EDPR signed the corresponding shareholders agreements which include put and call options agreements for the remaining percentage of the shares of the Sunseap Group with the minority shareholders. As a consequence, EDPR has call options to acquire the remaining stake of the capital of the Sunseap Group and the sellers have put options to sell their shares. EDPR have applied the anticipated-acquisition method (see note 2.A and 6). The exercise price for these options has been determined in an amount equal to 56,442 thousand Euros (see note 35).

Upon completion of the agreement, Sunseap Group Pte.Ltd performed a capital increase which was subscribed solely by EDP Renováveis, S.A and lead to EDP Renováveis, S.A holding 92.28% of the total stake of the acquired company, the amount of the capital increase is not considered within the consideration transferred for the business combination.

The Group used the financial statements as at 28 February 2022 of the company acquired, to determine pre-acquisition balance sheet and results, and, consequently, the companies have been consolidated from that date following the full consolidation method. Thus, this acquisition has contributed to the consolidated financial statements with Revenues, mainly from energy sales, in the approximate amount of 108,763 thousand Euros and with a Net profit in the approximate amount of 224 thousand Euros, referring to the ten-month period ended at 31 December 2022. If this acquisition had occurred in the beginning of the exercise, it would have contributed to the consolidated financial statements with revenues, mainly from energy sales, in the approximate amount of 121,430 thousand Euros and with a Net loss for the period in the approximate amount of 7,623 thousand Euros, referring to the twelve-month period ended at 31 December 2022.

At the acquisition date, EDPR Group has determined the fair value of the assets acquired and liabilities assumed, with the assistance of a specialized and independent firm. The valuation methodology utilized has been the Multi-Excess Earning Method (MEEM) and the discounted cashflow approach. This valuation methodology assumes that the kind of assets to be valued normally generates cash-flows in combination with other tangible and intangible assets and therefore consists in deducting the estimated cost of the use of other assets, such as PP&E or working capital, from the estimated cash flows associated to the asset to be valued. The main components of cashflow, namely production, long term power prices and operational costs were estimated using EDPR's own methodology using historical data and experience assessing investments of similar solar PV projects in EDR's portfolio. These internal assumptions used in the preparation of the cashflows of the portfolio have been challenged by the specialized firm. The after tax cash flows were then discounted at the weighted average cost of capital within a range of 6.3%-10.8% (blended), that has been calculated by the firm, reflecting the risks of the specific countries and adjusted for the profile of each project. Such valuation has determined a fair value of the net assets acquired in the amount of 296,173 thousand Euros.

		Goodwill	363,485

The aforementioned Sunseap's group valuation has determined a fair value for Property, plant and equipment in the amount of 520,521 thousand Euros, generating a fair value adjustment of 110,932 thousand Euros corresponding to the permits, licences and concessions (PLCs) and an associated deferred tax liability in the amount of 21,472 thousand Euros (see note 16 and 21). Furthermore, the valuation has determined a fair value for Intangible assets in the amount of 113,717 thousand Euros, generating a fair value adjustment of 113,295 thousand Euros corresponding to the power purchase agreements and feed-in-tariffs of the whole portfolio and an associated deferred tax liability in the amount of 17,378 thousand Euros.

The purchase price allocation exercise carried out in accordance with IFRS 3 resulted as a goodwill recognition in the amount of 363,485 thousand Euros, as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares.

The aforementioned provisional goodwill recognition resulting from the purchase price allocation, is mainly attributable to EDPR's establishment in the APAC platform within the context of EDP Business plan 2021-25, allowing EDPR to establish a portfolio for the APAC region of close to 10 GW of solar projects, of which 563 MW operating and under construction, and an experienced team of more than 600 employees spread across 9 markets, providing a growth platform for the region.

Xuan Thien

EDPR, through its wholly owned Vietnamese subsidiary Sunseap Commercial & Industrial Assets (Vietnam) Co., Ltd. entered in 2022 into an agreement with Xuan Thien Group for the acquisition of 99.99% of the shares of Xuan Thien Ninh Thuan JSC and Xuan Thien Thuan Vac JSC, each of one holding a PV project totalling 200 MWac (255MWdc) (see note 6). At that moment, the completion of this transaction was subject to customary conditions precedent. With this transaction, completed in 7 September 2022 once the aforementioned customary conditions precedent were fulfilled, EDPR has acquired 99.99% of the shareholding of the mentioned companies for a total consideration of 198,832 thousand Euros. Of the total consideration, 157,544 thousand Euros have been paid as of 31 December 2022, and an amount of 41,288 thousand Euros is accrued under the caption Other liabilities and other payables - Current (see note 35) correspond to the retentions that, in accordance with the sale purchase agreement, will be paid when certain milestones related to financing, module damages repairs and land use rights are fulfilled. This transaction is considered under the scope of IFRS 3 - Business combinations.

The Group used the financial statements as at 7 September 2022 of the companies acquired, to determine pre-acquisition balance sheet and results, and, consequently, the companies have been consolidated from that date following the full

consolidation method. Thus, this acquisition has contributed to the consolidated financial statements with Revenues, mainly from energy sales, in the approximate amount of 9,319 thousand Euros and with a Net profit in the approximate amount of 1,819 thousand Euros, referring to the four months period ended at 31 December 2022. If this acquisition had occurred in the beginning of the exercise, it would have contributed to the consolidated financial statements with revenues, mainly from energy sales, in the approximate amount of 33,225 thousand Euros and with a Net profit for the period in the approximate amount of 8.985 thousand Euros referring to the twelve-month period ended at 31 December 2022.

At the acquisition date, EDPR Group has determined the fair value of the assets acquired and liabilities assumed, with the assistance of a specialized and independent firm. The valuation methodology utilized has been the Multi-Excess Earning Method (MEEM) and the discounted cashflow approach. This valuation methodology assumes that the kind of assets to be valued normally generates cash-flows in combination with other tangible and intangible assets and therefore consists in deducting the estimated cost of the use of other assets, such as PP&E or working capital, from the estimated cash flows associated to the asset to be valued. The main assumptions of cashflow, namely production, long term power prices and operational costs were estimated using EDPR's own methodology using historical data and experience assessing investments of similar solar assets in EDPR's portfolio. These internal assumptions used in the preparation of the cashflows of the portfolio have been challenged by the specialized firm. The after tax cash flows were then discounted at the weighted average cost of capital of 10.3%, that has been calculated by the firm, reflecting the risk of the country and adjusted for the profile of the projects.

Such valuation has determined a fair value of the net assets acquired in the amount of 181,061 thousand Euros.

Fair value of identifiable assets and liabilities at the acquisition date is presented as follows:

THOUSAND EUROS	BOOK VALUE AT ACQUISITION DATE	FAIR VALUE ADJUSTMENT	FAIR VALUE AT ACQUISITION DATE
ASSETS			
Property, plant and equipment	171,487	26,754	198,241

Total Liabilities	109,602	11,652	121,254
Total Net assets acquired at fair value			181,061
- Total consideration for the acquisition of the shares			-202,298
		Goodwill	21,236

The aforementioned Xuan Thien's projects valuation has determined a fair value for Property, plant and equipment in the amount of 198,241 thousand Euros, generating a fair value adjustment of 26,754 thousand Euros corresponding to the permits, licences and concessions (PLCs) and an associated deferred tax liability in the amount of 2,026 thousand Euros (see note 16 and 21). Furthermore, the valuation has determined a fair value for Intangible assets in the amount of 85,476 thousand Euros, which equals the amount of the fair value adjustment corresponding to the power purchase agreements that these companies have in place and an associated deferred tax liability in the amount of 6,471 thousand Euros.

The purchase price allocation exercise carried out in accordance with IFRS 3 resulted in goodwill recognition in the amount of 21,236 thousand Euros, as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares.

The aforementioned provisional goodwill recognition resulting from the provisional purchase price allocation, which is identified according to what is indicated in note 2.A, is mainly attributable to EDPR doubling its operational capacity in Vietnam, strengthening its presence in the APAC region, a market where it entered in 2021 and has been since reinforced with the integration of Sunseap in February 2022.

Kronos Group

In the third quarter, EDPR entered into an agreement with Summercourt Capital GmbH (owner of 85% of the shares) and Bohne-Vermögensverwaltungs-GmbH (owner of 15% of the shares) to acquire a 66.80% stake of Kronos Solar Projects GmbH, which holds a solar generation portfolio of 9.4GW under development located in Germany, Netherlands, France and UK (see note 6). At that moment, the completion of this transaction was subject to customary conditions precedent. With this transaction, completed in 5 October 2022 once the aforementioned customary conditions precedent were fulfilled, EDPR has acquired 66.80% of the mentioned companies for a total consideration of 663,030 thousand Euros of which an amount of 341,995 thousand Euros corresponds to the put options and an amount of 71,035 thousand Euros relates to the estimation for the success fee to be paid to the sellers (see note 35). This transaction is considered under the scope of IFRS 3 – Business combinations.

Upon completion of the agreement, Kronos Solar Projects GmbH performed a capital increase which was subscribed solely by EDP Renewables Europe, S.L.U. and led to EDP Renewables Europe, S.L.U. holding 70% of the total stake of the acquired company, the amount of the capital increase is not considered within the consideration transferred for the business combination. Furthermore and within the context of this acquisition, and for the purpose of constructing and operating the projects, EDP Renewables Europe, S.L.U. and the sellers have incorporated the company Kronos Projektgesellschaft mbH with the same split in the shareholding (70%-30%).

EDPR signed the corresponding shareholders agreements which include put and call options agreements for the remaining percentage of the shares of the Kronos Group with the minority shareholders. As a consequence, EDPR has call options to acquire the remaining stake of the capital of the Kronos Group and the sellers have put options to sell their shares. EDPR have applied the anticipated-acquisition method (see note 2.A, 6 and 35).

The Group used the financial statements as at 30 September 2022 of the acquired companies, to determine pre-acquisition balance sheet and results, and, consequently, the companies have been consolidated from that date following the full consolidation method and equity method when applicable. Thus, this acquisition has contributed to the consolidated financial statements with no revenues since none of the projects of the portfolio are operating and no sales of projects have occurred during the period and with a Net loss in the approximate amount of 438 thousand Euros, referring to the four-month period ended at 31 December 2022. If this acquisition had occurred in the beginning of the exercise, it would have contributed to the consolidated financial statements with no revenues since none of the projects of the portfolio are operating and no sales of projects have occurred during the year and with a Net loss in the approximate amount of 1,176 thousand Euros, referring to the twelve-month period ended at 31 December 2022.

At the acquisition date, EDPR Group has determined internally the fair value of the assets acquired and liabilities assumed. Since the portfolio acquired is still in an early stage of development EDPR has not allocated any value to specific assets, hence the difference amounting to 651,657 thousand Euros between the consideration transferred and the net assets acquired has been allocated to provisional goodwill. Such assessment has determined a fair value of the net assets acquired in the amount of 11,373 thousand Euros.

Fair value of identifiable assets and liabilities at the acquisition date is presented as follows:

THOUSAND EUROS	BOOK VALUE AT ACQUISITION DATE	FAIR VALUE ADJUSTMENT	FAIR VALUE AT ACQUISITION DATE
ASSETS			
Property, plant and equipment	4,871	-	4,871
Intangible assets	3,331	-	3,331
Other non-current assets	455	-	455
Total Non-Current Assets	8,656	-	8,656

Total Liabilities	12,209	-	12,209
Total Net assets acquired at fair value			11,461
- Non-controlling interest			88
Total Net assets acquired at fair value			11,373
- Total consideration for the acquisition of the shares			-663,030
		Goodwill	651,657

The aforementioned goodwill recognition resulting from the purchase price allocation, which is identified as provisional according to what is indicated in note 2.A, is mainly attributable to the opportunity of entrance in new regions for EDPR (namely Netherlands and Germany), which benefit from ambitious renewables targets given the increased importance of security of supply and energy independence coupled with government initiatives such as the “Easter Package” in Germany that stands out with ambitious renewables capacity targets, with 360 GW of renewable installed capacity until 2030. In that sense almost 50% of the acquired solar development portfolio is located in Germany. Another element to consider within the goodwill is the well-proven know-how and track record of Kronos’s team with 1,4 GW developed through 80 successfully installed projects in 9 countries. Finally, this acquisition is considered to be highly complementary with EDPR geographical current set up, not only allowing the entrance in Germany and Netherlands, but also scaling presence in France and the UK with a fully solar focused business.

Longroad

EDPR, through its majority controlled US subsidiary, EDPR NA Distributed Generation, LLC, entered into an agreement in April 2022 to acquire 100% of the equity interests in ninety one (91) distinct limited liability companies and limited partnerships owning an aggregate nameplate capacity of 99.3 MWdc of operating solar plants located throughout the US. The acquisition of these companies has been structured in 8 different transactions ("tranches") which are independent from each other. However, given that the seller is the same, the assets have same nature and risks and are all located in the same geography, the Group has opted to present all these transactions aggregated in the same note, grouping the assets and liabilities acquired depending on whether the transaction has generated goodwill or badwill. At that moment, the completion of this transaction was subject to certain conditions precedent. The conditions precedent, which were specific for each acquired company, necessitated multiple closings of discrete asset groups in separate tranches. The closing tranches served to organize companies based up common attributes and/or common conditions precedent such as acquired companies with loan repayments, sale leaseback financed companies, and companies with common off-takers.

With the aforementioned conditions precedent fulfilled, EDPR acquired the aforementioned 100% equity interests in 84 companies in four tranches, each of which is considered under the scope of IFRS 3 - Business combinations, for the following cash consideration:

CLOSING DATE	CLOSING DATE	PROJECTS ACQUIRED	PURCHASE PRICE	CAPACITY (MW DC)
THOUSAND			EUR	MW DC
Renewable Venture Solar Fund V GP, LLC	19 April 2022	7	16,659	6.46
Longroad Solar Portfolio IV, LLC	9 August 2022	3	248	1.82
Longroad Solar WF Portfolio, LLC	9 August 2022	6	3,522	10.65
SunE Solar VI, LLC	9 August 2022	2	2,623	1.22
Longroad XII Holdings, LLC	3 October 2022	7	38,257	24.19
MMA Renewable Venture Solar Fund III, LLC	3 October 2022	18	22,867	16.93
Longroad DG Portfolio I, LLC	9 December 2022	11	3,661	5.94
Longroad Fund III Holdings, LLC	9 December 2022	30	45,155	32.09
		84	132,992	99.3

The Group used the financial statements as at each respective closing date to determine pre-acquisition results and, consequently, the companies and their operations have been consolidated since that date. The profit and loss and statement of cash flows reflect the activity of these project companies from the respective date of closing presented in the table above through 31 December 2022.

If these acquisitions had occurred at the beginning of 2022, these would have contributed to the consolidated financial statements with Revenues, mainly from energy and environmental attribute (REC) sales, in the approximate amount of 14,244 thousand Euros (15,000 thousand USD) and with Net income for the period in the approximate amount of 2,279 thousand Euros (2,400 thousand USD), referring to the twelve-month period ended at 31 December 2022.

At the acquisition dates for each respective tranche, the Group has determined the fair values of the assets acquired and liabilities assumed, based on valuations performed by a third party. The valuation methodology utilized was a discounted cashflow approach, where cash flows for each project were forecasted for the remaining life of the assets. The main components of cashflow, namely production, long term power prices and operational costs were estimated using EDPR's own methodology using historical data of the assets provided by the seller. The after tax cash flows were then discounted at the weighted average cost of capital of 8.25% reflecting the risk of the debt and equity financing components adjusted for the contracted profile of each project. Lastly to the aggregate value of the portfolio, adjustments were made for one-off items, other balance sheet assets or liabilities and synergies, to reach the final equity valuation.

Such valuation has determined a fair value of the net assets acquired in the amount of 77,372 thousand Euros. Inputs and assumptions included in the valuation models relied upon the use of significant estimates including market energy pricing curves, federal income tax rates and other present value factors.

Fair values of identifiable assets and liabilities at the acquisition dates for tranches resulting in a provisional goodwill from the transaction are presented as follows:

		BadwillIII	923

The purchase price allocation exercise carried out in accordance with IFRS 3 resulted as a provisional goodwill recognition in the amount of 7,727 thousand Euros, as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares of the projects Longroad Solar Portfolio IV, LLC, Longroad XII Holdings, LLC, MMA Renewable Ventures Solar Fund III, LLC, Longroad DG Portfolio I, LLC, and Longroad Fund III Holdings, LLC (see note 19).

Other purchase price allocations resulted in a provisional badwill recognition. The acquisitions of Renewable Ventures Solar Fund V GP, LLC, Longroad Solar WF Portfolio, LLC, and SunE Solar VI, LLC contributed badwill amounted to 932 thousand Euros (see note 9).

The aforementioned provisional goodwill resulting from the purchase price allocation is mainly attributable to the acquisition of above-market power purchase agreements. The aforementioned valuations have determined a fair value for Intangible assets 20,667 thousand Euros.

In addition to the above, as at 31 December 2022, the last tranche of the transaction recently closed and a purchase price allocation has not yet been finalized for Longroad DG Portfolio I, LLC (DG1) and Longroad Fund III Holdings, LLC (Fund III). The book values of these projects at acquisition date amounted to net assets of 27,578 thousand Euros. The provisional goodwill recognized for these transactions has been 21,238 thousand Euros (see note 19).

Business Combination closed during the year ended 31 December 2021

Distributed Generation

EDPR, through its wholly owned US subsidiary, EDP Renewables North America LLC, entered into an agreement in January 2021 to acquire 85% of C2 Omega LLC (C2). C2 is a US based Distributive Solar Generation Company with 89 MWs of operating and near completion capacity with a near-term pipeline of approximately 120 MWs through 16 states. At that moment, the completion of this transaction was subject to customary conditions precedent.

With the aforementioned customary conditions precedent fulfilled on March 1, 2021, EDPR acquired the aforementioned 85% interest in C2 for 46,530 thousand euros (55,032 thousand USD). This transaction is considered under the scope of IFRS 3 – Business combinations.

Within this transaction, EDPR has gained control over the company C2, with the then unrelated former owners have retained 15% of the ownership. The former sole owners are currently employees of EDPR. EDPR has an option to purchase the remaining 15% after February 2025 at an amount that is the present value of cash flows determined in a pre-defined model. If this call option is not executed by EDPR, then the former owners may put the 15% to EDPR after February 2026 using the present value of cash flows from the same pre-defined model, but with a discount rate 100 basis points higher than what was used in the value of EDPR's call option one year prior.

The Group used the financial statements as at 28 February 2021 of the companies acquired, to determine pre-acquisition results and, consequently, the companies have been consolidated from that date. The profit and loss and statement of cash flows reflect the activity of C2 and its subsidiaries from March 1, 2021 through December 31, 2021.

If this acquisition had occurred at the beginning of 2021, it would have contributed to the consolidated financial statements with Revenues, mainly from energy sales, in the approximate amount of 13,000 thousand Euros and with a Net loss for the period in the approximate amount of 2,400 thousand Euros, referring to the twelve-month period ended at 31 December 2021.

At the acquisition date, EDPR Group has determined the fair value of the assets acquired and liabilities assumed, based on a valuation performed by a third party. The valuation methodology utilized was a discounted cashflow approach, where cash flows for each project were forecasted for the remaining life of the assets. The main components of cashflow, namely production, long term power prices and operational costs were estimated using EDPR's own methodology using historical data of the assets provided by the seller. The after tax cash flows were then discounted at the weighted average cost of capital of 7% reflecting the risk of the debt and equity financing components adjusted for the contracted profile of each project. Lastly to the aggregate value of the portfolio, adjustments were made for one-off items, other balance sheet assets or liabilities and synergies, to reach the final equity valuation.

Such valuation has determined a fair value of the net assets acquired in the amount of 44,955 thousands of Euros.

Fair value of identifiable assets and liabilities at the acquisition date is presented as follows:

THOUSAND EUROS	BOOK VALUE AT ACQUISITION DATE	FAIR VALUE ADJUSTMENT	FAIR VALUE AT ACQUISITION DATE

Medium / Long term financial debt	79,509	-3,294	76,215
Institutional partnerships in US wind farms	7,216	4,259	11,475
Other non-current liabilities	8,308	-	8,308
Total Non-Current Liabilities	95,033	965	95,998
Short term financial debt	175	-	175
Other current liabilities	11,243	-	11,243
Total Current Liabilities	11,418	-	11,418
Total Liabilities	106,451	965	107,416
Total Net assets at fair value			48,981
- Non-controlling interests	7,253	-3,227	4,026
Total Net assets acquired at fair value			44,955
- Total consideration transferred for the acquisition of the shares			-46,530
Goodwill			1,575

The aforementioned C2's valuation has determined a fair value for Property, plant and equipment in the amount of 135,396 thousand Euros, generating a fair value adjustment of 447 thousand Euros (see note 16). 106,190 thousand Euros of this amount is attributable to operating assets and 29,206 thousand Euros is attributable to assets in the development pipeline.

The noncontrolling interest value of 4,026 thousand Euros was determined in two pieces: 1) 4 years of cash flows attributable to the former owners up until EDPR's call option date and 2) the value of the option to purchase the former owner's residual 15% interest.

The fair values of financial debt and Partnerships in US wind farms was derived by taking the forecasted payment streams under those instruments using the market interest rates and returns for those instruments at the acquisition date.

The purchase price allocation exercise carried out in accordance with IFRS 3 resulted in goodwill recognition in the amount of 1,575 thousand Euros, as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares.

The aforementioned goodwill resulting from the purchase price allocation is mainly attributable to EDPR using C2 as an entry to the distributive generation market.

Vento Ludens

EDPR entered in July 2021 into an agreement with Vento Ludens Holdings GmbH for the acquisition of 100% of the shares in the UK company Vento Ludens Limited which in turn owns a stake of 79% of the shares in the company Muirake Wind Farm Limited and 100% of the shares in the company Lurg Hill Wind Farm Limited (see note 6). The agreement did not entail any conditions precedent therefore signing and closing was simultaneous.

With this transaction, completed in 20 July 2021, EDPR has acquired a portfolio that consists of 79% of a 5MW operating wind farm commissioned in 2012 with a 20-year Feed in Tariff in Scotland, 100% of 226MW of wind projects located in Scotland and Wales and 100% 44MW of photovoltaic projects located in Ireland for a total consideration of 14,673 thousand Euros (12,698 thousand GBP) that includes a contingent consideration of 1,016 thousand Euros and shareholder loans in the amount of 4,256 thousand Euros. This transaction is considered under the scope of IFRS 3 – Business combinations.

The Group used the financial statements as at 31 July 2021 of the companies acquired, to determine pre-acquisition balance sheet and results, and, consequently, the companies have been consolidated from that date following the full consolidation method. Thus this acquisition has contributed to the consolidated financial statements with Revenues, mainly from energy sales, in the approximate amount of 558 thousand Euros and with a Net loss in the approximate amount of 153 thousand Euros, referring to the five-month period ended at 31 December 2021. If this acquisition had occurred in the beginning of the exercise, it would

have contributed to the consolidated financial statements with Revenues, mainly from energy sales, in the approximate amount of 2,313 thousand Euros and with a Net loss for the period in the approximate amount of 1,697 thousand Euros, referring to the twelve-month period ended at 31 December 2021.

At the acquisition date, EDPR Group has determined the fair value of the assets acquired and liabilities assumed, with the assistance of a specialized and independent firm. The valuation methodology utilized has been the Multi-Excess Earning Method (MEEM) and the discounted cashflow approach. This valuation methodology assumes that the kind of assets to be valued normally generates cash flows in combination with other tangible and intangible assets and therefore consists in deducting the estimated cost of the use of other assets, such as PP&E or working capital, from the estimated cash flows associated to the asset to be valued. The main components of cashflow, namely production, long term power prices and operational costs were estimated using EDPR's own methodology using historical data and experience assessing investments of similar wind farms and solar PV projects in EDPR's portfolio. These internal assumptions used in the preparation of the cashflows of the wind farm have been challenged by the specialized firm. The after tax cash flows were then discounted at the weighted average cost of capital, that has been calculated by the firm, reflecting the risk of the country and adjusted for the profile of the portfolio.

Such valuation has determined a fair value of the net assets acquired in the amount of 9,873 thousands Euros. Fair value of identifiable assets and liabilities at the acquisition date is presented as follows:

THOUSAND EUROS	BOOK VALUE AT ACQUISITION DATE	FAIR VALUE ADJUSTMENT	FAIR VALUE AT ACQUISITION DATE
ASSETS			
Property, plant and equipment	7,564	13,201	20,765
Other non-current assets	126	-	126
Total Non-Current Assets	7,690	13,201	20,891
Cash and cash equivalents	1,130	-	1,130
Other current assets	304	-	304
Total Current Assets	1,434	-	1,434
Total Assets	9,124	13,201	22,325
LIABILITIES			
Deferred tax liabilities	-	3,300	3,300
Other non-current liabilities	7,832	-	7,832
Total Non-Current Liabilities	7,832	3,300	11,132
Other current liabilities	969	-	969
Total Current Liabilities	969	-	969
Total Liabilities	8,801	3,300	12,101
Total Net assets at fair value			10,224
- Non-controlling interests	-73	424	351
Total Net assets acquired at fair value			9,873
- Total consideration transferred for the acquisition of the shares			-10,417
Goodwill			544

The aforementioned Vento Ludens portfolio valuation has determined a fair value for Property, plant and equipment in the amount of 20,765 thousand Euros, generating a fair value adjustment of 13,201 thousand Euros and a corresponding deferred tax liability in the amount of 3,300 thousand Euros (see note 16 and 21). Further, the determination of the Non-controlling interests of the company Muirake Wind Farm Limited at fair value has resulted in a total amount of 351 thousand Euros at acquisition date.

The purchase price allocation exercise carried out in accordance with IFRS 3R, which is identified as provisional according to what is indicated in note 2.A, resulted in a goodwill recognition in the amount of 544 thousand Euros, as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares.

The aforementioned goodwill resulting from the purchase price allocation is mainly attributable to EDPR using Vento Ludens portfolio to establish its presence in the UK onshore market with a sizeable and technologically diversified portfolio at different stages of development.

Aria del Vento

EDPR entered in December 2018 into an agreement with Siemens Gamesa Renewable Energy Italy, S.p.A. for the acquisition of the Italian project Aria del Vento. At that moment, the completion of this transaction was subject to customary conditions precedent. The agreement entailed as one of these conditions precedent to closing that Siemens Gamesa Renewable Energy Italy, S.p.A. contributed the project to a company that would then be acquired by EDPR.

With this transaction, completed in June 2021 once the aforementioned customary conditions precedent were fulfilled, EDPR has acquired 100% of the shareholding of the company Parco Eolico Aria del Vento, S.r.l. (see note 6) which owns a wind farm project with a installed capacity of MW 16 which is operational since 2020, for a total consideration of 26,001 thousand Euros.

The Group used the financial statements as at 30 June 2021 of the company acquired, to determine pre-acquisition balance sheet and results, and, consequently, the companies have been consolidated from that date following the full consolidation method. Thus this acquisition has contributed to the consolidated financial statements with Revenues, mainly from energy sales, in the approximate amount of 3,319 thousand Euros and with a Net profit in the approximate amount of 2,822 thousand Euros, referring to the six-month period ended at 31 December 2021.

As the wind farm project was transferred to the company acquired at closing of the transaction, there is no further profit and loss results previously.

At the acquisition date, EDPR Group has determined the fair value of the assets acquired and liabilities assumed, with the assistance of a specialized and independent firm. The valuation methodology utilized has been the Multi-Excess Earning Method (MEEM) and the discounted cashflow approach. This valuation methodology assumes that the kind of assets to be valued normally generates cash flows in combination with other tangible and intangible assets and therefore consists in deducting the estimated cost of the use of other assets, such as PP&E or working capital, from the estimated cash flows associated to the asset to be valued. The main components of cashflow, namely production, long term power prices and operational costs were estimated using EDPR's own methodology using historical data and experience assessing investments of similar wind farms in EDPR's portfolio. These internal assumptions used in the preparation of the cashflows of the wind farm have been challenged by the specialized firm. The after tax cash flows were then discounted at the weighted average cost of capital, that has been calculated by the firm, reflecting the risk of the country and adjusted for the profile of the project.

Such valuation has determined a fair value of the net assets acquired in the amount of 33,832 thousands Euros.

Fair value of identifiable assets and liabilities at the acquisition date is presented as follows:

THOUSAND EUROS	BOOK VALUE AT ACQUISITION DATE	FAIR VALUE ADJUSTMENT	FAIR VALUE AT ACQUISITION DATE
ASSETS			
Property, plant and equipment	21,651	13,993	35,644
Goodwill	5,216	-5,216	-
Other non-current assets	836	-	836
Total Non-Current Assets	27,703	8,777	36,480
Cash and cash equivalents	586	-	586
Other current assets	1,907	-	1,907
Total Current Assets	2,493	-	2,493
Total Assets	30,196	8,777	38,973
LIABILITIES			
Deferred tax liabilities	-	3,358	3,358
Total Non-Current Liabilities	-	3,358	3,358

THOUSAND EUROS	BOOK VALUE AT ACQUISITION DATE	FAIR VALUE ADJUSTMENT	FAIR VALUE AT ACQUISITION DATE
Other current liabilities	1,783	-	1,783
Total Current Liabilities	1,783	-	1,783
Total Liabilities	1,783	3,358	5,141
Total Net assets acquired at fair value			33,832
- Total consideration transferred for the acquisition of the shares			-26,001
Gain on acquisition			-7,831

The aforementioned Aria del Vento's valuation has determined a fair value for Property, plant and equipment in the amount of 35,644 thousand Euros, generating a fair value adjustment of 13,933 thousand Euros and a corresponding deferred tax liability in the amount of 3,358 thousand Euros (see note 16 and 21).

The purchase price allocation exercise carried out in accordance with IFRS 3R, which is identified as provisional according to what is indicated in note 2.A, resulted in a gain recognition in the amount of 7,831 thousand Euros, as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares. The gain resulting from the purchase price allocation has been registered in the Other income caption of the consolidated financial statements (see note 9).

The aforementioned gain recognition is mainly attributable to the price of the transaction that was agreed back in 2018, before the construction of the wind farm, and the renewable energy market have changed significantly since then, to awarded tariff which is the result of a regulatory policy designed to support the development of renewable energy sources by providing a guaranteed price for producers and to the valuation carried out by the independent expert.

Trung Son

EDPR entered in April 2021 into an agreement with Trina Solar Investment Pte, Ltd. for the acquisition of 100% of the shares of the holding company called Trina Solar Investment First Pte. Ltd. owning the 100% of the company LYS Energy Investment Pte. Ltd. which in turn owns the 100% of the company holding the 28 MWac (35 MWdc) operational solar PV project called Trung Son Energy Development Joint Stock Company (see note 6). At that moment, the completion of this transaction was subject to customary conditions precedent. With this transaction, completed in 29 June 2021 once the aforementioned customary conditions precedent were fulfilled, EDPR has acquired 100% of the above portfolio for a total consideration of 29,568 thousand Euros (35,179 thousand USD) of which an amount of 16,381 thousand Euros (19,174 thousand USD) refers to shareholders loans. This transaction is considered under the scope of IFRS 3 – Business combinations.

The Group used the financial statements as at 30 June 2021 of the company acquired, to determine pre-acquisition balance sheet and results, and, consequently, the companies have been consolidated from that date following the full consolidation method. Thus, this acquisition has contributed to the consolidated financial statements with Revenues, mainly from energy sales, in the approximate amount of 1,246 thousand Euros and with a Net loss in the approximate amount of 283 thousand Euros, referring to the six-month period ended at 31 December 2021. If this acquisition had occurred in the beginning of the exercise, it would have contributed to the consolidated financial statements with revenues, mainly from energy sales, in the approximate amount of 3,047 thousand Euros and with a Net profit for the period in the approximate amount of 555 thousand Euros, referring to the twelve-month period ended at 31 December 2021.

At the acquisition date, EDPR Group has determined the fair value of the assets acquired and liabilities assumed, with the assistance of a specialized and independent firm. The valuation methodology utilized has been the Multi-Excess Earning Method (MEEM) and the discounted cashflow approach. This valuation methodology assumes that the kind of assets to be valued normally generates cash flows in combination with other tangible and intangible assets and therefore consists in deducting the estimated cost of the use of other assets, such as PP&E or working capital, from the estimated cash flows associated to the asset to be valued. The main components of cashflow, namely production, long term power prices and operational costs were estimated using EDPR's own methodology using historical data and experience assessing investments of similar solar PV projects in EDPR's portfolio. These internal assumptions used in the preparation of the cashflows of the solar PV project have been challenged by the specialized firm. The after tax cash flows were then discounted at the weighted average cost of capital, that has been calculated by the firm, reflecting the risk of the country and adjusted for the profile of the project.

Such valuation has determined a fair value of the net assets acquired in the amount of 10,844 thousands Euros.

Fair value of identifiable assets and liabilities at the acquisition date is presented as follows:

THOUSAND EUROS	BOOK VALUE AT ACQUISITION DATE	FAIR VALUE ADJUSTMENT	FAIR VALUE AT ACQUISITION DATE
ASSETS			
Property, plant and equipment	19,724	5,631	25,355
Other non-current assets	2,073	-	2,073
Total Non-Current Assets	21,797	5,631	27,428
Cash and cash equivalents	1,459	-	1,459
Other current assets	15,381	-	15,381
Total Current Assets	16,840	-	16,840
Total Assets	38,637	5,631	44,268
LIABILITIES			
Deferred tax liabilities	-	1,126	1,126
Other non-current liabilities	31,222	-	31,222
Total Non-Current Liabilities	31,222	1,126	32,348
Other current liabilities	1,076	-	1,076
Total Current Liabilities	1,076	-	1,076
Total Liabilities	32,298	1,126	33,424
Total Net assets acquired at fair value			10,844
- Total consideration transferred for the acquisition of the shares			-13,187
		Goodwill	2,343

The aforementioned Trung Son's portfolio valuation has determined a fair value for Property, plant and equipment in the amount of 25,355 thousand Euros, generating a fair value adjustment of 5,631 thousand Euros and a corresponding deferred tax liability in the amount of 1,126 thousand Euros (see note 16 and 21).

The purchase price allocation exercise carried out in accordance with IFRS 3R resulted in a goodwill recognition in the amount of 2,343 thousand Euros, as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares.

The aforementioned goodwill recognition resulting from the purchase price allocation, which is identified as provisional according to what is indicated in note 2.A, is mainly attributable to EDPR using Trung Son's portfolio to establish its presence in Singapore and Vietnam and represents a first step towards the establishment of EDPR's presence in the Asia Pacific region.

At the acquisition date, certain contingent liabilities have been identified, therefore additional provisions have been recognized in the amount of 1,100 thousand Euros.

The purchase price allocation exercise carried out in accordance with IFRS 3 resulted as follows:

- Goodwill recognition in the amount of 148,341 thousand Euros (see note 20) as per the difference of the net assets acquired at fair value and the consideration transferred for the acquisition of the shares. This amount includes the previous Goodwill recognized in the book value at acquisition date amounting to 112,279 thousand Euros and an additional amount of 36,062 thousand Euros, of which an amount of 4,641 thousand Euros refers to associate companies consolidated by the equity method, thus presented in the caption Investments in joint ventures and associates caption (see note 20); and
- Gain in the step acquisition of CEASA in the amount of 1,887 thousand Euros as a consequence of the remeasurement at fair value of the investment previously held, being registered the corresponding difference between the fair value and the book value in the Other income caption of the consolidated financial statements (see note 9).

The aforementioned goodwill resulting from the purchase price allocation, is mainly attributable to the high-quality of the portfolio with strong wind resource (29% average load factor) and with a low risk profile, of which 87% of the capacity is regulated, with an average age of 13 years (~7 years of remaining regulated life) considering that the portfolio also counts with an attractive potential for future extensions/repowering given the aforementioned profile, as well as to the benefits and synergies that are expected to arise as a result of its integration into EDPR Group.

All the business combinations made in 2021, can be considered as final figures in 2022.

43. Environment issues

Expenses of environmental nature are the expenses that were identified and incurred to avoid, reduce or repair damages of an environmental nature that result from the Group's normal activity.

These expenses are booked in the income statement of the year, except if they qualify to be recognised as an asset, according to IAS 16.

During the year, the environmental expenses recognised in the income statement in the amount of 7,734 thousand Euros (31 December 2021: 4,564 thousand Euros) refer to costs with the environmental management plan.

Investments of an environmental nature booked as Property, plant and equipment and intangible assets during 2021 amount to 13,968 thousand Euros (31 December 2021: 19,351 thousand Euros).

As referred in accounting policy 2.P, the Group has established provisions for dismantling and decommissioning of property, plant and equipment when a legal or contractual obligation exists to dismantle and decommission those assets at the end of their useful lives. Consequently, the Group has booked provisions for property, plant and equipment related to electricity wind and solar generation for the responsibilities of restoring sites and land to its original condition, in the amount of 264,756 thousand Euros as at 31 December 2021 (31 December 2021: 313,594 thousand Euros) (see note 32).

44. Operating segments report

The Group generates energy from renewable resources and has, since 1 January 2022, four reportable segments which are the Group's business platforms, Europe, North America, Latam and Apac. The strategic business units have operations in different geographic zones and are managed separately because their characteristics are quite different. For each of the strategic business units, the Group's CEO reviews internal management reports on at least a quarterly basis.

The accounting policies of the reportable segments are the same as described in note 2. Information regarding the results of each reportable segment is included in Annex 1. Performance is based on segment operating profit measures, as included in the internal management reports that are reviewed by the Management. Segment operating profit is used to measure performance as management believes that such information is the most relevant in evaluating the results of certain segments relative to other entities that operate within these industries. Inter-segment pricing is determined on an arm's length basis.

A business segment is an identifiable component of the Group, aimed at providing a single product or service, or a group of related products or services, and it is subject to risks and returns that can be distinguished from those of other business segments.

The Group generates energy from renewable sources in several locations and its activity is managed based on the following business segments:

- Europe: refers to companies that operate in Spain, Portugal, Belgium, France, Italy, Germany, Netherlands, Poland, Romania, United Kingdom, Hungary and Greece;
- North America: refers to companies that operate in United States of America, Canada and Mexico;
- LATAM: refers to companies that operate in Brasil, Chile and Colombia;
- APAC: refers to companies that operate in Korea, Singapore, Vietnam, Malaysia, Indonesia, Thailand, Cambodia, China, Taiwan and Japan.

As at 31 December 2021, business segments were the following:

- Europe: refers to EDPR EU Group companies operating in Spain, Portugal, Belgium, France, Italy, Netherlands, Poland, Romania, United Kingdom, Hungary and Greece;

- North America: refers to EDPR North America, EDPR Canada and EDPR Mexico Group companies that operate in United States of America, Canada and Mexico, respectively;
- Brazil: refers to EDPR Brasil Group companies that operate in this country.

Segment definition

The amounts reported in each business segment result from the aggregation of the subsidiaries and business units defined in each segment perimeter, including the intra-segment eliminations, without any inter-segment allocation adjustment.

The financial information disclosed by each business segment is determined based on the amounts booked directly in the subsidiaries that compose the segment, including the intra-segment eliminations, without any inter-segment allocation adjustment.

45. Audit and non-audit fees

PricewaterhouseCoopers (PwC) was reappointed in the Shareholder's Meeting held on April 12th 2021 as the external auditor of the EDPR Group for years 2021, 2022 and 2023. Fees for professional services provided by this company and the other related entities and persons in accordance with Law 22/2015 of 20 July, for the year ended in 31 December 2022 and 2021 are as follows:

THOUSAND EUROS	31 DECEMBER 2022				
	EUROPE	NORTH AMERICA	LATAM	APAC	TOTAL
Audit and statutory audit of accounts	1,603	1,795	368	994	4,760
Other non-audit services	218	12	38	-	268
Total	1,821	1,807	406	994	5,028

The amount of Other non-audit services in Europe includes, among others, services that refer to the entire Group such as the review of the internal control system on financial reporting and review of the non-financial information related to sustainability included in the EDPR Group's annual report, which are invoiced to a European company. This amount also includes the limited review as of June 30, 2022 of the EDPR Consolidated Financial Statements and other reviews for Group consolidation purposes which are considered non-audit services according to the respective local regulation.

Total amount for Europe includes 857 thousand Euros of services provided by PricewaterhouseCoopers Auditores S.L. from which 676 thousand Euros refer to audit services and 181 thousand Euros refer to non-audit services.

The above fees exclude the fees for the companies that were sold during 2022 amounting 147 thousand Euros (see note 6).

The PwC fees for 2021 are as follows:

THOUSAND EUROS	31 DECEMBER 2021				
	EUROPE	NORTH AMERICA	BRAZIL	OTHER	TOTAL
Audit and statutory audit of accounts	1,540	1,379	189	84	3,192
Other non-audit services	166	11	6	-	183
Total	1,706	1,390	195	84	3,375

Total amount for Europe includes 786 thousand Euros of services provided by PricewaterhouseCoopers Auditores S.L. from which 624 thousand Euros refer to audit services and 150 thousand Euros refer to non-audit services.

ANNEX I

The Subsidiary Companies consolidated under the full consolidated method, as at 31 December 2022 and 2021, are as follows, where “% of capital” represents the direct stake held by the immediate parent company/ies and “% of voting rights” represents the indirect stake held by the Group’s parent holding company (EDP Renováveis S.A.):

Chairperson letter

António Gomes Mota

Chairman of the EDPR Board of Directors

Dear Stakeholder,

2022 has been an influential one for the global energy transition. We have experienced an undeniable acceleration of the energy transition with governments around the world increasing renewable energy targets, highlighted by the REPowerEU initiative and the Inflation Reduction Act (IRA). These legislative initiatives were in part introduced this year because of the Ukrainian war and the subsequent rise in gas and power prices, which further reinforced the need for a clean, affordable, and reliable energy. The focus has thus shifted to renewable as a way to reduce emissions, meet energy goals, and boost energy security. This shift in the energy market has been seen in the increase of both investments and installations of renewable energy sources. One thing is for sure, renewable energy is the answer.

EDPR is extremely well positioned to capture the growth of renewables due to its strong fundamentals. The company has an impressive track record, having been a leading pure renewables player for nearly 20 years. This experience, combined with a global footprint of 28 markets, and a management team with an average of 20 years of experience in the sector makes us a leading force in the energy transition. EDPR's people are also highly dedicated, committed and pride themselves on high quality work, further adding to its success. Finally, EDPR is continuously developing its capabilities in emerging technologies such as solar DG, solar and wind hybridization, storage, and hydrogen, ensuring it remains at the cutting edge of the renewables industry.

EDPR achieved significant success during 2022. By the end of the year, EDPR had added 2.1GW of renewable capacity on top of the 4.0 GW under construction to support future growth (which was more than double the Dec-21 levels). EDPR consolidated its global footprint by consolidating Sunseap into its portfolio and creating a platform in APAC, a new region for the company. Elsewhere, by acquiring Kronos, a solar development platform, EDPR increased its wind/solar balance and entered the key markets of Germany and The Netherlands. Asset rotation also contributed to EDPR's success with €424 million of gains from 5 transactions in 5 different markets. All in all, EDPR had a positive 2022 with an EBITDA of €2,157 million and a Recurring Net Profit of €671 million.

EDPR's governance model, which is aligned with best-practice and based on being lean and independent, supports the company's growth by focusing on the long-term sustainability of the company. The model also ensures that the stakeholders' interests are respected and protected, while reinforcing the fiduciary duties of the Board and the stewardship responsibility of a listed company. This is accomplished through a comprehensive approach to corporate governance, with a strong emphasis on corporate responsibility, transparency and accountability. This commitment to corporate governance is reaffirmed in the company's 2022 annual report and with measures like the creation at the end of this year, within the Board of Directors, of an autonomous committee on ESG that clearly highlights the central role of sustainability in the management of EDPR.

This year has been a great success for EDPR in terms of ESG accomplishments. It has revalidated its Top Employer Europe certificate for the fourth consecutive year and has extended it to Brazil for the first time. Additionally, EDPR North America has been named a Top Workplace in the US for the second consecutive year and has been honored with two Culture Excellence Awards for its diversity, equity, and inclusion practices as well as for being a woman-led company. More-

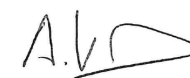

over, EDPR was awarded with the SkillsFuture Employer Award in Singapore, recognising its efforts in a people – centric approach. Finally, EDPR was included in the Bloomberg Gender – Equality Index for the third consecutive year, with an improved overall score compared to last year. All of this is a testament to EDPR's commitment to ESG initiatives.

On behalf of EDPR's Board of Directors, I would like to thank you all – our contractors, suppliers, clients, partners and shareholders – for your commitment, perseverance and trust in EDPR.

I would also like to take this opportunity to say a special thank you to our employees for their hard work, dedication and enthusiasm. You are the key to our success. Furthermore, I would like to extend my gratitude to the EDPR management team for their dedication to making EDPR the success that it is today. Your leadership and guidance have enabled us to reach new heights and accomplish great things.

I would like to close this message highlighting my excitement and hope for the future. We are confident that our new business plan for 2023–2026 will take advantage of the opportunities presented to us and build upon our current successes.

EDPR is extremely well positioned to capture this growth trend in renewables due to its strong fundamentals.

António Gomes Mota

Message from the CEO

Miguel Stilwell D'Andrade CEO

[Dear Shareholders and Stakeholders,](#)

2022 was a pivotal year for the renewable energy industry.

The tragic conflict in Ukraine, the subsequent turmoil in the energy markets, supply chain disruption, inflation, and increasing interest rates have added huge additional operating complexity to our activity. However, 2022 was also the year in which the world has come together to recognize what EDP has believed for many years: Renewables play a key role in the global solution to energy independence and a sustainable world.

It has also been a year of significant action, as governments around the world promoted private and public investment into green energy. The European Commission launched REPowerEU, a plan to save energy, diversify energy suppliers and produce clean energy in Europe, increasing the headline 2030 target for renewables installed capacity from 40% to 45%. In the United States, the Inflation Reduction Act (IRA) defined a record-breaking range of incentives designed to catalyze private investment in clean energy, providing a stable and long-term framework that will support our investment in the region.

All in all, renewables are expected to grow significantly from 3 TW global capacity in 2021 to 27 TW by 2050, driven by cost competitive technologies such as wind onshore and solar PV, and further enabled by leading solutions such as wind offshore, floating solar, wind and solar hybridization, storage and green hydrogen.

Despite this anticipated growth, there are still significant obstacles slowing down the deployment of renewables in the short-run, namely lengthy and complex permit and licensing procedures, interconnection bottlenecks and regulatory complexity and uncertainty (the latter particularly in Europe). In the US, supply chain disruption remains a major bottleneck principally for the execution of solar projects.

While some challenges will likely carry over into 2023, the evolving trends and opportunities create strong tailwinds for the renewables industry. EDPR remains well positioned to capture the growth that the world needs to ensure access to clean, affordable, and reliable energy for all.

2022 execution

Growth

Accelerated and selective growth is a key principle behind our investment strategy, as we focus on securing new projects with long-term contracts under stable legal and regulatory frameworks. This strategy allowed EDPR to grow significantly in 2022, with an additional 2.1 GW installed capacity worldwide to reach 15 GW of secured capacity by the end of the year. Reflecting the ramp up of our investment plan, gross investments accounted for a record of 5.1 billion euros, almost doubling the previous year.

EDPR strengthened its presence across core and new markets with some important strategic moves. Following the completion of Sunseap's acquisition, we have reinforced our presence in Asia-Pacific – the region that accounts for more than half of

the world's electricity demand – with a 75% increase in installed capacity, totaling 868 MWdc by year-end.

In Europe, we invested in Kronos, a solar developer company based in Germany, allowing us to enter Germany and the Netherlands, and expand our presence to 12 markets in Europe, which together represent more than 90% of the expected solar capacity additions in the European Union until 2030.

In Iberia, we commissioned our first hybrid solar and wind energy park in the region and secured a grid connection that will allow EDPR to build a 70 MW floating solar project in Alqueva hydro power plant in Portugal, where EDP already has one of Europe's largest floating solar parks. These pioneering projects are the first of their kind in the region, showcasing our commitment to invest in emerging technologies that accelerate decarbonization.

In the United States, we completed the construction of the largest solar park in Indiana and our first repowering project in Oklahoma, that will cumulatively power 130,000 homes annually for the next several decades. We started construction on 13 new projects, including our first solar park in Texas, to reach a record of more than 2 GWs of new capacity under construction.

In Latin America, we concluded the construction of one of our largest wind clusters in Brazil (580MW) and concluded the sale of 2 wind projects in that country with a total of 260MW, which reinforces the attractiveness of this strategic market. Moreover, we have recently started the construction of our first project in Chile, a 99 MW wind farm which we expect to complete during 2023.

As regards offshore wind, in 2022 alone EDPR increased its portfolio from 9.3 GW to 16.6 GW and reached multiple landmark objectives including the start of operations of Moray East (950 MW) and the start of construction of Moray West (850 MW), both bottom-fixed projects in the United Kingdom.

On floating offshore wind, Ocean Winds started construction of a farm in France and was awarded two additional projects of 2.3 GW in Scotland and a lease area to develop up to 2 GW on the West Coast of the United States.

These milestones showcase how EDPR continues to foster technological diversification. In this field, we have evolved our presence in storage, notably initiating construction of our first sizeable storage project in the US (40 MW), located in California. As for renewable hydrogen, an important energy vector that will play a key role in the energy transition, we are rapidly creating solid growth opportunities, currently leading 10 projects that account for almost 400 MW of electrolysis capacity and that have been selected for funding by the European Commission and the Spanish and Portuguese Governments.

Excellence

At EDPR, we will always strive to deliver competitive and high-quality projects by leveraging the vast experience and know-how of our teams and ensuring that our actions are in line with Environmental, Social and Governance ("ESG") best practice.

Our activities are rooted in our commitment to the 10 principles of the United Nations Global Compact, to build a more sustainable world, aligned with the values of respect for human rights, employment, environmental protection, and the fight against corruption.

EDPR became a signatory of the United Nations Sustainable Ocean Principles, highlighting the company's long-standing relationship to oceans and biodiversity, and our determination to protect them.

In line with our commitment to nurture an inclusive environment where all employees are equally empowered, EDPR signed the United Nations Women Empowerment Principles.

I was pleased to see EDPR included in the Bloomberg Gender-Equality Index for the third consecutive year, improving its overall score compared to last year.

Finally, we approved our first Human and Labour Rights Policy. Given the increasing importance of this topic, this agreement was a relevant step that underlines our commitment to responsible operations throughout our value chain.

Value

Reflecting on the past year, I am proud to say that EDPR maintained a solid financial performance and growth.

Our company delivered EBITDA of 2,157 million euros, 23% higher than in the previous year, supported by our strong operational portfolio that keeps growing every day as well as our asset rotation program that continues to deliver value – in 2022, we have completed a total of 6 transactions in 6 markets, securing proceeds of 2.0 billion euros.

Despite numerous external factors adversely impacting our day-to-day operations, EDPR maintained a recurring Net Profit of 671 million euros, fairly aligned with last year, which proves the company's profitability resilience to adverse contexts.

Preparing the future

I am proud of the way that we, as a company, have successfully navigated the challenging environment of the past 12 months. The ability of our business and people across the world to adapt and deliver has never been more evident, and I am extremely grateful to our teams for all the hard work and dedication.

I would also like to thank all those who have followed and supported EDPR in 2022, notably our investors, customers, suppliers, regulators, partners, and local communities.

Looking ahead, I am confident that we will continue to drive the energy transition globally. The unveiling of a new business plan for 2023–2026 will contain more details on how we will achieve our objectives.

I look forward to continuing this collective journey in changing tomorrow now.

While some challenges will likely carry over into 2023, the evolving trends and opportunities create strong tailwinds for the renewables industry. EDPR remains well positioned to capture the growth that the world needs to ensure access to clean, affordable, and reliable energy for all.

Miguel Stilwell d'Andrade

1.1. EDPR in brief

1.1.1.

Our Vision

**A global energy company,
leading the energy transition
to create superior value**

Our values

Innovation

We want to create value in the various areas in which we operate.

Sustainability

We aim to improve the quality of life of current and future generations.

Humanization

We build genuine and trusting relationships with our employees, customers, partners, and local communities.

Our commitments

Results

Delivering on our commitments to shareholders; leading through the ability to anticipate and execute; demanding excellence.

Sustainability

Taking on environmental responsibilities; contributing to developing the regions where we operate;
Reducing gas emissions; actively championing energy efficiency

Customers

Staying focused on customers; making sure we listen to their concerns; responding simply and transparently; surprising them and anticipating their needs.

People

Combining an ethical and rigorous conduct with enthusiasm and initiative; encouraging teamwork; investing in competence and merit; promoting a balance between professional and personal life.

EDPR is present in 28 markets globally with over 3,000 employees

1.1.3.

Business Description

1. Development

Site identification and grid connection

Search for sites with top-class wind conditions or irradiance resource and analyse grid connection feasibility.

Renewable resources analysis

Install meteorological equipment to collect and study wind profile and solar radiance.

Obtain permits

Engage with local public authorities to secure environmental, construction, operating and other licences.

Design layout & equipment choice

Optimise the layout of the asset and select the best fit of equipment model based on the site characteristics.

Origination

Secure long term contracts for energy sale, guaranteeing stable and predictable cash-flows.

Project funding

Find appropriate financing for the project.

To maximise the environmental positive impacts of wind and solar energy from a life cycle approach, EDPR has two main aspects in consideration when dismantling/repowering a site at the end of its useful life: land restoration and proper treatment of the waste generated.

- Even though EDPR works to minimise any impact on the land, the Company commits to clean up and rehabilitate the sites to return the area to its initial state.

- The main waste generated are turbines which are c.80%-90% recyclable, and EDPR participates in several initiatives to find a solution for the remaining percentage.

End of life

Once wind farms and solar plants reach the end of useful life (30-35 years), wind turbines and solar panels need to be assessed and replaced.

Efficiency

EDPR increases power generated by reducing the overall number of wind turbines and replacing them with more efficient machines.

4. Dismantling/Repowering

2. Construction

Procurement

Source major equipment and construction contracts globally.

Construction

Build access roads, prepare foundations, assemble wind turbines or solar panels, construct substation.

3. Operation

Start of operations & deliver clean energy

A better energy, a better future, a better world!

Data analysis

Monitor real-time operational data, analyse performance and identify opportunities for improvement.

Ongoing maintenance service

Keep availability figures at the highest level possible and minimise failure rates.

Risk & Energy management

Mitigate market exposure and manage energy sales.

1.1.4. 2022 Main Events

Jan

- 20 EDPR revalidates its Top Employer Europe certificate for the fourth consecutive year, and extends it to Brazil for the first time.
- 26 EDPR is included in the Bloomberg Gender-Equality Index for the third consecutive year, improving its overall score compared to last year.

Feb

- 24 EDPR completes Sunseap's acquisition, allowing the Company to establish a portfolio for the APAC region of close to 10 GW of solar projects.
- 27 EDPR is awarded lease area to develop up to 1.7 GW offshore wind project in the US through Ocean Winds, its 50:50 JV with ENGIE.

Aug

- 22 EDPR is awarded with 2 floating offshore wind projects in Scotland with 2.3 GW through Ocean Winds.
- 01 EDPR secures PPA for 200 MW solar project in the US.

Jul

- 07 EDPR is awarded with CfD for its Moray West project in the UK through Ocean Winds.

Jun

- 27 EDPR concludes Asset rotation deal of a 181 MW wind portfolio in Spain for an EV of €328 million.
- 08 EDPR becomes a signatory of the Sustainable Ocean Principles, highlighting its commitment to healthy and productive oceans.

May

- 24 EDPR enters an industrial agreement with Lhyfe, a pure player in green hydrogen production, to jointly identify, develop, build and manage projects in this area.

Apr

- 28 EDPR completes Asset Rotation deal of a 149 MW wind portfolio in Poland for an EV of €0.3bn.
- 05 EDPR is awarded with grid connection in floating solar auction in Portugal.

Mar

- 21 EDPR makes €500 thousand donation to help support Ukrainian refugees in Poland. The funds allowed to distribute food to those in need.
- 14 EDPR signs the UN's Women's Empowerment Principles, in line with its commitment to nurture an inclusive environment where all employees are equally empowered.

Sep

- 07 EDPR concludes solar PV deal in APAC totalling 200 MWac strengthening its position in the region.
- 09 EDPR completes Asset Rotation deal of a 172 MW wind portfolio in Italy.

Oct

- 06 EDPR signs Asset Rotation deal for a 260 MW operating wind portfolio in Brazil.
- 06 EDPR completes the acquisition of a solar development platform, entering in Germany and the Netherlands.
- 25 EDPR created the Environmental, Social and Governance Committee, composed by independent members of the Board of Directors.

Nov

- 14 EDPR is named a Top Workplace in the US for the 2nd consecutive year, and is honoured with 2 Culture Excellence Awards for its diversity, equity, and inclusion practices and for being a woman-led company.
- 22 EDPR is awarded with the SkillsFuture Employer Award in Singapore, being recognised for its efforts in a people-centric approach.

Dec

- 15 EDPR is awarded lease area to develop up to 2 GW floating offshore wind project in the US West Coast through Ocean Winds.
- 27 EDPR informs about Asset Rotation through Build & Transfer of 200 MW Solar Park in US.

