle East	(1)	178	(1)	33	114	2	-
Contassur ⁽¹⁾	-	-	-	187	2	-	-
Energia Sustentável Do Brasil	109	-	-	-	-	8	-
Hydroelectric portfolio in Portugal	-	3	-	1	120	-	-
Other	-	24	16	27	180	12	32
AT DECEMBER 31, 2020	108	205	15	248	416	21	32

(1) Contassur is a life insurance company accounted for using the equity method. Contassur offers insurance contracts, chiefly with pension funds that cover post-employment benefit obligations for Group employees and also employees of other companies mainly engaged in regulated activities in the electricity and gas sector in Belgium. Insurance contracts entered into by Contassur represent reimbursement rights recorded within "Other assets" in the statement of financial position. These reimbursement rights totaled €187 million at December 31, 2020 (€161 million at December 31, 2019).

3.2 Investments in joint ventures

3.2.1 Contribution of material joint ventures and of joint ventures that are not material to the Group taken individually

The table below shows the contribution of each material joint venture along with the aggregate contribution of joint ventures deemed not material taken individually to the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from equity method entities" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material joint ventures. These criteria include the contribution to the line items "Share in net income/(loss) of joint ventures" and "Investments in joint ventures", the Group's

share in the total assets of joint ventures, and joint ventures conducting major projects in the study or construction phase for which the related investment commitments are material.

Corporate name	Activity	Capacity	Percentage interest of investments in joint ventures		Carrying amount of investments in joint ventures		Share in net income/(loss) of joint ventures		Other comprehensive income/(loss) of joint ventures		Dividends received from joint ventures	
			Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31, 2019	Dec. 31, 2020	Dec. 31,	Dec. 31, 2020	Dec. 31, 2019
In millions of euros												
Transportadora Asociada de Gás S.A. (TAG) (Latin America, Brazil)	Gas transmission network		65.00	58.50	803	1,364	177	44	(233)	(71)	231	159
National Central Cooling Company "Tabreed" (Middle-East, Asia & Africa, Abu Dhabi)	District cooling networks		40.00	40.00	702	740	52	42	-	-	27	24

3.3 Other information on investments accounted for using the equity method

3.3.1 Unrecognized share of losses of associates and joint ventures

Cumulative unrecognized losses of associates (corresponding to the cumulative amount of losses exceeding the carrying amount of investments in the associates concerned) including other comprehensive income/(loss), amounted to

€114 million in 2020 (€113 million in 2019). This decrease resulted from (i) unrecognized income for the year 2019 amounting to €0.2 million and (ii) changes in other comprehensive income.

These unrecognized losses correspond to the negative fair value of derivative instruments designated as interest rate and commodity hedges ("Other comprehensive income/(loss)") contracted by associates in the Middle-East, Africa & Asia reportable segment in connection with the financing of construction projects for power generation plants.

3.3.2 Commitments and guarantees given by the Group in respect of equity method entities

At December 31, 2020, the main commitments and guarantees given by the Group in respect of equity method entities concern:

- Energia Sustentável do Brasil ("Jirau"), for an aggregate amount of BRL 4,398 million (€690 million).
At December 31, 2020, the amount of loans granted by Banco Nacional de Desenvolvimento Econômico e Social, the Brazilian Development Bank, to Energia Sustentável do Brasil amounted to BRL 10,680 million (€1,675 million). Each partner stands as guarantor for this debt to the extent of its ownership interest in the consortium;
- TAG for performance bonds and other guarantees for an amount of €172 million;
- The project management entities in the Middle East and Africa, for an aggregate amount of €851 million.

Commitments and guarantees given by the Group in respect of these project management entities chiefly correspond to:

- an equity contribution commitment (capital/subordinated debt) for €89 million. These commitments only concern entities acting as holding companies for projects in the construction phase,
- letters of credit to guarantee debt service reserve accounts for an aggregate amount of €198 million. The project financing set up in certain entities can require those entities to maintain a certain level of cash within the company (usually enough to service its debt for six months). This is particularly the case when the financing is without recourse. This level of cash may be replaced by letters of credit,
- collateral given to lenders in the form of pledged shares in the project management entities, for an aggregate amount of €244 million,
- performance bonds and other guarantees for an amount of €320 million.

NOTE 4 MAIN CHANGES IN GROUP STRUCTURE

Accounting standards

In accordance with IFRS 5 - *Non-Current Assets Held for Sale and Discontinued Operations*, assets or groups of assets held for sale are presented separately on the face of the statement of financial position and are measured and accounted for at the lower of their carrying amount and fair value less costs to sell.

An asset is classified as "held for sale" when its sale is highly probable within twelve months from the date of classification, when it is available for immediate sale under its present condition and when the management is committed to a plan to sell the asset and an active program to locate a buyer and complete the plan has been initiated. To assess whether a sale is highly probable, the Group takes into consideration among other things indications of interest and offers received from potential buyers as well as specific execution risks attached to certain transactions.

Furthermore, assets or group of assets are presented as discontinued operations in the Group's consolidated financial statements when they are classified as "held for sale" and represent a separate major line of business under IFRS 5.

4.1 Disposals carried out in 2020

4.1.1 Impact of the main disposals and sale agreements in 2020

The table below shows the impact of the main disposals and sale agreements of 2020 on the Group's net debt, excluding partial disposals with respect to DBSO ⁽¹⁾ activities:

<i>In millions of euros</i>	Disposal price	Reduction in net debt
Disposal of a share of ENGIE's interest in SUEZ – France	3,348	3,348
Disposal of ENGIE's interest in Astoria 1 and Astoria 2 - United States	375	375
Other disposals that are not material taken individually	425	423
TOTAL	4,148	4,146

Additional disposals in the process of completion at December 31, 2020 are described in Note 4.2 "Assets held for sale" and other significant strategic reviews underway are described in Note 4.3 "Other planned transactions".

4.1.2 Disposal of a portion of ENGIE's interest in SUEZ SA

On October 5, 2020, the Group accepted an offer from the Veolia group to acquire a 29.9% interest in SUEZ SA. After the transaction, which was completed on October 6, 2020, the Group still held a non-consolidated interest of 1.8% in SUEZ SA.

This transaction reduced the Group's net financial debt by €3,348 million. The disposal gain before tax, combined with the revaluation gain on the remaining interest, amounted to €1,735 million in 2020.

4.1.3 Disposal of ENGIE's interests in Astoria 1 and 2 (United States)

On June 18, 2020, the Group completed the sale of its respective 44.8% and 27.5% interests in the Astoria 1 and Astoria 2 gas-fired power plants to a consortium.

⁽¹⁾ Develop, Build, Share and Operate, a model used in renewable energies based on continuous rotation of capital employed.

The effects of the transaction have reduced the Group's net financial debt by €375 million. The disposal gain before tax amounted to €95 million in 2020.

4.2 Assets held for sale

Total "Assets classified as held for sale" and total "Liabilities directly associated with assets classified as held for sale" amounted to €1,292 million and €488 million, respectively, at December 31, 2020.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Property, plant and equipment, net and intangible assets	992	378
Other assets	299	90
TOTAL ASSETS CLASSIFIED AS HELD FOR SALE	1,292	468
Borrowings and debt	297	26
Other liabilities	190	65
TOTAL LIABILITIES DIRECTLY ASSOCIATED WITH ASSETS CLASSIFIED AS HELD FOR SALE	488	92

The assets related to green gas production in France recorded as "Assets classified as held for sale" at December 31, 2019 were sold in 2020 (see Note 4.1 "Disposals carried out in 2020").

"Assets classified as held for sale" at December 31, 2020 corresponds to renewable energy assets in India and Mexico (the sale of which is highly probable but remains subject to various approvals being obtained), as well as the Group's interest in EV Charged BV (EVBox), for which the plan to sell the majority of the Group's shares was announced in December 2020. These transactions are expected to be completed in 2021. Given the expected capital gains from the disposals, no significant value adjustment has been recorded.

4.3 Other planned transactions

On July 31, 2020, the Group announced a significant increase to its asset portfolio rotation program which, in the medium term, could more than double the previously announced target of around €4 billion.

In this context, the Group has begun a strategic review of its Client Solutions assets with a view to maximizing their value and strengthening their leadership positions to seize future growth opportunities thanks to a consistent scope and appropriate organization, taking into account three main criteria: business model, business type and potential for development in each geographical area. This strategic review will result in: (i) the preservation of Client Solutions businesses focused on the production of low-carbon energy, energy infrastructure and related services providing sophisticated, integrated and large-scale solutions for cities, communities and industries, and (ii) for the other Client Solutions businesses, the creation of a new entity with a leadership position in asset-light businesses and related services, aimed at eventually becoming independent from ENGIE. The entity will specialize in two business models: design and construction projects and recurring operating/maintenance services.

On November 13, 2020, ENGIE also announced that it was beginning a strategic review of its interest in GTT, in which it holds a 40.4% interest. ENGIE will consider selling all or part of its interest, either by way of a formal process of sale to a third party or on the markets.

Given the status of these strategic reviews at December 31, 2020, the conditions for reclassifying the assets in question as "Assets classified as held for sale" have not been met.

4.4 Acquisitions carried out in 2020

In total, acquisitions carried out in 2020 had an impact of €2.5 billion on net financial debt, including in particular:

- ENGIE and Meridiam, its 50/50 partner, finalized the transaction allowing them to operate a 50-year concession with the University of Iowa (UI) relating to energy efficiency, water management and, more generally, sustainability. The company, whose control is shared between the partners, has also issued preference shares held by Hannon

Armstrong. ENGIE has accounted for this investment using the equity method. The impact of the transaction on the Group's net debt was approximately €204 million.

- ENGIE and its partner, Caisse de dépôt et placement du Québec (CDPQ), finalized their acquisition of the remaining 10% stake in Transportadora Associada de Gás S.A. (TAG), previously held by PETROBRAS. This acquisition brought ENGIE's total interest in TAG to 65% (of which half is held by ENGIE Brasil Energia), while CDPQ holds the remaining 35%. Following the transaction, ENGIE retains joint control with CDPQ over the investment, which is still accounted for using the equity method. The impact of the transaction on the Group's net debt was approximately €112 million.
- In addition, with its consortium partners Crédit Agricole Assurances and Mirova (a subsidiary of Natixis Investment Managers), the Group finalized the acquisition of Portugal's second largest hydroelectric portfolio from EDP. ENGIE owns 40% of the consortium, while Crédit Agricole Assurances and Mirova, through managed funds, own 35% and 25%, respectively. The impact of the transaction on ENGIE's net debt was approximately €652 million. This investment is accounted for using the equity method.

The Group carried out various other acquisitions in 2020 which together account for the rest of the €2.5 billion impact, mainly of non-controlling interests in the Fos Cavaou LNG terminal in France, in Renvico in France and Italy, and in a concession in electric power transportation in Brazil.

NOTE 5 FINANCIAL INDICATORS USED IN FINANCIAL COMMUNICATION

The purpose of this note is to present the main non-GAAP financial indicators used by the Group as well as their reconciliation with the indicators of the IFRS consolidated financial statements.

5.1 EBITDA

The reconciliation between EBITDA and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec 31, 2019
Current operating income including operating MtM and share in net income of equity method entities	4,640	5,300
Mark-to-market on commodity contracts other than trading instruments	(199)	426
Net depreciation and amortization/Other	4,648	4,497
Share-based payments (IFRS 2)	50	51
Non-recurring share in net income of equity method entities	137	93
EBITDA	9,276	10,366

5.2 Current operating income (COI)

From January 1, 2020, in order to be consistent with the definitions of EBITDA and net recurring income Group share, in line with ENGIE's accounting policies, the Group has revised its definition of the performance management indicator "current operating income Recurring" (COI) by excluding from it the non-recurring share of net income of equity method entities.

The reconciliation between the old and the new definition of current operating income (COI) as of December 31, 2019 is presented below:

<i>In millions of euros</i>	Dec 31, 2019 published	Non-recurring share in net income of equity method entities	Dec 31, 2019 restated
CURRENT OPERATING INCOME (COI)	5,726	93	5,819

The reconciliation between current operating income (COI) and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec 31, 2019
Current operating income including operating MtM and share in net income of equity method entities	4,640	5,300
(-) Mark-to-market on commodity contracts other than trading instruments	(199)	426
(-) Non-recurring share in net income of equity method entities	137	93
CURRENT OPERATING INCOME (COI)	4,578	5,819

5.3 Net recurring income Group share

Net recurring income Group share is a financial indicator used by the Group in its financial reporting to present net income Group share adjusted for unusual or non-recurring items.

The reconciliation of net income/(loss) with net recurring income Group share is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2020	Dec 31, 2019
NET INCOME/(LOSS) GROUP SHARE		(1,536)	984
Net income attributable to non-controlling interests		644	664
NET INCOME/(LOSS)		(893)	1,649
Reconciliation items between "Current operating income including operating MtM and share in net income of equity method entities" and "Income/(loss) from operating activities"			
		3,139	1,623
Impairment losses	9.1	3,551	1,770
Restructuring costs	9.2	343	218
Changes in scope of consolidation	9.3	(1,640)	(1,604)
Other non-recurring items	9.4	886	1,240
Other adjusted items		109	154
Mark-to-market on commodity contracts other than trading instruments	8.1	(199)	426
Ineffective portion of derivatives qualified as fair value hedges	10	-	3
Gains/(losses) on debt restructuring and early unwinding of derivative financial instruments	10	29	(6)
Change in fair value of derivatives not qualified as hedges and ineffective portion of derivatives qualified as cash flow hedges	10	158	223
Non-recurring income/(loss) from debt instruments and equity instruments	10	69	(115)
Other adjusted tax impacts		(85)	(470)
Non-recurring income/(loss) included in share in net income of equity method entities		137	93
NET RECURRING INCOME		2,355	3,426
Net recurring income attributable to non-controlling interests		652	743
NET RECURRING INCOME GROUP SHARE		1,703	2,683

5.4 Industrial capital employed

The reconciliation of industrial capital employed with items in the statement of financial position is as follows:

<i>In millions of euros</i>		Dec. 31, 2020	Dec. 31, 2019
(+)	Property, plant and equipment and intangible assets, net	57,085	58,996
(+)	Goodwill	15,943	18,665
(-)	Goodwill Gaz de France - SUEZ and International Power ⁽¹⁾	(7,472)	(7,650)
(+)	IFRIC 4, IFRS 16 and IFRIC 12 receivables	1,827	1,737
(+)	Investments in equity method entities	6,760	9,216
(-)	Goodwill arising on the International Power combination ⁽¹⁾	(141)	(154)
(+)	Trade and other receivables, net	14,295	15,180
(-)	Margin calls ^{(1) (2)}	(1,585)	(2,023)
(+)	Inventories	4,140	3,617
(+)	Assets from contracts with customers	7,764	7,831
(+)	Other current and non-current assets	9,386	10,601
(+)	Deferred tax	(3,536)	(3,771)
(+)	Cancellation of deferred tax on other recyclable items ^{(1) (2)}	(543)	(571)
(-)	Provisions	(27,073)	(25,115)
(+)	Actuarial gains and losses in shareholders' equity (net of deferred tax) ⁽¹⁾	4,553	3,507
(-)	Trade and other payables	(17,307)	(19,109)
(+)	Margin calls ^{(1) (2)}	982	1,996
(-)	Liabilities from contracts with customers	(4,354)	(4,330)
(-)	Other current and non-current liabilities	(14,579)	(14,298)
	INDUSTRIAL CAPITAL EMPLOYED	46,146	54,325

(1) For the purpose of calculating industrial capital employed, the amounts recorded in respect of these items have been adjusted from those appearing in the statement of financial position.

(2) Margin calls included in "Trade and other receivables, net" and "Trade and other payables" correspond to advances received or paid as part of collateralization agreements set up by the Group to manage counterparty risk on commodity transactions.

5.5 Cash flow from operations (CFFO)

The reconciliation of cash flow from operations (CFFO) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec 31, 2019
Cash generated from operations before income tax and working capital requirements	8,788	9,863
Tax paid	(599)	(575)
Change in working capital requirements	(600)	(1,110)
Interest received on financial assets	21	28
Dividends received on equity investments	57	67
Interest paid	(665)	(780)
Interest received on cash and cash equivalents	53	82
CASH FLOW FROM OPERATIONS (CFFO)	7,054	7,574

5.6 Capital expenditure (CAPEX)

The reconciliation of capital expenditure (CAPEX) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec 31, 2019
Acquisitions of property, plant and equipment and intangible assets	5,115	6,524
Acquisitions of controlling interests in entities, net of cash and cash equivalents acquired	417	864
(+) <i>Cash and cash equivalents acquired</i>	60	229
Acquisitions of investments in equity method entities and joint operations	1,067	1,746
Acquisitions of equity and debt instruments	1,622	595
Change in loans and receivables originated by the Group and other	374	532
(+) <i>Other</i>	(5)	8
Change in ownership interests in controlled entities	312	12
(-) Disposal impacts relating to DBSO ⁽¹⁾ activities	(1,276)	(468)
TOTAL CAPITAL EXPENDITURE (CAPEX)	7,687	10,042

(1) *Develop, Build, Share & Operate; including Tax equity financing received (see Note 24 "Working capital requirements, inventories, other assets and other liabilities")*

5.7 Net financial debt

The reconciliation of net financial debt with items in the statement of financial position is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2020	Dec. 31, 2019
(+) Long-term borrowings	16.2 & 16.3	30,092	30,002
(+) Short-term borrowings	16.2 & 16.3	7,846	8,543
(+) Derivative instruments - carried in liabilities	16.4	13,115	15,575
(-) <i>Derivative instruments hedging commodities and other items</i>		(12,762)	(15,350)
(-) Other financial assets	16.1	(11,599)	(9,568)
(+) <i>Loans and receivables at amortized cost not included in net financial debt</i>		4,710	4,870
(+) <i>Equity instruments at fair value</i>		1,668	1,297
(+) <i>Debt instruments at fair value not included in net financial debt</i>		3,134	1,899
(-) Cash and cash equivalents	16.1	(12,980)	(10,519)
(-) Derivative instruments - carried in assets	16.4	(11,065)	(14,272)
(+) <i>Derivative instruments hedging commodities and other items</i>		10,299	13,443
NET FINANCIAL DEBT		22,458	25,919

5.8 Economic net debt

Economic net debt is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2020	Dec. 31, 2019
NET DEBT	16	22,458	25,919
Provisions for back-end of the nuclear fuel cycle	19	7,948	7,611
Provisions for dismantling of plant and equipment	19	7,604	7,329
Provisions for site rehabilitation	19	238	237
Post-employment benefit – Pension	20	3,174	2,427
<i>(-) Infrastructures regulated companies</i>		(351)	(93)
Post-employment benefit - Reimbursement rights	20	(187)	(160)
Post-employment benefit - Other benefits	20	5,732	5,001
<i>(-) Infrastructures regulated companies</i>		(3,602)	(3,080)
Deferred tax assets for pension and related obligations	11	(2,061)	(1,635)
<i>(-) Infrastructures regulated companies</i>		947	759
Plan assets relating to nuclear provisions, inventories of uranium, related derivative financial instruments and a receivable of Electrabel towards EDF Belgium	16 & 24	(4,479)	(3,236)
ECONOMIC NET DEBT		37,420	41,078

NOTE 6 SEGMENT INFORMATION

As of December 31, 2020, ENGIE was organized into 25 Business Units (BUs) or operating segments , which are essentially geographical, in order to remain close to its customers and foster initiative.

Since 2019, the Group has strengthened this structure by creating four new Global Business Lines (GBLs): Client Solutions, Networks, Renewables and Thermal which are designed to support the local teams and encourage cross-cutting performance by proposing an inter-BU strategy for their business, contributing to decisions on the allocation of resources between BUs, identifying and managing the key cross-cutting digital and excellence programs, identifying and implementing worldwide partnerships, and supporting, measuring and presenting the global performance of their business activities. These GBLs plus the Supply and Nuclear business activities form the Group's six core Business Lines (BLs).

The Group now operates on a matrix structure with the BUs forming the primary axis and the BLs the secondary axis.

In accordance with IFRS 8, these operating segments are grouped into seven reportable segments to present the Group's segment information. These are unchanged as of December 31, 2020: France excluding Infrastructures, France Infrastructures, Rest of Europe, Latin America, USA & Canada, Middle East, Asia & Africa and Others. The data presented as of December 31, 2019 take into account minor changes resulting from internal reorganizations (reallocation of ENGIE Impact and offshore wind projects to the Others segment).

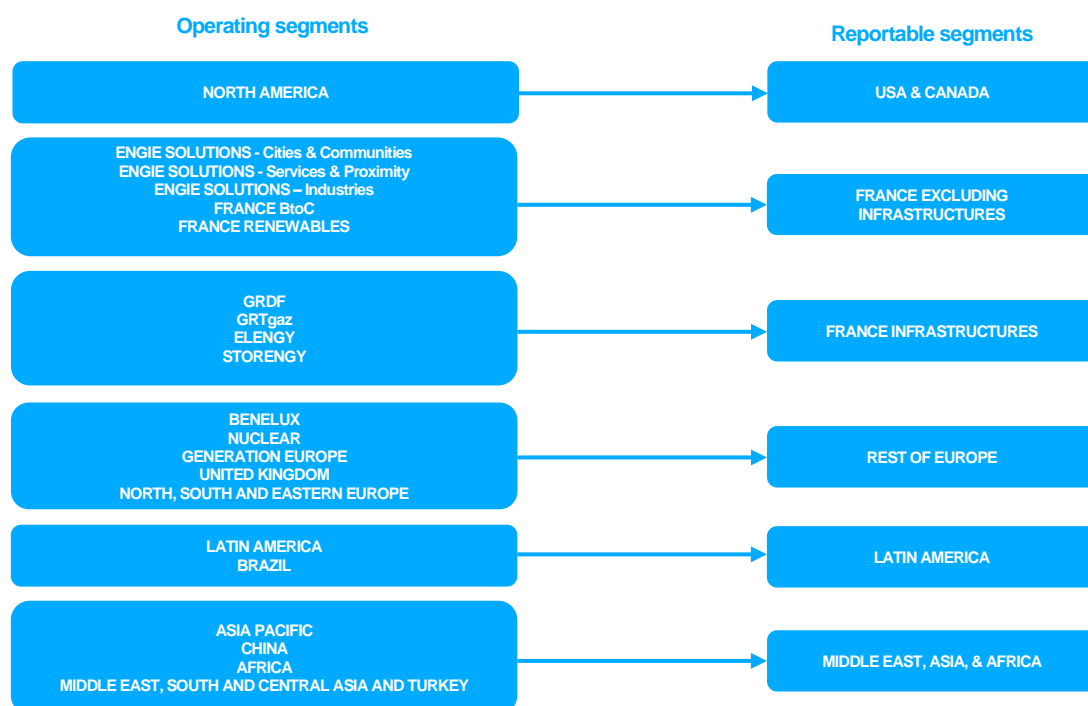

Due to the variety of its businesses and their geographical location, the Group serves a very diverse range of situations and customer types (industry, local authorities and individual customers). Accordingly, no external customer represents individually 10% or more of the Group's consolidated revenues.

6.1 Information by reportable segment

6.1.1 Definition of reportable segments

Each BU corresponds to an “operating segment” whose operational and financial performance is regularly reviewed by the Group’s Executive Committee, which remains the Group’s “chief operating decision maker” within the meaning of IFRS 8. The 25 BUs have now been regrouped into seven reportable segments reflecting the geographic areas where the Group operates:

- one reportable segment corresponding to the USA & Canada operating segment;
- five reportable segments corresponding to groups of operating segments;

- furthermore “Others” comprises the Group’s holding and corporate activities as well as operating segments that cannot be grouped together (Global Energy Management, Tractebel, GTT, Hydrogen) as well as the activities of *Entreprises & Collectivités (E&C)* due to the specific nature of their businesses and markets or due to their particular risk profile.

In order to determine how to group together the operating segments, as set out above, the Group exercised its judgment to decide whether two or more operating segments could be grouped together in the same reportable segment. The following key factors were examined to assess the similarity of the operating segments’ economic characteristics:

- nature of business and services;
- regulatory environment;
- economic environment in which the relevant activities operate (market maturity, growth prospects, political risks, etc.);
- risk profiles of the activities;
- how the activities fit into the Group’s strategy and business model.

The Group decided to organize the operating segments within the reportable segments for the following reasons:

- the ENGIE Solutions (divided into 3 customer segments: Cities and Communities, Services and Proximity and Industries), the France BtoC, and France Renewables operating segments have been grouped together within the **France excluding Infrastructures** reportable segment, which encompasses all the French downstream energy businesses (energy services and gas and electricity sales and distribution to BtoB, BtoT and BtoC customers), and the increasingly decentralized renewable energy generation activities. These are complementary unregulated businesses that are supported by a well-developed local network and primarily aim to develop a combined offering for local customers: energy services, decentralized production resources and combined gas and electricity supply contracts. These BUs also operate within an environment driven by the “energy transition for green growth” law (LTECV);
- the GRDF, GRTgaz, Storengy and Elengy operating segments, which comprise the gas infrastructure businesses mainly in France (distribution, transport, storage and LNG terminals), have been grouped together within the **France Infrastructures** reportable segment, as they are all regulated businesses with similar risk profiles and margins;
- the Benelux, Nuclear, Generation Europe, United Kingdom and North, South and Eastern Europe operating segments have been grouped together within the **Rest of Europe** reportable segment as these BUs, which comprise all of the Group’s European energy activities excluding France, have a similar business mix (energy production, supply, sale and services), operate in mature energy markets, and are undergoing transformation as part of the energy transition, with rapid development in renewable energy and client solutions;
- the Latin America and Brazil operating segments have been grouped together within the **Latin America** reportable segment, as these segments share similar growth prospects with a substantial proportion of their revenue generated by electricity sales under long-term agreements;
- the Asia-Pacific, China, Africa and Middle East, Southern and Central Asia and Turkey operating segments have been grouped together within the **Middle East, Asia & Africa** reportable segment, as all these regions have high power generation requirements and consequently represent significant growth prospects for the Group in the energy and energy services businesses. They operate in markets driven by the energy transition, with rapid development in renewable energy and client solutions.

6.1.2 Description of reportable segments

- **France excluding Infrastructures:** encompasses the activities of the following BUs: (i) ENGIE Solutions: energy sales and services for buildings and industry, cities and regions and major infrastructures and which designs, finances, builds and operates decentralized energy production and distribution facilities (heating and cooling networks) (ii) France BtoC: sales of energy and related services to individual and professional customers, (iii) France Renewables: development, construction, financing, operation and maintenance of all renewable power generation assets in France.
- **France Infrastructures:** encompasses the GRDF, GRTgaz, Elengy and Storengy BUs, which operate natural gas transportation, storage and distribution networks and facilities, and LNG terminals, mainly in France. They also sell access rights to these terminals.
- **Rest of Europe:** encompasses the activities of the following BUs: (i) Nuclear (electricity generation at nuclear power plants), (ii) Benelux (the Group’s business in Belgium, the Netherlands and Luxembourg: renewable electricity generation, sales of natural gas and electricity and energy services activities), (iii) Generation Europe, which comprises the Group’s thermal electricity generation activities in Europe, (iv) United Kingdom (management of renewable energy generation assets and the portfolio of distribution assets, supply of energy services and solutions, etc.) and (v) North, South and Eastern Europe (sales of natural gas and electricity and related energy services and solutions, operation of renewable energy generation assets, management of distribution networks).
- **Latin America:** encompasses the activities of (i) the Brazil BU and (ii) the Latin America BU (Argentina, Chile, Mexico and Peru). The subsidiaries concerned are involved in centralized power generation, including renewable energy, gas chain activities (including infrastructure), and energy services.
- **USA & Canada:** encompasses power generation, energy services and natural gas and electricity sales activities in the United States, Canada and Puerto Rico.
- **Middle East, Asia & Africa:** encompasses the activities of the following BUs: (i) Asia-Pacific (Australia, New Zealand, Thailand, Singapore and Indonesia), (ii) China, (iii) Africa (mainly Morocco and South Africa) and (iv) the Middle East, South and Central Asia and Turkey (including India and Pakistan). In all of these regions, the

Group is active in electricity generation and sales, gas distribution and sales, energy services and seawater desalination in the Arabian Peninsula.

- **Others:** encompasses the activities of (i) GEM, whose role is to manage and optimize, on behalf of the BUs that hold power generation assets, the Group's physical and contractual asset portfolios (excluding gas infrastructure), particularly in the European market, to sell energy to major pan-European and national industrial companies, and to provide solutions related to its expertise in the financial energy markets to third parties, (ii) Tractebel (engineering companies specialized in energy, hydraulics and infrastructure), (iii) GTT (specialized in the design of cryogenic membrane confinement systems for sea transportation and storage of LNG, both onshore and offshore), (iv) Hydrogen (design of renewable hydrogen-based zero carbon energy solutions), as well as (v) the Group's holding and corporate activities which include the entities centralizing the Group's financing requirements, *Entreprises & Collectivités* (E&C) and the contribution of the associate SUEZ until the sale of ENGIE's stake in October 2020.

The main commercial relationships between the reportable segments are as follows:

- relationships between the "France Infrastructures" reportable segment and the users of those infrastructures, i.e. the "France excluding Infrastructures" and "Others" (GEM and E&C) reportable segments: services relating to the use of the Group's gas infrastructures in France are billed based on regulated rates (or revenues) applicable to all users. Revenue and margins related to the GRDF business continue to fall within the scope of "France Infrastructures";
- relationships between the "Others" (GEM) reportable segment and the "France excluding Infrastructures" and "Rest of Europe" reportable segments: GEM manages the Group's natural gas supply contracts and sells gas at market prices to commercial companies within the "France excluding Infrastructures" and "Rest of Europe" reportable segments. As regards electricity, GEM manages and optimizes the power stations and sales portfolios on behalf of entities that hold power generation assets and deducts a percentage of the energy margin in return for providing these services. The revenue and margins related to power generation activities (minus the percentage deducted by GEM) are reported by the segments that hold power generation assets ("France excluding Infrastructures" and "Rest of Europe");
- relationships between the "Generation Europe" operating segment, which is part of the "Rest of Europe" reportable segment, and the commercial entities in the "France excluding Infrastructures" reportable segment: a portion of the power generated by thermal assets within the "Generation Europe" BU is sold to commercial entities from these segments at market prices.

Due to the variety of its businesses and their geographical location, the Group serves a very diverse range of situations and customer types (industry, local authorities and individual customers). Accordingly, no external customer represents individually 10% or more of the Group's consolidated revenues.

6.1.3 Key indicators by reportable segment

REVENUES

In millions of euros	Dec. 31, 2020			Dec. 31, 2019		
	External revenues	Intra-Group Revenues	Total	External revenues	Intra-Group Revenues	Total
France excluding Infrastructures	14,856	366	15,222	15,854	334	16,188

6.2 Key indicators by Business Line

6.2.1 Definition of Business Lines

- **Client Solutions** (excluding BtoC clients): encompasses services and service packages such as design, engineering, works, operation, installation, maintenance and facility management, as well as asset management activities such as heating and cooling networks, dedicated energy generation assets (decentralized energy delivered directly to the client). It also includes the Group's interest in the SUEZ group, partially sold on October 6, 2020 to VEOLIA (see Note 4 "Main changes in Group structure").
- **Networks**: comprises the Group's electricity and gas infrastructure activities and projects. These activities include the management and development of (i) gas and electricity transportation networks in Europe and Latin America and natural gas distribution networks in Europe, Asia and the American continent, (ii) natural gas underground storage in Europe, and (iii) regasification infrastructure in France and Chile. Apart from the historical infrastructure management activities, its asset portfolio also contributes to the challenges of energy decarbonization and network greening (gradual integration of green gas, hydrogen based projects, geothermal projects, energy as a service, etc.).
- **Renewables**: comprises all centralized renewable energy generation activities, including financing, construction and operation of renewable energy facilities, using various energy sources such as hydroelectric, onshore wind, photovoltaic solar, biomass, offshore wind, geothermal and biogas. The energy produced is fed into the grid and sold either on the open or regulated market or through electricity sale agreements.
- **Thermal**: encompasses all the Group's centralized energy generation activities using thermal assets, whether contracted or not. It includes the operation of power plants fueled mainly by gas and coal, as well as pump-operated storage plants. The energy produced is fed into the grid and sold either on the open or regulated market or through electricity sale agreements. It includes the financing, construction and operation of desalination plants, whether or not connected to power plants.
- **Nuclear**: encompasses all of the Group's nuclear power generation activities, with seven reactors in Belgium (four in Doel and three in Tihange) and drawing rights in France.

- **Supply:** encompasses all the Group's activities relating to the sale of gas and electricity to end customers, whether professional or individual. It also includes all the Group's activities in services for residential clients.

Others encompasses (i) energy management and optimization activities, (ii) the GTT BU, and (iii) corporate and holding activities.

TOTAL	55,751	60,058	46,146	54,325

(1) Comparative data presented for 2019 have been reclassified following the ratification of the Agreement on the withdrawal of the United Kingdom from the European Union on January 31, 2020.

NOTE 7 REVENUES

7.1 Revenues

Accounting standards

Revenues from contracts with customers concern revenues from contracts that fall within the scope of IFRS 15. Revenues are recognized when the customer obtains control of goods or services promised in the contract, for the amount of consideration to which an entity expects to be entitled in exchange for said promised goods or services.

A contractual analysis of the Group's sale contracts has led to the application of the following revenue recognition principles:

- **Gas, electricity and other energies**

Revenues from sales of gas, electricity and other energies are recognized upon delivery of the power to the retail, business or industrial customer.

Power deliveries are monitored in real time or on a deferred basis for those customers whose energy consumption is metered during the accounting period, in which case the portion of not yet metered revenues "in the meter" is estimated on the closing date.

- **Gas, electrical and other energy infrastructures**

Revenues derived by gas and electricity infrastructure operators upon providing transportation or distribution or storage capacities, are recognized on a straight-line basis over the contract term.

In the countries where the Group acts as an energy provider (supplier) without being in charge of its distribution or transportation, mainly in France and Belgium, an analysis of the energy sales contracts and of the related regulatory framework is carried out to determine whether the distribution or transportation services invoiced to the customers have to be excluded from the revenues recognized under IFRS 15.

Judgment may be exercised by the Group for this analysis in order to determine whether the energy provider acts as an agent or a principal for the gas or electricity distribution or transportation services re-invoiced to the customers. The main criteria used by the Group to exercise its judgment and conclude, in certain countries, that the energy provider acts as an agent of the infrastructure operator are as follows: who is primarily responsible for fulfillment of the distribution or transportation services? Does the energy provider have the ability to commit to capacity reservation contracts towards the infrastructure operator? To what extent does the energy provider have discretion in establishing the price for the distribution or transportation services?

- **Constructions, installations, Operations and Maintenance (O&M), facility management (FM) and other services**

Construction and installation contracts mainly concern assets built on the premises of customers such as cogeneration units, heaters or other energy-efficiency assets. The related revenues are usually recognized according to the percentage of completion on the basis of the costs incurred where the contracts fall within the scope of IFRS 15.

O&M contracts generally require the Group to perform services ensuring the availability of power generating facilities. These services are performed over time and the related revenues are recognized according to the percentage of completion on the basis of the costs incurred.

FM generally involves managing and integrating a large number of different services, outsourced by customers. The consideration due to FM suppliers can either be fixed or variable depending on the number of hours or based on another indicator, irrespective of the nature of the services provided. Hence, the related revenues are recognized according to the percentage of completion on the basis of the costs incurred or of the number of hours performed.

If it is not possible to conclude from the contractual analysis that the contract falls within the scope of IFRS 15, the revenues are accounted for as non-IFRS 15 revenues.

Revenues from other contracts, corresponding to revenues from operations that do not fall within the scope of IFRS 15, presented in the "Others" column include lease or concession income, as well as any financial component of operating services.

The table below shows a breakdown of revenues by type:

<i>In millions of euros</i>	Sales of gas	Sales of electricity and other energies	Sales of services linked to infrastructures	Constructions, installations, O&M, FM and other services	Others	Dec. 31, 2020

7.2 Trade and other receivables, assets and liabilities from contracts with customers

Accounting standards

On initial recognition, trade and other receivables are recorded at their transaction price as defined in IFRS 15.

A contract asset is an entity's right to consideration in exchange for goods or services that have been transferred to a customer but for which payment is not yet due or is contingent on the satisfaction of a specific condition stipulated in the contract. When an amount becomes due, it is transferred to receivables.

A receivable is recorded when the entity has an unconditional right to consideration. A right to consideration is unconditional if only the passage of time is required before payment of that consideration.

A contract liability is an entity's obligation to transfer goods or services to a customer for which the entity has already received consideration from the customer. The liability is derecognized upon recognition of the corresponding revenue.

Trade and other receivables and assets from contracts with customers are tested for impairment in accordance with the provisions of IFRS 9 on expected credit losses.

The impairment model for financial assets is based on the expected credit loss model. To calculate expected losses, the Group uses a matrix approach for trade receivables and assets from contracts with customers, for which the change in credit risk is monitored on a portfolio basis. An individual approach is used for large customers and other large counterparties, for which the change in credit risk is monitored on an individual basis.

See Note 17 "Risks arising from financial instruments" for the Group's assessment of counterparty risk.

7.2.1 Trade and other receivables and assets from contracts with customers

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Trade and other receivables, net	14,295	15,180
Of which IFRS 15	6,897	7,385
Of which non-IFRS15	7,398	7,795
Assets from contracts with customers	7,764	7,831
Accrued income and unbilled revenues	6,754	6,783
Energy in the meter ⁽¹⁾	1,010	1,048

(1) Net of advance payments.

In 2020, the segments reporting the greatest amounts of assets from contracts were France excluding Infrastructures (€2,817 million, mainly ENGIE Solutions and BtoC), Rest of Europe (€2,501 million, mainly in Benelux, Germany and the United Kingdom) and Others (€1,086 million mainly the GEM BU).

<i>In millions of euros</i>	Dec. 31, 2020			Dec. 31, 2019		
	Gross	Allowances and expected credit losses	Net	Gross	Allowances and expected credit losses	Net
Trade and other receivables, net	15,568	(1,273)	14,295	16,277	(1,097)	15,180
Assets from contracts with customers	7,784	(20)	7,764	7,848	(17)	7,831
TOTAL	23,351	(1,292)	22,059	24,125	(1,114)	23,011

Gas and electricity in the meter

For customers whose energy consumption is metered during the accounting period, the gas supplied but not yet metered at the reporting date is estimated based on historical data, consumption statistics and estimated selling prices.

For sales on networks used by a large number of grid operators, the Group is allocated a certain volume of energy transiting through the networks by the grid managers. As the final allocations are sometimes only known several months down the line, revenue figures cannot be determined with absolute certainty. However, the Group has developed measuring and modeling tools allowing it to estimate revenues with a reasonable degree of accuracy and subsequently ensure that risks of error associated with estimating quantities sold and the related revenues can be considered as immaterial.

In France and Belgium, un-metered revenues ("gas in the meter") are calculated using a direct method taking into account customers' estimated consumption based on the last invoice or metering not yet billed. These estimates are in line with the volume of energy allocated by the grid managers over the same period. The average price is used to measure "gas in the meter" and takes account of the category of customer and the age of the delivered unbilled "gas in the meter". The portion of unbilled revenues at the reporting date varies according to the assumptions about volume and average price.

"Electricity in the meter" is also determined using a direct allocation method similar to that used for gas, but taking into account specific factors related to electricity consumption. It is also measured on a customer-by-customer basis or by customer type.

Realized but not yet metered revenues ("un-metered revenues") mainly related to France and Belgium for an amount of €3,079 million at December 31, 2020 (€3,275 million at December 31, 2019).

7.2.2 Liabilities from contracts with customers

<i>In millions of euros</i>	Dec. 31, 2020			Dec. 31, 2019		
	Non-current	Current	Total	Non-current	Current	Total
Liabilities from contracts with customers	39	4,315	4,354	45	4,286	4,330
Advances and downpayments received	15	2,123	2,138	11	2,190	2,201
Deferred revenues	25	2,192	2,217	34	2,096	2,129

In 2020, the segments reporting the greatest amounts of revenues recognized over time due to the time lag between the payments and the performance of the services, are France excluding Infrastructures (€2,332 million, mainly in France BtoB and BtoC) and Rest of Europe (€1,455 million, mainly in Benelux and in Germany).

7.3 Revenues relating to performance obligations not yet satisfied

Revenues relating to performance obligations only partially satisfied at December 31, 2020 amounted to €15,883 million. They mainly concern the United Kingdom (€7,337 million) and ENGIE Solutions (€5,250 million) BUs. These BUs handle a large number of construction, installation, maintenance and facility management contracts under which revenues are recognized over time. The Benelux, Tractebel Engineering and North, South and Eastern Europe BUs will also be recognizing revenues over the next three years for performance obligations satisfied over time.

NOTE 8 OPERATING EXPENSES

Accounting standards

Operating expenses include:

- purchases and operating derivatives including:
 - the purchase of commodities and associated costs (infrastructure, transport, storage, etc.),
 - the realized impact, as well as the change in fair value (MtM), of commodity transactions, with or without physical delivery, that fall within the scope of IFRS 9 - *Financial Instruments* and that do not qualify as trading or hedging. These contracts are set up as part of economic hedges of operating transactions in the energy sector;
- purchases of services and other items such as subcontracting and interim expenses, lease expenses (short-term lease contracts or leases with a low underlying asset value), concession expenses, etc.;
- personnel costs;
- depreciation, amortization, and provisions; and
- taxes.

8.1 Purchases and operating derivatives

In millions of euros	Dec. 31, 2020	Dec. 31, 2019
Purchases and other income and expenses on operating derivatives other than trading ⁽¹⁾	(24,078)	(28,795)
Service and other purchases ⁽²⁾	(10,889)	(10,609)
PURCHASES AND OPERATING DERIVATIVES	(34,967)	(39,404)
<p>(1) Of which net income of €199 million in 2020 relating to MtM on commodity contracts other than trading (compared to a net expense of €426 million in 2019).</p> <p>(2) Of which €175 million in lease expenses, relating to short-term lease contracts and leases with a low underlying asset value in 2020 (compared to €258 million in lease expenses in 2019).</p>		

8.2 Personnel costs

In millions of euros	Notes	Dec. 31, 2020	Dec. 31, 2019
Short-term benefits		(11,191)	(10,933)
Share-based payments	21	(53)	(56)
Costs related to defined benefit plans	20.3.4	(267)	(368)
Costs related to defined contribution plans	20.4	(248)	(121)
PERSONNEL COSTS		(11,759)	(11,478)

8.3 Depreciation, amortization and provisions

In millions of euros	Notes	Dec. 31, 2020	Dec. 31, 2019
Depreciation and amortization	14 & 15	(4,648)	(4,497)
Net change in write-downs of inventories, trade receivables and other assets		(239)	(104)
Net change in provisions	19	110	208
DEPRECIATION, AMORTIZATION AND PROVISIONS		(4,778)	(4,393)

At December 31, 2020, depreciation and amortization mainly break down as €995 million for intangible assets and €3,655 million for property, plant and equipment.

NOTE 9 OTHER ITEMS OF INCOME/(LOSS) FROM OPERATING ACTIVITIES

Accounting standards

Other items of Income/(loss) from operating activities include:

- “Impairment losses”: this line include impairment losses on goodwill, other intangible assets, property, plant and equipment and investments in entities consolidated using the equity method of accounting;
- “Restructuring costs”: this line concern costs corresponding to a restructuring program planned and controlled by management that materially changes either the scope of a business undertaken by the entity, or the manner in which that business is conducted, based on the criteria set out in IAS 37;
- “Changes in the scope of consolidation”. This line includes:
 - direct costs related to acquisitions of controlling interests,
 - in a business combination achieved in stages, remeasurement at fair value at the acquisition date of the previously held interest,
 - subsequent changes in the fair value of contingent consideration,
 - gains or losses from disposals of investments which result in a change of consolidation method, as well as any impact from the remeasurement of retained interests with the exception of gains and losses arising from transactions realized in the framework of “Develop, Build, Share & Operate” (DBSO) or “Develop, Share, Build & Operate” (DSBO) business models. These transactions on renewable activities are recognized in current operating income as they are part of the recurring rotation of the Group’s capital employed;
- “Other non-recurring items”: this line includes other elements of an inhabited, abnormal or infrequent nature..

9.1 Impairment losses

<i>In millions of euros</i>	Notes	Dec. 31, 2020	Dec. 31, 2019
Impairment losses:			
Goodwill	13.1	(2,145)	(116)
Property, plant and equipment and other intangible assets	14 & 15	(1,257)	(1,735)
Investments in equity method entities and related provisions		(237)	-
TOTAL IMPAIRMENT LOSSES		(3,639)	(1,851)
Reversal of impairment losses:			
Property, plant and equipment and other intangible assets		88	61
Investments in equity method entities and related provisions		-	20
TOTAL REVERSALS OF IMPAIRMENT LOSSES		88	81
TOTAL		(3,551)	(1,770)

Net impairment losses amounted to €3,551 million in 2020, relating mainly to goodwill, property, plant and equipment and intangible assets. After taking into account the deferred tax effects and the share of impairment losses attributable to non-controlling interests, the impact of these impairment losses on net income Group share for 2020 amounted to €3,420 million.

Impairment tests are performed in accordance with the conditions described in Note 13.3.

9.1.1 Impairment losses recognized in 2020

Net impairment losses amounted to €3,551 million in 2020 and mainly concerned:

- **Goodwill for the Nuclear CGU** (€2,145 million) and **Belgian nuclear reactors** (€715 million)

Following the announcements made by the Belgian government in Autumn 2020 and the talks held since then, the Group considered that it could no longer justify the assumption that the operating life of half of its second-generation reactors could be extended for 20 years beyond 2025.

The impairment losses over the year take into consideration this major assumption change, the level of forward prices observed in the second half of 2020 and the update of the Group's long-term pricing scenario in light of the latest forecasts for demand, the price of CO₂ and the change in the energy mix.

- Other impairment losses

Other impairment losses recognized by the Group mainly concerned:

- an investment in a gas production asset in Algeria (€123 million);
- thermal power generation assets in the Middle East (€115 million);
- other thermal and renewable power generation assets in Mexico (€70 million), North America (€69 million) and Brazil (€64 million).

9.1.2 Impairment losses recognized in 2019

Net impairment losses amounted to €1,770 million in 2019, and mainly concerned:

- the Belgian nuclear facilities whose operating life may no longer be extended (€1,023 million) following the triennial review of nuclear provisions and the resulting increase in the carrying amount of the related dismantling assets in a context of falling prices;
- other impairment losses relating to thermal power generation assets in Latin America (€165 million) and the Middle East (€135 million), the intangible asset corresponding to the France BtoC client portfolio value (€111 million) and the value adjustments of several coal-fired power plants in Germany and the Netherlands in connection with their disposal (€148 million).

After taking into account the deferred tax effects and the share of impairment losses attributable to non-controlling interests, the impact of these impairment losses on net income Group share for 2019 amounted to €1,579 million.

9.2 Restructuring costs

In 2020, restructuring costs totaled €343 million (versus €218 million in 2019). Restructuring costs in both years mainly included costs related to staff reduction plans and measures to adapt to economic situations, as well as the shutdown or sale of operations, the closure or restructuring of certain facilities and other miscellaneous restructuring costs.

9.3 Changes in scope of consolidation

At December 31, 2020, the impact of changes in the scope of consolidation was a positive €1,640 million and mainly comprised (i) the positive impact of the disposal of the majority of ENGIE's interest in SUEZ for €1,735 million, (ii) the positive impact of the disposal of the Group's interests in Astoria 1 and 2 in the United States for €95 million, partially offset by (iii) a negative impact of €62 million relating to the disposal of MultiTech in Canada and (iv) a negative €51 million change in the earn-out from the disposal of LNG activities to TOTAL in 2018.

At December 31, 2019, the impact of changes in the scope of consolidation was a positive €1,604 million and mainly comprised the positive impact of the sale of Glow for €1,580 million, including €143 million in respect of items of other comprehensive income recycled to the income statement.

9.4 Other non-recurring items

Other non-recurring items at December 31, 2020 totaled a negative €886 million and mainly included, in addition to the impacts of the adjustment to provisions for the dismantling and rehabilitation of industrial sites, the effects of extending the trading management method launched by the GEM BU in 2017 to the rest of the Group's gas positions in Europe:

The management framework for the Group's gas positions in Europe changed in 2017 for the majority of the long-term contracts managed by the GEM BU, shifting to an individual approach per contract based on market conditions rather than as part of a portfolio. In 2020, ENGIE decided to extend this trading management model to the rest of its gas positions, thereby taking full account of the consequences of contractual changes and an expected increase in the volumes available in this area now under the trading business model. The implementation of the new management method to this extended scope has been made possible thanks to the rollout of tools that allow for a better economic vision of the positions. To this end, a new organization was put in place in December 2020.

As a result of this change in management framework, the Group extended fair value accounting to the assets in question, leading to an initial accounting impact of fair value measurement of a negative €726 million. From then on, the Group's results take into account the realized and unrealized gains and losses relating to these gas positions through the trading net margin presented in revenues and current operating income.

At December 31, 2019, other non-recurring items totaling a negative €1,240 million mainly included the non-recurring impact of the nuclear provision review (back-end of the cycle) and other miscellaneous expenses for a negative €1,166 million.

NOTE 10 NET FINANCIAL INCOME/(LOSS)

<i>In millions of euros</i>	Expense	Income	Dec. 31, 2020	Expense	Income	Dec. 31, 2019
<i>Interest expense on gross debt and hedges</i>	(901)	-	(901)	(894)	-	(894)
<i>Foreign exchange gains/losses on borrowings and hedges</i>	(21)	-	(21)	-	30	30
<i>Ineffective portion of derivatives qualified as fair value hedges</i>	-	-	-	(3)	-	(3)
<i>Gains and losses on cash and cash equivalents and liquid debt instruments held for cash investment purposes</i>	-	47	47	-	84	84
<i>Capitalized borrowing costs</i>	103	-	103	106	-	106
Cost of net debt	(819)	47	(772)	(790)	114	(676)
Cost of lease liabilities	(47)	-	(47)	(48)	-	(48)
<i>Cash payments made on the unwinding of swaps</i>	(44)	-	(44)	(62)	-	(62)
<i>Reversal of the negative fair value of these early unwound derivative financial instruments</i>	-	31	31	-	62	62
<i>Expenses on debt restructuring transactions</i>	(16)	-	(16)	-	6	6
Gains/(losses) on debt restructuring and early unwinding of derivative financial instruments	(60)	31	(29)	(62)	68	6
<i>Net interest expense on post-employment benefits and other long-term benefits</i>	(89)	-	(89)	(121)	-	(121)
<i>Unwinding of discounting adjustments to other long-term provisions</i>	(614)	-	(614)	(566)	-	(566)
<i>Change in fair value of derivatives not qualified as hedges and ineffective portion of derivatives qualified as cash flow hedges</i>	(158)	-	(158)	(223)	-	(223)
<i>Income/(loss) from debt instruments and equity instruments</i>	(97)	73	(24)	(34)	212	179
<i>Interest income on loans and receivables at amortized cost</i>	-	178	178	-	169	169
<i>Other</i>	(346)	225	(122)	(457)	350	(107)
Other financial income and expenses	(1,306)	475	(830)	(1,400)	731	(669)
NET FINANCIAL INCOME/(LOSS)	(2,232)	553	(1,678)	(2,300)	913	(1,387)

The cost of net debt is higher compared to December 31, 2019, due to the drop in cash remuneration and a more unfavorable foreign exchange result.

Losses from debt and equity instruments amounted to €24 million. This amount includes the negative change in fair value of money market funds held by Synatom for a negative amount of €66 million (see Note 16.1.1.2 "Debt instruments at fair value").

At December 31, 2020, the average cost of debt after hedging came out at 2.38% compared with 2.70% at December 31, 2019.

NOTE 11 INCOME TAX EXPENSE

Accounting standards

The Group calculates taxes in accordance with prevailing tax legislation in the countries where income is taxable.

In accordance with IAS 12, deferred taxes are recognized according to the liability method on temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their tax bases, using tax rates that have been enacted or substantively enacted by the reporting date. However, under the provisions of IAS 12, no deferred tax is recognized for temporary differences arising from goodwill for which impairment losses are not deductible for tax purposes, or from the initial recognition of an asset or liability in a transaction which (i) is not a business combination and (ii) at the time of the transaction, affects neither accounting income nor taxable income. In addition, deferred tax assets are only recognized to the extent that it is probable that taxable income will be available against which the deductible temporary differences can be utilized.

A deferred tax liability is recognized for all taxable temporary differences associated with investments in subsidiaries, associates, joint ventures and branches, except if the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

Net balances of deferred taxes are calculated based on the tax position of each company or on the total income of companies included within the relevant consolidated tax group, and are presented in assets or liabilities for their net amount per tax entity.

Deferred taxes are reviewed at each reporting date to take into account factors including the impact of changes in tax laws and the prospects of recovering deferred tax assets arising from deductible temporary differences.

Deferred tax assets and liabilities are not discounted.

Tax effects relating to coupon payments on deeply-subordinated perpetual notes are recognized in profit or loss.

11.1 Actual income tax expense recognized in the income statement

11.1.1 Breakdown of actual income tax expense recognized in the income statement

The tax expense recognized in the income statement for 2020 amounts to €715 million (€640 million income tax expense in 2019). It breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Current income taxes	(801)	(761)
Deferred taxes	85	121
TOTAL INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(715)	(640)

11.1.2 Reconciliation of theoretical income tax expense with actual income tax expense

A reconciliation of theoretical income tax expense with the Group's actual income tax expense is presented below:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Net income/(loss)	(893)	1,649
Share in net income of equity method entities	552	500
Income tax expense	(715)	(640)
Income/(loss) before income tax expense and share in net income of associates (A)	(730)	1,790
Of which French companies	1,559	285
Of which companies outside France	(2,288)	1,505
Statutory income tax rate of the parent company (B)	32.0%	34.4%
THEORETICAL INCOME TAX EXPENSE (C) = (A) X (B)	234	(616)
Reconciling items between theoretical and actual income tax expense		
Difference between statutory tax rate applicable to the parent and statutory tax rate in force in jurisdictions in France and abroad	(183)	215
Permanent differences ⁽¹⁾	(627)	(23)
Income taxed at a reduced rate or tax-exempt ⁽²⁾	571	533
Additional tax expense ⁽³⁾	(392)	(123)
Effect of unrecognized deferred tax assets on tax loss carry-forwards and other tax-deductible temporary differences ⁽⁴⁾	(638)	(867)
Recognition or utilization of tax income on previously unrecognized tax loss carry-forwards and other tax-deductible temporary differences ⁽⁵⁾	266	212
Impact of changes in tax rates ⁽⁶⁾	(106)	(55)
Tax credits and other tax reductions ⁽⁷⁾	112	101
Other ⁽⁸⁾	47	(16)
INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(715)	(640)

- (1) *Mainly includes disallowable impairment losses on goodwill, disallowable operating expenses and the deduction of interest expenses arising from hybrid debt.*
- (2) *Mainly includes capital gains on disposals of securities exempt from tax or taxed at a reduced rate in some tax jurisdictions, the impact of the specific tax regimes used by some entities, disallowable impairment losses and capital losses on securities, and the impact of untaxed income from remeasuring previously-held (or retained) equity interests in connection with acquisitions and changes in consolidation methods.*
- (3) *Mainly includes tax on dividends resulting from the parent company tax regime, withholding tax on dividends and interest levied in several tax jurisdictions, allocations to provisions for income tax, and regional and flat-rate corporate taxes.*
- (4) *Includes (i) the cancellation of the net deferred tax asset position for some tax entities in the absence of sufficient profit being forecast and (ii) the impact of disallowable impairment losses on fixed assets.*
- (5) *Includes the impact of the recognition of net deferred tax asset positions for some tax entities.*
- (6) *Mainly includes the impact of tax rate changes on deferred tax balances in France, the United Kingdom for 2020 and Luxembourg for 2019.*
- (7) *Mainly includes reversals of provisions for tax litigation, tax credits in France and other tax reductions.*
- (8) *Mainly includes the correction of previous tax charges.*

The Group reviewed the net deferred tax positions based on projections of future taxable income, including the expected effects of the COVID-19 crisis and the legal changes approved in 2020. The effects were limited to a few countries.

11.1.3 Analysis of the deferred tax income/(expense) recognized in the income statement, by type of temporary difference

<i>In millions of euros</i>	Impact in the income statement	
	Dec. 31, 2020	Dec. 31, 2019
Deferred tax assets:		
Tax loss carry-forwards and tax credits	(203)	572
Pension and related obligations	(78)	28
Non-deductible provisions	222	(137)
Difference between the carrying amount of PP&E and intangible assets and their tax bases	276	(93)
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	488	(1,360)
Other	(40)	(36)
TOTAL	666	(1,028)
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	2	(239)
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	(437)	1,661
Other	(146)	(273)
TOTAL	(581)	1,149
DEFERRED TAX INCOME/(EXPENSE)	85	121

11.2 Deferred tax income/(expense) recognized in “Other comprehensive income”

Net deferred tax income/(expense) recognized in “Other comprehensive income” is broken down by component as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Equity and debt instruments	(10)	(2)
Actuarial gains and losses	399	256
Net investment hedges	(27)	12
Cash flow hedges on other items	(128)	218
Cash flow hedges on net debt	17	10
TOTAL EXCLUDING SHARE OF EQUITY METHOD ENTITIES	253	494
Share of equity method entities	116	81
TOTAL	369	575

11.3 Deferred taxes presented in the statement of financial position

11.3.1 Change in deferred taxes

Changes in deferred taxes recognized in the statement of financial position, after netting deferred tax assets and liabilities by tax entity, break down as follows:

<i>In millions of euros</i>	Assets	Liabilities	Net position
AT DECEMBER 31, 2019	860	(4,631)	(3,771)
Impact on net income for the year	666	(580)	85
Impact on other comprehensive income items	504	(245)	259
Impact of changes in scope of consolidation	(9)	(19)	(29)
Impact of translation adjustments	(90)	213	122
Transfers to assets and liabilities classified as held for sale	(39)	29	(10)
Other	(723)	530	(193)
Impact of netting by tax entity	(288)	288	-
AT DECEMBER 31, 2020	880	(4,416)	(3,536)

11.3.2 Analysis of the net deferred tax position recognized in the statement of financial position (before netting deferred tax assets and liabilities by tax entity), by type of temporary difference

Accounting standards

Measurement of recognized tax loss carry-forwards

Deferred tax assets are recognized on tax loss carry-forwards when it is probable that taxable profit will be available against which the tax loss carry-forwards can be utilized. The probability that taxable profit will be available against which the unused tax losses can be utilized, is based on taxable temporary differences relating to the same taxation authority and the same taxable entity and estimates of future taxable profits. These estimates and utilizations of tax loss carry-forwards were prepared on the basis of profit and loss forecasts over a six-year tax projection period as included in the medium-term business plan validated by Management, subject to exceptions justified by a particular context and, if necessary, on the basis of additional forecasts.

<i>In millions of euros</i>	Statement of financial position at	
	Dec. 31, 2020	Dec. 31, 2019
Deferred tax assets:		
Tax loss carry-forwards and tax credits	1,771	2,118
Pension obligations	2,061	1,635
Non-deductible provisions	434	268
Difference between the carrying amount of PP&E and intangible assets and their tax bases	953	763
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	2,148	2,199
Other	444	518
TOTAL	7,810	7,502
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(8,531)	(8,953)
Measurement of financial instruments at fair value (IAS 32 / IFRS 9)	(2,067)	(1,700)
Other	(748)	(620)
TOTAL	(11,346)	(11,273)
NET DEFERRED TAX ASSETS/(LIABILITIES)	(3,536)	(3,772)

11.4 Unrecognized deferred taxes

At December 31, 2020, the tax effect of tax losses and tax credits eligible for carry-forward but not utilized and not recognized in the statement of financial position amounted to €4,061 million (€3,836 million at December 31, 2019). Most of these unrecognized tax losses relate to companies based in countries which allow losses to be carried forward indefinitely (mainly Belgium, Luxembourg and the Netherlands). These tax loss carry-forwards did not give fully or partially rise to the recognition of deferred tax due to the absence of sufficient profit forecasts in the medium term.

The tax effect of other tax-deductible temporary differences not recorded in the statement of financial position was €823 million at end-December 2020 versus €929 million at end-December 2019.

NOTE 12 EARNINGS PER SHARE

Accounting standards

Basic earnings per share is calculated by dividing net income Group share for the year by the weighted average number of ordinary shares outstanding during the year. The average number of ordinary shares outstanding during the year is the number of ordinary shares outstanding at the beginning of the year, adjusted by the number of ordinary shares bought back or issued during the year.

For the diluted earnings per share calculation, the weighted average number of shares and basic earnings per share are adjusted to take into account the impact of the conversion or exercise of any dilutive potential ordinary shares (options, warrants and convertible bonds, etc.).

In compliance with IAS 33 – *Earnings per Share*, earnings per share and diluted earnings per share are based on net income/(loss) Group share after deduction of payments to bearers of deeply-subordinated perpetual notes (see Note 18.2.1 “Issuance of deeply-subordinated perpetual notes”).

The Group’s dilutive instruments included in the calculation of diluted earnings per share include bonus shares and performance shares granted in the form of ENGIE securities.