1.1.5. Stakeholders Focus

Fostering strong relationships with communities, customers, authorities, and other groups of internal and external stakeholders helps companies to better understand and meet their needs and expectations.

Ever since it was founded, EDPR has been very aware of this. This is why it has been working hard to address societal issues and stakeholders' priorities, in order to create long-term value for the business and the stakeholders involved in the Company's mission.

Accordingly, and as stated in EDPR's Stakeholders Relations Policy, which is aligned with EDP Group's Policy, the Company aims to maintain an open and transparent dialog with its stakeholders in order to build and strengthen trust, promote information and knowledge sharing, anticipate challenges and identify cooperation opportunities.

EDPR seeks to achieve this through four major interaction commitments: comprehend, communicate, trust, and collaborate. These four pillars also form the basis of the Group's annual objectives regarding stakeholder relationship management and are consistent with those of EDP Group.

In this regard, monitoring stakeholder groups also helps in decision-making and in obtaining additional accurate information that allows the Company to meet its internal and external commitments.

PUBLIC

Comprehend INCLUDE, IDENTIFY, PRIORITIZE

EDPR regularly identifies the stakeholders that influence the Company and works to analyse and understand their expectations and interests in the decisions that directly impact them.

Collaborate INTEGRATE, SHARE, COOPERATE, REPORT

EDPR aims to collaborate with stakeholders by building strategic partnerships that aggregate and disperse knowledge, skills, and tools. These will promote the creation of shared value in a differentiating way.

Communicate INFORM, LISTEN, RESPOND

Committed in promoting a two-way dialogue with stakeholders through information and consulting initiatives is a part of EDPR's objective. This can be attainable by listening, informing, and responding to stakeholders in a consistent, clear, rigorous and transparent manner, resulting in a strong meaningful and lasting relationship.

Trust TRANSPARENCY, INTEGRITY, RESPECT, ETHICS

One of the Company's beliefs is the importance of a trustworthy relationship with the stakeholders in establishing stable, long-term relationships. These relationships with the stakeholders are based on values like transparency, integrity and mutual respect.

Stakeholder management approach

To ensure the balance between company objectives and stakeholder interests, it is important to define and create strong stakeholder management plans, beginning with identifying stakeholders, their roles, and the impact they have.

EDPR's stakeholders are those organizations or individuals that influence or are influenced by the activities and services undertaken by the Company, and are organized into four categories: Institutional, Social & Territorial Environment, Value Chain, and Market.

EDPR's stakeholders in 2022 are shown in the following diagram:

Once its stakeholders are identified, EDPR must be capable of understanding how the Company's performance is perceived by each of them, as well as it must have the analytical capacity to be able to identify and manage expectations, needs and areas for improvement.

In order to achieve this, EDPR has drawn up a Global Stakeholders Model that considers different stages and levels of implementation depending on market maturity, which has already been deployed in the different markets.

This model consists of a cyclical methodology that combines quantitative and qualitative analyses. EDPR knows how important it is to listen to its stakeholders, and that quantitative studies are a very useful and effective tool in stakeholder relations. This kind of studies help the Company to understand stakeholders' opinions, concerns, and expectations. But EDPR goes beyond that by seeking to understand the precise reasons as to why those results were obtained in the first place. That is why the methodology applied by the Company is based on a hybrid model that combines quantitative data with qualitative interviews to fully understand the reasons behind the opinions of the stakeholders that were interviewed. This reinforces the overall credibility of the results and procedures.

2022 highlights

While 2022 was marked by the implementation of several action plans, it was also the year that EDPR internationalised a social impact program due to its initial success.

Launched in Spain, Keep it Local arose from quantitative research carried out in this market, when some groups of stakeholders expressed their concern about depopulation in rural areas. Having such a strong presence in these rural settings, EDPR realized that its business could contribute to helping people fight against a growing phenomenon observed not only in Spain but also in other markets: rural flight. With that in mind, the company created Keep it Local, a program that awards scholarships to train young people in Operation and Maintenance skills. Through this initiative, EDPR is helping to create employment in a promising sector like that of renewable energies, while giving people the chance to live and work in their hometowns.

The first round, which took place in Spain in 2021, turned out to be a success, with over 125 people applying for one of the 24 scholarships available. It was also a great success in terms of the results and satisfaction of the participants, and since the program ended, 50% of the participants are now working in the sector and living in their hometowns. Given these great results, EDPR decided to not only hold a second round in Spain in which it offered 30 scholarships, but to extend the program to other markets too. Brazil held two rounds of the program in 2022, one focused on wind energy and the other on solar energy, training a total of 46 people. The groundwork has also been laid to roll the program out in Italy, with the first round planned for the beginning of 2023.

1.2.2 Share performance

EDPR has 960.6 million shares listed and admitted to trading in NYSE Euronext Lisbon, following the successful share capital increase concluded in April. On December 31st, 2022, EDPR had a market capitalisation of €19.8 billion, and equivalent to €20.58 per share. In 2022 total shareholder return was -6%, considering the dividend paid on April 29th of €0.09 per share.

1.3. Organisation

1.3.1. Shareholder structure

EDPR shareholders are spread across more than 30 countries, being EDP the main shareholder.

Since the successful Share capital increase in April 2021, where 88,250,000 new shares were issued at a subscription price of seventeen euros per share for a share premium of twelve euros, EDPR total share capital is composed of 960,558,162 shares with a nominal value of five euros each, fully paid. All these shares are part of a single class and series and are admitted to trading on the Euronext Lisbon regulated market.

Major shareholders, the EDP Group

The majority of the Company's share capital is owned by EDP Group, holding 74.98% of the share capital and voting rights. EDP group is a global company operating in all parts of the energy industry chain, from generation to the distribution and supply of gas and electricity. Over the past four decades, the company has built a significant position in the global energy landscape, establishing a presence in 29 markets on 3 continents. With over 13,000 employees, EDP supplies electricity and/or gas to over 9 million customers and is a sustainability partner for its clients, offering products and services in solar energy, energy efficiency, electric mobility, among others.

By the end of 2022, EDP had an installed capacity of 28.0 GW, generating 61.4 TWh of energy, of which 74% came from renewables. In this context, sustainability is part of the company's DNA, which is why the EDP Group has been a member of the Dow Jones Sustainability Index for more than 15 years.

Other qualified shareholders

Besides the qualified shareholding of EDP Group, Blackrock Inc. – a US global investment manager – communicated to CNMV the 12th of December 2022 an indirect qualified position, as collective investment institution, of 3.00% in EDPR share capital and voting rights.

As of December 31st, 2022, Blackrock Inc. owned 3.34% of EDPR share capital and voting rights.

EDPR shareholder structure

Broad base of investors

EDPR has an international base of investors. Excluding EDP Group, EDPR shareholders comprise close to 30,000 institutional and private investors spread worldwide.

Within institutional investors, which represent about 96% of shareholder base (ex-EDP Group), sustainable and responsible funds (SRI) are the major type of investor, followed by investment funds.

In this context, EDPR is a member of several financial indexes that aggregate top performing companies for sustainability.

Worldwide shareholders

EDPR shareholders are spread across more than 35 countries.

The United Kingdom is the most representative country accounting for 25% of EDPR's shareholder base (ex-EDP Group), followed by the US, France, Germany, Portugal, Sweden and Switzerland. In the Rest of Europe, the most representative countries are Spain, Belgium, Norway and Austria.

Shareholders (EX-EDP) by Country

Shareholders (Ex-EDP) by Type

1.3.2. Governance model

The organisation and functioning of EDPR's corporate governance model aim to achieve the highest standards of corporate governance, business conduct and ethics referenced on the best national and international practices.

Regulatory framework

EDPR is a Spanish Company listed in a regulated stock exchange in Portugal. The corporate organisation of EDPR is subject to its personal law and to the extent possible, to the recommendations contained in the Corporate Governance Code of the *Instituto Português de Corporate Governance* ("IPCG"). As such, the Company intends to comply with both legal systems but always considering that its personal law is the Spanish one and that in case of discrepancy the aim is to adopt the law that entails more protectionism for its shareholders.

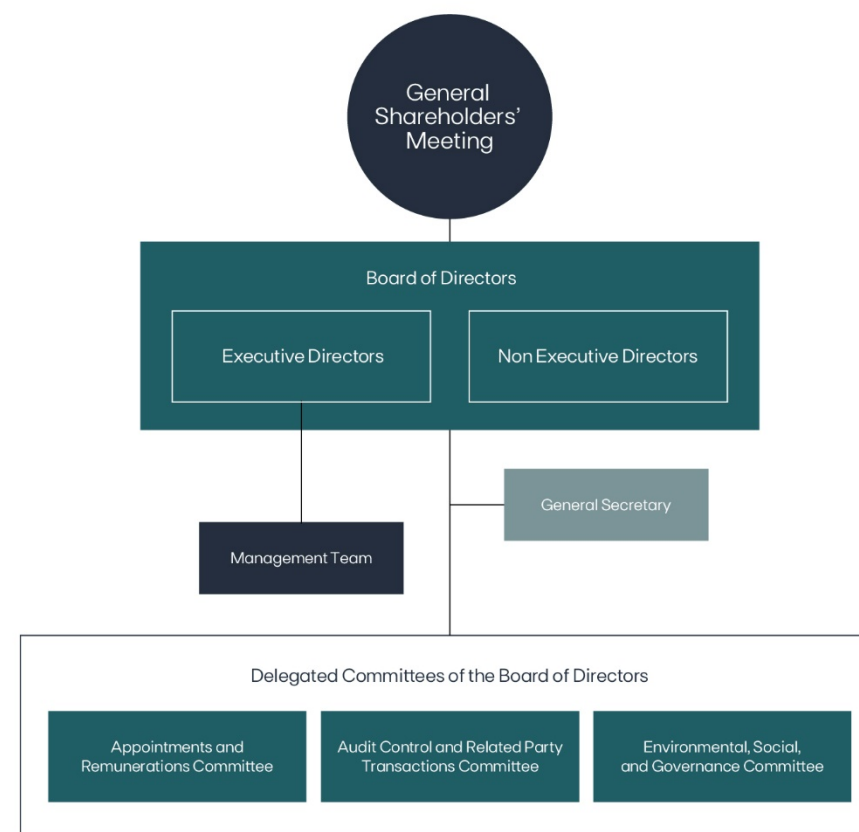

The Company's governance model is the one applicable under its personal law, and EDPR parallelly seeks to correspond it to the so-called "Anglo-Saxon" model set forth in the Portuguese Commercial Companies Code, in which the management body is a Board of Directors, and the supervision and control duties are of the responsibility of an Audit, Control and Related Party Transactions Committee.

Governance structure

In line with the framework above referred, the Company's governance model comprises a General Shareholders' Meeting and a Board of Directors that represents and manages the Company. In addition, EDPR's Board of Directors has set up three Delegated Committees entirely composed by Members of the Board of Directors: the Audit, Control and Related-Party Transactions Committee; the Appointments and Remunerations Committee; and the Environmental, Social and Corporate Governance Committee. This structure and its functioning enables a fluent workflow between all levels of the governance model, as: i) each of the Delegated Committees shall report the decisions taken to the Board of Directors and ii) as the Committees' members are also members of the Board, all of them will also receive the complete information at Board of Directors in order to take the corresponding decisions; and all in all, thus ensuring in time and manner the access to all the information to the whole Board of Directors in order to appraise the performance, current situation and perspectives for the further development of the Company.

The experience gained operating the Company through this structure indicates that the governance model approved by EDPR shareholders, and adopted in EDPR, is the most appropriate in line with the corporate organisation of its activity, especially because it ensures the transparent and meticulous separation of duties, management, and the specialisation of supervision.

Governance Model

Governing bodies

General Shareholders' Meeting

The General Shareholders' Meeting is the body in which the shareholders participate. It represents the Company with the full authority corresponding to its legal personality and has the power to deliberate, vote and adopt decisions, particularly on matters that the law and Articles of Association reserve for its decision and that must be submitted for its approval.

Board of Directors

The Board of Directors is the body that represents and administrates the Company under the broadest powers of management, supervision, and governance with no limitations other than the responsibilities expressly and exclusively granted to the jurisdiction of the General Shareholders' Meeting in the Company's Articles of Association, in the General Shareholders' Regulations or in the applicable law. EDPR's BoD shall consist of no less than five (5) and no more than seventeen (17) members (including a Chairperson), who are elected for 3 years period and that may be re-elected for equal periods. In the Shareholder's Meeting held on February 22nd, 2021, it was approved to adjust the total members of EDPR's BoD in twelve (12).

The commitment of EDPR with ESG best practices and with the continuous improvement of its corporate governance was again reflected in the composition considered for its governing bodies during 2022, which enabled an agile, independent and diverse corporate governance structure. EDPR's Board of Directors is composed by twelve (12) members of which 10 non-executive, and has an independent Chairperson. The presence of independent Directors and women is key for EDPR, representing 50% and 33% of the composition of the Board respectively. In addition, in line with EDPR's commitment with the best corporate governance practices, 100% of the members of the delegated Committees are independent.

On January 17th, 2022, EDPR received the resignation of Mrs. Joan Avalyn Dempsey as member of EDPR's BoD. On its meeting held on February 9th, 2022, the Appointments and Remunerations Committee analysed the criteria drivers to launch the recruitment process to cover this position, concluding that the most adequate profile should contribute to the diversity and independence of the Board, and be acquainted with the sector and American market, which would be a profile difficult to find before the next Shareholders' Meeting. In this context, the General Shareholders' Meetings held on March 31st, 2022 approved the continuation of the existing vacancy on the Board of Directors and expressly setting forth that the Board of Directors may fill it by co-option after that General Meeting had been held.

It was, on May 3rd, 2022 that following the proposal presented by the Appointments and Remunerations Committee, the BoD approved the appointment by co-option of Mrs. Kay McCall as an independent member to fill the vacancy. This appointment entered into effect on June 1st, 2022 and will be proposed for ratification to the next General Shareholders' Meeting.

Thus, the composition of EDPR's Board of Directors as of December 31st, 2022, is the following:

- António Gomes Mota, Chairperson and Independent Director;
- Miguel Stilwell d'Andrade, Executive Vice-Chairman and CEO;
- Rui Teixeira, Executive Director and CFO;
- Vera Pinto Pereira, Dominical Director;
- Ana Paula Marques, Dominical Director;
- Miguel Setas, Dominical Director;
- Manuel Menéndez, External Director;
- Acácio Piloto, Independent Director;
- Allan J. Katz, Independent Director;
- José Félix Morgado, Independent Director;
- Rosa García, Independent Director;
- Kay McCall, Independent Director.

Executive Directors

EDPR has two Executive Directors who are also Joint Directors – Miguel Stilwell d'Andrade (CEO) and Rui Teixeira (CFO) – to whom the Board agreed to delegate all the competences that can be delegated as per established under the Company Bylaws and the applicable law.

Delegated Committees of the Board of Directors

As regulated by the applicable Law and pursuant to the best corporate governance recommendations, EDPR has set up three additional specialised internal committees, which are entirely composed by non-executive and independent Directors.

Audit, Control, and Related Party Transactions Committee

The main duties of the Audit, Control and Related Party Transactions Committee are the supervision of the financial information and internal control, risk management and Compliance systems. It also assumes the functions related to the analysis and, when applicable, the approval of the Related Party Transactions of the Company.

The Audit, Control, and Related Party Transactions Committee consists of three (3) non-executive and independent members, who as of December 31st, 2022, are the following:

- Acácio Piloto, who is the Chairperson
- Rosa García
- José Félix Morgado

Appointments and Remunerations Committee

The main duties of this Committee are the assistance and report to the Board of Directors in the appointments, re-elections, dismissals, evaluation, and remunerations of the members of the Board of Directors and Management Team members.

The Appointments and Remunerations Committee consists of three (3) non-executive and independent directors, who as of December 31st, 2022, are the following:

- António Gomes Mota, who is the Chairperson
- Rosa García
- José Félix Morgado

Environmental, Social and Corporate Governance Committee

Considering: i) that Environmental, Social and Corporate Governance issues are gaining more relevance; ii) that the new investor profiles demand more and better information on the ESG performance of companies; and iii) the new regulation trends that aim to get commitment with the integration of these aspects; during 2022 it was analysed the convenience of incorporating a delegated committee specialised on these matters.

In this sense, on October 25th, 2022, the Board of Director agreed, in accordance with the proposal submitted the Appointments and Remunerations Committee, to incorporate in EDPR an Environmental, Social and Corporate Governance Committee, and also specifically approving its competences, composition, remuneration of its members and the regulations applicable to the Committee.

The main duties of the Environmental, Social and Corporate Governance Committee are the assistance and report to the Board of Directors in the alignment with the market trends and the company needs regarding Environmental, Social and Corporate Governance matters, with

the aim of also providing the investors with more transparent and exhaustive information regarding matters related to Corporate Governance and the Environmental and Social pillars.

The Environmental, Social, and Corporate Governance Committee consists of five (5) non-executive an independent, that as of December 31st, 2022, are the following:

- António Gomes Mota, who is the Chairperson
- Allan J. Katz
- Kay McCall
- Rosa García
- José Félix Morgado

Management structure

Management team

In January 2021, the Board of Directors agreed to create this body in order to assume the conduction and supervision of the daily activity and performance of the Company. Then, throughout the year, considering EDPR's growth tendency and its presence in new geographies, the appropriate composition of the Management Team was analysed to ensure the required support of both business and technical needs.

Accordingly, it was agreed to establish a new structure for the Management Team that entails the following composition: the CEO and CFO, the representatives of EDPR's Platforms (Europe & Latin America, North America and Asia-Pacific) and a member in charge of the coordination of the technical functions and offshore business.

In this context, as of December 31st, 2022, the composition of the Management Team was the following:

- Miguel Stilwell d'Andrade (CEO)
- Rui Teixeira (CFO)
- Duarte Bello (COO Europe & Latin America)
- Sandhya Ganapathy (COO North America)
- Pedro Vasconcelos (COO Asia-Pacific)
- Bautista Rodríguez (CTO & Offshore Business)

Remuneration policy

EDPR's governance model is reinforced by an incentive structure with transparent remuneration. The definition of the proposal of the remuneration policy for the members of the Board of Directors is incumbent on Appointments and Remunerations Committee, which is appointed by the Board of Directors.

The Remuneration Policy applicable for the reporting period was approved by the General Shareholders' Meeting and maintains a structure with a fixed remuneration for all members of the Board of Directors, whereas for the Executive Directors also defines a fixed and a variable remuneration based on key performance indicators, with an annual component and a multi-annual component.

Variable annual and multi-annual remuneration will be a percentage of fixed annual component, with a superior weight for multiannual vs. annual component (120% vs. 80%). The key performance indicators (KPIs) used to determine the amounts of the annual and multi-annual variable remuneration for each year of the term are proposed by the Appointments and Remunerations Committee with the aim of aligning them with the strategic pillars of the Company: growth, risk control and efficiency.

The Remuneration Policy establishes that the indicators shall be set in accordance with 6 clusters: (i) Shareholders, (ii) People, (iii) Environment & Communities, (iv) Assets and Operations, (v) Innovation & Partners, and (vi) Clients, though 14 KPIs, including all dimensions of EDPR's strategy. Each of such clusters shall have at least one indicator.

All in all, EDPR considers that its Remuneration Policy includes key elements to enhance the Company's management performance not only focused on short-term objectives, but also incorporate as part of its results (as in particular with regards of the assignation of the variable remuneration) the interests and sustainability of the Company and of shareholders in the medium and long term.

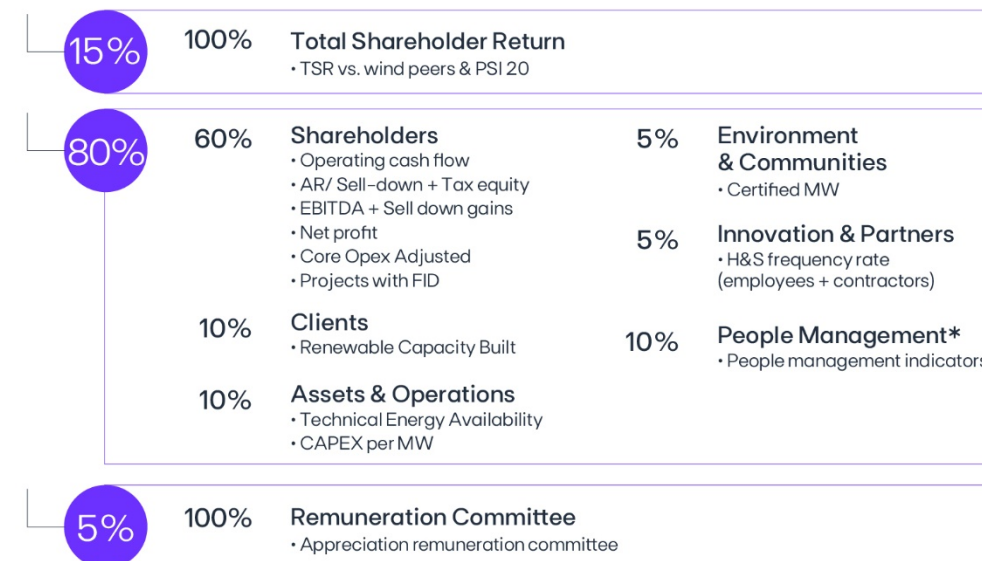

For further detailed information regarding the responsibilities and roles of the different social bodies, its activity during 2022, and the Company's up-to-date articles of association and regulations, please refer to the Corporate Governance section of the report (chapter 5) and visit www.edpr.com.

Remuneration Policy

Components

Variable Remuneration

*The policy has considered the labour conditions and the remuneration of the Company employees in order to define its terms, and in particular, has established this KPI, that includes the results of the Climate Survey launched to the employees in which the satisfaction level with the performance and applicable conditions is reflected.

1.3.3. Organisation structure

EDPR has grown significantly in a short period of time and will continue to step-up its growth, in line with its ambitious objectives for 2025. In this context, the Company's operative model is evolving to have an adequate organisation to cope with the strategic ambitions and enhanced growth standard.

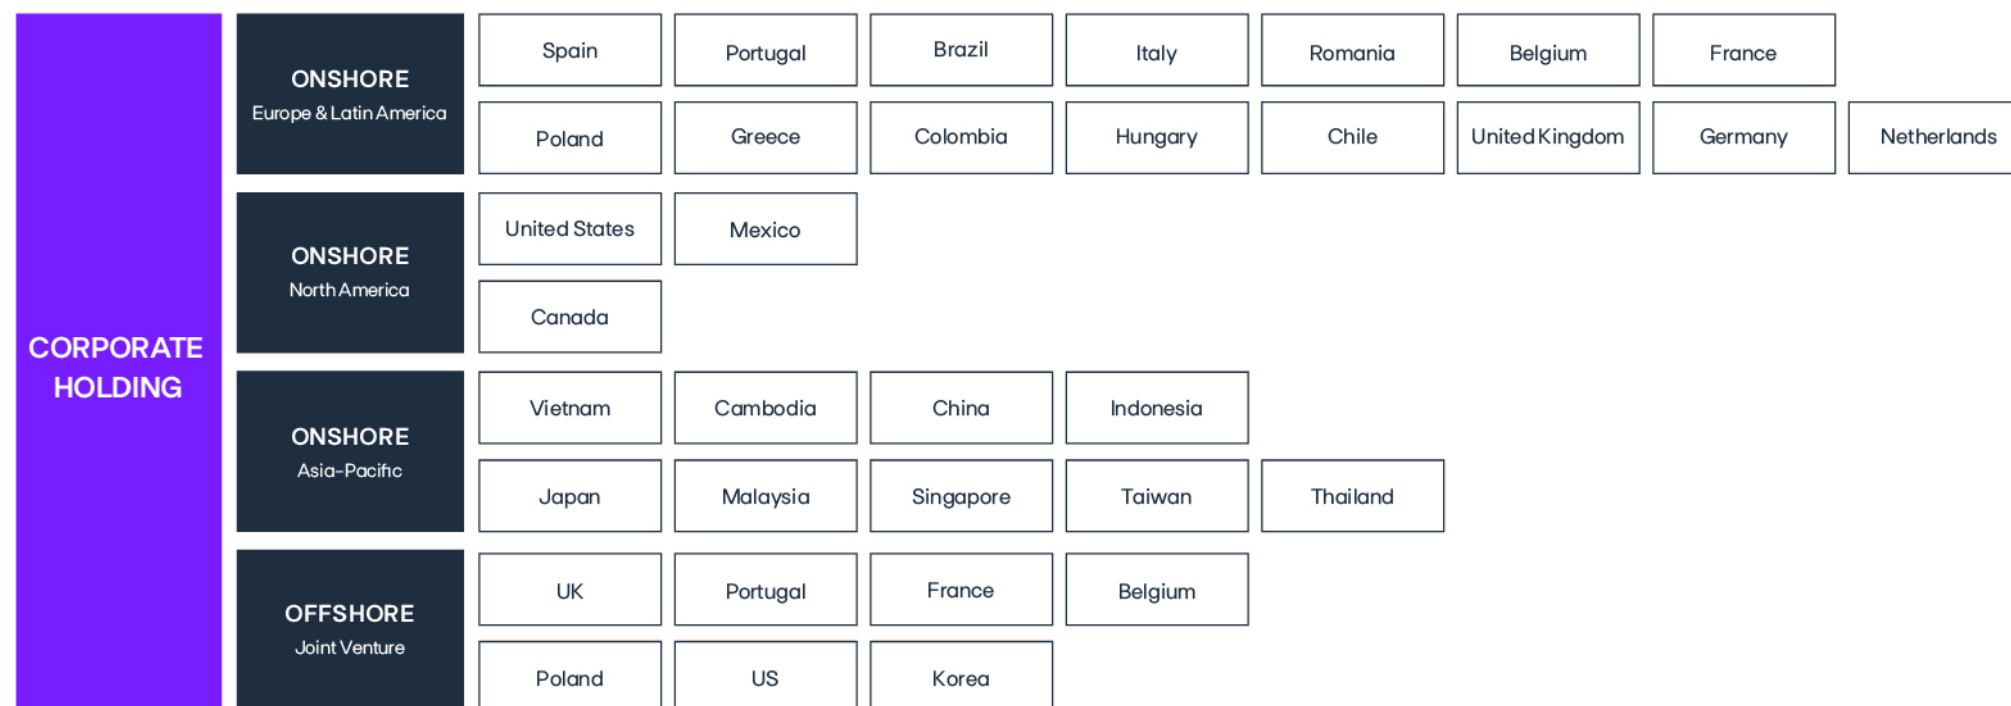

Accordingly, EDPR's organisation structure was defined based in the following fundamentals:

- Ensure corporate functions enable growth, maximize efficiency, and promote one global company;
- Empower core regions (Europe, Latin America, North America and Asia-Pacific) to lead growth and development;

- Leverage existing transversal logic in key business functions, with central and local resources;
- Ensure new technologies (such as storage and hydrogen) are nurtured and amplified by regions and foster further continuous and disruptive innovation.

As a result, EDPR's organisation model is organised around five main elements: a Corporate Holding, Onshore Europe & Latin America (EU & LATAM) platform, Onshore North America (NA) platform, Onshore Asia-Pacific (APAC) platform and Offshore platform. Each platform includes different business units specialised in each of the market's specificities.

This structure provides a perfect balance between the global view necessary to further develop EDPR's leadership in global renewable energy and the local approach that is critical for the successful development of our wind farms and solar plants, ensuring alignment with the defined strategy, optimising support processes and creating synergies.

Organisational model principles

The principles on which EDPR bases its organisational model are defined by the Management Team. These are a set of performance aspects that define the characteristics of the relationships, grant the rights between EDPR Holding and the business units, and ensure optimal efficiency and value creation.

Accountability alignment

Critical KPIs and span of control should be hierarchically aligned at project, country, platform and holding level to endure accountability tracking, and to take advantage of complementarities derived from end-to-end process vision.

Client-service

Corporate areas function as competence support centers and are internal service providers to all business units for all geographical non-specific needs. Business priorities and needs are defined by local businesses, and best practices are defined and distributed by corporate units.

Lean organization

Execution of activities at holding level are held only when significant value is derived, coherently with defined EDPR holding role.

Reinforce collegiate decision making

Ensure proper country-balance dynamics to ensure multiple-perspective challenge across functions

Clarity and transparency

Platforms organization models should remain similar, to allow for:

- 1) Easy coordination, vertically (holding-platforms) and horizontally (across platforms);
- 2) Scalability and replicability to ensure efficient integration of future growth.

EDPR holding

EDPR Holding seizes value creation through the dissemination of best practices in the organisation and the standardisation of corporate processes to the platforms and the business units to improve efficiency. The internal coordination model and interface with EDP Group impacts functions and responsibilities of both the Company's processes and structure. The assignments of the main responsibilities and activities of EDPR Holding to fulfil their respective missions include:

- Define internal structures;
- Ensure a global budget and its periodic monitoring;
- Manage the essential human resources;
- Provide appropriate management information;
- Compete for a culture of excellence throughout the Group;
- Integrate risk management and compliance in each area of responsibility, ensuring the monitoring and effectiveness of controls.

Strategic Management

Covers the activity of EDPR Holding to support the Management Team

- Define strategy objectives, policies, rules and procedures;
- Promote the dissemination of the EDPR culture and best practices;
- Review the accomplishment of the Company's business plan;
- Control key performance indicators.

Transversal Operation

Systematically and progressively coordinate between EDPR Holding and the Business Units

- Leading the activities included in the mission and functions of corporate addresses;
- Align the policies and strategies of each Business Unit;
- Ensure a functional reporting including policies, plan of action of activities;
- Linking the regulatory obligations of each Business Unit with efficient and effective management by leveraging corporate knowledge to maximise the interests and results of the Group;
- Capture synergies and optimise support processes.

EDPR platforms

The four platforms are defined as: Onshore Europe & Latin America, Onshore North America, Onshore Asia-Pacific and Offshore.

Onshore Europe & Latin America platform

After its consolidation in Spain since 1997 as one of the leading companies in the renewable industry, EDPR continued to expand its business in Europe in 2007 with the entry, throughout these years, in other markets such as Portugal, France, Belgium, Italy, Poland, Romania, and more recently Greece, Hungary, UK, Germany and Netherlands.

In South America, EDPR's history began in 2009 through Brazil, entering in the Colombian market ten years later and in the Chilean market in 2021.

In this platform, the technologies that represent the installed capacity are wind and solar photovoltaic (PV).

Onshore North America platform

As part of its growth strategy, EDPR entered the US market in 2007, having more than doubled its wind power production capacity since.

This first approach to the North American market was followed by EDPR's activity in Canada and Mexico and reinforced by its recent entry into distributed solar (DG) power generation in the US in 2021.

On the North American Onshore platform, along with solar DG, wind and solar PV make up the installed base of technologies.

Onshore APAC platform

EDPR entered in Asia through a solar PV project in Vietnam in 2021.

In February 2022, EDPR concluded the acquisition of a majority stake in Sunseap, which has become the most established home-grown clean energy solutions provider in Singapore, being the largest owner and developer of rooftop PV systems. Backed by its strong market position as a leading Pan-Asian solar player, Sunseap is the largest distributed solar player in SEA and top 4 largest solar player in SEA, with an expanding presence.

As a result, EDPR is currently present in 9 APAC markets: Vietnam, Singapore, China, Taiwan, Japan, Cambodia, Malaysia, Thailand, and Indonesia.

The APAC Onshore platform's installed technologies are solar photovoltaic (PV) and distributed solar (DG).

Offshore platform

EDPR has a 50:50 Joint Venture with ENGIE (Ocean Winds) for offshore wind energy since 2020, which grants the development of projects in the United Kingdom, Portugal, France, Belgium, Poland, South Korea, and the United States.

Ocean Winds develops both bottom-fixed and floating offshore wind farms.

1.3.4. Integrity and ethics

EDPR is global energy company, focused on creating value, innovation and sustainability, which operates a business based on a commitment to excellence, serving its stakeholders and making a decisive contribution to a responsible energy transition. One of its most valuable assets is its reputation, which is why EDPR is committed to carrying out all its activities ethically in the different markets in which it operates and acting on principles that derive from its identity. In this context, EDPR is committed to act in accordance with the highest ethical and compliance standards.

Ethics

The Code of Ethics refers to principles of action that include compliance with legislation, integrity regarding matters such as bribery and corruption, respect for human and labour rights, transparency, and corporate social responsibility, including its contribution to sustainable development and its responsibility for the economic, environmental, and social impacts of its decisions and activities. This Code is a privileged tool that frames the reflection on ethics, but it is essentially a guide to support employees in their daily decisions when performing their job activities. It does not override the law and regulations – which must always be fully and scrupulously complied with – but rather complements them by supporting responsible decision making.

In that sense, EDPR's Code of Ethics applies to all Company employees regardless of their position in the organisation and working location, and they all must comply with it. Additionally, the commitments in this Code are equally applicable to EDPR business partners, representatives and suppliers who are, in any way, entitle to act on behalf of EDPR. The Code of Ethics is published on the intranet and website of EDPR, and all employees have access to it. In this sense, all the employees (including new hires) have to confirm its acknowledgement annually. Likewise, this Code has been widely circulated to the employees of the Group through internal communications, and the new hires receive a specific training on introduction to the Code of Ethics (Let's live our Code of Ethics).

During 2022, the Code of Ethics has been reviewed and updated, being approved by the Ethics Committee and the Board of Directors of EDPR in October.

This review considers the established in the Directive (EU) 2019/1937 on the protection of persons who report violations of Union law (incorporation of the speak up channel) and also to achieve a greater alignment with the purpose and strategy of the Group: "Changing Now Tomorrow".

As consequence of the above, in 2022 EDPR has reviewed and merged all its whistleblowing channels and has launched the corporate channel "Speak Up".

The Speak Up channel is a global channel, that welcomes the reporting of alleged violations, either of the Code of Ethics, or of any legal issues – among which are those provided for in the Directive (EU) 2019/1937 – as well as internal policies and regulations. Additionally, in geographies where required by local laws, EDPR has specific Speak Up channels. These channels are published in the official website available to all the employees and to any interested party (<https://www.edpr.com/en/speak-up>).

Through these channels, reporting will follow a robust, effective, and efficient management process, supported by an independent governance model – which includes EDPR's Ethics Committee, the Ethics Ombudsman and, in matters relating to integrity issues or certain specific legislation, the Compliance area.

An essential aspect of the reporting process is the protection of the whistle-blowers, who can also make denounces in an anonymous way. This commitment is predicated on full respect for the principle that anyone who uses the reporting methods in good faith and with justification will be protected from censure or retaliation. Additionally, all information exchanged is kept confidential and secured against unauthorized access, so that personal data protection is assured.

In 2022, there were nine (9) claims submitted through the Speak Up channel or the previous existing channels, of which 6 were considered as founded (2 with an action plan and 4 with a monitoring plan defined), 1 as inconclusive (there is not enough evidence to confirm the infraction) and 2 are under analysis.

The Ethics Ombudsperson, an independent third party that is behind the Speak Up channel, receives the complaints and doubts submitted through this channel and investigates and documents the procedure for each of them. The appointment for this position is made by the Ethics Committee and approved by the Board of Directors and its main functions are detailed in the Corporate Governance section of this report (chapter 5). Since January 2019, the Ombudsperson of EDPR is Maria Manuela Casimiro da Silva.

To support and achieve its Ethics commitments and initiatives, and with the aim of minimising the risk of unethical practices, generating transparency and trust in relationships, EDPR has implemented the following actions:

- **Ethics Committee:** EDPR revised the organisation and functioning of its Ethics Committee to ensure best practices in terms of its composition and scope of action. The main functions of the Committee are detailed in the Corporate Governance section of this report (chapter 5). The Ethics Committee is composed by the Chairman of the Appointments, Remunerations and Corporate Governance Committee, who shall chair the Committee; the Chairman of the Audit, Control, and Related Party Transactions Committee; the Ethics Ombudsperson; the Compliance Officer; the Human Resources Director; the General Counsel & Compliance of EDPR North America LLC.; and the Secretary of the Board of Directors, who shall also perform the duties of the Secretary of the Ethics Committee meetings.
- **Ethics survey:** During this year, the results of the survey launched in November 2021 have been analysed and an action plan has been developed.
- **Celebration of the Global Ethics Day:** On October 19th, EDPR celebrated the Global Ethics Day, and with the goal of reinforcing the ethics culture, the Ethics Ombudsperson and the Compliance officer published messages in the intranet highlighting the relevance of Ethics and Compliance in our organization.

Corporate compliance

The implementation of a solid corporate culture of integrity and transparency has always been a priority for EDPR, structuring its supervision and monitoring through a regulatory compliance conduct basis and through the adoption of ethical values and principles, both consolidated as central elements of its business model.

In order to lead and manage the necessary measures for this implementation and functioning, the Company has a Compliance Officer.

In addition, EDPR has a Global Compliance Model which applies to the whole EDPR Group, maintaining the idea of establishing Compliance as a strategic part of the Company's corporate culture.

In the definition of the Global Compliance Model, the Global Compliance structure has been defined and a great effort has been made to develop a robust set of policies and procedures for the Group, which include the following:

- The **Code of Conduct for Top Management and Senior Financial Officers**, approved by the Board of Directors, that reinforces and complements the Code of Ethics, and reflects the commitment of the people who have been given the responsibility and power to carry out the supervisory and administrative functions of the EDPR Group.
- The **Compliance Standard**, approved by the Board of Directors and updated in 2022, which establishes the principles and procedural rules that govern the carrying out of the Compliance function and the specific Compliance functions of all employees.

The Global Compliance Program integrates specific programs depending on the risks affecting the Group:

- A specific **Integrity Compliance Program**, focused on the prevention of corruption and bribery risks: EDPR has a zero-tolerance approach to bribery and corruption and is committed to act professionally, fairly and with integrity in all business dealings and relationships wherever the Company operates. For this reason, the specific Integrity Compliance Program has as its central axis the Integrity Policy, which was approved by the Board of Directors and updated in 2022. The Integrity Policy has been complemented by other procedures that facilitate the application of this Policy, such as:
 - The Donations and Sponsorships Procedure, approved by the Management Team.
 - The Offers and Events Procedure, approved by the Management Team and updated in 2022.
 - The Conflict of Interest Procedure, approved by the Management Team.
 - The Integrity Due Diligence Procedure and the Procedure for relationship with Public Officials and Politically Exposed Persons. The creation of a technological platform for third-party analysis, which can be used by all Group employees, is noteworthy. Both of them have been reviewed and updated in 2022.
 - The Intermediary Agreements Procedure, approved by the Management Team in 2022.
- A specific **Criminal Compliance Program**, focused on the prevention of criminal risks in Spain considering the regulation in Spain. The Criminal Compliance Policy, initially approved in December 2017, was updated during 2022.

- A specific **Personal Data Protection Program Compliance**, focused on the protection of personal data to which EDPR has access and for which it is responsible. In this context, the Company has been strengthening its management system to ensure the adequacy of EDPR Group's entities to the applicable legal requirements regarding Data Protection in the different geographies. The specific Personal Data Protection Compliance Program has as its central axis in the principles of reflected on the Personal Data Protection Policy, approved by the Board of Directors. The main matters involved this Program are periodically reviewed taking into account new requirements and the expansion of the Group in new geographies:
- The Cookie Policies across different geographies have been updated in 2022.
- Since September 2022, the internal Data Protection Procedures and Methodologies are being reviewed taking into account the regulatory requirements established in the legislations of the new geographies in which EDPR has a presence.
- In October 2022, EDPR started a Project for the review and identification of International Personal Data Transfers accompanied by the elaboration of a Gap Analysis and Action Plan for the subsequent regularization of those transfers that may require it.
- In December 2022, EDPR started the development of a new Master Data Protection Policy at a Group Level.

Within the context of the Global Compliance Program, additional activities performed during 2022 to strengthen corporate compliance were:

- The risk and control matrix was updated. All the areas/departments of EDPR have reviewed the assigned controls and have validated the applicable controls (self-assessment).
- A Control Audit Plan was established, and the controls assigned in the Plan were audited by an independent third party.
- The Risk Assessment Methodology was updated in order to have a more objective risk assessment.
- The reporting system to Top Management and Senior Management was improved, establishing reports about the Global Compliance Model to: (i) the CEO (monthly), (ii) the Audit Control and Related Party Transactions Committee (quarterly), (iii) the Management Team (yearly) and (iv) to the Board of Directors (yearly).

All this normative development implied a strong work to make the new policies and procedures of the Group known, with training and communication in the field of Compliance having a special focus this year.

Training and communication are fundamental tools to strengthen and disseminate the ethics and integrity culture. In this sense, the following activities have been developed during the year: (i) Training for specific areas (M&A, Legal, Procurement) on the Integrity Due Diligence Procedure; (ii) Transversal trainings based on the Compliance Management System, integrity and personal data protection (iii) Training on Ethics for Middle Management, (iv) Training sessions in person in different geographies (Italy, Greece, France, Romania, Brazil, Colombia and Hungary) and (v) training on Ethics and Criminal Compliance to the new hires.

During 2022, 78% of employees completed at least one course of the Ethics or Compliance trainings launched.

These trainings were complemented with communication activities. In addition, specific communications have been made on: (i) the monthly Ethics and Compliance Comic which shows practical cases on the application of the Code of Ethics and the Compliance policies and procedures, (ii) Global Ethics Day campaign, (iii) periodic posts on intranet and internal platforms over compliance topics and (iv) different thematic campaigns as the Privacy Day, GRPD anniversary or anticorruption day.

These achievements allowed EDPR to renew its double certification in Criminal Compliance and Anti-Bribery from AENOR, which verifies and accredits that the company has developed a system of criminal and anti-bribery compliance that meets the requirements of reference standards UNE 19601 and ISO 37001.

With said certifications, EDPR demonstrates that it has an effective anti-bribery management system (ISO 37001) and that its Spanish criminal risks Prevention Model complies with best practices to prevent crime, reduce risk, and foster an ethical and legally compliant business culture (UNE 19601). In addition, these achievements are a recognition of EDPR's commitment to promote a culture of compliance and strengthen values such as integrity, accountability, and transparency.

2.1. Business environment

2.1.1. General context

2022 overview

Today the world is in the midst of a global energy crisis. The Russian invasion of Ukraine is causing far-reaching disruptions on energy markets that are to be added to the ones caused by the COVID-19 pandemic.

Starting in 2019, the pandemic strained global supply chains mainly due to lockdowns all around the world and, in particular, in China. Clean energy projects were delayed for months or even years as procurement, manufacturing, shipping, and logistics were all affected by the supply chain crisis. Although the world began to gradually lift some of the restrictions by the end of 2020, their impacts are still tangible as supply chain have not completely recovered yet.

In February 2022, the Russian invasion of Ukraine had a profound effect on global energy markets. Russia was the largest exporter of fossil fuels, but the curtailment of natural gas supply to Europe together with the European sanctions banning coal and some oil imports, led to price volatility, supply shortages, and security issues. In addition, the war has, again, disrupted global supply chains, as Ukraine, Russia, and Belarus supply much of the world's key raw materials.

In terms of prices, the shortage of fuels has led to record price levels, exposing consumers to higher energy bills. Record dry conditions in parts of southern Europe have also exacerbated the already fragile situation in the energy markets and contributed to upward price pressures. Rising energy prices have ultimately contributed to high inflationary pressures. In response to inflation, central banks across the world are increasing interest rates, which could be pushing the world towards a global recession, increasing the risk of extreme poverty in many regions all around the globe.

Therefore, today's energy crisis has brought to light the vulnerability of our energy system. Fuel shortages have highlighted the importance of energy security and governments all around the world are seeking to put energy independence at the heart of their energy systems. This has translated in important structural changes, with many countries striving to reduce energy demand, diversify energy suppliers and boost domestic sources.

One potential positive development is that, more than ever before, governments are trying to accelerate the energy transition towards a secure, sustainable, and affordable energy mix. Renewables will be the cornerstone of this transition as they simultaneously address energy security and the climate crisis. The US and the European Union have already taken a big step forward in this regard with the approval in 2022 of the Inflation Reduction Act (IRA) and the REPowerEU Plan.

GLOBAL WARMING IN 2022

According to the Copernicus Climate Change Service, 2022 was the 5th warmest year on record and summer 2022 was the hottest on record for Europe. The annual average temperature in 2022 was approximately 1.2°C higher than in the period 1850-1900. The study also reveals that the last eight years have been the eight warmest on record and that extreme climate events are clearly on the rise.

In 2022, numerous climate catastrophes have caused widespread damage all around the world. In Pakistan, monsoon flooding left about a third of the country under water, affecting around 33 million people and killing more than 1,700. In the summer of 2022, China was hit by its most severe heatwave in six decades, exacerbating a drought that caused power shortages in vast areas of the country and forcing the government to ration electricity in some provinces.

In Europe, an extreme heatwave and a drought hit several countries during the summer of 2022, killing at least 15,000 people, according to the World Health Organization.

In the US, Hurricane Ian, a category 4 Atlantic hurricane that struck western and southeast US, was the second-deadliest storm this century in the US, behind Hurricane Katrina in 2005.

CLIMATE NEGOTIATIONS: 27TH CONFERENCE OF THE PARTIES OF THE UNFCCC (COP 27)

The United Nations Conference of the Parties met in Sharm el-Sheikh (Egypt) from October 31st to November 20th, 2022, for its 27th annual summit ("COP 27").

The main achievement of the COP 27 agreement was a commitment to create a new dedicated fund to support vulnerable developing countries facing loss and damage from climate disasters. However, it remains to be decided how the fund will work, and who will contribute to it financially. The agreement states that the donor group will extend beyond developed nations, opening the door for the inclusion of major emerging economies such as China.

Overall, there was little progress from last year's COP26 meeting in Glasgow on key issues. Despite the energy crisis prompted by the Russian invasion of Ukraine and the urgency to phase out fossil fuels, negotiators failed to reach a commitment on greater cuts to greenhouse gas emissions and an end to fossil fuel use. There were however a few exceptions, with some countries announcing more ambitious nationally determined contributions (NDCs), like Australia, Singapore, Thailand, or Norway, and other announcing faster decarbonization (Turkey and India, among others).

REPowerEU

At European level, the European Commission adopted in May 2022 the REPowerEU Plan, a proposal to rapidly reduce dependence on Russian fuels and accelerate the energy transition. The Plan aims to end Europe's dependence on Russian fossil fuels as quickly as possible (by 2027, with a 2/3 cut in Russian gas consumption by the end of 2022), using a combination of supply diversification of gas and demand reduction. The strategy plans to increase gas supplies from other producers, including Norway, Algeria, Libya, and Azerbaijan and through higher LNG imports, involving the need to adapt gas infrastructure to allow for the import of more LNG. Plans to reduce natural gas demand are to be built on fuel substitution, mainly increasing the share of renewables, but also increasing, green hydrogen and nuclear, among others.

The REPower plan increases the renewable ambition of the Fit-for-55 Package which was presented in July 2021. In that package, the European Commission proposed that the EU should increase its renewable in energy demand to 40% in 2030. In the REPowerEU, the Commission proposes to increase this target to 45%. The Parliament has already endorsed the new 45% target while most of the EU member states have not done it so far.

Essentially, achieving REPowerEU targets would mean tripling renewable energy additions until 2030, achieving 510 GW of wind and 592 GW of solar PV.

Solar PV is in fact the primary focus of REPowerEU. The 2030 Solar target is increased 122 GW (compared to the previous 470 GW target). A dedicated EU Solar Strategy was also presented to achieve those ambitious solar goals. The Strategy provides recommendation to boost all kind solar PV installations and targets to develop and EU solar industry.

Permitting has been identified as the main barrier to achieve renewables deployment. The Plan includes a proposal to tackle permitting delays to ensure that renewable projects are able to complete the permitting procedure within two years. The Plan also outlines dedicated "go-to" areas for renewables¹ that would be put in place by Member States, with shortened and simplified permitting processes in areas with lower environmental risks.

The REPowerEU plan involves a series of amendments of existing legislation, namely the Renewable Energy Directive whose discussion will continue over 2023

Before that, the Commission released a proposal to speed up permitting process for renewable energy projects, that was agreed in a Council regulation in December 2022.

Inflation Reduction Act

The Inflation Reduction act of 2022 (IRA) was signed into law on August 16th, 2022, representing the most significant legislative action ever to tackle climate change and accelerate the transition towards a clean energy economy. The law aims at achieving its emission-reduction goals through enhanced support of renewable technologies, electric vehicles, green hydrogen, and carbon capture, utilization & storage (CCUS), among others.

QUOTE IRA. JOE BIDEN, PRESIDENT OF THE UNITED STATES

"The new law is not just about today, it's about tomorrow. It's about delivering progress and prosperity to American families."

Targets will be delivered through a combination of grants, loans, rebates, incentives, and other investments to support the goals. The law allocates 369 billion USD in Energy Security and Climate Change programs over the next ten years, the largest climate-related investment by the US government ever seen, to help the country achieve a more clean and sustainable energy matrix. Of this, wind, solar, and storage would receive an estimated \$128 billion of tax credit extension and expansion. Crucially, the law adopts long-term energy tax credit structures to support renewable energy projects, giving developers a 10-year window for such incentives versus the previous stop-and-go scheme. These new credits will be available until either 2032 or until the power-sector emissions are 25% compared to 2022 levels.

Expiring tax credits for wind and solar would be extended through 2024, and after this period they would switch to new technology-neutral credits for new emission-free power plants. According to industry estimates, the IRA could contribute to a doubling of the share of renewable energy generation by 2030, relative to current levels.

¹ Now called "Accelerated Renewable Areas".

2.1.2. The evolution of renewables around the world in 2022

Wind

Global wind additions are expected to remain strong in 2022², with analysts³ forecasting around 95–99 GW of new capacity. If confirmed, total additions would probably be similar than the ones observed in 2020 (95 GW) and 2021 (94 GW). All analysts highlight the challenges faced by the wind industry: in addition to the supply chain disruptions caused by the COVID-19 and delays in project commissioning all around the globe, the wind industry is facing new challenges caused by Russia's invasion of Ukraine.

Regarding offshore wind, new installations are expected to drop by around 50% in 2022, following an extraordinarily good year in 2021. According to consulted analysts, around 9–13 GW of projects are expected to be connected in 2022, with China representing around 50% of new additions. The UK is also expected to drive the record-high-capacity additions in Europe, adding around 3 GW of new capacity.

Overall, China remains the largest wind market, although additions have dropped from last year's record-breaking figures. According to the National Energy Administration (NEA), China added 37.6 GW of wind power, down 21% in annual terms. Experts believe that new installations have been impacted by China's strict pandemic control measures and the end of feed-in tariffs for offshore wind projects. However, the outlook for the next years is promising, in particular following the announcement of the China's Five-Year Plan on renewables that foresees doubling the renewables generation by 2025 (compared to 2020YE levels).

In the European Union, new wind energy installations totalled 15 GW in 2022, according to preliminary data released by Wind Europe, up 33% in annual terms. Onshore wind installations represent around 90% of the total, with Germany, Sweden, Finland, Spain and France leading the ranking. In the offshore field, France commissioned its first offshore wind farm, adding almost 500 MW to the European offshore. The preliminary capacity data exclude the UK, which is expected to drive record-high-capacity additions in Europe, adding around 3.2 GW of new offshore projects.

Although the results are positive, especially in view of the high inflation and supply chain challenges, the Association points out that 15 GW are still significantly short of EU needs in order to reach climate and energy security targets. Permitting is regarded as one of the main barriers to further deployment, although new regulation approved in December 2022 by the European Council should reduce permitting bottlenecks and unlock part of the 80 GW of wind that are currently estimated to be stuck in the licensing process.

In the US, only 8.6 GW of wind projects were connected in 2022, according to the American Clean Power Association (ACP). This slowdown in wind installations is mainly explained by the phase-down of the PTC prior to the passage of the Inflation Reduction Act. No offshore wind projects were commissioned in 2022, but according to the ACP, at least 24 GW of offshore wind projects are under construction or in advanced development. In addition, ten states have set offshore wind procurement targets, accounting for more than 74 GW.

In South America, Brazil is likely to be the largest market in 2022, wind experts forecasting around 3 GW of new onshore wind additions.

² At the time of preparation of this report, final data from the Global Wind Energy Council (GWEC), the American Clean Power Association (ACP) or Wind Europe, had not been released.

³ Experts consulted include: GWEC, IHS markit, Bloomberg New Energy Finance, Wood MacKenzie, IEA, Wind Europe and American Clean Power Association, among others.

Solar PV

2022 is on course to become another record-breaking year for solar PV, with consulted analysts⁴ estimating that around 193–268 GW of new installations could have been deployed worldwide. All analysts highlight that solar PV is becoming the least costly option for new electricity generation in an increasingly number of countries, despite soaring equipment prices and lingering supply challenges.

All solar PV segments have witnessed considerable growth in 2022. According to experts, around 55–60% of new solar PV capacity would be utility-scale projects and the remaining ones small-scale (mainly residential and commercial systems).

China remains the largest solar PV market worldwide and once again achieved a new historical high in new installations, with 87 GW added according to the National Energy Administration (NEA). Other major markets in Asia include India (around 14 GW expected), Japan (around 6 GW) and Republic of Korea (around 4 GW).

Europe also witnessed an excellent year in terms of solar PV additions, with 41 GW installed, an impressive annual growth of 47% from the 28 GW installed in 2021. According to Solar Power Europe, Germany was again Europe's largest market with 7.9 GW of newly installed capacity, followed by Spain (7.5 GW), Poland (4.9 GW), the Netherlands (4.0 GW) and France (2.7 GW).

The EU's solar power generation fleet amounts to 208.9 GW, 25% more than in 2021 (167.5 GW). Therefore, solar capacity has exceeded the 200 GW milestone, only four years after it surpassed the 100 GW landmark.

In the US, around 18–24 GW of solar PV capacity could have been added in 2022⁵. Although overall results are positive, the preliminary data point to a relative slowdown of the sector, mainly explained by trade barriers, high equipment prices and ongoing supply chain constraints, that is hindering solar energy fast progress.

New solar PV additions in South America are also expected to hit a new record in 2022. Since 2018, the region has, every year, added more solar PV than wind and this trend is set to continue. The strong rise of solar PV is primarily driven by the small-scale segment. Rapid expansion of the sector was witnessed in Brazil (2.7 GW added in 2022 according to ANEEL) and Chile (1.8 GW, according to ACERA data).

FLOATING SOLAR PV

The rise of floating solar technology is also among the latest trends in the revolutionary growth of solar PV capacity. Floating solar refers to solar panels mounted on a structure that floats on a body of water, typically a reservoir, lake, or even in coastal areas.

The main advantage is that the technology removes the need of purchasing or leasing expensive land areas. In addition, the water has a cooling effect on the solar facility, increasing its efficiency. On the other side, the shade of the floating installation helps to reduce water evaporation, ultimately protecting the water resources.

Although today, the total installed capacity of floating solar is below 5 GW, there is wide consensus among experts that it will exponentially grow in the next years. In Singapore, Sunseap (now part of EDPR) completed in 2021 one of the world's largest floating PV plants, with a capacity of 5 MW. Although Asia Pacific is taking the lead in deploying the technology, other regions are also progressing fast. EDPR will start the construction of the Alqueva floating solar plant, which is set to become the largest in Europe (70 MW).

⁴ Experts consulted include: IHS markit, Bloomberg New Energy Finance, Wood MacKenzie, IEA, solar Power Europe and American Clean Power Association, among others.

⁵ Experts consulted include IHS, BNEF, IEA and Wood MacKenzie, among others.

2.1.3. Regulatory framework

Belgium

- Green certificate scheme (GC).
- Wind farms receive market price plus GCs per MWh produced.
- Number of GC/MWh (kECO) for new plants' contracts was previously revised every two years:
 - However, due to soaring electricity prices, an extraordinary revision was done in December 2021: from April 2022 onshore wind projects will receive 0.52 GC/MWh instead of 0.73 GC/MWh (current parameter).
 - Also, in December 2022 it has been updated, to 0 GC/MWh.
- The minimum price for GCs is set at 65€/GC in Wallonia.

Poland

- Electricity price can be established through bilateral contracts.
- Wind farms commissioned before 2018 are supported through a Green Certificate scheme (GC). Wind receives 1 GC/MWh during a 15-year period. Electricity suppliers have a substitution fee for non-compliance with GC obligations.
- Since 2018, wind farms are supported by 15-year two-side Contracts-For-Difference awarded through auctions.

Italy

- Wind farms in operation prior to 2012YE are under a feed-in-premium scheme applicable during the first 15 years of operation.
- Wind farms commissioned from 2013 to 2017 are supported by a 20-year floor CfD scheme, awarded through competitive auctions.
- Since 2017, wind farms are supported by a 20-year two-side CfD scheme.

Portugal

- Wind farms commissioned before 2006 are subject to a Feed-in-tariff (FiT) whose value is correlated with production and indexed to CPI. Initial tenure was the soonest of 15 years (or until 2020) or 33GWh/MW but it was increased 7 years (tariff extension) with a cap and floor scheme in exchange of annual payments between 2013 and 2020.
- Wind farms under the new regime (COD after 2006) are subject to a FiT for the soonest of 20 years from COD of 44 GWh/MW. Tariff value is also indexed to CPI.
- Since 2019, solar projects are awarded following a new auction system.
- Floating PV projects awarded in 2022 auction have a 15 years CfD with a negative strike price (the original project pays for injecting the energy in the grid in exchange of securing grid capacity that can be used by over equipment and hybrid).