	Dec. 31, 2020	Dec. 31, 2019
Numerator (in millions of euros)		
Net income/(loss) Group share	(1,536)	984
Interest from deeply-subordinated perpetual notes	(187)	(165)
Net income/(loss) used to calculate earnings per share	(1,723)	820
Impact of dilutive instruments	-	-
Diluted net income/(loss) Group share	(1,723)	820
Denominator (in millions of shares)		
Average number of outstanding shares	2,416	2,413
Impact of dilutive instruments:		
Bonus share plans reserved for employees	11	12
Diluted average number of outstanding shares	2,427	2,425
Earnings per share (in euros)		
Basic earnings/(loss) per share	(0.71)	0.34
Diluted earnings/(loss) per share	(0.71)	0.34

NOTE 13 GOODWILL

Accounting standards

Upon a business combination, goodwill is measured as the difference between:

- on the one hand the sum of:
 - the consideration transferred;
 - the amount of non-controlling interests in the acquiree; and
 - in a business combination achieved in stages, the acquisition-date fair value of the previously held equity interest in the acquiree;
- on the other hand the net fair value of the identifiable assets acquired and liabilities assumed. The key assumptions and estimates used to determine the fair value of assets acquired and liabilities assumed include the market outlook for the measurement of future cash flows as well as applicable discount rates. These assumptions reflect management's best estimates at the acquisition date.

The amount of goodwill recognized at the acquisition date cannot be adjusted after the end of the 12 month measurement period.

Goodwill relating to interests in associates is recorded under "Investments in equity method entities".

Risk of impairment

Goodwill is not amortized but tested for impairment each year in accordance with IAS 36, or more frequently where an indication of impairment is identified. Impairment tests are carried out at the level of cash-generating units (CGUs) or groups of CGUs, which constitute groups of assets which generate cash flows that are largely independent from cash flows generated by other CGUs.

Goodwill is impaired if the net carrying amount of the CGU to which the goodwill is allocated is greater than the recoverable amount of that CGU. The methods used to carry out these impairment tests are described in Note 13.3.

Impairment losses in relation to goodwill cannot be reversed and are shown as "Impairment losses" in the income statement.

Indicators of goodwill impairment

The main indicators of impairment used by the Group are:

- using external sources of information
 - a decline in an asset's value over the period that is significantly more than would be expected from the passage of time or normal use;
 - significant adverse changes that have taken place over the period, or will take place in the near future, in the technological market, economic or legal environment in which the entity operates or in the market to which an asset is dedicated;
 - an increase over the period in market interest rates or other market rates of return on investments if such increase is likely to affect the discount rate used in calculating an asset's value in use and decrease its recoverable amount materially;
 - the carrying amount of the net assets of the entity exceeds its market capitalization;
- using internal sources of information
 - evidence of obsolescence or physical damage to an asset

- significant changes in the extent to which, or manner in which, an asset is used or is expected to be used, that have taken place in the period or soon thereafter and that will adversely affect it. These changes include the asset becoming idle, plans to dispose of an asset sooner than expected, reassessing its useful life as finite rather than indefinite or plans to restructure the operations to which the asset belongs;
- internal reports that indicate that the economic performance of an asset is, or will be, worse than expected.

13.1 Movements in the carrying amount of goodwill

<i>In millions of euros</i>	Net amount
AT DECEMBER 31, 2019	18,665
Impairment losses	(2,145)
Changes in scope of consolidation and Other	(151)
Translation adjustments	(330)
AT DECEMBER 31, 2020	15,943

Changes during the period mainly comprise impairment of goodwill related to the Nuclear CGU, and the disposal of the Group's interests in Astoria 1 and 2, offset by various acquisitions made during the year (see Note 4 "Main changes in Group structure").

13.2 Goodwill CGUs

The table below shows "material" goodwill CGUs at December 31, 2020:

<i>In millions of euros</i>	Operating segment	Dec. 31, 2020
MATERIAL CGUs		
GRDF	France Infrastructures	4,009
Nuclear	Rest of Europe	797
Engie Solutions	France excl. Infrastructures	1,470
Benelux	Rest of Europe	1,242
France Renewable Energy	France excl. Infrastructures	1,178
United Kingdom	Rest of Europe	1,019
OTHER SIGNIFICANT CGUs		
France BtoC	France excl. Infrastructures	1,050
Northern, Southern and Central Europe	Rest of Europe	863
GRTgaz	France Infrastructures	614
North America	USA & Canada	538
Generation Europe	Rest of Europe	521
OTHER CGUs		2,642
TOTAL		15,943

During 2020, the Group made certain adjustments to its organization structure (see Note 6 "Segment information"):

- the France B2B and France Networks CGUs have been combined into a single CGU called ENGIE Solutions;
- the Benelux BU has been split into three separate CGUs: Nuclear, Renewables and Benelux (energy services, electricity sales and gas sales activities);
- ENGIE Impact's share of the goodwill related to the North America and Tractebel CGUs has been reallocated to the Impact CGU.

13.3 Impairment testing of goodwill CGUs

All goodwill CGUs were tested for impairment. In addition, intangible assets and property plant and equipment were tested at the level of the relevant group of assets, whenever there was an indication of impairment. The current environment, which has been affected by the COVID-19 crisis, has had consequences that are indications of potential impairment, in particular the fall in energy prices, decline in the BtoB sector and fall in the stock markets. The Group did not identify any increased risk of impairment due to the COVID-19 crisis, in particular for assets used in capital-light activities or with little

exposure to short-term changes in market conditions. This is particularly the case for regulated infrastructures, the historical client solutions businesses and the energy sales business.

The impairment tests are based on data as of end-June, plus a review of events arisen in the second half of the year.

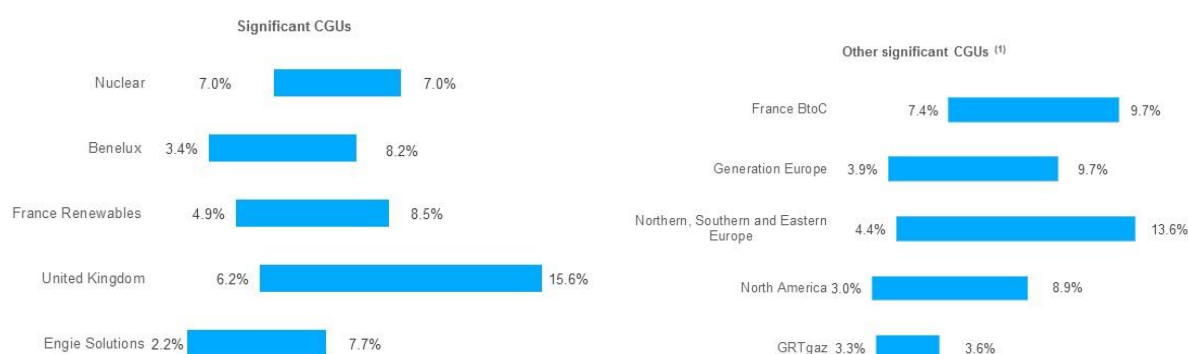

In most cases, the recoverable amount of CGUs is determined by reference to a value in use that is calculated using cash flow projections drawn up on the basis of the 2021 budget and the 2022-2023 medium-term business plan, as approved by the Executive Committee and the Board of Directors, and on extrapolated cash flows beyond that time frame.

Cash flow projections are determined on the basis of macroeconomic assumptions (inflation, exchange rates and growth rates) and price forecasts resulting from the Group's reference scenario for 2024-2040. The forecasts that feature in the reference scenario were approved by the Executive Committee in December 2020. The forecasts and projections included in the reference scenario were determined on the basis of the following inputs:

- forward market prices over the liquidity period for fuel (coal, oil and gas), CO₂ and electricity on each market;
- beyond this period, medium- and long-term energy prices were determined by the Group based on macroeconomic assumptions and fundamental supply and demand equilibrium models, the results of which are regularly compared against forecasts prepared by external energy sector specialists. Long-term projections for CO₂ prices are in line with the 2050 climate neutrality objectives set by the European Commission as part of the "European Green Deal" presented in December 2019. More specifically, medium- and long-term electricity prices were determined by the Group using electricity demand forecasting models, medium- and long-term forecasts of fuel and CO₂ prices, and expected trends in installed capacity and in the technology mix of the production assets within each power generation system.

Discount rate

The discount rates used correspond to the weighted average cost of capital, which is adjusted in order to reflect the business, market, country and currency risk relating to each goodwill CGU reviewed. The discount rates used are consistent with available external information sources. The post-tax rates used in 2020 to measure the value in use of the goodwill CGUs for discounting future cash flows ranged between 2.2% and 15.6%, compared with a range of between 3.1% and 13.1% in 2019. The discount rates used for the main goodwill CGUs are shown below:

(1) The valuation methods used are the discounted cash flows (DCF) method and the discounted dividend model (DDM) method.

13.3.1 Material CGUs

This section presents the method for determining value in use, the key assumptions underlying the valuation, and the sensitivity analyses for the impairment tests on the Group's main goodwill CGUs at December 31, 2020.

13.3.1.1 GRDF CGU

The total amount of goodwill allocated to the GRDF CGU was €4,009 million at December 31, 2020. The GRDF CGU groups together the Group's regulated natural gas distribution activities in France.

The terminal value used to calculate the value in use corresponds to the expected Regulated Asset Base (RAB) with no premium at the end of 2026. The RAB is the value assigned by the French Energy Regulation Commission (CRE) to the assets operated by the distributor. It is the sum of the future pre-tax cash flows, discounted at the pre-tax rate of return guaranteed by the regulator.

The cash flow projections are drawn up based on the tariff for public natural gas distribution networks, known as the "ATRD 6 tariff", which entered into force for a period of four years on July 1, 2020, and on the overall level of investments agreed by the CRE as part of its decision on the "ATRD 6 tariff".

Given the regulated nature of the businesses grouped within the GRDF CGU, a reasonable change in any of the valuation inputs would not result in impairment losses.

13.3.1.2 Nuclear CGU

The goodwill allocated to the Nuclear CGU amounted to €797 million at December 31, 2020. The Group's Nuclear CGU encompasses the power generation activities from its nuclear power plants in Belgium and drawing rights on the Chooz B and Tricastin power plants in France.

Key assumptions used for the impairment test

The cash flow projections for the Nuclear CGU are based on a large number of key assumptions, such as prices of fuel and CO₂, expected trends in electricity demand and prices, availability of power plants, the market outlook, and changes in the regulatory environment (especially concerning nuclear capacities in Belgium and the extension of drawing rights agreements for French nuclear plants). The key assumptions also include the discount rate used to calculate the value in use of this goodwill CGU.

Cash flow projections for the period beyond the medium-term business plan were determined as described below:

Activities	Assumptions applied beyond the term of the business plan ⁽¹⁾
Nuclear power generation in Belgium	For Doel 1, Doel 2 and Tihange 1, cash flow projection over the residual useful life of 50 years. For the second generation reactors Doel 3, Doel 4, Tihange 2 and Tihange 3, cash flow projection over the residual useful life of 40 years without any hypothesis of extension unlike previous years.
Drawing rights on Chooz B and Tricastin power plants	Cash flow projection over the remaining term of existing contract plus assumption that drawing rights will be extended for a further 10 years.

The most important assumptions concerning the Belgian regulatory environment relate to the operating life of existing nuclear reactors.

The impairment test took into account the 10-year extension (through 2025) of the operating life of Tihange 1, Doel 1 and Doel 2, annual royalties totaling €20 million in respect of the extension of Doel 1 and Doel 2, and the new conditions for determining the nuclear contribution that will apply to second-generation reactors (Doel 3 and 4, Tihange 2 and 3) through their 40th year of operation, as defined in the December 29, 2016 law and reviewed by the CREG in 2020.

As regards second-generation reactors, the principle of a gradual phase-out of nuclear power and the schedule for this phase-out, with the shutdown of the reactors of Doel 3 in 2022, Tihange 2 in 2023 and Tihange 3 and Doel 4 in 2025, after 40 years of operation, were first set out in the law of January 31, 2003 on the gradual phase-out of nuclear power for industrial electrical generation, and have been regularly reaffirmed since then in the law of June 18, 2015, the energy pact approved by the government on March 30, 2018, the governmental agreement of September 30, 2020, and the general policy memorandum of November 4, 2020. However, this principle remains combined with analysis mechanisms enabling this decision to be reassessed by end-2021 based on its impacts on the security of supply, the climate, energy prices and the security of power plants subject to a monitoring process. If this monitoring process reveals a potential supply security problem, the 2020 governmental agreement provides for the option of adjusting the phase-out schedule for capacity of up

to 2 GW. However, in view of the Belgian government's announcements in Autumn 2020 and its talks with the Group since then, the Group considered that for the 2020 impairment test, unlike prior years, the operating conditions for carrying out pre-extension work were no longer met and therefore no longer justified the assumption that the life of half of its second generator reactors could be extended for 20 years beyond 2025.

In France, the Nuclear Safety Authority authorized the start-up of Tricastin 1 on December 20, 2019 after its shutdown for its fourth 10-yearly inspection and, on December 3, 2020, published a draft decision setting out the conditions for the 900 MW reactors to continue operating beyond 40 years. Confirmation of a 10-year extension of the operating life of the 900 MW series reactors is therefore expected to be formalized in the next few years, once the conditions for continued operation have been determined by the Nuclear Safety Authority and a public inquiry has been held. The Group therefore included an assumption that the operating life of the Tricastin and Chooz B nuclear plants would be extended for 10 years after their fourth 10-yearly inspection and that, therefore, so would the Group's drawing rights expiring on average in 2021 and 2039 respectively. This assumption had already been made in prior years, as the Group considered, in line with its reference scenario on developments in the French energy mix, that an extension of the operating life of those reactors was the most credible and most probable scenario.

Results of the impairment test

Given the material assumption change described above, the forward prices observed in the second half of 2020, and the Group's long-term pricing scenario updated based on the latest forecasts for demand, CO2 prices and developments in the energy mix, the Group recognized an impairment loss of €715 million against its nuclear assets in Belgium and €2,145 million against the goodwill allocated to the Nuclear CGU at December 31, 2020. The carrying amount of the residual goodwill was €797 million at December 31, 2020.

Sensitivity analyses

A decrease of €10/MWh in electricity prices for all nuclear power generation would lead to an additional impairment loss of around €1.7 billion. Conversely, an increase of €10/MWh in electricity prices would increase the recoverable amount of the CGU by around €1.5 billion.

An increase of 50 basis points in the discount rates would lead to an additional impairment loss of around €0.1 billion. A decrease of 50 basis points in the discount rates used would lead to an increase in the recoverable amount of the CGU of around €0.1 billion.

13.3.1.3 ENGIE Solutions CGU

The goodwill allocated to the ENGIE Solutions CGU amounted to €1,470 million at December 31, 2020. The ENGIE Solutions CGU encompasses the following activities in France: (i) energy services and sales for buildings and industry, cities and regions and major infrastructures, and (ii) design, financing, construction and operation of decentralized energy production and distribution facilities (heating and cooling networks).

The terminal value used to calculate the value in use of the services and energy sales businesses was determined by extrapolating the cash flows beyond the medium-term business plan period using a long-term growth rate of 1.85% per year.

The main assumptions and key estimates relate primarily to discount rates and changes in price beyond the liquidity period.

An increase of 50 basis points in the discount rates used would have a negative 25% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 27% impact on the calculation.

A decrease of 10% in the margin captured by power generation assets would have a negative 20% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. An increase of 10% in the margin captured would have a positive 23% impact on this calculation.

13.3.1.4 Benelux CGU

The total amount of goodwill allocated to the Benelux CGU was €1,242 million at December 31, 2020. The Benelux CGU encompasses (i) energy services, electricity and gas sales in Belgium and the Netherlands, and (ii) energy services in Luxembourg.

The terminal value used to calculate the value in use of the services and energy sales businesses was determined by extrapolating the cash flows beyond the medium-term business plan period using a long-term growth rate of 2% per year.

An increase of 50 basis points in the discount rates used would have a negative 21% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 24% impact on the calculation.

A decrease of 10% in the margin on gas and electricity sales activities would have a negative 15% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 10% in the margin on gas and electricity sales activities would have a positive 15% impact on the calculation.

A decrease of 10% in the margin on service activities would have a negative 16% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 10% in the margin on services activities would have a positive 16% impact on the calculation.

13.3.1.5 France Renewable Energy CGU

The goodwill allocated to the France Renewable Energy CGU amounted to €1,178 million at December 31, 2020. The France Renewable Energy CGU groups together the development, construction, financing, operation and maintenance of all of the renewable power generation assets in France (hydraulic, wind and photovoltaic).

For the hydraulics business, the terminal value was determined to calculate the value in use by extrapolating the cash flows beyond the medium-term business plan based on the reference scenario adopted by the Group.

The main assumptions and key estimates relate primarily to discount rates, assumptions on the renewal of the hydropower concession agreements and changes in electricity prices beyond the liquidity period.

Value in use of the Compagnie Nationale du Rhône and SHEM was calculated based on assumptions including the extension or renewal of a tender process for the concession agreements, as well as on the conditions of a potential extension.

The cash flows for the periods covered by the renewal of the concession agreements are based on a number of assumptions relating to the economic and regulatory conditions for operating these assets (royalty rates, required level of investment, etc.) during this period.

A decrease of €10/MWh in electricity prices for hydropower generation would have a negative 105% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. Conversely, an increase of €10/MWh in electricity prices would have a positive 102% impact on the calculation.

An increase of 50 basis points in the discount rates used would have a negative 80% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 97% impact on the calculation.

If the Compagnie Nationale du Rhône hydropower concession agreements are not renewed beyond 2023, this would have a strong adverse impact on the results of the test, with the recoverable amount falling significantly below the carrying amount. In this scenario, the impairment risk would represent around €1 billion.

13.3.1.6 United Kingdom CGU

The goodwill allocated to the United Kingdom CGU amounted to €1,019 million at December 31, 2020. The United Kingdom CGU includes activities in (i) renewable power generation (hydraulic, wind and solar), (ii) gas and electricity sales, and (iii) services to individual and professional customers in the United Kingdom.

The terminal value used to calculate the value in use of the services and energy sales businesses was determined by extrapolating the cash flows beyond the medium-term business plan period using a long-term growth rate of 2% per year.

The main assumptions and key estimates relate primarily to discount rates and changes in price beyond the liquidity period.

An increase of 50 basis points in the discount rates used would have a negative 24% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 27% impact on the calculation.

A decrease of 10% in the margin captured by power generation assets would have a negative 23% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. An increase of 10% in the margin captured would have a positive 23% impact on this calculation.

13.3.2 Other significant CGUs

13.3.2.1 North America CGU

The goodwill allocated to the North America CGU amounted to €538 million at December 31, 2020. The North America CGU mainly comprises:

- Canada, which includes activities in (i) renewable power generation, and (ii) services to individual and professional customers;
- the United States, which includes activities in (i) gas and electricity sales and (ii) services to individual and professional customers;
- Puerto Rico, which includes an investment in EcoElectrica, a key energy industry player in Puerto Rico's economy (see Note 3.2 "Investments in joint ventures"). Despite the difficult financial environment in Puerto Rico, ENGIE does not have any information at December 31, 2020 on the basis of which the Group would modify its valuation assumptions, regarding its share in these assets.

The wind and solar energy production activities in the United States make up an independent goodwill CGU.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2021 budget and the 2022-2023 medium-term business plan. A terminal value was calculated for the services and energy sales businesses using EBITDA multiples as a basis.

The main assumptions and key estimates relate primarily to discount rates and changes in price beyond the liquidity period.

An increase of 50 basis points in the discount rates used would have a negative 46% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 33% impact on the calculation.

A decrease of 10% in the margin on gas and electricity sales activities would have a negative 50% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 10% in the margin on gas and electricity sales activities would have a positive 30% impact on the calculation.

A decrease of 10% in the margin on service activities would have a negative 35% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. Conversely, an increase of 10% in the margin on services activities would have a positive 16% impact on the calculation.

13.3.2.2 Generation Europe CGU

The goodwill allocated to the Generation Europe CGU amounted to €521 million at December 31, 2020. The Generation Europe CGU groups together the thermal power generation activities in Europe.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2021 budget and the 2022-2023 medium-term business plan. Beyond this three-year period, cash flows were projected over the useful lives of the assets based on the reference scenario adopted by the Group.

The main assumptions and key estimates relate primarily to discount rates, estimated demand for electricity and changes in the price of CO₂, fuel and electricity beyond the liquidity period.

Results of the impairment test

At December 31, 2020, the recoverable amount of the Generation Europe goodwill CGU was higher than its carrying amount.

Sensitivity analyses

An increase of 50 basis points in the discount rates used would have a negative 13% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 13% impact on the calculation.

A decrease of 10% in the margin captured by thermal power plants would have a negative 29% impact on the excess of the recoverable amount over the carrying amount of the goodwill CGU. However, the recoverable amount would remain above the carrying amount. An increase of 10% in the margin captured would have a positive 29% impact on this calculation.

13.3.2.3 Other significant goodwill CGUs

For the other significant goodwill CGUs, there is a considerable difference between their recoverable amount and their carrying amount at December 31, 2020.

13.4 Goodwill segment information

The carrying amount of goodwill can be analyzed as follows by reportable segment:

<i>In millions of euros</i>	Dec. 31, 2020
France excluding Infrastructures	3,698
France Infrastructures	5,006
Rest of Europe	4,494
Latin America	706
USA & Canada	650
Middle East, Asia & Africa	667
Others	721
TOTAL	15,943

NOTE 14 INTANGIBLE ASSETS

Accounting standards

Initial measurement

Intangible assets are carried at cost less any accumulated amortization and any accumulated impairment losses.

Amortization

Intangible assets are amortized on the basis of the expected pattern of consumption of the estimated future economic benefits embodied in the asset. Amortization is calculated mainly on a straight-line basis over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Concession rights	10	30
Customer portfolio	3	20
Other intangible assets	1	50

Intangible assets with an indefinite useful life are not amortized but are tested for impairment annually.

Risk of impairment

In accordance with IAS 36, impairment tests are carried out on items of property, plant and equipment and intangible assets where there is an indication that the assets may be impaired. Such indications may be based on events or changes in the market environment, or on internal sources of information. Intangible assets that are not amortized are tested for impairment annually.

Impairment indicators

Property, plant and equipment and intangible assets with finite useful lives are only tested for impairment when there is an indication that they may be impaired. This is generally the result of significant changes in the environment in which the assets are operated or when economic performance is lower than expected.

Main impairment indicators used by the Group are described in Note 13 "Goodwill".

Impairment

Items of property, plant and equipment and intangible assets are tested for impairment at the level of the individual asset or cash-generating unit (CGU), as appropriate and determined in accordance with IAS 36. If the recoverable amount of an asset is lower than its carrying amount, the carrying amount is written down to the recoverable amount by recording an impairment loss. Upon recognition of an impairment loss, the depreciable amount and possibly the useful life of the asset concerned is revised.

Impairment losses recorded in relation to property, plant and equipment or intangible assets may be subsequently reversed if the recoverable amount of the asset increases to exceed the carrying amount. The increased carrying amount of an item of property, plant or equipment following the reversal of an impairment loss may not exceed the carrying amount that would have been determined (net of depreciation/amortization) had no impairment loss been recognized in prior periods.

Measurement of recoverable amount

In order to review the recoverable amount of property, plant and equipment and intangible assets, the assets are grouped, where appropriate, into CGUs and the carrying amount of each CGU is compared with its recoverable amount.

For operating entities which the Group intends to hold on a long-term and going concern basis, the recoverable amount of a CGU corresponds to the higher of its fair value less costs to sell and its value in use. Value in use is primarily determined based on the present value of future operating cash flows including a terminal value. Standard valuation techniques are used based on the following main economic assumptions:

- market perspectives and developments in the regulatory framework;
- discount rates based on the specific characteristics of the operating entities concerned;
- terminal values in line with available market data specific to the operating segments concerned and growth rates associated with these terminal values, not exceeding the inflation rate.

Discount rates are determined on a post-tax basis and applied to post-tax cash flows. The recoverable amounts calculated on the basis of these discount rates are the same as the amounts obtained by applying the pre-tax discount rates to cash flows estimated on a pre-tax basis, as required by IAS 36.

For operating entities which the Group has decided to sell, the related recoverable amount of the assets concerned is based on market value less costs of disposal. Where negotiations are ongoing, this value is determined based on the best estimate of their outcome as of the reporting date.

In the event of a decline in value, the impairment loss is recorded in the consolidated income statement under "Impairment losses".

Intangible rights arising on concession contracts

IFRIC 12 – *Service Concession Arrangements* deals with the treatment to be applied by the concession operator in respect of certain concession arrangements.

For a concession arrangement to fall within the scope of IFRIC 12, usage of the infrastructure must be controlled by the concession grantor. This requirement is satisfied when the following two conditions are met:

- the grantor controls or regulates what services the operator must provide with the infrastructure, to whom it must provide them, and at what price; and
- the grantor controls any residual interest in the infrastructure at the end of the term of the arrangement, for example it retains the right to take back the infrastructure at the end of the concession.

The intangible asset model according to paragraph 17 of IFRIC 12 applies if the operator receives a right (a license) to charge the users, or the grantor, depending on the use made of the public service. There is no unconditional right to receive cash as the amounts depend on the extent to which the public uses the service.

Concession infrastructures that do not meet the requirements of IFRIC 12 are presented as property, plant and equipment. This is the case of gas distribution infrastructures in France. The related assets are recognized in accordance with IAS 16, given that GRDF operates its network under long-term concession arrangements, most of which are mandatorily renewed upon expiration pursuant to French law No. 46-628 of April 8, 1946.

Research and development costs

Research costs are expensed as incurred.

Development costs are capitalized when the asset recognition criteria set out in IAS 38 are met. Capitalized development costs are amortized over the useful life of the intangible asset recognized.

14.1 Movements in intangible assets

<i>In millions of euros</i>	Intangible rights arising on concession contracts	Capacity entitlements	Others	Total
GROSS AMOUNT				
AT DECEMBER 31, 2019	3,838	2,862	11,984	18,684
Acquisitions	158	-	1,111	1,269
Disposals	(5)	(18)	(122)	(146)
Translation adjustments	(99)	-	(196)	(294)

Translation adjustments	10	-	81	91
Changes in scope of consolidation	-	-	(4)	(4)
Transfer to "Assets classified as held for sale"	-	-	7	7
Other	-	-	36	36
AT DECEMBER 31, 2020	(1,781)	(2,193)	(8,532)	(12,505)
CARRYING AMOUNT				
AT DECEMBER 31, 2019	2,182	727	4,129	7,038
AT DECEMBER 31, 2020	2,126	716	4,354	7,196

In 2020, the net increase in "Intangible assets" was mainly attributable to the investments of the period for a total of €1,269 million and to changes in scope of consolidation of €105 million that relate mainly to the acquisition of Novo Estado Transmissora de Energia, which operates in the Brazilian infrastructure sector for €52 million and to three acquisitions in the Engie Solutions business in France and the UK for €25 million, partially offset by amortization for a total of €995 million and a negative foreign exchange impact of €203 million primarily due to the sharp depreciation of the Brazilian real (€132 million).

14.1.1 Impairment

The Group carried out a review of the assets, taking into account the fact that the COVID-19 crisis has consequences that are indications of potential impairment losses (in particular the drop in energy prices, BtoB activity and the stock market, see Note 13 "Goodwill").

At December 31, 2020, the impairment losses allocated to the intangible assets for €85 million were recognized mainly on the ENGIE Solutions BU.

14.1.2 Capacity entitlements

The Group has acquired capacity entitlements from power stations operated by third parties. These power station capacity rights were acquired in connection with transactions or within the scope of the Group's involvement in financing the construction of certain power stations. In consideration, the Group received the right to purchase a share of the production over the useful life of the underlying assets. These rights are amortized over the useful life of the underlying assets, not exceeding 50 years. The Group currently holds entitlements in the Chooz B and Tricastin power plants in France and in the virtual power plant (VPP) in Italy.

14.1.3 Other

At December 31, 2020, this caption mainly relates to software and licenses for €1,388 million, as well as intangible assets in progress for €638 million and intangible assets (client portfolio) acquired as a result of business combinations and capitalized acquisition costs for customer contracts for €2,059 million.

14.2 Information regarding research and development costs

Research and development activities primarily relate to various studies regarding technological innovation, improvements in plant efficiency, safety, environmental protection, service quality, and the use of energy resources.

Research and development costs, excluding technical assistance costs, totaled €190 million in 2020, of which €27 million in expenses related to in-house projects in the development phase that meet the criteria for recognition as an intangible asset as defined in IAS 38.

NOTE 15 PROPERTY, PLANT AND EQUIPMENT

Accounting standards

Initial recognition and subsequent measurement

Items of property, plant and equipment are recognized at historical cost less any accumulated depreciation and any accumulated impairment losses.

The carrying amount of these items is not revalued as the Group has elected not to apply the allowed alternative method, which consists of regularly revaluing one or more categories of property, plant and equipment.

Investment subsidies are deducted from the gross value of the assets concerned.

In accordance with IAS 16, the initial cost of the item of property, plant and equipment includes an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, when the entity has a present, legal or constructive obligation to dismantle the item or restore the site. A corresponding provision for this obligation is recorded for the amount of the asset component.

Borrowing costs that are directly attributable to the construction of the qualifying asset are capitalized as part of the cost of that asset.

Leases

In accordance with IFRS 16, the Group recognizes a right-of-use asset and a corresponding lease liability with respect to contracts considered as a lease in which the Group acts as lessee, except for leases with a term of 12 months or less ("short-term leases"), and leases for which the underlying asset is of a low value ("low-value asset"). Payments associated with these leases are recognized on a straight-line basis as expenses in profit and loss. The lease contracts in the Group mainly concern real estate, vehicles and other equipment.

The right-of-use asset is initially measured at cost, which comprises the initial amount of the lease liability adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred and an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received.

The lease liability is initially measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate. This rate is calculated based on the Group's incremental borrowing rate adjusted in accordance with IFRS 16, taking into account (i) the economic environment of the subsidiaries, and in particular their credit risk, (ii) the currency in which the contract is concluded and (iii) the duration of the contract at inception (or the remaining duration for contracts existing upon the initial application of IFRS 16). The methodology applied to determine the incremental borrowing rate reflects the profile of the lease payments (duration method).

The lease term is assessed, including whether a renewal option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised, on a case-by-case basis. The lease term is reassessed if a significant event or a significant change in circumstances that is within the control of the lessee occurs and may affect the assessment made. In determining the enforceable period of a lease, the Group applies a broad interpretation of the term penalty and takes into consideration not only contractual penalties arising from termination, but also ancillary costs that could arise in case of an early termination of the lease.

Cushion gas

"Cushion" gas injected into underground storage facilities is essential for ensuring that reservoirs can be operated effectively, and is therefore inseparable from these reservoirs. Unlike "working" gas which is included in inventories (see Note 24.2 "Inventories"), cushion gas is reported in other property, plant and equipment.

Depreciation

In accordance with the components approach, each significant component of an item of property, plant and equipment with a different useful life from that of the main asset to which it relates is depreciated separately over its own useful life.

Property, plant and equipment is depreciated mainly using the straight-line method over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Plant and equipment		
• Storage - Production - Transport - Distribution	5	60 ^(*)
• Installation – Maintenance	3	10
• Hydraulic plant and equipment	20	65
Other property, plant and equipment	2	33

()Excluding cushion gas.*

The range of useful lives is due to the diversity of the assets in each category. The minimum periods relate to smaller equipment and furniture, while the maximum periods concern network infrastructures and storage facilities. In accordance with the law of January 31, 2003 adopted by the Belgian Chamber of Representatives with respect to the gradual phase-out of nuclear energy for the industrial production of electricity, the useful lives of nuclear power stations were reviewed and adjusted prospectively to 40 years as from 2003, except for Tihange 1, Doel 1 and Doel 2 for which the operating lives have been extended by 10 years.