Spain

- Under RD 413/2014, wind energy projects receive pool price and a premium per MW in order to achieve a target return defined by regulation.
- RDL 17/2019 has set the target return (TRF) @7.398% for WF's prior to 2013 for the next two regulatory periods (until 2031) and @7.09% for new installations for the current regulatory period (until 2026).
- Premium calculation is based on standard assets (standard load factor, production and costs).
- Since 2016, all the new renewable capacity is allocated through competitive auctions.
- In 2020, RD 960/2020 defined the framework for a new auction mechanism.
- In 2021 and 2022 three auctions under the new scheme (set by RD 960/2020) were held:
 - Wind and onshore PV projects competed for 12-year fixed-price PPAs with certain exposure to market prices (5% for non-dispatchable and 25% for dispatchable RES).
 - Participants were awarded unidentified MWs but were requested to comply with stringent deadlines and submit a strategic plan.

Colombia

- Colombian wind farms are awarded 15-year contracts through competitive pay-as-bid auctions. Contracts are signed with distribution companies.
- Additionally, Colombian wind farms must secure reliability charge contracts, which provides a monthly payment in exchange of having part of their capacity available when the system is under tight supply conditions.

Brazil

- Old wind farms receive support under a feed-in program ("PROINFA").
- Since 2008, competitive auctions award 20-year PPAs to winning projects.
- Electricity may also be sold under private PPAs.

France

- Old wind farms receive Feed-in tariffs for 15 years, with values depending on their COD and load factors achieved.
- A transitory Contract-for-difference scheme was released in December 2016 in which wind farms having requested a PPA in 2016 would receive a 15-year CfD, being the strike price very similar to the previous FiT. This scheme was closed in December 2019.
- From 2017 onwards:
 - Wind farms with 6 wind turbines (or less, and with 3MW/WTG maximum) can request a 20-year CfD which strike price ranges from 72€/MWh to 74€/MWh depending on turbine's diameter and may include a FiT reduction when a yearly generation cap is reached. Since April 2022, additional tip height restriction (below 132m) has been implemented.
 - Wind farms not eligible to CR17 need to participate in competitive tenders in order to obtain a 20-year CfD.
 - A new set of rules ("Cahier des Charges") that will govern auctions (both technology-specific and neutral) from H2 2021 until 2026 were published in August 2021.

Romania

- Wind assets (installed until 2013) received 2 GC/MWh until 2017 and 1 GC/MWh after 2017 completing 15 years:
 - 1 out of the 2 GC earned until March 2017 is postponed and can only be recovered gradually from January 2018.
- Solar assets received 6 GC/MWh for 15 years:
 - 2 out of the 6 GC earned until December 2020 are postponed and may only be recovered gradually from 2025.
- GC are traded in the market under a cap and floor system (cap €35.0 and floor 29.4€).
- Wind assets (installed after 2013) receive 1.5 GC/MWh until 2017 and 0.75 GC/MWh afterwards until completing 15 years.
- Solar PV facilities (installed after 2014) only receive 3 GC.
- The GCs issued after April 2017 and the CGs postponed to trading from July 2013 will remain valid and may be traded until March 2032.

Greece

- Renewable projects in Greece are supported by a 20-year feed-in premium (Contract-for-Difference) awarded through auctions.
- In 2022, Greece launched a new support system, based on two-way contract-for-difference contracts, awarded through auctions:
 - For both onshore wind and solar installations, support will be awarded through a joint competitive tendering procedure, with minimum reserves per technology of 30%.

Hungary

- Renewable projects before 2016 benefited from a feed-in tariff scheme ("KÁT system").
- In 2016 the FiT was closed to new projects and replaced by a new support system ("MÉTAR system") consisting of 15-year Contracts-for-Difference granted through technology-neutral tenders.

Chile

- Technology-neutral auctions, for renewable and non-renewable technologies award 15-year power purchase agreements with distribution companies.
- Large non-regulated customers can also enter into PPAs directly with generators or organize a public auction.

UK

- Since 2013, renewables are supported through a 15-year two-way Contracts-for-difference, awarded through auctions, that have progressively replaced the former Green Certificate scheme:
 - The “established technologies” which include onshore wind and solar PV, compete for budgets in each allocation round. Less mature technologies have a separate “pot” of allocated budget. For the first time, in 2023 auction, offshore will compete with mature technologies.

Vietnam

- Onshore wind projects were supported under two different Feed-in-tariff regimes:
 - Projects were granted a 20-year PPA with EVN, the state utility.
 - As the latest feed-in-tariff was closed for new projects, a new support scheme is expected to be released soon – most likely, competitive auctions will be introduced.
- Solar PV projects have also been remunerated under two different feed-in-tariff regimes and the government is also planning to introduce a pilot auction program.
- FiT schemes are no longer available; however a transitional scheme has been published for renewable projects that had a FiT signed but failed to COD on time. Transitional scheme would be subject to a price negotiation with EVN.

Singapore

- No support is given to large-scale renewable energy.
- Solar PV development is mainly incentivized through public agencies tenders like the SolarNova programme or JTC tenders:
 - Solarnova was launched in 2014 by the Housing Development Board (HDB). It aggregates demand for solar PV across some government agencies buildings to achieve economies of scale. Since 2014, 7 SolarNova tenders have been launched, granting 441MW
 - JTC is a government agency under the Ministry of Trade and Industry that launched several Solar PV tenders under the Solarland and SolarRoof programme. There have been fewer and smaller auctions than in solarnova's program.

Other APAC

- In APAC, many countries enacted FITs' schemes in the first stages of renewables' development (Japan, Taiwan, India, Thailand, among others). However, most of these countries are transitioning to other schemes (mainly auction-based systems) and are opening up to the possibility of private corporate PPAs (for example South Korea, Malaysia, Australia, Australia, etc.).
- Other countries have opted for GC systems (for example, India or Korea), although this system has not been widely used in APAC countries.
- An increasing number of countries are setting auctions to remunerate renewable projects (Singapore, Japan, China, some States in Australia, Taiwan, India, Malaysia).

2.2. Strategy

The World is joining forces to face global warming, one of the major challenges that currently threatens the planet, that if not controlled might have irreversible consequences.

There is an undeniable new private and social commitment demanding and supporting an unparalleled renewables growth to meet the requirements for a decarbonised and electrified world in which a clean, affordable, and reliable energy sector is at the centre of the economy. This will inevitably lead to an unparalleled growth of renewable energy that is expected to be supported by a continued decrease in renewables' costs. EDPR has extensive experience in the sector and a track-record in delivering its targets, often ahead of schedule, and is prepared to deliver on a new and even more ambitious plan.

EDPR's Business Plan for the 2021-25 period is based on a strategy focused on accelerating growth, supported by the value generated by its ongoing Asset rotation strategy, and performed by its proven high-quality teams and efficient operations based on sustainable excellence across all ESG dimensions.

¹Adjusted by offshore costs (mainly cross-charged to projects' SPVs), service fees, one-offs, and current period also adjusted by forex.

EDPR's business model to deliver solid and ambitious growth targets through 2025, positioning the Company to successfully lead a sector with increased worldwide relevance.

2.2.1. Growth

Accelerated and selective growth is the key principle behind EDPR's investment selection process, with new projects having long-term PPAs or CfDs secured or awarded through long-term contracts under stable legal and regulatory frameworks.

As presented in February 2021, EDPR plans for the period 2021-2025 to double its installed capacity and add 20 GW, of which 11.2 GW is already secured as of December 2022. EDPR is still aiming to diversify its portfolio geographically and technologically even more, developing more wind onshore, solar, wind offshore and storage technology along with the entrance in new markets. Geographical distribution of the 20 GW is planned to be 45% in North America, 35% in Europe, 15% in Latin America and 5% in Other geographies (now Asia-Pacific), while technological distribution will result in 45% additions on wind onshore, 40% in solar PV, 7% in solar DG, 5% in wind offshore and 2% in storage.

New markets expansion in 2022

EDPR's 2021-25 Business Plan foresaw that ~5% of the overall 2021-25 investment would be directed to new markets in order to develop optionality and diversify EDPR's portfolio. Key criteria when assessing new markets are having strong fundamentals, stable legal and regulatory frameworks, growth potential, large market size and visibility on low risk contracted remuneration.

APAC is one of the largest and fastest growing renewables market globally with expected additions of 120 GW/p.a. on average until 2030 (55% of global additions) and solar will represent ~65% of these additions, split between PV and DG. Therefore, besides announcing the entrance in Vietnam through an acquisition back in June 2021, EDPR acquired Sunseap, the largest distributed solar player and top 4 largest solar player in SEA, with presence in 9 markets and a total of 0.6 GW operating and under construction.

This year, EDPR has also acquired Kronos, a solar developer company based in Germany. This acquisition allows EDPR to enter into Germany and the Netherlands which benefit from ambitious renewables targets, given the increased importance of security of supply and energy independence.

Germany represents close to 50% of the acquired portfolio and the government has recently announced the “Easter Package” that stands out with ambitious renewables capacity targets, with 360 GW of renewable installed capacity until 2030. Moreover, the entrance in these new markets creates opportunities to expand not only in solar but also in other technologies, namely wind standalone or wind through hybridisation, hydrogen, and storage technologies.

EDPR main growth market driven by PPAs secured

North America is EDPR’s main growth market, with 7.2 GW of installed capacity, representing almost half of EDPR total portfolio. **The US, Canada and Mexico will account for 45% of the total 20 GW targeted capacity additions.** As of December 2022, **EDPR already secured 55% of such target** with 4.7 GW secured, of which 4.3 GW in the US, with around 2.8 GW in solar technologies.

Focus on low risk regulatory frameworks

EDPR growth in Europe is supported by identified short-term opportunities along with medium-term pipeline options and PPA appetite. **EDPR plans to add 6.7 GW in Europe, representing 35% of the total capacity to be added in the period 2021–2025.** As of December 2022, from the targeted 6.7 GW, **EDPR already secured 3.5 GW related to wind onshore and solar PV.** In April 2022, EDPR was awarded 70 MW of floating solar PV in Portugal. In 2022, EDPR added 378 MW of wind onshore in Europe and 53 MW in Solar.

Projects with long-term PPAs

South America represents a 15% of the total capacity to be added in the 2021–2025 period. EDPR has been active in upcoming opportunities, namely auction and long term PPAs, given the strong fundamentals of some South American countries, with high growth of electricity demand, robust renewable resources and stable regulatory frameworks. As of December 2022, **EDPR already secured more than 2.0 GW in South America**, mostly in Brazil, with 1.5 GW secured (of which 0.5 GW will be solar).

Both Sunseap and Kronos are fully aligned with EDPR’s growth strategy and within the investment target for new geographies, allowing EDPR to accelerate growth worldwide in both solar and wind.

Solid platform on one of the fastest growing renewables market globally

New geographies represents a 5% of EDPR 2021–25 growth. EDPR managed to accomplished 50% of such target with the acquisition of Sunseap in 2022, a solar focused platform based in Singapore. As of December 2022, **EDPR had a total secured capacity in new geographies of 0.9 GW and added 0.7 GW of solar related to APAC.** In June, EDPR strengthened its position in Vietnam with the agreement to acquire two solar projects of 200 Mwac in operation since 2020 and with a 20-year PPA. With this, EDPR will expand its footprint in the world, accelerating its growth in Asia-Pacific where establishes a solid platform.

Investing in offshore wind technology

Offshore wind energy is becoming an essential part of the global energy transition, leading to the market’s rapid growth and increased competitiveness. **EDPR and ENGIE** combined their strengths and formed a 50%/ 50% **Joint Venture called Ocean Winds** with **a target of 5 to 7 GW of projects in operation or under construction and 5 to 10 GW under advanced development by 2025.** In 2022, Ocean Winds was awarded five new projects: ScotWind (2 GW, UK), NY Bight (~1.7 GW, US), Shetland Islands I & II (2.3 GW, UK) and Golden State (2.0 GW, US). As of December 2022, total gross capacity in the portfolio amounted to 16.6 GW.

Developing new technologies and business models to ensure long term renewables competitive edge and growth

HYBRIDIZATION

Improve profitability and assets utilization

- Opportunities combining Solar + Wind to improve infrastructure utilization.
- 0.4 GW of hybrid projects analyzed for 2021–25.
- 70 MW of hybrid wind capacity awarded in Portugal

STORAGE

Strong path to address intermittency

- Deploy storage coupled with solar (first solar 200 MW + storage 40 MW under construction in US).
- New unit to develop capabilities for standalone storage management (0.4 GW expected through 2025).
- Addressing client requirements.

FLOATING OFFSHORE

Differentiated business case

- Early-mover advantage and technology partner
- Large GW projet in early stage in Korea and pipeline in Spanish and Greek islands
- Five new projects awarded YTD in North America and Scotland

REPOWERING

Increasing current assets long-term value

- Using current infrastructure and upgrade with more efficient technology.
- First repowerings successfully installed/under construction in Spain (42 MW) and in US (162 MW)
- At least additional 0.4 GW expected through 2025 (in the US taking advantage of current PTC framework).

SOLAR DG

Leverage distinctive go-to-market capabilities

- Through the agreement to acquire Sunseap in 2022, Solar DG enabled EDPR to enter a new market such as Asia Pacific where utility-scale will also play a key role.
- With the acquisition of C2 in 2021, EDPR will develop the distributed generation segment, broaden competitive solutions to its customers and boost the North America platform growth potential reinforcing the company's commitment with the region.
- Enables EDPR to serve a rapidly growing market segment offering a range of new services and solutions to meet its clients' renewable energy needs.

HYDROGEN

Key role on decarbonization

- Improve renewables value creation through synergies, offering additional services and repurpose thermal assets.
- Ambition to deploy 1.5 GW of green energy hydrogen production capacity by 2030.
- Agreement with Lhyfe to jointly develop and manage renewable hydrogen production projects

2.2.2. Value

The ongoing Asset rotation model has been a cornerstone of EDPR's strategy, and its success has been key to crystallise value upfront to redeploy and fund accretive new growth opportunities.

The Asset Rotation model relies on a combination of the cash generated from operating assets and EDPR's strategy of selling majority stakes in projects in operation or under development, along with the US Tax Equity structures to finance the profitable growth of the business. This model allows the Company to crystallise value upfront while recycling capital to reinvest in other projects.

Value: Ongoing Asset rotation strategy

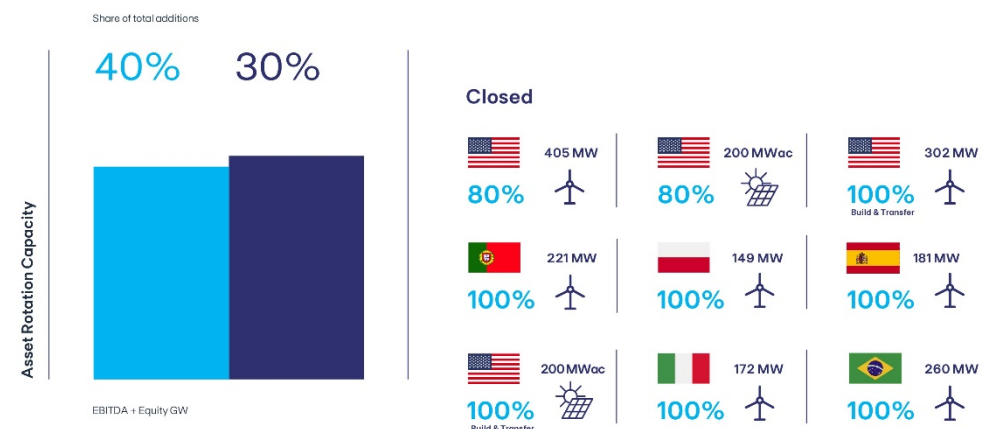

Proceeds from selling majority stakes in operational or under development assets are also important sources of funds for the self-funding model of EDPR in financing its profitable growth.

Under this strategy, EDPR sells majority stakes in projects in operation or in late stage of development, allowing the Company to recycle capital, with up-front cash flow crystallisation, and create value by reinvesting proceeds in accretive growth, with the option to provide operating and maintenance services. On the top of these, the Asset rotation strategy makes visible the value creation on reported financial statements, with capital gains being booked in the income statement.

In its 2021-25 Business Plan, EDPR estimated to deliver capital gains of c.€0.3 billion p.a. but demand for RES assets has increased considerably, therefore driving valuations to high levels.

In terms of capacity, EDPR has sold on average 1.1 GW/year in 2021-22 (below the average 1.4 GW/year targeted) allowing for an average capital gain of 0.5 billion euros per MW.

Since 2021, EDPR has closed 9 asset rotation transactions (7 in wind and 2 in solar, including 2 Build & Transfer agreements) with c.€3.4 billion of Asset rotation proceeds, representing over 40% of our €8.0 billion target.

2.2.3. Excellence

One of the strategic pillars of the Company, setting it apart in the industry, is the drive to maximise the operational performance of its wind and solar plants through excellence and the experience from its quality teams. EDPR has flexibility on managing the full value chain to deliver competitive and quality projects at the highest excellence standards, while guaranteeing the compliance with the best ESG standards.

Development: Competitive projects

EDPR leverages on its local development knowledge and multi-partnership network to find and develop competitive and quality projects. The Company's second to none energy assessment track record, experienced PPA origination teams and efficient site layouts are set to maximise the output of each and every project, both operational and financial wise.

Construction: Large experienced focused on delivering

EDPR's global scale provides competitive procurement over the whole portfolio. Its long-term business with top tier suppliers becomes a scarce asset nowadays, accounting with more than 20 years of relationships, bringing EDPR the best market opportunities. The large experience in years and MW of EDPR's E&C team leverage on agile project management, focused in delivering new projects to the portfolio.

Operations: Excellence in asset management

EDPR's unique O&M strategy has allowed the Company to increase internalisation post-warranty, therefore resulting in service price reductions and flexibility to choose today on an asset-by-asset basis the most competitive choice between insourcing or outsourcing. Since 2021, macro environment has rapidly change worldwide with supply chain unbalances and inflationary pressure leading into higher costs. EDPR continued to grow even under such circumstances, however leading into higher Core OpeX/ MW ratios YoY.

Setting targets for ESG excellence throughout the value chain

	2022	2025
 Circular economy % Recovery rate for generated wastes in the whole value chain	74% ¹	85%
 Biodiversity % Facilities with high biodiversity risk with action plans defined	100%	100%
 People % Improve diversity and inclusion by increasing female employees	33%	36%
 Communities €/year Investment in supporting local communities	2.4	3
 Suppliers % Purchasing volume in sustainable suppliers	62%	75%
Zero accidents mindset		

¹ Recovery only for operations since there was no dismantling in 2022, and construction data is in progress.

EDPR's growth derived from the 2021-25 Business Plan will be supported by the current top-class team and reinforced by the best talent in the market, attracted by a superior value proposition offered by the Company. Accordingly, EDPR's team increased by 44% during 2022, having now over 3,000 employees.

In this context, EDPR developed a Human Resources strategy focused on three main pillars and supported by specific targets:

Attract

EDPR aims to integrate the best talent in the market, attracted by a great company culture, while fostering diversity and inclusion as a trigger for innovation.

**First

2.3. Risk management

In line with EDPR's controlled risk profile, Risk Management process defines the mechanisms for measurement and management of risks and opportunities impacting the business, increasing the likelihood of the Company in achieving its financial, operational and ESG targets, while minimising fluctuations of results.

Risk management process

EDPR's Enterprise Risk Management Process is an integrated and transversal management model that ensures the minimisation of the effects of risk on EDPR's capital and earnings, as well as the implementation of best practices of Corporate Governance and transparency.

EDPR's Enterprise Risk Management Process is inspired on Basel Committee on Banking Supervision's principles, guidelines, and recommendations.

The process aligns EDPR's risk exposure with the Company's desired risk profile. Risk management policies are aimed to mitigate risks without ignoring potential opportunities, thus optimising return versus risk exposure within predefined risk appetite limits.

Risk governance model

Risk management is closely followed and supervised by the Audit, Control and Related Party Transactions Committee; an independent supervisory body composed of non-executive members. It is also endorsed by the Management Team, supported by the Risk Committee, and implemented for investment and day-to-day decisions by all managers of the Company.

EDPR has created three distinct forums within the Company's Risk Management processes, separating discussions on execution of mitigation strategies from those on definition of new policies, in order to help decision-making process:

- **Restricted Risk Committee:** Held every month, it is mainly focused on development risk and market risk from selling energy (electricity price, basis, profile, Green Certificates and RECs). It is the forum to discuss the evolution of projects under development and construction and the execution of mitigation strategies to reduce merchant exposure. It also monitors compliance with risk thresholds defined within risk policies (market risk, counterparty risk, operational risk, and country risk).
- **Financial Risk Committee:** Held every quarter, it is held to review main financial markets risks (exchange rates, interest rates and inflation), liquidity risk, commodities risk and credit risk to financial institutions and discuss the execution of mitigation strategies.
- **Risk Committee:** Held every quarter, it is the forum where new strategic analyses are discussed, and new policies and procedures are proposed for approval to the Management Team. Additionally, EDPR's overall risk position is reviewed, together with EBITDA@Risk and Net Income@Risk.

Risk map at EDPR

Risk Management at EDPR is focused on covering all risks of the Company, including ESG. To have a holistic view, they are classified in five Risk Categories. Within each Risk Category, risks are classified in Risk Groups. In addition, for each risk category and risk group, EDPR implements a series of mitigation strategies with specific measures. The full description of the risks and how they are managed can be found in the Corporate Governance chapter. The Risk Categories, the Risk Groups and the Risk Management mitigation strategies are summarised below.

Risk categories

Market risks It refers to the risk to EDPR resulting from movements in market prices. Due to the relationship between wind production and energy price, production risk is considered within market risk. In particular, market risks are changes in energy prices, energy production risk, interest rates, foreign exchange rates and other commodity prices.

Counterparty risks Risk that counterparty to a transaction could default before final settlement of the transaction's cash flows. A direct economic loss would occur if transactions with the counterparty had positive economic value at the time of default. Even in the case of not defaulting, it may not comply with its contract obligations (timing, quality, etc.), implying additional higher costs due to its replacement or to delays in fulfilling the contract.

Operational risks Defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events (such as an increase in equipment default rates, increasing O&M, or natural disasters) and ensuring Business continuity at all times. It also includes risks such as ESG and environmental impact in the business.

Risk groups

- Energy Price Risk
- Energy Production Risk
- Commodity Price Risk
- Liquidity Risk
- Inflation Risk
- Exchange Rate Risk
- Interest Rate Risk

- Counterparty Credit Risk
- Counterparty Operational Risk

- Development Risk
- Legal Claims Risk (Compliance, Corruption, Fraud)
- Execution Risk
- Personnel Risk (health and safety, human rights, discrimination)
- Operation Risk (Damage to Physical Assets, Equip. Performance, Environmental and Climate Change aspects)
- Processes Risk (including Business Continuity)
- Information
- Technologies Risk

Mitigation strategies

- Close analysis of natural hedges to define best alternatives.
- Hedge of market exposure through long term power purchase agreements (PPA) or short and medium term financial contracts.
- Natural FX hedging, with debt and revenues in same currency.
- Execution of FX hedging for net investment (after deducting local debt).
- Execution of FX hedging to eliminate FX transaction risk, mainly in Capex.
- Execution of interest rate hedging.
- Execution of inflation hedging.
- Alternative funding sources such as Tax equity structures and Multilateral/ Project Finance agreements.

- Counterparty exposure limits by counterparty and at EDPR level.
- Collateral requirement if limits are exceeded.
- Monitoring of compliance with internal policy.

- Supervision of suppliers by EDPR's engineering team.
- Flexible CODs in PPAs to avoid penalties.
- Partnerships with strong local teams.
- Monitor recurrent operational risks during construction and development.
- Close follow-up of O&M costs, turbine availability and failure rates.
- Insurance against physical damage and business interruption.
- Strict compliance with legal requirements and zero tolerance for discrimination, unethical behavior or fraud.
- Attractive remuneration packages and training for personnel.
- Revision and compliance with all regulations that affect EDPR activity (H&S, environmental, taxes...).
- Control of internal procedures.
- Redundancy of servers and control centers of wind farms.
- TCFD analysis and climate mitigation measures
- Contingency plans
- ESG policies and specific measures

Risk categories

Business risks

Potential loss in the Company's earnings due to adverse changes in business margins. Such losses can result, above all, from a serious increase in equipment prices or changes in the regulatory environment. Changes in energy prices and energy production are considered market risks

Strategic risks

It refers to risks coming from macroeconomic, political, social or environmental situation in countries where EDPR is present, as well as those coming from a change in competitive landscape, from technology disruptions, from changes in energy markets or from governance decisions (investment decisions criteria, Corporate Governance and Reputational issues).

Risk groups

- Regulatory Risk (renewables)
- Equipment Price Risk
- Equipment Supply Risk

- Country Risk
- Competitive Landscape Risk
- Technology Disruptions Risk
- Invest. Decisions Criteria Risk
- Reputational Risk
- Meteorological Changes
- Corp. Organisation and Governance
- Energy Planning

Mitigation strategies

- Careful selection of energy markets based on country risk and energy market fundamentals.
- Diversification in markets and remuneration schemes.
- Diversification in technologies.
- Follow-up of regulation changes in markets where EDPR is present to adjust strategy if needed.
- Active involvement in major industry associations in all EDPR markets.
- Signing of medium-term agreements with equipment manufacturers to ensure visibility of prices and supply.
- Relying on a large base of equipment suppliers to ensure supply.
- Careful selection of countries.
- Worst case profitability analysis of every new investment considering all risks factors.
- Risk-return metrics at project and equity level
- Profitability resilience metrics.
- Consideration of stress case scenarios in the evolution of energy markets for new investment decisions.
- Follow-up of cost effectiveness of renewable technologies and potential market disruptions.

Risk analyses highlights during 2022

In 2022, EDPR analysed the impact of the current inflationary scenario on costs and revenues. On costs, it was considered the exposure to inflation of operating expenses, capital expenses and interest payments, while on revenues, the exposure of inflation-indexed PPAs and merchant revenues. Different measures were put in place to balance inflation exposure, namely the increase in the duration of the corporate debt with EDP.

Moreover, a detailed analysis on the effects of the conflict between Ukraine and Russia was performed to determine which are the main risks to which EDPR is exposed and to define a contingency plan to reduce potential impacts. As a follow-up of this analysis, EDPR took some business continuity measures in bordering countries with Ukraine.

Also, during 2022, EDPR reassessed the Operational Risk of the company, executing a bottom-up analysis across all departments, as stated in EDPR's Operational Risk Policy. Following the growth of the installed capacity at EDPR in recent years, together with the planned growth within the current Business Plan, it was agreed to adjust the Operational Risk threshold accordingly in EDPR's Operational Risk Policy and Enterprise Risk Management framework.

Finally, EDPR performed a deep-dive analysis on current and expected future Counterparty exposure to capital equipment suppliers, within the context of the main challenges faced by the industry, such as supply chain bottlenecks, inflationary pressures and increase in commodity prices, with individual counterparty risk limits adjusted accordingly. Additionally, EDPR also proposed to adjust its Portfolio risk limits to account for its Distributed Generation activity in Asia-Pacific, following EDPR's acquisition of a majority stake in Sunseap during 2022.

EDPR risk matrix by financial impact

EDPR's risk matrix is a qualitative assessment of likelihood and impact of the different risk categories within the Company. It is dynamic and it depends on market conditions and future internal expectations and scenarios.

Emerging risks at EDPR

Changes in weather patterns at a global level caused by climate change

Resource volatility has always been a normal part of the Renewables business but, in the past few years, the level of concern regarding the resilience of companies to withstand future shifts in weather patterns, derived from climate change, has increased significantly. In addition, the latest reports of the Intergovernmental Panel on Climate Change (IPCC) highlight climate change as one of the most significant risks that society will face in the future.

It is not clear how global warming will affect changes in weather patterns in the long term, but it could imply that some regions will have weaker resources in the future, leading to drops in energy production, while some others will be experiencing increases.

To monitor this emerging risk and its potential impact, EDPR has adopted the recommendations issued by the Task Force on Climate-Related Financial Disclosures (TCFD) to analyse, incorporate, and disclose climate-related risks and opportunities into its business.

EDPR has assessed the potential impact arising from changes in weather patterns, in which physical and transition risks, as well as opportunities, were analysed using three different climate scenarios. Each of these scenarios included a set of political, social, economic, and technological narratives associated to them.

From the analysis, it was concluded that the geographical and technological diversification from EDPR's portfolio significantly helps mitigate this potential risk.

In addition, for those risks that EDPR has identified as significant, the Company has identified a series of adaptation measures that EDPR has currently in place in some markets and may replicate in others in the short, medium, and long term.

Gap in labour market and availability of talent for renewable energy companies

Increased competition for labour resources, both skilled and unskilled, structural changes in work culture (driven by remote working) and digital transformation are some of the factors creating an emerging gap in the supply-demand labour market.

The rapid growth of the global renewable energy industry, expected for the next couple of decades, together with an ageing world population, could originate a mismatch between the availability of skilled and professional labour and the demand from industry players, including EDPR.

A shortage of qualified personnel could impact team sizing and productivity, lead to an increase in workforce costs and create the need to go further on the benefits provided, in order to attract and retain talent in the organisation.

To tackle the problems caused by this emerging risk, EDPR is putting in place some mitigation measures, such as the development of youth-targeted programs, an increase in social media presence geared towards recruiting and networking initiatives, the advancement of work-inclusive methodologies and the flexibilization of work, in line with the new reality and work culture.

Potential misalignment between regulatory risk on energy market design with international commitments for climate transition

The marginal remuneration system has been a staple of the wholesale electricity market design in Europe and North America for many decades. However, in recent years, this operating model has seen its fair share of challenges, as a growing number of intermittent, zero-marginal cost technologies (such as wind or solar) have increased its share in the overall production, leading to higher generation uncertainty and price volatility within electricity markets.

These structural challenges, coupled with the aftermath of a worldwide pandemic, the constraints in global supply chains and the invasion of Ukraine in 2022, created an unprecedented situation of high electricity prices, especially in Europe, leading many governments to implement short-term regulatory changes in the hopes of easing the economic impact on consumers and businesses alike.

For energy companies, the emerging discussions on potential modifications to the current marginal design of electricity markets, can create a situation of deep uncertainty and affect their strategic outlooks.

Structural changes with retroactive consequences on existing projects' profitability could discourage any new investments in renewable installations and promising technologies, thus jeopardising the fulfilment of the ambitious long term climate goals put forth by those same countries. This could, in turn, lead to a downwards revision of those same climate transition objectives.

To address this emerging risk of regulatory changes not being aligned with long-term climate goals, EDPR's mitigation strategies entail a close follow-up of the regulatory developments, an active participation in national and international discussions, a strategic approach to geographically diversify its presence and the creation of contractual resilience, in order to share the risk stemming from potential structural changes in market design.

(1) AR stands for Asset Rotation

EDPR continues to deliver solid selective growth

With a top-quality portfolio, EDPR has a strong track record and proven capability to execute superior projects and deliver on targets. The installed asset base of 14.7 GW is not only young, on average 9 years, it is also mostly certified in terms of environmental and health and safety standards.

As of 2022, EDPR had, in terms of EBITDA + Equity capacity, 5,656 MW installed in Europe, 7,242 MW in North America, 1,114 MW in South America and 726 MW in APAC.

In terms of technology, EDPR continued its effort to diversify its portfolio, which translates into 12,724 MW of wind onshore, 322 MW of wind offshore and 1,691 MW of solar technology, that includes both solar PV utility-scale and solar DG.

Capacity by Region (%)

Capacity by Technology (%)

2022 installations were global, mainly driven by South America and APAC

During 2022, EDPR added a total of 2,121 MW, including the successful expansion in APAC through the acquisition of Sunseap, that now represents 5% of EDPR's portfolio.

More specifically, EDPR added 1,053 MW of wind onshore, corresponding to 378 MW in Europe, namely 145 MW in Spain, 100 MW in Poland, 83 MW in Italy, 32 MW in France, and 18 MW in Portugal. In North America, 96 MW were installed coming from a project in Mexico. Lastly, in South America, EDPR added 580 MW of wind onshore in Brazil.

In terms of solar capacity, 377 MW were added in Vietnam, 316 MW in the US, 230 MW in Singapore, 92 MW in the rest of APAC, 36 MW in Poland, 9 MW in Spain, and 8 MW in Portugal.

Pursuing its Asset rotation strategy, EDPR successfully concluded several Asset rotation deals that amounted to c.1 GW of capacity. In detail, EDPR sold a 100% stake in a 149 MW wind portfolio in Poland, a 181 MW wind portfolio in Spain, a 172 MW wind portfolio in Italy, a 260 MW wind portfolio in Brazil and in a 200 MWac solar project in the US, the latest under a Build & Transfer agreement.

All in all, in 2022, EDPR consolidated portfolio net variation was of +1.2 GW.

10% increase Year on Year in generation

EDPR produced 33.4 TWh (+10% YoY) of clean energy in 2022. The YoY evolution comes in line with a higher installed capacity in the period and a better renewable resource YoY.

In 2022, EDPR achieved a 30% load factor (vs 29% in 2021) reflecting 98% of P50 long term average GCF, following a recovery of the renewable resource, especially in the first half of the year, mainly driven by North America.

EDPR achieved a 95% technical availability in 2022, with the company continuing to leverage on its competitive advantages to maximise the projects' output and also on its diversified portfolio across different geographies to minimise the renewable resource volatility risk.

Generation by Region (%)

Solid growth and diversified portfolio delivers balanced output

EDPR's operations in Europe were a major driver for the electricity production increase in 2022, increasing +4% YoY to 11.8 TWh and representing 35% of the total output. This is mainly explained by the new capacity in operation and stable renewable resource. In Europe, EDPR achieved a 26% load factor (flat YoY). In Spain, load factor during the year was 26% (flat YoY), while in Portugal reached a load factor of 27% (-1pp YoY). On the other hand, in the Rest of Europe, EDPR accomplished a 26% load factor (+1pp YoY).

In North America, output increased +8% YoY to 18.4 TWh, reflecting mainly a stronger renewable resource at 33% (+2pp YoY). North America represented 55% of EDPR's total output in 2022.

EDPR's production in South America, more precisely in Brazil, increased to 2.6 TWh (+39% YoY), mainly explained by higher installed capacity. The region represented 8% of all EDPR generation in the year, despite a lower load factor of 39% load factor (-2pp YoY).

Finally, APAC production during the year reached 0.6 TWh following the solar capacity additions in the year, and already represent 2% of all EDPR generation.

EDPR manages a portfolio of 14.7 GW, propelled by capacity additions in 2022

As of December 2022, EDPR had 4.0 GW of new capacity under construction, more than doubling 2021 levels of capacity under construction.

Capacity under construction has increased for solar technology during the last year, fostering portfolio diversification and supporting most of the additions for 2023 and beyond, of which the most sizeable ones are Moray West wind offshore project in the United Kingdom and the two wind projects in Colombia.

In terms of wind onshore, under construction capacity amounted to 188 MW in Europe, 119 MW in Italy, 22 MW in Portugal, 20 MW in Spain, 15 MW in France and 12 MW in Poland. In North America, 502 MW were under construction, of which 300 MW corresponding to wind onshore in Canada and 202 MW to wind in the US. In South America, Colombia had 504 MW of wind under construction.

Regarding solar capacity under construction, 659 MW were in Europe, more precisely, 193 MW in Italy, 184 MW in Poland, 170 MW in Portugal, and 112 MW in Spain. In North America, EDPR had 1,573 MW under construction, all of them coming from the US, and out of which 40 MW are related to the first capacity of storage of the company to start constructions. Finally, EDPR also had 126 MW of capacity under construction in APAC.

In terms of wind offshore, EDPR had, through Ocean Winds, 431 MW under construction at equity level coming from the Moray West project in the United Kingdom, which translates to 912 MW gross capacity.

EDPR has a young portfolio with 9 years of average operating age, with an estimate of over 21 years of useful life remaining to be captured.

Capacity Under Construction by Technology (%)

Capacity Under Construction by Region (%)

Assets Average Life (years)

3.1.2. Financial performance

Income Statement

Revenues reached €2.4 billion and EBITDA summed €2.2 billion.

Revenues (€m)

Revenues totaled €2,371 million (+35% increase vs 2021) on the back of additional installed capacity (+€251 million vs 2021), higher average selling price excluding Asset rotation (+€138 million vs 2021), Asset rotation effect (+€38 million vs 2021), better wind resource (+€43 million vs 2021), forex translation and others (+€145 million vs 2021).

Other operating income amounted to €526 million (-17% vs 2021), largely driven by €424 million related to capital gains from Asset rotation transactions closed during the year in Europe, US and Brazil.

Since 2021, macro environment has rapidly changed worldwide with supply chain unbalances and inflationary pressure leading into higher costs. EDPR continued to grow despite such circumstances. In this context Operating Costs (Opex) totalled €920 million (+36% vs 2021), given upfront costs to support expected growth over the coming years. In comparable terms, adjusted by offshore costs (mainly cross charged to projects' SPV), Sell-down assets deconsolidated, one-offs, service fees and forex, Core Opex (defined as Supplies and Services and Personnel Costs) per average MW was up 16% year on year.

In 2022, EBITDA summed €2,157 million (vs €1,760 million in 2021) and EBIT amounted to €1,412 million (vs €1,151 million in 2021). Net Financial Expenses increased to €449 million (vs €249 million in 2021) with comparison impacted by forex and higher average debt.

At the bottom line, Net Profit summed €616 million (vs 655 million in 2021). Evolution was impacted by higher financial expenses and impairments of PP&E in South America, that if excluded lead to a Recurring Net Profit of €671m (+2% vs 2021).

Non-controlling interests in the period totalled €201 million (vs €154 million in 2021), as a result of better overall performance.

CONSOLIDATED INCOME STATEMENT	2022	2021	Δ% YoY

Recurring Net Profit	671	655	2%

Balance sheet

In 2022 total equity increased by €396 million.

Total Equity of €10.6 billion increased by €396 million in 2022, of which €2,007 million are attributable to reserves and retained earnings. Equity attributable to EDPR shareholders increase is mainly explained by the +€616 million from Net profit in the period, along with +€30 million of the exchange rate effects, -€256 million from variation in fair value cash flow hedges and -€86 million from dividend distributions to EDPR shareholders.

Total Liabilities increased €5,066 million year on year to €16.9 billion, explained by the increase in financial debt (+€2,119 million), rents due from lease contracts (+€341 million), deferred tax liabilities (+€184 million), deferred revenues from Institutional partnerships (+€67 million), and other liabilities (+€2,524 million), despite the decrease in provisions (-€54 million) and in Institutional partnerships (-€115 million). Debt-to-equity ratio stood at 160% by the end of 2022. Liabilities were mainly composed of financial debt (36%; vs 34% in 2021), liabilities related to institutional partnerships in the US (8%; vs 13% in 2021) and other liabilities (39% vs 34% in 2021).

Liabilities to tax equity partnerships in the United States decreased by €48 million to €2,212 million. Deferred revenues related to institutional partnerships primarily represent the non-economic liability associated to the tax credits already realised by the institutional investor, arising from accelerated tax depreciation, and yet to be recognised as income by EDPR throughout the remaining useful lifetime of the respective assets. Deferred tax liabilities reflect the liabilities arising from temporary differences between the accounting and the tax basis of assets and liabilities. Accounts payables include trade suppliers, PP&E suppliers, deferred income related to investment grants received and derivative financial instruments.

As total assets summed €27.5 billion in December 2022, the equity ratio of EDPR reached 38%. Assets were 65% composed of net PP&E – property, plant and equipment representing €17.9 billion (+€3,329 million vs 2021). In detail it included +€3.4 billion of capex, -€0.6 billion of depreciation charges along with positive exchange differences of +€0.5 billion.

Net intangible assets of €3.0 billion mainly include €2.3 billion from goodwill registered in the books, for the most part related to the acquisitions made in the period.

Cash flow statement and Investment activity

Operating cash flow impacted by top line performance

In 2022, EDPR generated Operating cash flow of €1,049 million (+29% vs 2021), due to a better top line performance. Operating cash flow is nothing more than the EBITDA net of income tax, income from institutional partnerships in the US, changes in working capital, and non-cash items that include the €424 million of capital gains from Asset Rotation transactions.

Cash flow evolution was mainly impacted by Gross Investments of €5,147 million (+80% vs 2021), driven by the higher levels of Capex at €3,446 million (+37% vs 2021) mainly in APAC and South America, fostering geographical diversification of the portfolio, and Financial Investments that reached €1,701 million coming mainly from the acquisition of two solar portfolios in APAC and Europe that are programmed to help EDPR diversify its portfolio technology wise.

All in all, Net Debt increased €2,003 million during the year.

Net debt

Supporting the investments that are behind the growth plan

As of December 2022, Net Debt totalled €4,938 million (vs €2,935 million in 2021) reflecting the investments made in the period, to support the company's growth targets, the negative forex translation and higher cost of debt that offset the better top-line performance and stronger operational cash flow that is supported among other things by the value generation coming from the Asset rotation deals concluded in the year.

Net Debt (€m)

Debt Maturity (%)

Income statement by region

Europe

In 2022, Europe increased its revenues to €1,279 million (+38% vs 2021) due to higher production at 11.8 TWh (+4% vs 2021) and higher prices, mainly in Spain (+52% vs 2021). Net Operating costs (Operating costs net of other operating income), increased to €80 million, primarily explained by the higher capital gains in the previous year. All in all, EBITDA in Europe totalled €1,248 million (+31% vs 2021), reflecting an EBITDA margin of 98%.

North America

In North America, revenues increased to €952 million in 2021 (+25% vs 2021) on the back of higher capacity and resource in period, with the previous year impacted by the one-off ERCOT event in the US during the first quarter of 2021. Net Operating costs increased to €332 million, reflecting mainly the higher number of Asset rotations concluded in the previous period. Operating costs increased +40% vs 2021. As a consequence, North America EBITDA totalled €655 million (vs €747 million in 2021), reflecting an EBITDA margin of 69%.

South America

In South America, revenues increased to €89 million (+31% vs 2021) on the back of higher renewable resource and electricity generation (+39% vs 2021) in Brazil. Net Operating costs decreased to -€89 million, due to the €122 million of other operation income registered in 2022 mainly explained by the gains generated from the Asset rotation of a 260 MW wind portfolio in Brazil. All in all, EBITDA in South America totalled €177 million, (vs €49 million in 2021) reflecting an EBITDA margin of 200%.

APAC

2022 marked the integration of Sunseap in EDPR, during the first quarter of the year. In 2021, EDPR consolidated a single 28 MW solar project, which explains the comparison not being like-for-like. It should be noted that in APAC, the company registered revenues of €85 million and an EBITDA of €35 million, that translates into an EBITDA margin of 41%.

Subsequent events

EDPR informs about clawback taxes in Romania and Poland renewables generation

Madrid, January 9th 2023: EDP Renováveis, S.A. (“EDPR” or “company”) informs to the market about regulatory developments in Romania and Poland where it operates 521 MW and 697 MW of renewables capacity respectively.

According to the European Union Council Regulation 2022/1854 of October 6th 2022 (Regulation), on an emergency intervention to address high energy prices, emergency cap mechanisms should apply on realized market revenues only, including hedging operations against fluctuations in the wholesale electricity market. This is necessary to avoid harming producers who do not actually benefit from the current high electricity prices due to having hedged their revenues against fluctuations in the wholesale electricity market.

In this context, governments in Romania and Poland have recently introduced emergency clawback mechanisms to restrict the revenues earned by renewable energy producers and other market participants. In Romania a 100% tax is applied on revenues over 450 RON/MWh as well as a withholding tax on behalf of offtakers. In Poland a clawback mechanism is applicable to non-CfD energy with 100% tax on revenues above 345 PLN/MWh for wind projects under Green Certificate (GC) scheme and the corresponding strike price for projects under CfD scheme.

EDPR considers that these new legislations in Romania and Poland do not follow the European Union Council principle of clawing back only realized market revenues as both ignore financial hedges in place within EDPR. These financial hedges follow the company’s low risk strategy to secure long term revenues and to remove electricity prices volatility on the company’s earnings. Ultimately, these new taxes may result in the cancelation of the effects of the existing risk management strategies legitimately implemented by renewables producers resulting in taxation of unrealized profits, clearly against the Regulation principles.

These developments in Romania and Poland have a direct impact on EDPR, that will have to pay the taxes as if it was benefiting from current high electricity market prices, without consideration of costs incurred with the associated financial hedges in energy markets. This non consideration of financial hedges can result in unreasonable payments and potential costs estimated at €0.3 Bn in 2023, depending on the evolution of electricity wholesale prices,

final interpretation/implementation of the recently published legislations and their compatibility with international agreements in force.

EDPR will pursue all legal actions to contribute to the return to a fair rule of law that may support the much-needed investments in renewables in these countries and within the European Union.

Blackrock notifies acquisition of a qualified shareholding in EDPR

Madrid, January 23rd 2023: EDP Renováveis, S.A. (“EDPR”) is providing the following information to the market:

Blackrock Inc. (“Blackrock”) has notified EDPR that, in accordance with article 23 of Royal Decree 1362/2007 and as a result of transactions executed on January 20th 2023, it has crossed the 3% minimum threshold for qualified shareholding positions.

Following such transactions, Blackrock is attributed with 28,069,268 voting rights in EDPR, corresponding to 2.922% of the aggregate voting rights in the company.

EDPR completes Asset Rotation deal of a 260 MW operating wind portfolio in Brazil

Madrid, January 30th 2023: Following the information released to the market on October 6th 2022, EDP Renováveis, S.A. (“EDPR”) is pleased to announce the completion to Sale and Purchase Agreement with Companhia Paranaense de Energia (“COPEL”) to sell a 100% equity stake in 2 operating wind projects that total 260 MW of capacity, situated in the state of Rio Grande do Norte, Brazil, for an estimated Enterprise Value of BRL1.8bn as of December 31st 2021 (€0.3 billion @5.51 EUR/BRL rate).

With this transaction, EDPR has already secured €3.4bn of Asset rotation proceeds within the context of the €8bn Asset rotation program for 2021–25 announced in EDPR Capital Markets Day in February 2021, allowing EDPR to accelerate value creation while recycling capital to reinvest in accretive growth.

EDPR secures its first PPA in Greece

Madrid, February 14th 2023: EDP Renováveis, S.A. (“EDPR”) is pleased to announce that it has secured a long-term Power Purchase Agreement (“PPA”) with MYTILINEOS – Energy &

Metals, one of the largest industrial and energy companies in Greece, to sell the green energy produced by a 78 MW wind portfolio.

This deal marks EDPR's first PPA in Greece and it will be covered by a portfolio that consists of 3 wind projects that are expected to enter into operation between the end of 2024 and 2025, more precisely:

- 2 projects, with 23 MW and 35 MW respectively, located in Voiotia, Greece;
- 1 project with 21 MW located in Achaia, Greece.

With this new portfolio, EDPR has now 11.2 GW secured out of the 20 GW target additions for 2021–25 announced in EDPR Capital Markets Day in February 2021. Additionally, this transaction enables EDPR to achieve more than 3.6 GW of the 6.7 GW target for renewable capacity additions in Europe during 2021–25.

EDPR's success in securing new PPAs reinforces its low-risk profile and growth strategy based on the development of competitive projects with long-term visibility, fostering the acceleration of the energy transition and the decarbonization of the economy.

Information on average payment terms to suppliers

In 2022, total number of invoices paid by Spanish companies within the legal payment period amounted to 10,212 invoices, 97% of total invoices, while the payments made within the legal payment period amounted to €54,931 thousand, which represents 88% of total payments. The average supplier payment period was of 28 days, below the payment period stipulated by law of 60 days.

Own shares

As of December 2022, EDPR did not hold own shares and no transactions were made during the year.

3.2. Human capital

Key Data

2022 highlights

During 2022, EDPR was consolidated as a human-centred company under its new vision of one company, one culture, and one purpose, where “Our energy and heart drive a better tomorrow”.

To become future-proof and evolve as a global, agile, and efficient organisation, EDPR needs empowered people that help the Company become prepared for its future challenges, ignited by a human-centred approach and a holistic development, which requires a common DNA and purpose that fulfil its business and people needs.

To bring this DNA and purpose to life, which was driven by the global development mindset rollout worldwide, a human skillset is a crucial piece of this transformational puzzle, helping EDPR translate who it is, how it delivers and what impact it wants to have in the world.

This skillset is composed by 3 axes:

- The first one is **Energy**: portrays EDPR’s stamina and path until now, track record, ability to execute, and deliver results in an efficient way.
- Because EDPR is human-centred, its **Heart** highlights its people and their key role in delivering the Company’s commitment to its clients, partners, and communities.
- And finally, EDPR’s **Drive** reflects its ambition and leadership in making change happen, being bold to anticipate and embrace it.

In fact, the Company’s increasingly global scope in business and geographies, made it revisit the purpose and skills needed to reinforce a one global company culture, mobilising it towards its goals and ensuring a common and engaging employee experience. In that way, EDPR has moved to a hybrid working model worldwide, looking for encouraging a culture of flexibility and well-being.

In addition to the significant organic growth seen in the countries in which EDPR was already present, 2022 was marked by an inorganic increase through two acquisitions. With the acquisition of Sunseap, the Company incorporated more than 500 employees present in 9 different countries in APAC. Sunseap will provide EDPR with local talent and knowledge in Asia-Pacific region and experience in distributed solar business. Additionally, in 2022 EDPR reached an agreement to acquire a 70% stake in Kronos, a solar developer company based in Germany. This acquisition allowed EDPR to enter in Germany and the Netherlands.

Employee journey

EDPR is aware that people are its most important asset, and that is why it is devoted to support the employee experience and life within the Company as a key factor in achieving the objectives of the 2021–25 Business Plan. A customised Employee Value Proposal is offered to employees throughout their journey in EDPR, which allows them to join a multinational team and grow along with it. EDPR believes that motivated workforce aligned with the Company’s strategy is one of the key drivers behind the ability to deliver positive results.

In this sense, EDPR has a People & Organisational Development (P&OD) strategy defined by five key pillars: Empowered Organisation, Human-Centred Experience, People Management Lift, Capabilities for the Future, and Smart & Digital Ecosystem. Much has been done to advance each of these pillars during 2022, considering an active listening of the employees, and the Company will continue to make progress in each of them in the coming years.

During 2022, the Climate Survey was launched, in which 94% of the employees participated in all EDPR and a result of 86% Engagement was obtained.

EDPR continuously works to provide excellent conditions for its employees, to grow and develop talent at all levels, and to optimise its policies and practices. As a result, EDPR has been recognised again by the Top Employers Institute as one of the best companies to work for in Europe in 2022 and, at a local level, in Spain, France, Italy, Portugal, Poland, Romania and for first time in Brazil. The Company was also recognised as a 2022 Top Workplace in the United States. These certifications endorse EDPR as one of the best companies to work at worldwide thanks to the journey it offers its employees.

Attract

EDPR is facing a very challenging context, as growing its business requires attracting and retaining talented and empowered people.

Attracting talent

EDPR is leading energy transition process in the renewable energy sector and is aware that its team is key to achieve this. Therefore, the Company is continuously striving to attract talent, bringing in the right skills and profiles to address current and future business challenges, and retain professionals who seek to excel in their work.

In EDPR, non-discrimination and equal opportunities are guaranteed during all the selection processes. This is reflected in its Code of Ethics and Recruitment Manual of EDPR, which

contains specific clauses on non-discrimination and equal opportunities, in line with the Company's culture of diversity, equity, and inclusion (DEI) and the respect for human and labour rights.

During 2022, EDPR implemented different talent attraction initiatives to strengthen its image as a leading employer:

- Job fairs:** One of the basis of EDPR's philosophy in terms of attracting talent is to work on the pillars of the labour market, serving and attracting future professionals in the sector. In 2022, EDPR focused on both professional and field technician job fairs. This not only allowed the Company to connect with students and professionals, but also to achieve a higher brand awareness in the US, and to grow EDPR's early career bench with the upcoming talent of the future. Throughout the year, the Company attended 62 job fairs from the most relevant Universities and Business Schools worldwide, with an assistance of more than 30,000 students. In addition, EDPR revamped its employer branding initiatives with new approaches to attract talent, such as the open days.
- Recruitment sources:** The most important recruitment source for EDPR, aligned with its P&OD strategy and philosophy, is its own team. In 2022, more than 15% of the planned positions were filled internally with EDPR employees, offering opportunities for growth and development. Nonetheless, EDPR's main source of recruitment is LinkedIn, covering up to 50% of the positions hired in 2022. LinkedIn historically is one of the best professional networks to recruit professional, young, and experienced talent, but due to the competitiveness in the market, EDPR had to be more creative in its recruitment approach. In this sense, different strategies have been defined to attract talent that include EDPR company profiles in new professional networks (such as XING for Germany and Handshake in the US), and a brand communication plan which includes initiatives associated with universities, entities recognised in the sector, and additional measures in the digital sphere that will strengthen EDPR's employer brand. This talent search also includes involvement of the hiring managers messaging talent in order to entice the connection with the Company.
- EHUB:** EDPR NA and EDPR EU&LATAM platforms have worked together in close collaboration to build a specific unit of professional employees, focused on technical areas who support the North American areas who live in Porto, Portugal, and Madrid, Spain. This program started with 8-10 positions and now currently has 21 employees and growing, having little to no turnover within the group. The program provides a true global experience for the employee and hiring manager. Although the intent was not to move employees to the NA platform as the program grows, there are opportunities for the employees in Porto to move to the US.

Integrating the team

During 2022, EDPR welcomed 1,217 new hires (+87% than in 2021 mainly due to the integration of Sunseap and Kronos), of whom 31% are women. There were over 30 nationalities among the new hires, and their average age was 34 years old. 91% of the new employees correspond to levels of Specialists and Technicians, and 99% of the hires were allocated in permanent positions. In addition, 189 internships were carried out during 2022 in EDPR (+35% than in 2021).

The onboarding of the new team members plays a critical role in their success and builds relationships that are important in integration process, increasing motivation and performance. Aware of this, EDPR has an Onboarding Policy for new hires which details the process and measures to follow when integrating a new employee into the Company.

Some of the measures detailed in EDPR's Onboarding Policy are, apart from the administrative tasks associated with registration, establishing contact between the new employee and their future manager prior to incorporation, organising their first day of work, coordinating with IT, delivering the equipment required, and meeting with an HR buddy.

The onboarding approach in EDPR is not only about being close to the new hire during their first days, but providing support to clarify all the questions that may arise, monitoring closely their performance during their first 6 months at the Company, and completing a process of 6 milestones, all these in addition to frequent and direct contact from the Talent Attraction team to guarantee the correct integration of the new employee, which encourages engagement and shorten adaptation period.

A new measure introduced in North America for 2022 is a Digital Onboarding Assistant, which sends new hires key information on specific days following the date of hire, along with a dedicated internal site, which hosts a range of key information to help the employee onboard into both the Company and the department they work in.

In addition, EDPR shares a monthly newsletter to its employees where all the new hires' names, occupation and country of work are included, fostering their integration.

Experience

EDPR strives every day to create an environment of trust and professionalism among its team. To this end, it regularly implements activities, measures and campaigns that are important for

the professional and personal development of employees, by offering an individualised Employee Value Proposition (EVP) with working conditions that allow employees to grow and thrive, helping their well-being and that of their families, supporting volunteer activities and promoting diversity, equity, and inclusion.

Individualisation

Part of EDPR's EVP is a competitive remuneration package aligned with the best practices in the market. EDPR's Compensation Package includes (i) an Annual Base Salary, (ii) a Variable Pay depending on the achievements of the Area, Company KPIs, and an Individual Global Assessment of the employee, and (iii) an above market practices, vital benefits package such as Health Insurance, Life Insurance or Pension Plan, besides the well-being benefits package. The remuneration package is not static, which means that it evolves at the same pace as the business and employees' needs and concerns.

Well-being and Flexibility

Both physical and mental health were once again a global priority. Accordingly, EDPR implements several initiatives focused on family, time, and health, offering its team a wide range of benefits that reinforce the Company's position as a flexible workplace with work-life balance policies; it also encourages an efficient use of time in employees' daily tasks to reconcile their professional and personal life while still achieving excellent results. As an outcome, EDPR's work-life balance practices have earned it the EFR Certification (Empresa Familiarmente Responsable) for ten years, awarded by the Spanish *Fundación MásFamilia*. In 2022, EDPR maintained the level of excellence in this certification obtained in 2021, which recognises the Company's efforts to reconcile professional and personal life, excellence, and flexibility. To achieve this continuously, EDPR is committed to constantly improve the initiatives implemented, which will enable it to provide the most progressive and appropriate benefits to employees.

During 2022, the Hybrid Model of work was established in the Company, in which employees can work remotely 2 days a week, where feasible, as EDPR believes that remote work is crucial to improve flexibility, work-life balance and the overall well-being of its team while remaining productive. The *Flex Fridays* initiative was implemented globally, which implies having Fridays' afternoon off through an intensive working schedule. In the EU&LATAM platform specifically, different initiatives to foster networking, communication, and relationship among employees in physical areas were put in place, such as the *Juice UP your morning* breakfasts which aim to foster moments that allow employees to interact in a relaxed atmosphere.

In addition, the Company has a wellness platform to further develop a culture of wellness and encourage healthy habits. The aim of the programs promoted by the platform is to create a culture where employees choose to voluntarily adopt healthy habits by sharing their experiences, form support networks to facilitate the process and motivate each other. To raise awareness on mental health, EDPR launched once again the *Mind Your Mind* campaign in October, which promoted educational talks with specialists, employees, and other key stakeholders on how to approach the topic, especially in the current social context.

Furthermore, EDPR has a volunteer program addressed to its employees in order to promote social responsibility, giving them the opportunity to grow not only at work but also personally while also contributing to the society.

Diversity, Equity, and Inclusion

As it looks forward, EDPR continues to evolve its organisation and is dedicated to fostering a culture of human equality and valuing the strengths of our differences, as it builds a more inclusive, sustainable environment for future generations. The Company wants to lead by example to create an equal, sustainable future. EDPR's goal is to contribute to improving the quality of life of its employees, removing professional barriers, and promoting gender equality, to ensure a transparent workplace environment where mutual respect and equal opportunities prevail. In accordance, there is a Diversity, Equity, and Inclusion Committee at EDP Group level to promote its commitment to these fundamental principles. The main objectives of the Committee are to reflect the Group's strategy on diversity, equity, and inclusion, including the definition and development of initiatives that contribute to a global action plan and local action plans, and to foster the exchange of knowledge and best practices. However, as a responsible company, the EDPR's goal is to actively promote these values in its team.

In this context, EDPR celebrated different milestones in terms of diversity like Women Month in March, Diversity Week in May and Disability Day in December, during which different trainings, initiatives and talks were carried out to raise awareness among employees on these important topics. The Company believes that with the right tools and knowledge, we will be able to have a truly inclusive culture and a more sustainable future.

In addition, EDPR is part of the "Empowering Women's Talent" program for the development of female talent promoted by *Equipos & Talento*. The program helps companies to learn, share, communicate and inspire about gender diversity, with the aim of promoting female empowerment and leadership.

At local level, EDPR organised multiple initiatives in Europe & Latin America during the year to promote diversity, inclusion and equity in different groups such as different generations, genders, abilities, and cultures. To this end, internal meetings focused on these topics have been held to promote activities and raise awareness in each of them and in all geographies within the region. These encounters, called *Waves*, were organised with different periodicity in each country, and interesting initiatives have arisen from them such as *WomEng*, aiming for the promotion of scientific-technological vocation among girls, based on awareness-raising and guidance actions, delivered by EDPR professionals in the world of engineering. Group mentoring is used to encourage girls' and primary school students' interest in STEM (Science, Technology, Engineering and Maths).

In North America, the Company made an investment to charter a corporate Toastmasters program with a DEI focus and the development of the team's underrepresented talent. This is a learn-by-doing program that focuses on effective communication and leadership skills. EDPR also had three of its employees participating in a book to promote women in STEM. The book is titled "Everyday Superheros". This multi-cultural children's book shares the colourful stories and energy careers of 26 diverse women powering our planet. Additionally, in September EDPR launched *Women Who Rise*, a specialised developmental program through a book club for women to advance their careers.

Not only does EDPR look within the organisation to institute change in its own DE&I, but the Company also participates in volunteer committees to support its local communities and create partnerships with non-profit organisations. One of these organisations is Black Girls Do Engineering, which focuses on STEM education of young black girls in middle and high school. Another organisation EDPR partners with is Easter Seals, which provides resources for veterans and individuals with disabilities, and Dress for Success that helps to provide business attire and development tools to help women thrive in work and life.

As a result of its commitment and practices, EDPR was recognised again in the Bloomberg Gender-Equality Index (GEI) in 2022, a benchmark index that selects the listed companies most involved in the development of gender equality in the world. EDPR's inclusion as part of this index highlights the Company's work to promote equal opportunities for women through development, representation, and transparency policies.

In addition, during 2022, the Company was honoured with two Culture Excellence Awards in the US for its diversity, equity, and inclusion practices and for being a woman-led company.

EDPR is dedicated to continuously fostering a culture founded on human equality and the strength in diversity and will continue to lead by example. The Company upholds its commitment to Diversity, Equity & Inclusion not only through words, but through actions that truly make a positive impact on people.

Global Development Mindset

To address the needs for reinforcing a one company mindset, EDPR must foster an impactful development environment that translates into a holistic assessment that integrates individual's past (performance), present (skills), and future (agility), addressing business and people needs. A new global development mindset that also includes development conversations, a key tool and moment to foster an impactful experience. This ongoing cycle is supported by a new learning experience and culture that is flexible and led by everyone, according to their needs.

In this sense, EDPR is committed to the development of its employees, offering them an attractive professional career, and aligning their capabilities and skills with the current and future needs of the company. The growth and development of the Company's business leads EDPR to invest in the employees by discovering, improving, and emphasising the potential of each mainly through internal mobility, training, and development actions.

Holistic assessment

For an impactful and comprehensive development experience, EDPR strives to have a whole perspective of the employee, by learning how they perform, what skills they have, and their agility to evolve under new or unexpected conditions. To better develop its team, the Company must consider the infinite connection between past, present, and future. This connection gives EDPR different ingredients and insights that it should consider while assessing its people, in order to bring out their best self.

- **Performance (past):** Performance monitoring is quite essential for EDPR, from an individual perspective and for the organisation, since it:
 - Enables people to perform to the best of their abilities and produce the highest-quality work;
 - Provides feedback and support on their progress about what is expected from them according to each function/level, while allowing accountability;
 - Promotes greater differentiation between employees, fostering a fair and transparent consequent management.

- **Skills (present):** It is essential to realise that the skills that EDPR's employees have are, by consequence, also the Company's competencies. Therefore, EDPR benefits from mapping the skills it has in house in order to fulfil skills gaps, and guide and tailor its development initiatives considering its business and people needs.
- **Agility (future):** EDPR is committed to lead the energy transition and has an ambitious Business Plan accordingly. The best way for the Company to be prepared for this future and quickly adapt to market changes is by being flexible, creative, and resilient. To do this, EDPR fosters development also considering future needs, preparing the team for upcoming challenges and ensuring business continuity.

Learning

EDPR offers job-specific ongoing learning opportunities to contribute to the self-development of employees according to the new learning model as part of the Global Development Mindset. Regular and continuous Development Conversations with the Manager contribute to identify learning needs along the year in close relationship with strategic goals and the main business challenges, so they are anticipated and prioritised.

This approach implies a fluid learning process that happens in the pace of work, anytime, anywhere, anyhow.

A mature Learning culture requires a proper environment that stimulates curiosity, autonomy and share of learning among employees, not only through formal but also through informal ways. The offer has evolved to a more on-demand approach where employees have online learning contents and resources to personalise the learning experience. The Udemy's portfolio with over 11,000 online courses, Campus Online open contents, workshops and global talks or shared contents in EDPR's Global Communities online are part of this diversified learning experience.

The annual Training Plan also includes business specific programs (technical, management, behavioural), digital training focused on the digital upskill roadmap, mandatory topics addressed (safety, ethics, compliance, cybersecurity) aligned with the Company's challenges and new markets or technologies to ensure the sustainability of EDPR's business.

During 2022, EDPR delivered a total of 87,187 training hours throughout 4,828 sessions that included 44,551 participants. This translates into an average of 32 hours of training per employee and results in 96% of EDPR's team receiving training. With lessons learnt after COVID-19 pandemic, EDPR has consolidated different learning methodologies and selected

the best option who matches the requirements from both the contents and the participants: live online, e-learning, virtual remote formats and in-classroom training are part of the learning ecosystem in EDPR (a total of 74% of training hours or 94% of the attendances were delivered in online methodologies). Therefore, EDPR keeps on Digitalisation as one of the main training drivers that helped to accelerate and consolidate during 2022 because of the methodologies and by contents increasingly delivered on topics such as Collaborative Tools (Microsoft 365 suite), Agile or Design Thinking methodologies, Data Analyse tools, Digital Transformation, Cybersecurity, SMART business, IoT, Cloud or Artificial Intelligence.

Knowledge management

EDPR is aware of the importance of Knowledge as a valuable asset within the business and in employees' development. Thus, EDPR is boosting LINK as a knowledge platform, increasing the number of areas, domains and curated documents with valuable content captured and shared across the organisation encouraging the access to recommended documents. During 2022, EDPR organised a total of 3 sessions of *40fiveminutes*, an online initiative to easily share main business insights in a friendly and informal way to those employees who voluntarily register to the sessions.

Implementing a Global Development Mindset culture implies a strong knowledge sharing mindset, so EDPR strives to improve the use of knowledge by regularly distributing customised relevant documents or events, fostering the participation in Communities, offering regular talks, webinars, or clinics, working to adapt to new ways of learning reaching to all the generations present in the Company, and by establishing a hybrid work model.

Development Programs

To support the Company's growth and to align the current and future needs of the organisation with the skills of employees, as well as boost their professional growth, EDPR has included in the new global development mindset approach an holistic assessment (past, present, and future), development conversations and "anytime, anywhere" development tools, as long as different development programs that allow employees acquire the right tools to take on new responsibilities and adapt to new challenges:

- The **Lead Now Program** aims to support middle managers in their role as team leaders. As a result, participants have the possibility to self-assess their management style, improve the skills they need, and get to know the role they play in the different HR processes at EDPR, as well as the IT, internal tools and H&S systems that can help them

develop their role. Through online sessions, two editions were delivered to 24 employees in 2022 in Europe and Latin America, and other five in North America in which 72 employees participated.

- The **Leader Coaching Program** in North America supports current and new leaders with focused leadership coaching via certified leadership coaches who provide Leadership Coaching, Transition Coaching for first-time managers, or Group Coaching for groups of leaders on leadership topics that align to current business environment. In 2022, 82 North America leaders attended Leader Coaching programs.
- The **Executive Development Program** is an advanced training with a similar philosophy of an MBA in which the main objective is to develop the vision, skills and management capabilities required to meet the many and diverse challenges that EDPR professionals must face. In January 2022, the edition launched in May 2021 ended with 30 participants. It was focused on different topics, such as Economic Outlook, Strategic Vision, Operational Excellence, Financial Management, Communication and Leadership, among others.

Mobility

EDPR considers both functional and geographical mobility as a tool that contributes to the organisational development by stimulating employees' motivation, skills, productivity, personal fulfilment and fostering the share of best practices. The mobility processes within EDPR aim to respond to the different challenges and needs of the Company, considering the characteristics of the different geographies. In 2022 there were 90 mobility processes, 40 of them functional, 34 geographical and 16 both functional and geographical. Entering in new geographies such as APAC has meant that new mobility opportunities have arisen. The different types of mobilities that we consider within the company are the indicated below:

- **Short-term assignments:** Applies to short-term international relocation (up to 1 year), not renewable, initiated by the Company, whose purpose is the development of projects or the development of the professional career of employees involved.
- **Expatriation:** This regulation applies exclusively to expatriation up to 3 years, renewable, (international assignment for the execution of management or mandate functions in the destination country or critical functions that may have been identified).
- **Commuting:** Applies to employees that perform simultaneously management and mandate functions in two companies located in different geographical regions or countries, one of them being the base location.
- **Local plus:** For employees going on long-term relocations (more than 1 year), through cessation of the work contract at the home company.

3.3. Supply chain capital

EDPR's market leadership, based in value creation capacity, innovation and relationship with its stakeholders, is much influenced by the performance of its suppliers. The Company's materiality matrix identifies the supply chain and its management as one of the most relevant aspects for EDPR, based on its importance for society and for the Company's own business.

Suppliers are a key stakeholder for the Company, and also a main partner to achieve its installed capacity growth targets and sustainability goals. Technical excellence, execution performance, economic competitiveness, together with sustainability are the basis of EDPR relationship with suppliers. This results in close collaboration, joint capacity to innovate, but also strengthen the sustainability practices and improve the quality of the Company's operations.

Key Data

¹ EDPR defines spending in local suppliers at a country level as purchases to suppliers in countries where EDPR is present divided by the total invoiced volume in 2022; ² Weight of each region on the total invoiced volume in 2022.

EDPR's supply chain

EDPR has a strong interaction, and a permanent dialogue and engagement process with its supply chain, in particular with the suppliers of the critical equipment and services, understood as WTG (Wind Turbine Generator) & Solar Panels, Inverters, Structures/Trackers, Batteries, Balance of Plant (BOP) and Operation and Maintenance (O&M) contractors. These suppliers contribute in a meaningful and visible way to the value of EDPR core activities. This close relationship allows EDPR to benefit from all the new technical solutions and innovations available on the market to maximise the value creation in the projects worldwide. This partnership approach also helps EDPR to anticipate and mitigate Supply Chain disruption and to minimize impacts during the projects' execution.

High quality and sustainable procurement

EDPR's Procurement Policy establishes the framework under which the Company's procurement process is developed. This process extends to direct and indirect suppliers and allows EDPR to establish practices and procedures that ensure a high-quality relationship with its suppliers and sustainability practices through the entire supply chain. Some of these practices and procedures are: development of activities that promote the sharing of the best sustainability practices in EDPR purchases; contribution to the growth and profitability of the business through the promotion of initiatives for the progress and continuous improvement of the supply chain; systematic monitoring of suppliers' performance and risk profile; dissemination and implementation of EDPR's ESG policies (Environmental, H&S and Human and Labour Rights policies and Code of Ethics) in the acquisition of goods and services; and involvement and empowerment of all actors in the supply chain. Many of these practices are possible through continuous dialogue and engagement with suppliers where the main priorities of both parties are shared at the technical, implementation and ESG levels.

Implementation of the Procurement Policy leads to a better control in the suppliers' management process, assuring EDPR values are respected, high quality standards and minimization of the risks.

EDPR has in place requirements related to ESG, Quality and Risk management that have to be met by its suppliers throughout the main procurement phases: Registration and Qualification, Requests for Proposals and Contracting and, lastly, the Monitoring and Evaluation of the suppliers.

Registration and Qualification phase

The registration process is mandatory requirement for any company who intends to become a supplier or apply for a qualification process issued by EDPR. The Corporate System of Supplier Registration of the Company works as the support to search and select suppliers by providing detailed information, validated and updated by credible sources, in order to guarantee their accreditation through financial, technical quality and ESG criteria. EDPR has also its own Supplier Qualification Process in place since 2020 focusing in additional aspects specific to EDPR business. It aims to provide an analysis on critical issues and establishes minimum requirements to ensure that the suppliers EDPR works with are qualified: Technical capabilities & Quality Management, Financial & Risk, Compliance & Integrity, Health & Safety and Environmental Management criteria. The Company regularly reviews and reassesses the Qualification System criteria to ensure that they reflect the main market trends and regulations and that a high level of quality of the information available from suppliers is maintained.

In addition, during the Qualification Process, the Company shares for suppliers' knowledge: EDPR Code of Ethics, EDPR Integrity Policy and EDP Supplier Code of Conduct.

The qualified suppliers are then included in a Qualified Suppliers List who then are able to participate in the EDPR bidding and contracting process, during the qualification validity period. Only those suppliers who have been qualified and are included in a Suppliers Qualification List will be able to receive a subsequent award.

Request for Proposals (RFP) and Contracting phase

The incorporation of adequate criteria in the contracting processes of the Company is essential to ensure in-depth management, mitigation, and avoidance of operational and ESG risks in the supply chain.

Request for Proposals (RFP) from suppliers

In 2022, EDPR has included an additional analysis on 5 ESG priorities in its turbine and module tenders (RFPs): Decarbonisation, Circular Economy, Human Rights, Health and Safety, and Transparency and Reporting. EDPR analyses corporate policies, targets, strategies, statements, roadmaps and other corporate documents or procedures that show suppliers' commitment to EDPR's ESG priorities. This analysis also helps the Company to avoid and mitigate potential ESG risks.

Adequate compliance by all EDPR suppliers with applicable H&S and environmental requirements is essential to guarantee the correct performance of the contracted services and works. Aiming to ensure that suppliers comply with these requirements, the Company has established a disciplinary and sanctioning regime, which is included in all RFPs, contracts, and purchase orders so any provider will be always informed about the consequences of not complying with EDPR H&S and environmental requirements.

Moreover, EDPR has a Third-Party Integrity Due Diligence Procedure which was approved with the goal to reinforce the mechanisms for identifying and preventing possible integrity or corruption risks for EDPR in the relationship with third parties. In this sense, during 2022, 385 Compliance analysis of suppliers were performed (closed Integrity Due Diligence Analysis). In addition, an internal tool has been developed to facilitate the management of the Integrity Due Diligence analyses. In cases with high risk, it is necessary the approval of the Management Team, and the inclusion of robust clauses related to corruption in the corresponding agreements is recommended. These IDD allows the Company to verify public sanction lists, Political Exposed Persons lists (PEPs) and adverse media, in order to avoid any integrity risk.

Supplier Contracting and Awarding

In addition, during the contracting and awarding phase, the Company also establishes a fluent dialogue and shared of information with strategic suppliers through the traceability information requests and meetings. Technical components, including serial number and manufacturing origin must be provided by suppliers during this phase, ensuring traceability and enabling post-contracting manufacturing audits. This traceability information on the origin of the components allows the company to assess and avoid potential ESG risks.

In parallel, financial capacity of the suppliers and their insurance policy are evaluated according to the EDPR's Credit-in procedure that defines the requirements to ensure the compliance with EDPR's Counterparty Risk Policy and the proper follow-up of active

guarantees. EDPR Counterparty Risk Policy sets the methodology and process to measure counterparty risk of new contracts, monitor counterparty risk of existing contracts, define in which moments and situations it should be used and establish guidelines and mitigation instruments to reduce counterparty risk when they exceed established limits.

Monitoring and Evaluation phase

In order to guarantee that the suppliers comply with the previously mentioned requirements, EDPR monitors strategic suppliers during their services delivery and activity in EDPR's facilities.

EDPR has two mechanisms to ensure that suppliers comply with its contractual obligations: passive mechanism and active mechanism.

- The **passive mechanisms** are those related to suppliers' disclosure when they identify any situation, infringement, or circumstance that may affect the agreement.
- The **active mechanisms** consist in:
 - Physical audits of the manufacturing process and the right from EDPR to audit/request information to the supplier. EDPR could audit those factories where its components are manufactured and produced.
 - Inspections that EDPR performs during the construction and operation phases, to monitor the suppliers' and contractors' performance regarding environmental and H&S aspects and to identify potential risks. In 2022, EDPR performed 2,277 inspections (+31% than in 2021) to 274 suppliers (+1% YoY) regarding EHS procedures. These inspections and audits are performed by EDPR to ensure best practices among contractors and to guarantee that these services are performed in a rigorous and standardized manner. As a result of these inspections, the Company identifies corrective actions needed and establishes an action plan for continuous improvement.
 - EDPR hires an external party for additional supervision in these areas. These processes are reinforced by the integrated Health and Safety and Environmental Management System, which was developed and externally certified according to international standards ISO 45001 and ISO 14001.
 - In Europe & Latin America, EDPR has a Suppliers Sustainability Guide in place for both construction and O&M operations, providing an overview of the sustainability requirements EDPR expects its suppliers to meet, including H&S, environmental and ethical requirements.

- In addition, in Europe & Latin America, EDPR classifies suppliers according to their HSE score and risk. This performance evaluation allows to classify suppliers and then implement an action plan according to other procurement processes, since adequate compliance by all EDPR suppliers with applicable H&S and environmental requirement is essential to guarantee the correct performance of the contracted services and works.

EDPR's scope 3 and supply chain decarbonization

EDPR's activity inherently contributes to the achievement of global climate goals. Despite this, scope 3 has become a priority for the Company, as most of the Company's emissions are directly related to the supply chain.

Therefore, EDPR has implemented during 2022 a methodology for measuring upstream emissions from the supply chain, for which it has been essential to engage with suppliers to know the emissions linked to their activity with EDPR. As with other aspects, EDPR has established as a priority to continue improving the assessment and disclosure of its supply chain emissions. Please refer to chapter 4. GRI Reporting for more information on EDPR's scope 3 emissions.

3.4. Social capital

At EDPR, there's a commitment to integrate the social aspects in planning and decision-making and to guarantee responsible operations throughout the whole lifecycle of its business. As a result, EDPR undertakes to respect and foster due respect for these practices within the Company and in its supply chain.

Specifically, EDPR believes it is indispensable to contribute to the development of the society respecting both human and labour rights and creating value in different ways, for different people. With this in mind, the Company is guided by three key social responsibility principles: guarantee the highest health and safety standards, respect human and labour rights in the whole value chain and, lastly, support communities.

3.4.1. Guarantee the highest health & safety standards

The health and safety of those who contribute to EDPR's activities is a key value and a priority for its success. Consequently, the Company aims to promote and build on a positive safety culture in which every employee, service provider and supplier is engaged. According to its Code of Ethics, EDPR undertakes to give priority to the employees and suppliers' safety, health and wellbeing and to ensure the development of appropriate occupational health and safety management systems. The commitment to guarantee the welfare of employees and contractors is further supported by EDPR's Occupational Health and Safety Policy.

EDPR's integrated Health & Safety and Environmental Management System was developed and certified according to international standards ISO 45001 and ISO 14001 for a more global and efficient approach, simplifying processes and managing the potential risks of its activity. The HSEMS, where synergies play a fundamental role, was implemented and jointly certified by an independent certifying organisation. The implementation of this integrated system allows for better management and prevention of accidents, with the objective of zero accidents overall. The commitment to health & safety is further supported through the ISO 45001 certification, which covers c.100%¹ of EDPR's installed capacity by the end of 2022.

¹ Calculation based on 2021YE installed capacity (EBITDA MWs). EDPR certifies the facilities the year after the COD (commercial operating date). Thus, the facilities that have entered into operation in 2022 will be certified in 2023.

Key data

During 2022, EDPR registered 39 work-related injuries that resulted in lost workdays for employees and contractors (+3% YoY). One of these injuries was fatal and EDPR has defined an action plan with corrective measures to further mitigate these incidents, which was revised and approved by the Company's Management Team.

In 2022, the injury and the lost day rate were 2.5 work injuries per million hours worked (+22% YoY) and 166 days lost due to work accident per million hours worked (+26 YoY), respectively. The interannual variations of these ratios are mostly impacted by a decrease in worked hours (-16% YoY) mainly in Brazil due to the conclusion of construction works carried out during 2021, as the country had 580 MW under construction by the end of 2021 and none by the end of 2022.

2022 highlights

EDPR continuously works to improve its health & safety indicators and to bring awareness to the best practices, having implemented several initiatives throughout the year in this sense.

EDP Group launched *PlayItSafe*, a global safety program transversal to the entire Group which focuses on the continuous improvement of the Company and its procedures, with a special focus on accident prevention. This initiative seeks to sensitise all employees to the importance of adopting safe behaviours and will last for four years.

The underlying work and this program will be done around six priority axes, essential to achieve the objectives of accident reduction. They are:

- The commitment and involvement of our leaders in Prevention and Safety;
- The promotion of safe behaviour and learning from mistakes;
- Digitisation of processes and operations;
- Strengthening skills in the area of Prevention and Safety;
- Communication and involvement with Prevention and Safety;
- Management of the contracting chain.

Within the framework of these axes, in 2022 the Group mainly invested in closer and more transparent communication, trying to reach all employees and strengthen its safety culture.

Specifically, a global and monthly campaign was developed to talk about the main risks that employees are subject to in their professional context, and the fatal accident was communicated through an email from the CEO to all employees for the first time. This was also the year in which the Group focused on investing in training its team leaders and managers, reinforcing the conviction of leading by example.

In addition, in 2022 the Hybrid Model of work was established in the Company, in which employees can work remotely 2 days a week, where feasible, as EDPR believes that remote work is crucial to improve flexibility, work-life balance and the overall well-being of its team while remaining productive. Also, the *Flex Fridays* initiative was implemented globally, which implies having Fridays' afternoon off through an intensive working schedule.

Lastly, as both physical and mental health were once again a global priority in 2022, EDPR also implemented several initiatives focusing on employees' general health and well-being. In this context, the Company has a wellness platform to further develop a culture of wellness and encourage healthy habits. The aim of the programs promoted by the platform is to create a culture where employees choose to voluntarily adopt healthy habits by sharing their experiences, form support networks to facilitate the process and motivate each other. To raise awareness on mental health, EDPR launched once again the *Mind Your Mind* campaign in October, which promoted educational talks with specialists, employees, and other key stakeholders on how to approach the topic, especially in the current social context.

3.4.2. Respect human and labour rights

For the Company, it is a top priority to promote human rights and fair labour practices across the entire value chain. EDPR respects and undertakes to promote Human and Labour Rights internally, in its suppliers, customers and the communities where it operates, namely in indigenous communities. This commitment has been reflected in EDPR's Code of Ethics since 2009. However, given the increasing relevance of this topic, EDPR's first Human and Labour Rights Policy was approved in 2022.

This Policy applies to all EDPR Group companies and employees, business relationship and activities, in all its geographic locations, regardless of the local practices or level of social and economic development. In addition, it is articulated with the Code of Ethics, the Stakeholder Relationship Policy, and the Supplier's Code of Conduct, and identifies the references, norms, and international conventions to which it is submitted, establishing the principles and procedures that ensure compliance with them.

As stated in its Human and Labour Rights Policy, EDPR is committed to respecting and enforcing all internationally recognised human and labour rights, which translates into:

- Supporting the International Bill of Human Rights, subscribing to and implementing the Principles of the United Nations Global Compact and the instruments to protect vulnerable people and groups;
- Applying the ILO Declaration on Fundamental Principles and Rights at Work and related conventions and the Tripartite Declaration of Principles concerning Multinational Enterprises and Social Policy;
- Operating a human and labour rights management system that is active and present in all its activities, implementing the United Nations Guiding Principles on Business and Human Rights, the OECD Due Diligence Guidance for Responsible Business Conduct, and the Directive of the European Parliament and of the Council on Corporate Due Diligence and Corporate Accountability.

These commitments are also reflected in EDPR's Code of Ethics, which contains specific clauses regarding non-discrimination and equal opportunities in line with the Company's culture of diversity and respect for human and labour rights. The commitments in this Code are equally applicable to EDPR business partners, representatives and suppliers who are, in any way, entitle to act on behalf of EDPR.

EDPR also requires its suppliers and service providers to comply with its ethical standards. In this way, the alignment with the spirit of EDPR's Code of Ethics is required. Moreover, the Sustainable Procurement Policy references the promotion of respect for dignity and human rights, and the rejection of any form of forced labour or child labour, harassment, discrimination, abuse, or other types of physical or psychological violence.

In addition, as stated in its Code of Ethics, EDPR promotes a culture free from any sort of harassment, understanding this to be systematically undesired behaviour of a moral or sexual nature, in a verbal, non-verbal or physical form, which has the goal or effect of disturbing or embarrassing another person, or affecting their dignity or creating an intimidating, hostile, degrading, humiliating or destabilizing environment. Harassing forms of behaviour in a business context violate the victims' labour rights, and may affect their value as people and workers, causing harm that can have an impact on their self-esteem, physical and mental health, life project and family relationships. Therefore, in addition to the legal obligations to which EDPR is subject to, the Code of Ethics also states that it is the duty of all employees to prevent, confront and report all behaviour that may preclude a situation of harassment.

In this regard, EDPR's Speak Up Channel is accessible to all employees, customers, suppliers and other stakeholders that may be adversely impacted by the Company or, irrespective of this, that wish to complain, denounce, clarify or expose any situation of ethical nature, including those related to human and labour rights.

The Ethics Ombudsperson, an independent third party that is behind the Speak Up channel, receives the complaints and doubts submitted through this channel and investigates and documents the procedure for each of them. A preliminary report is then submitted to the Ethics Committee, whose main goal is to ensure compliance with the Code of Ethics within EDPR.

3.4.3. Support communities

The Company believes that besides excelling in the way it performs, there must be a main factor weighing in every action or activity EDPR does – people. The Company considers that in order to have a positive impact on society, it is vital to work for the common good by promoting and supporting social investment activities.

EDPR's strategy for social investment reinforces two major topics – Fair Energy Transition, and Culture – having defined concrete objectives for the allocation of social investment to each of these themes.

- The **Fair Energy Transition** theme, which englobes social investment activities such as Closer2You, Keep it Local, Wind Experts and Your Energy, aims to promote energy efficiency, renewable energy and decarbonization through increased awareness, supporting education on renewable energy for all. This thematic focus is greatly aligned with EDPR's business and therefore also promotes a more efficient use of the Company's skills, thus contributing to supporting communities in a more efficient manner.
- The **Culture** theme, which englobes EDPR's Powering Culture initiative, contributes to the protection and promotion of cultural heritage, local traditions and access to culture and art, contributing to a more vibrant and creative society.

In parallel and recognising the need to continue supporting projects that respond to other social needs of the communities where EDPR is present, the Company will maintain its investment in various topics such as health, social inclusion and response to emergency situations, among others.

In this context, and as an integral part of the communities where it operates, EDPR undertakes to maintain a relationship of proximity with the local communities engaging in regular and open dialogue, seeking to know their needs, respecting their cultural integrity and looking to contribute to improve the living conditions of local population, taking measures to consider and respect the community interests. Therefore, in line with its social investment strategy and the communities' needs and expectations, EDPR has defined a Catalogue of Activities that works as a tool for defining the social investment made in local communities. Nevertheless, in addition to the development of social activities, EDPR provides long-lasting economic benefits to the surrounding areas that include, but are not limited to, infrastructure investments, tax payments, landowners' royalty payments and job creation.

However, as a responsible company, EDPR works to promote the wellbeing and development of not only the communities where it operates but also of society in general, focusing on the people who contribute to the success of the Company's business and how society may benefit from it. In this context, and following the humanitarian crisis in Ukraine, EDPR made a €500 thousand donation to help support Ukrainian refugees in Poland. Specifically, the funds were used to distribute food to those in need in close partnership with NGOs that are very engaged in emergency support to the people fleeing the war to Poland. The donation adds up to the Group mobilising resources and equipment in affected communities as a response package for the humanitarian crisis. Aid was also sent to organisations working with victims on the front line – such as the Red Cross and Doctors of the World – in the form of the donation of essential goods and direct economic assistance.

Due to EDPR's presence in Poland, Romania and Hungary, there is regular contact with local authorities, to whom aid was also provided as required to support those communities on the border with Ukraine. In addition to this emergency response package, in-house action launched by volunteers of the Group was also carried out in the form of more local initiatives, helping refugees in Portugal and other countries.

Globally, during 2022, EDPR invested a total of €2.4 million in supporting communities, as a result of several activities such as internally developed and collaborative initiatives, donations to charitable organisations and volunteering activities. 23% of EDPR employees participated in volunteering initiatives, contributing with more than 2,500 hours of their time to the development and wellbeing of the society.

All in all, the Company believes that this support powerfully contributes to make EDPR's vision of a sustainable, safe, and healthy world a reality.

3.5. Natural Capital

Wind and solar power are two of the most environmentally friendly ways to produce energy, while contributing to achieving global climate goals and decarbonizing the economy. Despite the positive impact of EDPR's activities on the environment, the Company continues to implement processes and measures to manage ESG issues, and works on a daily basis to protect the natural capital and ecosystems in which it operates. As a result of this commitment, EDPR integrates ESG aspects into the Company's decisionmaking, with sustainability playing a key role within the EDPR's Business Plan 21–25. Specifically, environmental issues are two of the specific ESG targets included in the BP.

EDPR's Environmental Policy establishes the Company's specific commitments to contribute to the mitigation of climate change, the promotion of the circular economy and the protection of biodiversity. The Policy reflects EDPR's approach to complement the Company's strategy through responsible and proactive management of environmental aspects along its entire value chain. EDPR implements measures to prevent, correct and compensate any potential impact on the environment, establishing a series of commitments to ensure the proper implementation and maintenance of an effective Environmental Management System at its facilities.

The integrated Health & Safety and Environmental Management System, developed and certified according to international standards ISO 45001 and ISO 14001, enables EDPR to adopt a global environmental and safety efficient approach, standardizing processes and allowing the Company to manage the potential risks of its activity. This management system is implemented and then certified by an independent certification organization. By the end of 2022, ISO 14001 certification covers c. 100%¹ of EDPR's installed capacity.

With an expected life span of 30 years, EDPR's wind farms will pay back their life-cycle energy consumption in less than one year², meaning that for the remaining 29 years of their life cycle they will be producing clean energy.

¹ Calculation based on 2021YE installed capacity EBITDA. EDPR certifies the facilities the year after the COD (commercial operating date). Thus, the facilities that have entered into operation in 2022 will be certified in 2023;

² According to the life cycle assessments of our main turbine suppliers.

2021-25 Business Plan Targets

1. Development

2. Construction

20 GW Gross additions	Climate Change	<p>EDPR promotes the development of new renewable energy projects that contribute to achieving global decarbonization goals and fight against climate change.</p> <p>During the development phase, the Company's highly experienced and qualified EDPR promotion teams locate the best sites for renewable energy generation, based on the necessary resources (wind and sun) and with nearby transmission lines.</p>	<p>EDPR aims to be a reference in the industry for building the most cost competitive, safe and efficient wind farms and solar plants in order to generate clean energy and help protect the climate.</p> <p>The Procurement, Engineering and Construction teams from EDPR are well equipped to select the best wind turbines and solar panel systems based on each project's specifics. The Company also uses in-house expertise to design the best sites, and assure top-class engineering and construction standards.</p>
		<p>During the development phase, EDPR takes into account circular opportunities when designing the facilities. The search for circular solutions in this phase allows the Company to design facilities that are as circular as possible, taking advantage of rainfall resources and taking into consideration future waste treatment and collection.</p> <p>EDPR, through its sustainability guides and its engagement with suppliers during the RFPs, shares with them the recyclability of materials as one of the Company's priorities.</p>	<p>The construction phase is essential to the circularity of the Company and its operations by promoting the efficient use of natural resources and maximizing the recovery of waste and resources, as well as their reintroduction into the economy as by-products. An example of this is the Company's use of earthworks to backfill and level the facilities.</p> <p>In addition, the environmental monitoring and surveillance of the construction works ensures a sustainable use of resources, as well as the correct management of the waste generated.</p>
		<p>EDPR conducts environmental viability studies to identify environmental constraints and ensure the best location for projects. In addition, through Environmental Impact Assessments (EIAs) and other studies, the environmental impacts of projects are assessed in detail. All these studies, carried out by external professionals, allow the Company to take into account and manage potential impacts on the surrounding flora and fauna, as well as to implement preventive measures to avoid them.</p> <p>During 2022, EDPR invested 6.6 million euros in environmental impact studies (EIAs and other monitoring and environmental impact studies) for its projects.</p>	<p>The construction phase is closely supervised by EDPR to minimise potential impacts or disturbances and to ensure adequate restoration of the land once the works are completed. In this regard, the Company has ensured the restoration of 100% of the areas affected by non-permanent infrastructure. During 2022, in a solar project in Spain, EDPR has achieved more than 100% restoration rates, revegetating the area between the solar panels and around the plant, generating a positive impact on the beekeeping panels in the area.</p> <p>In addition, the environmental monitoring of the construction works is the key process to ensure that the risk to biodiversity is adequately managed, to avoid potential impacts and to implement the necessary corrective measures.</p>

2021-25 Business Plan Targets

3. Operation

4. Dismantling / Repowering

20 GW Gross additions	Climate Change <p>EDPR produces renewable energy, which inherently involves contribution to the fight against climate change and the reduction of GHG emissions. Both wind and solar energy are emission-free and do not produce harmful SO_x, NO_x or mercury emissions, thus protecting air and water resources.</p> <p>During 2022, EDPR's operations allowed the Company to avoid the emission of 20 million tons of CO₂. In addition, CO₂ emissions related to EDPR's activities (including its upstream emissions) represent only 14% of total emissions avoided.</p>	<p>The efficiency of wind turbines and solar panels, as well as their end of life, are evaluated by the Company for their replacement or dismantling. The repowering of wind farms has been one of the solutions applied by EDPR, which consists of reducing the number of wind turbines and replacing them with more efficient models. The new modern models allow the Company to increase installed capacity, CO₂ avoided and clean energy generated ,while reducing the land area per MW.</p>
85% Recovery rate for waste generated in the whole value chain	Circular Economy <p>EDPR promotes a sustainable and rational use of the resources it needs, as well as a reuse of components whenever possible. In this regard, the Company encourages the recovery and recycling of waste. In 2022, EDPR recovered 74% of the total waste generated in its operations, and 90% of the hazardous waste. Most of this waste is related to the necessary maintenance of the assets during their operational phase, with the remaining part coming from the offices.</p> <p>For the time being, the activity carried out by EDPR does not involve material water consumption. However, the Company continuously analyses this variable for its correct management.</p>	<p>In the case of wind turbines, the recycling rate is between 80–90%², as the remaining percentage is related to turbine blades, which are composed and manufactured with complex materials that make them difficult to recycle. As the Company's solar energy capacity grows, EDPR integrates circularity criteria into its operations and decision-making process.</p> <p>EDPR is committed to supporting processes and initiatives to recover blades and promote the circular economy. In addition, EDPR integrates circularity criteria in upcoming dismantling projects and takes them into account when working with suppliers at this stage.</p>
100% Facilities with high biodiversity risk with action plans defined	Biodiversity <p>In order to ensure that suppliers comply with environmental requirements during the operation and maintenance phase, EDPR has an environmental monitoring plan implemented by an external party. In this regard, EDPR conducts internal inspections to monitor the environmental performance of contractors, in order to ensure proper monitoring of operations and the implementation of measures and initiatives to protect biodiversity.</p> <p>In 2022, EDPR performed 1,425 inspections to 214 contractors on their environmental procedures during the construction and operation of the Company's projects.</p>	<p>The Company is committed to cleaning and rehabilitating the land to return it to its initial state, as well as minimizing any potential impact generated.</p> <p>To this end, EDPR has been working on an environmental management guide for the dismantling phase, with the aim of serving as a framework for all the measures to be applied in the process, including biodiversity criteria.</p>

3.6. Digital Capital

The digital journey is a never-ending transformation given the rapid evolution of Technology and its big impact on the Business and the People.

Accordingly, digital transformation is one of EDPR's strategic pillars for the coming years, as we must continue to improve our digital capabilities to stay competitive with our peers as we continue to grow, focusing also on sustainability. EDPR's digital strategy involves not just the use of new technologies, but also a digital mindset awareness and engagement within the organisation, along with a clear definition of the processes that will change from physical to digital.

Since 2021, Digital Transformation Committee, was formally created to sponsor and enable digital transformation as a competitive advantage for EDPR. The Committee is sponsored directly by the Management Team and the 3 main areas that were designated Boosters (People, Process, Technology).

In this context, "digitalise" is one of the action verbs of EDPR, that includes a very significant number of innovative projects with the same purpose: "Business transformation" and "Business culture".

During 2022, different initiatives have been deployed towards having a holistic approach to digital within EDPR. In order to speed up the transformation needed at a complex and fast-growing organisation, a Digital & Technological Transformation Program was launched after an initial assessment that identified opportunities on data usage, digital development, systems duplication, cybersecurity governance and technology orchestration.

In late 2022, EDP Group launched a new digital maturity assessment globally with 3 goals:

- Get a fresh understanding of the Group's digital maturity based on benchmarks of its peers and focusing on potential gaps and untapped value pools.
- Consolidate a Group-wide and cross-Platform digital narrative and value story.
- Define a set of recommendations to accelerate value-focused digitalisation across Platforms and DGU (Digital Global Unit), adding to current digital roadmaps or building new ones.

Throughout the year, EDPR invested €6 million (CAPEX) Digital projects and obtained a score of 4.31 on a scale of 1 to 5 in the "IDC Digital Maturity Index" (compared to 4.05 accomplished last year). EDPR reinforce the path as a Digital Transformer achieved in 2021. The "Digital Maturity Index" is an external evaluation that fosters the continuous improvement mindset in EDPR. In 2022, the followed model was established by IDC & Universidade Catolica, and similarly to last year it was based in five pillars: 1) Leadership; 2) Omni-Experience; 3) Work source; 4) Operating Model; 5) Information.

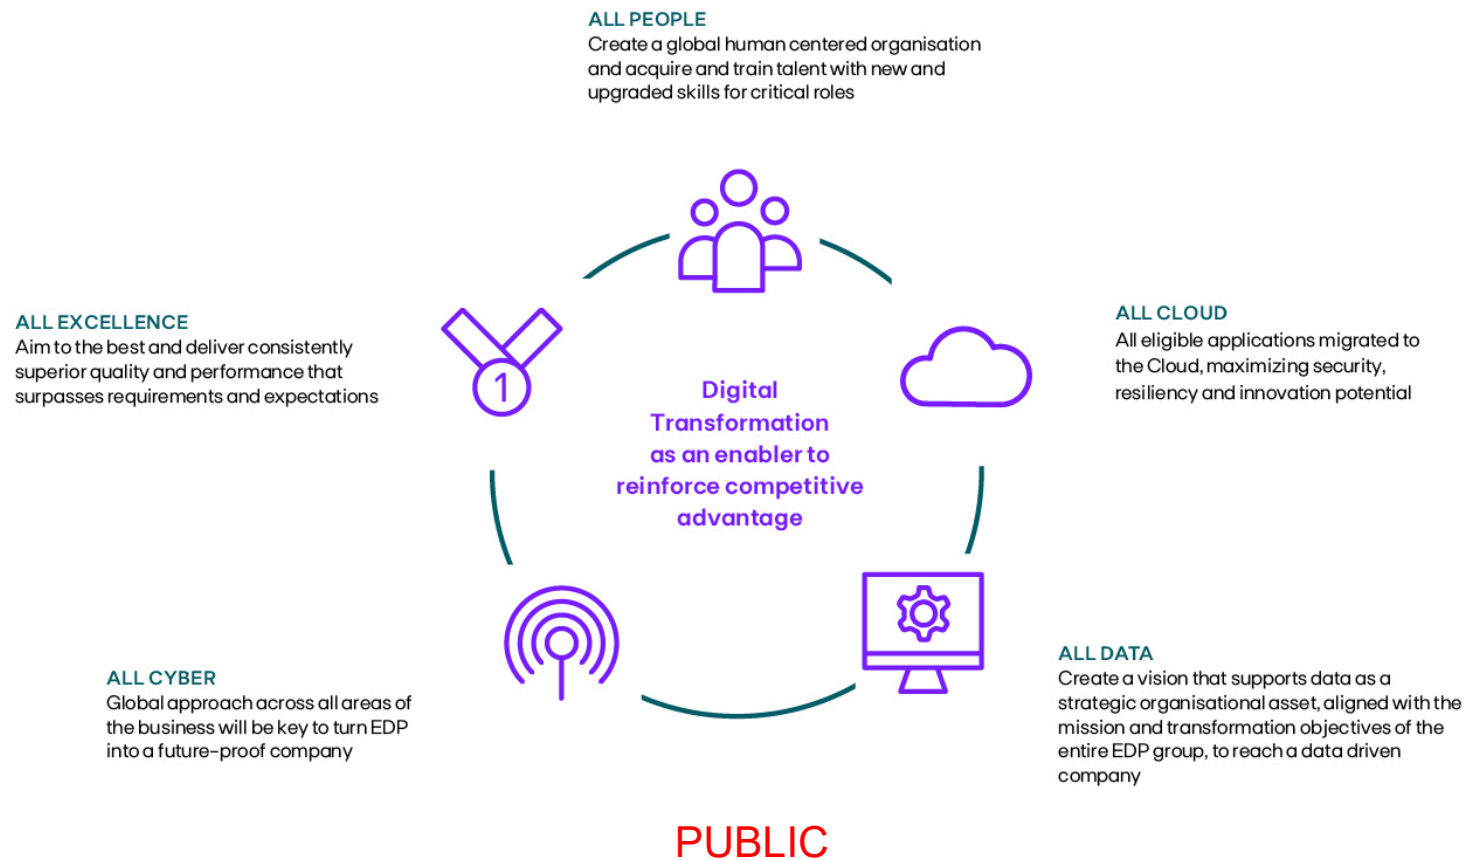

Technology

During 2021 and 2022 the focus was not only on digitalisation by itself but all the surrounding ecosystem that supports, enhances, and drives from it.

The Digital & Technological Transformation Program focuses in 5 areas:

- Leverage on the **Data & Analytics** platform to accelerate data architecture readiness (e.g., BDAS), promote a business seamless data usage and develop analytics and visualisation tools;
- Accelerate EDPR's **Digital** deployment creating an integrated digital hub with the required capabilities (e.g., people, tools, budget) aligned with DGU digital hub;
- Converge and standardise **Systems Architecture** across platforms to maximise synergies, speed up time to market of new products and applications and ensure scalability;
- Establish an aligned and integrated **Cybersecurity** approach across geographies and at group level to reduce risk exposure and incident response time;
- Promote orchestration and alignment of **IT/OT Management** to improve efficiency and resources optimisation of technology projects delivery.

DIGITAL TRANSFORMATION PROGRAM

A total of 15 initiatives had progressed during 2022 and around 30% were completed by the end of the year. The remaining ones are following according with their plan and the program is intended to be finished by the end of 2023.

In addition, during 2022, the Agile methodology started to be sprinkled not only for IT teams, but within business areas that can leverage the usage by introducing new ways of working and planning.

Moreover, Cybersecurity is one of the main points for the operational business and strategic information definition of the Company. The BitSight rating is focused on the organisation's cybersecurity risk, with less elasticity. By the end of 2022, EDPR maintained the rating of "Advanced" with 780 points, exceeding the Group KPI of 740.

Processes

EDPR is continuously improving its Lean framework and as these programs evolve, digital tools are helping us more effectively connect, collaborate, and optimise the way we work.

The Lean programs are targeted to create a strong culture of wholistic, impact-oriented thinking and a scientific approach to problem solving. The programs focus on the project lifecycle, from Development to Operation and the strategic workplan consists of the following three pillars:

- **Culture:** To achieve a Lean Culture, we must invest in our people, have leaders who demonstrate humility, and foster trust within the organisation. We work towards these goals through Lean training and knowledge exchange forums such as the Lean Day. In 2022, EDPR held two Lean Days, one in North America and one in Europe, where teams from across the company were invited to share their improvement projects and perspectives. In addition, more than 500 employees participated in training offerings: joining either the Lean introduction course or the Lean leadership course.
- **Alignment:** To optimise outcomes, we need to align our processes, technology, and people with EDP's mission, purpose, and goals. To do this, achieve this, we enable systems thinking and support development of standard processes. This pillar includes programs such as Daily Lean, which focuses on day-to-day best practices at our operating sites and OKRs which focuses on quarterly goal setting across teams. In 2022 the team leveraged multiple digital productivity tools to more effectively communicate and enable accelerated implementation of new programs.

- **Continuous improvement:** The team's primary focus areas within the pillar of continuous improvement includes our LeanIn program which is designed to bring value to the organisation through collaboratively solving problems and equipping program participants for repeated success. In 2022, the LeanIn program generated 28 new Lean projects involving over 360 employees. In addition, EDPR has implemented programs such as Lessons Learned to ensure that we reflect on past projects and avoid repeating mistakes. The latter resulted in the creation of a new digital Lessons Learned repository and a structured process for capturing and disseminating lessons learned.

In 2022, EDPR began to implement the digital priorities identified in the "Digital Start" exercise performed in 2021 to boost digitalisation of processes across the company. In parallel, the team continued with existing programs to fast-track digital transformation at EDPR. Digitalisation has also been a key factor in streamlining the integration of new companies such as Sunseap and Kronos.

Digital Start

3 new digital processes were introduced in the Accounting department: a fully digitalised urgent payment process, payment inquiries, and simple way to view invoice status. In 2022, the Accounting team processed more than 30,000 invoices and responded to more than 2,000 inquiries.

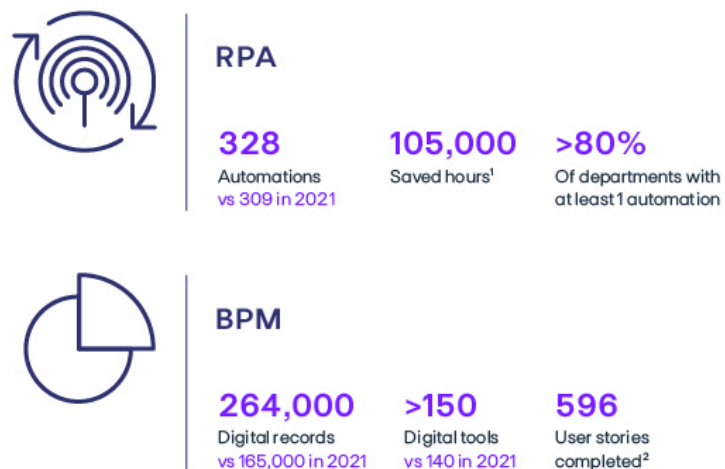

Our new onboarding assistant, Terra, allows teams to create customised communications and tasks for new hires. In 2022, Terra sent more than 6,600 onboarding events to new employees. These tools demonstrate the power of combining BPM and RPA technology.

BPM

Over the past decade, Business Process Management (BPM) technology has been instrumental in accelerating the digitalisation and streamlining of processes at EDPR. In 2022, EDPR teams created approximately 264,000 digital records in our 150+ BPM tools, and the Business Process Excellence team implemented almost 600 suggestions for new tools or improvements to existing tools. Some of these improvements include features to support core business functions such as the pricing process.

RPA

In 2022, Robotic Process Automation (RPA) technology was used to automate tasks in more than 80% of departments across EDPR. With intelligent use of RPA technology, teams are able to increase efficiency and support profitable growth by automating.

¹In 2022, we updated our methodology for calculating time savings produced by automations. We removed a factor that was designed to account for the time that humans take when switching between different tasks. As a result, the total saved hours are lower but provide a more accurate representation of the time that humans would take to perform the specific tasks that have been automated.

²User stories completed for new tools or improvements to existing tools (+47% vs 2021 considering an update on the reporting process).

People

Both the fast track of the energy sector worldwide and the workforce demands are setting the digitalisation pace in EDPR. This digital transformation directly impacts on the culture and digital capabilities, requiring a digital high-level roadmap focused on people with proper skills and mindset. Aligned with Technology and Process boosters, EDPR is convinced that People has a strong contribution to accelerate the digital transformation by empowering people with learning initiatives, helping to spread out the digital know-how with on-the-job experiences and fostering the digital culture throughout the work environment. Different initiatives have been coordinated with the other Boosters in the Digital Transformation Committee, with the objective of maximising the digital capabilities adoption, accelerating the learning curve to be efficient and preparing the company to cope with future challenges and business plan goals.

During 2022, EDPR delivered 13,488 training hours in digital topics (18% of the total training hours delivered) with 14,911 attendances (33.5% of the total). Among others, we want to highlight relevant digital topics or best-in-class programs such as the OT Cybersecurity Program (implementing first two levels Basic I and Basic II), Collaborative tools and MS 365 suite, Data Management and also initiatives involving methodologies like Design Thinking or Agile (with specific webinar offered to all employees to create an Agile Mindset awareness). Advanced programs addressed to Top Management or Leaders were launched during the year, like *Digital 2 Managers* or *Artificial Intelligence for Leaders*.

The new EDPR Human Skills embrace digital behaviours that need learning supports such as Problem Solving, Curious Learning, Collaboration, Open-mindedness, Forward Thinking or Embracing Change. Learning resources offered include a big amount of contents to develop these Human Skills at different levels and segments including specific digital roles with deeper needs on digital capabilities.

In addition, the new Global Development Mindset establishes a new continuous learning experience based on the self-development ownership of every single employee with digital development options to fulfil individual needs. Online learning resources (in Campus Online or the UDEMY portfolio of over 11,000 online courses available) increase the learning offer and allow people to personalised learning paths. Other contents/experiences are shared to all members of Global Communities to stay up to date with current and future digital trends. At the end of 2022, 75% of the employees received training in digitalisation during the year. When talking about methodologies, eLearning contents or live-online sessions and webinars have a relevant presence: during 2022, 74% of the total training hours delivered were in online methodologies vs in-person.

During 2022, EDPR set the pillars for becoming a digitally enabled company with the Digital First Mindset program as the answer to transform the Digital Workforce mindset during the journey. The first stage was launched in December preparing the *Design* phase of the EDPR headcount with a global definition of strategy: behaviours, roles/targets and practices that will allow to go deep with the assessment phase during 2023 to identify digital gaps and both reskilling and upskilling digital opportunities.

The Digital Transformation approach not only impacts on engaging current workforce with digital growth opportunities, but also helps to attract digital talent to meet future needs in our business plan, having a digital branding in the talent market.

3.7. Innovation capital

Technical innovation is one of the hallmarks of EDPR. The Company's history is built on the continuous searching of new trends and solutions in energy production to meet its stakeholders' expectations. Accordingly, EDPR develops projects within the framework of its two main strategic pillars for Innovation: Cleaner Energy focused on sustainable power generation, and Energy Storage & Flexibility to ensure a smoother transition to an energy mix system.

EDPR's commitment to innovation and new technologies has made it a leader in the renewable energy sector. Currently, the Company continues to take advantage of all expertise obtained since the start of its inception to ensure more efficient solutions, more attractive returns, and a more sustainable future. As a result, EDPR engages in projects that englobe wind energy, solar energy, energy storage plants, floating offshore wind farms, green hydrogen, and hybrid power plants.

In addition, EDPR is developing core key-tech enablers initiatives to unblock innovation capabilities, using digitalisation is a powerful innovation enabler. Business Information Modelling (BIM) together with Geographical Information System (GIS) are game changers for design, control and render of the assets, which opens windows for further innovations.

Digital environment is moving forward in the operations area as well, focused on all activities which provide accuracy in operations as Statistical applications based on R and Machine learning for components failure rate and failure modes estimation, Reliability with Robot field activities as blade repairing in wind turbines, and efficiency as blade inspection through A.I. image processing.

Cleaner energy

Construction

BIM + GIS

BIM allows to define and implement a collaborative working methodology to generate a digital asset from the engineering phase until operations, centralising all its information in a digital information model generated by all its agents.

BIM is currently at a medium level of implementation in the construction sector, and low in the renewable one, so its implementation is an innovation in itself as it is a disruptive change, a cultural change that involves multiple processes of design, quality, communication, and whole management. EDPR has successfully achieved BIM implementation in several projects of wind and solar, in different regions across Europe, with high focus on development and engineering stages.

The degree of innovation is directly related to the layers of information or BIM uses that can be implemented in the virtual construction models, being in the case of EDPR multiple uses applied, including elements of calculations (CapEx), simulations (road traffic, hydrological, etc.) and automations (connection with ProjectWise and GIS).

The connection of BIM with GIS also represents a high degree of development, and the increase of interoperability between systems.

Construction digital controlling

Vyntelligence, winner of 2020 Free Electrons program, delivers augmented intelligence with the purpose of simplifying workflow processes, while it increases operational efficiency, reduces costs, and creates invaluable business intelligence. Their Remote Audit solution makes it easier to remotely audit work in the field with Video intelligence, by combining AI with a more human way of capturing data in the field, using a short, guided video from the mobile.

This solution approach is able to improve quality and operational efficiency on EDPR's projects thanks to remote supervision specifically at construction stage.

Vyntelligence will provide a platform that allows an acceleration of workflows, helping in digitalization of processes. Remote supervision of Meteorological Mast assembly and start-up on one hand and Substation switchyard electromechanical assembly and commissioning on the other hand are the objectives of a pilot that will last until October 2023.

This initiative will open the door to check the fit of augmented reality among Construction Control digitalisation.

Operations

Wind farms

Blade inspection and repair

During 2022, several demonstrations of blade inspection were performed with different approaches (auto-flight drones, live streaming drones, non-stop inspection) to understand their advantages, disadvantages, maturity and future of each technology. In addition, the ROMAIN project for blade maintenance was kicked-off. A collaboration project led by EDP that aims to design a compact robot capable of carrying and deploying the newly developed inspection and repair kit along the blade.

Virtual reality

The Telepresence and Virtual Dispatcher initiative tries to provide the O&M team a remote and collaborative inspection tool for wind farms implementing a Virtual Reality based approach. A first concept test was built for Carondio wind farm in Spain, and the goal is to deploy the technology for all the WTG in a wind farm during 2023.

Solar plants

PV module technologies benchmark @SUNLAB (in Santarém, Portugal)

New PV module testbed showcasing the most promising technologies of this decade. The structure consists of a fixed-tilt rack with front and rear side irradiance monitoring, on which five module technologies will be installed.

Automated Guided Vehicles (AGV) for services in PV plants

In 2022, EDPR supported a local manufacturer with an agreement for manufacturing an autonomous robot for cleaning the panels of a PV power plant. The prototype will be able to perform the cleaning without any human intervention. It consists of an outdoor electric AGV provided with a brush and fast change water tank and battery pack. This prototype is scheduled to be tested in Acampo Arval PV plant in the second half of 2023. In addition, the VASD project was also launched in 2022, aiming to develop an autonomous robot for vegetation mowing and collecting the leftover. The system will be able to face rough and dense vegetation.

Hybrid plants

Hybrid power plants combine different sources of energy production and storage to leverage the strengths and address the challenges of each specific production method with the aim of generating energy that is more affordable, reliable, and sustainable.