Fixtures and fittings relating to hydro plants operated by the Group are depreciated over the shorter of the contract term and the useful life of the assets, taking into account the renewal of the concession period if such renewal is considered to be reasonably certain.

The right-of-use asset related to leases is depreciated using the straight-line method from the commencement date to the end of the lease term, unless the lease transfers ownership of the underlying asset to the Group by the end of the lease term. In that case the right-of-use asset is depreciated over the useful life of the underlying asset, which is determined on the same basis as that used for property, plant and equipment mentioned above.

Risk of impairment

See Note 14 “Intangible assets”.

Impairment indicators

See Note 13 “Goodwill”.

15.1 Movements in property, plant and equipment

<i>In millions of euros</i>	Land	Buildings	Plant and equipment	Vehicles	Dismantling costs	Assets in progress	Right of use	Other	Total

CARRYING AMOUNT									
AT DECEMBER 31, 2019	564	2,495	40,135	147	1,273	3,815	3,014	515	51,958
AT DECEMBER 31, 2020	535	2,356	38,514	147	619	4,308	2,895	514	49,889

In 2020, the net decrease in "Property, plant and equipment" essentially takes into account :

- depreciation for a total negative amount of €3,655 million
- impairment losses on property, plant and equipment amounting to €1,171 million mainly relating to:
 - nuclear assets in Belgium (€715 million),
 - renewable assets in Brazil, Mexico, Chile, France and the United States (€193 million),
 - gas-fired power plants in Spain and the United States (€51 million),
 - gas distribution assets in Argentina (€41 million),
 - coal-fired power plants in Brazil and the United Kingdom (€59 million),
- the classification under "Assets held for sale" for a negative €566 million, mainly relating to solar farms in India (€361 million), wind and solar farms in Mexico and Italy (€169 million) and to EV Box (€36 million);
- changes in the scope of consolidation amounting to a negative €274 million, primarily relating to disposals in renewable energies in Australia and France for a total negative amount of €273 million;
- negative foreign exchange effects of €2,023 million, mainly resulting from the sharp depreciation of the Brazilian real (negative impact of €1,063 million), fluctuations in the US dollar (negative impact of €728 million) and the pound sterling (negative impact of €96 million);

partly offset by :

- maintenance and development investments for a total amount of €5,109 million mainly related to the construction and the development of wind and solar farms in the United States, in Latin America and in France (€1,906 million), as well as the extension of the transportation and distribution networks in the France Infrastructure segment (€1,333 million),

15.2 Pledged and mortgaged assets

Items of property, plant and equipment pledged by the Group to guarantee borrowings and debt amounted to €1,749 million at December 31, 2020 compared to €2,261 million at December 31, 2019.

The net decrease mainly relates to :

- thermoelectric and wind assets in Brazil for a negative €416 million, due to the sharp depreciation of the Brazilian real (negative impact of €433 million);
- renewable assets in France for a negative €39 million;
- the entity FHH (Guernsey) Ltd. in the United Kingdom for a negative €42 million mainly due to the depreciation of the pound sterling (negative impact of €34 million).

15.3 Contractual commitments to purchase property, plant and equipment

In the ordinary course of their operations, some Group companies have entered into commitments to purchase, and the related third parties to deliver, property, plant and equipment. These commitments relate mainly to orders for equipment and material related to the construction of energy production units and to service agreements.

Investment commitments made by the Group to purchase property, plant and equipment totaled €2,212 million at December 31, 2020 compared to €1,384 million at December 31, 2019.

The net increase primarily relates to the construction of solar farms in India for an amount of €305 million.

15.4 Other information

Borrowing costs for 2020 included in the cost of property, plant and equipment amounted to €103 million at December 31, 2020 compared to €106 million at December 31, 2019.

NOTE 16 FINANCIAL INSTRUMENTS

16.1 Financial assets

Accounting standards

In accordance with the principles of IFRS 9 - *Financial Instruments*, financial assets are recognized and measured either at amortized cost, at fair value through equity or at fair value through profit or loss based on the following two criteria:

- a first criterion relating to the contractual cash flow characteristics of the financial asset. The analysis of contractual cash flow characteristics makes it possible to determine whether these cash flows are “only payments of principal and interest on the outstanding amounts” (known as the “SPPI” test or Solely Payments of Principal and Interest);
- a second criterion relating to the business model used by the Group to manage its financial assets. IFRS 9 defines three different business models: a first business model whose objective is to hold assets in order to collect contractual cash flows (hold to collect), a second model whose objective is achieved by both collecting contractual cash flows and selling financial assets (hold to collect and sell), and other business models.

The identification of the business model and the analysis of the contractual cash flow characteristics require judgment to ensure that the financial assets are classified in the appropriate category.

Where the financial asset is an investment in an equity instrument and is not held for trading, the Group may irrevocably elect to present the gains and losses on that investment in other comprehensive income.

Except for trade receivables, which are measured at their transaction price in accordance with IFRS 15, financial assets are measured, on initial recognition, at fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs that are directly attributable to their acquisition.

At the end of each reporting period, financial assets measured using the amortized cost method or at fair value through other comprehensive income (with a recycling mechanism) are subject to an impairment test based on the expected credit losses method.

Financial assets also include derivatives that are measured at fair value in accordance with IFRS 9.

In accordance with IAS 1, the Group presents current and non-current assets and current and non-current liabilities separately in the statement of financial position. In view of the majority of the Group's activities, it was considered that the criterion to be used to classify assets is the expected time to realize the asset or settle the liability: the asset is classified as current if this period is less than 12 months and as non-current if it is more than 12 months after the reporting period.

The following table presents the Group's different categories of financial assets, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2020			Dec. 31, 2019		
		Non-current	Current	Total	Non-current	Current	Total

16.1.1 Other financial assets

16.1.1.1 Equity instruments at fair value

Accounting standards

Equity instruments at fair value through other comprehensive income (OCI)

Under IFRS 9 an irrevocable election can be made to present subsequent changes in the fair value of an investment in an equity instrument that is not held for trading in other comprehensive income. This choice is made on an instrument by instrument basis. Amounts presented in other comprehensive income should not be transferred to profit or loss including proceeds of disposals. However, IFRS 9 authorizes the transfer of the accumulated profits and losses to another component of equity. Dividends from such investments are recognized in profit or loss unless the dividend clearly represents the recovery of a portion of the cost of the investment.

The equity instruments recognized under this line item mainly concern investments in companies that are not controlled by the Group and for which OCI measurement has been selected given their strategic and long-term nature.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost, plus transaction costs.

At each reporting date, for listed securities, fair value is determined based on the quoted market price at the reporting date. For unlisted securities, fair value is measured using valuation models based primarily on the latest market transactions, the discounting of dividends or cash flows and the net asset value.

Equity instruments at fair value through profit or loss

Equity instruments that are held for trading or for which the Group has not elected for measurement at fair value through other comprehensive income are measured at fair value through profit or loss.

This category mainly includes investments in companies not controlled by the Group.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost.

At each reporting date, for listed and unlisted securities, the same measurement method as described above should be applied.

<i>In millions of euros</i>	Equity instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Total
AT DECEMBER 31, 2019	921	377	1,297
Increase/Reclassification	291	51	342
Decrease	(78)	(8)	(85)
Changes in fair value	46	3	49
Changes in scope of consolidation, translation adjustments and other	17	48	65
AT DECEMBER 31, 2020	1,197	471	1,668
Dividends	35	8	43

Equity instruments break down as €606 million of listed equity instruments and €1,062 million of unlisted equity instruments. This amount mainly includes shares held by the Group as a minority interest in Nord Stream AG for an amount of €552 million, as well as the Group's residual interest in SUEZ (previously accounted for using the equity method) for €185 million.

16.1.1.2 Debt instruments at fair value

Accounting standards

Debt instruments at fair value through other comprehensive income

Financial assets that are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets and for which the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the outstanding amount (SPPI), are measured at fair value through OCI (with a recycling mechanism). This involves a measurement through profit or loss for interest (at amortized cost using the effective interest method), impairment and foreign exchange gains and losses, and through OCI (with a recycling mechanism) for other gains or losses.

This category mainly includes bonds.

Fair value gains and losses on these instruments are recognized in other comprehensive income, except for the following items which are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

When the financial asset is derecognized, the cumulative gain or loss that was previously recognized in other comprehensive income is reclassified from equity to profit or loss.

Debt instruments at fair value through profit or loss

Financial assets whose contractual cash flows do not consist solely of payments of principal and interest on the amount outstanding (SPPI) or that are held in view of an "other" business model are measured at fair value through profit or loss.

The Group's investments in UCITS are accounted for in this caption. They are considered as debt instruments, according to IAS 32 - *Financial Instruments: Presentation*, given the existence of an obligation for the issuer to redeem units, at the request of the holder. They are measured at fair value through profit or loss because the contractual cash flow characteristics do not meet the SPPI test.

<i>In millions of euros</i>	Debt instruments at fair value through other comprehensive income	Liquid debt instruments held for cash investment purposes at fair value through other comprehensive income	Debt instruments at fair value through income	Liquid debt instruments held for cash investment purposes at fair value through income	Total
AT DECEMBER 31, 2019	1,138	11	761	507	2,417
Increase	1,521	-	1,017	128	2,667
Decrease	(734)	(2)	(459)	(38)	(1,233)
Changes in fair value	(22)	-	(91)	-	(112)
Changes in scope of consolidation, translation adjustments and other	(8)	2	10	-	4
AT DECEMBER 31, 2020	1,895	11	1,238	598	3,742

Debt instruments at fair value at December 31, 2020 include bonds and money market funds held by Synatom for €3,086 million and liquid instruments deducted from net financial debt for €608 million (respectively €1,846 million and €518 million at December 31, 2019).

Developments regarding the Synatom portfolios

In 2020, in view of the current crisis in the financial markets, in order to limit risks and in accordance with the Group's policies, the various investment managers of the portfolios held by Synatom were required to sell part of the equity portfolio and the bond portfolio, with no material impact on income or equity.

Furthermore, money market funds recorded as debt instruments at fair value through income and equity instruments at fair value through other comprehensive income over the period generated a negative change in fair value of €134 million, respectively recognized in net non-recurring financial income for a negative €87 million, and in equity for a negative €47 million.

16.1.1.3 Loans and receivables at amortized cost

Accounting standards

Loans and receivables held by the Group under a business model consisting in holding the instrument in order to collect the contractual cash flows, and whose contractual cash flows consist solely of payments of principal and interest on the principal amount outstanding (SPPI test) are measured at amortized cost. Interest is calculated using the effective interest method.

The following items are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

The Group enters into services or take-or-pay contracts that are, or contain, a lease and under which the Group acts as lessor and its customers as lessees. Leases are analyzed in accordance with IFRS 16 in order to determine whether they constitute an operating lease or a finance lease. Whenever the terms of the lease transfer substantially all the risk and rewards of ownership of the related asset, the contract is classified as a finance lease and a finance receivable is recognized to reflect the financing deemed to be granted by the Group to the customer.

Leasing security deposits are presented in this caption and recognized at their nominal value.

Please refer to Note 17 "Risks arising from financial instruments" regarding the assessment of counterparty risk.

<i>In millions of euros</i>	Dec. 31, 2020			Dec. 31, 2019		
	Non-current	Current	Total	Non-current	Current	Total
Loans granted to affiliated companies	2,527	148	2,675	2,293	172	2,465
Other receivables at amortized cost	205	1,740	1,944	301	1,697	1,998
Amounts receivable under concession contracts	853	51	904	588	65	653
Amounts receivable under finance leases	557	101	658	599	138	738
TOTAL	4,141	2,041	6,182	3,782	2,072	5,854

Loans and receivables at amortized cost include the loan relating to the financing of the Nord Stream 2 pipeline project for a total amount of €948 million, including capitalized interest.

The €311 million loan granted to Neptune Energy as part of the sale of the exploration-production business was repaid in an amount of €222 million during the year.

Impairment and expected credit losses against loans and receivables at amortized cost stood at €204 million at December 31, 2020 (versus €139 million at December 31, 2019).

Net gains and losses recognized in the income statement relating to loans and receivables at amortized cost break down as follows:

<i>In millions of euros</i>	Interest income	Post-acquisition measurement	
		Foreign currency translation	Expected credit loss
At December 31, 2020	285	(48)	-
At December 31, 2019	233	(38)	4

No material expected credit losses were recognized against loans and receivables at amortized cost at December 31, 2020 and December 31, 2019.

Amounts receivable under finance leases

These contracts refer to lease contracts in which ENGIE acts as lessor, classified as finance leases in accordance with IFRS 16. They concern (i) energy purchase and sale contracts where the contract conveys an exclusive right to use a production asset; and (ii) certain contracts with industrial customers relating to assets held by the Group.

The Group has recognized finance lease receivables, notably for cogeneration plants for Wapda and NTDC (Uch - Pakistan) and Lanxess (Electrabel - Belgium).

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Undiscounted future minimum lease payments	760	892
Unguaranteed residual value accruing to the lessor	11	8

Unearned financial income	62	94
NET INVESTMENT IN THE LEASE (STATEMENT OF FINANCIAL POSITION)	709	806
<i>Of which present value of future minimum lease payments</i>	<i>700</i>	<i>801</i>
<i>Of which present value of unguaranteed residual value</i>	<i>9</i>	<i>6</i>

Undiscounted minimum lease payments receivable under finance leases can be analyzed as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Year 1	130	118
Years 2 to 5 inclusive	379	470
Beyond year 5	251	304
TOTAL	760	892

16.1.2 Trade and other receivables, assets from contracts with customers

Information on trade and other receivables and assets from contracts with customers are provided in Note 7.2. "Trade and other receivables, assets and liabilities from contracts with customers".

16.1.3 Cash and cash equivalents

Accounting standards

This item includes cash equivalents as well as short-term investments that are considered to be readily convertible into a known amount of cash and where the risk of a change in their value is deemed to be negligible based on the criteria set out in IAS 7.

Bank overdrafts are not included in the calculation of cash and cash equivalents and are recorded under "Short-term borrowings".

Cash and cash equivalent items are subject to impairment tests in accordance with the expected credit losses model of IFRS 9.

"Cash and cash equivalents" totaled €12,980 million at December 31, 2020 (€10,519 million at December 31, 2019).

This amount included funds related to the green bond issues, which remain unallocated to the funding of eligible projects (see section 5 of the *Universal Registration Document*).

At December 31, 2020, this amount also included €68 million in cash and cash equivalents subject to restrictions (€86 million at December 31, 2019), including €48 million of cash equivalents set aside to cover the repayment of borrowings and debt as part of project financing arrangements in certain subsidiaries.

Gains recognized in respect of "Cash and cash equivalents" amounted to €45 million at December 31, 2020 compared to €76 million at December 31, 2019.

16.1.4 Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material

As indicated in Note 19.2 "Obligations relating to nuclear power generation activities", the Belgian law of April 11, 2003, amended by the law of April 25, 2007, granted the Group's wholly-owned subsidiary Synatom responsibility for managing and investing funds received from operators of nuclear power plants in Belgium and intended to cover the costs of dismantling nuclear power plants and managing radioactive fissile material.

Pursuant to the law, Synatom may lend up to 75% of these funds to nuclear power plant operators provided that certain credit quality criteria are met. The funds that cannot be lent to nuclear operators are invested in assets to cover the liabilities.

Since October 2019, Electrabel has not taken out any further loans in respect of provisions for the back-end of the nuclear fuel cycle and has undertaken to repay all of the loans taken out for that purpose by 2025. In 2020, Synatom therefore increased its investments in financial assets to cover the future costs of managing radioactive fissile material by nearly €1.3 billion.

The financial assets covering future costs of dismantling nuclear facilities and managing radioactive fissile material are either loans to legal entities that meet the credit quality criteria required by law or other external assets with sufficient diversification and spread to minimize the risk. The Commission for Nuclear Provisions issues an opinion on the asset classes in which Synatom may invest.

Loans to entities outside the Group and other cash investments are shown in the table below:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Loans to third parties	11	467
Loan to Eso/Elia	-	453
Loan to Sibelga	11	14
Others loans and receivables at amortized cost	332	85
Debt instruments - restricted cash	332	85
Equity and debt instruments at fair value	3,492	2,054
Equity instruments at fair value through other comprehensive income	406	207
Debt instruments at fair value through other comprehensive income	1,895	1,138
Debt instruments at fair value through income	1,191	709
TOTAL	3,835	2,606

Loans to legal entities outside the Group and the cash subject to restrictions held by money market funds are shown in the statement of financial position as "Loans and receivables at amortized cost". Bonds and money market funds held by Synatom are shown as "Equity instruments at fair value through other comprehensive income", "Debt instruments at fair value through other comprehensive income" or "Debt instruments at fair value through income" (see Note 16.1 "Financial assets").

16.1.5 Transfer of financial assets

At December 31, 2020, the outstanding amount of transferred financial assets (as well as the risks to which the Group remains exposed following the transfer of those financial assets) as part of transactions leading to either (i) all or part of those assets being retained in the statement of financial position, or (ii) their full deconsolidation while retaining a continuing involvement in these financial assets, was not material in terms of the Group's indicators.

In 2020, the Group carried out disposals without recourse to financial assets as part of transactions leading to full derecognition, for an outstanding amount of €1,257 million at December 31, 2020.

16.1.6 Financial assets and equity instruments pledged as collateral for borrowings and debt

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Financial assets and equity instruments pledged as collateral	3,716	4,471

This item mainly includes the carrying amount of equity instruments pledged as collateral for borrowings and debt.

16.2 Financial liabilities

Accounting standards

Borrowings and other financial liabilities are measured at amortized cost using the effective interest rate method.

On initial recognition, any issue or redemption premiums and discounts and issuing costs are added to/deducted from the nominal value of the borrowings concerned. These items are taken into account when calculating the effective interest rate and are therefore recorded in the consolidated income statement over the life of the borrowings using the amortized cost method.

As regards structured debt instruments that do not have an equity component, the Group may be required to separate an “embedded” derivative instrument from its host contract. When an embedded derivative is separated from its host contract, the initial carrying amount of the structured instrument is broken down into an embedded derivative component, corresponding to the fair value of the embedded derivative, and a financial liability component, corresponding to the difference between the amount of the issue and the fair value of the embedded derivative. The separation of components upon initial recognition does not give rise to any gains or losses.

The debt is subsequently recorded at amortized cost using the effective interest method while the derivative is measured at fair value, with changes in fair value recognized in profit or loss.

Financial liabilities are recognized either:

- as “Amortized cost liabilities” for borrowings, trade payables and other creditors, and other financial liabilities;
- as “Liabilities measured at fair value through profit or loss” for derivative financial instruments and for financial liabilities designated as such.

The following table presents the Group’s different financial liabilities at December 31, 2020, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2020			Dec. 31, 2019		
		Non-current	Current	Total	Non-current	Current	Total
Borrowings and debt		30,092	7,846	37,939	30,002	8,543	38,544
Trade and other payables	16.2	-	17,307	17,307	-	19,109	19,109
Liabilities from contracts with customers	7.2	39	4,315	4,354	45	4,286	4,330

NET FINANCIAL DEBT		29,577	(7,119)	22,458	29,267	(3,348)	25,919

(1) This item corresponds to the revaluation of the interest rate component of debt in a qualified fair value hedging relationship for €396 million, margin calls on debt hedging derivatives carried in liabilities for €262 million and the impact of amortized cost for €117 million (compared to, respectively, €353 million, €399 million and €224 million at December 31, 2019).

(2) This item notably corresponds to assets related to financing, liquid debt instruments held for cash investment purposes and margin calls on derivatives hedging borrowings - carried in assets.

(3) This item represents the interest rate component of the fair value of derivatives hedging borrowings in a designated fair value hedging relationship. It also represents the exchange rate and outstanding accrued interest rate components of the fair value of all debt-related derivatives irrespective of whether or not they qualify as hedges.

The fair value of gross borrowings and debt (excluding lease liabilities) amounted to €39,036 million at December 31, 2020, compared with a carrying amount of €35,546 million.

Financial income and expenses related to borrowings and debt are presented in Note 10 "Net financial income/(loss)".

16.3.2 Reconciliation between net financial debt and cash flow from (used in) financing activities

In millions of euros		Dec. 31, 2019	Cash flow from financing activities	Cash flow variation of cash and cash equivalents	Change in fair value	Translation adjustments	Change in scope of consolidation and others	Dec. 31, 2020

Other financial	Other financial assets deducted from	(1,502)	(608)	-	(2)	24	1	(2,088)
Cash and cash	Cash and cash equivalents	(10,519)	-	(2,952)	-	535	(44)	(12,980)
Derivative	Derivatives hedging borrowings	(604)	380	-	(10)	(182)	3	(413)
NET FINANCIAL		25,919	463	(2,952)	180	(1,078)	(75)	22,458

(1) Lease liabilities: the negative amount of €573 million included in the "Cash flow from financing activities" column corresponds to lease payments, excluding interest (total cash outflow for leases amounted to €616 million, of which €43 million relating to interest).

16.3.3 Main events of the period

16.3.3.1 Impact of changes in the scope of consolidation and in exchange rates on net financial debt

In 2020, changes in exchange rates resulted in a €1,078 million decrease in net financial debt, including a €701 million decrease in relation to the Brazilian real and a €356 million decrease in relation to the US dollar.

Changes in the scope of consolidation (including the cash impact of acquisitions and disposals) led to a €1,925 million decrease in net financial debt, reflecting:

- disposals of assets over the period, which reduced net financial debt by €4,146 million, notably including the disposal of the ENGIE's interests in Astoria 1 and 2 in the United States, and the sale of part of ENGIE's interest in SUEZ to the VEOLIA group (see Note 4.1 "Disposals carried out in 2020");
- the classification of renewable energy assets in India and Mexico, as well as the Group's interest in the EV Charged BV company under "Assets held for sale", which reduced net financial debt by €297 million (see Note 4.2 "Assets held for sale");
- acquisitions carried out in 2020 which increased net financial debt by €2,518 million, mainly due to the creation, on a 50/50 basis with Meridiam, of the company that operates the concession granted by the University of Iowa in the United States, for energy efficiency and water management; the acquisition of the residual 10% stake in Transportadora Asociada de Gás S. A. (TAG) and an electric power transmission concession in Brazil; the acquisition from EDP of the second largest hydroelectric portfolio in Portugal via a consortium 40%-owned by ENGIE; the acquisition of Renvico, which operates in the field of renewable energy in France and Italy; and the acquisition of minority interests in an LNG terminal in France (see Note 4.4 "Acquisitions carried out in 2020").

16.3.3.2 Financing and refinancing transactions

The Group carried out the following main transactions in 2020:

ENGIE SA

- on January 21, 2020 ENGIE SA redeemed €824 million worth of bonds:
 - a €400 million tranche matured with a 2.5% coupon,
 - a €424 million tranche matured with a 3.125% coupon;
- on March 27, 2020, ENGIE SA issued €2.5 billion worth of bonds:
 - a €1,000 million tranche, maturing in March 2025 with a 1.375% coupon,
 - a €750 million tranche, a green bond maturing in March 2028 with a 1.75% coupon,
 - a €750 million tranche, a green bond maturing in March 2032 with a 2.125% coupon;
- ENGIE SA drew down bilateral lines for a total amount of €885 million for a duration of one month:
 - on March 20, 2020 for €300 million,
 - on March 23, 2020 for €200 million,
 - on March 30, 2020 for €385 million;
- on April 16, 2020, ENGIE SA redeemed €200 million worth of bonds that matured with a floating EURIBOR 3M coupon plus a 0.58% mark-up;

- on May 19, 2020 ENGIE SA redeemed €1.2 billion worth of green bonds that matured with a 1.375% coupon;
- on June 11, 2020, ENGIE SA issued €750 million worth of bonds maturing in June 2027 with a 0.375% coupon;
- on October 9, 2020, ENGIE SA redeemed CHF 275 million (€255 million) worth of bonds with a 1.13% coupon at maturity;
- on December 23, 2020, ENGIE SA redeemed a USD 300 million bank loan (€246 million), with a floating US Libor 3 months coupon plus a 0.90% mark-up at maturity;

Other entities of the Group

- on January 28, 2020, ENGIE Energia Chile carried out the following refinancing transactions:
 - issue of USD 500 million (€453 million) worth of bonds, maturing in January 2030 with a 3.4% coupon,
 - redemption of USD 400 million (€363 million) worth of bonds, maturing in January 2021 with a 5.625% coupon,
 - redemption of two bank loans totaling USD 80 million (€72 million) maturing in June 2020;
- on August 1, 2020, ENGIE Brasil Energia took out thirteen bank loans for a total amount of BRL 1,167 million (€197 million) maturing in March 2044;
- on August 10, 2020, ENGIE Brasil Energia took out two bank loans for a total amount of BRL 742 million (€123 million) maturing in May 2044;
- on September 23, 2020, ENGIE Brasil Energia took out two bank loans for a total amount of BRL 340 million (€54 million) including a BRL 102 million loan maturing in April 2028 and a BRL 238 million loan maturing in October 2036;
- on November 15, 2020, ENGIE Brasil Energia took out two bank loans for a total amount of BRL 582 million (€91 million) including a BRL 150 million loan maturing in April 2028 and a BRL 432 million loan maturing in October 2036;
- on November 17, 2020, ENGIE Brasil Energia redeemed the outstanding amount of BRL 965 million (€149 million) worth of bonds at maturity;
- on December 17, 2020, ENGIE Brasil Energia took out eight bank loans for a total amount of BRL 272 million (€43 million) maturing in March 2044.

16.4 Derivative instruments

Accounting standards

Derivative financial instruments are measured at fair value. This fair value is determined on the basis of market data, available from external contributors. In the absence of an external benchmark, a valuation based on internal models recognized by market participants and favoring data directly derived from observable data such as OTC quotations is used.

The change in fair value of derivative financial instruments is recorded in the income statement except when they are designated as hedging instruments in a cash flow hedge or net investment hedge. In this case, changes in the value of the hedging instruments are recognized directly in equity, excluding the ineffective portion of the hedges.

The Group uses derivative financial instruments to manage and reduce its exposure to market risks arising from fluctuations in interest rates, foreign currency exchange rates and commodity prices, mainly for gas and electricity. The use of derivative instruments is governed by a Group policy for managing interest rate, currency and commodity risks (see Note 17 – *Risks arising from financial instruments*).

Derivative financial instruments are contracts (i) whose value changes in response to the change in one or more observable variables, (ii) that do not require any material initial net investment, and (iii) that are settled at a future date.

Derivative instruments include swaps, options, futures and swaptions, as well as forward commitments to purchase or sell listed and unlisted securities, and firm commitments or options to purchase or sell non-financial assets that involve physical delivery of the underlying.

For purchases and sales of electricity and natural gas, the Group systematically analyzes whether the contract was entered into in the “normal” course of operations and therefore falls outside the scope of IFRS 9. This analysis consists firstly in demonstrating that the contract is entered into and continues to be held for the purpose of physical delivery or receipt of the commodity in accordance with the Group’s expected purchase, sale or usage requirements.

The second step is to demonstrate that the Group has no practice of settling similar contracts on a net basis and that these contracts are not equivalent to written options. In particular, in the case of electricity and gas sales allowing the buyer a certain degree of flexibility concerning the volumes delivered, the Group distinguishes between contracts that are equivalent to capacity sales considered as transactions falling within the scope of ordinary operations and those that are equivalent to written financial options, which are accounted for as derivative financial instruments.

Only contracts that meet all of the above conditions are considered as falling outside the scope of IFRS 9. Adequate specific documentation is compiled to support this analysis.

Embedded derivatives

The main Group contracts that may contain embedded derivatives are contracts with clauses or options potentially affecting the contract price, volume or maturity. This is the case primarily with contracts for the purchase or sale of non-financial assets, whose price is revised based on an index, the exchange rate of a foreign currency or the price of an asset other than the contract’s underlying.

An embedded derivative is a component of a hybrid (combined) instrument that also includes a non-derivative host contract – with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

If a hybrid contract contains a host that is an asset within the scope of IFRS 9, the Group applies the presentation and measurements requirements described in Note 17.1. to the entire hybrid contract.

Conversely, when a hybrid contract contains a host that is not an asset within the scope of IFRS 9, an embedded derivative shall be separated from the host and accounted for as a derivative if, and only if:

- the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host;
- a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and
- the hybrid contract is not measured at fair value with changes in fair value recognized in profit or loss (i.e., a derivative that is embedded in a financial liability at fair value through profit or loss is not separated).

Where an embedded derivative is separate from the host contract, it is measured at fair value and fair value changes are recognized in profit or loss (except if the embedded derivative is documented in a hedge relationship).

Hedging instruments: recognition and presentation

Derivative instruments qualifying as hedging instruments are recognized in the consolidated statement of financial position and measured at fair value. However, their accounting treatment varies according to whether they are classified as (i) a fair value hedge of an asset or liability; (ii) a cash flow hedge, or (iii) a hedge of a net investment in a foreign operation.

Fair value hedges

A fair value hedge is defined as a hedge of the exposure to changes in fair value of a recognized asset or liability such as a fixed-rate loan or borrowing, or of assets, liabilities or an unrecognized firm commitment denominated in a foreign currency.

The gain or loss from remeasuring the hedging instrument at fair value is recognized in income. The gain or loss on the hedged item attributable to the hedged risk adjusts the carrying amount of the hedged item and is also recognized in income even if the hedged item is in a category in respect of which changes in fair value are recognized through other comprehensive income. These two adjustments are presented net in the consolidated income statement, with the net effect corresponding to the ineffective portion of the hedge.

Cash flow hedges

A cash flow hedge is a hedge of the exposure to variability in cash flows that could affect the Group's income. The hedged cash flows may be attributable to a particular risk associated with a recognized financial or non-financial asset or a highly probable forecast transaction.

The portion of the gain or loss on the hedging instrument that is determined to be an effective hedge is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in income. The gains or losses accumulated in equity are reclassified to the consolidated income statement under the same caption as the loss or gain on the hedged item – i.e., current operating income for operating cash flows and financial income or expenses for other cash flows – in the same periods in which the hedged cash flows affect income.

If the hedging relationship is discontinued, in particular because the hedge is no longer considered effective, the cumulative gain or loss on the hedging instrument remains recognized in equity until the forecast transaction occurs. However, if a forecast transaction is no longer expected to occur, the cumulative gain or loss on the hedging instrument is immediately recognized in income.

Hedge of a net investment in a foreign operation

In the same way as for a cash flow hedge, the portion of the gain or loss on the hedging instrument that is determined to be an effective hedge of the currency risk is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in income. The gains or losses accumulated in other comprehensive income are transferred to the consolidated income statement when the investment is liquidated or sold.