The hybridisation of pre-existing assets via the adaptation of wind, solar and water technologies is one of the main pathways for growth within the renewable energy sector, offering several benefits such as the increased efficiency of projects, the use and co-opting of existing electrical infrastructure, increased cost stability and a reduced impact on the environment. At the end of 2022, EDPR had over 1,600 MW worth of hybrid projects for these technologies in Spain and Portugal which are either in the study or development phase. Whilst in varying phases of maturity, these are expected to be commissioned over the course of the next several years. EDPR intends to carry on focusing on similar projects in all regions of the world where it is present, with hybrid plants development already under way in North and South America in addition to other European countries including Poland, Italy, and Greece.

Energy storage & flexibility

Battery storage

EDPR works on different projects to improve battery life, improving and maximising battery life to obtain the highest possible efficiency, allowing to get more potential out of them.

EDPR's Technology team is working on the development of software and hardware tools to enable better analysis of the State of Health (SOH) of lithium-ion batteries. SOH is a key parameter that determines the remaining capacity (Ah) of a battery cell as a function of the degradation experienced by both cyclic degradation and lifetime. Thus, through an accurate characterisation of the SOH, optimisation of the complete lifetime of a Battery Energy Storage System (BESS) project, from design/sizing to operations/maintenance, can be achieved.

As a complementary activity, modelling is also extended to the other components of a BESS, mainly the Power Conversion System (PCS). The PCS acts as the connecting element between the DC component and the AC interface. The PCS is of vital importance to extract the full potential of a BESS as a provider of key and novel applications for the grid (RES integration, grid formation, etc.). Different power conversion system topologies for grid integration of lithium-ion batteries are analysed and modelled in order to assess their capabilities with respect to each of these applications.

3.8. Sustainable Development Goals

EDPR supplies affordable & clean energy while mitigating the climate change...

EDPR is a global leader in the sector of renewable energy and one of the world's largest wind energy producer, ending the year with 14.7 GW of installed capacity. In 2022, the company generated 33.4 TWh of clean energy, a cost-effective way to fight climate change.

Wind and solar power are two of the most environmentally friendly ways of producing energy. EDPR's business inherently implies the reduction of GHG emissions and therefore has a positive impact on the environment. In 2022, EDPR's activities avoided the emission of 20 million tons of CO₂.

...impacting positively on communities & fostering innovative infrastructures & circular economy...

EDPR works to promote the well-being and development of the society. In 2022, EDPR invested €2.4 million in supporting communities as a result of activities such as internally developed and collaborative initiatives, donations to charitable organisations and volunteering activities.

Innovation is part of EDPR's day-to-day reality. The company is focused on the more disruptive technologies of the industry and is committed to foster innovative solutions throughout its entire value chain. In 2022, EDPR centred on promoting digital skills and 75% of its employees participated in digitalisation trainings.

Even though EDPR is in the renewable energy business, it goes beyond its commitment with sustainability by fostering a culture of responsible operations and circular economy. In 2022, EDPR recovered 74% of total waste generated and 90% of hazardous waste generated.

...ensuring decent work, gender equality & preservation of the environment.

EDPR continuously works to provide excellent conditions for its employees, grow and develop talent at all levels and optimise its employment policies and labour practises. As a result, EDPR has been recognised as a Top Employer in Europe for the fourth consecutive year and in Brazil for the first time, and as a Top Workplace in the US.

In 2022, EDPR was featured for the third consecutive year in the Bloomberg Gender-Equality Index. The Company's inclusion in this index highlights EDPR's work to promote equal opportunities for women through development, representation and transparency policies

EDPR's business is its best contribution to reduce biodiversity loss. Nevertheless, the Company's commitment to contribute to the protection of biodiversity leads to an active role in the conservation of wildlife surrounding its facilities. In this sense, in 2022 EDPR restored 100% of the hectares that were vegetally affected after construction works in Europe.

Our global vision

PUBLIC

GRI Reporting

Materiality assessment	87
Material topics	89

4.1. Materiality assessment

Background and objectives

The macro-economic context, where the challenges of sustainability are increasing, summing up with the diversity of EDPR's stakeholders, results in a large and complex list of important issues, which must be prioritised according to its relevance and significance.

In this context, EDPR's material issues were identified, and the results achieved supported the preparation of this Annual Report, as reflected in the Company's management strategy and, in particular, in its agenda for sustainability.

An issue is considered material when it influences the decision, the action and the performance of an organisation and its stakeholders.

Methodology

The methodology adopted is based on the Accountability Standards and the information is collected corporately and within each business units as well.

Materiality is acquired by the interception of the issues identified by stakeholders with the importance given internally by the business. The topics identified by the Company are prioritised according to the frequency with which they appear in the different categories analysed.

Relevance for society

The relevance for society is determined by the importance/impact of a specific theme from an external perspective to the Company, designated as society perspective. Therefore, the society vision reflects the vision idea/concept of the several stakeholder groups that have influence on or are influenced by EDPR's activities. This vision must be achieved through sources that ensure independence from the Company to collect, on most cases, external data.

In parallel, the establishment of a society perspective is also supported by documents, analysis and international/national specific studies that allow a broad outlook on the emerging trends in the sustainability area. Consequently, the Company considers that the vision of the several stakeholders reflects the vision of society, thus allowing the assessment of the expectations outside EDPR.

Relevance for business

The vision of the business is obtained through the evaluation of the importance/impact of a specific theme from an internal perspective to the Company. This vision is originated from the analysis of the defined business strategic goals as these depict the current positioning and concerns of EDPR and reflect the future vision of the business. In 2019, EDPR defined a new strategic plan until 2022 and, thus, the material issues for the Company in which this assessment was based were updated accordingly.

Results

The materiality matrix describes visually and promptly the most sensitive and impacting themes by comparing the relevance to society with the relevance to the business. The critical and sensitive themes for EDPR, obtained from the analysis of the materiality matrix, allows the Company to drive the strategy and support the decision-making process as well as to focus the report of information based on shared interests between EDPR and stakeholders, facilitating the relationship between them.

Materiality matrix

Note 1: Environmental management includes biodiversity, waste management and spills.

Note 2: EDPR reports environmental indicators from EBITDA sites the year after their inclusion in operational data. Thus, the environmental indicators of sites that have started operation in 2022 will be included in the 2023 report.

EDPR did not identify the following topics as material:

- Water: Generation from wind energy does not consume water in its operational processes. The water is consumed mainly for human use.
- Light pollution: EDPR activities do not have a material impact in light pollution.
- Raw materials: EDPR core business does not consume raw materials.
- Food waste: EDPR activities do not have a material impact in food waste.

4.2. Climate change

For information regarding GRI 3-3 – Management of material topics, please refer to section Growth of the chapter Strategy and to section Operational Performance of the chapter Performance.

GRI EU1 – Installed capacity, broken down by primary energy source and by regulatory regime

INSTALLED CAPACITY	UN	2022	2021	Δ YoY
Europe	MW	5,656	5,727	(71)
Spain	MW	2,322	2,349	(28)
Portugal	MW	1,199	1,162	+37
Rest of Europe	MW	2,135	2,216	(81)
North America	MW	7,242	7,030	+212
US	MW	6,617	6,500	+116
Canada	MW	130	130	-
Mexico	MW	496	400	+96
South America	MW	1,114	795	+319
Brazil	MW	1,114	795	+319
APAC	MW	726	28	+698
Vietnam	MW	405	28	+377
Singapore	MW	230	0	+230
Rest of APAC	MW	92	0	+92
TOTAL	MW	14,738	13,580	+1,159

Note: The reported data includes EBITDA and Equity MWs.

With a top-quality portfolio, EDPR has a strong track record and proven capability to execute superior projects and deliver on targets. The installed asset base of 14.7 GW is not only young, on average 9 years, it is also mostly certified in terms of environmental and health and safety standards. As of 2022, EDPR had 5,656 MW installed in Europe, 7,242 MW in North America, 1,114 MW in South America and 726 MW in APAC. In terms of technology, EDPR continued its effort to diversify its portfolio, which translates into 12,724 MW of wind onshore, 322 MW of wind offshore and 1,691 MW of solar technology, that includes both solar PV utility-scale and solar DG.

During 2022, EDPR added a total of 2,121 MW, including the successful expansion in APAC through the acquisition of Sunseap, that now represents 5% of EDPR's portfolio. More specifically, EDPR added 1,053 MW of wind onshore, corresponding to 378 MW in Europe, namely 145 MW in Spain, 100 MW in Poland, 83 MW in Italy, 32 MW in France, and 18 MW in Portugal. In North America, 96 MW were installed coming from a project in Mexico. Lastly, in South America, EDPR added 580 MW of wind onshore in Brazil. In terms of solar capacity, 377 MW were added in Vietnam, 316 MW in the US, 230 MW in Singapore, 92 MW in the rest of APAC, 36 MW in Poland, 9 MW in Spain, and 8 MW in Portugal.

Pursuing its Asset rotation strategy, EDPR successfully concluded several Asset rotation deals that amounted to c.1 GW of capacity. In detail, EDPR sold a 100% stake in a 149 MW wind portfolio in Poland, a 181 MW wind portfolio in Spain, a 172 MW wind portfolio in Italy, a 260 MW wind portfolio in Brazil and in a 200 MWac solar project in the US, the latest under a Build & Transfer agreement. All in all, in 2022, EDPR consolidated portfolio net variation was of +1.2 GW.

GRI EU2 – Net energy output broken down by primary energy source and by regulatory regime

ELECTRICITY GENERATED	UN	2022	2021	Δ% YoY
Europe	GWh	11,778	11,357	+4%
Spain	GWh	4,885	4,979	(2%)
Portugal	GWh	2,715	3,049	(11%)
Rest of Europe	GWh	4,178	3,329	+25%
North America	GWh	18,362	17,057	+8%
US	GWh	17,029	15,814	+8%
Canada	GWh	360	255	+41%
Mexico	GWh	973	987	(1%)
South America	GWh	2,625	1,888	+39%
Brazil	GWh	2,625	1,888	+39%
APAC	GWh	636	23	-
Vietnam	GWh	393	23	-
Singapore	GWh	184	0	-
Rest of APAC	GWh	59	0	-
TOTAL	GWh	33,401	30,324	+10%

EDPR produced 33.4 TWh (+10% YoY) of clean energy in 2022. The YoY evolution comes in line with a higher installed capacity in the period and a better renewable resource YoY. In 2022, EDPR achieved a 30% load factor (vs 29% in 2021) reflecting 98% of P50 long term average GCF, following a recovery of the renewable resource, especially in the first half of the year, mainly driven by North America. EDPR achieved a 95% technical availability in 2022, with the company continuing to leverage on its competitive advantages to maximise the projects' output and also on its diversified portfolio across different geographies to minimise the renewable resource volatility risk.

GRI 201-2 – Financial implications and other risks and opportunities for the organisation's activities due to climate change

The Earth's climate has changed throughout history. Scientists attribute the current global warming trend observed since the mid-20th century to the human expansion of the "greenhouse effect" – warming that results when the atmosphere traps heat radiating from Earth toward space. Over the last century, the burning of fossil fuels like coal and oil has increased the concentration of atmospheric carbon dioxide (CO₂).

EDPR is a clear example of how fighting against climate change creates business opportunities. The Company's core business, to deliver clean energy by developing, building and operating top quality wind farms and solar plants, inherently implies the reduction of greenhouse gas emissions, contributing to the world's fight against climate change and its impacts.

Since its inception, EDPR has been performing a strategy focused on selective growth, by investing in quality projects with predictable future cash-flows, and seamless execution, supported by core competences that yield superior profitability, all embedded within a distinctive and self-funding model designed to accelerate value creation. As a result of undertaking such strategy, at the same time flexible enough to accommodate changing business and economic environments, EDPR remains today as a leading company in the renewable energy industry. As reflected in its 2021-25 Business Plan, EDPR plans to add 20 GW in the 2021-2025 period, of which 11.2 GW are already secured. In the coming future, EDPR will continue diversifying its portfolio at geographical and technology levels, developing more wind onshore, solar, wind offshore, green hydrogen and storage technology projects along with the entrance in new markets.

During 2022, EDPR added a total of 2,121 MW, including the successful expansion in APAC through the acquisition of Sunseap, that now represents 5% of EDPR's portfolio. The Company has successfully generated 33.4 TWh of renewable energy, avoiding the emissions of 20 million tons of CO₂¹, +9% YoY due to increase in production (+10% YoY), impacted by higher net installed capacity (+1.2 GW YoY). Capital expenditures and financial investments with capacity additions, ongoing construction and development works during the year totalled €3,446 million.

¹ According to the calculation methodology described in GRI 305-5.

However, EDPR faces climate change not only as a business opportunity, but also as an opportunity to innovate. EDPR's commitment to innovation and new technologies has made it a leader in the renewable energy sector. Currently, the Company continues to take advantage of all expertise obtained since the start of its inception to ensure more efficient solutions, more attractive returns and a more sustainable future. As a result, EDPR engages in projects that englobe wind energy, solar energy, energy storage plants, floating offshore wind farms, green hydrogen and hybrid power plants.

Nevertheless, on the risk side, meteorological changes may pose a risk for EDPR's activities and results since they are carried out in areas of the planet that are being affected by climate change. In addition, future estimations of wind and solar production are based on analysis of historical measurements for more than 20 years and they are considered representative of the future. However, relevant unexpected meteorological changes could lead to a lower production than the one expected from historical data. Thus, when evaluating a new investment, EDPR considers potential changes in the production forecasted but, even so, the size of the potential deviation in the case of relevant meteorological changes is uncertain. Moreover, renewable plants in construction and in operation are exposed to weather hazards, natural disasters, etc., which depend on the location of assets. At EDPR, all plants are insured from the physical damage during construction and operation. During operation, any natural disaster, weather hazard or accident will also be partially insured to revenue losses due to the event. Thus, no material impacts are identified in the EDPR's consolidated financial statements as a consequence of climate change.

As a sector leader, EDPR is aware of the urgency to fight climate change and even though its business inherently implies a positive impact on the environment, the Company continues to work on a daily basis to hold itself to a higher standard and to incorporate innovation in its value chain in order to further contribute to the protection of the climate.

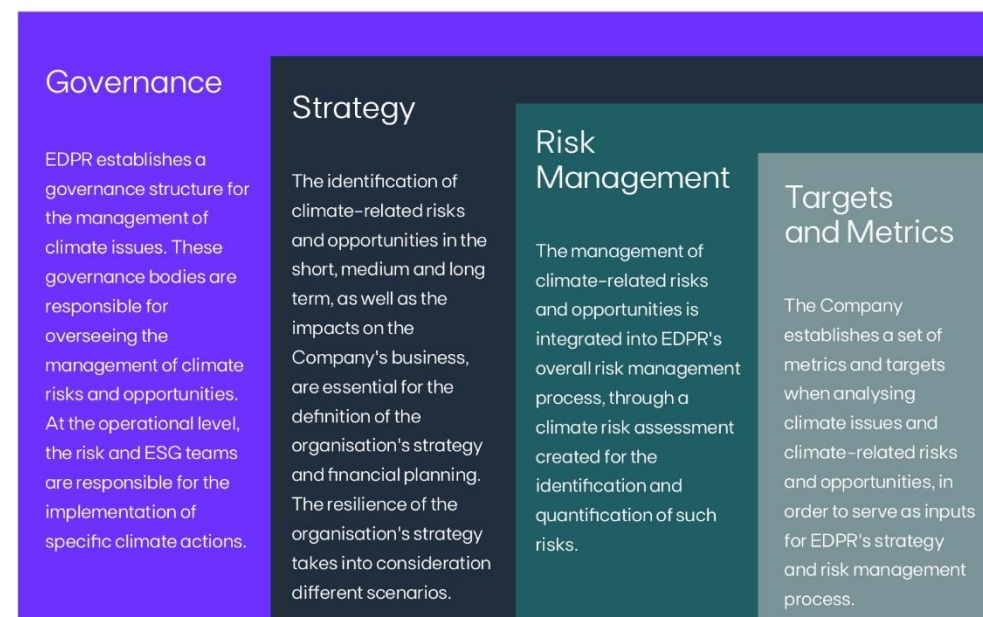

Given the relevance of climate-related risks and opportunities for the resilience of companies, EDPR has taken a step forward in 2022 to manage these aspects and integrate them into its decision-making process.

EDPR's TCFD Alignment

EDPR reports for the first year its approach to TCFD recommendations. The measures implemented by the Company to integrate climate-related risks and opportunities are summarised below, as well as in Annex I – TCFD Alignment.

The image bellow summarises TCFD's main areas and how EDPR integrates the recommendations into its risk management and decision-making processes.

EDPR's TCFD alignment

See Annex I – TCFD Alignment for more information on the EDPR TCFD framework, in relation to the different areas of recommendations.

GRI 302-1 – Energy consumption within the organisation

Wind turbines and solar panels require a small amount of electricity to operate. This energy consumption is generally self-consumed. Given the intermittency of wind generation, sometimes it is needed to consume electricity from the grid.

ENERGY CONSUMPTION	UN	2022	2021	Δ% YoY
Wind farms and solar plants	GJ	329,839	323,462	+2%
Electricity consumption	GJ	329,839	323,462	+2%
Offices	GJ	19,543	13,205	+48%
Electricity consumption	GJ	16,467	9,586	+72%
Gas	GJ	3,076	3,619	(15%)
Fleet	GJ	30,834	33,018	(7%)
Petrol consumption	GJ	26,921	27,441	(2%)
Diesel consumption	GJ	3,804	5,469	(30%)
Bioethanol consumption	GJ	108	108	+0.3%
TOTAL	GJ	380,216	369,686	+3%

Note 1: Gas conversion factor according to Agência Portuguesa de Ambiente.

Note 2: Fleet energy consumption refers to O&M fleet.

Note 3: Please note that variation in energy consumption in offices is mainly impacted by data in 2021 only including 4Q21 (due to the remote work model implemented the rest of the year), except for O&M offices in NA.

GRI 302-4 – Reduction of energy consumption

EDPR's activity is based on clean energy generation, and it produces about 316 times the energy consumed by itself. Nonetheless, the Company is conscious about promoting a culture of rational use of resources and promotes many internal campaigns to encourage sustainable behaviours. In this context, EDPR is promoting the transition of its fleet to electric and hybrid vehicles. As of December 2022, 37% of EDPR's service fleet is hybrid or electric (+4pp YoY).

GRI 305-1 – Direct (scope 1) GHG emissions

EDPR's Scope 1 emissions represent 2,399 tons of CO₂ equivalent, -8% vs 2021. 1,910 tons are emitted by transportation related to the sites' operation, 174 tons by gas consumption in the Company's offices and the rest of it is related to SF₆.

Part of the equipment used for electricity generation purposes contains SF₆ gasses and during 2022, EDPR registered emissions of 14 kg of this gas, which is equivalent to 316 tons of CO₂ eq.

Note 1: Emissions were estimated according to GHG protocol (including official sources such as IPCC or the US department of energy).

Note 2: Data from offices in 2021 refers to 4Q21 data (due to the remote work model implemented the rest of the year), except for O&M offices in NA.

GRI 305-2 – Energy indirect (scope 2) greenhouse gas (GHG) emissions

EDPR's CO₂ indirect emissions (scope 2) represent 29,956 tons, +10% vs 2021. Of the 2022 scope 2 emissions, 28,431 tons are driven by electricity consumption by the wind farms and solar plants and 1,525 tons by electricity consumption in the offices.

EDPR offsets 100% of its Scope 2 CO₂ emissions since 2018 through Certifications of Origin in Spain and Renewable Energy Certifications (RECs) for the remaining geographies (sourced in the US), obtained from renewable energy generation.

Note 1: The emission factors used are based on the following sources: Portugal – EDP, Turbogás, Tejo energia, Rede Eléctrica Nacional (REN), and Entidade reguladora dos serviços energéticos (ERSE); Spain – Red Eléctrica de España (REE); Brazil – Ministry of Science and Technology – SIN (national interconnected system); Other European countries and Canada – IHS Markit.

Note 2: Electricity consumption emissions were calculated with the global emission factors of each country and state within the US.

Note 3: Data from offices in 2021 refers to 4Q21 data (due to the remote work model implemented the rest of the year), except for O&M offices in NA).

Note 4: 2021 data was restated.

GRI 305-3 – Other indirect (scope 3) greenhouse gas (GHG) emissions

EDPR's CO₂ indirect emissions (scope 3) in 2022 are 2,736,347 tons, which represent c.99% of the Company's global emissions. EDPR's scope 3 is divided into those related to the activity of its employees and those related to the supply chain and its activity linked to the Company.

Scope 3 emissions from employees' activity

EDPR's work requires employees to travel and commute. Based on the estimates, employees' business travels (GHG Protocol Category 6) accounted for a total of 3,367 tons of CO₂ emissions, +186% vs 2021 due to travel restrictions due to the pandemic. In relation to employees' commuting (GHG Protocol Category 7), the emissions generated in 2022 are 2,163 tons of CO₂, +454% YoY mainly due to the fact that the Company only reported the emissions generated in the last quarter of 2021, due to the remote work model implemented the rest of the year.

Note 1: Emissions were estimated according to GHG protocol, by following the Defra standard.

Note 2: Employee commuting emissions were calculated from data collected in a survey to all employees, and in 2021 only corresponds to 4Q21 data (due to the remote work model implemented the rest of the year).

Note 3: When calculating employees transportation by air, the radioactive factor is not considered.

Scope 3 emissions from EDPR's supply chain

EDPR's biggest contribution to decarbonisation is its core business, since it inherently implies the reduction of GHG emissions, contributing to the world's fight against climate change and its impacts. Even though, the Company is conscious about its practices regarding emissions and the importance of aligning its supply chain with the Company's climate ambition. As a 100% renewable company, EDPR has identified the supply chain (scope 3) and its climate performance as the main area of action to reduce its global emissions.

EDPR has been working in 2022 on a methodology to account and disclose its upstream emissions. Following the GHG Protocol, the Company has assessed its suppliers' emissions when providing the Company with services, modules, turbines and other components and materials for the construction of its wind farms and solar plants. EDPR includes information on the major sources of emissions generated in the development of the main materials for its facilities, including information from manufacturing to the construction of its wind farms, as well as emissions generated by the transportation of components and materials.

Emissions from the supply chain correspond to the following GHG Protocol categories:

- **Category 1. Purchased Goods and Services:** This category includes all emissions linked to purchases classified as operational expenditure (Opex) and all emissions generated by suppliers during the operation and maintenance phase of wind farms and solar plants.
- **Category 2. Capital Assets:** This category includes all emissions linked to purchases classified as capital expenditure (Capex) and those from the main components of the Company's wind farms and solar plants (modules and turbines). For this exercise, EDPR

has carried out an engagement with suppliers in order to have information on the emissions generated upstream for each of the models (LCAs, EPDs and other environmental declarations).

- **Category 5. Waste Generated in operations:** This category includes emissions generated by non-recovered waste from the Company's operating phase.
- **Other emissions** from the transportation and logistics of materials required for the construction of its wind farms and solar plants are also included in this scope 3 disclosure.

Note 1: Emissions have been calculated based on the specific emission factors of the turbine and module models. For the rest of the materials and purchases, publicly available sources of information have been used: DEFRA, EPA or NREL.

Note 2: Scope 3 emissions related to the supply chain include all emissions generated up to the construction of the facilities.

Note 3: The Company includes a large part of the emissions generated in the transport of materials and components, although the information from different models and suppliers is not always homogeneous.

Total emissions generated by EDPR's supply chain are 2,730,817 tons of CO₂. EDPR is aware of the importance of its supply chain to achieve its climate objectives and therefore engages with them in order to communicate its priorities in this regard.

Total 2022 CO₂ emissions

EDPR's total emissions are 2,768,702 tons of CO₂. Given its activity, scopes 1 and 2 emissions represent a low percentage with compared to the emissions generated indirectly in the Company's value chain. Within scope 3 emissions, the supply chain and emissions generated in the upstream component manufacturing and construction processes are the most relevant, accounting around 99% of the Company's total emissions.

GRI 305-5 – Reduction of greenhouse gas (GHG emissions)

EDPR's core business activity inherently implies the reduction GHG emissions. Wind and solar energy have zero carbon emissions, contributing to the world's fight against climate change and does not produce harmful SO_x, NO_x, or mercury emissions, protecting valuable air and water resources. It is estimated that the Company's activities during 2022 avoided the emission of 20 million tons of CO₂.

The Company's emissions –including all the scopes– represent 14% of the total amount of emissions avoided, and c.99% of the total emissions are from our supply chain. Even though EDPR's activity is based on the clean energy generation, it is conscious about promoting a culture of rational use of resources and, in this context, the Company is promoting the transition of its fleet to electric and hybrid vehicles. As of December 2022, 37% of EDPR's service fleet is hybrid or electric (+4pp YoY).

Nevertheless, even though EDPR activity inherently implies the reduction GHG emissions, the Company goes one-step forward by compensating 100% of the scope 2 emissions. In 2022, 100% of the emissions related to electricity consumption in windfarms and offices in all EDPR countries have been compensated through Certifications of Origin in Spain and Renewable Energy Certifications (RECs) for the remaining geographies (sourced in the US), obtained from renewable energy generation.

Note 1: To calculate the emissions avoidance, the energy generation has been multiplied by the CO₂ eq. emission factors of each country and state within the US. EDPR considers the emission factor of just fossil fuel energy, as it is considered that by increasing the generation of renewable energy, there is a displacing of these technologies, while other renewable technologies and nuclear plants will continue with its quota of generation.

Note 2: The emission factors used are based on the following sources: Portugal – EDP, Turbogás, Tejo Energia, Rede Eléctrica Nacional (REN), and Entidade reguladora dos serviços energéticos (ERSE); Spain – Red Eléctrica de España (REE); Brazil – Ministry of Science and Technology – SIN (national interconnected system); USA – emissions & generation resource integrated database (EGRID) for each state emission factor; other European countries, Mexico and Canada – IHS Markit.

Internal carbon pricing

At Group level, a carbon price is used company-wide to assess the impact of current and future carbon regulation and carbon taxes on energy prices, energy volumes, and existing assets' value, as well as to evaluate capital investments in building or acquiring new electricity generation assets across the globe. Meaningful carbon prices strongly benefit EDP's business strategy, fully align with the Paris Agreement, and contribute decisively to its commitment to be carbon neutral by 2040.

GHG-related regulation considered the European Union Emissions Trading System (EU-ETS), which applies to our thermal power generation assets in Europe (Portugal and Spain), as well as in possible future markets in the only other geography where we currently own thermal power plants (Brazil).

4.3. Economic business sustainability

For information regarding GRI 3-3 – Management of material topics, please refer to section Financial Performance of the chapter Performance.

GRI 201-1 – Direct economic value generated and distributed

ECONOMIC VALUE GENERATED AND DISTRIBUTED	UN	2022	2021
Economic value generated	€m	3,757	2,487

Value creation

In a context in which climate change is one of the great challenges that society faces, and under the implementation of an integrated risk model, EDPR promotes clean energy through the development, construction and operation of wind farms and solar plants. Throughout its business model, EDPR transforms its industrial, financial, human, social, natural and intellectual capital, generating a competitive return for its shareholders, generating quality employment, promoting the development of the communities where it operates, having a positive impact on the environment and generating business and innovation together with the supply chain.

All the components of value creation are included in different chapters throughout the Annual Report:

- **Context** – Challenges and Opportunities: Chapter 2. Strategic approach (General context)
- **Risks**: Chapter 2. Strategic approach (Risk management)
- **Business Model**: Chapter 1. The company (Business description)
- **Capitals**: Chapter 3. Performance (Financial Capital, including Industrial Capital in the section Operational Performance; Human Capital; Social Capital, in the subchapters Social Capital and Supply Chain Capital; Natural Capital; and Intellectual Capital in the Innovation Capital and Digital Capital subchapters).
- **Key stakeholders return**: Chapter 3. Performance (Financial Capital, Human Capital, Social Capital, Natural Capital and Supply Chain Capital).

EU Taxonomy Regulation

The European Commission's Sustainable Finance Taxonomy Regulation has been considered as one of the main elements to move capital flows towards a more sustainable economy. It is a key classification system to promote climate neutrality by identifying those activities considered as environmentally sustainable.

In accordance with the EU taxonomy and what it establishes, EDPR has reported since 2021 on the 3 KPIs requested: the proportion of its turnover, capital expenditure (Capex), and operational expenditure (Opex). In 2021, EDPR disclosed its eligible economic activities associated to one of the environmental objectives, the climate change mitigation. EDPR determines the Taxonomy eligible and aligned KPIs in accordance with the legal requirements.

Considering that its core business is the planning, construction, operation and maintenance of electricity generating power stations using renewable energy sources (mainly wind and solar), EDPR assigned the Taxonomy-eligible economic activities to the electricity generation from wind and solar power utility scale (economic activities 4.1 and 4.3) and as a novelty in 2022, in order to report its distributed solar activity, it includes the economic activity of installation, maintenance and repair of renewable energy technologies (7.6) – in accordance with Annex I of the Climate Delegated Act (EU 2021/2139). The economic activities in this category could be associated mainly with NACE codes D35.11 and F42.22, in accordance with the statistical classification of economic activities established by Regulation (EC) No 1893/2006.

The different EDPR technologies and the economic activity identified by the taxonomy are the following ones: Solar Utility Scale Energy (Solar PV) as “*Electricity generation using solar photovoltaic technology (4.1)*”; Wind Energy as “*Electricity generation from wind power (4.3)*”; and Solar Distributed Solar Energy (DG) as “*Installation, maintenance and repair of renewable energy technologies (7.6)*”. In order to disaggregate, under Article 8 of the EU Taxonomy Regulation (EU) 2021/2178 of 6 July 2021, the Turnover, Capex and Opex volume for each of the economic activity mentioned above (4.1, 4.3 and 7.6), EDPR has used the proportion of each technology on generation, capacity under construction and EBITDA capacity respectively. Taking this into account, there is no risk of double counting the reported indicators in the numerator.

Eligible and Aligned Turnover in 2022

TAXONOMY-ELIGIBLE ACTIVITIES	TOTAL ELIGIBLE TURNOVER (€m)	PROPORTION OF TAXONOMY ELIGIBLE TURNOVER (%)	PROPORTION OF TAXONOMY ALIGNED TURNOVER (%)
Electricity generation using solar photovoltaic technology (4.1)	€ 87	3.62%	3.62%
Electricity generation from wind power (4.3)	€ 2,262	94.63%	94.63%
Installation, maintenance and repair of renewable energy technologies (7.6)	€ 29	1.23%	1.23%
TOTAL	€ 2,378	99.5%	99.5%

Note: Refer to Annex II for more information related to taxonomy and how EDPR meets alignment requirements.

Definition

The proportion of Taxonomy-eligible and aligned turnover was calculated as the portion of the turnover derived from products and services associated with electricity generation from wind and solar in the reporting period and those related to sales such as RECs and renewable energy guarantees of origin (numerator) divided by the total turnover in the reporting period (denominator).

The numerator of the KPI is defined as the net turnover derived from electricity sales, from advisory and management services provided to third parties, from other goods and materials sales such as guarantees of origin and RECs and financial guarantees of subsidiaries for the development of their activity. The third parties include entities to whom EDPR sold assets in the context of its Asset Rotation strategy, and partners in EDPR controlled entities.

The denominator of the turnover KPI is based on the Company's consolidated revenues in accordance with IAS 1.82(a).

Reconciliation

There is no direct reconciliation in the Consolidated Financial Statements. For the calculation of this KPI, the Company has taken into account the total turnover and not only the disclosed revenues and gross profit. Compared to EDPR revenues disclosed, the turnover also includes the costs of raw materials and consumables. Please refer to page 3 of EDPR's 2022 Consolidated Financial Statements (line "Revenue") for the gross profit information.

Eligible and Aligned Capex in 2022

TAXONOMY-ELIGIBLE ACTIVITIES	TOTAL ELIGIBLE CAPEX (€m)	PROPORTION OF TAXONOMY ELIGIBLE CAPEX (%)	PROPORTION OF TAXONOMY ALIGNED CAPEX (%)
Electricity generation using solar photovoltaic technology (4.1)	€ 2,112	61.28%	61.28%
Electricity generation from wind power (4.3)	€ 1,153	33.44%	33.44%
Installation, maintenance and repair of renewable energy technologies (7.6)	€ 164	4.76%	4.76%
TOTAL	€ 3,429	99.5%	99.5%

Note: Refer to Annex II for more information related to taxonomy and how EDPR meets alignment requirements.

Definition

The proportion of Taxonomy-eligible and aligned Capex was calculated as the portion of the total Capex derived from products and services associated with electricity generation from wind and solar power in the reporting period (numerator) divided by the total Capex in the reporting period (denominator).

The numerator consists of the Capex related to assets or processes associated with electricity generation from wind and solar power (considered as components necessary to execute the activity). Consequently, all Capex invested into planning, construction, operation and maintenance of wind farms and solar plants are considered in the numerator of the Capex KPI.

Total Capex consists of additions to tangible and intangible fixed assets during the financial year, before depreciation, amortisation and any re-measurements, including those resulting from revaluations and impairments, as well as excluding changes in fair value. It includes acquisitions of tangible fixed assets (IAS 16), intangible fixed assets (IAS 38), right-of-use assets (IFRS 16) and investment properties (IAS 40). Additions resulting from business combinations are also included. Goodwill is not included in Capex, as it is not defined as an intangible asset in accordance with IAS 38.

Reconciliation

There is no direct reconciliation in the Consolidated Financial Statements. For the calculation of this KPI, the Company has taken into account the total non-current assets. This Capex includes the Property, plant and equipment and the Intangible assets of EDPR in 2022. Please refer to notes 16 (*Property, plant and equipment*) and 18 (*Intangible assets*) for further information.

Eligible and Aligned Opex in 2022

TAXONOMY-ELIGIBLE ACTIVITIES	TOTAL ELIGIBLE OPEX (€m)	PROPORTION OF TAXONOMY ELIGIBLE OPEX (%)	PROPORTION OF TAXONOMY ALIGNED OPEX (%)
Electricity generation using solar photovoltaic technology (4.1)	€ 18	7.02%	7.02%
Electricity generation from wind power (4.3)	€ 224	87.37%	87.37%
Installation, maintenance and repair of renewable energy technologies (7.6)	€ 10	3.76%	3.76%
TOTAL	€ 252	98.2%	98.2%

Note: Refer to Annex II for more information related to taxonomy and how EDPR meets alignment requirements.

Definition

The proportion of Taxonomy-eligible and aligned Opex is defined as the Opex considered sustainable in the reporting period (numerator) divided by the Company's total Opex (denominator).

The numerator consists of the Opex related to maintenance of assets or processes associated with electricity generation from wind and solar power (considered as components necessary to execute the activity). This Opex also include non-capitalised costs related to leases and rents activities. Consequently, all Opex related to the maintenance of wind farms and solar plants are considered in the numerator of the Opex KPI.

The denominator, total Opex, consists of direct non-capitalised costs that relate to leases and rents, and maintenance and repairs, and any other direct expenditures relating to the day-to-day servicing of assets of property, plant and equipment. This value cannot be reconciled to Company's consolidated financial statements, as it includes:

The volume of non-capitalised leases, which excludes expenses for short-term leases. Maintenance and repair and other direct expenditures relating to the day-to-day servicing of assets of property, plant and equipment were determined based on the maintenance and repair costs allocated to the Company's internal cost centres. The related cost items can be found in various line items in EDPR's income statement, including production costs (maintenance in operations), sales and distribution cost (maintenance logistics) and administration cost (such as maintenance of IT-systems).

EU taxonomy eligibility & alignment

During this 2022 exercise, all activity reported by EDPR as eligible in all three indicators of the taxonomy (Turnover, Capex and Opex) has met the alignment criteria. Compared to the 2021 eligibility exercise, there have been no significant changes: both turnover (+0.9pp YoY) and Capex (+0.2pp YoY) have increased in eligibility, while Opex slightly decreases (-0.2pp YoY).

Please refer to Annex II for more information on the EDPR EU taxonomy alignment process and its compliance with the requirements related to Do No Significant Harm and Minimum Safeguards.

4.4. Health & safety

For information regarding GRI 3-3 – Management of material topics, please refer to section Health & Safety of the chapter Performance.

GRI 403-1 – Occupational health and safety management system

The management of all issues related to health and safety is collected and described in the integrated Health & Safety and Environment Management System (HSEMS), which covers all employees and operations of the Company. The processes and procedures regulated in the management system are developed to comply with the legal requirements of each country, the ISO 45001 standard, and the requirements that have been considered appropriate by EDPR to carry out a correct management of the related issues with the H&S of all workers.

GRI 403-2 – Hazard identification, risk assessment and incident investigation

The process to identify hazards and assess the H&S risks arising from the Company's activity and facilities is developed according to the Hazards Identification and Risks Assessment procedure of the HSEMS, in which responsibilities and methodologies are defined to ensure risks are reduced and, if possible, avoided. The Risk Assessment of each job position is reviewed and updated as applicable, pursuant to the Company's commitment to continuous improvement. The preparation of these risk assessments is carried out by senior H&S technicians. The risk assessments, as well as the risk assessment procedure itself, are audited every year with an internal audit and the external audit of ISO 45001 certification. All the findings, conclusions, and recommendations that emerge from the audits, monitoring and other reviews are managed according to the Findings Management procedure of the HSEMS, and an action plan is drawn. The results of this action plan are reviewed in subsequent audits.

In addition, the Communication, Consultation & Participation procedure of the HSEMS includes information on hazards communication management. The process of risks communication is an effective tool to establish an active information channel, fast and effective among employees, managers and the top management, to act in the fastest way possible and avoid risks that may arise. To promote the participation and commitment of the entire Company, any employee may report anomalies or detected risks on H&S and

environmental issues. When an unsafe act or condition is detected, the employee may report it in an internal tool, specifying whether an immediate action is required. EDPR's commitment not to retaliate against any worker who expresses a concern about safety issues or who has intervened in any incident is included in the Company's Health & Safety Policy. The Policy also indicates that workers should remove themselves from work situations that they believe could cause injury or ill health, as no situation can justify endangering someone's life.

To know how to report, investigate and follow-up on an incident, the Incidents Management procedure is available in the HSEMS. The purpose of this procedure is to define the process to identify, respond, report, analyse and investigate incidents and respond to emergency situations, as well as to take the necessary actions to prevent and/or mitigate them.

GRI 403-3 – Occupational health services

EDPR ensures that medical examinations are provided to the employees according to the legal requirements of each country, to determine whether employees are medically fit to carry out their specific duties. EDPR has external medical services for all employees² for the medical follow-up, whose management is carried out directly by the medical service of the joint prevention service of the EDP Spain company. The detailed results of the medical examinations are confidential but shared with the employee, as EDPR receives only the conclusion of the examination: apt, not apt or apt with restrictions, indicating the restrictions.

GRI 403-4 – Worker participation, consultation, and communication on occupational health and safety

A significant part of the Company plays a fundamental role in the implementation of its Health & Safety Policy. In this context, EDPR created health and safety committees that collect information from different operational levels.

In addition, the H&S Policy, Management System and its procedures, as well as other H&S aspects are communicated to employees using a multi-tier approach. The Policy is published on EDPR's website and intranet, and is also printed and posted at each facility, as the HSEMS and its documented procedures are automatically available in every employee's computer desktop for easy access. Moreover, the Company shares monthly H&S reports with its employees.

² Except for employees working from the Oviedo office

GRI 403-5 – Worker training on occupational health and safety

The Company's commitment to ensure high safety standards for employees and contractors make EDPR an increasingly safe place to work, prioritising the safety and wellbeing of all stakeholders with the objective of zero accidents overall. In order to achieve this goal, EDPR provides training to both its employees and its contractors regarding both generic occupational health & safety aspects as well as training on specific work-related hazards.

In 2022, EDPR provided more than 19,500 hours of training on H&S topics to its employees, which corresponds to over 7 hours of training per employee on average.

GRI 403-6 – Promotion of worker health

During 2022, both physical and mental health were once again a global priority. In this context, EDPR has several initiatives focusing on employees' health and wellbeing to ensure the continuity of care, providing employees with different tools and services such as access to online medical consultations, TelePharmacy, physiotherapy and psychological therapy sessions.

To raise awareness on mental health in particular, EDPR launched the *Mind Your Mind* campaign in October, which promoted educational talks with specialists, employees and other key stakeholders on how to approach the topic, especially in the current social context. In addition, the Company has a wellness platform to further develop a culture of wellness and

encourage healthy habits. The aim of the programs promoted by the platform is to create a culture where employees choose to voluntarily adopt healthy habits by sharing their experiences, form support networks to facilitate the process and motivate each other.

GRI 403-7 – Prevention and mitigation of occupational health and safety impacts directly linked by business relationships

To guarantee that the suppliers comply with EDPR's requirements regarding sustainability in the supply chain, EDPR monitors strategic suppliers during their services delivery. EDPR performs internal inspections during the construction and operation phases to monitor the suppliers' performance regarding environmental and H&S aspects and to identify and consequently mitigate potential risks. In 2022, EDPR performed 2,196 inspections (+31% than in 2021) to 255 suppliers (-2% YoY) regarding health and safety procedures. As a result of these inspections, the Company identifies corrective actions needed and establishes an action plan for continuous improvement.

Moreover, to prevent possible H&S risks to workers from other companies, EDPR provides a risk guide for the facility to all contractors before starting their work on the facility. In addition, the Company requires that the contractors participate in drills that are carried out at the facilities, so that everyone knows how to act in the event of an emergency. EDPR also has established, through the HSEMS's Safety Alerts Management technical instruction, the communication to contractors of any safety alert that may be applicable to the facility or the contractors.

¹Excludes fatalities. Refers to work-related injuries that result in more than 6 months of lost workdays. ²Excludes high-consequence injuries. ³Includes injuries that result in restricted work or transfer to another job, minor first aid injuries, and injuries that required medical treatment beyond first aid, or loss of consciousness; or significant injury or ill health diagnosed by a physician or other licensed healthcare professional. ⁴Sum of recordable work-related injuries without lost workdays, and work-related injuries that result in fatalities and lost workdays. Commuting incidents are not included (5 commuting accidents in 2022 of EDPR employees, of which 3 resulted in lost workdays).

Note: From the 9 employees impacted by work-related injuries with lost workdays, 8 are male and 1 is female. Even though EDPR does not register H&S indicators by gender for contractors, normally the majority of contractors working on EDPR sites are men.

¹Excludes fatalities. Refers to work-related injuries that result in more than 6 months of lost workdays. ²Excludes high-consequence injuries. ³Includes injuries that result in restricted work or transfer to another job, minor first aid injuries, and injuries that required medical treatment beyond first aid, or loss of consciousness; or significant injury or ill health diagnosed by a physician or other licensed healthcare professional. ⁴Corresponds to the sum of recordable work-related injuries without lost workdays, and work-related injuries that result in fatalities and lost workdays. Commuting incidents are not included (there were 5 commuting accidents in 2022 related to EDPR employees, of which 3 resulted in lost workdays).

Note: Frequency rate calculated as [# of work-related injuries/Hours worked * 1,000,000].

SEVERITY RATE OF WORK-RELATED INJURIES	UN	2022			2021		
		EMPLOYEES	CONTRACTORS	TOTAL	EMPLOYEES	CONTRACTORS	TOTAL
Europe	x	0	525	276	3	286	180
North America	x	120	0	45	206	147	164
South America	x	22	272	253	0	76	73
APAC	x	47	0	33	0	0	0
TOTAL	x	51	234	166	93	142	132

Note 1: Severity rate calculated as [# of Lost workdays/Hours worked*1,000,000].

Note 2: Fatal accidents are not included in the severity rates since each fatal accident is methodologically associated with a total of 6,000 lost days, which would misrepresent the reported data. If these were included in 2021, the Total Severity Rate for EDPR would be 461 and the Total Severity Rate for contractors in Europe would be 2,180. In 2022, Total Severity Rate for EDPR would be 559 and the Total Severity Rate for contractors in South America would be 1,899.

During 2022, EDPR registered 39 work-related injuries that resulted in lost workdays for employees and contractors (+3% YoY). One of these injuries was fatal and EDPR has defined an action plan with corrective measures to further mitigate these incidents, which was revised and approved by the Company's Management Team.

In 2022, the injury and the lost day rate were 2.5 work injuries per million hours worked (+22% YoY) and 166 days lost due to work accident per million hours worked (+26 YoY), respectively. The interannual variations of these ratios are mostly impacted by a decrease in worked hours (-16% YoY) mainly in Brazil due to the conclusion of construction works carried out during 2021, as the country had 580 MW under construction by the end of 2021 and none by the end of 2022.

However, EDPR continuously works to improve these ratios and to bring awareness to the best H&S practices. This is reinforced by the integrated Health & Safety and Environmental Management System, developed and certified according to international standards ISO 45001 and ISO 14001 for a more global and efficient approach, simplifying processes and managing the potential risks of its activity. The HSEMS, where synergies play a fundamental role, was implemented and jointly certified by an independent certifying organisation. The implementation of this integrated system allows for better management and prevention of accidents, with the objective of zero accidents overall. The commitment to health & safety is further supported through the ISO 45001 certification, which covers c.100%¹ of EDPR's installed capacity by the end of 2022.

¹ Calculation based on 2021YE installed capacity (EBITDA MWs). EDPR certifies the facilities the year after the COD (commercial operating date). Thus, the facilities that have entered into operation in 2022 will be certified in 2023.

GRI 403-10 – Work-related ill-health

EDPR has no knowledge of any cases of occupational diseases in the company. EDPR is working to systematise the registration of this type of diseases, if detected.

GRI EU17 – Days worked by contractor and subcontractor employees involved in construction, operation and maintenance activities

Contractors involved in construction, operation and maintenance activities worked an average of 1,203,667 days during 2022, which represents a decrease of 33% when compared to the previous year.

GRI EU25 – Number of injuries and fatalities to the public involving company assets, including legal judgments, settlements and pending legal cases of diseases

EDPR has no knowledge of any legal judgments, settlements and pending legal cases of diseases in 2022, neither in 2021.

Note: For the information reported in this indicator, EDPR considers passive contingencies associated with litigation qualified as probable in 2022 recorded in the contingencies reporting system.

Absenteeism

ABSENTEEISM BY COUNTRY	2022	2021
	HOURS (#)	HOURS (#)
Europe	19,357	75,759
Spain	13,853	67,817
Portugal	759	2,880
France & Belgium	1,062	119
Italy	756	1,023
Poland	2,528	1,984
Romania	376	1,936
Greece	0	0
Hungary	24	0
United Kingdom	0	-
North America	28,563	28,740
North America	28,563	28,740
South America	1,094	1,327
Brazil	568	687
Colombia	288	640
Chile	238	0
APAC	26,308	-
Singapore	26,308	-
TOTAL	75,322	105,826

Note 1: EDPR defines absenteeism as total of non-worked hours in workable periods, including absence hours due to accidents, absence hours due to diseases and absence hours due to other not justified motives.

Note 2: Excludes employees from Rest of APAC.

Note 3: The YoY variation is mainly due to the fact that the methodology for calculating the data in the 2022 financial year has improved.

4.5. People management

For information regarding GRI 3-3 – Management of material topics, please refer to section Human Capital of the chapter Performance. Moreover, please find other people management related topics at the end of this section.

GRI 2-7 – Employees

EDPR had 3,086 employees in 2022, +44% vs 2021 mainly due to the acquisition of Sunseap, a renewable energy company in the APAC region.

In the table below, the number of full-time / part-time employees in 2022 is disclosed by age group, gender and professional category.

By the end of 2022, 99% of EDPR's employees worked full-time (vs 98% in 2021).

FULL-TIME / PART-TIME EMPLOYEES	UN	UNDER 30 YEARS OLD		BETWEEN 30 AND 50 YEARS OLD		OVER 50 YEARS OLD		TOTAL
		FEMALE	MALE	FEMALE	MALE	FEMALE	MALE	
Full-time	#	259	494	622	1,343	90	238	3,046

Technicians	#	6	1	7	0	7	1	22
TOTAL	#	260	494	651	1,345	96	240	3,086

Note 1: EDPR keeps a constant number of employees throughout the year, which makes the difference between the final number of employees and the average not significant. In 2022, this difference (13%) is slightly higher than previous years due to the incorporation of Sunseap.

Note 2: 92% of the temporary employees are located in North America, 7% in Europe and 1% in Asia-Pacific.

The average number of contractors' workers during 2022 was 1,209 in Europe, 1,484 in North America, 1,924 in South America and 355 in APAC.

In the table below, the number of permanent / temporary employees in 2021 is disclosed by age group, gender and professional category.

PERMANENT / TEMPORARY EMPLOYEES	UN	UNDER 30 YEARS OLD		BETWEEN 30 AND 50 YEARS OLD		OVER 50 YEARS OLD		TOTAL
		FEMALE	MALE	FEMALE	MALE	FEMALE	MALE

GRI 2-30 – Collective bargaining agreements

According to its Code of Ethics, EDPR undertakes to respect freedom of trade union association and recognise the right to collective bargaining.

At EDPR, from 3,086 employees, 12% were covered by collective bargaining agreements in 2022. Collective bargaining agreements include different topics such as career development, mobility, salaries, health & safety etc. and apply to all employees working under an employment relationship with some companies of EDPR group, regardless of the type of contract, the professional group into which they are classified, their occupation or job. However, matters relating to the corporate organisation itself, the laws of each country or even usage and custom in each country result in certain groups being expressly excluded from the scope of collective bargaining agreements.

The collective bargaining agreements that are applied at EDPR are usually negotiated at state level or regional level, and EDPR may be just one of the players among other leading sectorial companies in the negotiation with employees' representatives, and in some cases, governmental representatives. In Portugal and Brazil, EDP negotiates its own agreements with employees, and those apply to any employee working for companies of the Group, including EDPR.

During the last years, EDPR has performed different benchmark analysis of the benefits stated at the different collective bargaining agreements that apply to its employees, comparing them against the benefits offered by the Company and, in general terms, the Company offers a more competitive benefits package compared to what is stated in the collective bargaining agreement.

GRI 401-2 – Benefits provided to full-time employees that are not provided to temporary or part-time employees

As a responsible employer, a quality employment that can be balanced with personal life is a priority for EDPR. In this sense, the package of benefits provided to full-time employees does not differ from that offered to part-time employees. This benefits package, depending on the country, includes medical insurance, life insurance, pension plan and conciliation measures.

GRI 402-1– Minimum notice periods regarding operational changes

In EDPR, it is customary to communicate significant events and organisational changes to the affected groups in advance.

As an employer in the United States, EDPR complies with the Worker Adjustment and Retraining Notification (WARN) Act Guide to Advance Notice of Closings and Layoffs.

GRI 404-1 – Average hours of training per year per employee

In 2022, EDPR invested more than €2.2 million in training.

The total number of training hours increased +31% vs 2021, +23% for women employees and +34% for male employees.

GRI 404-2 – Programs for upgrading employee skills and transition assistance programs

To address the needs for reinforcing a one company mindset, EDPR must foster an impactful development environment that translates into a holistic assessment that integrates individual's past (performance), present (skills), and future (agility), addressing business and people needs. A new global development mindset that also includes development conversations, a key tool and moment to foster an impactful experience. This ongoing cycle is supported by a new learning experience and culture that is flexible and led by everyone, according to their needs.

In this sense, EDPR is committed to the development of its employees, offering them an attractive professional career, and aligning their capabilities and skills with the current and future needs of the company. The growth and development of the Company's business leads EDPR to invest in the employees by discovering, improving, and emphasising the potential of each mainly through internal mobility, training, and development actions.

Holistic assessment

For an impactful and comprehensive development experience, EDPR strives to have a whole perspective of the employee, by learning how they perform, what skills they have, and their agility to evolve under new or unexpected conditions. To better develop its team, the Company must consider the infinite connection between past, present, and future. This connection gives EDPR different ingredients and insights that it should consider while assessing its people, in order to bring out their best self.

- **Performance (past):** Performance monitoring is quite essential for EDPR, from an individual perspective and for the organisation, since it:
 - Enables people to perform to the best of their abilities and produce the highest-quality work;
 - Provides feedback and support on their progress about what is expected from them according to each function/level, while allowing accountability;
 - Promotes greater differentiation between employees, fostering a fair and transparent consequent management.
- **Skills (present):** It is essential to realise that the skills that EDPR's employees have are, by consequence, also the Company's competencies. Therefore, EDPR benefits from mapping the skills it has in house in order to fulfil skills gaps, and guide and tailor its development initiatives considering its business and people needs.
- **Agility (future):** EDPR is committed to lead the energy transition and has an ambitious Business Plan accordingly. The best way for the Company to be prepared for this future and quickly adapt to market changes is by being flexible, creative, and resilient. To do this, EDPR fosters development also considering future needs, preparing the team for upcoming challenges and ensuring business continuity.

Learning

EDPR offers job-specific ongoing learning opportunities to contribute to the self-development of employees according to the new learning model as part of the Global Development Mindset. Regular and continuous Development Conversations with the Manager contribute to identify learning needs along the year in close relationship with strategic goals and the main business challenges, so they are anticipated and prioritised. This approach implies a fluid learning process that happens in the pace of work, anytime, anywhere, anyhow.

A mature Learning culture requires a proper environment that stimulates curiosity, autonomy and share of learning among employees, not only through formal but also through informal ways. The offer has evolved to a more on-demand approach where employees have online learning contents and resources to personalise the learning experience. The Udemy's portfolio with over 11,000 online courses, Campus Online open contents, workshops and global talks or shared contents in EDPR's Global Communities online are part of this diversified learning experience.

The annual Training Plan also includes business specific programs (technical, management, behavioural), digital training focused on the digital upskill roadmap, mandatory topics addressed (safety, ethics, compliance, cybersecurity) aligned with the Company's challenges and new markets or technologies to ensure the sustainability of EDPR's business.

During 2022, EDPR delivered a total of 87,187 training hours throughout 4,828 sessions that included 44,551 participants. This translates into an average of 32 hours of training per employee and results in 96% of EDPR's team receiving training. With lessons learnt after COVID-19 pandemic, EDPR has consolidated different learning methodologies and selected the best option who matches the requirements from both the contents and the participants: live online, e-learning, virtual remote formats and in-classroom training are part of the learning ecosystem in EDPR (a total of 74% of training hours or 94% of the attendances were delivered in online methodologies). Therefore, EDPR keeps on Digitalisation as one of the main training drivers that helped to accelerate and consolidate during 2022 because of the methodologies and by contents increasingly delivered on topics such as Collaborative Tools (Microsoft 365 suite), Agile or Design Thinking methodologies, Data Analyse tools, Digital Transformation, Cybersecurity, SMART business, IoT, Cloud or Artificial Intelligence.

Knowledge management

EDPR is aware of the importance of Knowledge as a valuable asset within the business and in employees' development. Thus, EDPR is boosting LINK as a knowledge platform, increasing the number of areas, domains and curated documents with valuable content captured and shared across the organisation encouraging the access to recommended documents. During 2022, EDPR organised a total of 3 sessions of *40fiveminutes*, an online initiative to easily share main business insights in a friendly and informal way to those employees who voluntarily register to the sessions.

Implementing a Global Development Mindset culture implies a strong knowledge sharing mindset, so EDPR strives to improve the use of knowledge by regularly distributing customised

relevant documents or events, fostering the participation in Communities, offering regular talks, webinars, or clinics, working to adapt to new ways of learning reaching to all the generations present in the Company, and by establishing a hybrid work model.

Development Programs

To support the Company's growth and to align the current and future needs of the organisation with the skills of employees, as well as boost their professional growth, EDPR has included in the new global development mindset approach an holistic assessment (past, present, and future), development conversations and "anytime, anywhere" development tools, as long as different development programs that allow employees acquire the right tools to take on new responsibilities and adapt to new challenges:

- The **Lead Now Program** aims to support middle managers in their role as team leaders. As a result, participants have the possibility to self-assess their management style, improve the skills they need, and get to know the role they play in the different HR processes at EDPR, as well as the IT, internal tools and H&S systems that can help them develop their role. Through online sessions, two editions were delivered to 24 employees in 2022 in Europe and Latin America, and other five in North America in which 72 employees participated.
- The **Leader Coaching Program** in North America supports current and new leaders with focused leadership coaching via certified leadership coaches who provide Leadership Coaching, Transition Coaching for first-time managers, or Group Coaching for groups of leaders on leadership topics that align to current business environment. In 2022, 82 North America leaders attended Leader Coaching programs.
- The **Executive Development Program** is an advanced training with a similar philosophy of an MBA in which the main objective is to develop the vision, skills and management capabilities required to meet the many and diverse challenges that EDPR professionals must face. In January 2022, the edition launched in May 2021 ended with 30 participants. It was focused on different topics, such as Economic Outlook, Strategic Vision, Operational Excellence, Financial Management, Communication and Leadership, among others.

Mobility

EDPR considers both functional and geographical mobility as a tool that contributes to the organisational development by stimulating employees' motivation, skills, productivity,

personal fulfilment and fostering the share of best practices. The mobility processes within EDPR aim to respond to the different challenges and needs of the Company, considering the characteristics of the different geographies. In 2022 there were 90 mobility processes, 40 of them functional, 34 geographical and 16 both functional and geographical. Entering in new geographies such as APAC has meant that new mobility opportunities have arisen. The different types of mobilities that we consider within the company are the indicated below:

- **Short-term assignments:** Applies to short-term international relocation (up to 1 year), not renewable, initiated by the Company, whose purpose is the development of projects or the development of the professional career of employees involved.
- **Expatriation:** This regulation applies exclusively to expatriation up to 3 years, renewable, (international assignment for the execution of management or mandate functions in the destination country or critical functions that may have been identified).
- **Commuting:** Applies to employees that perform simultaneously management and mandate functions in two companies located in different geographical regions or countries, one of them being the base location.
- **Local plus:** For employees going on long-term relocations (more than 1 year), through cessation of the work contract at the home company.