Hedging instruments: identification and documentation of hedging relationships

The hedging instruments and hedged items are designated at the inception of the hedging relationship. The hedging relationship is formally documented in each case, specifying the hedging strategy, the hedged risk and the method used to assess hedge effectiveness. Only derivative contracts entered into with external counterparties are considered as being eligible for hedge accounting

Hedge effectiveness is assessed and documented at the inception of the hedging relationship and on an ongoing basis throughout the periods for which the hedge was designated.

Hedge effectiveness is demonstrated both prospectively and retrospectively using various methods, based mainly on a comparison between changes in fair value or cash flows between the hedging instrument and the hedged item. Methods based on an analysis of statistical correlations between historical price data are also used.

Derivative instruments not qualifying for hedge accounting: recognition and presentation

These items mainly concern derivative financial instruments used in economic hedges that have not been – or are no longer – documented as hedging relationships for accounting purposes.

When a derivative financial instrument does not qualify or no longer qualifies for hedge accounting, changes in fair value are recognized directly in income under (i) current operating income for derivative instruments with non-financial assets as the underlying, and (ii) financial income or expenses for currency, interest rate and equity derivatives.

Derivative instruments not qualifying for hedge accounting used by the Group in connection with proprietary commodity trading activities and other derivatives expiring in less than 12 months are recognized in the consolidated statement of financial position in current assets and liabilities, while derivatives expiring after this period are classified as non-current items.

Fair value measurement

The fair value of instruments listed on an active market is determined by reference to the market price. In this case, these instruments are presented in level 1 of the fair value hierarchy.

The fair value of unlisted financial instruments for which there is no active market and for which observable market data exist is determined based on valuation techniques such as option pricing models or the discounted cash flow method.

The models used to evaluate these instruments take into account assumptions based on market inputs:

- the fair value of interest rate swaps is calculated based on the present value of future cash flows;
- the fair value of forward foreign exchange contracts and currency swaps is calculated by reference to current prices for contracts with similar maturities by discounting the future cash flow spread (difference between the forward exchange rate under the contract and the forward exchange rate recalculated in line with the new market conditions applicable to the nominal amount);
- the fair value of currency and interest rate options is calculated using option pricing models;
- commodity derivatives are valued by reference to listed market prices based on the present value of future cash flows (commodity swaps or commodity forwards) and option pricing models (options), for which market price volatility may be a factor. Contracts with maturities exceeding the depth of transactions for which prices are observable, or which are particularly complex, may be valued based on internal assumptions;
- exceptionally, for complex contracts negotiated with independent financial institutions, the Group uses the values established by its counterparties.

These instruments are presented in level 2 of the fair value hierarchy except when the evaluation is based mainly on data that are not observable, in which case they are presented in level 3 of the fair value hierarchy. Most often, this is the case for derivatives with a maturity that falls outside the observability period for market data relating to the underlying or when certain inputs such as the volatility of the underlying are not observable.

Except in case of enforceable master netting arrangements or similar agreements, counterparty risk is included in the fair value of financial derivative instrument assets and liabilities. It is calculated according to the “expected loss” method and takes into account the exposure at default, the probability of default and the loss given default. The probability of default is determined on the basis of credit ratings assigned to each counterparty (“historical probability of default” approach).

Derivative instruments recognized in assets and liabilities are measured at fair value and broken down as follows:

In millions of euros	Dec. 31, 2020						Dec. 31, 2019					
	Assets			Liabilities			Assets			Liabilities		
	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total
Derivatives hedging borrowings	619	147	766	313	39	353	705	124	829	183	41	225
Derivatives hedging commodities	1,163	7,879	9,042	945	9,252	10,197	2,484	9,993	12,476	3,011	10,360	13,371
Derivatives hedging other items ⁽¹⁾	1,214	43	1,257	2,530	45	2,575	949	17	966	1,934	45	1,980
TOTAL	2,996	8,069	11,065	3,789	9,336	13,125	4,137	10,134	14,272	5,129	10,446	15,575

(1) Derivatives hedging other items mainly include the interest rate component of interest rate derivatives (not qualifying as hedges or qualifying as cash flow hedges) that are excluded from net financial debt, as well as net investment hedge derivatives.

16.4.1 Offsetting of derivative instrument assets and liabilities

The net amount of derivative instruments after taking into account enforceable master netting arrangements or similar agreements, whether or not they are offset in accordance with paragraph 42 of IAS 32, are presented in the table below:

In millions of euros	Dec. 31, 2020				Dec. 31, 2019			
	Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount	Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount
Assets								
Derivatives hedging commodities	9,465	9,042	(5,198)	3,844	13,121	12,476	(7,704)	4,772
Derivatives hedging borrowings and other items	2,023	2,023	(200)	1,822	1,795	1,795	(399)	1,397
Liabilities								
Derivatives hedging commodities	(10,621)	(10,197)	6,307	(3,890)	(14,015)	(13,371)	9,872	(3,499)
Derivatives hedging borrowings and other items	(2,928)	(2,928)	1,362	(1,566)	(2,204)	(2,204)	899	(1,305)

(1) Net amount recognized in the statement of financial position after taking into account offsetting agreements that meet the criteria set out in paragraph 42 of IAS 32.

(2) Other offsetting agreements include collateral and other guarantee instruments, as well as offsetting agreements that do not meet the criteria set out in paragraph 42 of IAS 32.

16.5 Fair value of financial instruments by level in the fair value hierarchy

16.5.1 Financial assets

The table below shows the allocation of financial instruments carried in assets to the different levels in the fair value hierarchy:

In millions of euros	Dec. 31, 2020				Dec. 31, 2019			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Other financial assets (excluding loans and receivables at amortized cost)	5,410	3,693	-	1,718	3,714	2,069	-	1,645
Equity instruments at fair value through other comprehensive income	1,197	421	-	775	921	222	-	698
Equity instruments at fair value through income	471	185	-	286	377	-	-	377
Debt instruments at fair value through other comprehensive income	1,906	1,895	-	11	1,149	1,138	-	11
Debt instruments at fair value through income	1,836	1,191	-	645	1,268	709	-	559
Derivative instruments	11,065	4	10,216	844	14,272	8	12,993	1,270
Derivatives hedging borrowings	766	-	766	-	829	-	829	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	1,967	-	1,717	250	3,521	-	2,928	593
Derivatives hedging commodities - relating to trading activities ⁽¹⁾	7,075	4	6,477	594	8,955	8	8,271	677
Derivatives hedging other items	1,257	-	1,257	-	966	-	966	-
TOTAL	16,475	3,697	10,216	2,562	17,986	2,077	12,993	2,916

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and a power contract that are measured at fair value and relate to trading activities.

A definition of these three levels is presented in Note 16.4 "Derivative instruments".

Other financial assets (excluding loans and receivables at amortized cost)

Changes in level 3 equity and debt instruments at fair value can be analyzed as follows:

In millions of euros	Equity instruments at fair value through other comprehensive income	Debt instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Debt instruments at fair value through income	Other financial assets (excluding loans and receivables)
AT DECEMBER 31, 2019	698	11	377	559	1,645
Acquisitions	25	-	51	134	211
Disposals	(7)	(2)	(8)	(39)	(55)
Changes in fair value	42	-	3	(4)	41
Changes in scope of consolidation, foreign currency translation and other changes ⁽¹⁾	17	2	(137)	(5)	(124)
AT DECEMBER 31, 2020	775	11	286	645	1,718
Gains/(losses) recorded in income relating to instruments held at the end of the period					46

Derivative instruments

Changes in level 3 commodities derivatives can be analyzed as follows:

<i>In millions of euros</i>	Net Asset/(Liability)
AT DECEMBER 31, 2019	89
Changes in fair value recorded in income ⁽¹⁾	(937)
Settlements	(37)
Transfer out of level 3 to levels 1 and 2	11
Net fair value recorded in income	(874)
Deferred Day-One gains/(losses)	38
AT DECEMBER 31, 2020	(836)

(1) This amount includes the initial impact of the extension of the gas trading management model for gas positions used by the GEM BU for a negative loss of €725 million (see Note 9.4 "Other non-recurring items").

16.5.2 Financial liabilities

The table below shows the allocation of financial instruments carried in liabilities to the different levels in the fair value hierarchy:

<i>In millions of euros</i>	Dec. 31, 2020				Dec. 31, 2019			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Borrowings used in designated fair value hedges	4,812	-	4,812	-	6,510	-	6,510	-
Borrowings not used in designated fair value hedges	34,223	25,039	9,184	-	32,382	22,763	9,620	-
Derivative instruments	13,125	89	11,355	1,681	15,575	102	14,292	1,181
Derivatives hedging borrowings	353	-	353	-	225	-	225	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	1,694	4	1,428	261	4,136	-	3,697	440
Derivatives hedging commodities - relating to trading activities ⁽¹⁾	8,503	85	6,999	1,419	9,234	102	8,391	741
Derivatives hedging other items	2,575	-	2,575	-	1,980	-	1,980	-
TOTAL	52,160	25,128	25,352	1,681	54,468	22,865	30,422	1,181

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and a power contract that are measured at fair value and relate to trading activities.

A definition of these three levels is presented in Note 16.4 "Derivative instruments".

Borrowings used in designated fair value hedges

This caption includes bonds in a designated fair value hedging relationship, which are presented in level 2 in the above table. Only the interest rate component of the bonds is remeasured, with fair value determined by reference to observable inputs.

Borrowings not used in designated fair value hedges

Listed bond issues are included in level 1.

Other borrowings not used in a designated hedging relationship, are presented in level 2 in the above table. The fair value of these borrowings is determined on the basis of future discounted cash flows and relies on directly or indirectly observable data.

NOTE 17 RISKS ARISING FROM FINANCIAL INSTRUMENTS

The Group mainly uses derivative instruments to manage its exposure to market risks. Financial risk management procedures are set out in Chapter 2 “Risk factors” of the Universal Registration Document.

17.1 Market risks

17.1.1 Commodity risk

Commodity risk arises primarily from the following activities:

- portfolio management; and
- trading.

The Group has identified primarily two types of commodity risks: price risk resulting from fluctuations in market prices, and volume risk inherent to the business.

In the ordinary course of its operations, the Group is exposed to commodity risks on natural gas, electricity, coal, oil and oil products, other fuels, CO₂ and other “green” products. The Group is active on these energy markets either for supply purposes, or to optimize and secure its energy production chain and its energy sales. The Group also uses derivatives to offer hedging instruments to its clients and to hedge its own positions.

17.1.1.1 Portfolio management activities

Portfolio management seeks to optimize the market value of assets (power plants, gas and coal supply contracts, energy sales and gas storage and transportation) over various timeframes (short-, medium- and long-term). Market value is optimized by:

- guaranteeing supply and ensuring the balance between physical needs and resources;
- managing market risks (price, volume) to unlock optimum value from portfolios within a specific risk framework.

The risk framework aims to safeguard the Group’s financial resources over the budget period and smooth out medium-term earnings (over three or five years, depending on the maturity of each market). It encourages portfolio managers to take out economic hedges on their portfolio.

Sensitivities of the commodity-related derivatives portfolio used as part of the portfolio management activities as at December 31, 2020 are detailed in the table below. They are not representative of future changes in consolidated earnings and equity, insofar as they do not include the sensitivities relating to the purchase and sale contracts for the underlying commodities.

Sensitivity analysis ⁽¹⁾

In millions of euros	Changes in price	Dec. 31, 2020		Dec. 31, 2019	
		Pre-tax impact on income	Pre-tax impact on equity	Pre-tax impact on income	Pre-tax impact on equity
Oil-based products	+USD 10/bbl	119	266	40	234
Natural gas	+€3/MWh	379	537	225	471
Electricity	+€5/MWh	(90)	(39)	82	(47)
Coal	+USD 10/ton	-	1	(2)	-
Greenhouse gas emission rights	+€2/ton	(116)	1	(89)	19
EUR/USD	+10%	37	-	(25)	(99)
EUR/GBP	+10%	(6)	7	33	-

(1) The sensitivities shown above apply solely to financial commodity derivatives used for hedging purposes as part of the portfolio management activities.

The COVID-19 crisis has significantly increased the volatility of financial markets. This volatility resulted in a decline in commodity prices, which contributed to significant changes in the fair value of our financial instruments, thereby impacting the income statement (see Note 8.1 "Purchases and operating derivatives") as well as the Group's other comprehensive income (see "Statement of comprehensive income").

The COVID-19 crisis did not have a major impact on the sensitivity of other items of comprehensive income. No significant impact in terms of ineffectiveness or disqualification of certain hedges qualifying as cash flow hedges was recognized at the year-end.

17.1.1.2 Trading activities

The Group's trading activities are primarily conducted within:

- ENGIE Global Markets and ENGIE Energy Management. The purpose of these wholly-owned companies is to (i) assist Group entities in optimizing their asset portfolios; and (ii) create and implement energy price risk management solutions for internal and external customers;
- ENGIE SA for the optimization of part of its long-term gas supply contracts, of a power exchange contract and of part of its gas sales contracts with retail entities in France and Benelux and with power generation facilities in France and Belgium.

Revenues from trading activities totaled €629 million at December 31, 2020 (€684 million at December 31, 2019).

The use of Value at Risk (VaR) to quantify market risk arising from trading activities provides a transversal measure of risk, taking all markets and products into account. VaR represents the maximum potential loss on a portfolio over a specified holding period based on a given confidence interval. It is not an indication of expected results but is back-tested on a regular basis.

The Group uses a one-day holding period and a 99% confidence interval to calculate VaR, as well as stress tests, in accordance with banking regulatory requirements.

The VaR shown below corresponds to the global VaR of the Group's trading entities.

Value at Risk

In millions of euros	Dec. 31, 2020	2020 average ⁽¹⁾	2020 maximum ⁽²⁾	2020 minimum ⁽²⁾	2019 average ⁽¹⁾
Trading activities	7	10	19	3	14

(1) Average daily VaR.

(2) Maximum and minimum daily VaR observed in 2020.

17.1.2 Hedges of commodity risks

Hedging instruments and sources of hedge ineffectiveness

The Group enters into cash flow hedges, using derivative instruments (firm or option contracts) contracted over the counter or on organized markets, to reduce its commodity risks, which relate mainly to future cash flows from contracted or expected sales and purchases of commodities. These instruments may be settled net or involve physical delivery of the underlying.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and potential mismatches in settlement dates and indices between the derivative instruments and the associated underlying exposures.

The fair values of commodity derivatives are indicated in the table below:

<i>In millions of euros</i>	Dec. 31, 2020				Dec. 31, 2019			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Derivative instruments relating to portfolio management activities	1,163	804	(945)	(749)	2,484	1,037	(3,011)	(1,125)
<i>Cash flow hedges</i>	225	291	(250)	(205)	1,893	292	(1,953)	(557)
<i>Other derivative instruments</i>	938	514	(695)	(544)	591	746	(1,058)	(568)
Derivative instruments relating to trading activities	-	7,075	-	(8,503)	-	8,955	-	(9,234)
TOTAL	1,163	7,879	(945)	(9,252)	2,484	9,993	(3,011)	(10,360)

The fair values shown in the table above reflect the amounts for which assets could be exchanged, or liabilities settled, at the end of the reporting period. They are not representative of expected future cash flows insofar as positions (i) are sensitive to changes in prices; (ii) can be modified by subsequent transactions; and (iii) can be offset by future cash flows arising on the underlying transactions.

17.1.2.1 Cash flow hedges

The fair values of cash flow hedges by type of commodity are as follows:

<i>In millions of euros</i>	Dec. 31, 2020				Dec. 31, 2019			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Natural gas	168	236	(178)	(159)	1,814	235	(1,937)	(550)
Electricity	1	3	(3)	(5)	14	35	(9)	(5)
Coal	-	-	-	-	-	1	(1)	-
Oil	54	50	(68)	(41)	51	-	-	-
Other ⁽¹⁾	2	2	(1)	-	14	21	(6)	(2)
TOTAL	225	291	(250)	(205)	1,893	292	(1,953)	(557)

(1) Includes mainly foreign currency hedges on commodities.

Notional amounts (net) ⁽¹⁾

Notional amounts and maturities of cash flow hedges are as follows:

	<i>Unit</i>	2021	2022	2023	2024	2025	Beyond 5 years	Total at Dec. 31, 2020
Natural gas	<i>GWh</i>	99,240	52,651	24,945	8,667	733	-	186,236
Electricity	<i>GWh</i>	(4,150)	(2,693)	(1,227)	7	-	-	(8,063)
Coal	<i>Thousands of tons</i>	52	23	-	-	-	-	75
Oil-based products	<i>Thousands of barrels</i>	(16,723)	(11,381)	(11,410)	(11,508)	-	-	(51,022)
Forex	<i>Millions of euros</i>	19	4	-	-	-	-	24
Greenhouse gas emission rights	<i>Thousands of tons</i>	188	117	73	12	-	-	390

(1) Long/(short) position.

Effects of hedge accounting on the Group's financial position and performance

<i>In millions of euros</i>	Dec. 31, 2020			Dec. 31, 2019		
	Fair Value		Total	Nominal	Fair value	Nominal
	Assets	Liabilities		Total	Total	Total
Cash flow hedges	515	(455)	61	126,189	(325)	4,967
TOTAL	515	(455)	61	126,189	(325)	4,967

The fair values represented above are positive for assets and negative for liabilities.

<i>In millions of euros</i>		Nominal amount	Fair Value	Change in fair value used for calculating hedge effectiveness	Change in the value of the hedging instrument recognized in equity ⁽¹⁾	Ineffective portion recognized in profit or loss ⁽¹⁾	Amount reclassified from the hedge reserve to profit or loss ⁽¹⁾	Line item of profit or loss
Cash flow hedges								Current operating income
	Hedging instruments	126,189	61		154	-	698	
	Hedged items			748				

(1) Gains/(losses).

Hedge inefficiency is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedge. The fair value of the hedging instruments at December 31, 2020 reflects the cumulative change in the fair value of the hedging instruments since inception of the hedges.

Maturity of commodity derivatives designated as cash flow hedges

<i>In millions of euros</i>	2021	2022	2023	2024	2025	Beyond 5 years	Dec. 31, 2020	Dec. 31, 2019
Fair Value of derivatives by maturity	168	39	(40)	(33)	17	3	154	(325)

Amounts presented in the statement of changes in equity and the statement of comprehensive income

The following table provides a reconciliation of each component of equity and an analysis of other comprehensive income:

<i>In millions of euros</i>	Cash flow hedge	Derivatives hedging commodities
At December 31, 2019		(837)
Effective portion recognized in equity		189
Amount reclassified from hedge reserve to profit or loss		704
Translation differences		-
Changes in scope of consolidation and other		(1)
At December 31, 2020		54

17.1.2.2 Other commodity derivatives

Other commodity derivatives include:

- commodity purchase and sale contracts that were not entered into or are no longer held for the purpose of the receipt or delivery of commodities in accordance with the Group's expected purchase, sale or usage requirements;
- embedded derivatives; and
- derivative financial instruments that are not eligible for hedge accounting in accordance with IFRS 9 or for which the Group has elected not to apply hedge accounting.

17.1.3 Currency risk

The Group is exposed to currency risk, defined as the impact on its statement of financial position and income statement of fluctuations in exchange rates affecting its operating and financing activities. Currency risk comprises (i) transaction risk arising in the ordinary course of business, (ii) specific transaction risk related to investments, mergers and acquisitions or disposal projects, and (iii) translation risk arising from the conversion into euros of income statement and statement of financial position items from subsidiaries with a functional currency other than the euro. The main translation risk exposures correspond, in order, to assets in US dollars, Brazilian real and pounds sterling.

17.1.3.1 Financial instruments by currency

The following tables present a breakdown by currency of outstanding borrowings and debt and net financial debt, before and after hedging:

17.1.3.2 Currency risk sensitivity analysis

A sensitivity analysis to currency risk on financial income/(loss) – excluding the income statement translation impact of foreign subsidiaries – was performed based on all financial instruments managed by the treasury department and representing a currency risk (including derivative financial instruments).

A sensitivity analysis to currency risk on equity was performed based on all financial instruments qualified as net investment hedges at the reporting date.

For currency risk, sensitivity corresponds to a 10% rise or fall in exchange rates of foreign currencies against the euro compared to closing rates.

In millions of euros	Dec. 31, 2020			
	Impact on income		Impact on equity	
	+10% ⁽¹⁾	-10% ⁽¹⁾	+10% ⁽¹⁾	-10% ⁽¹⁾
Exposures denominated in a currency other than the functional currency of companies carrying the liabilities on their statements of financial position ⁽²⁾	4	(4)	NA	NA
Financial instruments (debt and derivatives) qualified as net investment hedges ⁽³⁾	NA	NA	155	(155)

(1) +(-)10%: depreciation (appreciation) of 10% of all foreign currencies against the euro.

(2) Excluding derivatives qualified as net investment hedges.

(3) This impact is countered by the offsetting change in the net investment hedged.

17.1.4 Interest rate risk

The Group seeks to manage its borrowing costs by limiting the impact of interest rate fluctuations on its income statement. The Group's policy is therefore to arbitrate between fixed rates, floating rates and capped floating rates for its net debt. The interest rate mix may shift within a range defined by Group Management in line with market trends.

In order to manage the interest rate structure for its net debt, the Group uses hedging instruments, particularly interest rate swaps and options. At December 31, 2020, the Group had a portfolio of interest rate options (caps) protecting it from a rise in short-term interest rates for the euro.

The Group has a portfolio of 2021, 2023, 2024 and 2025 forward interest rate pre-hedges with respective 20/21-year and 10 year maturities on each of the volumes initiated in 2020 to protect the refinancing interest rate on a portion of its debt.

17.1.4.1 Analysis of financial instruments by type of interest rate

The following tables present a breakdown by type of interest rate of outstanding borrowings and debt and net financial debt before and after hedging:

17.1.4.2 Interest rate risk sensitivity analysis

Sensitivity was analyzed based on the Group's net debt position (including the impact of interest rate and foreign currency derivatives relating to net debt) at the reporting date.

For interest rate risk, sensitivity corresponds to a 100-basis-point rise or fall in the yield curve compared to year-end interest rates.

In millions of euros	Dec. 31, 2020			
	Impact on income		Impact on equity	
	+100 basis points	-100 basis points	+100 basis points	-100 basis points
Net interest expense on floating-rate net debt (nominal amount) and on floating-rate leg of derivatives	(3)	2	NA	NA
Change in fair value of derivatives not qualifying as hedges	70	(139)	NA	NA
Change in fair value of derivatives qualifying as cash flow hedges	NA	NA	549	(711)

17.1.5 Currency and interest rate hedges

The COVID-19 crisis has not prompted the Group to review its foreign exchange and interest rate risk management policy described below

17.1.5.1 Currency risk management

Foreign currency exchange risk (or "FX" risk) is reported and managed based on a Group-wide approach, reflected in a dedicated Group policy that is approved by Group Management. The policy distinguishes between the three following main sources of currency risk:

- Regular transaction risk**

Regular transaction risk corresponds to the potential negative financial impact of currency fluctuations on business and financial operations denominated in a currency other than the functional currency.

The management of regular transaction risk is fully delegated to the subsidiaries for their scope of activities, while the risks related to central activities are managed at corporate level.

FX risks related to operational activities are systematically hedged when the related cash flows are certain, with a hedging horizon that corresponds at least to the medium-term plan horizon. For cash flows that are not certain, in their entirety, the hedge is initially based on a “no regret” volume. Exposures are monitored and managed based on the sum of nominal cash flows in FX, including highly probable amounts and related hedges.

For FX risks related to financial activities, all significant exposures related to cash, financial debt, etc. are systematically hedged. Exposures are monitored based on the net sum of balance sheet items in FX.

- **Project transaction risk**

Specific project transaction risk corresponds to the potential negative financial impact of FX fluctuations on specific major operations such as investment projects, acquisitions, disposals and restructuring projects, involving multiple currencies.

The management of these FX risks includes the definition and implementation of hedging transactions, taking into account the likelihood of the risk (including probability of project completion) and its evolution, the availability of hedging instruments and their associated cost. Management’s aim is to ensure the viability and the profitability of the transactions.

- **Translation risk**

Translation risk corresponds to the potential negative financial impact of FX fluctuations concerning consolidated entities with a functional currency other than the euro. It relates to the translation of their income and expenses and their net assets.

Translation risk is managed centrally, with a focus on securing the net asset value.

The pertinence of hedging this translation risk is assessed regularly for each currency (as a minimum) or set of assets in the same currency, taking into account notably the value of the assets and the hedging costs.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating currency risk:

- derivative instruments: these mostly correspond to over-the-counter contracts and include FX forward transactions, FX swaps, currency swaps, cross currency swaps, plain vanilla FX options or combinations (calls, puts or collars);
- monetary items such as debt, cash and loans.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and in some cases the amount of the future cash flows in foreign currency that are being hedged.

17.1.5.2 Interest rate risk management

The Group is exposed to interest rate risk through its financing and investing activities. Interest rate risk is defined as a financial risk resulting from fluctuations in base interest rates that may increase the cost of debt and affect the viability of investments. Base interest rates are market interest rates, such as EURIBOR, LIBOR, etc., that do not include the borrower’s credit spread.

As part of the interest rate benchmark reform, since 2019 the Group has applied, the transition reliefs permitted by the IASB which allow the uncertainties caused by the reform not to be taken into account in the “highly probable” requirement. In 2020, the Group decided to apply the “IBOR phase 2” amendments, which provide for the clarification of the accounting treatment of financial instruments concerned by the reform, in advance. These amendments, which mainly aim to address the issues relating to the valuation of financial instruments and hedging relationships, only apply to the changes required by the reform.

The approach adopted by the ENGIE Group, through an ad hoc working group, makes it possible to address the issue both at the level of central financing vehicles and external financing issued directly by the Business Units.

A Group-wide approach to interest rate risk management is reflected in a dedicated Group policy that is approved by Group Management. This policy distinguishes between the two following main sources of interest rate risk:

- **Interest rate risk relating to Group net debt**

Interest rate risk relating to Group net debt designates the financial impact of base rate movements on the debt and cash portfolio from recurring financing activities. This risk is mainly managed centrally.

Risk management objectives are, by order of importance:

- to protect the long term viability of assets;
- to optimize financing costs and ensure competitiveness; and
- to minimize uncertainty on the cost of debt.

Interest rate risk is managed actively by monitoring changes in market rates and their impact on the Group's gross and net debt.

- **Project interest rate risk**

Specific project interest rate risk corresponds to the potential negative financial impact of base rate movements on specific major operations such as investment projects, acquisitions, disposals and restructuring projects. Interest rate risk after the closing of an operation is considered as regular (see "Interest rate risk" above).

Interest rate risk is managed for specific project transactions in order to protect the economic viability of projects, acquisitions, disposals and restructuring initiatives against adverse changes in interest rates. It may include the implementation of hedging transactions, depending on a number of factors including the likeliness of completion, the availability of hedging instruments and their associated cost.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating interest rate risk:

- derivative instruments: these mostly correspond to over-the-counter contracts that are used to manage base interest rates. Such instruments include:
 - swaps, to change the nature of interest payments on debts, typically from fixed to floating rates or vice versa, and
 - plain vanilla interest rate options;
- caps, floors and collars that allow the impact of interest rate fluctuations to be limited by setting minimum and/or maximum limits on floating interest rates.

Sources of hedge ineffectiveness are mainly related to changes in the credit quality of the counterparties and related charges, as well as potential gaps in settlement dates and in indices between the derivative instruments and the related underlying exposures.

17.1.5.3 Currency and interest rate hedges

The Group has elected to apply hedge accounting whenever possible and suitable for currency risk and interest rate risk management purposes and also manages a portfolio of undesignated derivative instruments, corresponding to economic hedges relating to net debt and foreign currency exposures.

The Group uses the three hedge accounting methods: cash flow hedging, fair value hedging and net investment hedging.

In general, the Group does not frequently reset hedging relationships, designate specific risk components as a hedged item or designate credit exposures as measured at fair value through income.

The Group qualifies interest rate or cross currency swaps transforming fixed-rate debt into floating-rate debt as fair value hedges.

Cash flow hedges are mainly used to hedge future cash flows in foreign currency, floating-rate debt as well as future refinancing requirements.

Net investment hedging instruments are mainly FX swaps and forwards.

The fair values of derivatives (excluding commodity instruments) are indicated in the table below:

	Dec. 31, 2020				Dec. 31, 2019			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
<i>In millions of euros</i>								
Derivatives hedging borrowings	619	147	(313)	(39)	705	124	(183)	(41)
<i>Fair value hedges</i>	526	14	(48)	(3)	530	81	(54)	(1)
<i>Cash flow hedges</i>	8	7	(220)	(8)	55	-	(93)	(7)
<i>Derivative instruments not qualifying for hedge accounting</i>	85	126	(46)	(28)	120	43	(36)	(34)
Derivatives hedging other items	1,214	43	(2,530)	(45)	949	17	(1,934)	(45)
<i>Cash flow hedges</i>	30	3	(768)	(11)	25	-	(571)	(4)
<i>Net investment hedges</i>	55	-	(4)	-	33	-	(6)	-
<i>Derivative instruments not qualifying for hedge accounting</i>	1,130	40	(1,758)	(33)	891	17	(1,357)	(41)
TOTAL	1,833	189	(2,844)	(84)	1,654	142	(2,118)	(86)

The fair values shown in the table above reflect the amounts relating to the price that would be received for the sale of an asset or paid for the transfer of a liability between market participants in the normal course of business. They are not representative of expected future cash flows insofar as the positions (i) are sensitive to changes in prices or to changes in credit ratings, (ii) can be modified by subsequent transactions, and (iii) can be offset by future cash flows arising on the underlying transactions.

Amount, timing and uncertainty of future cash flows

The following tables provide a profile of the timing at December 31, 2020 of the nominal amount of hedging instruments:

<i>In millions of euros</i>										
Buy/Sell	Interest rate type	Derivative instrument type	Currency	Total	2021	2022	2023	2024	2025	Beyond 5 years
Buy	Fixed	CCS	EUR	(486)	(303)	(32)	(30)	(29)	(26)	(67)
			USD	(2,205)	(982)	(937)	(41)	(41)	(41)	(163)

TOTAL	1,779	(2,184)	(405)	25,029	(126)	31,224

The fair values presented in the above table are positive for an assets and negative for a liabilities.

In millions of euros		Nominal and outstanding amount	Fair value ⁽¹⁾	Change in fair value used for calculating hedge ineffectiveness	Change in the value of the hedging instrument recognized in equity ⁽²⁾	Ineffective portion recognized in profit or loss ⁽²⁾	Amount reclassified from the hedge reserve to profit or loss ⁽²⁾	Line item of the income statement
Fair value hedges	Hedging instruments	4,622	495	495	NA	-	NA	Cost of net debt
	Hedged items ^{(3) (4)}	4,302	396	(1,698)	NA		NA	
Cash flow hedges	Hedging instruments	7,463	(958)	(860)	207	(5)	47	Other financial income and expenses / Current operating income including operating MtM
	Hedged items			854				
Net investment hedges	Hedging instruments	3,027	27	56	(119)	NA	(9)	Other financial income and expenses / Current operating income including operating MtM
	Hedged items			(56)				

(1) The adjustment of the fair value of hedged items is presented as long term and short-term borrowings and debt for an amount of €396 million.