GRI 404-3 – Percentage of employees receiving regular performance and career development reviews

EDPR defines two assessment processes for its employees. The annual performance assessment, which covers all employees entitled to variable remuneration, and the potential assessment.

All EDPR employees, regardless of their professional category, are evaluated every two years to determine their development potential by providing the most suitable training. EDPR creates tailored development plan to address specific needs.

Moreover, EDPR offers the possibility to all employees to define an Individual Development Plan. This plan is a very effective tool that enable the Company to structure training actions for the employee aimed at widening their abilities and expertise since it requires a reflection upon the results of their skills assessment and identify the individual's strong points and

improvement areas, taking into consideration the employee's development level, as well as the teamwork and organisational strategy.

The potential assessment process is independent from performance appraisal and is based on a 360 degree evaluation model which considers feedback from oneself, peers, subordinates and the manager.

GRI 405-1 – Diversity of governance bodies and employees

In the table below, the proportion of members of the Board of Directors by the end of 2022 is disclosed by age group and gender (no variation vs 2021).

BOARD OF DIRECTORS	UN	UNDER 30 YEARS OLD	BETWEEN 30 AND 50 YEARS OLD	OVER 50 YEARS OLD	TOTAL
Female	%	0%	17%	17%	33%
Male	%	0%	17%	50%	67%
TOTAL	%	0%	33%	67%	100%

In the table below, the proportion of members of the Board of Directors by the end of 2021 is disclosed by age group and gender.

BOARD OF DIRECTORS	UN	UNDER 30 YEARS OLD	BETWEEN 30 AND 50 YEARS OLD	OVER 50 YEARS OLD	TOTAL
Female	%	0%	17%	17%	33%
Male	%	0%	17%	50%	67%
TOTAL	%	0%	33%	67%	100%

Following the best Corporate Governance practices, in 2022 EDPR analysed and reviewed the possible criteria applicable in the selection of the new members of its Governing Bodies. For these purposes, there were taken into account the market trends and the specific needs of EDPR, in order to ensure the suitability of the roles, the contribution of the new profiles to a better performance, and the aim of ensuring a balanced composition in the bodies of the Company. As a conclusion, the Appointments and Remunerations Committee agreed to consider as a reference certain standards and requirements in accordance with the following:

- Individual attributes: education, competence, integrity, availability, and experience.
- Diversity: to be considered as a wide criteria, analysed in accordance with the nature and complexity of the businesses developed, as well as according to the social and environmental context from time to time, and that will include, among others, gender, age and culture.

It was expressly stated that this list should not be considered as an exhaustive nor limiting reference, and that in any case, depending on the needs and competences required, other criteria may be taken into account.

Based on the above criteria, after the previous advice of the Appointments and Remunerations Committee, the Board of Directors submits the related proposals to the General Shareholders' Meeting (including for sake of clarity, the curriculum vitae of the candidates, and the justifying report, which shall be publicly disclosed with the other supporting documents of the meeting).

In the table below, the proportion of employees in 2022 is disclosed by age group, gender, and professional category.

EMPLOYEES	UN	UNDER 30 YEARS OLD		BETWEEN 30 AND 50 YEARS OLD		OVER 50 YEARS OLD		TOTAL

GRI 405-2 – Ratio of basic salary and remuneration of women to men

Note 1: The tables below refer to average remuneration. 2022 values do not include expats and mobilities, totalling 4% of the employees. 2021 values do not include expats, 2021 mobilities, new hires from December, employees from OW (the offshore JV with ENGIE) and employees from Viesgo (a company acquired at the end of 2020), totalling 5% of the employees.

Note 2: The calculations are based on the December headcount. The base salaries of the new hires are annualised but the rest of the monetary and non-monetary benefits are not annualised, which may cause deviations.

Note 3: The wage gap is calculated based on GRI methodology (female/male remuneration). The calculation considers the employees' working hours.

In the table below, the average remuneration of employees in 2022 and 2021 is disclosed by age group, gender and professional category.

GRI 2-21 – Annual total compensation ratio

The ratio presented below represents of the annual total compensation for the organisation's highest-paid individual in each country of significant operations to the median annual total compensation for all employees.

ANNUAL TOTAL COMPENSATION RATIO	UN	2022	2021	Δ% YoY
Spain	x	8.4	5.4	+54%
Portugal	x	6.6	4.7	+40%
US	x	8.7	11.2	(22%)

Note 1: Miguel Stilwell d'Andrade and Rui Teixeira did not receive any remuneration from EDPR. EDPR and EDP signed an executive management services agreement according to which EDPR paid to EDP a fee for the services rendered by these officers.

Note 2: X as unit means times.

Note 3: 2022 values do not include expats and mobilities, totalling 4% of the employees. 2021 values do not include expats, 2021 mobilities, new hires from December, employees from OW (the offshore JV with ENGIE) and employees from Viesgo (a company acquired at the end of 2020), totalling 5% of the employees.

Note 4: The calculations are based on the December headcount. The base salaries of the new hires are annualised, but the rest of the monetary and non-monetary benefits are not annualised, which may cause deviations.

Please note that the variation in the US ratio is mainly due to the inclusion of the LTIP payment in 2021.

GRI EU15 – Percentage of employees eligible to retire in the next 5 and 10 years broken down by job category and by region

EMPLOYEES ELIGIBLE TO RETIRE	UN	2022		2021	
		IN 10 YEARS	IN 5 YEARS	IN 10 YEARS	IN 5 YEARS
By employment category

Rest of North America	%	7%	4%	0%	0%
South America	%	1%	1%	0%	0%
Brazil	%	0%	0%	0%	0%
Rest of South America	%	4%	2%	0%	0%
APAC	%	3%	1%	0%	0%
TOTAL	%	5%	3%	5%	4%

Note: The employees eligible to retire in the next 5 years is with 60 years reference and in the next 10 years with 57 years reference.

Other people management related topics:

Communication with employees

EDPR's global presence with employees from different regions, nationalities and generations requires the Company to listen and provide feedback on a range of ambitions, motivations, and prospects. In this regard, EDPR launches a Climate Survey every two years to support its active listening strategy and draws up an integrated action plan based on real current data.

Just as important as getting to know our people is ensuring that they have all the relevant information at their disposal, from onboarding through to the Company's business and strategy. To this end, there is a range of internal communication channels that complement each other and are reinventing themselves to meet the EDPR's needs following its exponential, multicultural growth over recent years:

- **Intranet:** The platform takes online interaction among employees to a new level by including social media-style features and advanced customisation options. It is a place to share information, work together, and learn about projects and news from EDPR and EDP Group.
- **Workplace:** The social network aims to strengthen internal communication by customising content according to the audience, bringing it closer to the company hierarchy, fostering top-down and bidirectional communication and improving teamwork.
- **EDP On Renew magazine:** The print magazine has been a mainstay of EDP Group's internal communications since 1988. The On Renew edition, specific to EDPR, shows the Company and its people through stories, interviews, and reports.
- **EDP On TV:** The TV channel broadcasts in EDPR and EDP offices and online. It includes dynamic news reports and interviews on news and events. It is the medium that truly puts a face on projects, employees and initiatives.
- **EDP On App:** T mobile app to access the Company's intranet, where corporate news can be consulted and the tools and services available to employees can be used.
- **Global newsletter:** A monthly newsletter gives a broader reach to news and information regarding the Company's projects, teams, successes, and strategies.
- **HR App:** EDPR has an app in place to offer employees news and access to recruitment processes or measures, all in a practical, simple way. This tool is particularly useful to keep traveling and geographically dispersed employees connected.

EDPR also holds regular global meetings for each platform, so employees can streamline their long-distance communication; furthermore, these meetings promote networking and proximity to leaders in order to share, first-hand, the business goals set by the management team for the near future, all with a view to meeting the overall objective of leading the energy transition.

Other global events also take place throughout the year, but in an online format, many of them hosted by our CEO to discuss and/or present relevant topics, make first-hand.

Employees with disabilities

In the companies in Spain where there is a legal obligation to have people with disabilities in the workforce to comply with the LISMI due to the number of employees, EDPR has opted for the exceptionality measures provided by the Law. The Company is able to comply with the quota that legally applies to it through contracts of goods or services with companies that promote the hiring of disabled people and also through donations. EDPR's companies under this obligation are covered with the exceptionality measures since February 2018 and for a period of three years. For the rest of EDPR countries, the approach is the same. Recently, as part of EDPR's global strategy, a Diversity and Equality Committee has been set up with the participation of the Management Team, whose objective is to integrate the commitment to this issue within the company. One of the objectives of this Committee is focused on the group of people with disabilities as one of the most important topics to be developed. Please note that by the end of the 2022, 1.7% of the Company's employees had disabilities.

Work organisation and implementation of "right to disconnect" policies

For EDPR, it is a priority to foster time efficiency of employees' daily tasks to balance their professional and personal life, while still delivering excellent results. In this context, the Company has been implementing several initiatives that contribute to achieve this, and even though currently EDPR does not have policies regarding the right of people to disconnect from work during non-work hours, messages of work organisation and disconnection will continue to be conveyed. For example, in 2017 EDPR designed Work Smarter, a Code that includes a set of guidelines to work efficiently by maximising the time efficiency of each daily task, mainly regarding work organisation, email & phone and meetings. Additionally, different initiatives took place during 2017 in order to involve employees around this different way of working. Some of the initiatives were placing inspiring sentences and clocks in the meeting rooms to remind the employees that their time is gold. Within Work Smarter, some of the initiatives were focused on the right to disconnect. In 2020, due to the COVID-19 and

subsequent home office regime implemented, EPDR shared several tips in its intranet on how to better work from home, which included the separation between professional and personal life, setting a work schedule and taking breaks. Lastly, in 2021, EPDR introduced the *Golden Rules* initiative to provide guidelines for its employees on topics such as respecting routines, best practices when communicating through email and tips for organising their daily schedule. Later, together with the implementation of the new hybrid working model, the *Golden Rules 2.0* was created, which is an adaptation of the previous initiative to a new reality in which there are some employees working from home and others working at the office at the same time. By following these recommendations, people can be more efficient with their time and promote each other's wellbeing.

Work life balance

Both physical and mental health were once again a global priority. Accordingly, EPDR implements several initiatives focused on family, time, and health, offering its team a wide range of benefits that reinforce the Company's position as a flexible workplace with work-life balance policies; it also encourages an efficient use of time in employees' daily tasks to reconcile their professional and personal life while still achieving excellent results. As an outcome, EPDR's work-life balance practices have earned it the EFR Certification (Empresa Familiarmente Responsable) for eleven years, awarded by the Spanish *Fundación MásFamilia*. In 2022, EPDR maintained the level of excellence in this certification obtained in 2021, which recognises the Company's efforts to reconcile professional and personal life, excellence, and flexibility. To achieve this continuously, EPDR is committed to constantly improve the initiatives implemented, which will enable it to provide the most progressive and appropriate benefits to employees.

During 2022, the Hybrid Work Model was established in the Company, in which employees can work remotely 2 days a week, where feasible, as EPDR believes that remote work is crucial to improve flexibility, work-life balance and the overall well-being of its team while remaining productive. The *Flex Fridays* initiative was implemented globally, which implies having Fridays' afternoon off through an intensive working schedule. In the EU&LATAM platform specifically, different initiatives to foster networking, communication, and relationship among employees in physical areas were put in place, such as the *Juice UP your morning* breakfasts which aim to foster moments that allow employees to interact in a relaxed atmosphere.

In addition, the Company has a wellness platform to further develop a culture of wellness and encourage healthy habits. The aim of the programs promoted by the platform is to create a culture where employees choose to voluntarily adopt healthy habits by sharing their

experiences, form support networks to facilitate the process and motivate each other. To raise awareness on mental health, EPDR launched once again the *Mind Your Mind* campaign in October, which promoted educational talks with specialists, employees, and other key stakeholders on how to approach the topic, especially in the current social context.

Furthermore, EPDR has a volunteer program addressed to its employees in order to promote social responsibility, giving them the opportunity to grow not only at work but also personally while also contributing to the society.

Equality plans

EDP Renováveis S.A. has an Equality Plan for the period 2020–2022 in accordance with the Spanish Organic Law 3/2007 which has already achieved 92% compliance at a global level and has taken the appropriate steps to comply with local legislation on equality as required.

Adopted measures to promote employment related to equality

As it looks forward, EPDR continues to evolve its organisation and is dedicated to fostering a culture of human equality and valuing the strengths of our differences, as it builds a more inclusive, sustainable environment for future generations. The Company wants to lead by example to create an equal, sustainable future. EPDR's goal is to contribute to improving the quality of life of its employees, removing professional barriers, and promoting gender equality, to ensure a transparent workplace environment where mutual respect and equal opportunities prevail. In accordance, there is a Diversity, Equity, and Inclusion Committee at EDP Group level to promote its commitment to these fundamental principles. The main objectives of the Committee are to reflect the Group's strategy on diversity, equity, and inclusion, including the definition and development of initiatives that contribute to a global action plan and local action plans, and to foster the exchange of knowledge and best practices. However, as a responsible company, the EPDR's goal is to actively promote these values in its team.

In this context, EPDR celebrated different milestones in terms of diversity like Women Month in March, Diversity Week in May and Disability Day in December, during which different trainings, initiatives and talks were carried out to raise awareness among employees on these important topics. The Company believes that with the right tools and knowledge, we will be able to have a truly inclusive culture and a more sustainable future.

In addition, EPDR is part of the "Empowering Women's Talent" program for the development of female talent promoted by *Equipos & Talento*. The program helps companies to learn, share,

communicate and inspire about gender diversity, with the aim of promoting female empowerment and leadership.

At local level, EDPR organised multiple initiatives in Europe & Latin America during the year to promote diversity, inclusion and equity in different groups such as different generations, genders, abilities, and cultures. To this end, internal meetings focused on these topics have been held to promote activities and raise awareness in each of them and in all geographies within the region. These encounters, called *Waves*, were organised with different periodicity in each country, and interesting initiatives have arisen from them such as *WomEng*, aiming for the promotion of scientific-technological vocation among girls, based on awareness-raising and guidance actions, delivered by EDPR professionals in the world of engineering. Group mentoring is used to encourage girls' and primary school students' interest in STEM (Science, Technology, Engineering and Maths).

In North America, the Company made an investment to charter a corporate Toastmasters program with a DEI focus and the development of the team's underrepresented talent. This is a learn-by-doing program that focuses on effective communication and leadership skills. EDPR also had three of its employees participating in a book to promote women in STEM. The book is titled "Everyday Superheros". This multi-cultural children's book shares the colourful stories and energy careers of 26 diverse women powering our planet. Additionally, in September EDPR launched *Women Who Rise*, a specialised developmental program through a book club for women to advance their careers.

Not only does EDPR look within the organisation to institute change in its own DE&I, but the Company also participates in volunteer committees to support its local communities and create partnerships with non-profit organisations. One of these organisations is Black Girls Do Engineering, which focuses on STEM education of young black girls in middle and high school. Another organisation EDPR partners with is Easter Seals, which provides resources for veterans and individuals with disabilities, and Dress for Success that helps to provide business attire and development tools to help women thrive in work and life.

As a result of its commitment and practices, EDPR was recognised again in the Bloomberg Gender-Equality Index (GEI) in 2022, a benchmark index that selects the listed companies most involved in the development of gender equality in the world. EDPR's inclusion as part of this index highlights the Company's work to promote equal opportunities for women through development, representation, and transparency policies. In addition, during 2022, the Company was honoured with two Culture Excellence Awards in the US for its diversity, equity, and inclusion practices and for being a woman-led company.

EDPR is dedicated to continuously fostering a culture founded on human equality and the strength in diversity and will continue to lead by example. The Company upholds its commitment to Diversity, Equity & Inclusion not only through words, but through actions that truly make a positive impact on people.

Sexual harassment protocol

Currently, EDPR does not have a specific sexual harassment protocol. Nevertheless, as stated in its Code of Ethics, EDPR promotes a culture free from any sort of harassment, understanding this to be systematically undesired behaviour of a moral or sexual nature, in a verbal, non-verbal or physical form, which has the goal or effect of disturbing or embarrassing another person, or affecting their dignity or creating an intimidating, hostile, degrading, humiliating or destabilising environment.

Harassing forms of behaviour in a business context violate the victims' labour rights, and may affect their value as people and workers, causing harm that can have an impact on their self-esteem, physical and mental health, life project and family relationships. Therefore, in addition to the legal obligations to which EDPR is subject to, the Code of Ethics also states that it is the duty of all employees to prevent, confront and report any and all behaviour that may preclude a situation of harassment. In this regard, the Code of Ethics has its own regulation that defines a process and channel, open to all stakeholders, to report any potential claim or doubt on the application of the Code.

Universal accessibility

Most of the offices in which EDPR has its operations are not owned by the Company. Therefore, EDPR is limited in the implementation of accessibility measures in its offices. However, in other topics in which EDPR has decision-making power, such as the creation of its website, the company took measures to comply with the accessibility specifications that help blind people to use it.

Long-term incentive plans

EDPR globally assigns long-term incentive plans to the Top Management segment and critical positions in the Senior Management segment. The Company's Management Team considers the attribution of these incentives as a tool for attracting and retaining talent, focusing on achieving results, and complying with the business plan.

4.6. Corporate governance

For information regarding GRI 3-3 – Management of material topics, please refer to section Organisation of the chapter The company.

Remuneration of EDPR's Board of Directors

The table below includes the list of Directors that composed EDPR's Board during 2022, and the amounts paid by EDPR either (i) as remuneration to them for their functions at the Board level or (ii) as fee to EDP under the Management Services Agreement for their services (not remuneration). The following figures reflect the period of 2022 in which each relevant Director was member of the Board:

DIRECTOR	REMUNERATION	FEES MANAGEMENT SERVICES AGREEMENT EDP-EDPR	
EXECUTIVE DIRECTORS		Fixed component	Variable component
Miguel Stilwell d' Andrade	-	384,000€*	173,664.84€
Rui Teixeira	-	290,000€*	131,153.13€
NON-EXECUTIVE DIRECTORS		Fixed component	
António Mota	230,000€		-
Vera Pinto	-	65,000€*	-
Ana Paula Marques	-	65,000€*	-
Miguel Setas	-	65,000€*	-
Manuel Menéndez	65,000€		-
Acácio Piloto (**)	65,000€		-
Allan J.Katz (**)	65,000€		-
Rosa García (**)	65,000€		-
José Morgado (**)	65,000€		-
Kay McCall (**) (***)	37,917€		-
Joan Avalyn Dempsey (****)	2,446€		-
Sub- Total	595,363€	869,000€	304,817.97€
Total		1,769,180.97€	

*These amounts correspond to the service fee paid by EDPR to EDP under the Management Services Agreement for the services rendered in 2022 by such director. In addition, EDPR pays to EDP a 5% of such service fee which is applied to the retirement savings plan for Executive Directors described in topic 76 of Chapter 5 of the Annual Report.

**These Directors also received remuneration for their participation in the Delegated Committees that is detailed at Chapter 6 of this Annual Report.

***The remuneration reflected for this Director corresponds to 2022, provided that she was appointed by co-option on May 3rd, 2022 (with effects June 1st, 2022).

**** Joan Avalyn Dempsey presented the resignation to her positions as Board Members with effects January 13th, 2022, and therefore the amounts indicated in the table above reflect the remuneration accrued in 2022 until her resignation.

In 2022, EDPR paid on average €191,727 (+110% vs 2021) to the Board of Directors' male members and €47,073 (+8% vs 2021) to female members. The interannual variations are mainly due to the changes in the Board's composition that occurred in 2021 and 2022.

Specifically, EDPR paid on average €489,409 to its Executive Directors in 2022 (all male), +6% vs 2021.

For further information on the topic please see chapter 5. Corporate Governance.

4.7. Innovation

For information regarding GRI 3-3 – Management of material topics, please refer to section Innovation Capital of the chapter Execution.

4.8. Community engagement

For information regarding GRI 3-3 – Management of material topics, please refer to section Support communities of the chapter Performance.

GRI 202-2 – Proportion of senior management hired from the local community

The Code of Ethics contains specific clauses of non-discrimination and equal opportunities in line with the Company's culture of diversity. This is reflected in the procedures for hiring people via a non-discriminatory selection process. A potential employee's race, gender, sexual orientation, religion, marital status, disability, political orientation or opinions of any other nature, ethnic or social origin, place of birth or trade union membership are not considered.

In this context, there are no specific procedures explicitly requiring local recruitment. Nevertheless, a high percentage of EDPR employees are hired from the same country in which the Company operates.

LOCAL RECRUITMENT	UN	2022	2021
Senior managers			
Europe	%	90%	89%
North America	%	85%	84%
South America	%	64%	50%
APAC	%	64%	–

Note: There were no senior managers in APAC in 2021. In 2022, EDPR acquired Sunseap, a company in the APAC region.

GRI 203-1 – Infrastructure investments and services supported

Wind and solar energy require infrastructure investments which benefit surrounding communities. This includes the reinforcement of existing electricity networks and the rehabilitation of existing roads or the construction of new roads.

The investment in roads is necessary in order to transport heavy equipment (wind turbine components, power transformers, etc.) to the site during construction. The improved road

system facilitates future maintenance activities after construction works, as well as improves access to remote locations for the surrounding communities. During the operation of the wind farms and solar plants, these roads are maintained. The integration of the generation capacity may also require upgrades in the distribution and transmission grids that belong to the system operators. Those upgrades indirectly benefit the quality of service offered in the surrounding areas by minimising electricity supply interruptions. In 2022, EDPR invested €22 million in the development of community roads surrounding its projects.

GRI 203-2 – Significant indirect economic impacts

Renewable energy technologies are viewed not only as tools for mitigating climate change, but are also increasingly recognised as investments that can provide direct and indirect economic advantages by reducing dependence on imported fuels (and hence, improving trade balances), enhancing local air quality and safety, advancing energy access and security, propelling economic development and creating jobs. In 2022, EDPR implemented several economic development projects, which foster job creation and profit generation.

GRI 411-1 – Incidents of violations involving rights of indigenous peoples

EDPR has no knowledge of any incident of violations involving rights of indigenous people in 2022, neither in 2021.

Note: For the information reported in this indicator, EDPR considers passive contingencies associated with litigation qualified as probable recorded in the contingencies reporting system, and claims/doubts reported in the Speak Up Channel and considered as founded.

GRI 413-1 – Operations with local community engagement, impact assessments, and development programs

The Company believes that besides excelling in the way it performs, there must be a main factor weighing in every action or activity EDPR does – people. The Company considers that in order to have a positive impact on society, it is vital to work for the common good by promoting and supporting social investment activities.

EDPR's strategy for social investment reinforces two major topics – Fair Energy Transition, and Culture – having defined concrete objectives for the allocation of social investment to each of these themes.

- The **Fair Energy Transition** theme, which englobes social investment activities such as Closer2You, Keep it Local, Wind Experts and Your Energy, aims to promote energy efficiency, renewable energy and decarbonisation through increased awareness, supporting education on renewable energy for all. This thematic focus is greatly aligned with EDPR's business and therefore also promotes a more efficient use of the Company's skills, thus contributing to supporting communities in a more efficient manner.
- The **Culture** theme, which englobes EDPR's Powering Culture initiative, contributes to the protection and promotion of cultural heritage, local traditions and access to culture and art, contributing to a more vibrant and creative society.

In parallel and recognising the need to continue supporting projects that respond to other social needs of the communities where EDPR is present, the Company will maintain its investment in various topics such as health, social inclusion and response to emergency situations, among others.

In this context, and as an integral part of the communities where it operates, EDPR undertakes to maintain a relationship of proximity with the local communities engaging in regular and open dialogue, seeking to know their needs, respecting their cultural integrity and looking to contribute to improve the living conditions of local population, taking measures to consider and respect the community interests. Therefore, in line with its social investment strategy and the communities' needs and expectations, EDPR has defined a Catalogue of Activities that works as a tool for defining the social investment made in local communities. Nevertheless, in addition to the development of social activities, EDPR provides long-lasting economic benefits to the surrounding areas that include, but are not limited to, infrastructure investments, tax payments, landowners' royalty payments and job creation.

However, as a responsible company, EDPR works to promote the wellbeing and development of not only the communities where it operates but also of society in general, focusing on the people who contribute to the success of the Company's business and how society may benefit from it. In this context, and following the humanitarian crisis in Ukraine, EDPR made a €500 thousand donation to help support Ukrainian refugees in Poland. Specifically, the funds were used to distribute food to those in need in close partnership with NGOs that are very engaged in emergency support to the people fleeing the war to Poland. The donation adds up to the Group mobilising resources and equipment in affected communities as a response package for the humanitarian crisis. Aid was also sent to organisations working with victims on the front line – such as the Red Cross and Doctors of the World – in the form of the donation of essential goods and direct economic assistance.

Due to EDPR's presence in Poland, Romania and Hungary, there is regular contact with local authorities, to whom aid was also provided as required to support those communities on the border with Ukraine. In addition to this emergency response package, in-house action launched by volunteers of the Group was also carried out in the form of more local initiatives, helping refugees in Portugal and other countries.

Globally, during 2022, EDPR invested a total of €2.4 million in supporting communities, as a result of several activities such as internally developed and collaborative initiatives, donations to charitable organisations and volunteering activities. 23% of EDPR employees participated in volunteering initiatives, contributing with more than 2,500 hours of their time to the development and wellbeing of the society.

GRI 413-2 – Operations with significant actual and potential negative impacts on local communities

Noise, visual impact, TV interferences and ice thrown from wind turbines are identified as EDPR's business environmental impacts within the category of disturbance to the local communities. EDPR implements the necessary measures to make these impacts as minor as possible. Moreover, during the operation phase, EDPR has grievance mechanisms in place available to the local communities to ensure that suggestions or complaints are properly recorded and addressed. This allows EDPR not only to solve the complaints but also to introduce improvements in all processes. In 2022, EDPR registered 52 complaints regarding potential impacts on the local communities, -30% when comparing to 2021. There were 35 complaints in the US, of which 15 were related to noise, 12 related to road drainage, 6 related to shadows and 2 related to possible interferences with the TV or radio signal. In France there were 15 complaints, of which 11 related to possible interferences with the TV or radio signal, 2 related to noise and 2 related to shadows. There was also 1 complaint in Italy related to noise and 1 in Poland related to a spill.

Please note that EDPR does not have individual consumers, according to the concept this term has associated in the Spanish regulation (Law 11/2018). Regarding the complaint systems, given the core business of the Company, EDPR does not deal directly with individual consumers. However, EDPR considers the local communities near its operations as its clients and makes different complaint channels available to them, among which is the Speak Up Channel.

4.9. Suppliers management

GRI 204-1 – Proportion of spending on local suppliers

At EDPR, there is no specific policy or in-house procedure for preferring locally based suppliers. Nevertheless, under equal commercial terms, EDPR chooses local suppliers in order to enhance the socio-economic sustainability of the 28 markets where it is present.

In this way, 87% of vendor spending in 2022 was sourced from local suppliers.

Moreover, during the construction of the Company's projects, the local community can see an influx of temporary local construction workers and suppliers that provide a positive impact on the local economy.

Note: EDPR defines spending in local suppliers as purchases to suppliers in countries where EDPR is present divided by the total invoiced volume in 2022.

GRI 308-2 – Negative environmental impacts in the supply chain and actions taken

EDPR's Procurement Policy establishes the framework under which the Company's procurement process is developed. This process extends to direct and indirect suppliers and allows EDPR to establish practices and procedures that ensure a high-quality relationship with its suppliers and sustainability practices through the entire supply chain. Accordingly, EDPR has in place requirements related to ESG, Quality and Risk management that have to be met by its suppliers throughout the main procurement phases: Registration and Qualification, Requests for Proposals and Contracting and, lastly, the Monitoring and Evaluation of the suppliers.

EDPR has a Corporate System of Supplier Registration that works as the support to search and select suppliers by providing detailed information, validated and updated by credible sources, in order to guarantee their accreditation through financial, technical quality and ESG criteria. EDPR has also a Supplier Qualification Process in place since 2020, which aims to provide an analysis on critical issues and establishes minimum requirements to ensure that the suppliers EDPR works with are qualified: Technical capabilities & Quality Management, Financial & Risk, Compliance & Integrity, Health & Safety and Environmental Management criteria. The Company regularly reviews and reassesses the Qualification System criteria to ensure that

they reflect the main market trends and regulations and that a high level of quality of the information available from suppliers is maintained.

The incorporation of adequate criteria in the contracting processes of the Company is essential to ensure in-depth management, mitigation and avoidance of operational and ESG risks in the supply chain. In 2022, EDPR has included an additional analysis on 5 ESG priorities in its turbine and module tenders (RFPs): Decarbonisation, Circular Economy, Human Rights, Health and Safety, and Transparency and Reporting. EDPR analyses corporate policies, targets, strategies, statements, roadmaps and other corporate documents or procedures that show suppliers' commitment to EDPR's ESG priorities. This analysis also helps the Company to avoid and mitigate potential ESG risks. Adequate compliance by all EDPR suppliers with applicable H&S and environmental requirements is essential to guarantee the correct performance of the contracted services and works. Aiming to ensure that suppliers comply with these requirements, the Company has established a disciplinary and sanctioning regime, which is included in all RFPs, contracts, and purchase orders so any provider will be always informed about the consequences of not complying with EDPR H&S and environmental requirements.

Moreover, EDPR has a Third-Party Integrity Due Diligence Procedure which was approved with the goal to reinforce the mechanisms for identifying and preventing possible integrity or corruption risks for EDPR in the relationship with third parties. In this sense, during 2022, 385 Compliance analysis of suppliers were performed (closed Integrity Due Diligence Analysis). In addition, an internal tool has been developed to facilitate the management of the Integrity Due Diligence analyses. In cases with high risk, it is necessary the approval of the Management Team, and the inclusion of robust clauses related to corruption in the corresponding agreements is recommended. These IDD allows the Company to verify public sanction lists, Political Exposed Persons lists (PEPs) and adverse media, in order to avoid any integrity risk.

In addition, during the contracting and awarding phase, the Company also establishes a fluent dialogue and shared of information with strategic suppliers through the traceability information requests and meetings. Technical components, including serial number and manufacturing origin must be provided by suppliers during this phase, ensuring traceability and enabling post-contracting manufacturing audits. This traceability information on the origin of the components allows the company to assess and avoid potential ESG risks. In parallel, financial capacity of the suppliers and their insurance policy are evaluated according to the EDPR's Credit-in procedure that defines the requirements to ensure the compliance with EDPR's Counterparty Risk Policy and the proper follow-up of active guarantees. EDPR Counterparty Risk Policy sets the methodology and process to measure counterparty risk of

new contracts, monitor counterparty risk of existing contracts, define in which moments and situations it should be used and establish guidelines and mitigation instruments to reduce counterparty risk when they exceed established limits.

In order to guarantee that suppliers comply with the previously mentioned requirements, EDPR monitors strategic suppliers during their services delivery and activity in EDPR's facilities. EDPR has two mechanisms to ensure that suppliers comply with its contractual obligations: passive mechanism and active mechanism:

- The **passive mechanisms** are those related to suppliers' disclosure when they identify any situation, infringement, or circumstance that may affect the agreement.
- The **active mechanisms** consist in:
 - Physical audits of the manufacturing process and the right from EDPR to audit/request information to the supplier. EDPR could audit those factories where its components are manufactured and produced.
 - Inspections that EDPR performs during the construction and operation phases, to monitor the suppliers' and contractors' performance regarding environmental and H&S aspects and to identify potential risks. In 2022, EDPR performed 1,425 inspections (~18% than in 2021) to 214 suppliers (~21% YoY) regarding environmental procedures. These inspections and audits are performed by EDPR to ensure best practices among contractors and to guarantee that these services are performed in a rigorous and standardised manner. As a result of these inspections, the Company identifies corrective actions needed and establishes an action plan for continuous improvement. These processes are reinforced by the integrated Health and Safety and Environmental Management System, which was developed and externally certified according to international standards ISO 45001 and ISO 14001.
 - EDPR hires an external party for additional supervision in these areas. These processes are reinforced by the integrated Health and Safety and Environmental Management System, which was developed and externally certified according to international standards ISO 45001 and ISO 14001.
 - In Europe & Latin America, EDPR has a Suppliers Sustainability Guide in place for both construction and O&M operations, providing an overview of the sustainability requirements EDPR expects its suppliers to meet, including H&S, environmental and ethical requirements. The guide includes H&S, environmental and ethical requirements such as compliance with applicable regulations, policies, internal norms, procedures, and systems in place.

- In addition, in Europe & Latin America, EDPR classifies suppliers according to their HSE score and risk. This performance evaluation allows to classify suppliers and then implement an action plan according to other procurement processes, since adequate compliance by all EDPR suppliers with applicable H&S and environmental requirement is essential to guarantee the correct performance of the contracted services and works.

In a previous study to characterise EDPR's supply chain, performed in 2015, including the analysis of the exposure to economic, social and environmental risks, performed using the ESCHER (Efficient Supply Chain Economic and Environmental Reporting) methodology developed by PwC, it was determined that 300-thousand-ton GHG emissions were associated to EDPR's direct and indirect purchases, only 5% of which related to direct purchases. Through this study, EDPR aims to identify areas where should focus its improvement activities in order to significantly reduce its exposure to risk and optimise impacts.

GRI 414-2 – Negative social impacts in the supply chain and actions taken

EDPR's Procurement Policy establishes the framework under which the Company's procurement process is developed. This process extends to direct and indirect suppliers and allows EDPR to establish practices and procedures that ensure a high quality relationship with its suppliers and sustainability practices through the entire supply chain. Accordingly EDPR has in place requirements related to ESG, Quality and Risk management that have to be met by its suppliers throughout the main procurement phases: Registration and Qualification, Requests for Proposals and Contracting and, lastly, the Monitoring and Evaluation of the suppliers.

EDPR has a Corporate System of Supplier Registration that works as the support to search and select suppliers by providing detailed information, validated and updated by credible sources, in order to guarantee their accreditation through financial, technical quality and ESG criteria. EDPR has also its own Supplier Qualification Process in place since 2020 focusing in additional aspects specific to EDPR business. It aims to provide an analysis on critical issues and establishes minimum requirements to ensure that the suppliers EDPR works with are qualified: Technical capabilities & Quality Management, Financial & Risk, Compliance & Integrity, Health & Safety and Environmental Management criteria. The Company regularly reviews and reassesses the Qualification System criteria to ensure that they reflect the main market trends and regulations and that a high level of quality of the information available from suppliers is maintained.

The incorporation of adequate criteria in the contracting processes of the Company is essential to ensure in-depth management, mitigation and avoidance of operational and ESG risks in the supply chain. In 2022, EDPR has included an additional analysis on 5 ESG priorities in its turbine and module tenders (RFPs): Decarbonisation, Circular Economy, Human Rights, Health and Safety, and Transparency and Reporting. EDPR analyses corporate policies, targets, strategies, statements, roadmaps and other corporate documents or procedures that show suppliers' commitment to EDPR's ESG priorities. This analysis also helps the Company to avoid and mitigate potential ESG risks. Adequate compliance by all EDPR suppliers with applicable H&S and environmental requirements is essential to guarantee the correct performance of the contracted services and works. Aiming to ensure that suppliers comply with these requirements, the Company has established a disciplinary and sanctioning regime, which is included in all RFPs, contracts, and purchase orders so any provider will be always informed about the consequences of not complying with EDPR H&S and environmental requirements.

Moreover, EDPR has a Third-Party Integrity Due Diligence Procedure which was approved with the goal to reinforce the mechanisms for identifying and preventing possible integrity or corruption risks for EDPR in the relationship with third parties. In this sense, during 2022, 385 Compliance analysis of suppliers were performed (closed Integrity Due Diligence Analysis). In addition, an internal tool has been developed to facilitate the management of the Integrity Due Diligence analyses. In cases with high risk, it is necessary the approval of the Management Team, and the inclusion of robust clauses related to corruption in the corresponding agreements is recommended. These IDD allows the Company to verify public sanction lists, Political Exposed Persons lists (PEPs) and adverse media, in order to avoid any integrity risk.

In addition, during the contracting and awarding phase, the Company also establishes a fluent dialogue and shared of information with strategic suppliers through the traceability information requests and meetings. Technical components, including serial number and manufacturing origin must be provided by suppliers during this phase, ensuring traceability and enabling post-contracting manufacturing audits. This traceability information on the origin of the components allows the company to assess and avoid potential ESG risks. In parallel, financial capacity of the suppliers and their insurance policy are evaluated according to the EDPR's Credit-in procedure that defines the requirements to ensure the compliance with EDPR's Counterparty Risk Policy and the proper follow-up of active guarantees. EDPR Counterparty Risk Policy sets the methodology and process to measure counterparty risk of new contracts, monitor counterparty risk of existing contracts, define in which moments and situations it should be used and establish guidelines and mitigation instruments to reduce counterparty risk when they exceed established limits.

In order to guarantee that suppliers comply with the previously mentioned requirements, EDPR monitors strategic suppliers during their services delivery and activity in EDPR's facilities. EDPR has two mechanisms to ensure that suppliers comply with its contractual obligations: passive mechanism and active mechanism:

- The **passive mechanisms** are those related to suppliers' disclosure when they identify any situation, infringement, or circumstance that may affect the agreement.
- The **active mechanisms** consist in:
 - Physical audits of the manufacturing process and the right from EDPR to audit/request information to the supplier. EDPR could audit those factories where its components are manufactured and produced.
 - Inspections that EDPR performs during the construction and operation phases, to monitor the suppliers' and contractors' performance regarding environmental and H&S aspects and to identify potential risks. In 2022, EDPR performed 2,196 inspections (+26% than in 2021) to 255 suppliers (-6% YoY) regarding health and safety procedures. These inspections and audits are performed by EDPR to ensure best practices among contractors and to guarantee that these services are performed in a rigorous and standardised manner. As a result of these inspections, the Company identifies corrective actions needed and establishes an action plan for continuous improvement. These processes are reinforced by the integrated Health and Safety and Environmental Management System, which was developed and externally certified according to international standards ISO 45001 and ISO 14001.
 - EDPR hires an external party for additional supervision in these areas. These processes are reinforced by the integrated Health and Safety and Environmental Management System, which was developed and externally certified according to international standards ISO 45001 and ISO 14001.
 - In Europe & Latin America, EDPR has a Suppliers Sustainability Guide in place for both construction and O&M operations, providing an overview of the sustainability requirements EDPR expects its suppliers to meet, including H&S, environmental and ethical requirements. The guide includes H&S, environmental and ethical requirements such as compliance with applicable regulations, policies, internal norms, procedures and systems in place.
 - In addition, in Europe & Latin America, EDPR classifies suppliers according to their HSE score and risk. This performance evaluation allows to classify suppliers and then implement an action plan according to other procurement processes, since adequate compliance by all EDPR suppliers with applicable H&S and environmental requirement is essential to guarantee the correct performance of the contracted services and works.

In a previous study to characterise EDPR's supply chain, performed in 2015, including the analysis of the exposure to economic, social and environmental risks, performed using the ESCHER (Efficient Supply Chain Economic and Environmental Reporting) methodology developed by PwC, it was determined that more than 20,000 jobs related to EDPR's direct purchases were created, more than €735 million gross value added was associated to EDPR's purchases, and that ~0% of EDPR's direct purchases were identified as having significant risk for incidents of child labour, forced or compulsory labour or freedom of association. Through this study, EDPR aims to identify areas where should focus its improvement activities in order to significantly reduce its exposure to risk and optimise impacts.

EDPR's due diligence process

EDPR makes it a priority to implement procedures and measures to ensure the absence of governance, environmental, and human rights and labour rights risks in its supply chain. To this end, the Company is committed to taking action and improving its supply chain management on a daily basis.

EDPR supply chain management policies and procedures

EDPR's due diligence process begins with its public commitments and policies that apply to the Company's activity, its suppliers, and its contractors. In this regard, the Company has a Supplier Code of Conduct and a Human and Labour Rights Policy, implementing the principles of set in the Code of Ethics. EDPR also makes available to anyone a Speak Up channel, to give voice to any complaint from any person or organisation.

The Company's due diligence process is triggered for all purchases >25,000 euros.

Risk screening due diligence

A supplier screening due diligence process to identify potential risks

EDPR performs a public information analysis prior to any tender process, screening scouting counterparts' compliance and integrity. By this first due diligence layer, the Company can identify any negative information and decide if the counterpart achieves EDPR's ethical standards. After the Compliance report, the Procurement team is able to verify if the counterpart profile stands for the purchase risk and goals.

Risk assessment and monitoring due diligence

Identification and assessment of risks in the supply chain

The first step to identify risks in the supply chain is the Company's criticality matrix. This matrix, that is independent of the supplier, includes the mapping of different supply categories, analysing the relevance of each purchase in relation to its activity for EDPR's business, the duration of its relationship with the Company and the potential environmental and social risks arising from its activity. The Company then carries out a qualification process of critical suppliers, in order to know the measures it has in place to manage any potential risk within the supply chain.

Engagement process to prevent and mitigate impacts

Next, through the Request for Proposal (RFP) process, EDPR conducts a screening process of module and turbine suppliers, in order to assess their commitments, measures and targets, and also to identify potential ESG risks. EDPR has implemented an additional measure of traceability meetings and share of information, in order to avoid any potential risk areas in its upstream processes. Through continuous dialogue with suppliers, EDPR is able to anticipate and take action on potential risks in the supply chain. During this phase, the Company also establishes contractual clauses to ensure the necessary measures in case a potential risk arises.

Continuous monitoring of the supply chain

The Company continuously monitors its suppliers and contractors. For those contractors working in the organisation's facilities, EDPR performs audits and inspections. For manufacturing suppliers, the Company conducts quality audits at the facilities where the components are developed. Finally, as part of its commitment to promote a sustainable supply chain, EDPR joins initiatives such as Solar Energy Industries Association or Solar Power Europe. In 2022, EDPR has also joined the Solar Stewardship Initiative. This initiative aims to bring together different players in the solar energy industry – from utilities to suppliers – to promote a transparent, responsible, and sustainable supply chain. One of the main actions of the initiative is to promote a standard audit process for the solar industry supply chain.

ESG Criticality Matrix

The EDPR criticality matrix standardises the procurement risks according to each purchase category. The matrix drives the suppliers' scouting process, setting the minimum ESG thresholds and the development of the tender terms and negotiation, to ensure risks mitigation and monitoring obligations. During the contractual relationship, the matrix is the map that guides the supplier assessment and helps defining priorities. Annually, all critical suppliers are evaluated against the matrix criteria and the company can analyse suppliers' performance and drive improvements.

ESG aspects analysed by category of supplier

1 Supply Category (value chain sectoral risks: country/sector/activity)

2 Purchase Amount (EUR)

3 Duration of the contract and frequency of supplies

4 Importance for operation, innovation and investment

5 Consequence of sudden supply interruption

6 Irreplaceability of suppliers

7 Supplier access to equipment/facilities

8 Supplier access to customers

9 Supplier access to protected personal data

10 Supplier access to reserved data and Cybersecurity

11 Risks of occupational accidents from the contracted activity

12 Environmental risks from the contracted activity

13 Ethical, human and labour rights of the contracted activity

Sector level specific risk map

EDPR develops renewable energy facilities and, therefore, the core of its activity is the licensing, construction, and operation of facilities. Procurement is aimed at local companies that provide services to facilities and, upstream, at technological equipment for the power sector. EDPR acquires market available power technology and doesn't design technical equipments for manufacturing, therefore the Procurement is directed towards wholesale and brands.

Salient Risks	Direct Tier 1 (scope 1+2)	Indirect/ Tier 2 + n (scope 3)	Procurement Spend 2022
Electrical/Industrial technology	–	ESG upstream footprint	656,878,046 €
Corporate Services and IT	Data Privacy, Cybersecurity, Integrity	–	845,127,752 €
Technical Services and Construction	Waste, Safety, Subcontracting, local impact	ESG upstream footprint	3,472,579,631 €
TOTAL			4,974,585,429 €

Overcoming solar modules risks through due diligence

Although EDPR purchases ready-to-install photovoltaic modules from licenced companies in its operating geographies, and therefore does not have direct impacts on the supply chain practices, the risk of being connected with any international convention's violations arising from upstream activities of unknown companies is still present and must be tackled to implement EDPR policies ("Guarantee it will not be complicit in human and labour rights abuses or disrespect"). Identification of upstream companies linked to module brands is a huge challenge for any individual company in the context of the global market's complexity and opacity. Moreover, the photovoltaic sector is high tech, especially regarding the manufacture of semiconductor materials and, to that extent, it is highly concentrated in a few producers and in a small number of countries. Estimated numbers for the year 2022 indicate that 98% of the world's crystalline wafers originated in China. Implementing deep due diligence to its direct counterparts and, at the same time, cooperating with industry initiatives aiming at developing the traceability of products is the approach that EDPR implements.

Spend exposure to country risks level

Below is a breakdown of EDPR's purchases according to the country risk level of the suppliers of contracted goods and services.

■ Low Risk ■ Medium Risk ■ High Risk

4.10. Environmental management

For information regarding GRI 3-3 – Management of material topics, please refer to section Natural Capital of the chapter Performance.

GRI 304-2 – Significant impacts of activities, products, and services on biodiversity

As a responsible company, EDPR is aware of the sensitivity of natural ecosystems and the pressures affecting biodiversity. EDPR's Environmental Policy establishes the Company's specific commitments to contribute to the mitigation of climate change, the promotion of the circular economy and the protection of biodiversity. EDPR's commitment towards biodiversity protection is focused on the main impacts of its activities: migrating birds, bats and habitat fragmentation. As a result, the Company particularly commits to protect the wildlife surrounding its wind farms and solar plants.

The Company has implemented relevant measures to identify the impacts of its operations on biodiversity, including:

- **Environmental impact assessments and/or risk mapping:** During the development phase of any project of the Company, the potential environmental impacts are analysed in detail in the environmental impact studies and other specific environmental studies, always performed by professional external experts. These studies evaluate the possible impacts of the projects in factors such as fauna, flora, soil, air and water bodies, among others.
- **Monitoring of biodiversity indicators:** EDPR has established an environmental monitoring which is implemented by an external party. Even so, efforts are intensified with specific monitoring procedures in the small number of sites located inside or close to protected areas. During the construction and operational phases, EDPR conducts on-site environmental monitoring to identify and prevent possible impacts on the biodiversity.

In addition, the Company has defined general procedures in its Environmental Management System to prevent, correct or compensate impacts in the environment. By the end of 2022, ISO 14001 certification covers c. 100%¹ of EDPR's installed capacity. The environmental strategy of the Company complements this approach, with the ambition for a globally positive balance through projects focused on the conservation of wildlife.

Moreover, as a sustainable company, it is EDPR's duty to contribute to the development of research and conservation programs, as well as to broaden scientific knowledge on biodiversity matters by supporting institutions and strengthening dialogue and partnerships.

GRI 304-3 – Habitats protected or restored

EDPR's business is its best contribution to reduce biodiversity loss. Nevertheless, the Company's commitment to contribute to the protection of biodiversity leads to an active role in the conservation of wildlife surrounding its facilities.

Even though EDPR works to minimise any impact on the land surrounding its facilities, the construction and dismantlement processes of wind farms and solar plants are closely followed by EDPR teams, who work to reduce potential impacts or disturbances and to ensure proper restoration of the land once the works finish, cleaning up and rehabilitating the sites to return the area to its initial state.

In 2022, EDPR finished the land restoration of four projects after construction works, restoring 100% of the hectares that were vegetally affected by the projects in Europe. During 2022, in a solar project in Spain, EDPR has achieved more than 100% restoration rates, revegetating the area between the solar panels and around the plant, generating a positive impact on the beekeeping panels in the area.

In addition, EDPR actively participates in the protection of biodiversity mainly through collaborations with several organisations to further protect wildlife surrounding its facilities. In Europe the Company has collaborated with GREFA (Group for the Rehabilitation of Native Fauna and their Habitat in Spanish) to establish new pairs of Egyptian Vultures (*Neophron percnopterus*) in the province of Cádiz through the acclimatisation of rehabilitated, captive-bred or translocated specimens.

In the US, EDPR continues to support the Renewable Energy Wildlife Institute (REWI), a multi-stakeholder organisation whose focus is to conduct and support scientific research related to renewable energy and wildlife. In addition, EDPR is a member of the Renewable Energy Wildlife Research Fund and has provided funding for several research projects.

¹Calculation based on 2021YE installed capacity (EBITDA MWs). EDPR certifies the facilities the year after the COD (commercial operating date). Thus, the facilities that have entered into operation in 2022 will be certified in 2023.

GRI 304-1 – Operational sites owned, leased, managed in, or adjacent to, protected areas and areas of high biodiversity value outside protected areas

COUNTRY	FACILITY NAME	TYPE OF OPERATION	POSITION IN RELATION WITH PROTECTED AREA	FACILITY AREA IN PROTECTED NATURAL AREA (ha)	FACILITY AREA IN PROTECTED NATURAL AREA (%)	ATTRIBUTE OF THE PROTECTED AREA	STATUS OF THE PROTECTED AREA

Note 1: This table contains information regarding every EDPR operational sites in or adjacent to protected areas. EDPR does not own sites in or adjacent to protected areas in its remaining markets.

Note 2: Coll de la Garganta, Serra Voltorera, Ávila and La Victoria appear twice in the table as the first entry refers to a bird protected area and the second entry to a protected area due to the community importance of the site.

GRI 306-1 – Waste generation and significant waste-related impacts

The waste generated by EDPR is not directly linked to the generation process. Most of them are related to turbines' operation and maintenance processes, and the rest is waste originated in facilities and offices. Despite this, the Company promotes proper waste management and the integration of circularity in all phases of its projects.

Accordingly, most of the hazardous waste produced by the sites is related to oil and oil-related waste such as oil filters or oil containers, used mainly for lubrication of the turbines. The consumption of this oil is based on certain pre-defined replacement time frequencies (between 2 and 5 years, based on the component, oil type and manufacturer). Annual fluctuations in hazardous waste generated are heavily dependent on the multiannual oil replacement programs mentioned. Non-hazardous waste generated by the Company includes mixed municipal waste, paper, metals, and plastics, among others.

GRI 306-2 – Management of significant waste-related impacts

EDPR promotes a rational use of resources and the reuse of components whenever possible. In addition, the Company integrates criteria for proper waste management in all phases of its projects. The Company promotes the recovery of waste rather than disposal through recycling and other means. In this context, during 2022, EDPR recovered 74% of the waste generated and 90% of the hazardous waste generated. Please see below the summary of waste generation and recovery ratios, considering that YoY variations are mainly due to increase in production & decrease in waste generation (-19% YoY), mainly due to less one-offs.

WASTE - RATIOS	UN	2022	2021	Δ% YoY
Total waste	kg/GWh	45	61	(26%)
Total hazardous waste	kg/GWh	15	26	(43%)
Total non-hazardous waste	kg/GWh	30	34	(13%)
Total waste recovered	%	74%	75%	(1.8 pp)
Hazardous waste recovered	%	90%	88%	+2 pp
Non-hazardous waste recovered	%	65%	66%	(0.4 pp)

GRI 306-3 – Waste generated

WASTE BY COMPOSITION	UN	WASTE GENERATED
Hazardous waste	t	482

WASTE DISPOSED	UN	2022	2021
Hazardous waste	t	46	351
Total hazardous waste sent to landfill	t	30	333
Total hazardous waste with other disposal, except landfill	t	15	19
Non-hazardous waste	t	338	351
Total non-hazardous waste sent to landfill	t	325	333
Total non-hazardous waste with other disposal, except landfill	t	13	19
TOTAL	t	384	703

Notes to the waste indicators reported above:

- For the purposes of this report, all wastes have been classified as hazardous or non-hazardous according to European waste catalogue; however, in each country where EDPR has a geographic presence, each site is required to adhere to national law by following company procedures for handling, labelling, and storage of wastes to ensure compliance. In cases like in the United States, when the Company's operations generate small quantities of substances which fall into additionally regulated categories such as

used oils and universal wastes, EDPR follows strict standards for handling and disposal of these waste types to ensure and remain compliant with all applicable laws.

- Includes waste both from operational facilities and offices. Waste from offices in 2021 only refers to 4Q21 data (due to the home office implemented the rest of the year).
- All waste is treated offsite.
- 2021 data restated to include all waste generated, not excluding waste caused by non-recurring events such as spills and fires.

Significant spills

Given EDPR's activity and its locations, oil spills and fires are the major environmental risks the Company faces. The Environmental Management System is designed and implemented to prevent emergency situations from happening. But, just to be cautionary, the system covers the identification and management of these, including the near miss situations.

EDPR defines significant spills and fires as any spill affecting water bodies/courses, protected soils or soils of interest because of its natural value, or fire affecting protected areas and/or species (according to local protection laws), derived from the O&M activities in the facilities. EDPR continues to register near miss situations, when a registered incident does not reach the category of significant spill. In 2022, there were no significant spills and fires, and there were 71 near miss situations registered during the year (-14% vs 2021).

In this context, EDPR performs regular environmental drills to guarantee that all employees and suppliers are familiar with the risks and have received the appropriate training to prevent and act, if necessary.

Other environmental management related topics

Despite EDPR's core activities do not pose any threats of serious or irreversible damage to the environment, the Company, in compliance with the Precautionary Principle, applies cost-effective measures to prevent environmental degradation such as provisions for dismantling and decommissioning of property, plant and equipment to dismantle and decommission those assets at the end of their useful lives. Consequently, EDPR has booked provisions for property, plant and equipment related to electricity wind and solar generation for the responsibilities of restoring sites and land to its original condition, in the amount of €264,756 thousand as at 31 December 2022 (-16% vs 2021).

4.11. Communication and transparency

Contributions to foundations and non-profit entities

EDPR contributed with more than 540 thousand euros to Foundations, +80% vs 2021. Regarding non-profit organisations and NGOs, EDPR donated more than 660 thousand euros, +51% YoY. The interannual variations are mostly due to EDPR's solidarity campaign carried out in 2022 in response to the humanitarian crisis in Ukraine.

GRI 2-28 – Membership of associations

The EDP Group raises awareness to policy makers and legislators about the interests of the business sector and/or its own. Globally, EDP Group's activities include participation in industry associations ("Industry Institutions") comprising multiple industry participants that work to advance shared policy objectives. EDPR's approach and involvement with Industry Institutions is in accordance with EDP Group's internal regulations, policies and procedures, including the principles of integrity and transparency expressed in the Code of Ethics. In Europe, activities are monitored by means of voluntary registration on a platform created for that purpose by the European Commission – "Transparency Register". EDP has been registered since the creation of this platform in 2011. In North America, relevant Industry Institutions are required to disclose and/or register campaign finance and lobbying activities in accordance with applicable local, state, or federal law.

In the following table are presented the contributions concerning the activities of representation of interests of EDPR:

ACTIVITIES OF REPRESENTATION OF INTEREST	UN	2022	2021
Trade associations or tax-exempt groups	€k	1,536	1,700
Lobbying, interest representation or similar	€k	295	549
Other	€k	20	29
Local, regional or national political campaigns / organisations / candidates	€k	0	0
TOTAL	€k	1,851	2,278

The table below contains the most relevant contributions for associations in 2022:

MOST RELEVANT CONTRIBUTIONS	UN	2022
Solar Energy Industry Association	€k	147
American Energy Action	€k	111
Renewable Energy Wildlife Institute	€k	83
Funseam	€k	60
Asociación Empresarial Eólica (AEE)	€k	58

GRI 201-4 – Financial assistance received from government

EDPR has not received any financial assistance from the government in 2022, neither in 2021.

Note: The American legislation foresees – and has foreseen in the past – several tax incentives for the production of renewable energy in the United States. Some examples are the production tax credits, the research and development tax credits, the former cash grant, the so-called MACRS (a way of accelerated depreciation), etc. These tax credits are in most cases part of the renewable energy remuneration scheme.

GRI 206-1 – Legal actions for anti-competitive behaviour, anti-trust, and monopoly practices

EDPR has no knowledge of any legal actions for anti-competitive behaviour, anti-trust or monopoly practices in 2022, neither in 2021.

Note: For the information reported in this indicator, EDPR considers passive contingencies associated with litigation qualified as probable in 2021 recorded in the contingencies reporting system.

GRI 2-27 – Compliance with laws and regulations

EDPR has no knowledge of any non-compliance with laws and regulations in 2022, neither in 2021.

Note: For the information reported in this indicator, EDPR considers passive contingencies associated with litigation qualified as probable recorded in the contingencies reporting system and that have obtained an unappealable judgement.

GRI 415-1 – Political contributions

The Integrity Policy, in line with the principles defined in the Code of Ethics, prohibits any contribution or association of the EDPR brand to political parties, candidates, campaign structures / political candidacy or to related persons or entities, namely through the delivery of goods or the provision of services, directly or indirectly, on behalf or representation of EDPR, since it may jeopardise the integrity of the Group entities, unless otherwise required by law. In addition, EDPR should make available the necessary arrangements for employees to take part, in their strictly personal capacity, in political processes, under applicable law.