(2) Gains/(losses)

(3) The difference between the fair value used to determine the ineffective portion relating to hedging instruments and that relating to the hedged items corresponds to the amortized cost of borrowings and debt that are part of a fair value hedge relationship.

(4) Of which €98 million relating to hedging items that are no longer adjusted as a result of disqualification as a fair value hedge.

Hedge inefficiency is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedge. The fair value of the hedging instruments at December 31, 2020 reflects the cumulative change in the fair value of the hedging instruments since inception of the hedges. For fair value hedges, the same principle applies to the hedged items.

No significant impact in terms of ineffectiveness or disqualification of certain hedges was recognized at December 31, 2020.

Foreign currency and interest rate derivatives designated as cash flow hedges can be analyzed as follows by maturity

In millions of euros	2021	2022	2023	2024	2025	Beyond 5 years	Total at Dec. 31, 2020	Total at Dec. 31, 2019
Fair value of derivatives by maturity	(44)	(38)	(41)	(34)	(29)	(774)	(958)	(594)

Amounts presented in the statement of changes in equity and the statement of comprehensive income

The following table provides a reconciliation of each component of equity and an analysis of other comprehensive income:

	Cash flow hedge			Net investment hedge

(1) Cash flow hedges for given periods.

(2) Cash flow hedges for given transactions.

(3) Of which a negative €487 million of cash flow hedge reserves for which hedge accounting is no longer applied.

(4) All of the reserves relate to continuing hedging relationships.

17.2 Counterparty risk

Due to its financial and operational activities, the Group is exposed to the risk of default of its counterparties (customers, suppliers, EPC contractors, partners, intermediaries, and banks). Default could affect payments, goods delivery and/or asset performance.

The principles of counterparty risk management are set out in the Group counterparty risk policy, which:

- assigns roles and responsibilities for managing and controlling counterparty risk at different levels (Corporate, BU or entity), and ensures operational procedures are in place and consistent across the Group;
- characterizes counterparty risk and the mechanisms by which it impacts the economic performance and financial statements of the Group;
- defines indicators, reporting and control mechanisms to ensure visibility and to provide tools for financial performance management; and
- provides guidelines on the use of mitigating mechanisms such as collateral and guarantees, which are widely used by some businesses.

Depending on the nature of the business, the Group is exposed to different types of counterparty risk. As a result some businesses use collateral instruments – particularly the Energy Management business, where the use of margin calls and other types of financial collateral (standardized legal framework) is a market standard. In addition, other businesses may request guarantees from their counterparties in certain cases (parent company guarantees, bank guarantees, etc.).

Under the new standard IFRS 9, the Group has defined and applied a Group-wide methodology including the two different approaches:

- a portfolio approach, whereby the Group determines that:
 - coherent customer portfolios and sub-portfolios have to be considered (i.e., portfolios that have comparable credit risk and/or comparable payment behavior), taking into account different aspects:
 - public or private counterparties,
 - residential or BtoB counterparties,
 - geography,
 - type of activity,
 - size of the counterparty, and
 - any other aspects the Group may consider relevant,
 - impairment rates must be determined based on historical aging balances and, when correlation is proven and documentation possible, historical data must be adjusted by forward-looking elements; and

- an individualized approach for significant counterparties, for which the Group has set rules for defining the stage of the concerned asset for Expected Credit Loss (ECL) calculations:
 - stage 1 covers financial assets that have not deteriorated significantly since initial recognition. The ECL for stage 1 is calculated on a 12-month basis,
 - stage 2 covers financial assets for which the credit risk has significantly increased. The ECL for stage 2 is calculated on a lifetime basis. The decision to move an asset from stage 1 to stage 2 is based on certain criteria such as:
 - a significant downgrade in the creditworthiness of a counterparty and/or its parent company and/or its guarantor (if any),
 - significant adverse change in the regulatory environment,
 - changes in political or country-related risk, and
 - any other aspect the Group may consider relevant.

Regarding financial assets that are more than 30 days past due, the move to stage 2 is not systematically applied as long as the Group has reasonable and supportable information that demonstrates that, even if payments become more than 30 days past due, this does not represent a significant increase in the credit risk since initial recognition.

- stage 3 covers assets for which default has already been observed, such as:
 - when there is evidence of significant and ongoing financial difficulty of the counterparty,
 - when there is evidence of failure in credit support from a parent company to its subsidiary (in this case the subsidiary is the Group's counterparty at risk),
 - when a Group entity has initiated legal proceedings against the counterparty for non-payment.

Regarding financial assets that are more than 90 days past due, the presumption can be rebutted if the Group has reasonable and supportable information that demonstrates that even if payments become more than 90 days past due, this does not indicate counterparty default.

The ECL formula applicable in stages 1 and 2 is $ECL = EAD \times PD \times LGD$, where:

- for 12-month ECL, Exposure At Default (EAD) equals the carrying amount of the financial asset, to which the relevant Probability of Default (PD) and the Loss Given Default (LGD) are applied;
- for lifetime ECL, the calculation method consists in identifying changes in exposure for each year, especially the expected timing and amount of the contractual repayments, and then applying to each repayment the relevant PD and the LGD, and discounting the figures obtained. ECL is then the sum of the discounted figures; and
- probability of default is the likelihood of default over a particular time horizon (in stage 1, this time horizon is 12 months after the reporting period; in stage 2 this time horizon is the entire lifetime of the financial asset). This information is based on external data from a well-known rating agency. The PD depends on the time horizon and of the rating of the counterparty. The Group uses external ratings if they are available; ENGIE's credit risk experts determine an internal rating for major counterparties with no external rating.

LGD levels are notably based on Basel standards:

- 75% for subordinated assets; and
- 45% for standard assets.

For assets considered to be of strategic importance for the counterparty, such as essential public services or goods, LGD is set at 30%.

The Group has decided that write-offs apply in the following situations:

- assets for which a legal recovery procedure is pending: should not be written off as long as the procedure is ongoing; and

- assets for which no legal recovery procedure is pending: should be written off once the trade receivable is 3 years overdue (5 years overdue for public counterparties).

As a result of the COVID-19 crisis, the Group has implemented a specific management system to secure its counterparty risk. It is based in particular on:

- an increased monitoring of exposures and cash inflow delays for individually monitored counterparties; and
- an enhanced monitoring of aging balances of the Group's various activities for counterparties monitored using a portfolio approach.

Since the beginning of the crisis, the Group has taken immediate action to limit its exposures such as:

- the closure of customer lines in the most affected sectors within the Energy Management activity;
- the reassignment, during the lockdown in the first half of 2020, of commercial resources to sales administration missions, within the supply and marketing activities, in order to limit the deterioration of aging balances. This increased monitoring of collection procedures throughout 2020 led to no significant change in outstandings (trade receivables, contract assets or receivables recognized at amortized cost) and a general improvement in the cash position of the business units concerned.

Furthermore, the Group has also implemented measures to support the most vulnerable households and microenterprises such as:

- the reimbursement of 2 months of electricity standing charges (April and May) for beneficiaries of an energy voucher or of the Housing Solidarity Fund (*Fonds de Solidarité Logement*);
- the implementation of a payment facility over 6 months with a postponement of the first due date until the end of the health crisis for companies with less than 10 employees.

From an accounting point of view, these various measures were accompanied by an adjustment of the provisioning rate in the customer segments most at risk, particularly in the aeronautical and hotel & catering sectors. These effects led to an increase in expected credit loss, the impact of which on the Group's net income amounted to €230 million at December 31, 2020.

17.2.1 Operating activities

Counterparty risk arising on operating activities is managed via standard mechanisms such as third-party guarantees, netting agreements and margin calls, using dedicated hedging instruments or special prepayment and debt recovery procedures, particularly for retail customers.

Under the Group's policy, each business unit is responsible for managing counterparty risk, although the Group continues to manage the biggest counterparty exposures centrally.

The credit rating of large- and mid-sized counterparties with which the Group has exposures above a certain threshold is measured based on a specific rating process, while a simplified credit scoring process is used for commercial customers with which the Group has fairly low exposures. These processes are based on formally documented, consistent methods across the Group. Consolidated exposures are monitored by counterparty and by segment (credit rating, sector, etc.) using standard indicators (payment risk, mark-to-market exposure).

The Group's Energy Market Risk Committee (CRME) consolidates and monitors the Group's exposure to its main energy counterparties on a quarterly basis and ensures that the exposure limits set for these counterparties are respected.

17.2.1.1 Trade and other receivables, assets from contracts with customers

Total outstanding exposures presented in the tables below do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €2,431 million at December 31, 2020 (compared to €2,898 million at December 31, 2019).

17.2.1.2 Commodity derivatives

In the case of commodity derivatives, counterparty risk arises from positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

In millions of euros	Dec. 31, 2020		Dec. 31, 2019	
	Investment Grade ⁽¹⁾	Total	Investment Grade ⁽¹⁾	Total
Gross exposure ⁽²⁾	6,633	9,031	9,849	12,466
Net exposure ⁽³⁾	2,817	3,750	3,501	4,422
% of credit exposure to "Investment Grade" counterparties	75.1%		79.2%	

- (1) Investment Grade corresponds to transactions with counterparties that are rated at least BBB- by Standard & Poor's, Baa3 by Moody's, or equivalent by Dun & Bradstreet. "Investment Grade" is also determined based on an internal rating tool that has been rolled out within the Group, and covers its main counterparties.
- (2) Corresponds to the maximum exposure, i.e., the value of the derivatives shown under assets (positive fair value).
- (3) After taking into account the liability positions with the same counterparties (negative fair value), collateral, netting agreements and other credit enhancement techniques.

The COVID-19 crisis has not affected the Group's exposure due to the credit quality of its counterparties, which has been maintained to date.

17.2.2 Financing activities

For its financing activities, the Group has put in place procedures for managing and monitoring risk based on (i) the accreditation of counterparties according to external credit ratings, objective market data (credit default swaps, market capitalization) and financial structure, and (ii) counterparty risk exposure limits.

To reduce its counterparty risk exposure, the Group has drawn increasingly on a structured legal framework based on master agreements (including netting clauses) and collateralization contracts (margin calls).

The oversight procedure for managing counterparty risk arising from financing activities is managed by a Middle Office that operates independently of the Group's Treasury department and reports to the Finance division.

17.2.2.1 Loans and receivables at amortized cost

The total outstanding exposures presented in the tables below do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €1,424 million at December 31, 2020 (compared to €899 million at December 31, 2019).

In millions of euros	Dec. 31, 2020						
	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Other	Total by counterparty type
Gross	4,144	415	67	4,626	2,582	2,045	4,626

TOTAL	4,087	381	(43)	4,425	2,455	1,970	4,425

In millions of euros	Dec. 31, 2019						
	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Other	Total by counterparty type
Gross	4,257	564	49	4,870	2,772	2,098	4,870
Expected credit losses	(53)	(56)	(30)	(139)	(36)	(104)	(139)
TOTAL	4,204	508	19	4,731	2,736	1,995	4,731

- (1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's.

17.2.2.2 Counterparty risk arising from investing activities and the use of derivative financial instruments

The Group is exposed to counterparty risk arising from investments of surplus cash and from the use of derivative financial instruments. In the case of financial instruments at fair value through income, counterparty risk arises on instruments with a positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

In millions of euros	Dec. 31, 2020				Dec. 31, 2019			
	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non Investment-Grade ⁽²⁾	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non-Investment Grade ⁽²⁾
Exposure	13,174	84.4%	8.7%	6.9%	10,686	85.7%	4.7%	9.6%

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's or Baa3 by Moody's.

(2) Most of these two exposures is carried by consolidated companies that include non-controlling interests, or by Group companies that operate in emerging countries, where cash cannot be pooled and is therefore invested locally.

Furthermore, at December 31, 2020, Crédit Agricole Corporate and Investment Bank (CACIB) is the main Group counterparty and represents 20% of cash surpluses. This relates mainly to a depositary risk.

17.3 Liquidity risk

In the context of its operating activities, the Group is exposed to a risk of having insufficient liquidity to meet its contractual obligations. As well as the risks inherent in managing working capital requirements (WCR), margin calls are required in certain market activities.

The Group has set up a weekly committee tasked with managing and monitoring liquidity risk throughout the Group, by maintaining a broad range of investments and sources of financing, preparing forecasts of cash investments and divestments. Stress tests are also performed on the margin calls put in place when commodity, interest rate and currency derivatives are negotiated to assess the Group's resilience in terms of liquidity.

The Group centralizes virtually all the financing needs and cash flow surpluses of the companies it controls, as well as most of their medium- and long-term external financing requirements. Centralization is provided by financing vehicles (long-term and short-term) and by dedicated Group cash pooling vehicles based in France, Belgium and Luxembourg.

Surpluses held by these structures are managed in accordance with a uniform policy. In accordance with this policy, unpooled cash surpluses are invested in instruments selected on a case-by-case basis in light of local financial market imperatives and the financial strength of the counterparties concerned.

The onslaught of successive financial crises since 2008 and the ensuing rise in counterparty risk prompted the Group to tighten its investment policy with the aim of keeping an extremely high level of liquidity and protecting invested capital and a daily monitoring of performance and counterparty, allowing the Group to take immediate action where required in response to market developments. Consequently, 77% of the cash pooled at December 31, 2020 was invested in overnight bank deposits and standard money market funds with daily liquidity.

The Group's financing policy is based on:

- centralizing external financing;
- diversifying sources of financing between credit institutions and capital markets;
- achieving a balanced debt repayment profile.

The Group seeks to diversify its sources of financing by carrying out public or private bond issues within the scope of its Euro Medium Term Notes program. It also issues negotiable commercial paper in France (Negotiable European Commercial Paper) and in the United States (U.S. Commercial Paper). As negotiable commercial paper is relatively inexpensive and highly liquid, it is used by the Group in a cyclical or structural fashion to finance its short-term cash requirements. However, the refinancing of all outstanding negotiable commercial paper remains secured by confirmed bank lines of credit – mainly centralized – allowing the Group to continue to finance its activities if access to this financing

source were to dry up. These facilities are appropriate for the scale of its operations and for the timing of contractual debt repayments.

As a result of the COVID-19 crisis, the Group implemented specific management measures to secure its liquidity. These measures are based on, (i) increased monitoring of centralized cash management and central liquidity, which is regularly communicated to General Management and the Board of Directors, and (ii) stress tests to assess the Group's liquidity.

In this context, the Group has also taken several actions including:

- maintaining an outstanding amount of negotiable commercial papers in France and the United States of €4 billion on average over the year, benefiting from the measures offered by the ECB to combat the pandemic (PEPP ⁽¹⁾ CSPP ⁽²⁾) for €900 million in the first half of 2020;
- the drawdown on bilateral credit lines of €885 million in March for a period of one month to cover the decline in liquidity in the negotiable commercial papers market;
- a bond issue for a total amount of €2.5 billion on March 27, 2020;
- the signature on May 11, 2020 of a syndicated credit line for an amount of €2.5 billion with a 12-month term and renewable for two 6-month periods. At the end of 2020 and given the changes in the Group's liquidity, in particular following the sale of its stake in SUEZ, this line was cancelled entirely.

In addition to these actions, the Group decided to (i) propose the cancellation of the payment of the 2019 dividend – this resolution was approved by the Shareholders' Meeting on May 14, 2020, and (ii) revise the timetable of certain investment projects (adjustments, postponements, etc.).

The various actions carried out by the Group ensure a high and reinforced level of liquidity.

Diversifying sources of financing and liquidity

In millions of euros

(1) Net amount of negotiable commercial paper.

(2) Cash corresponds to cash and cash equivalents, other financial assets deducted from net financial debt, net of bank overdrafts and current accounts, of which 78% was invested in the Eurozone.

At December 31, 2020, all the entities of the Group whose debt is consolidated complied with the covenants and declarations included in their financial documentation, except for some non-significant entities for which compliance actions are being implemented. None of the available centralized credit lines contain a default clause linked to financial ratios or rating level.

(1) Pandemic emergency purchase programme.

(2) Corporate sector purchase programme.

17.3.1 Undiscounted contractual payments relating to financial activities

Undiscounted contractual payments on outstanding borrowings and debt by maturity

<i>In millions of euros</i>	2021	2022	2023	2024	2025	Beyond 5 years	Total at Dec. 31, 2020	Total at Dec. 31, 2019
Bond issues	1,446	2,623	2,546	1,183	2,015	16,356	26,170	26,015
Bank borrowings	986	537	371	265	371	1,594	4,123	5,292
Negotiable commercial paper	4,024	-	-	-	-	-	4,024	3,233
Lease liabilities	513	460	284	258	231	921	2,386	2,512
Other borrowings	34	38	15	13	7	43	150	261
Bank overdrafts and current accounts	301	-	-	-	-	-	301	247

Other financial assets and cash and cash equivalents deducted from net financial debt have a liquidity of less than one year.

Undiscounted contractual interest payments on outstanding borrowings and debt by maturity

<i>In millions of euros</i>	2021	2022	2023	2024	2025	Beyond 5 years	Total at Dec. 31, 2020	Total at Dec. 31, 2019
Undiscounted contractual interest flows on outstanding borrowings and debt	959	731	658	554	553	6,398	9,853	9,872

Undiscounted contractual payments on outstanding derivatives (excluding commodity instruments) by maturity

<i>In millions of euros</i>	2021	2022	2023	2024	2025	Beyond 5 years	Total at Dec. 31, 2020	Total at Dec. 31, 2019
Derivatives (excluding commodity instruments)	(213)	(107)	55	19	31	532	317	(237)

To better reflect the economic substance of these transactions, the cash flows linked to the derivatives recognized in assets and liabilities shown in the table above relate to net positions.

Group's undrawn credit facility programs

<i>In millions of euros</i>	2021	2022	2023	2024	2025	Beyond 5 years	Total at Dec. 31, 2020	Total at Dec. 31, 2019
Confirmed undrawn credit facility programs	1,002	6,463	560	4,991	-	678	13,695	13,019

Of these undrawn programs, an amount of €4,024 million is allocated to covering commercial paper issues.

At December 31, 2020, no single counterparty represented more than 5% of the Group's confirmed undrawn credit lines.

17.3.2 Undiscounted contractual payments relating to operating activities

The table below provides an analysis of undiscounted fair values due and receivable in respect of commodity derivatives recorded in assets and liabilities at the statement of financial position date.

The Group provides an analysis of residual contractual maturities for commodity derivative instruments included in its portfolio management activities. Derivative instruments relating to trading activities are considered to be liquid in less than one year, and are presented under current items in the statement of financial position.

<i>In millions of euros</i>	2021	2022	2023	2024	2025	Beyond 5 years	Total at Dec. 31, 2020	Total at Dec. 31, 2019

Derivative instruments carried in assets								
<i>relating to portfolio management activities</i>	802	671	204	101	29	166	1,975	3,363
<i>relating to trading activities</i>	7,059	-	-	-	-	-	7,059	8,954
TOTAL	(1,367)	162	23	25	(11)	18	(1,149)	(1,349)

17.3.3 Commitments relating to commodity purchase and sale contracts entered into within the ordinary course of business

Some Group operating companies have entered into long-term contracts, some of which include “take-or-pay” clauses. These consist of firm commitments to purchase or sell specified quantities of gas, electricity or steam as well as related services, in exchange for a firm commitment from the other party to deliver or purchase said quantities and services. These contracts were documented as falling outside the scope of IFRS 9. The table below shows the main future commitments arising from contracts entered into by Others (GEM BU) and Latin America (expressed in TWh).

<i>In TWh</i>	2021	2022-2025	Beyond 5 years	Total at Dec. 31, 2020	Total at Dec. 31, 2019
Firm purchases	(309)	(586)	(934)	(1,829)	(2,498)
Firm sales	498	608	465	1,571	1,573

NOTE 18 EQUITY

18.1 Share capital

	Number of shares			Value <i>(in millions of euros)</i>		
	Total	Treasury stock	Outstanding	Share capital	Additional paid-in capital	Treasury stock
AT DECEMBER 31, 2019	2,435,285,011	(22,153,694)	2,413,131,317	2,435	31,470	(303)
Dividend paid in cash	-	-	-	-	-	-
Allocation of prior-year income	-	-	-	-	(178)	-
Purchase/disposal of treasury stock	-	-	-	-	-	47
Delivery of treasury stock (bonus)	-	3,689,060	3,689,060	-	-	-
Revaluation	-	-	-	-	-	-
AT DECEMBER 31, 2020	2,435,285,011	(18,464,634)	2,416,820,377	2,435	31,291	(256)

Changes in the number of outstanding shares in 2020 result solely from the disposal of 3.7 million treasury shares, as part of bonus share plans.

18.1.1 Potential share capital and instruments providing a right to subscribe for new ENGIE SA shares

Since 2017, the Group no longer has any stock purchase or subscription option plans.

Shares to be allocated under the performance share award plans described in Note 21 "Share-based payments" are covered by existing ENGIE SA shares.

18.1.2 Treasury stock

Accounting standards

Treasury shares are recognized at acquisition cost and deducted from equity. Gains and losses on disposals of treasury shares are recorded directly in equity and do not, therefore, impact income for the period.

The Group has a stock repurchase program as a result of the authorization granted to the Board of Directors by the Ordinary and Extraordinary Shareholders' Meeting of May 17, 2020. This program provides for the repurchase of up to 10% of the shares comprising the share capital of ENGIE SA at the date of the said Shareholders' Meeting. The aggregate amount of acquisitions net of expenses under the program may not exceed €7.3 billion, and the purchase price must be less than €30 per share excluding acquisition costs.

At December 31, 2020, the Group held 18.5 million treasury shares. To date, all of the shares have been allocated to cover the Group's share commitments to employees and corporate officers.

The liquidity agreement signed with an investment service provider assigns to the latter the role of operating on the market on a daily basis, to buy or sell ENGIE SA shares, in order to ensure liquidity and an active market for the shares on the Paris and Brussels stock exchanges. To date, the resources allocated to the implementation of this agreement amount to €50 million.

18.2 Other disclosures concerning additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (Group share)

Total additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (including net income for the year), amounted to €33,830 million at December 31, 2020, including €31,291 million in additional paid-in capital. Additional paid-in capital includes the allocation of ENGIE SA's net income for an amount of €178 million.

Consolidated reserves include the cumulative income of the Group, the legal and statutory reserves of ENGIE SA, cumulative actuarial gains and losses, net of tax and the change in fair value of equity instruments at fair value through OCI.

Under French law, 5% of the net income of French companies must be allocated to the legal reserve until the latter reaches 10% of share capital. This reserve can only be distributed to shareholders in the event of liquidation. The ENGIE SA legal reserve amounts to €244 million.

18.2.1 Issuance of deeply-subordinated perpetual notes

On November 19, 2020, ENGIE SA carried out an early refinancing of deeply-subordinated perpetual notes, resulting in:

- an issue of green deeply-subordinated perpetual notes for an amount of €850 million offering a coupon of 1.5% with an annual reimbursement option from November 2028, accounted for in equity for a net amount of €844 million;
- a partial early redemption of three tranches of deeply-subordinated perpetual notes for an amount of €850 million, broken down as follows :
 - A redemption of €50 million (4.750% coupon) on a residual nominal amount of €413 million. The first reimbursement option for this hybrid debt was planned for July 2021,
 - A redemption of green deeply-subordinated perpetual notes for €342 million (1.375% coupon) out of a nominal amount of €1 billion. The first reimbursement option for this hybrid debt was planned for April 2023,
 - A redemption of €458 million (3.875% coupon) on a residual nominal amount of €1 billion. The first reimbursement option for this hybrid debt was planned for June 2024.

In accordance with the provisions of IAS 32 – *Financial Instruments – Presentation*, and given their characteristics, these new instruments were accounted for in equity in the Group's consolidated financial statements.

At December 31, 2020 the nominal value of the deeply-subordinated notes amounted to €3,913 million.

In 2020, the Group paid €187 million to the owners of these notes, including €128 million relating to coupons and €59 million for early repayment compensation. This amount is accounted for as a deduction from equity in the Group's consolidated financial statements; the relating tax saving is accounted for in the income statement.

18.2.2 Distributable capacity of ENGIE SA

ENGIE SA's distributable capacity totaled €27,363 million at December 31, 2020 (compared with €31,290 million at December 31, 2019), including €31,291 million of additional paid-in capital.

18.2.3 Dividends

It was proposed, at the Shareholders' Meeting convened to approve the ENGIE Group financial statements for the year ended December 31, 2019, to pay a dividend of €0.80 per share, representing a total payout of €1,931 million based on the number of shares outstanding at December 31, 2019. It will be increased by 10% for all shares held for at least two

years on December 31, 2019 and up to the 2019 dividend payment date. Based on the number of outstanding shares on December 31, 2019, this increase is valued at €17 million.

At the Shareholders' Meeting of May 14, 2020, the shareholders approved the Board's decision not to pay a dividend for the 2019 fiscal year in a spirit of responsibility and prudence in the exceptional context of the COVID-19 pandemic.

Proposed dividend in respect of 2020

At the Shareholders' Meeting convened to approve the ENGIE Group financial statements for the year ended December 31, 2020, the shareholders will be asked to approve a dividend of €0.53 per share, representing a total payout of €1,281 million based on the number of shares outstanding at December 31, 2020. It will be increased by 10% for all shares held for at least two years on December 31, 2020 and up to the 2020 dividend payment date. Based on the number of outstanding shares on December 31, 2020, this increase is valued at €10 million.

Subject to approval by the Shareholders' Meeting of May 20 2021, this dividend, net of the interim dividend paid will be detached on Monday May 24, 2021 and paid on Wednesday May 26, 2021. It is not recognized as a liability in the financial statements at December 31, 2020, since the financial statements at the end of 2020 were presented before the appropriation of earnings.

18.2.4 Other transactions

On February 5, 2020, Elengy acquired 27,5% of Total's shares in Fosmax LNG via its subsidiary Total Gaz Electricité Holding France (TGEHF). The acquisition of the shares excluding fees, amounting to €212 million, was financed mainly by an increase in Elengy's capital reserved for "Société d'Infrastructures Gazières (SIG)" in the amount of €185 million.

On July 2, 2020, ENGIE signed an agreement to sell a 49% stake in a 2.3 GW renewable energy portfolio in the United States to the American group Hannon Armstrong, a leader in investing in environmentally friendly solutions. This transaction resulted in the immediate sale of a 49% stake in 663 MW of wind projects in service, with the remaining projects (1.6 GW including 0.5 GW of solar projects), currently under construction, being transferred only upon commissioning. ENGIE will continue fully to consolidate, operate and manage these assets. This transaction resulted in a cash inflow of €406 million.

18.3 Gains and losses recognized in equity (Group share)

All items shown in the table below correspond to cumulative gains and losses (Group share) at December 31, 2020 and December 31, 2019, which are recyclable to income in subsequent periods.

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Debt instruments	30	76
Net investment hedges ⁽¹⁾	(156)	(284)
Cash flow hedges (excl. commodity instruments) ⁽¹⁾	(1,214)	(958)
Commodity cash flow hedges ⁽¹⁾	76	(837)
Deferred taxes on the items above	358	505
Share of equity method entities accounted in recyclable items, net of tax ⁽²⁾	(813)	(462)
TOTAL RECYCLABLE ITEMS BEFORE TRANSLATION ADJUSTMENTS	(1,719)	(1,961)
Translation adjustments ⁽³⁾	(2,850)	(1,098)
TOTAL RECYCLABLE ITEMS	(4,570)	(3,059)

(1) See Note 17 "Risks arising from financial instruments".

(2) See Note 3 "Investments in equity method entities".

(3) The change in translation adjustments is mainly due to the strong depreciation of the Brazilian real (negative €1,038 million) and the change in the US dollar (negative €677 million).

18.4 Capital management

ENGIE SA seeks to optimize its financial structure at all times by pursuing an optimal balance between its economic net debt and its EBITDA. The Group's key objective in managing its financial structure is to maximize value for shareholders

and reduce the cost of capital, while ensuring that the Group has the financial flexibility required to continue its expansion. The Group manages its financial structure and makes any necessary adjustments in light of prevailing economic conditions. In this context, it may choose to adjust the amount of dividends paid to shareholders, reimburse a portion of capital, carry out share buybacks (see Note 18.1.2 “*Treasury stock*”), issue new shares or deeply-subordinated notes, launch share-based payment plans, recalibrate its investment budget, or sell assets in order to scale back its net debt.

The Group's policy is to maintain an “strong investment grade” rating from the rating agencies. To achieve this, it manages its financial structure in line with the indicators usually monitored by these agencies, namely the Group's operating profile, financial policy and a series of financial ratios. One of the most commonly used ratios is the ratio where the numerator includes operating cash flows less net financial expense and taxes paid, and the denominator includes adjusted net financial debt. Net financial debt is mainly adjusted for nuclear provisions, provisions for pensions and deeply-subordinated notes.

The Group's objectives and processes for managing capital have remained unchanged over the past few years.

ENGIE SA is not obliged to comply with any external minimum capital requirements except those provided for by law.

NOTE 19 PROVISIONS

Accounting standards

General principles related to the recognition of a provision

The Group recognizes a provision where it has a present obligation (legal or constructive) towards a third party arising from past events and where it is probable that an outflow of resources will be necessary to settle the obligation with no expected consideration in return.

A provision for restructuring costs is recognized when the general criteria for setting up a provision are met, i.e. when the Group has a detailed formal plan relating to the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

Provisions with a maturity of over 12 months are discounted when the effect of discounting is material. The Group's main long-term provisions are provisions for the back-end of the nuclear fuel cycle, provisions for dismantling facilities and provisions for site restoration costs. The discount rates used reflect current market assessments of the time value of money and the risks specific to the liability concerned. Expenses with respect to unwinding the discount on the provision are recognized as other financial income and expenses.

Estimates of provisions

Factors having a significant influence on the amount of provisions, and particularly, but not solely, those relating to the back-end of the nuclear fuel cycle, to the dismantling of nuclear facilities and of gas infrastructures in France, include:

- cost estimates (notably the retained scenario for managing radioactive nuclear fuel consumed) (*see Note 19.2*);
- the timing of expenditure (notably, for nuclear power generation activities, the timetable for reprocessing radioactive nuclear fuel consumed and for dismantling facilities as well as the timetable for the end of gas operations regarding the main gas infrastructure businesses in France) (*see Notes 19.2 and 19.3*); and
- the discount rate applied to cash flows.

These factors are based on information and estimates deemed by the Group to be the most appropriate as of today.

Modifications to certain factors could lead to a significant adjustment in these provisions.

<i>In millions of euros</i>	Post-employment and other long-term benefits	Back-end of the nuclear fuel cycle	Dismantling of plant and equipment ⁽¹⁾ and Site rehabilitation	Other contingencies	Total
AT DECEMBER 31, 2019	7,481	7,611	7,566	2,458	25,115
Additions	313	194	84	531	1,122
Utilizations	(412)	(107)	(86)	(626)	(1,232)
Reversals	(2)	-	(1)	(18)	(20)
Changes in scope of consolidation	6	-	(1)	5	10
Impact of unwinding discount adjustments	90	251	187	17	544
Translation adjustments	(31)	-	(23)	(24)	(78)
Other	1,497	-	116	-	1,613
AT DECEMBER 31, 2020	8,941	7,948	7,841	2,343	27,073
Non-current	8,810	7,849	7,816	400	24,876
Current	131	99	25	1,942	2,197

(1) Of which €6,207 million in provisions for dismantling nuclear facilities, managed by Synatom, compared to €6,060 million at December 31, 2019.