In North America, EDPR retains political consultants for lobbying activities. However, these political consultants are prohibited from making contributions to political candidates, campaigns or parties on behalf of or in the name of EDPR. Additionally, EDPR has provided financial support for the activities of America Energy Action, a welfare organisation organised under Section 501(c)(4) of the US Internal Revenue Code. Such social welfare organisations may participate legally in some political activity on behalf of or in opposition to candidates for public office. However, any such political activity must be completely independent of any political candidate or political campaign.

Finally, in accordance with US law, and at the request of US employees, EDPR provides properly regulated mechanisms for employees' participation in political processes and has enabled the establishment of a political action committee (PAC) called the EDPR NA PAC. The EDPR PAC is funded entirely by voluntary personal monetary contributions made by members of the PAC, who are eligible employees in accordance with US law, and decisions on which political campaigns to support are made with the approval of the PAC governing board, which is made up of elected members of the PAC, also in accordance with US law.

These activities are then aligned with the above-mentioned principles of the Integrity Policy and the Code of Ethics.

GRI 207-1 – Approach to tax

EDPR's fiscal strategy is based on five main pillars:

1) EDPR has an ethical and civic duty to contribute to the financing of the general functions of the States in which it operates, by paying the taxes, levies and other contributions that are due, contributing to the well-being of citizens and to the development of the Group's local business. In this context, it carries out its fiscal function with rigor and professionalism, in line with the "EDPR Fiscal Mission", in accordance with the following principles:

- Implements the options which are most appropriate to the business and to the shareholders, in faithful compliance with the spirit and letter of the Law;
- Pays the taxes that are due in all the geographical areas where it carries out its activity;
- Adopts the arm's length principle in intra-group transactions, in the context of the applicable international transfer pricing rules, guidelines and best practices, by transversally implementing an internal transfer pricing policy based on three main principles:
 - All intra-group transactions of a commercial or financial nature have a pre-defined pricing, with terms and conditions that are in line with what would normally have been practised between independent entities, in comparable operations;
 - The definition of the transfer price is based on the economic rationale of the intra-group transaction and, in accordance with the internal rules of the EDPR, not constituting an instrument for tax planning and / or tax evasion;
 - The documentation of intra-group transactions is fully compliant with the Guidelines of the Organisation for Economic Co-operation and Development (OECD), without prejudice to the specific aspects of the internal legislation of each geographical area.
- Adopts tax practices based on principles of economic relevance and commonly accepted business practices;
- Discloses true and complete information concerning relevant transactions; and,
- Seeks to defend its legitimate interests by administrative means and, when appropriate, judicially, when the payment of any taxes, contributions and levies reasonably raises doubts regarding its legality.

2) EDPR reconciles the responsible compliance with tax obligations, with the commitment to create value for its shareholders, efficiently managing its tax burden and using the available

tax benefits and incentives applicable in each region, taking into account the Group's global interest and foreseeing significant tax risks.

3) EDPR is committed to maintain a relationship with the Tax Authorities of the countries where it operates based on principles of trust, good faith, transparency, cooperation and reciprocity, aiming to facilitate the application of the Law and to minimise litigation.

4) EDPR applies responsible policies, striving to maintain a low-risk tax profile in order to avoid conducts that could generate significant tax risks. To this end, EDPR implemented a global risk management policy with the objective of identifying, quantifying, managing, monitoring and minimising the tax risks, in close connection with the highest levels of control and decision.

5) EDPR considers transparency a core principle of its fiscal function, particularly through:

Not resorting to opaque structures or operating in jurisdictions for reasons that do not have a close connection with the economic activity developed within them. EDPR does not have subsidiaries in territories considered to be noncooperating in accordance with Spanish and Portuguese legislations and / or with the OECD benchmarks; and, Disclosure of tax information in accordance with the best international practices and recommendations, to facilitate the understanding of the global contribution for the economies and the principles governing its fiscal policies and practices.

GRI 207-2 – Tax governance, control and risk management

The process of management and control of the tax risk begins with the identification and mapping of the risks to which the EDPR is subject. In this sense, EDPR continuously assesses the tax risks and uncertainties, conducting regular exercises in order to identify, quantify and monitor risks that arise from external events with potential material impact.

Accordingly, the Group implemented a risk management policy for identifying, quantifying, managing, monitoring and mitigating, among others, the tax risks, particularly the risk of materialisation of the tax contingencies. Indeed, EDPR, through a specialised team, continuously monitors the processes associated with tax risks and contingencies (related and not related to ongoing litigation), in close cooperation with the respective Business Units, corporate legal services and external lawyers and consultants.

In addition, the EDPR's Management Team is involved in the decision-making process of the relevant operations, being its tax impact, if any, analysed, documented and included in the

documentation submitted for approval, in particular when it may constitute an important element for the final decision, in order to ensure long-term value creation for shareholders. EDPR also has an Audit, Control and Related-Party Transactions Committee, whose main mission, upon delegation of the BoD, includes the permanent monitoring and supervision of any matters related to the internal control system over financial information and the risk management process, particularly in its fiscal aspects.

GRI 207-3 – Stakeholder engagement and management of concerns related to tax

The EDP Group reconciles responsible compliance with tax obligations, with the commitment to create value for its shareholders, advocating efficient management of its tax burden through the use of legally available tax benefits and incentives applicable in each region and which are appropriate to the business carried out. The EDP Group is specifically committed to maintain a relationship with the Tax Authorities of the countries where it operates based on principles of trust, good faith, transparency, cooperation and reciprocity, aiming to facilitate the application of the Law and to minimise litigation.

GRI 207-4 – Country-by-country reporting

CORPORATE INCOME TAX PAID	UN	2022	2021
Spain	€M	25	4
Portugal	€M	33	28
France / Belgium	€M	0	1
Poland	€M	26	11
Romania	€M	0	0
Italy	€M	18	3
Greece	€M	0	0
UK	€M	0	0
Brazil	€M	10	5
Colombia	€M	4	0
Chile	€M	0	0
US	€M	1	1
Canada	€M	0	0
Mexico	€M	7	10
Others	€M	0	0
TOTAL	€M	125	63

Note 1: The American legislation foresees – and has foreseen in the past – several tax incentives for the production of renewable energy in the United States. Some examples are the production tax credits, the research and development tax credits, the former cash grant, the so-called MACRS (a way of accelerated depreciation), etc. these tax credits, that in most cases are part of the renewable energy remuneration scheme, have accumulated during the last years, allowing the minimisation of CIT cash-out in this geography.

Note 2: As a general rule, the corporate income tax cash-out detailed above considers both the down payments corresponding to the fiscal year in course (where applicable) and the balance of the corporate income tax corresponding to the previous year.

Note 3: For information regarding Profit before income tax, please refer to 4.3 Economic Business Sustainability. For the number of employees by country, please refer to 4.5 People Management, GRI 2-7.

4.12. Digital transformation

For information regarding GRI 3-3 – Management of material topics, please refer to section Digital Capital of the chapter Performance.

4.13. Ethics and compliance

For information regarding GRI 3–3 – Management of material topics, please refer to section Integrity and ethics of the chapter The Company.

GRI 205–1 – Operations assessed for risks related to corruption

EDPR analyses all the new markets where it operates through a market overview including ESG topics such as human rights, labour, and environment. This study also evaluates the corruption risk.

EDPR has a Third Party Integrity Due Diligence Procedure which was approved with the goal to reinforce the mechanisms for identifying and preventing possible integrity or corruption risks for EDPR in the relationship with third parties. In this sense, during 2022, 692 Compliance analysis of third parties were performed (considering closed Integrity Due Diligence Analysis). In addition, an internal tool has been developed to facilitate the management of the Integrity Due Diligence analyses. In cases with high risk, it is necessary the approval of the Management Team, and the inclusion of robust clauses related to corruption in the corresponding agreements is recommended.

GRI 205–2 – Communication and training on anti-corruption policies and procedures

In 2021, EDPR modified its Anti-Corruption Policy and it is now called Integrity Policy. This document was reviewed and updated in October 2022. EDPR's Integrity Policy aims to define the general principles of action and the duties for the Company, its employees, and business partners, in order to avoid the commission of criminal and administrative offences, in particular, conducts associated with crimes of corruption and bribery, money laundering and terrorism financing, antitrust/anti-competitive practices and non-compliance with data protection requirements.

The Integrity Policy is complemented by other procedures that facilitate the application of this Policy. Among others: (i) the Donations and Sponsorships Procedure, (ii) the Offers and Events Procedure and (iii) the Conflict of Interest Procedure. During 2022, the following Procedures have reviewed and updated: Offers and Events, Relationships with Public Officials, and Politically Exposed Persons and Integrity Due Diligence. Additionally, in 2022, a new Procedure has been approved: the Intermediary Agreements Procedure.

All this normative development has implied a strong work to make the new policies and procedures of the Group known, having deepened this year a lot in training and communication in the anti-corruption area.

Training and communication are fundamental tools to strengthen and disseminate the ethic and integrity culture. In that sense, the following activities have been developed: (i) Training for specific areas (M&A, Legal, Procurement) on the Integrity Due Diligence Procedure; (ii) Transversal trainings based on the Compliance Management System, integrity and personal data protection (iii) Training on Ethics for Middle Management, (iv) Training sessions in person in different geographies (Italy, Greece, France, Romania, Brazil, Colombia and Hungary) and (v) training on Ethics and Criminal Compliance to the new hires.

These trainings have been complemented with communication activities: (i) the monthly Ethics and Compliance Comic which shows practical cases of application of the Code of Ethics and the Compliance policies and procedures, (ii) Global Ethics Day campaign, (iii) periodic posts on intranet and internal platforms over compliance topics and (iv) different thematic campaigns as the Privacy Day, GRPD anniversary or anticorruption.

GRI 205–3 – Confirmed incidents of corruption and actions taken

EDPR has no knowledge of any confirmed incident of corruption in 2022, neither in 2021.

Note: For the information reported in this indicator, EDPR considers passive contingencies associated with litigation qualified as probable in 2022 recorded in the contingencies reporting system and claims/doubts reported in the Speak Up Channel and considered as founded.

GRI 406–1 – Incidents of discrimination and corrective actions taken

EDPR has no knowledge of any incident of discrimination in 2022, neither in 2021.

Note: For the information reported in this indicator, EDPR considers passive contingencies associated with litigation qualified as probable in 2022 recorded in the contingencies reporting system and claims/doubts reported in the Speak Up Channel and considered as founded.

GRI 407–1 – Operations and suppliers in which the right to freedom of association and collective bargaining may be at risk

Throughout EDPR's operations, both employees and suppliers must comply with the EDPR's Code of Ethics, which has specific clauses to respect freedom of trade union association and recognise the right to collective bargaining. During 2022, neither in 2021, EDPR did not

register any claims/doubts in the Speak Up Channel regarding operations with significant risk where the right to freedom of association and collective bargaining may be at risk.

In a previous study to characterise EDPR's supply chain, performed in 2015, including the analysis of the exposure to economic, social and environmental risks, performed using the ESCHER (Efficient Supply Chain Economic and Environmental Reporting) methodology developed by PwC, it was determined that ~0 of EDPR's direct purchases were identified in which the right to exercise freedom of association and collective bargaining may be at significant risk. Through this study, EDPR aims to identify areas where should focus its improvement activities in order to significantly reduce its exposure to risk and optimise impacts.

GRI 408-1 – Operations and suppliers at significant risk for incidents of child labour

Throughout EDPR's operations, both employees and suppliers must comply with the EDPR's Code of Ethics, which has specific clauses against child labour. During 2022, neither in 2021, EDPR did not register any claims/doubts in the Speak Up Channel regarding operations with significant risk for incidents of child labour.

In a previous study to characterise EDPR's supply chain, performed in 2015, including the analysis of the exposure to economic, social and environmental risks, performed using the ESCHER (Efficient Supply Chain Economic and Environmental Reporting) methodology developed by PwC, it was determined that ~0 of EDPR's direct purchases were as having significant risk for incidents of child labour. Through this study, EDPR aims to identify areas where should focus its improvement activities in order to significantly reduce its exposure to risk and optimise impacts.

GRI 409-1 – Operations and suppliers at significant risk for incidents of forced or compulsory labour

Throughout EDPR's operations, both employees and suppliers must comply with the EDPR's Code of Ethics, which has specific clauses against forced labour. During 2022, neither in 2021, EDPR did not register any claims/doubts in the Speak Up Channel regarding operations with significant risk for incidents of forced and compulsory labour.

In a previous study to characterise EDPR's supply chain, performed in 2015, including the analysis of the exposure to economic, social and environmental risks, performed using the ESCHER (Efficient Supply Chain Economic and Environmental Reporting) methodology developed by PwC, it was determined that ~0 of EDPR's direct purchases were as having significant risk for incidents of forced or compulsory labour. Through this study, EDPR aims to identify areas where should focus its improvement activities in order to significantly reduce its exposure to risk and optimise impacts.

Other corporate ethics topics

Money laundering

The money laundering risk involves acquiring, possessing, using, converting, or transmitting goods knowing that they have their origin in a criminal activity, or perform any other act that seeks to cover their illicit origin. EDPR has identified in its Compliance Model the money laundering risk and has developed several controls and measures to minimise the probability of occurrence. Currently, the money laundering risk is categorised as low.

4.14. Reporting principles

This is the fourteenth year EDPR publishes an integrated report describing the Company's performance, with respect to the three pillars of sustainability: environmental, social and governance.

Information is presented with reference to Global Reporting Initiative (GRI) Standard 1 Foundation guidelines for Sustainability Reporting for the period between 1 January 2022 and 31 December 2022 and also provides information on the additional electricity sector supplement indicators directly related to the Company business, which is the power generation from renewable sources, basically wind. A full GRI standards content index for the report can be found in Annex IV of this chapter.

United Nations Global Compact

Global Compact is an initiative of the United Nations launched in 2000 that defines guideline directives for businesses that opt to contribute to sustainable development. EDPR has become signatory of this initiative and is committed to put these principles into practice, informing society of the progress it has achieved.

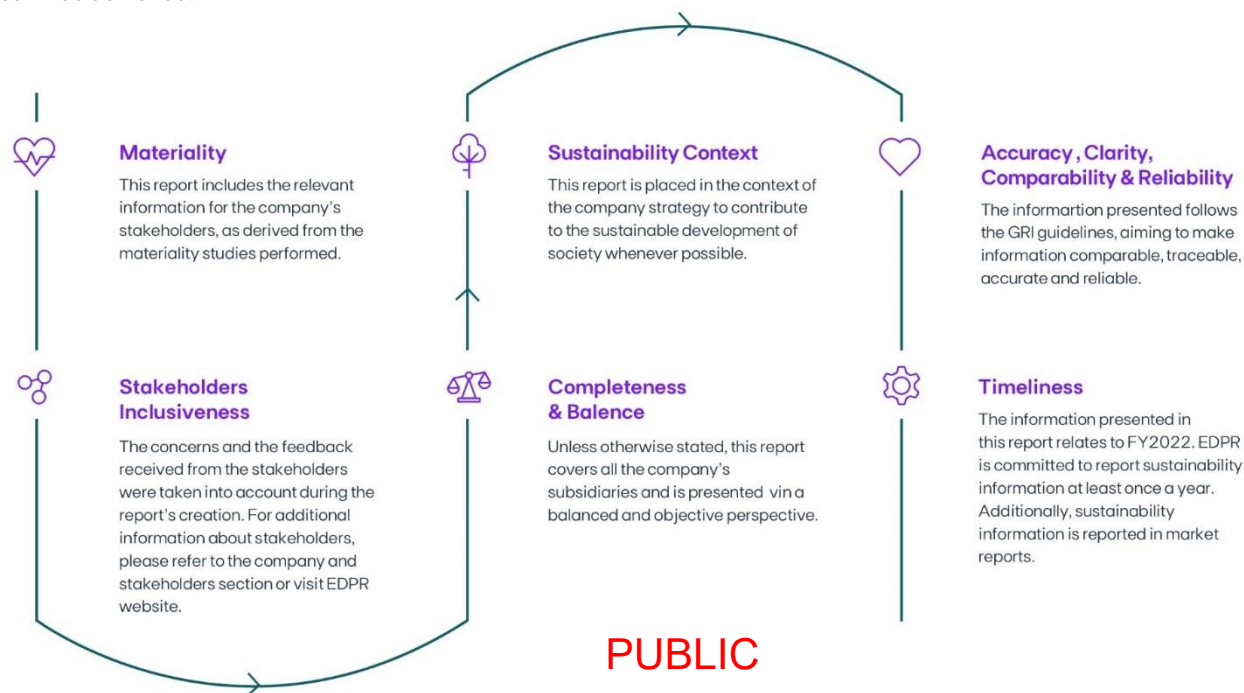

Additionally, in 2015, in the United Nations General Assembly, the world leaders decided to assume a set of global goals to change the world until 2030. The agenda that must guide the joint work of governments, citizens, companies, and organisations, consists of 17 Sustainable Development Goals (SDGs) with the ambition of ending poverty, fighting against inequality and stopping climate change. EDPR will direct its contributions to eight of the 17 Sustainable Development Goals.

To learn more about the UN Global Compact, please visit www.unglobalcompact.org.

Global Reporting Initiative

The GRI Standards are the first global standards for sustainability reporting, representing the global best practice for reporting on a range of economic, environmental and social impacts. A company's adherence to this initiative means that it concurs with the concept and practices of sustainability. This Annual Report has been prepared with reference with the GRI Standards in its Core option, and these Standards have been independently assured according to ISAE 3000 by PwC.

To learn more about the GRI guidelines, please visit www.globalreporting.org

Annex I: Alignment with TCFD recommendations

Background of TCFD and climate-related risks and opportunities

Climate change has become one of society's greatest challenges in the short, medium and long term. In addition, international organisations such as the Intergovernmental Panel on Climate Change (IPCC) highlight the significant impact that changes in climate patterns may have in the coming future. Faced with this scenario, all organisations, from investors to companies themselves, are working to make their assets more resilient to changes in weather and climate patterns. Given the growing concern of various stakeholders about the resilience of companies to the risks and opportunities of climate change, the Task Force on Carbon Finance Disclosure (TCFD) published in 2017 a set of recommendations on how to analyse, incorporate and disclose climate transition and long-term resilience, with the aim of increasing transparency and information provided to stakeholders.

The EDP Group and EDPR have been adopting the recommendations issued by the TCFD, and in 2021 launched a project to deepen them, specifically in the integration of climate and its risks and opportunities within the governance, strategy, risk management and metrics and targets of the companies, as well as in the implementation of a regular process for assessing climate risks and opportunities (including their identification and quantification).

EDPR integrates weather patterns in its decision making and analysis of its assets, in order to anticipate and implement adaptation measures for any potential risk. The Company reports for the first time its approach to TCFD recommendations, and the measures implemented to integrate climate-related risks and opportunities are the following ones.

EDPR's Climate Governance

The organisation has an ESG Committee that leads and oversees the management of the Company's ESG aspects. This ESG Committee, which is part of the Board of Directors – composed of independent directors – is the highest governance body in the management of climate-related risks and opportunities. In addition, given the relevance of climate aspects for the financial performance of companies, the person responsible for the supervision of climate aspects at Management Team level is the Chief Financial Officer (CFO).

EDPR's governance receives regular updates on the identification and assessment of climate risks and opportunities, as well as the implementation of concrete measures in this regard. In addition, the Board of Directors' remuneration policy includes among its KPIs a series of ESG objectives for the Company, with climate action through an increase in installed capacity being one of the priorities.

Finally, at the technical and operational level, the process is led by the Global Risk and ESG Departments, with the collaboration of other departments. Different departments and teams contribute with their expertise in the process, in terms of technical knowledge, information in the field or in dealing with specific environmental issues. The following figure summarises the internal supervision and monitoring process for climate issues:

EDPR's Climate Governance

Strategy, Climate Risks and Opportunities

Climate risks have an annual basis dedicated process, that aims to assess which are the most relevant climate risks and opportunities, in order to test financial resilience regarding climate transition. The main activity carried out is a quantification exercise led by Global Risk Department, analysing each significant risk according to three-time horizons (Business Plan horizon of 3 years, 10 and 30 years) and under three different climate scenarios. The exercise is later on consolidated at Group level to obtain a global result.

Climate-related time horizons and scenarios

To test resilience to climate change, three different scenarios are used to integrate physical and transition scenarios. A narrative was constructed for each scenario, based on the RCP (Representative Concentration Pathway) scenarios of the IPCC for the analysis of physical risks, and on the IEA (International Energy Agency) scenarios, with some internal adjustments to better reflect our reality, for the analysis of transition risks. This table below summarises the main risks and opportunities that the Company has analysed:

Physical Risks	Transition Risks	Transition Opportunities
Chronic risk <ul style="list-style-type: none"> • Rising temperatures • Rising sea levels • Water availability • Wind availability 	Regulatory and legal risk	Energy sources
	Market risk	Products and services
	Technology risk	Resource efficiency
Acute risk <ul style="list-style-type: none"> • Days of extreme heat/cool • Consecutive days of extreme heat/cool • Extreme events (wind, precipitation, fires) 	Reputational risk	Markets
		Resilience

All of the above risks are aggregated into three main scenarios that have been used to quantify risks and opportunities:

Narrative physical scenarios	Narrative transition scenarios
 <p>IEA SDS (with internal adjustments) + RCP 2.6</p> <ul style="list-style-type: none"> • Compliance with the Paris Agreement • Energy system achieves carbon neutrality by 2070 • Temperature increases between 1.5°C and 2°C • Mean sea level rises 0.4m and ocean acidification begins to recover by 2050 	<ul style="list-style-type: none"> • Sustainable energy-related economic growth and job creation • More resilient and clean energy system • Total international cooperation for sustainable development • Lower fuel prices and renewable generation • Very high CO₂ price
 <p>IEA STEPS (with internal adjustments) + RCP 4.5</p> <ul style="list-style-type: none"> • Paris agreement not kept • Temperature increases between 2°C and 3°C • Extreme temperatures become more frequent • Average sea level rises 0.5m and many species are unable to adapt 	<ul style="list-style-type: none"> • Announced policies are, generally, complied with • Policies are adopted to reduce the use of fossil fuels, however demand is still high • Increased price of fuels and cheaper renewables, with average CO₂ price
 <p>IEA CP (with internal adjustments) + RCP 8.5</p> <ul style="list-style-type: none"> • Paris agreement not kept • Temperature rises by more than 3°C • Extreme events become more frequent • Wide variations in precipitation • Mean sea level rises 0.7m 	<ul style="list-style-type: none"> • No additional effort is made for sustainable development • Limited policies for the reduction of fossil fuels and the promotion of sustainable sources • High demand and high prices for fossil fuels • Share of fossil fuels and CO₂ emissions unchanged • CO₂ price remains low

Climate-related risks and opportunities

EDPR has three specific climate risk and opportunity taxonomies, which are aligned with the structure recommended by TCFD, and is validated and updated regularly. Climate risks are present in several risk categories, mainly the physical risks impact at business level, the energy market risks and other at the operational level such as damages, efficiency losses or delays. Transition risks and opportunities impact at strategic level, the surrounding context (technological disruption, changes in competitive paradigm...), at business level (commodity, pool prices, regulation...) and at an operational level (legal, compliance, ethics...).

When analysing the risks, both physical and transitional, the Company has taken into consideration the following descriptions and variables when determining whether or not they were significant in the different time horizons and scenarios:

Physical risks description in EDPR's climate scenarios

PHYSICAL RISKS		
RISK CATEGORY	RISK	VARIABLE
Chronic	Temperature increase	Average temperature rise
	Sea level rise	Rise of sea level
	Water availability	Average precipitation variation Average days with rainfall <1mm var
	Wind availability	Average wind speed
Acute	Extremely hot days	Days w/ temperature >35°C
	Extremely consecutive hot days	Consecutive days w/ temperature >35°C
	Extremely cold days	Days w/ temperature <0°C
	Extremely consecutive cold days	Consecutive days w/ temperature <0°C
	Extreme wind events	Extreme events per year
	Extreme rain events	
	Extreme wildfire events	Wildfires per 100ha

Transition risks description in EDPR's climate scenarios

TRANSITION RISKS	
RISK CATEGORY	VARIABLE
Regulatory and legal risk	Related to concerted government action to adopt climate mitigation and adaptation strategies, e.g. change in renewable energy support schemes
Market Risk	Resulted from changes in market dynamics, influenced, for example, by changes in customer behaviour and changes in market fundamentals
Technological Risk	Related to the adaptation of new technologies requiring greater investment by organizations
Reputational Risk	Referred to increased stakeholder concern and influence of public opinion

Transition opportunities description in EDPR's climate scenarios

TRANSITION OPPORTUNITIES	
TRANSITION CATEGORY	VARIABLE
Energy Source	Resulted from the use of incentive policies for renewable generation, leveraging on the existing generation portfolio
Products and Services	Driven by the development and expansion of low carbon products and services, and in the electrification of consumption as a measure to decarbonise the economy, and (potentially) in the increased demand for energy for heating/cooling due to the influence of physical risks
Resource Efficiency	Related to the reduction of operational costs by increasing efficiency in the processes of the value chain
Markets	Related to the access to new markets through geographic, technological, and business diversification. The issue of Green Bonds for low carbon generation is also a new opportunity
Resilience	Driven by the development of adaptive capacity to respond to climate change, to manage the associated risks and take advantage of the opportunities

Quantification of climate-related risks and opportunities. Value@Risk

EDPR has identified and quantified a set of climate risks and opportunities assuming its current strategy, over the three scenarios and time horizons mentioned above. The quantification methodology is based on individual analysis of the impact on EBITDA of each risk (physical and transition) and opportunity, carried out for most of EDPR's portfolio. This quantification considers the identification of the physical variables and their evolution according to specialists, and the political/ social/ economic/ technological narratives related to the different scenarios.

The quantification method depends on each risk and opportunity, using, whenever possible, the direct method (expected loss/ gain and maximum loss/ gain P95%), or alternatively the indirect method (probability/ frequency, average impact, and maximum impact P95%).

This process enables the company to identify significant climate risks, manage them and implement mitigating measures to reduce their impact on financial results.

a. Physical and transition significant risks

CATEGORY	RISK	MAIN IMPACTS	ADAPTATION MEASURES
Physical Chronic Risk	Temperature increase	Rise of energy losses Loss of efficiency Demand increase	Diversification in geographies and technologies; Increase in demand as a natural mitigation; Firewalls in facilities; Emergency and Self Protection plans.
Physical Acute Risk	Extreme temperatures (heat or cold wave)	Unpredictability of consumption Malfunction of turbines and panels	Energy risk management through hedging strategy; Cooling systems in turbines; Assets strengthening and resilience; Firewalls in facilities; Emergency and Self Protection plans; Preventive shutdown systems for wind turbines in extreme situations.
Physical Acute Risk	Extreme events (wind and rain)	Disruption of generation activities and damage to assets Increase operating costs	Preventive maintenance Insurance plans; Asset resiliency and facility strengthening Strengthening of business continuity and crisis management plans.

CATEGORY	RISK	MAIN IMPACTS	ADAPTATION MEASURES
Transition Risk - Technology	Existing assets devaluation or substitution due to technological obsolescence	Devaluation/ replacement of assets due to technological obsolescence	Preventive shutdown systems for wind turbines in extreme situations. Business Innovation; Repowering and dismantling processes; Monitoring of market trends.

b. Transition opportunities

CATEGORY	OPPORTUNITIES	MAIN IMPACTS AND BENEFITS
Transition opportunity- Energy Source	Use of lower-emission sources of energy	Resource efficiency
Transition opportunity- Products and Services	Rise of power demand	Increase in business opportunities
Transition opportunity- Markets	Access to new markets	Increase in installed capacity and different remuneration schemes

From the analysis, it was concluded that the geographical and technological diversification from EDPR's portfolio significantly helps mitigate this potential risk. In addition, for those risks that EDPR has quantified as significant, the Company has identified a series of adaptation measures that EDPR has currently in place in some markets and may replicate in others in the short, medium and long term.

This entire process of identifying, quantifying, and monitoring risks and opportunities allows the Company to integrate changes in weather patterns into its decision making, planning and financial strategy, thus improving the Company's resilience to a changing climate.

Climate Metrics and Targets

The analysis and quantification of the above-mentioned climate issues establishes the criteria and variables that the Company has identified when evaluating these risks and opportunities.

To monitor compliance with the medium and long-term objectives established at Group level, a set of indicators and metrics has been defined to monitor EDPR's climate performance, including both contribution to climate change mitigation and how the Company adapts its assets.

Climate-related metrics and targets

INDICATOR	CATEGORIES	REFERENCE
Scope 1 emissions	Mobile combustion: car fleet emissions Fugitive emissions: e.g., SF6 Gas consumption in administrative buildings	GHG Protocol, TCFD, CDP, GRI
Scope 2 emissions	Electricity consumption in administrative buildings, if supplied by third parties Self-consumption of electricity in renewable power stations, provided that it is supplied by third parties	GHG Protocol, TCFD, CDP, GRI
Scope 3 emissions	Purchased goods and services Capital assets Wastes from operations Business travel Employees' commuting	GHG Protocol, TCFD, CDP, GRI
CO ₂ specific emissions	GHG emissions (scope 1 or Scope 2 and 3)	GRI
% Renewable installed capacity	EU1 indicator GRI	GRI
% Renewable generation	EU2 indicator GRI	GRI
% Fleet electrification	305-1 Indicator GRI	GRI
Avoided CO ₂ (by renewable generation)	Emissions that would have occurred if electricity from renewable energy sources in each geography had been solely produced by the mix of thermoelectric power stations in that geography.	GRI

The consolidation of these indicators is done quarterly, at corporate level, in a climate dashboard, which reflects the overall performance of the EDP Group's climate action since 2015, with the possibility of disaggregating the information by quarter/year, geography, activity and technology. The climate dashboard thus enables the monitoring of indicators and the verification of compliance with the climate change public targets assumed by the EDP Group. This data is checked annually by an independent auditor. It is thus possible to monitor the evolution of the indicators against the defined targets, both quarterly and annually.

Regarding to its climate change mitigation and adaptation targets, EDPR's activity inherently contributes to the fight against climate change. Emissions generated by the Company and its supply chain in 2022 represent only 14% of avoided emissions. EDPR, aware of the importance of its supply chain in achieving its business objectives and reducing emissions, has launched an engagement effort with its main suppliers, with the aim of promoting decarbonization in the supply chain and in the emissions generated in the Company's upstream processes.

The Company is committed to broadening the scope of its climate risk measurement and monitoring, expanding the number of markets analysed. This additional analysis will allow the Company to launch the Climate Adaptation Plan for all its markets. The Company has started the compilation and implementation of adaptation measures, with the aim of replicating the adaptation measures it already has in place.

Annex II: Taxonomy Alignment. KPIs under Article 8^o of EU Taxonomy

Background and EDPR's taxonomy approach

The European Union Taxonomy Regulation published in the official journal of the European Union on June 18, 2020 (EU 2020/852) sets out the criteria for an activity to be qualified as environmentally sustainable. It is the key instrument to achieve the path of carbon neutrality proposed by the European Commission and adopted in 2019 with the European green deal. The Taxonomy has three main parts:

- The performance levels of activities which make a substantial contribution (SC) to at least one of the six EU's environmental objectives as defined in the articles 10^o to 15^o regulation of the Taxonomy (1. Climate change mitigation; 2. Climate change adaptation; 3. Protection and restoration of biodiversity & ecosystems; 4. Transition to a circular economy; 5. Sustainable use and protection of water and marine resources; 6. Pollution prevention and control).
- Do no significant harm (DNSH) to any of the other five environmental objectives as stipulated in the article 17^o of Taxonomy and
- Comply with the minimum social safeguards (MSS) as stipulated in the article 18^o of Taxonomy which meaning governance standards and do not violate social norms, including human rights and labour rights .

As part of this regulation, two delegated acts were published in 2021 in the official journal of the European Union, and one during 2022. These delegated acts listed the economic activities covered by the EU Taxonomy, which ones could be defined as sustainable and also how to report turnover, CAPEX and OPEX aligned with the EU Taxonomy:

- On December 9, 2021, the EU Taxonomy Climate Delegated Act on climate (EU 2021/2139), with application from January 1, 2022. Under this regulation, economic activity is environmentally sustainable where it: substantially contributes to climate change mitigation and adaptation objectives; does not significantly harm any of the other EU environmental objectives and is carried out in compliance with minimum safeguards;

- On December 10, 2021, the delegated act concerning Article 8 (EU 2021/2178), with application from January 1, 2022. Under this regulation, the companies covered by the Non-Financial Reporting Directive (which will be replaced by the Corporate Sustainability Reporting Directive and then implemented by member states within 18 months) are required to disclose the proportion of turnover, capital expenditure (CAPEX) or operating expenditure (OPEX) associated with economic activities that are environmentally sustainable;
- On July 15, 2022 the European Commission published in the official journal of the European Union the complementary delegated act EU 2022/1214 which, under strict restrictions includes gas and nuclear activities as eligible and amending Delegate Regulation EU2021/2178 as regards specific public disclosures for those economic activities. This delegated act will apply from January 1, 2023.

It is also expected that the European Commission should adopt several Delegated Acts to finalise the Taxonomy Regulation during the following years. EDPR follows up the main regulatory developments on taxonomy, including other ESG reporting and disclosure.

Relevant definitions

Taxonomy-eligible economic activity means an economic activity that is described in the delegated acts supplementing the Taxonomy Regulation (i.e. the Climate Delegated Act as of now) irrespective of whether that economic activity meets any or all of the technical screening criteria laid down in those delegated acts.

Taxonomy-non-eligible economic activity means any economic activity that is not described in the delegated acts supplementing the Taxonomy Regulation.

Taxonomy-aligned economic activity means an economic activity that complies with all of the following requirements:

- The economic activity contributes substantially to one or more of the environmental objectives;
- It does not significantly harm any of the environmental objectives;
- It is carried out in compliance with the minimum safeguards; and
- It complies with technical screening criteria in the delegated acts supplementing the Taxonomy Regulation (i.e., Climate Delegated Act as of now).

EDPR follows the definitions of KPIs related to Turnover, capital expenditure (CAPEX) and operational expenditure (OPEX) in accordance with the sections 1.1.1, 1.1.2 and 1.1.3 of the Commission Delegated Regulation (EU 2021/2178) associated with Taxonomy-eligible economic activities, Taxonomy-non-eligible economic activities and Taxonomy-aligned economic activities as defined in its article 1(2) and (5). The disclosure of the proportion of the turnover, capital expenditure and operational expenditure eligible, non-eligible and aligned with the European Taxonomy is made under the templates of the annex II of the Commission Delegated Regulation (EU 2021/2178).

The eligibility by NACE code activity

- EDPR generation activity: D35.11 – Electricity generation using solar photovoltaic technology (activity 4.1); Electricity generation from wind power (4.3); and Installation, maintenance and repair of renewable energy technologies (7.6). Activity 7.6 (enabling activity) has been included for the first time in 2022.
- Supply: F42.22 – Construction of utility projects for electricity and maintenance and repair of renewable energy technologies.

This Annex II includes information on how EDPR complies with the taxonomy requirements:

- The substantial contribution to meet the climate change mitigation (TSC).
- The confirmation that its activities do no significant harm (DNSH) the remaining environmental objectives.
- The compliance with the Minimum Safeguards (MS).
- The turnover, the capital expenditures (CAPEX) and the operational expenditures (OPEX) associated eligible, aligned and non-eligible.

Technical criteria according to the EU taxonomy

EDPR's low carbon activities

- Wind and solar-based electricity production activities: Considering that EDPR's core business is the development, construction, operation and maintenance of electricity generating power stations using renewable energy sources (wind and solar), EDPR aligns it's the Taxonomy-eligible to the electricity generation from wind and solar power (economic activities 4.1, 4.3 and 7.6 in accordance with Annex I and II of the Climate

Delegated Act). The economic activities in this category could be associated with NACE codes D35.11 and F42.2.2 in accordance with the statistical classification of economic activities established by Regulation (EC) No 1893/2006.

EDPR's verification process regarding to DNSH requirements

In its Environmental Policy, EDPR outlines a set of commitments (Climate Change mitigation; Circular Economy promotion; and Biodiversity protection) that safeguard the implementation and maintenance of appropriate and effective environmental management systems.

EDPR's Environmental Policy provides the framework for determining material environmental issues. EDPR promotes environmental protection and integrates it into the decision-making processes in the different phases of the projects: 1) Development; 2) Construction; 3) Operation and maintenance; 4) Dismantling and Repowering. The Company also includes a previous prospection phase, in order to identify the best locations for the future facilities. This additional phase also includes the identification of potential environmental issues.

EDPR's approach in the different sections of DNSH criteria is detailed below.

Climate Change Adaptation

EDPR processes to evaluate climate risk and perform vulnerability assessment of its operations

Climate change related risks and opportunities are integrated into EDPR's risk management procedures, including:

- Phase 1 – EDPR ensures an identification of risks and opportunities in its main markets, under the TCFD's recommendations.
- Phase 2 – In its climate-related risk analysis, EDPR restricted the number of physical scenarios to three (RCP 2.6, RCP 4.5 and RCP 8.5) and for transitional risks EDPR is using the scenarios of International Energy Agency (IEA Sustainable Development Scenario; IEA STEPS (Stated Policies) and IEA CP).
- Phase 3 – Climate-risk quantification and analysis of the risks based on the aggregated climate-related value@risk (considering EBITDA@risk > €1M).

In 2022, EDPR has consolidated its TCFD framework, integrating recommendations for the management of climate-related risks and opportunities. EDPR's TCFD framework currently

covers the main markets in which the company operates. Nonetheless, EDPR is working on broadening the scope of its methodology to all its markets.

This exercise has served as a starting point to identify climate risks and opportunities that may have a financial impact on the Company in the short, medium and long term. Through this identification, EDPR has begun to analyse climate change adaptation measures already in place or to be implemented in the coming future to mitigate the impact of the most significant climate risks.

Please, refer to Annex I for more information regarding EDPR's TCFD Alignment

Biodiversity and ecosystems

EDPR projects/operations comply with EU regulations or equivalent national provisions or international standards.

Through the prospection phase and prior to other procedures and EIAs (Environmental Impact Assessments), EDPR carries out an analysis of environmental constraints and other environmental issues, with the objective of selecting the best location for the project, based on various criteria.

The environmental studies and impact assessment (EIAs and other studies) procedures are developed and conducted to ensure that the necessary studies are carried out to identify the environment state and the potential impacts so that they are avoided, minimised and compensated –following the mitigation hierarchy– during all the project phases. EDPR is committed to protecting the environment and biodiversity, and therefore the scope of environmental assessment follows the regulation and legal requirements defined by Authorities. Based on the environmental impact assessments, the national authority approves or not the project's construction, by submitting a declaration through the Environmental Impact Statement (EIS) or other kind of declarations.

During the construction phase, the Company implements a set of minimisation, restoration and compensation measures, necessary to avoid and remediate potential impacts. The main preventive measure the Company has in place is the environmental surveillance during the construction phase. This surveillance enables EDPR to check that applicable requirements are fulfilled and preventive measures are implemented, as well as to control potential impacts not expected and manage them properly. In addition, the guarantee of a mitigation hierarchy approach is considered and incorporated into national laws. Under the responsibility of

National Authorities, the licensing process is overseen throughout the project cycle; otherwise, the right to operate this project is inhibited.

EDPR interacts with relevant stakeholders such as wildlife regulatory agencies, in order to assess the best solutions to compensate environmental impacts of present and future operations.

Finally, EDPR has a Health & Safety and Environmental Management System, certified according to ISO 14001 and ISO 45001 by an accredited external independent third party. To obtain this certificate external audits are performed each year to assess:

- The implementation of Environmental Policy
- The internal procedures in place to minimise the potential effects of EDPR activity on the environment (mainly Climate Change, Biodiversity, Circular Economy).

EDPR has achieved 100% ISO 14001:2015 environmental certifications reinforcing its commitments and procedures for managing environmental aspects. The calculation is based on installed capacity EBITDA.

For the different markets, EDPR has procedures for compliance with applicable environmental regulations. This regulatory monitoring is reviewed periodically and allows establishing measures and action plans to ensure compliance.

EDPR implements any required mitigation and compensation measures for protecting the environment

Through its on-site management systems, EDPR promotes continuous improvement in its facilities, identifying any opportunity for improvement in its processes. All those projects located near or inside a protected area include the necessary studies and measures to protect biodiversity. EDPR's initiatives have the same mitigation hierarchy: avoid, minimise, restore and compensate all the negative impacts that our projects could have.

EDPR establishes several measures, procedures and commitments towards biodiversity protection:

- Contribute to preventing or reducing biodiversity loss by promoting dynamic, global and locally owned management, long-term thinking and the search for a positive global balance.

- Contribute to deepening scientific knowledge on different aspects of biodiversity, including through the establishment of partnerships.
- EDPR has created landscape and wildlife protection programs in impacted areas, in partnership with local public entities. These efforts have been recognised as valuable to maintain biodiversity and natural heritage.
- Depending on the environment and its facilities' EDPR has compulsory and voluntary initiatives in place in terms of biodiversity and habitat conservation. The main environmental initiatives can be found on the Report of Environmental Activities.
- Not building new generation facilities in areas included in the UNESCO World Heritage List, ensuring that it continues to have no presence in these territories. EDPR monitors all its facilities located in protected areas in order to identify those wind farms and solar plants that may have a potential impact on biodiversity and ensuring that all the necessary measures are in place. This monitoring process helps the Company to implement actions to avoid and mitigate such impact. In Europe and Latin America, EDPR is working on a materiality analysis in 2023, which aims to identify potential impacts on biodiversity.
- The EDP Group is working on a document that will define the specific content of Biodiversity Action Plans (BAP). These BAPs will be implemented in those areas considered at risk for biodiversity. This document outlines the main components of a BAP, the biodiversity monitoring process and the reporting and communication process.
- During the construction and operation phases, EDPR conducts on-site environmental monitoring to identify and prevent possible impacts on biodiversity and the ecosystem.
- EDPR has mechanisms in place to fight biodiversity potential impacts within its facilities, such as: Monitor collisions of birds and bats and their cumulative effect on species while limiting indiscriminate accesses that disturb sensitive species and habitats, restoration of affected vegetation areas, etc.
- EDPR, as part of a group-wide initiative, is working on identifying Nature Based Solutions (NBs) that can be replicated by the different companies in their facilities and surrounding environments.

Circular economy

EDPR promotes Circular Economy and the efficient use of natural resources during all its value chain. The Company has a specific target in its BP 21-25 regarding the recovery for generated wastes. The Company is also working and engaging with its suppliers to include circular economy criteria during construction and dismantling phases.

The Company's Environmental Policy outlines the circular economy commitments and how EDPR promotes efficient use of natural resources in its activities, wherever possible, within the framework of a life-cycle analysis, in particular:

- Minimise the use of natural resources necessary to properly carry out its activities;
- Optimise and efficiently manage internal products and services, promoting a circular economy for our customers;
- Maximise the recovery of waste and its reintroduction into the economy as by-products.

Regarding circular economy, EDPR follows procurement criteria and standards

At Group level, EDP's supplier management approach is based on a holistic view of the sustainable supply chain which, through the EDPpartners programme, enables the Group to ensure the integrated coordination of activities.

EDPR's supply chain management approach also includes waste management and circular economy. The Company also includes circular economy within its engagement process with suppliers:

- Sustainable Procurement Policy
- For EU&LATAM contract conditions: there are suppliers sustainability guides for construction and O&M phases, including recycling guidance and recommendations
- EDP Supplier Code of Conduct
- ESG priorities for strategic suppliers, including circular economy

Engaging with manufacturing suppliers to promote circular economy

EDPR has included ESG criteria in its last Request For Proposals (RFP), requesting turbine and module suppliers to share its ESG performance, commitments, targets and measures. One of this ESG priorities is circular economy. The Company has also engaged with suppliers to share their LCAs and environmental information about their products, including circular economy and recycling rates and information. During EDPR's engagement process with suppliers, the Company shares its ESG priorities with turbine and module suppliers.

EDPR waste approach during operations and dismantling

EDPR promotes the recycling during its operations. The Company engages with waste treatment suppliers to find solutions that help the Company achieve its expected recovery rates.

In 2019 and in 2021, EDPR had repowered 3 wind farms (Corne, Zas and Blue Canyon II) with high levels of recycling rates. In addition, EDPR includes circular economy as a priority for the coming dismantling and repowering projects. Finally, the Company promotes and rewards those contracts that offer solutions and opportunities for circularity. In dismantling projects, the main challenge for the wind industry is not only the large amount of waste, but also the materials from the blades, which are not always easy to recover with current methods.

Joining industry initiatives, forums and pilot projects

Since 2017, the Company has joined some initiatives and projects, and has also worked with suppliers such as: the collaboration with Thermal Recycling of Composite (R3FIBER), RECICLALIA, the LIFE REFIBRE project or the pilot project with the Associação Portuguesa de Energias Renováveis (APREN). EDP is also a member of the Global Alliance for Sustainable Energy, which also addresses the circular economy.

Water

Given EDPR's activity and the criteria included in the EU Taxonomy through the technical criteria and DNSH, the Company has no impact on water and aquatic resources.

Prevention of pollution

Given EDPR's activity and the criteria included in the EU Taxonomy through the technical criteria and DNSH, the Company has no impact on pollution.

EDPR's verification process regarding to Minimum safeguards (MS) requirements

EDPR's approach to compliance with the established minimum safeguards is detailed below. Some specific procedures, policies and measures are established at EDP Group level and therefore cover all Business Units (BUs), including EDPR.

EDPR has several measures and procedures that allow the Company to manage the minimum safeguards requirements and ensure that risk situations do not occur, regarding to:

- Corruption and Bribery
- Fair Competition
- Taxation
- Human and Labour Rights

EDPR complies with guidelines pertaining to human rights and labour rights, as well as corruption, taxation and fair competition. EDP's policies are listed below:

- Human and Labour Rights Policy is publicly available in this link https://www.edpr.com/sites/edpr/files/2022-11/EDPR_IntegrityPolicy_2022.pdf
- The Integrity Policy (bribery and corruption) is available in this link https://www.edpr.com/sites/edpr/files/2022-11/EDPR_IntegrityPolicy_2022.pdf
- EDP Group Fiscal Policy is publicly available in this link <https://www.edp.com/en/edp-group-fiscal-policy>
- Healthy Competition Practices Commitment is publicly available in this link <https://www.edp.com/en/healthy-competition-practices-commitment>

EDPR's policies and procedures on human and labour rights, anti-bribery and anti-corruption are listed below:

EDPR has launched its Human and Labour Rights Policy where the Company commits to respect and undertakes to promote fair human and labour rights practices, being committed to guarantee responsible operations throughout the whole value chain.

In addition, the Company has an Integrity Policy that defines the general principles of action and duties for EDPR to prevent illegal conducts such as crimes of corruption, bribery, undue receipt of advantages, money laundering and terrorism financing, antitrust/anti-competitive practices and non-compliance with data protection requirements.

These policies allow the Company to comply with international guidelines such as:

- OECD Guidelines for Multinational Enterprises
- OECD Guidelines on Responsible Business Conduct
- UN Guiding Principles on Business and Human Rights

- International Labour Organisation's (ILO) declaration on Fundamental Rights and Principles at Work
- The eight ILO core conventions
- International Bill of Human Rights

The Company's Code of Ethics also includes how the Company commits to ensure respect to human and labour rights and also how it prevents corruption and bribery situations.

EDPR's measures and processes to combat corruption, bribery, bribe solicitation and extortion

The Company has internal control procedures, as well as ethics and compliance programs in place to detect and avoid potential corruption and bribery risks.

The Company has a Global Compliance Program which includes:

- Integrity Compliance Program
- Criminal Compliance Program for Spain
- Global Data Compliance Program
- And Local Compliance Program according to regulations

Ethics, Integrity and Compliance Governance within the Company

EDPR has also a Compliance Standard that formalise the mission and responsibilities of the Compliance functions and establishes different measures and procedures that enable the Company to fight and prevent corruption and bribery:

- Audit Control and Related Party Transactions Committee responsible for the supervision of the financial information and internal control, risk management and Compliance systems;
- EDPR Ethics Committee to ensure the Code of Ethics compliance within the Company. This Committee is composed of three members that must be the presidents of the Audit, Control and Related-Party Transactions Committee and of the Nominations and Remuneration Committee and the Compliance Officer;
- The Ethics Ombudsperson that receives ethical nature complaints and investigates them;
- Specific Compliance Department to lead all the ethical, integrity and compliance measures. The Compliance Officer is the Director of the Corporate Compliance

Department. The Compliance Officer reports to the Audit, Control and Related Party Transactions Committee (hereinafter "CAUD") and to the CEO.

Risk Management, including ESG and integrity issues

- Risk identification and assessment processes for assessing the non-compliance risk
- Risk analysis and evaluation of the adequacy and effectiveness of existing control mechanisms
- Risk mitigation and control measures

Other policies and procedures to ensure integrity and ethics in the Company:

- EDPR Integrity Policy
- EDPR Code of Ethics
- EDP Code of conduct for Top Management and Senior Financial Officers
- EDP Suppliers Code of Conduct
- Third parties' Integrity Due Diligence (IDD) processes
- Interaction with Public Agents and Politically Exposed Persons procedure
- Prevention of Conflicts of Interests procedure
- Donations and Sponsorships procedure
- Offers and Events procedure
- Intermediary Agreements procedure

EDPR, only enters formalised legal transactions with third parties and other partners that comply with the laws of their countries and adopt internal procedures that are aligned with EDPR internal policies and standards.

The Company's Integrity Policy is based on zero-tolerance policy in dealing with the prevention and fight against this type of illicit acts, such as corruption and bribery. The Policy establishes a common commitment and minimum requirements for legal compliance.

The Policy sets out several measures and control mechanisms, such as those listed below:

- Procedures and Internal control mechanisms: As result of risk assessment, EDPR implements transversal and specific control mechanism to ensure the application of EDPR's Integrity Policy.
- Training and Communication: The procedures associated with the Global Compliance Program are shared to all employees by specific and transversal trainings. All current and

employees must understand and commit to what the Policy outlines and global communication campaigns are often launched to all the employees.

- **Contact and Reporting Channels (Whistleblowing):** EDPR makes available several reporting channels for communicating irregularities and encourages its own employees to report any type of behaviour that breaches of this Policy. Some of these channels are: Speak Up Channel; Specific internal whistle-blower channels for EDPR companies, in which any whistleblowing related to matters provided for in the aforementioned legislation can be reported; Ethics Ombudsperson; and Compliance Department.
- **Monitoring, Continuous Improvement and Report:** Compliance teams are responsible for promoting appropriate mechanisms to monitor the Global Compliance Program, lead the analysis of misalignment situations and promote corrective actions.
- **Audit:** The Company has an Internal Audit Department in charge of ensuring that audits comply with the Global Compliance Program and that they guarantee the fight against corruption and bribery, as well as risk management. The Company also has an external audit process that allows EDPR to obtain a double certification from AENOR that verifies and accredits that the Company has developed a system of criminal and anti-bribery compliance based on UNE 19601 and ISO 37001 standards. The AENOR Certifications (UNE 19601 and ISO 37001) were obtained in 2021 and, in 2022, EDPR has renewed both Certifications.

Compliance with the fair competition requirements of the Minimum Safeguards

The Company follows the applicable regulations on fair competition, ensuring compliance in all markets in which it operates.

Through its Code of Ethics EDPR prioritises relationships of trust and fair competition with all its stakeholders, promoting an honest and respectful relationship with all of them. In this sense, it is fundamental for the Company to promote integrity in its business practices, through good practices of healthy competition.

In this sense, the Company establishes through its Code the guidelines for action and the situations that must be avoided, in order to ensure that no anti-competitive practices take place. EDPR, through training of new hires on the Company's Code of Ethics and periodic communications regarding the Code and its compliance.

Compliance with tax regulation, tax governance and tax risk management processes

The Company ensures compliance with applicable tax regulations and has certifications to support it. The EDP Group's Tax Policy establishes the Company's approach to tax management. In addition, EDPR reports in its Annual Report, Chapter 4 of GRI Reporting (GRI – 207), its approach to tax issues, as well as tax governance, risk management and its tax contribution country by country.

For more information, please refer to the EDP Group's tax policy.

Compliance with Human and Labour Rights and due diligence requirements from the EU Taxonomy and the Minimum Safeguards

The Company's commitment to respect human rights is part of its public statements and commitments, such as the Human and Labour Rights Policy, the Code of Ethics, the Integrity Policy and the Supplier Code of Conduct, among others.

EDPR identifies its supply chain as a key segment to achieve its sustainability goals and anticipate potential risks. The Company has a due diligence process for the management of the supply chain, which can be summarised as follows:

- Series of commitments established by the Company to ensure respect for human and labour rights in its activity;
- Supply chain screening process;
- Risk assessment;
- Monitoring of suppliers and continuous dialogue and engagement with the supply chain, in order to anticipate and avoid potential risks.

For the direct activity of EDPR and its contractors, the Company has a series of policies and procedures that outline its commitments and measures to manage human rights in its value chain.

In this Annual Report, through various sections such as the "Social Capital" subchapter and in Chapter 4 of "GRI Reporting", the Company includes information on its due diligence measures for the management of human and labour rights through its entire value chain.

TURNOVER	ECONOMIC ACTIVITIES ⁽¹⁾	CODE ⁽²⁾	SUBSTANTIAL CONTRIBUTION CRITERIA ⁽⁵⁾										DNSH ⁽⁶⁾								TAXONOMY ALIGNED PROPORTION OF TURNOVER YEAR N	TAXONOMY ALIGNED PROPORTION OF TURNOVER YEAR N-1	CATEGORY (ENABLING ACTIVITY) ⁽⁸⁾	CATEGORY (TRANSITIONAL ACTIVITY)

B. Taxonomy-non-eligible activities																					
Turnover of Taxonomy-non-eligible activities ⁽¹¹⁾			12.47	0.5%																	
Total (A + B) ⁽¹²⁾			2,390	100%																	

⁽¹⁾ Under the EU Taxonomy Regulation one activity could match the description of an activity and the technical screening criteria laid out the Climate Delegate Act. In EDPR's case the Annex I – climate change mitigation and activities from energy sector .

⁽²⁾ The code assigned to each of the economic activities is that set out in Annex I of Delegated Regulation (EU) 2021/2178. In accordance with the economic activity number, EDPR activities are included within the numbers D35.11 and F42.22 of the Nomenclature of Economic Activities (NACE), the statistical classification of economic activities in the EU.

⁽³⁾ Absolute turnover: The proportion shall be calculated as the weight of the amount of Turnover of the activity over the total Turnover of the Company.

⁽⁴⁾ Proportion turnover: Percentage according to the contribution to each of the environmental objectives. In the case of EDPR, only the climate change mitigation objective is included.

⁽⁵⁾ Substantial contribution to climate change mitigation: refers to the share of the revenues of each individual economic activity (indicated in the column Turnover) that contributes to climate change mitigation. This is the only objective of the EU taxonomy regulation alignment analysis shown in the table.

⁽⁶⁾ DNSH: environmental objectives meeting the DNSH criteria are specified for each activity.

⁽⁷⁾ Minimum safeguards: indicates whether the minimum safeguards are respected for each individual activity.

⁽⁸⁾ Category: specifies whether the activity is an enabling or transitional activity.

⁽⁹⁾ This section of the table includes Turnover figures for aligned activities (compliant with technical criteria, DNSH principles and minimum safeguards).

⁽¹⁰⁾ This section of the table includes Turnover figures for activities that are eligible (present in the taxonomy), but do not meet the technical criteria and/or the DNSH principles.

⁽¹¹⁾ Difference between the total Turnover of the company and the sum of the Turnover of the aligned activities and the eligible non-aligned activities.

⁽¹²⁾ The total Turnover of the Company. Please, refer to "Business Economic Sustainability" content for more information.

Independent verification report

To the shareholders of EDP Renováveis, S.A.:

Pursuant to article 49 of the Code of Commerce, we have verified, with the scope of a limited assurance engagement, the Consolidated Non-Financial Information Statement ("NFIS") for the year ended 31 December 2022 of EDP Renováveis, S.A. (Parent company) and subsidiaries (hereinafter EDPR or the Group) which forms part of the accompanying EDPR's consolidated management report.

The content of the consolidated management report includes information additional to that required by current mercantile legislation in relation to non-financial information, which has not been covered by our verification work. In this respect, our work was limited solely to verifying the information identified in tables: Annex I: "Statement of Non-Financial Information" and Annex II: "GRI content index", included in the accompanying consolidated management report.

Responsibility of the directors of the Parent company

The preparation of the NFIS included in EDPR's consolidated management report and the content thereof, are the responsibility of the directors of EDP Renováveis, S.A. The NFIS has been drawn up in accordance with the provisions of current mercantile legislation and using as a reference the criteria of the *Sustainability Reporting Standards* of the *Global Reporting Initiative* ("GRI Standards") and Electric Utilities Industry Supplement as per the details provided for each matter in the tables: Annex I: "Statement of Non-Financial Information" and Annex II: "GRI content index" of the consolidated management report.

This responsibility also includes the design, implementation, and maintenance of the internal control considered necessary to allow the NFIS to be free of material misstatement due to fraud or error.

The directors of EDP Renováveis, S.A. are also responsible for defining, implementing, adapting, and maintaining the management systems from which the information required to prepare the NFIS is obtained.