The impact of unwinding discount adjustments in respect of post-employment and other long-term benefits relates to the interest expense on the benefit obligation, net of the interest income on plan assets.

The “Other” line mainly comprises actuarial gains and losses arising on post-employment benefit obligations in 2020, which are recorded in “Other comprehensive income” as well as provisions recorded against a dismantling or site rehabilitation asset.

Additions, utilizations, reversals and the impact of unwinding discount adjustments are presented as follows in the consolidated income statement:

<i>In millions of euros</i>	Dec. 31, 2020
Income/(loss) from operating activities	130
Other financial income and expenses	(544)
TOTAL	(414)

The different types of provisions and the calculation principles applied are described below.

19.1 Post-employment benefits and other long-term benefits

See Note 20 “Post-employment benefits and other long-term benefits”.

19.2 Obligations relating to nuclear power generation activities

In the context of its nuclear power generation activities, the Group assumes obligations relating to the management of the back-end nuclear fuel cycle and the dismantling of nuclear facilities.

19.2.1 Legal framework

The Belgian law of April 11, 2003 granted Group subsidiary Synatom responsibility for managing provisions set aside to cover the costs of dismantling nuclear power plants and managing spent nuclear fuel in those plants. The tasks of the Commission for Nuclear Provisions (CNP) set up pursuant to the above-mentioned law is to oversee the process of computing and managing these provisions.

To enable the Commission for Nuclear Provisions to carry out its work in accordance with the above-mentioned law, Synatom is required to submit a report every three years describing the core inputs used to measure these provisions. If any changes are observed from one triennial report to another that could materially impact the financial inputs used, i.e., the industrial scenario, estimated costs and timing, the Commission may revise its opinion, and the Group makes the necessary adjustments, if any, in the income statement.

Synatom submitted its triennial report to the Commission on September 12, 2019 and the Commission issued its opinion on December 12, 2019, which was taken into account in preparing the financial statements for the year ended December 31, 2019. The provisions recognized by the Group were determined taking into account the prevailing contractual and legal framework, which sets the operating life of the Tihange 1 reactor and the Doel 1 and 2 reactors at 50 years, and the other reactors at 40 years. These provisions have not changed significantly since that date, besides the impact of recurring factors such as the passage of time (unwinding) and utilizations of and additions to provisions for fuel spent during the year.

The provisions include in their assumptions all existing or planned environmental regulatory requirements on a European, national and regional level. If new legislation were to be introduced in the future, the cost estimates used as a basis for the calculations could vary. The Group does not believe that it is aware of any developments that could materially impact the amount of the provisions with the exception of the ongoing studies conducted by ONDRAF to define a technical solution for the storage of category A, low- or medium- activity and short-lived waste.

The estimated provision amounts include margins for contingencies and other risks that may arise in connection with dismantling and radioactive spent fuel management procedures. The contingency margins relating to the disposal of waste are determined by ONDRAF and built into its fees. The Group also estimates appropriate margins for each cost category.

The Group considers that, to the best of its knowledge, the provisions approved by the Commission take into account all currently available information to manage the contingencies and other risks associated with processes such as dismantling nuclear facilities and managing radioactive spent fuel.

19.2.2 Provisions for the back-end of the nuclear fuel cycle

Accounting standards

Allocations to provisions for the back-end of the nuclear fuel cycle are computed based on the average unit cost of the quantities expected to be used up to the end of the operating life of the plants, applied to quantities used at the closing date. An annual allocation is also recognized with respect to unwinding the discount on the provisions.

When spent nuclear fuel is removed from a reactor and temporarily stored on-site, it requires conditioning and potentially reprocessing to separate the most active radionuclides, before being consigned to long-term storage.

ONDRAF proposed on February 9, 2018 that geological storage be adopted as the national policy for managing high-level and/or long-lived radioactive waste. The proposal is subject to the approval of the Belgian government after obtaining the opinion of the Federal Agency for Nuclear Control (*Agence Fédérale de Contrôle Nucléaire – AFCN*).

In addition, ENGIE considers that the “mixed” scenario adopted by the Commission for Nuclear Provisions continues to apply, whereby the fuel containing the most active radionuclides is reprocessed, and the rest disposed of directly without reprocessing.

The provisions booked by the Group for nuclear fuel processing and storage cover all of the costs linked to the “mixed” scenario, including on-site storage, transportation, reprocessing, conditioning, storage and geological disposal. They are calculated based on the following principles and inputs:

- storage costs primarily comprise the costs of building and operating additional dry storage facilities and operating existing facilities, along with the costs of purchasing containers;
- part of the radioactive spent fuel is transferred for reprocessing. The resulting plutonium and uranium is sold to a third party;
- radioactive spent fuel that has not been reprocessed is to be conditioned, which requires conditioning facilities to be built according to ONDRAF's approved criteria. ONDRAF's recommendations as regards the cost of these facilities have been fully taken into account;
- the reprocessing residues and conditioned spent fuel are transferred to ONDRAF;

- the cost of burying fuel in deep geological repositories is estimated using the royalty rate established by ONDRAF based on a total disposal facility cost of €10.7 billion²⁰¹⁷. The estimated cost of the AFCN's preliminary recommendation as regards an additional well has also been included based on ONDRAF's recommendations.
- the long-term obligation is calculated using estimated internal costs and external costs assessed based on offers received from third parties;
- the baseline scenario includes ONDRAF's latest scenario, with geological storage starting in around 2070 and ending in around 2135;
- the discount rate used is 3.25%. It takes into account (i) an analysis of trends in long-term benchmark rates and their historical and forecast averages, as well as (ii) the long life of the liabilities based on ONDRAF's scenario;
- an inflation rate assumption of 2.0% (actual rate of 1.25%).

The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment. In its opinion to the Commission for Nuclear Provisions, ONDRAF pointed out the uncertainty over some costs, which in principle are covered by the contingency margins, but for which the Commission set up a work and further analysis program as of 2020. The provisions may be subsequently adjusted in line with changes in the above-mentioned inputs and related cost estimates. Belgium's current legal framework does not permit partial reprocessing and has not yet confirmed the adoption of geological storage as the policy for managing medium and high level nuclear waste.

As regards the partial reprocessing scenario, following a resolution adopted by the House of Representatives in 1993, reprocessing contracts that had not already begun were suspended and then terminated in 1998. The scenario adopted is based on the assumption that the Belgian government will allow Synatom to reprocess spent fuel and that an agreement will be reached between Belgium and France designating Orano (formerly Areva) as responsible for these reprocessing operations. A scenario assuming the direct disposal of waste without reprocessing would lead to a decrease in the provision compared to the provision resulting from the "mixed" scenario currently used and approved by the Commission for Nuclear Provisions.

The Belgian government has not yet taken a decision as to whether the waste should be buried in a deep geological repository or stored over the long term. On November 27, 2019, the European Commission sent a reasoned opinion to Belgium under the breach procedure provided for in Article 258 of the Treaty on the Functioning of the European Union, on the grounds that Belgium had not adopted a national program for managing radioactive waste in compliance with various requirements set out in the directive on spent fuel and radioactive waste (Council Directive 2011/70/Euratom). Therefore, at this stage, there is only one national program for the safe storage of spent fuel pending reprocessing or long-term storage. The scenario adopted by the Commission for Nuclear Provisions is based on the assumption that the waste will be buried in a deep geological repository at a site yet to be identified and classified in Belgium.

Sensitivity

Provisions for the back-end of the nuclear fuel cycle remain sensitive to assumptions regarding costs, the timing of operations and expenditure, as well as to discount rates:

- a 10% increase in ONDRAF's fees above the royalty rate for the removal of high-level and/or long-lived waste would lead to an increase in provisions of approximately €175 million based on unchanged contingency margins;
- a five-year advance in ONDRAF's expenditure on temporary storage, conditioning and long-term storage for high-level and/or long-lived radioactive waste would lead to an increase in provisions of approximately €170 million. A five-year delay in the payment schedule for these various expenses would lead to a decrease of less than that amount;
- a change of 10 basis points in the discount rate used could lead to an adjustment of approximately €260 million in provisions for the back-end of the nuclear fuel cycle. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

These sensitivities are calculated on a purely financial basis and should therefore be interpreted with appropriate caution in view of the variety of other inputs – some of which may be interdependent – included in the evaluation.

19.2.3 Provisions for dismantling nuclear facilities

Accounting standards

A provision is recognized when the Group has a present legal or constructive obligation to dismantle facilities or to restore a site. The present value of the obligation at the time of commissioning represents the initial amount of the provision for dismantling with, as the counterpart, an asset for the same amount, which is included in the carrying amount of the facilities concerned. This asset is depreciated over the operating life of the facilities and is included in the scope of assets subject to impairment tests. Adjustments to the provision due to subsequent changes in (i) the expected outflow of resources, (ii) the timing of dismantling expenses or (iii) the discount rate, are deducted from or, subject to specific conditions, added to the cost of the corresponding asset. The impacts of unwinding the discount are recognized in expenses for the period.

A provision is also recorded for nuclear units for which the Group holds a capacity right up to its share of the expected decommissioning costs to be borne by the Group.

Nuclear power plants have to be dismantled at the end of their operating life. Provisions are set aside in the Group's financial statements to cover all costs relating to (i) the shutdown phase, which involves removing radioactive spent fuel from the site and (ii) the dismantling phase, which consists of decommissioning and cleaning up the site.

The dismantling strategy is based on the facilities being dismantled (i) immediately after the reactor is shut down, (ii) on a mass basis rather than on a site-by-site basis, and (iii) completely, the land being subsequently returned to greenfield status.

Provisions for dismantling nuclear facilities are calculated based on the following principles and inputs:

- costs payable over the long term are calculated by reference to the estimated costs for each nuclear facility, based on a study conducted by independent experts under the assumption that the facilities will be dismantled on a mass basis;
- fees for handling Class A – low or medium activity and short-lived - and B – low or medium activity and long-lived dismantling waste are determined using the royalty rate established by ONDRAF and include the margins recommended by ONDRAF for waste reclassification risk given the uncertainty over the definition of the criteria for classification in those classes;
- for the various phases, margins for usual contingencies, reviewed by ONDRAF and the Commission for Nuclear Provisions, are included;
- an inflation rate of 2.0% is applied until the dismantling obligations expire in order to determine the value of the future obligation;
- a discount rate of 2.5% (including inflation of 2.0%) is applied to determine the present value (NPV) of the obligation. It is different from the rate used to calculate the provision for processing spent nuclear fuel due to the major differences in horizon of the two liabilities after taking into account ONDRAF's new scenario;
- the operating life is 50 years for Tihange 1 and Doel 1 and 2, and 40 years for the other facilities;
- the start of the technical shutdown procedures depends on the facility concerned and on the timing of operations for the nuclear reactor as a whole. The shutdown procedures are immediately followed by dismantling operations.

The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment. In its opinion to the Commission for Nuclear Provisions, ONDRAF pointed out the uncertainty over some costs, which in principle are covered by the contingency margins, but for which the Commission set up a work and further analysis program in 2020. The provisions may be subsequently adjusted in line with changes in the above-mentioned inputs. However, these inputs and assumptions are based on information and estimates which the Group deems reasonable to date and which have been approved by the Commission for Nuclear Provisions.

The scenario adopted is based on a dismantling program and on timetables that have to be approved by the nuclear safety authorities.

Sensitivity

Based on currently applied inputs for estimating costs and the timing of payments, a change of 10 basis points in the discount rate used could lead to an adjustment of approximately €62 million in dismantling provisions. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

This sensitivity is calculated on a purely financial basis and should therefore be interpreted with appropriate caution in view of the variety of other inputs – some of which may be interdependent – included in the evaluation.

19.3 Dismantling of non-nuclear plant and equipment and site rehabilitation

19.3.1 Dismantling obligations arising on non-nuclear plant and equipment

Certain plant and equipment, including conventional power stations, transmission and distribution pipelines, storage facilities and LNG terminals, have to be dismantled at the end of their operational lives. This obligation is the result of prevailing environmental regulations in the countries concerned, contractual agreements, or an implicit Group commitment.

Based on estimates of proven and probable gas reserves through 2260 using current production levels, dismantling provisions for gas infrastructures in France have a present value near zero.

19.3.2 Hazelwood Power Station & Mine (Australia)

The Group and its partner Mitsui announced in November 2016 their decision to close the coal-fired Hazelwood Power Station, and cease coal extraction operations from the adjoining mine from late March 2017. The Group holds a 72% interest in the former 1,600 MW power station and adjoining mine, which was previously fully consolidated and has been consolidated as a joint operation since September 2018.

At December 31, 2020, the Group's share (72%) of the provision covering the obligation to dismantle and rehabilitate the mine amounted to €277 million.

Dismantling and site rehabilitation work commenced in 2017 and focused on: managing site contamination; planning site-wide environmental clean-up; the demolition and dismantling of all of the site's industrial facilities, including the former power station; and ongoing aquifer pumping and designated earthworks within the mine to ensure mine floor and batter stability with a view to long-term rehabilitation into a pit lake.

Several policies and laws that have a direct or indirect impact on mine rehabilitation and on the agencies that administer them have recently been reformed. Consequently, the ultimate regulatory obligations are likely to be revised during the life of the project and could therefore have an impact on provisions.

The average discount rate used to determine the amount of the provisions is 4.03%.

The amount of the provision recognized is based on the Group's best current estimate of the demolition and rehabilitation costs that Hazelwood is expected to incur. However, the amount of this provision may be adjusted in the future to take into account any changes in the key inputs.

19.4 Other contingencies

This caption essentially includes provisions for commercial litigation, tax claims and disputes (except income tax, pursuant to IFRIC 23) as well as provisions for onerous contracts relating to storage and transport capacity reservation contracts.

NOTE 20 POST-EMPLOYMENT BENEFITS AND OTHER LONG-TERM BENEFITS

Accounting standards

Depending on the laws and practices in force in the countries where the Group operates, Group companies have obligations in terms of pensions, early retirement payments, retirement bonuses and other benefit plans. Such obligations generally apply to all employees within the companies concerned.

The Group's obligations in relation to pensions and other employee benefits are recognized and measured in compliance with IAS 19. Accordingly:

- the cost of defined contribution plans is expensed based on the amount of contributions payable in the period;
- the Group's obligations concerning pensions and other employee benefits payable under defined benefit plans are assessed on an actuarial basis using the projected unit credit method. These calculations are based on assumptions relating to mortality, staff turnover and estimated future salary increases, as well as the economic conditions specific to each country or entity of the Group. Discount rates are determined by reference to the yield, at the measurement date, on investment grade corporate bonds in the related geographical area (or on government bonds in countries where no representative market for such corporate bonds exists).

Pension commitments are measured on the basis of actuarial assumptions. The Group considers that the assumptions used to measure its obligations are relevant and documented. However, any change in these assumptions could have a significant impact on the resulting calculations.

Provisions are recorded when commitments under these plans exceed the fair value of plan assets. Where the value of plan assets (capped where appropriate) is greater than the related commitments, the surplus is recorded as an asset under "Other assets" (current or non-current).

As regards post-employment benefit obligations, actuarial gains and losses are recognized in other comprehensive income. Where appropriate, adjustments resulting from applying the asset ceiling to net assets relating to overfunded plans are treated in a similar way. However, actuarial gains and losses on other long-term benefits such as long-service awards, are recognized immediately in income.

Net interest on the net defined benefit liability (asset) is presented in net financial income/(loss).

20.1 Description of the main pension plans

20.1.1 Companies belonging to the Electricity and Gas Industries sector in France

Since January 1, 2005, the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*) has operated the pension, disability, death, occupational accident and occupational illness benefit plans for electricity and gas industry (hereinafter "EGI") companies in France. The CNIEG is a social security legal entity under private law placed under the joint responsibility of the ministries in charge of social security and the budget.

Employees and retirees of EGI sector companies have been fully affiliated to the CNIEG since January 1, 2005. The main affiliated Group entities are ENGIE SA, GRDF, GRTgaz, Elengy, Storengy, ENGIE Thermique France, CPCU, CNR and SHEM.

Following the funding reform of the special EGI pension plan introduced by Law No. 2004-803 of August 9, 2004 and its implementing decrees, specific benefits (pension benefits on top of the standard benefits payable under ordinary law) already vested at December 31, 2004 ("past specific benefits") were allocated between the various EGI entities. Past

specific benefits (benefits vested at December 31, 2004) relating to regulated transmission and distribution businesses ("regulated past specific benefits") are funded by the levy on gas and electricity transmission and distribution services (*Contribution Tarifaire d'Acheminement*) and therefore no longer represent an obligation for the ENGIE Group. Unregulated past specific benefits (benefits vested at December 31, 2004) are funded by EGI sector companies to the extent defined by Decree No. 2005-322 of April 5, 2005.

The special EGI pension plan is a legal pension plan available to new entrants.

The specific benefits vested under the plan since January 1, 2005 are wholly financed by EGI sector companies in proportion to their respective weight in terms of payroll costs within the EGI sector.

As this plan represents a defined benefit plan, the Group has set aside a pension provision in respect of specific benefits payable to employees of unregulated activities and specific benefits vested by employees of regulated activities since January 1, 2005. This provision also covers the Group's early retirement obligations. The provision amount may be subject to fluctuations based on the weight of the Group's companies within the EGI sector.

Pension benefit obligations and other "mutualized" obligations are assessed by the CNIEG.

At December 31, 2020, the projected benefit obligation in respect of the special pension plan for EGI sector companies amounted to €4.3 billion.

The duration of the pension benefit obligation of the EGI pension plan is 24 years.

20.1.2 Companies belonging to the electricity and gas sector in Belgium

In Belgium, the rights of employees in electricity and gas sector companies, principally Electrabel, Laborelec and some ENGIE Energy Management Trading and ENGIE CC employee categories, are governed by collective bargaining agreements.

These agreements, applicable to "wage-rated" employees recruited prior to June 1, 2002 and managerial staff recruited prior to May 1, 1999, specify the benefits entitling employees to a supplementary pension equivalent to 75% of their most recent annual income, for a full career and in addition to the statutory pension. These top-up pension payments provided under defined benefit plans are partly reversionary. In practice, the benefits are paid in the form of a lump sum for the majority of plan participants. Most of the obligations resulting from these pension plans are financed through pension funds set up for the electricity and gas sector and by certain insurance companies. Pre-funded pension plans are financed by employer and employee contributions. Employer contributions are calculated annually based on actuarial assessments.

The projected benefit obligation relating to these plans represented around 16% of total pension obligations and related liabilities at December 31, 2020. The average duration is 9 years.

"Wage-rated" employees recruited after June 1, 2002 and managerial staff (i) recruited after May 1, 1999 or (ii) having opted for the transfer through defined contribution plans, are covered under defined contribution plans. Prior to January 1, 2017, the law specified a minimum average annual return (3.75% on wage contributions and 3.25% on employer contributions) when savings are liquidated.

The law on supplementary pensions, approved on December 18, 2016 and enforced on January 1, 2017 henceforth specifies a minimum rate of return, depending on the actual rate of return of Belgian government bonds, within a range of 1.75%-3.25% (the rates are now identical for employee and employer contributions). In 2020, the minimum rate of return stood at 1.75%.

An expense of €37 million was recognized in 2020 in respect of these defined contribution plans (€36 million in 2019).

20.1.3 Multi-employer plans

Employees of some Group companies are affiliated to multi-employer pension plans.

Under multi-employer plans, risks are pooled to the extent that the plan is funded by a single contribution rate determined for all affiliated companies and applicable to all employees.

Multi-employer plans are particularly common in the Netherlands, where employees are normally required to participate in a compulsory industry-wide plan. These plans cover a significant number of employers, thereby limiting the impact of potential default by an affiliated company. In the event of default, the vested rights are maintained in a special compartment and are not transferred to the other members. Refinancing plans may be set up to ensure the funds are balanced.

The ENGIE Group accounts for multi-employer plans as defined contribution plans.

The expense recognized in 2020 in respect of multi-employer pension plans was stable as compared to 2019 at €73 million.

20.1.4 Other pension plans

Most other Group companies also grant their employees retirement benefits. In terms of financing, pension plans within the Group are almost equally split between defined benefit and defined contribution plans.

The Group's main pension plans outside France, Belgium and the Netherlands concern:

- the United Kingdom: the large majority of defined benefit pension plans is now closed to new entrants and future benefits no longer vest under these plans. All entities run a defined contribution scheme. The pension obligations of International Power's subsidiaries in the United Kingdom are covered by the special Electricity Supply Pension Scheme (ESPS). The assets of this defined benefit scheme are invested in separate funds. Since June 1, 2008, the scheme has been closed and a defined contribution plan has been set up for new entrants;
- Germany: the Group's German subsidiaries have closed their defined benefit plans to new entrants and now offer defined contribution plans;
- Brazil: ENGIE Brasil Energia operates its own pension scheme. This scheme has been split into two parts, one for the (closed) defined benefit plan, and the other for the defined contribution plan that has been available to new entrants since the beginning of 2005.

20.2 Description of other post-employment benefit obligations and other long-term benefits

20.2.1 Other benefits granted to current and former EGI sector employees

Other benefits granted to EGI sector employees are:

Post-employment benefits:

- reduced energy prices;
- end-of-career indemnities;
- bonus leave;
- death capital benefits.

Long-term benefits:

- allowances for occupational accidents and illnesses;
- temporary and permanent disability allowances;
- long-service awards.

The Group's main obligations are described below.

20.2.1.1 Reduced energy prices

Under Article 28 of the national statute for electricity and gas industry personnel, all employees (current and former employees, provided they meet certain length-of-service conditions) are entitled to benefits in kind, which take the form of reduced energy prices known as “employee rates”.

This benefit entitles employees to electricity and gas supplies at a reduced price. For retired employees, this provision represents a post-employment defined benefit. Retired employees are only entitled to the reduced rate if they have completed at least 15 years’ service within EGI sector companies.

In accordance with the agreements signed with EDF in 1951, ENGIE provides gas to all current and former employees of ENGIE and EDF, while EDF supplies electricity to these same beneficiaries. ENGIE pays (or benefits from) the balancing contribution payable in respect of its employees as a result of energy exchanges between the two utilities.

The obligation to provide energy at a reduced price to current and former employees is measured as the difference between the energy sale price and the preferential rate granted.

The provision set aside in respect of reduced energy prices stood at €4.2 billion at December 31, 2020. The duration of the obligation is 25 years.

20.2.1.2 End-of-career indemnities

Retiring employees (or their dependents in the event of death during active service) are entitled to end-of-career indemnities, which increase in line with the length of service within the EGI sector.

20.2.1.3 Compensation for occupational accidents and illnesses

EGI sector employees are entitled to compensation for accidents at work and occupational illnesses. These benefits cover all employees or the dependents of employees who die as a result of occupational accidents or illnesses, or injuries suffered on the way to work.

The amount of the obligation corresponds to the likely present value of the benefits to be paid to current beneficiaries, taking into account any reversionary annuities.

20.2.2 Other benefits granted to employees of the gas and electricity sector in Belgium

Electricity and gas sector companies also grant other employee benefits such as the reimbursement of medical expenses, electricity and gas price reductions, as well as length-of-service awards and early retirement schemes. These benefits are not prefunded, with the exception of the special “*allocation transitoire*” termination indemnity, considered as an end-of-career indemnity.

20.2.3 Other collective agreements

Most other Group companies also grant their staff post-employment benefits (early retirement plans, medical coverage, benefits in kind, etc.) and other long-term benefits such as jubilee and length-of-service awards.

20.3 Defined benefit plans

20.3.1 Amounts presented in the statement of financial position and statement of comprehensive income

In accordance with IAS 19, the information presented in the statement of financial position relating to post-employment benefit obligations and other long-term benefits results from the difference between the gross projected benefit obligation and the fair value of plan assets. A provision is recognized if this difference is positive (net obligation), while a prepaid benefit cost is recorded in the statement of financial position when the difference is negative, provided that the conditions for recognizing the prepaid benefit cost are met.

Changes in provisions for pension plans, post-employment benefits and other long-term benefits, plan assets and reimbursement rights recognized in the statement of financial position are as follows:

<i>In millions of euros</i>	Provisions	Plan assets	Reimbursement rights
At December 31, 2019	(7,481)	53	161
Exchange rate differences	35	-	-
Changes in scope of consolidation and other	-	-	-
Actuarial gains and losses	(1,488)	(31)	(7)
Periodic pension cost	(438)	(3)	25
Asset ceiling	-	-	-
Contributions/benefits paid	431	17	9
AT December 31, 2020	(8,941)	36	188

Plan assets and reimbursement rights are presented in the statement of financial position under "Other non-current assets" or "Other current assets".

The cost recognized for the period amounted to €441 million in 2020 (€492 million in 2019). The components of this defined benefit cost in the period are set out in Note 20.3.3 "Components of the net periodic pension cost".

The Eurozone represented 98% of the Group's net obligation at December 31, 2020, 97% at December 31, 2019).

Cumulative actuarial gains and losses recognized in equity amounted to €6,037 million at December 31, 2020, compared to €-4,594 million at December 31, 2019.

Net actuarial differences arising in the period and presented on a separate line in the statement of comprehensive income represented a net actuarial loss of €1,519 million in 2020 and of €-1,149 million in 2019.

20.3.2 Change in benefit obligations and plan assets

The table below shows the amount of the Group's projected benefit obligations and plan assets, changes in these items during the periods presented, and their reconciliation with the amounts reported in the statement of financial position:

	Dec. 31, 2020				Dec. 31, 2019			
	Pension benefit obligations (1)	Other post-employment benefit obligations (2)	Long-term benefit obligations (3)	Total	Pension benefit obligations (1)	Other post-employment benefit obligations (2)	Long-term benefit obligations (3)	Total
In millions of euros								
A - CHANGE IN PROJECTED BENEFIT OBLIGATION								
Projected benefit obligation at January 1	(8,570)	(4,470)	(531)	(13,572)	(7,712)	(3,794)	(499)	(12,006)

PREPAID BENEFIT	36	-	-	36	53	-	-	53

(1) Pensions and retirement bonuses.

(2) Reduced energy prices, healthcare, gratuities and other post-employment benefits.

(3) Length-of-service awards and other long-term benefits.

20.3.3 Components of the net periodic pension cost

The net periodic cost recognized in respect of defined benefit obligations for the years ended December 31, 2020 and 2019 breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Current service cost	432	397
Actuarial gains and losses ⁽¹⁾	37	19
Plan amendments	-	-
Gains or losses on pension plan curtailments, terminations and settlements	(120)	(48)
Non-recurring items	-	-
Total accounted for under current operating income including operating MtM and share in net income of equity method entities	350	368
Net interest expense	91	125
Total accounted for under net financial income/(loss)	91	125
TOTAL	441	493

(1) On the long-term benefit obligation.

20.3.4 Funding policy and strategy

When defined benefit plans are funded, the related plan assets are invested in pension funds and/or with insurance companies, depending on the investment practices specific to the country concerned. The investment strategies underlying these defined benefit plans are aimed at striking the right balance between return on investment and acceptable levels of risk.

The objectives of these strategies are twofold: to maintain sufficient liquidity to cover pension and other benefit payments; and as part of risk management, to achieve a long-term rate of return higher than the discount rate or, where appropriate, at least equal to future required returns.

When plan assets are invested in pension funds, investment decisions are the responsibility of the fund management concerned. For French companies, where plan assets are invested with an insurance company, the latter manages the investment portfolio for unit-linked policies or euro-denominated policies, in a manner adapted to the risk and long-term profile of the liabilities.

The funding of these obligations at December 31 for each of the periods presented can be analyzed as follows:

<i>In millions of euros</i>	Projected benefit obligation	Fair value of plan assets	Asset ceiling	Total net obligation
Underfunded plans	(7,671)	5,192	(21)	(2,500)
Overfunded plans	(606)	842	-	236
Unfunded plans	(6,641)	-	-	(6,641)
AT DECEMBER 31, 2020	(14,918)	6,034	(21)	(8,905)
Underfunded plans	(7,399)	5,616	(25)	(1,809)
Overfunded plans	(517)	553	-	36
Unfunded plans	(5,655)	-	-	(5,655)
AT DECEMBER 31, 2019	(13,571)	6,169	(25)	(7,428)

The allocation of plan assets by principal asset category can be analyzed as follows:

<i>In %</i>	Dec. 31, 2020	Dec. 31, 2019
Equity investments	26	27
Sovereign bond investments	23	26
Corporate bond investments	29	27
Money market securities	3	3
Real estate	2	2
Other assets	16	15
TOTAL	100	100

All plan assets were quoted on an active market at December 31, 2020.

The actual return on assets of EGI sector companies stood at a positive 1.4% in 2020.

In 2020, the actual return on plan assets of Belgian entities amounted to approximately 2.8% in Group insurance and a positive 0.8% in pension funds.

The allocation of plan asset categories by geographic area of investment can be analyzed as follows:

In %	Europe	North America	Latin America	Asia - Oceania	Rest of the World	Total
Equity investments	60	23	3	10	4	100
Sovereign bond investments	82	1	16	-	-	100
Corporate bond investments	74	20	1	4	2	100
Money market securities	96	-	3	1	-	100
Real estate	92	1	5	1	1	100
Other assets	46	23	3	4	24	100

20.3.5 Actuarial assumptions

Actuarial assumptions are determined individually by country and company in conjunction with independent actuaries. Weighted discount rates for the main actuarial assumptions are presented below:

		Pension benefit obligations		Other post-employment benefit obligations		Long-term benefit obligations		Total benefit obligations	
		2020	2019	2020	2019	2020	2019	2020	2019
Discount rate	Eurozone	0.6%	1.2%	0.6%	1.2%	0.6%	1.0%	0.6%	1.2%
	UK Zone	1.6%	1.7%	-	-	-	-	-	-
Inflation rate	Eurozone	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%	1.8%
	UK Zone	3.2%	3.4%	-	-	-	-	-	-

20.3.5.1 Discount and inflation rate

The discount rate applied is determined based on the yield, at the date of the calculation, of investment grade corporate bonds with maturities mirroring the term of the plan.

The rates were determined for each monetary area based on data for AA corporate bond yields. For the Eurozone, data (from Bloomberg) are extrapolated on the basis of government bond yields for long maturities.

According to the Group's estimates, a 100-basis-point increase or decrease in the discount rate would result in a change of approximately 18% in the projected benefit obligation.

The inflation rates were determined for each monetary area. A 100-basis-point increase or decrease in the inflation rate (with an unchanged discount rate) would result in a change of approximately 17% in the projected benefit obligation.

20.3.5.2 Other assumptions

The increase in the rate of medical costs (including inflation) was estimated at 1%.

A 100-basis-point change in the assumed increase in medical costs would have the following impacts:

In millions of euros	100 basis point increase	100 basis point decrease
Impact on expenses	-	-
Impact on pension obligations	5	(5)

20.3.6 Estimated employer contributions payable in 2021 under defined benefit plans

The Group expects to pay around €214 million in contributions into its defined benefit plans in 2021, including €133 million for EGI sector companies. Annual contributions in respect of EGI sector companies will be made by reference to rights vested during the year, taking into account the funding level for each entity in order to even out contributions over the medium term.

20.4 Defined contribution plans

In 2020, the Group recorded a €248 million expense in respect of amounts paid into Group defined contribution plans (€121 million in 2019). These contributions are recorded under “Personnel costs” in the consolidated income statement.

NOTE 21 SHARE-BASED PAYMENTS

Accounting standards

Under IFRS 2, share-based payments made in consideration for services provided are recognized as personnel costs. These services are measured at the fair value of the instruments awarded.

The fair value of bonus share plans is estimated by reference to the share price at the grant date, taking into account the fact that no dividend is payable over the vesting period, and based on the estimated turnover rate for the employees concerned and the probability that the Group will meet its performance targets. The fair value measurement also takes into account the non-transferability period associated with these instruments. The cost of shares granted to employees is expensed over the vesting period of the rights and offset against equity.

A Monte Carlo pricing model is used for performance shares granted on a discretionary basis and subject to external performance criteria.

Expenses recognized in respect of share-based payments break down as follows:

In millions of euros	Expense for the year	
	Dec. 31, 2020	Dec. 31, 2019
Employee share issues ⁽¹⁾	(2)	(1)
Bonus/performance share plans ⁽²⁾⁽³⁾	(45)	(48)
Other Group companies' plans	(3)	(2)
TOTAL	(50)	(51)

(1) Including Share Appreciation Rights set up within the scope of employee share issues in certain countries.

(2) Of which a reversal of €6 million in 2020 for failure to meet the performance conditions.

(3) Of which a reversal of €5 million in 2020 for failure to meet the condition of continuing employment within the Group (€2 million in 2019).

21.1 Performance shares

21.1.1 New awards in 2020

ENGIE Performance Share plan of December 17, 2020

On December 17, 2020, the Board of Directors approved the award of 4.9 million performance shares to members of the Group's executive and senior management, breaking down into three tranches:

- performance shares vesting on March 14, 2024, subject to a one-year lock-up period;
- performance shares vesting on March 14, 2024, without a lock-up period; and
- performance shares vesting on March 14, 2025, without a lock-up period.

In addition to a condition requiring employees to be employed with the Group at the vesting date, each tranche is made up of instruments subject to three different conditions, excluding the first 150 performance shares granted to beneficiaries (excluding top management), which are exempt from performance conditions. The performance conditions, each of which accounts for one-third of the total grant, are as follows:

- a market performance condition relating to ENGIE's Total Shareholder Return compared to that of a reference panel of nine companies, as assessed between November 2020 and January 2024;
- two internal performance conditions relating to net recurring income Group share and to Return On Capital Employed (ROCE) in 2022 and 2023.

Under this plan, performance shares without conditions were also awarded to the winners of the Innovation and Incubation programs (21,150 shares awarded).

21.1.2 Fair value of bonus share plans with or without performance conditions

The following assumptions were used to calculate the fair value of the new plans awarded by ENGIE in 2020:

Award date	Vesting date	End of the lock-up period	Price at the award date	Expected dividend	Financing cost for the employee	Non-transferability cost	Market-related performance condition	Fair value per unit
December 17, 2020	March 14, 2024	March 14, 2025	12.7	0,75	3.9%	0,36	yes	9,44
December 17, 2020	March 14, 2024	March 14, 2024	12.7	0,75	3.9%	0,36	yes	9,87
December 17, 2020	March 14, 2024	March 14, 2024	12.7	0,75	3.9%	0,47	no	10,67
December 17, 2020	March 14, 2025	March 14, 2025	12.7	0,75	3.9%	0,36	yes	9,16
Weighted average fair value of the December 17, 2020 plan								9,93

21.1.3 Review of internal performance conditions applicable to the plans

In addition to the condition of continuing employment within the Group, eligibility for certain bonus share and performance share plans is subject to an internal performance condition. When this condition is not fully met, the number of bonus shares granted to employees is reduced in accordance with the plans' regulations, leading to a decrease in the total expense recognized in relation to the plans in accordance with IFRS 2. Performance conditions are reviewed at each reporting date.

The Group decided to adjust the effect of the COVID-19 crisis on the achievement of the internal performance conditions for the performance share plans awarded in December 2017 and December 2018 including 2020 as the year of reference. After applying the adjusted achievement rates, the Group recognized income of €6 million.

NOTE 22 RELATED PARTY TRANSACTIONS

This note describes material transactions between the Group and its related parties.

Compensation payable to key management personnel is disclosed in Note 23 "Executive compensation".

Transactions with joint ventures and associates are described in Note 3 "Investments in equity method entities".

Only material transactions are described below.

22.1 Relations with the French State and with entities owned or partly owned by the French State

22.1.1 Relations with the French State

The French State's interest in the Group at December 31, 2020 was unchanged from the previous year at 23.64%. This entitles it to three seats of the 13 seats on the Board of Directors (one director representing the State appointed by decree, and directors appointed by the Shareholders' Meeting at the proposal of the State).

The French State holds 33.19% of the theoretical voting rights (33.39% of exercisable voting rights) compared with 33.67% at end-2019.

On May 22, 2019, the PACTE act ("Action plan for business growth and transformation") was enacted, enabling the French State to dispose of its ENGIE shares without restriction.

In addition, the French State holds a golden share aimed at protecting France's critical interests and ensuring the continuity and safeguarding of supplies in the energy sector. The golden share is granted to the French State indefinitely and confers the right to oppose ENGIE's decision if it considers them contrary to the interest of France.

entitles it to veto decisions taken by ENGIE if it considers they could harm France's interests.

Public service engagements in the energy sector are defined by the law of January 3, 2003.

Transmission rates on the GRTgaz transportation network and the gas distribution network in France, as well as rates for accessing the French LNG terminals and revenues from storage capacities are all regulated.

The Law on Energy and Climate enacted on November 8, 2019 will put an end to regulated gas tariffs and will restrict regulated electricity tariffs for consumers and small businesses. The final date for the discontinuation of regulated gas tariffs is July 1, 2023.

22.1.2 Relations with EDF

Following the creation on July 1, 2004 of the French gas and electricity distribution network operator (EDF Gaz de France Distribution), Gaz de France SA and EDF entered into an agreement on April 18, 2005 setting out their relationship as regards the distribution business. The December 7, 2006 law on the energy sector reorganized the natural gas and electricity distribution networks. Enedis SA (previously ERDF SA), a subsidiary of EDF SA, and GRDF SA, a subsidiary of ENGIE SA, were created on January 1, 2007 and January 1, 2008, respectively, and act in accordance with the agreement previously signed by the two incumbent operators.

22.2 Relations with the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*)

The Group's relations with the CNIEG, which manages all old-age, death and disability benefits for active and retired employees of the Group who belong to the special EGI pension plan, employees of EDF and Non-Nationalized Companies (*Entreprises Non Nationalisées* – ENN), are described in Note 20 "Post-employment benefits and other long-term benefits".

NOTE 23 EXECUTIVE COMPENSATION

The executive compensation presented below includes the compensation of the members of the Group's Executive Committee and Board of Directors.

The Executive Committee had ten members at December 31, 2020 (14 members at December 31, 2019).

Their compensation breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Short-term benefits	29	21
Post-employment benefits	-	10
Share-based payments	2	5
Termination benefits	7	-
TOTAL	38	36

Pursuant to the European Directive of April 16, 2014, French ordinance no. 2019-697 relating to supplementary pensions, published on July 4, 2019, terminated the existing L137-11 pension plan (referred to as "Article 39") and prohibited the accrual of further rights and the entry of any new members as of that date.

Following the closure of the plan and the freezing of the random rights in 2019, in 2020 the Group transformed the random rights of beneficiaries, including the members of the Group's Executive Committee, under a defined contribution plan referred to as "Article 82".

NOTE 24 WORKING CAPITAL REQUIREMENTS, INVENTORIES, OTHER ASSETS AND OTHER LIABILITIES

Accounting standards

In accordance with IAS 1, the Group's current and non-current assets and liabilities are shown separately in the consolidated statement of financial position. For most of the Group's activities, the breakdown into current and non-current items is based on when assets are expected to be realized, or liabilities extinguished. Assets expected to be realized or liabilities extinguished within 12 months of the reporting date are classified as current, while all other items are classified as non-current.

Inventories

Inventories are measured at the lower of cost and net realizable value. Net realizable value corresponds to the estimated selling price in the ordinary course of business, less the estimated costs of completion and the estimated costs necessary to make the sale.

The cost of inventories is determined based on the first-in, first-out method or the weighted average cost formula.

Nuclear fuel purchased is consumed in the process of producing electricity over a number of years. The consumption of this nuclear fuel inventory is recorded based on estimates of the quantity of electricity produced per unit of fuel.

Gas inventories

Gas injected into underground storage facilities includes working gas, which can be withdrawn without adversely affecting the subsequent operation of the reservoirs, and cushion gas, which is inseparable from the reservoirs and essential for their operation (see Note 15 "*Property, plant and equipment*").

Working gas is classified in inventories and measured at weighted average purchase cost upon entering the transportation network regardless of its source, including any regasification costs.

Group inventory outflows are valued using the weighted average unit cost method.

Tax equity

The ENGIE Group finances its renewables projects in the United States through tax equity structures, in which part of the necessary funds is provided by a tax partner. The tax partner obtains, up to a pre-determined level, a preferential right essentially to the project's tax credits, which it can deduct from its own tax base.

The tax partner's investments meet the definition of a liability under IFRS. Since the tax equity liability corresponding to these tax benefits does not give rise to any cash outflow for the project entity, it does not represent a financial debt and is accounted for in "Other liabilities".

Besides the unwinding effect, the liability changes mainly as a function of the tax credits allocated to the tax partner recognized in profit or loss.

24.1 Composition of change in working capital requirements

<i>In millions of euros</i>	Change in working capital requirements at Dec. 31, 2020	Change in working capital requirements at Dec. 31, 2019
Inventories	(492)	465
Trade and other receivables, net	107	802
Trade and other payables, net	(586)	(1,107)
Tax and employee-related receivables/payables	(58)	(36)
Margin calls and derivative instruments hedging commodities relating to trading activities	(109)	(981)
Other	539	(253)
TOTAL	(600)	(1,110)

24.2 Inventories

<i>In millions of euros</i>	Dec. 31, 2020	Dec. 31, 2019
Inventories of natural gas, net	1,146	1,104
Inventories of uranium ⁽¹⁾	530	538
CO ₂ emissions allowances, green certificates and energy saving certificates, net	1,070	682
Inventories of commodities other than gas and other inventories, net	1,395	1,294
TOTAL	4,140	3,617

(1) Financial hedging instruments are backed by these uranium inventories and represented an amount of €18 million at December 31, 2020

24.3 Other assets and other liabilities

<i>In millions of euros</i>	Dec. 31, 2020				Dec. 31, 2019			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Other assets and liabilities	396	8,990	(2,004)	(12,545)	384	10,216	(1,222)	(13,101)

At December 31, 2020, other non-current assets also included a receivable towards EDF Belgium in respect of nuclear provisions amounting to €94 million (€92 million at December 31, 2019).

Other liabilities include €1,123 million in investments made by tax partners as part of the financing of renewable projects in the United States by tax equity (€228 million at December 31, 2019).

NOTE 25 LEGAL AND ANTI-TRUST PROCEEDINGS

The Group is party to a number of legal and anti-trust proceedings with third parties or with legal and/or administrative authorities (including tax authorities) in the normal course of its business.

The main disputes and investigations presented hereafter are recognized as liabilities or give rise to contingent assets or liabilities.

In the normal course of its business, the Group is involved in a number of disputes and investigations before state courts, arbitral tribunals or regulatory authorities. The disputes and investigations that could have a material impact on the Group are presented below.

25.1 France excluding Infrastructures

25.1.1 Canvassing

EDF brought an action against ENGIE before the Nanterre Commercial Court on July 20, 2017, seeking €13.5 million in damages for alleged losses due to unfair competitive practices pursued by ENGIE mainly in its door-to-door canvassing campaigns. In its judgment of December 14, 2017, the court ordered ENGIE to pay EDF the sum of €150,000, concluding that ENGIE was guilty of unfair competition but acknowledging that there had been no disparagement of EDF and that ENGIE had set up training and control arrangements for its partners.

ENGIE appealed the judgment and EDF brought a cross-appeal seeking €94.7 million in damages for its alleged loss. The Versailles Court of Appeal delivered its judgment on March 12, 2019, ordering ENGIE to pay EDF €1 million. It also ordered ENGIE to cease and desist from all parasitic business practices and disparagement to the detriment of EDF, subject to a penalty of €10,000 for each infringement.

On July 6, 2020, EDF asked the enforcement judge at the Nanterre Court to assess the penalty ordered by the Versailles Court of Appeal, seeking payment from ENGIE of the sum of €106.89 million and a final penalty of €50,000 per infringement for a period of one year. On December 11, 2020, the enforcement judge ordered ENGIE to pay EDF the sum of €230,000 and ordered a new provisional penalty of €15,000 per new infringement for a period of one year as of notification of the judgment by EDF.

On December 22, 2020, EDF appealed the enforcement judge's decision before the Versailles Court of Appeal.

25.2 France Infrastructures

25.2.1 Commissioning

Regarding the customer management services carried out on behalf of the grid manager in the gas sector, on June 30, 2020, two memorandums of understanding were signed by GRDF with Total Direct Energie and ENI respectively with a view to ending all ongoing disputes between GRDF, Total Direct Energie and ENI. The financial impact of these memorandums of understanding was fully taken into account in the financial statements for the six months ended June 30, 2020.

Regarding the customer management services carried out on behalf of the grid manager in the electricity sector (in this case ERDF, now ENEDIS), following proceedings brought by ENGIE, in a decision of July 13, 2016, the *Conseil d'État* ruled that the principle whereby the grid manager pays compensation to the supplier should apply. In the same decision, the *Conseil d'État* denied the CRE the right to set a customer threshold beyond which the compensation would not be payable, which hitherto prevented ENGIE from receiving any compensation. In light of this decision, ENGIE brought an action against ENEDIS with the purpose of obtaining payment for these customer management services. The legislature has adopted a decision that retroactively validates the agreements entered into with ENEDIS and precludes

any request for compensation for unpaid customer management services. In a decision handed down on April 19, 2019, the Constitutional Court ruled that this provision was constitutional. The proceedings against ENEDIS are still underway.

25.2.2 Investigation into the regulation mechanism for natural gas storage in France

On February 29, 2020, the European Commission announced that it had launched an in-depth investigation into the regulation mechanism for the storage of natural gas introduced on January 1, 2018 to secure France's natural gas supply. Storengy and Géométhane provided the Commission with all the necessary information to substantiate their analyses for the purposes of the Commission's investigation aimed at reaching a final decision. The initiation of these proceedings provides no guarantee as to the outcome of the investigation.

25.3 Rest of Europe

25.3.1 Resumption and extension of operations at the nuclear power plants

Various associations have brought actions before the Constitutional Court, the *Conseil d'État* and the ordinary courts against the laws and administrative decisions authorizing the extension of operations at the Doel 1 and 2 and Tihange 1 reactors. The Brussels Court of Appeal dismissed Greenpeace's claims in a decision dated June 12, 2018. Greenpeace appealed this decision before the Court of Cassation. This appeal was rejected by a ruling of the Court of Cassation dated January 9, 2020, such that the decision by the Brussels Court of Appeal dated June 12, 2018 is now final. As for the action brought before the Constitutional Court, on June 22, 2017 the Court referred the case to the Court of Justice of the European Union (CJEU) for a preliminary ruling. In its judgment of July 29, 2019, the CJEU ruled that the Belgian law extending the operating lives of the Doel 1 and Doel 2 reactors (Law extending Doel 1 and Doel 2) was adopted without the required environmental assessments being carried out first, but that the effects of the law on extension may provisionally be maintained where there is a genuine and serious threat of an interruption to electricity supply, and then only for the length of time that is strictly necessary to eliminate this threat. In its decision of March 5, 2020, the Constitutional Court overturned the Law extending Doel 1 and Doel 2, while maintaining its effects until the legislator adopts a new law after having carried out the required environmental assessments, including a cross-border public consultation process, by December 31, 2022 at the latest. The appeal before the *Conseil d'État* is still ongoing.

In addition, some local authorities and various organizations have challenged the authorization to restart operations at the Tihange 2 reactor. On November 9, 2018, the *Conseil d'État* rejected the action brought by some local German authorities seeking the annulment of this decision. Civil proceedings are still ongoing before the Brussels Court of First Instance. On September 3, 2020, the Court ruled that the case was admissible, but unfounded.

25.3.2 Claim by the Dutch tax authorities related to interest deductibility

Based on a disputable interpretation of a statutory modification that came into force in 2007, the Dutch tax authorities refuse the deductibility of a portion (€1.1 billion) of the interest paid on financing contracted for the acquisition of investments made in the Netherlands since 2000. Following the Dutch tax authorities' rejection of the administrative claim against the 2007 tax assessment, action was brought before the Arnhem Court of First Instance in June 2016. On October 4, 2018, the court ruled in favor of the tax authorities. On October 26, 2020, the ruling was confirmed by the Arnhem Court of Appeal. ENGIE Energie Nederland Holding BV considers that the Court committed errors in law and that its decision was not well-founded, either under Dutch or European law. It has therefore appealed the decision before the Court of Cassation.

25.3.3 Claim by the Dutch tax authorities related to power plant impairment losses

The Dutch tax authorities have disallowed the tax deduction of asset impairment losses reported by ENGIE Energie Nederland NV on its 2010-2013 tax returns. The authorities challenged both the period of coverage of the impairment losses and the amount. Accordingly, they added back the full amount of the accumulated asset impairment losses over the abovementioned period, i.e., an amount of €1.9 billion. ENGIE has contested the tax authorities position as regards

both the period and the amount and filed an administrative appeal in November 2018, which was rejected in February 2019. ENGIE is considering whether to launch legal proceedings.

25.3.4 Transfer price of gas

The Belgian tax authorities' Special Tax Inspectorate has issued two tax deficiency notices in respect of taxable income for fiscal years 2012 and 2013 for an aggregate amount of €706 million, considering that the price applied for the supply of gas by ENGIE (then GDF SUEZ) to Electrabel S.A. was excessive. ENGIE and Electrabel S.A. are challenging this adjustment. Belgium and France have begun conciliation proceedings to settle the dispute.

25.3.5 Spain - Punica

In the Punica case (investigation into the awarding of contracts), 12 Cofely España employees, as well as the company itself, were placed under investigation by the examining judge in charge of the case. The criminal proceedings are still ongoing and will probably continue through 2021.

25.3.6 Italy - Vado Ligure

On March 11, 2014, the Court of Savona seized and closed down the VL3 and VL4 coal-fired production units at the Vado Ligure thermal power plant belonging to Tirreno Power S.p.A. (TP), a company which is 50%-owned by the ENGIE Group. This decision was taken as part of a criminal investigation against the present and former executive managers of TP into environmental infringements and public health risks. The investigation was closed on July 20, 2016. The case was referred to the Savone Court to be tried on the merits. The proceedings began on December 11, 2018 and will continue through 2021.

25.3.7 Italy - Tax dispute relating to excise duties and ENGIE Italia VAT (formerly GDF SUEZ Energie)

In 2017, the Italian tax authorities challenged the excise duty waiver for gas transfers carried out by ENGIE Italia SpA (ENGIE Italia) for industrial customers in Italy on the grounds that it did not have a certificate for these customers. The authorities plan to issue a tax reassessment for a total amount of €126 million (excise duties, VAT, late payment penalties and interest). ENGIE Italia has challenged the legality of this procedure both in light of Italian and European law and in any event deems the sanction to be disproportionate compared to a formal requirement.

In 2018, ENGIE Italia launched an appeal with the Perugia Court of First Instance requesting the cancellation of the tax reassessment notice.

In October 2018, the Court of First Instance dismissed the cancellation request, simply applying an outdated ministerial decree and ignoring ENGIE Italia's legal arguments.

ENGIE Italia appealed the ruling in November 2018 and the Court of Appeal ruled in its favor in November 2019 on the grounds that the documents requested by the Italian tax authorities were not legal and that the authorities needed to take into account the factual situation of the taxpayer to determine its requirement to pay excise duties. In 2020, the tax authorities referred the case to the Court of Cassation.

25.3.8 Italy - Competition procedure

On May 9, 2019, a fine of €38 million was jointly and severally imposed on ENGIE Servizi SpA and ENGIE Energy Services International S.A. by the Italian Competition Authority (the Authority) for certain alleged anti-competitive practices relating to the award of the Consip FM4 2014 contract. An appeal was lodged with the Lazio Regional Administrative Court (Lazio RAC). On July 18, 2019, the Lazio RAC suspended the payment of the fine, and on July 27, 2020, it overturned the Authority's decision as regards both ENGIE Servizi SpA and ENGIE Energy Services International SA. On November 17, 2020, the Authority appealed the Lazio RAC's decision before Italy's highest administrative court.

25.4 Latin America

25.4.1 Concessions in Buenos Aires and Santa Fe

In 2003, ENGIE and its joint shareholders, water distribution concession operators in Buenos Aires and Santa Fe, initiated two arbitration proceedings against the Argentinean State before the International Center for Settlement of Investment Disputes (ICSID). The purpose of these proceedings was to obtain compensation for the loss in value of investments made since the start of the concession, in accordance with bilateral investment protection treaties.

As a reminder, prior to the stock market listing of SUEZ Environnement Company, ENGIE and SUEZ (formerly SUEZ Environnement) entered into an agreement providing for the economic transfer to SUEZ of the rights and obligations relating to the ownership interests held by ENGIE in Aguas Argentinas and Aguas Provinciales de Santa Fe, including the rights and obligations resulting from the arbitration proceedings.

On April 9, 2015, the ICSID ordered the Argentinean State to pay USD 405 million in respect of the termination of the Buenos Aires water distribution and treatment concession contracts (including USD 367 million to ENGIE and its subsidiaries), and on December 4, 2015, to pay USD 225 million in respect of the termination of the Santa Fe concession contracts. The Argentinean State sought the annulment of these awards. By decision dated May 5, 2017, the claim for the annulment of the Buenos Aires award was rejected. The claim to annul the award in the Santa Fe case was rejected by a decision dated December 14, 2018. Consequently, the two ICSID awards, which are a step in the settlement of the dispute, are now final.

The Argentinean government and the various shareholders of Aguas Argentinas entered into and implemented a settlement agreement in accordance with the arbitral award of April 9, 2015, handed down in respect of the water distribution and treatment concession contracts in Buenos Aires. In accordance with the above-mentioned agreement concerning the economic transfer to SUEZ of ENGIE's rights and obligations, SUEZ and its subsidiaries received €224.1 million in cash. Furthermore, the December 14, 2018 ruling pertaining to the water distribution and wastewater treatment concessions granted to Aguas Provinciales de Santa Fe has yet to be applied.

25.4.2 Planned construction of an LNG terminal in Uruguay

GNLS SA, a joint subsidiary of Marubeni and ENGIE, was selected in 2013 to build an offshore LNG terminal in Uruguay. On November 20, 2013, GNLS contracted out the design and construction of the terminal to Construtora OAS SA. Following a number of problems and defects, GNLS terminated the contract in March 2015 and made use of its guarantees. OAS challenged the termination of the contract but did not take action against GNLS. OAS went bankrupt in Uruguay on April 8, 2015. In September 2015, GNLS and the authorities agreed to cancel the planned construction.

On May 24, 2017, OAS and GNLS appeared before the Uruguayan courts in a conciliation process at the request of OAS. The conciliation process was unsuccessful. OAS then threatened to call GNLS before the Uruguayan courts to claim damages.

Since GNLS had incurred significant losses as a result of the termination of the contract, it filed a request for arbitration on August 22, 2017 in accordance with the terms of the contract providing for dispute resolution in Madrid by the ICC International Court of Arbitration, claiming a principal amount of USD 373 million. OAS responded by summoning GNLS before the Montevideo Commercial Court, claiming USD 311 million in damages. ENGIE was officially named as a party to the proceedings on December 5, 2018. Both proceedings are still pending.

25.4.3 Claim against sales tax adjustments in Brazil

On December 14, 2018, the Brazilian tax authorities sent ENGIE Brasil Energia S.A. tax assessment notices for the 2014, 2015 and 2016 fiscal years considering that the company was liable for the PIS and COFINS taxes (federal value added taxes) on the reimbursement of certain fuels used in the production of energy by thermoelectric plants. The adjustments amounted to a total of 492 million Brazilian reais, including 229 million Brazilian reais in taxes to which are added fines and interest.

ENGIE Brasil Energia disputes these notices of tax assessment and introduced tax claims in 2019, which the tax authorities have rejected, however. A final claim at administrative level (prior to possible appeals before tax courts at judicial level) was filed by ENGIE Brasil Energia in January 2020.

25.4.4 Mexico – Renewable energy

In the past few months, the Mexican government and public authorities have taken positions and regulatory measures that directly affect private players in the energy sector (in particular renewable energy producers) and go against the letter and spirit of the latest energy sector reforms introduced in 2013 and 2014. The constitutionality and legality of some of these measures have been contested in legal proceedings launched by non-government bodies and private investors, in particular by ENGIE subsidiaries that develop or implement renewable energy projects in the country. These proceedings are currently ongoing. In most cases, including in proceedings initiated by ENGIE subsidiaries, the competent courts ordered the suspension of the disputed measures pending a decision on the merits.

25.5 Other

25.5.1 Withholding tax

In their tax deficiency notice dated December 22, 2008, the French tax authorities questioned the tax treatment of the non-recourse sale by SUEZ (now ENGIE) of a withholding tax (*précompte*) receivable in 2005 for an amount of €995 million (receivable relating to the *précompte* paid in respect of the 1999-2003 fiscal years). The Montreuil Administrative Court handed down a judgment in ENGIE's favor in April 2019, which led to the French tax authorities appealing the decision before the Versailles Court of Appeal in May 2019. The submissions have been exchanged and the parties are awaiting a date for the hearing.

Regarding the dispute over the *précompte* itself, on February 1, 2016, the *Conseil d'État* dismissed the appeal before the Court of Cassation seeking the repayment of the *précompte* in respect of the 1999, 2000 and 2001 fiscal years. On June 23, 2020, the Versailles Administrative Court of Appeal found in favor of ENGIE as regards the cases seeking repayment of the *précompte* in respect of the 2002 and 2003 fiscal years but rejected the case in respect of the 2004 fiscal year. As the *précompte* receivables for 2002/2003 have been assigned, the relevant amounts will be repaid to the assignee banks. The case has been referred to the *Conseil d'État* by the two parties. Pursuant to an application for a priority preliminary ruling on the issue of constitutionality, on October 23, 2020, the *Conseil d'État* decided to seek a preliminary ruling from the Court of Justice of the European Union to ascertain whether Directive 90/435/EC of 1990 precludes the withholding of the *précompte* upon the redistribution by a parent company of dividends received from subsidiaries established in the European Union.

Furthermore, after ENGIE and several French groups lodged a complaint, on April 28, 2016, the European Commission issued a reasoned opinion to the French State as part of infringement proceedings, setting out its view that the *Conseil d'État* did not comply with European Union law when handing down decisions in disputes regarding the *précompte*, such as those involving ENGIE. On July 10, 2017, the European Commission referred the matter to the Court of Justice of the European Union (CJEU) on the grounds of France's failure to comply. On October 4, 2018, the Court of Justice of the European Union ruled partially in favor of the European Commission. Following this decision, France must revisit its methodology in order to determine the *précompte* repayment amounts in closed and pending court cases.

25.5.2 Luxembourg - State aid investigation

On September 19, 2016, the European Commission announced its decision to open an investigation into whether or not two private rulings granted by the Luxembourg State in 2008 and 2010 covering two similar transactions between several of the Group's Luxembourg subsidiaries constituted State aid. On June 20, 2018, the European Commission adopted a final, unfavorable decision deeming that Luxembourg had provided ENGIE with State aid. On September 4, 2018, ENGIE requested the annulment of the decision before the European Courts, thereby challenging the existence of a selective advantage. As these proceedings do not have a suspensive effect, ENGIE paid a sum of €123 million into an escrow account on October 22, 2018 in respect of one of the two transactions in question, since no aid was actually received for

the other. Following the proceedings before the European Courts, this sum will be returned to ENGIE or paid to the Luxembourg State depending on whether or not the Commission's decision is annulled. On September 15, 2020, the hearing was held in the presence of the parties and the Court's decision is currently pending.

25.5.3 Poland - Competition procedure

On November 7, 2019, a fine of 172 million Polish zloty (€40 million) was imposed on ENGIE Energy Management Holding Switzerland AG (EEMHS) for failing to respond to a request for disclosure of documents from the Polish Competition Authority (UOKiK) in a proceeding initiated by the UOKiK which suspected a potential failure to notify by EEMHS and other financial investors involved in the financing of the Nord Stream 2 pipeline (main proceeding). EEMHS filed an appeal with the Competition Protection Court. The appeal proceedings are pending.

In the context of the main proceedings, on October 6, 2020, the UOKiK ordered EEMHS to pay a fine of 55.5 million Polish zlotys (approximately €12.3 million). The UOKiK also ordered the termination of the financing agreements for the Nord Stream 2 project. On November 5, 2020, EEMHS appealed this decision with the Competition Protection Court. The appeal automatically suspends the execution of all of the penalties ordered by the UOKiK.

25.5.4 Sale of 29.9% of the capital of SUEZ to Veolia

In the context of the sale by ENGIE of 29.9% of the capital of SUEZ to Veolia, on October 6, 2020, ENGIE was summonsed to various proceedings, both in summary hearings or hearings on the merits, and both in labor law and commercial law matters. The main proceedings involved Veolia and SUEZ and were initiated by SUEZ, acting alone or jointly with its staff representation bodies. ENGIE has acted within its rights in all circumstances, has not violated any of its obligations and there is no irregularity in the form or substance of the sale to Veolia, which is now final, that is likely to affect the validity thereof.

NOTE 26 SUBSEQUENT EVENTS

No significant event occurred after the closing of the financial statements at December 31, 2020.

NOTE 27 FEES PAID TO THE STATUTORY AUDITORS AND TO MEMBERS OF THEIR NETWORKS

Pursuant to Article 222-8 of the General Regulations of the French Financial Markets Authority (AMF), the following table presents information on the fees paid by ENGIE SA, its fully consolidated subsidiaries and joint operations to each of the auditors in charge of auditing the annual and consolidated financial statements of the ENGIE Group.

The Shareholders' Meeting of ENGIE SA of May 14, 2020 decided to renew the terms of office of Deloitte and EY as Statutory Auditors for a six-year period from 2020 to 2025.

	Deloitte			EY			Total