Our independence and quality management

We have complied with the independence requirements and other ethical requirements of the International Code of Ethics for Professional Accountants (including International Independence Standards) issued by the International Ethics Standards Board for Accountants ("IESBA Code") which is founded on fundamental principles of integrity, objectivity, professional competence, and due care, confidentiality, and professional behaviour.

Our firm applies current international quality standards and maintains, consequently, a quality system that includes policies and procedures related to compliance with ethical requirements, professional standards, and applicable legal and regulatory provisions.

The engagement team consisted of professionals specialising in Non-financial Information reviews, specifically in information on economic, social, and environmental performance.

Our responsibility

Our responsibility is to express our conclusions in a limited assurance independent report based on the work we have performed. We carried out our work in accordance with the requirements laid down in the current International Standard on Assurance Engagements (ISAE) 3000 Revised, Assurance Engagements other than Audits or Reviews of Historical Financial Information (ISAE 3000 Revised) issued by the International Auditing and Assurance Standards Board (IAASB) of the International Federation of Accountants (IFAC) and in the Guidelines for verification engagements of the Statement of Non-Financial Information issued by the Spanish Institute of Auditors ("Instituto de Censores Jurados de Cuentas de España").

In a limited assurance engagement, the procedures performed vary in nature and timing of execution, and are less extensive than those carried out in a reasonable assurance engagement and, accordingly, the assurance provided is also lower.

Our work consisted of posing questions to management as well as to the various units of EDPR that were involved in the preparation of the NFIS, of the review of the processes for compiling and validating the information presented in the NFIS, and in the application of certain analytical procedures and review procedures on a sample basis, as described below:

- Meetings with EDPR personnel to understand the business model, policies, and management approaches applied, principal risks relating to these matters, and to obtain the information required for the external review.
- Analysis of the scope, relevance, and integrity of the content of the NFIS for the year 2022, based on the materiality analysis carried out by EDPR and described in section 4.1. "Materiality assessment", taking into account the content required by current mercantile legislation.
- Analysis of the procedures used to compile and validate the information presented in the NFIS for the year 2022.
- Review of information relating to risks, policies, and management approaches applied in relation to material matters presented in the NFIS for the year 2022.
- Verification, by means of sample testing, of the information relating to the content of the NFIS for the year 2022 and that it was adequately compiled using data provided by the sources of the information.
- Obtaining a management representation letter from the directors and management of the Parent company.

Conclusion

Based on the procedures performed in our verification and the evidence we have obtained, nothing has come to our attention that causes us to believe that the NFIS of EDP Renováveis, S.A. and its subsidiaries, for the year ended 31 December 2022 has not been prepared, in all material respects, in accordance with the provisions of current mercantile legislation and using as a reference the criteria of GRI and Electric Utilities as per the details provided for each matter in the tables: Annex I: "Statement of Non-Financial Information" and Annex II: "GRI content index" of the consolidated management report.

Emphasis of matter

The Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 relating to the establishment of a framework to facilitate sustainable investments establishes the obligation to disclose information on the manner and extent to which the company's activities are associated with economic activities aligned in relation to the objectives of climate change mitigation and adaptation to climate change for the first time for the year 2022, in addition to the information referring to eligible activities required in the year 2021. Consequently, comparative alignment information has not been included in the accompanying NFIS. On the other hand, to the extent that the information referring to eligible activities in the year 2021 was not required with the same level of detail as in the year 2022, detailed information regarding eligibility is not strictly comparable either in the accompanying NFIS. Additionally, it should be noted that EDPR's directors have incorporated information on the criteria that, in their opinion, best allow compliance with the aforementioned obligations and that are defined in the "Taxonomy Regulation" section of the "4.3 Economic Business Sustainability" chapter and in Annex II: "Taxonomy Alignment. KPIs and EDPR disclosure under Article 8° of EU Taxonomy" of the accompanying NFIS. Our conclusion has not been modified in relation to this matter.

Use and distribution

This report has been drawn up in response to the requirement established in current Spanish mercantile legislation and therefore may not be suitable for other purposes and jurisdictions.

Part II – Corporate governance assessment	247
Annex I – Curriculum vitae of the Board of Directors EDP Renováveis S.A.	260

PART I – Information on shareholder structure, organisation and corporate governance

A. Shareholder structure

I. Capital structure

1. Capital structure

EDP Renováveis, S.A. (hereinafter referred to as “EDP Renováveis”, “EDPR” or the “Company”) total share capital is 4,802,790,810€, since the Share capital increase in April 2021, where 88,250,000 new shares were issued at a subscription price of EUR 17.00 per share for a share premium of EUR 12.00. EDPR total share capital is composed of 960,558,162 shares with a nominal value of EUR 5.00 each, fully paid. All these shares are part of a single class and series and are admitted to trading on the Euronext Lisbon regulated market.

Codes and tickers of EDP Renováveis SA share: ISIN:ES0127797019
LEI:529900MUFAH07Q1TAX06

Bloomberg Ticker (Euronext Lisbon): EDPR PL Reuters RIC:EDPR.LS

EDPR main shareholder is EDP – Energias de Portugal, S.A., through EDP – Energias de Portugal, S.A. Sucursal en España, with 74.98% of share capital and voting rights. Excluding EDP, EDPR shareholders comprise close to 30,000 institutional and private investors spread across more than 35 countries with main focus in the United States and United Kingdom.

Institutional Investors represent about 96% of Company shareholders (ex-EDP Group), mainly investment funds and socially responsible investors (“SRI”), while Private Investors, mostly Portuguese, stand for the remaining 4 %.

For further information about EDPR shareholder structure please see chapter 1.3 of the Annual Report (“Organisation”).

2. Restrictions to the transferability of shares

EDPR’s Articles of Association have no restrictions on the transferability of shares.

3. Own shares

EDPR does not hold own shares.

4. Change of control

EDPR has not adopted any measures designed to prevent successful takeover bids, nor defensive measures for cases of a change in control in its shareholder structure or agreements subject to the condition of a change in control of the Company, other than in accordance with normal practice, and therefore, has not adopted any mechanisms that imply payments or assumption of fees in the case of the transfer of control or the change in the composition of the managing body, or that could be likely to harm the free transferability of shares or shareholder assessment of the performance of the members of the managing body.

Notwithstanding the above, the following are normal market practice related to a potential change of control:

- In the case of financing of certain wind farm projects, lenders have the right to approve change in control at the borrower if the later ceased to be controlled, directly or indirectly by EDPR.
- In the case of guarantees provided by EDP Group companies, if EDP directly or indirectly ceases to have the majority of EDPR then EDP is no longer obliged to provide such services or guarantees. The relevant subsidiaries will be obliged to provide for the cancellation or replacement of all outstanding guarantees within approximately sixty (60) days of the change of control event.

In the cases of intra-group services agreements and according to the Framework Agreement signed between EDP Renováveis S.A. and EDP Energias de Portugal S.A., the contracts will maintain their full force as long as (i) EDP maintains its share capital above 50% or the right to exercise directly or indirectly more than 50% of voting rights on EDPR’s share capital, or (ii) even if the share capital of EDP or its voting rights are below 50%, but more than half of the Members of the Board are elected through an EDP proposal.

5. Special agreements regime

EDPR does not have a special system for the renewal or withdrawal of counter measures for the restriction on the number of votes capable of being held or exercised by only one shareholder individually or together with other shareholders.

6. Shareholders' agreements

The Company is not aware of any shareholders' agreement that may result in restrictions on the transfer of securities or voting rights. Shareholdings and bonds held.

II. Shareholdings and bonds held

7. Qualified holdings

Qualifying holdings in EDPR are subject to the Spanish Law, which regulates the criteria and thresholds of the shareholder's ownerships. The table below includes the information about the qualifying holdings of EDPR and their voting rights as of December 31st, 2022:

SHAREHOLDER	SHARES
EDP – ENERGIAS DE PORTUGAL, S.A. – SUCURSAL EN ESPAÑA	720,191,372
BLACKROCK INC.	32,115,908
Total qualified holdings	752,307,280

EDP detains 74.98% of EDPR capital and voting rights, through EDP – Energias de Portugal, S.A. – Sucursal en España.

As of December 31st, 2022, EDPR's shareholder structure consisted in a total qualified shareholding of 78.32%, corresponding to EDP Group and Blackrock Inc., with 74.98% and 3.34% of the capital, respectively.

8. Shares held by the Members of the Management and Supervisory Boards

As of December 31st 2022, none of the members of the Board of Directors /Delegated Committees of the Company directly or indirectly own EDPR shares.

9. Powers of the Board of Directors

The Board of Directors is vested with the broad-ranging powers of administration, management, and governance of the Company, with no other limitations besides the powers which are expressly assigned to the General Shareholders' Meetings in the Company's Articles of Association (specifically in article 13) or in the applicable law. In this regard, the powers of the Board include, without limitation¹ to:

- Acquire on lucrative or onerous title basis personal and real property, rights, shares and interests that may suit the Company;
- Sell and mortgage or charge personal and real property, rights, shares and interests of the Company and cancel mortgages and other rights in rem;
- Negotiate and enter into loans and credit operations that it may deem appropriate;
- Negotiate and formalize all sort of acts and contracts with public entities or private persons;
- Exercise civil and criminal actions and all further actions to be undertaken by the Company, representing it before governmental officers, authorities, corporations, governing, administrative, administrative-economic, administrative-litigation and judicial courts, labour courts and the labour sections of the Supreme Court and of the High Courts of the Autonomous Communities, with no limitations whatsoever, including before the European Court of Justice, and in general before the Government, in all its levels and hierarchies; to intervene or promote, follow and terminate, through all procedures and instances, the processes, court sections or proceedings; to accept decisions, to file any kind of appeal, including the cassation one and other extraordinary appeals, to discontinue or confess, to agree an early termination of a proceeding, to submit litigious questions to arbitration judges, and to carry out all sorts of notices and requirements and to grant a power of attorney to Court Representatives and other representatives, with the case-related powers and the powers which are usually granted to litigation cases and all the special powers applicable, and to revoke such powers;
- Agree the allotment of interim dividends;
- Call and convene the General Meetings and submit to them the proposals that it deem appropriate;
- Direct the Company and organize its operations and exploitations by acknowledging the course of the Company businesses and operations, managing the investment of funds, making extraordinary amortizations of bonds and realizing anything that it is considered appropriate for the best achievement of the Company's objectives;

¹¹This list has a merely indicative nature, as the Board of Directors may perform all further powers expressly granted to the Board in the articles or in the applicable law.

- Appoint and dismiss Directors and other Company's technical and administrative personnel, defining their responsibilities and remuneration;
- Agree any changes of the registered office's address within the same municipal area;
- Incorporate legal entities as stipulated under the law; assigning and investing all sorts of assets and rights, as well as entering merger and cooperation agreements, association, grouping and temporary union agreements between companies or business and joint property agreements, and agreeing their alteration, transformation and termination.

Likewise, the General Shareholders' Meeting held in March 26th, 2020, approved the delegation to the Board of Directors of the power to issue in one or more occasions both:

- Fixed income securities or other debt instruments of analogous nature;
- Fixed income securities or other type of securities (warrants included) convertible or exchangeable into EDP Renováveis, S.A. shares, or that recognize at the Board of Directors' discretion the right of subscription or acquisition of shares of EDP Renováveis, S.A. or of other companies, up to a maximum amount of three hundred million Euros (EUR 300,000,000) or its equivalent in other currency.

As part of such delegation, the General Shareholder's Meeting delegated into the Board of Directors the power to increase the share capital up to the necessary amount to execute the related tasks above. Additionally, it was also approved to authorize the Board of Directors for the acquisition of own shares by the Company and/or the affiliate companies up to the maximum limit of 10% of the subscribed share capital. These delegations may be exercised by the Board of Directors within a period of five (5) years since the proposal was approved, and within the limits provided under the law and the By-Laws.

Likewise, on the General Shareholders' Meeting held on March 31st, 2022, it was also approved the delegation to the Board of Directors of the power to carry out increases of share capital with the exclusion of the pre-emptive subscription rights (on one or several occasions) within the maximum term of five years. The total maximum amount of the increase or increases decided upon under this authorization shall be no higher than 50% of the present share capital; or in the event that the increase of capital excludes the pre-emptive subscription right of shareholders, than the 20% of the present share capital. This authorization shall be extended, as broadly as may be required by Law, to the setting and determination of those terms inherent in each of the increases in order to obtain any authorizations required under the legal provisions in force (including, but without being limited to, the determination of the amount and date of implementation, the number of shares to be issued, with or without voting rights, with or without a share premium, consisting of the countervalue of the new shares to be issued in monetary contributions, and being able to

determine the terms and conditions of the increase of capital and the characteristics of the shares). Should be noted that, it has been specifically stated with regards to this authorization that the total or partial exclusion of the pre-emptive subscription right shall be performed in terms of the corporate interest and pursuant to the legal requirements, and that the Board of Directors shall issue a report detailing those reasons that justify this in the corporate interest in each specific case, and which shall be made available to the shareholders and communicated at the first General Meeting of Shareholders held after the increase in capital.

Additionally, in compliance with its personal law and Company's internal regulations, some functions of the Board of Directors are non-delegable and, as such, have to be performed at this level, which are the following:

- Election of the Chairperson of the Board of Directors;
- Appointment of Directors by co-option;
- The supervision of the effective functioning of any committees that it may have incorporated and of the performance of any delegated bodies or managers it may have designated;
- The determination of the company's general policies and strategies;
- The authorization or waiver of the obligations arising from the Directors duty of loyalty;
- Its own organization and functioning;
- The formulation of the annual accounts and its submission to the General Shareholders' Meeting;
- The preparation of any type of report required from the board by law, when the underlying transaction to which the report refers cannot be delegated;
- The appointment and removal of the delegated directors ("*Joint Directors*") of the company, as well as the determination of their contract conditions;
- The appointment or removal of the members of the Management Team, as well as the determination of their basic contract conditions, including remuneration;
- Decisions relating to directors' remuneration, within the statutory framework and, if such is the case, within the remuneration policy approved by the General Shareholders' Meeting;
- Calling the General Shareholders' Meeting and preparing the agenda and proposed resolutions;
- The policy relating to own shares;
- Any powers that the General Shareholders' Meeting has vested to the board of directors, unless the board has explicitly authorized that they may be sub-delegated;
- The approval of the strategic or business plan, annual management objectives and budget, investment and financing policies, social sustainability policy and the dividends policy;

- The determination of the risk control and management policy, including those related to tax matters, and the supervision of the internal information and control systems;
- The determination of the company's corporate governance policy as well as the one applicable to the group of which the company is the parent entity; its organization and functioning and, in particular, the approval and amendment of its own regulations;
- The approval of the financial information that the company must disclose periodically;
- The definition of the structure of the group of companies of which the company is the parent entity;
- The approval of all type of investments and transactions that due to their high amount or special nature are considered as strategic or that may imply a financial risk, unless their approval falls under the General Shareholders' Meeting. For the purposes of this paragraph, the following transactions shall be considered as included:
 - i. The purchase and sale of assets, rights or shareholdings by EDPR, included in the business plan approved by the Board of Directors ("the Business Plan"), whenever their [A] (i) book value, or (ii) market value assessed in terms of equity value, or (iii) the transaction price, or (iv) the initial investment value, is over one hundred and fifty million Euros (150,000,000€)² (at present value), or [B] initial investment value consumes the total amount foreseen Business Plan for these type of transactions, whenever their (i) book value, or (ii) its market value assessed in terms of equity value, or (iii) the transaction price, or (iv) the initial investment value, is over seventy-five million Euros (75,000,000€) (at present value);
 - ii. Agreements regarding (i) bank loans and (ii) credit facilities in an amount above two hundred and fifty million Euros (250,000,000€), provided that, as a result of such agreements, EDPR's overall indebtedness exceeds the amount set forth in the approved annual budget;
 - iii. Total or partial opening or closure of establishments, as well as extensions or reductions of its activity, provided that, according to a reasonable estimate of the executive directors, they result in a change in the turnover or in the assets of the Company of over seventy-five million Euros (75,000,000€);
 - iv. Other operations and relevant transactions, and in particular, those excluded from the scope of the Business Plan whenever their (i) book value or (ii) market value assessed in terms of equity value, or (iii) the transaction price, or (iv) the initial investment value is above seventy-five million Euros (75,000,000€)³ (at present value);
 - v. Any operations not directly related to the energy sector which amount is above twenty million Euros (20,000,000€);
 - vi. Setting up or terminating strategic partnerships or any other forms of enduring cooperation, in an amount above twenty million Euros (20,000,000€).⁴
- The approval of the creation or acquisition of shares in special purpose entities or registered in countries or territories considered tax havens, as well as any other transaction or operation of a similar nature that, due to its complexity, may undermine the transparency of the company and its group;
- The approval of Related Party Transactions, unless:
 - i. its approval corresponds to the Shareholders' Meeting; or
 - ii. transactions (i) between companies of the same group and that are performed in the ordinary management of the company and under market conditions, or (ii) closed under standardized conditions and wholesale applied to a high number of clients, and at prices or tariffs generally established by the supplier of the good or service, the amount of which does not exceed the 0.5% of the net annual company turnover ; which will be approved by the Audit, Control and Related Party Transactions Committee.
- The determination of the company's tax strategy;
- The supervision of the elaboration and submission process of the financial information and the management report, that will include, as the case may be, the required non-financial information; and the submission of the recommendations or proposals presented to the Board aimed to protect its integrity.

Should be noted that in case of duly justified urgency situations, or when considered convenient in an interim period between meetings of the Board of Directors, the decisions related to the reserved matters referred above may be adopted by the delegated bodies or individuals, and will be ratified at the first Board meeting to be held after the adoption of the decision.

Notwithstanding the above, considering that during 2022 it was identified that many transactions defined as reserved under the regulations of the Board were being approved through the exception process – adopted by the delegated bodies or individuals (as the Executive Directors), and then being ratified at the first Board meeting held after the adoption of the decision - and bearing in mind the estimates for next years regarding a high volume and ambitious timings for these type of the transactions, it was considered advisable to establish a mechanism that boosts the implication of the Board of Directors in the decision making

²For the purposes of this provision, the amounts of the respective financial guarantees shall be considered in aggregate.

³For the purposes of this provision, the amounts of the respective financial guarantees shall be considered in aggregate.

⁴For the purposes of this provision, partnerships or other forms of cooperation which do not have a strategic and lasting character, namely regarding cases where such partnerships are limited to specific transactions in predominantly commercial and operational matters, or which relate to the Company's core activities.

process, and that also ensures the necessary agility can be guaranteed. In this context, and for these purposes, on October 25th, 2022, it was resolved to incorporate a fast-track procedure by the Board of Directors of EDPR for certain matters that require urgent approval, that is extensively ruled under the regulations of the Board of Directors, and that will operate as follows:

1. A justified request will be addressed by the CEO to the Chairman of the Board of Directors, framing the matter in question by providing a term-sheet template duly fulfilled;
2. The Chairman of the Board of Directors will submit the request and the information provided to the members of the Board of Directors, who shall have three business days counted from the receipt of the communication to issue their opinion on the matter;
3. Once this 3-business day-period has elapsed, the Directors that have not replied, will be deemed to have issued a favorable opinion;
4. The resolution adopted will be communicated to the CEO, and it will be recorded together with the supporting documents (including the related term-sheet), in the following Board of Directors meeting.

As per the governance model adopted, EDPR has to comply with the regulation established under the Spanish Companies Act, which among others, as mentioned above, establishes that the approvals of the strategic lines and policies of the company are a reserved matters of the Board of Directors that cannot be delegated, and that shall be necessarily approved at this level. Therefore, in compliance with recommendation III.6 and its personal Law (Spanish one), in case of proposal of a new Business Plan, in EDPR such will be first assessed by the Audit, Control and Related Party Transactions Committee (as per its Governance Model does not have a Supervisory Body), and being the final proposal approved at the Board of Directors level.

10. Significant business relationships between the holders of qualifying holdings and the Company

Information on any significant business relationships between the holders of qualifying holdings and the Company is described on topic 90 of this Chapter 5 of the Annual Report.

B. Corporate Boards and Committees

I. General Shareholders' Meeting

On March 31st, 2022 the General Shareholders' Meeting resolved to approve the Regulations

of the General Shareholders' Meeting of EDP Renováveis, S.A., which establishes the principles of its organization and operation, and, that contain the rules governing the convening, preparation, information, attendance and development of the General Shareholders' Meeting, as well as the exercise of the corresponding rights of the shareholders when it is convened and held, all in accordance with the applicable regulations in force. These regulations are available at the website of the Company www.edpr.com. Any amendment to these Regulations shall require the resolution to be adopted by the General Shareholders' Meeting but not with qualified quorum.

a) Composition of the Board of the General Meeting

11. Board of the General Shareholders' Meeting

Since 2021, EDPR adopted the general practice followed under the personal law of the Company (Spanish one) that allows the Shareholders' Meeting to be chaired by the Chairperson of the Board of Directors, and in the absence thereof, to the Vice-Chairperson (in the absence of both of them, it will be assigned to the oldest director).

As such, the Chairperson of the Board of Directors – or whoever acting as substitute – together with the remaining members of the Board, shall constitute the Board of the General Shareholders' Meeting; and its Secretary will be the Secretary of the Board of Directors. Therefore, as of December 31th, 2022 the role of Chairperson of the Shareholders' Meeting corresponds to António Gomes Mota, – who was appointed as member of the Board for a three-year (3) term by the General Shareholders' Meeting held in April 12th, 2021, and for the position of Chairperson of the Board of Directors on its meeting subsequently held on the same date—and the role of the Secretary of the General Shareholders' Meeting corresponds to the Secretary of the Board of Directors, María González Rodríguez, who was appointed for that position on November 2nd, 2021.

Should be also highlighted that accordance with article 180 of the Spanish Companies' Law, all the Board of Directors' Members are obliged to attend the General Meetings.

The Chairperson of the General Shareholders' Meeting of EDPR has at his disposal, the necessary human and logistical resources required for the performance of his duties. Therefore, in addition to the resources provided by the Company's General Secretary, in 2022 the Company hired a specialized entity to give support to the meeting and to collect, process and count the votes submitted by the shareholders on the Ordinary Shareholders' meeting held on March 31st, 2022.

b) Exercising the right to vote

12. Voting rights restrictions

Each EDPR share entitles its holder to one vote. Neither EDPR's Articles of Association, nor General Shareholders' Meeting Regulations establish any restriction regarding voting rights.

13. Voting rights

Neither EDPR's Articles of Association, nor General Shareholders' Meeting Regulations have any reference to a maximum percentage of voting rights that may be exercised by a single shareholder or by shareholders that are in any relationship. All shareholders, regardless the number of shares owned, may attend to the General Shareholders' Meeting and request the information or explanations that they consider relevant regarding the matters included in the Agenda of the convened meeting, and are entitled as shareholders of the Company, to take part in its deliberations and to participate in its voting process.

On 2022, the Board of Directors approved a Shareholder's Guide for the General Shareholders' Meeting held in March 31st, detailing among other matters, the procedure and requirements for the submission through mail and electronic communication of voting forms. This Guide was made available at the Company's website (www.edpr.com). As informed in the related Notice, in order to exercise their right to attend, the shareholders must have the ownership of their shares duly registered in the Book Entry Account at least five (5) days prior to the date of the General Shareholders' Meeting. At this meeting the Regulations of the General Shareholders' Meeting were approved, and will thereafter be the document that will rule all these procedures.

Any shareholder may be represented at the General Shareholders' Meeting by a third party by means of a revocable Power of Attorney (even if such representative is not a shareholder). The Board of Directors may require shareholders' Power of Attorney to be in the Company's possession at least two (2) days in advance, indicating the name of the representative.

These Powers of Attorney shall be granted specifically for each General Shareholders' Meeting and can be evidenced in writing or by remote means of communication such as email or post.

According to the applicable law and the Company's Articles of Association, the notice of

EDPR's General Shareholders' Meetings is published in the Official Gazette of the Commercial Registry and on the Company's website at least thirty (30) days prior to the meeting date. Likewise, the Notice of the General Shareholders' Meeting is published at the website of *Sociedade Gestora de Sistemas de Liquidação e de Sistemas Centralizados de Valores Mobiliários, S.A* ("Interbolsa") and on the website of the *Comissão do Mercado de Valores Mobiliários* ("CMVM") – at www.cmvm.pt – and of the *Comisión Nacional del Mercado de Valores* ("CNMV") – at www.cnmv.es. Simultaneously with the publication of the meeting Notice, the supporting documentation in relation to the General Shareholders' Meeting is published on the CMVM website. Likewise, as soon as the notice of the meeting was formally published, the following information and documentation related to the General Shareholders' Meeting was made available at the Company's website (www.edpr.com):

- The notice of the General Shareholders' Meeting;
- The total number of shares and voting rights at the date of the Meeting notice;
- The template of the letter of representation and the template of the ballot to be sent by mail, and also, the links to the electronic platform that the Company provides for the voting on the topics included in the Agenda;
- The full texts of the proposed resolutions (included when received if such were the case, those proposed by shareholders) and related supporting documentation, that will be submitted to the General Shareholders' Meeting for approval;
- The Shareholders' Guide;
- The consolidated texts in force (Articles of Association and the other applicable regulations).

In 2022, the Company included the English and Portuguese versions of the information and documents related to the Shareholders' Meetings on its website (www.edpr.com) with the notice of the meetings being the Spanish version of the documents the one that prevailed.

Shareholders may vote on the topics included on the Shareholders' Meeting Agenda, in person (including by means of the corresponding representative) at the meeting, by ordinary mail, or by electronic communication (in this latest case, through a telematic vote platform made available at the Company's website or sending the related filled and signed templates by email), and in any case providing the documentation indicated in the General Shareholders' Meeting Regulations.

Pursuant to the terms of article 15 of the Articles of Association and Article 24.7 of the General Shareholders' Meeting Regulations, both electronic and mail-in votes must be received by the Company before midnight (24.00 hours) of the day before the scheduled meeting date of

first call. Remote votes can be revoked subsequently by the same means used to cast them, always within the deadlines established for that purpose, or by personal attendance to the General Shareholders' Meeting of the shareholder who casted the vote to his/her representative.

14. Decisions that can only be adopted by a qualified quorum

According to EDPR's Articles of Association and the General Shareholders' Meeting Regulations, and as established in the law, both ordinary and extraordinary General Shareholders' Meetings are validly constituted when first called if the shareholders, either present or represented, jointly reach at least twenty-five percent (25%) of the subscribed voting capital. On second call, the General Shareholders' Meeting will be validly constituted regardless of the amount of the capital present or represented.

Notwithstanding the above percentages, to validly approve the issuance of bonds, the increase or reduction of capital, the transformation, global assignment of assets and liabilities, merger or spin-off of the Company, the transfer of the Registered Office abroad, the elimination or limitation of pre-emptive rights of new shares and in general, any necessary amendment to the Articles of Association, in the Ordinary or Extraordinary Shareholders' Meeting, it is required that on first call, the Shareholders, either present or represented, reach at least fifty percent (50%) of the subscribed voting capital and, on second call, at least twenty-five percent (25%) of the subscribed voting capital.

In relation to the quorum required to validly approve these matters, in accordance with the Law, the Articles of Association and the General Shareholders' Meeting Regulations, when the shareholders attending represent more than fifty percent (50%) of the subscribed voting capital, the above mentioned resolutions will be validly adopted by absolute majority, and in the case the shareholders attending represent between the twenty-five percent (25%) and the fifty percent (50%) – but without reaching it – the favorable vote of the two-thirds (2/3) of the present or represented capital in the General Shareholders' Meeting will be required to approve these resolutions.

EDPR has not established any mechanism that may intend to cause mismatching between the rights to receive dividends or the subscription of new securities and the voting right of each common share, and has not adopted mechanisms that hinder the passing of resolutions by shareholders, including fixing a quorum for resolutions greater than that provided by the law.

II. Management and supervision

a) Composition

15. Corporate Governance model

EDPR is a Spanish Company listed in a regulated stock exchange in Portugal. The corporate organization of EDPR is subject to its personal law and to the extent possible, to the recommendations contained in the Corporate Governance Code of the Instituto Português de Corporate Governance ("IPCG"), resulted as of the Protocol signed on October 13th, 2017 between the Comissão do Mercado de Valores Mobiliários ("CMVM" – Portuguese Securities Market Commission) and the IPCG, which was last reviewed in July 2020. This governance code is available at the IPCG website (<https://cam.cgov.pt/>). As such, the Company intends to comply with both legal systems but always taking into account that its personal law is the Spanish one, and that in case of discrepancy, the aim is to adopt the law that entails more protectionism for its shareholders.

The governance structure of EDPR is the one applicable under its personal law, that comprises a General Shareholders' Meeting and a Board of Directors that represents and manages the Company. Additionally, parallelly seeks to correspond it to the so-called "Anglo-Saxon" model set forth in the Portuguese Commercial Companies Code, in which the management body is a Board of Directors, and the supervision and control duties are of the responsibility of an Audit, Control and Related Party Transactions Committee. The organization and functioning of EDPR corporate governance model aims to achieve the highest standards of corporate governance, business conduct and ethics referenced on the best national and international practices.

In line with the governance model above referred, and as detailed along topics 15 – 29 of this Chapter 5 of the Annual Report and contemplated in the law and Articles of Association of the Company, as of December 31st, 2022, EDPR does not have a Supervisory Board, but its Board of Directors has set up three Delegated Committees entirely composed by Members of the Board of Directors: the Audit, Control and Related-Party Transactions Committee, the Appointments and Remunerations Committee and the Environmental, Social and Corporate Governance Committee. This structure and its functioning, enables a fluent workflow between all levels of the governance model, as: i) each of the Delegated Committees shall report the decisions taken to the Board of Directors (drafting the minutes of each of the meetings and also providing whatever further clarification is required by the Board), and ii) as the committees Members are also members of the Board, all of them will also receive the complete information at Board of Directors level (as convening of the meetings, supporting documents

and related minutes) in order to take the corresponding decisions; and all in all, thus ensuring in time and manner the access to all the information to the whole Board of Directors in order to appraise the performance, current situation and perspectives for the further development of the Company.

The General Secretary constitutes the focal point in charge of the centralization of the reception and management of all the information and documents to be provided to the different Governing Bodies. This information is prepared by the different departments of EDPR, with the support when necessary of external experts, and always managed in a strictly confidential basis. Additionally, the corresponding duties and functioning procedures for the Governing Bodies (including but without limitation, the performance of their functions, their Chairmanship, periodicity of meetings, their functioning and the duties of their members) have been defined at the Articles of Association, the General Shareholders' Meeting Regulations, and Board of Directors and Delegated Committees Regulations (which are published at the website of the Company www.edpr.com), with the aim of ensuring the adequacy in terms of time and manner of the elaboration, management and access to the information in order to proceed at each level with the corresponding acknowledgements and decisions. In line with the above, the General Secretary sends the notices and supporting documents of the topics to be discussed in each meeting of the Board and of each of its committees to their proper discussion during the meeting. Besides the above, Secretary to the Board of Directors also provides necessary legal advice to the Governing Bodies. Finally, the minutes of all meetings of the Board of Directors and Delegated Committees are drawn and also circulated by the General Secretary.

The governance model of EDPR was designed to ensure the transparent and meticulous separation of duties, management and the specialization of supervision, through the following governing bodies:

- General Shareholders' Meeting
- Board of Directors
- Audit, Control and Related Party Transactions Committee
- Appointments and Remunerations Committee
- Environmental, Social and Corporate Governance Committee

The experience gained operating the Company through this structure indicates that the governance model approved by EDPR shareholders, and adopted in EDPR, is the most appropriate in line with the corporate organization of its activity, especially because it affords transparency and a healthy balance between the management and the supervisory functions.

The links of the Company Website that refers to the information of the Governing Bodies and its regulations are indicated in topics 59–65 of this Chapter 5 of the Annual Report.

16. Rules for the nomination and replacement of directors

According to Article 29.5 of the Company's Articles of Association, the Appointments and Remunerations Committee is empowered by the Board of Directors to propose, advise and inform the Board regarding the appointments (including by co- option), re-elections, removals and remuneration of the Board Members, as well as the composition of the committees of the Board. This committee also advises on the appointment, remuneration and dismissal of top management officers.

As also referred in the Company Articles of Association (Article 21) the term of office of the Board Members shall be of three (3) years and may be re-elected once or more times for equal periods. The appointment proposals shall be approved by majority.

Following the best Corporate Governance practices, in 2022 there were analysed and reviewed the possible criteria applicable in the selection of the new members of its Governing Bodies. For these purposes there were taken into account the market trends and the specific needs of EDPR, in order to ensure the suitability of the roles, the contribution of the new profiles to a better performance, and the aim of ensuring a balanced composition in the bodies of the Company. As a conclusion of this reflection, the Appointments and Remunerations Committee agreed to consider as a reference certain standards and requirements in accordance with the following:

- Individual attributes: education, competence, integrity, availability and experience.
- Diversity: to be considered as a wide criteria, analyzed in accordance with the nature and complexity of the businesses developed, as well as according to the social and environmental context from time to time, and that will include, among others, gender, age and culture.

It was expressly stated that this list should not be considered as an exhaustive nor limiting reference, and that in any case, depending on the needs and competences required, other criteria may be taken into account.

Based on the above criteria, after the previous advice of the Appointments and Remunerations Committee, the Board of Directors submits the related proposals to the General Shareholders' Meeting (including for sake of clarity, the curriculum vitae of the candidates, and the justifying report, which shall be publicly disclosed with the other supporting documents of the meeting in the terms referred in topic 13 above). For more information about the composition of the Board of Directors please check the Sustainability Chapter of the Annual Report at its topic GRI 405–1, and the Annex I of this Chapter 5 of the Annual Report, which includes the curricular details of its Members.

Additionally, in case of a vacancy, pursuant to the Articles of Association and the Spanish Companies Law, the Board of Directors may co-opt a new Board Member, who will occupy the position until the next General Shareholders' Meeting, to which a proposal will be submitted for the ratification of such appointment by co-option. Pursuant to the Spanish Companies Law, the co-option of Directors must be approved by absolute majority of the Directors at the Board meeting.

Finally, pursuant to Article 23 of the Articles of Association and article 243 of the Spanish Companies Act, shareholders may group their shares until constituting an amount of capital equal or higher than the result of dividing the company's capital by the number of Members of the Board, to be entitled to appoint a number of Directors equal to the result of the fraction using only whole amounts. Those shareholders making use of this power, cannot intervene in the nomination of the other members of the Board of Directors.

17. Composition of the Board of Directors

Pursuant to Article 20 of the Company's Articles of Association, the Board of Directors shall consist of no less than five (5) and no more than seventeen (17) Directors. Taking into account the size of EDPR and the complexity of the risks intrinsic to its activity, following the proposal of the Appointments and Remunerations Committee, the Board of Directors EDPR submitted to the Extraordinary Shareholders Meeting held on February 22nd, 2021 the proposal to adjust the number of Directors of the Company to a total of twelve (12) members. As also referred in the Company Articles of Association (Article 21) the term of office of the Board Members shall be of three (3) years and may be re-elected once or more times for equal periods.

On January 17th, 2022, the Board acknowledged the resignation of Joan Avalyn Dempsey to her position as Director (with effects January 13th, 2022), and on its meeting held on February 9th 2022, the Appointments and Remunerations Committee analyzed the criteria drivers for the recruitment process to be launched to cover this position, concluding that the most adequate profile to be considered would be an American person of the less represented gender to be appointed as a non-executive an independent Director, which would be a profile difficult to find before the next Shareholders' Meeting. In this context, the General Shareholders' Meeting held on March 31st resolved the continuation of the existing vacancy on the Board of Directors, leaving the position unfilled, and expressly setting forth that the Board of Directors may fill it by co-option after that General Meeting had been held. It was on May 3th, 2022, when the Board of Directors, following the proposal presented by the Appointments and Remunerations Committee, appointed by co-option Kay Mc Call for this position (with effects June 1st, 2022). Therefore, as of December 31st, 2022, the Board of Directors was composed by the following Directors:

MEMBER	POSITION	FIRST APPOINTMENT	RE-ELECTION	END OF TERM
António Gomes Mota	Independent Chairperson	12/04/2021	-	12/04/2024
Miguel Stilwell d'Andrade	CEO & Executive Vice-Chairperson	19/02/2021	12/04/2021	12/04/2024
Rui Teixeira	CFO and Executive Director	29/10/2019	12/04/2021	12/04/2024
Vera Pinto	Director	26/02/2019	12/04/2021	12/04/2024
Ana Paula Marques	Director	19/02/2021	12/04/2021	12/04/2024
Miguel Setas	Director	12/04/2021	-	12/04/2024
Manuel Menéndez	Director	04/06/2008	12/04/2021	12/04/2024
Acácio Piloto	Director	26/02/2013	12/04/2021	12/04/2024
Allan J. Katz	Director	09/04/2015	12/04/2021	12/04/2024
Rosa García García	Director	12/04/2021	-	12/04/2024
José Manuel Félix Morgado	Director	12/04/2021	-	12/04/2024
Kay Mc Call	Director	1/06/2022	-	Until the next General Shareholders' Meeting
Joan Avalyn Dempsey*	Director	19/02/2021	-	-

*Joan Avalyn Dempsey presented the resignation to her positions as Board Members with effects January 13th, 2022.

Likewise, since November 2nd, 2021, the Secretary non-member of the Board of Directors is María González Rodríguez and the Vice-Secretary of the Board of non-member is Borja Pérez Dapena.

18. Executive, Non-Executive and Independent Members of the Board

The independence of the Directors is evaluated according to the Company's personal law, and annually confirmed by each of the corresponding Directors through the signature of an independence declaration. Likewise, EDPR Board of Directors Regulations, and Article 20.2 of its Articles of Association, defines independent Directors as those who are able to perform their duties without being limited by relations with the Company, its significant Shareholders, or its management officers and comply with the other legal requirements. Corporate Governance recommendations of the IPCG Code state that the number of non-executive directors should be higher than the number of executive directors, and that at least one third

over the total members shall be non-executive members that also comply with the independence criteria. In this sense, and provided that the independence criteria applicable to EDPR Directors are the ones established under its personal law, from a total of twelve (12) positions that composed of EDPR's Board of Directors as of December 31st, 2022, ten (10) were non-executive, being six (6) of them also independent. In accordance with the law and Articles of Association, it has been established that Non- Executive Directors can only be represented in the Board meetings by other Non- Executive Director.

As such, it has been concluded that the composition of the Board and its Delegated Committees is suitable for the size of the company and the complexity of the risks intrinsic to its activity mainly considering that enables a separation of duties, management and specialization of supervision at the same time that the non-executive and independent directors take part in all the decisions also at the Board of Directors level. Should be noted to this extent that the Board of Directors is composed by a majority of non-executive members, with a high percentage of independents; and that the Audit, Control and Related Party Transactions Committee, the Appointments and Remunerations Committee and the Environmental, Social and Corporate Governance Committee are entirely composed by non-executive and independent members. Likewise, the executive line of the Board is centralized in two directors, who are supported in the daily activity of the Company by the Members of a Management Team.

Spanish law, Regulations of the Board of Directors and Company Articles of Association regulate the criteria for the incompatibilities with the position of Director. Specifically, Article 23 of the Articles of Association, establish that the following can not be Directors:

- Those who are directors of or are associated with any competitor of EDPR, or have family relations with them. In this respect a Company shall be considered as a competitor of EDPR, whenever it is engaged, if it is directly or indirectly involved in the production, storage, transport, distribution, marketing or supply of electricity or fuel gas; or also if has interests opposed to those of EDPR, or to the ones of any competitor or any of the companies in its group, and the Board members, employees, lawyers, consultants, or representatives of any of them. Under no circumstances shall companies belonging to the same group as EDPR, including abroad, be considered competitors;
- Those who are in any other situation of incompatibility or prohibition under the law or EDPR's Articles of Association. Under Spanish law, among others, are not allowed to be Directors those who are underage – under eighteen (18) years – and were not emancipated, disqualified, competitors, convicted of certain offences, or that hold certain management positions.

The prevention and avoidance of the conflict of interest in the performance of the duties of the Directors of EDPR is regulated in line with the terms contained in article 229 of the Spanish Companies Law and implemented in article 28.3 of the Board of Directors Regulations, which is also applicable to the committees under article 12 of their respective regulations. This article states that in case any direct or indirect conflict of interest arose, it shall be communicated to the Board of Directors, being the Director involved obliged to abstain from intervening in the corresponding operation. Additionally, all the Board Members (and hence those of its Delegated Committees, as they are entirely composed by Members of the Board) shall annually sign an statement declaring their compliance with the terms of the requirements stated under article 229 of the Spanish Companies Law, and their commitment to notify any variation in the information declared under the statement as soon as it may occur, in order to fully comply with the loyalty duty and avoid any interference or irregularity in any decision-making process.

The following table includes the executive, non-executive and independent members of the Board of Directors as of December 31st, 2022:

BOARD MEMBER	POSITION
António Gomes Mota	Chairperson (non-Executive & independent)
Miguel Stilwell d'Andrade	CEO and Executive Vice-Chairperson
Rui Teixeira	CFO and Executive Director
Vera Pinto	Non-Executive Director
Ana Paula Marques	Non-Executive Director
Miguel Setas	Non-Executive Director
Manuel Menéndez	Non-Executive Director
Acácio Piloto	Non-Executive and independent Director
Allan J. Katz	Non-Executive and independent Director
Rosa García García	Non-Executive and independent Director
José Morgado	Non-Executive and independent Director
Kay Mc Call	Non-Executive and independent Director

19. Professional qualifications and biographies of the Members of the Board of Directors

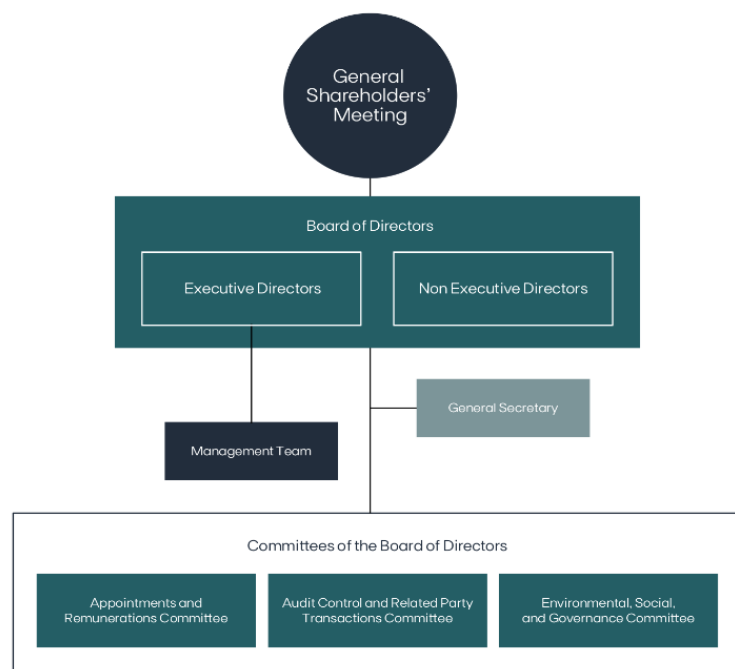

The skills and main positions held by the members of the Board of Directors, as well as those that they currently hold in Group and non-Group companies and other relevant curricular information details are available in the Annex I of this Chapter 5 of the Annual Report.

20. Family, professional and business relationships of the Members of the Board of Directors with qualifying shareholders

Qualifying Shareholders in EDPR are subject to the Spanish Law, which regulates the criteria and thresholds of the shareholders' holdings. As of December 31st, 2022, and as far as the Company was informed, there are no family or business relationships of Members of the Board of Directors with qualifying shareholders but only professional relationships due to the fact that some of the Members of EDPR's Board of Directors are currently Members of the Board of Directors in other companies belonging to the same group as EDP Renováveis S.A., which are the following: Miguel Stilwell d' Andrade; Rui Teixeira; Vera Pinto; Ana Paula Marques; Miguel Setas and Manuel Menéndez.

21. Corporate bodies and management structure

As exposed in topic 15 above, the governance model of EDPR was designed to ensure the transparent and meticulous separation of duties and the specialization of supervision through the following governing bodies and management structure:

General Shareholders' Meeting: which is the body in which the shareholders participate. Represents the Company with the full authority corresponding to its legal personality and has the power to deliberate, vote and adopt decisions, particularly on matters that the law and Articles of Association reserve for its decision and that must be submitted for its approval.

Board of Directors: that represents and administrates the Company under the broadest powers of management, supervision and governance with no limitations other than the responsibilities expressly and exclusively granted to the jurisdiction of the General Shareholders' Meeting in the Company's Articles of Association, in the General Shareholders' Regulations or in the applicable law.

Executive Directors: EDPR has two Executive Directors who are also Joint Directors, Miguel Stilwell de Andrade (CEO) and Rui Teixeira (CFO), to whom the Board agreed to delegate all the competences that can be delegated as per established under the Company Bylaws and the applicable law.

Delegated Committees: as regulated by the applicable Law and pursuant to the best corporate governance recommendations, EDPR has set up three additional specialized internal committees:

- The Audit, Control and Related Party Transactions Committee, whose main duties are the supervision of the financial information and internal control, risk management and Compliance systems. It also assumes the functions related to the analysis and, when applicable, the approval of the Related Party Transactions of the Company.
- The Appointments and Remunerations Committee, whose main duties are the assistance and report to the Board of Directors in the appointments, re-elections, dismissals, evaluation, and remunerations of Directors and Management Team members.
- The Environmental, Social and Corporate Governance Committee, whose main duties are the assistance and report to the Board of Directors in the alignment with the market trends and the company needs regarding Environmental, Social and Corporate Governance matters, with the aim of also providing the investors with more transparent and exhaustive information regarding matters related to Corporate Governance and Sustainability.

Management Team: On January 2021 the Board of Directors agreed to create this body in order to assume the conduction and supervision of the daily activity and performance of the Company.

Considering the growing tendency of EDPR and its presence in new geographies, it has been concluded that in order to ensure the required support to the needs to be covered both in business and technical terms, the appropriate composition of the Management Team will be the CEO and CFO, the representatives of EDPR's Platforms (Europe, LaTam, APac and North America), and a member in charge of the coordination of the technical functions and Offshore business.

Therefore, as of 31st, 2022 the composition of the Management Team of EDPR was as follows:

- Miguel Stilwell d'Andrade (CEO)
- Rui Teixeira (CFO)
- Duarte Bello (COO Europe&LaTam)
- Pedro Vasconcelos (COO APac)
- Sandhya Ganapathy (COO NA)
- Bautista Rodríguez (CTO & Business Offshore)

b) Functioning

22. Board of Directors regulations

EDPR's Board of Directors Regulations were last amended on December 12th, 2022 and are available at Company's website (www.edpr.com), and at Company's headquarters at Plaza de la Gesta, 2, Oviedo, Spain.

23. Number of meetings held by the Board of Directors and attendance report

According to the Law and its Articles of Association, EDPR's Board of Directors meetings take place at least once every quarter. During the year ended on December 31st, 2022, the Board of Directors held six (6) meetings. The notices and supporting documents of the topics to be discussed in each meeting are sent to the Board members in advance to their proper discussion during the meeting. Additionally, the minutes of all meetings are drawn and also circulated.

The following table expresses the attendance percentage of the participation of the Directors to the meetings held during 2022:

BOARD MEMBER	POSITION	ATTENDANCE*
António Gomes Mota	Chairperson (non-Executive and independent)	100%
Miguel Stilwell d'Andrade	CEO and Executive Vice-Chairperson	100%
Rui Teixeira	CFO and Executive Director	100%
Vera Pinto	Non-Executive Director	100%
Ana Paula Marques	Non-Executive Director	100%**
Miguel Setas	Non-Executive Director	100%**
Manuel Menéndez	Non-Executive Director	100%**
Acácio Piloto	Non-Executive Director and independent Director	100%
Allan J. Katz	Non-Executive Director and independent Director	83,33%
Rosa García García	Non-Executive Director and independent Director	100%
José Félix Morgado	Non-Executive Director and independent Director	100%
Kay Mc Call	Non-Executive Director and independent Director	100%

*The percentage reflects the meetings attended by the Members of the Board during 2022, provided that Kay Mc Call was appointed by co-option on May 3rd, 2022 (with effects June 1st, 2022), thus the percentage shown in the table reflects the attendance calculated over the meetings celebrated since such date.

**Ana Paula Marques, Miguel Setas and Manuel Menéndez were not able to attend to the Board of Directors meeting held on February 19th, 2022 but in line with the Company bylaws and the applicable law, they delegated their representation and votes into other non-executive member of the Board (António Gomes Mota).

Likewise, on February 7th, 2022 it was held a meeting of non-executive Directors in order to analyze and assess the organization, composition and functioning of the Board of Directors and its Committees.

24. Competent body for the performance appraisal of Executive Directors

The key performance indicators for the appraisal of the Executive Directors are set in advance and approved by the General Shareholder's Meeting.

Once the corresponding fiscal year is completed, the Appointments and Remunerations Committee performs the first assessment about the compliance with such key performance indicators, and submits its recommendation to the Board of Directors, which evaluates the proposal of this committee and makes the final decision. Should be noted that according to the personal law of EDPR, the definitive assessment of this performance is a non-delegable competence of the Board of Directors.

25. Performance evaluation criteria applicable to Executive Directors

The criteria for assessing the Executive Directors' performance are described on topics 70, 71 and 72 of this Chapter 5 of the Annual Report.

26. Availability of the Members of the Board of Directors

The availability of the members of the Board of Directors is one of the individual attributes considered by EDPR in the selection processes, and a reference that is clearly being more observed and acquiring material relevance in the Market. As such, and with the aim of complying with the best governance practices, the Board of Directors resolved at its meeting held on October 25th, 2022 to rule under its Regulations the performance of EDPR Executive Directors when they have executive functions in entities outside the Group; in accordance to which it has been established that: i) the Executive members of the Board of Directors may not exercise executive functions in more than two companies outside EDP Group.; and ii) the exercise of that functions will be subject to prior assessment of the Appointments and Remunerations Committee and of the approval by the Board of Directors.

The members of Board of Directors of EDPR are fully available for the performance of their duties having no constraints for the execution of this function simultaneously with other positions.

The positions held at the same time in other companies within and outside the Group, and other relevant activities undertaken by members of the Board of Directors throughout the financial year are listed in the Annex I of this Chapter 5 of the Annual Report.

- c) Committees within the Board of Directors or Supervisory Board and Board Delegates

27. Board of Directors' Committees

As previously exposed, in line with Spanish Law and as specifically foreseen in Article 10 of the

Company's Articles of Association, the Board of Directors is entitled to create delegated bodies. The Board of Directors of EDPR has set up three committees:

- Audit, Control and Related-Party Transactions Committee
- Appointments and Remunerations Committee
- Environmental, Social and Corporate Governance Committee

The three Committees are composed exclusively by non-executive and independent members.

28. Details of the Executive Delegates of the Board

On January 19th, 2021, the Board of Directors agreed to appoint Miguel Stillwel d'Andrade and Rui Teixeira as Joint Executive Directors, delegating in them all the competences that can be delegated as per established under the Company Bylaws and the applicable law. On April 12th, 2022 the Board agreed to re-elect both of them as Joint Executive Directors, as well as to again delegate in them all the competences that can be delegated as per established under the Company Bylaws and the applicable law. The reserved matters of the Board of Directors are identified in topic 9 of this Chapter 5 of the Annual Report and article 9 of the Board of Directors Regulations.

29. Committees' competences

Audit, Control and Related Party Transactions Committee

Composition

Pursuant to Article 28 of the Company's Articles of Association and Article 9 of its Regulations, the Audit, Control and Related Party Transactions Committee consists of no less than three (3) and no more than five (5) members.

Following the proposal submitted by the Appointments and Remunerations Committee, its Chairperson, Acacio Piloto, was first elected for this position on June 27th, 2018, and re-elected on April 12th, 2021.

The Audit, Control and Related Party Transactions Committee consists of three (3) non-executive and independent members, who as of December 31st 2022, are the following:

- Acacio Piloto, who is the Chairperson
- Rosa García García
- José Manuel Félix Morgado

Additionally, María González Rodríguez is the Secretary of the Audit, Control and Related Party Transactions Committee since November 2nd, 2021.

The committee members shall maintain their positions for as long as they are Company Directors. Nevertheless, the Board may decide to discharge members of the committee at any time, and also the members may resign of these positions but still maintaining their seat as Members of the Board of Directors.

Competences

Notwithstanding the other duties that the Board may assign to this committee, it shall perform supervisory functions of Audit and Control independently from the Board of Directors, as well as, by delegation of the Board of Directors, the supervisory functions of the transactions between Related Parties, as follows:

A) Audit and Control functions:

- Reporting through the Chairperson on questions falling under its jurisdiction to the General Shareholders' Meetings;
- Proposing the appointment of the Company's auditors to the Board of Directors for subsequent approval by the General Shareholders' Meeting, as well as the contractual conditions, scope of the work – specially concerning audit services, “audit related” and “non-audit” – annual activity evaluation and revocation or renovation of the auditor appointments;
- Supervising the finance reporting and the functioning of the internal risk management and control systems, evaluating those systems and proposing the adequate adjustments according to the Company necessities, as well as supervising the suitability of the preparation process and the disclosure of financial information by the Board of Directors, including suitable accounting policies, estimates, judgments, relevant disclosure and its consistent application between financial years in a duly documented and communicated form;

- Supervising internal audits, in particular: i) approving and supervising in coordination with the CEO, the Annual Internal Audit Plan; ii) approving and reviewing the Internal Audit Rule; and, iii) supervising in coordination with the CEO and Management Team the implementation of the recommendations issued by Internal Audit;
- Establishing a permanent contact with the External Auditors to assure the conditions, including independence, that may be adequate for provision of services performed by them, acting as the Company speaker for the subjects related to the auditing process, and receiving and maintaining information on any other questions regarding accounting subjects;
- Preparing an annual report on its activities, including eventual constraints, and expressing an opinion on the Management Report, the accounts and the proposals presented by the Board of Directors;
- Receiving notices of financial and accounting irregularities presented by the Company's employees, shareholders, or entities that have a direct interest and judicially protected, related with the Company's social activity;
- Engaging the services of experts to collaborate with committee members in the performance of their functions (when engaging the services of such experts and determining their remuneration, it must be taken into account the importance of the matters entrusted to them and the economic situation of the Company);
- Drafting reports at the request of the Board and its Committees;
- Approving and supervising, in coordination with the Management Team, the Annual Activity Plan of the Corporate Compliance Department;
- Appreciating and monitoring the recommendations on measures to be taken in situations of significant non-compliance;
- Supervising compliance with regulations and alignment of business processes with the requirements of the Compliance Management System in order to achieve a sustainable compliance culture throughout the Company.

B) Related Party Transactions functions:

- By delegation of the Board of Directors:
 - i) Analyzing and, where appropriate, approving the (i) (a) intragroup transactions or (b) transactions performed between EDPR Group and EDP Group when their amount is below 10% of the total assets at the last annual balance sheet approved by the company, as long as they are in the ordinary management of the company and under market conditions; (ii) transactions executed under contracts with standardized

terms that are wholesale applied to a high number of clients under prices or tariffs generally established by the supplier of the goods or services, and which amount does not exceed the 0,5% of the net annual company turnover; and periodically informing the Board of Directors about the transactions approved by this Committee in the exercise of the above referred delegation, stating the fairness and transparency of such transactions, and as the case may be, the compliance with the applicable legal criteria;

- i. Analyzing and informing about any modification of the Framework Agreement signed by EDP and EDP Renováveis on 7 May 2008;
 - ii. Submitting reports to the Board of Directors of the Company regarding the Related Party Transactions – that shall be approved by the Board of Directors of EDPR SA or by its Shareholder’s Meeting in accordance with the law – and that shall include: (i) the information regarding the nature of the operation and the relation with the Related Party, (ii) the identity of the Related Party, the date and value or amount of the compensation of the transaction, and any other information necessary to appraise if the operation is fair and reasonable for the company and for the non-Related Party shareholders;
- Asking EDP for access to the information needed to perform its duties.

Functioning

In addition to the Articles of Association and the law, this committee is governed by its regulations (that were last amended on February 15th 2022), which are available at the Company’s website (www.edpr.com).

The committee shall meet at least once a quarter and additionally whenever its Chairperson deems fit. The notices and supporting documents of the topics to be discussed in each meeting of this committee are sent to its members in advance to their proper discussion during the meeting. Additionally, this committee shall draft minutes of every meeting held and inform the Board of Directors of its decisions at the first Board held after each committee meeting.

Decisions shall be adopted by majority and the Chairperson shall have the casting vote in the event of a tie.

2022 Activity

In 2022 the Audit, Control and Related Party Transactions committee’s activities included the following:

A) Audit and Control Activities:

- Monitor the closure of quarterly accounts, first half-year and year-end accounts;
- Information about the proposals of application of results for the fiscal year ended on December 31st 2021 and the distribution of dividends;
- Information about the independence of the External Auditor;
- Assessment of the external auditor’s work, especially concerning the scope of work in 2022, approval of all “audit related” and “non-audit” services and analysis of external auditor’s remuneration;
- Assessment on the policies and remunerations systems of the Company;
- Supervision of the quality and integrity in the preparation and disclosure of the financial information in accordance with the applicable accounting policies, estimates and judgments;
- Issuance of an opinion about the individual and consolidated reports (including the Corporate Governance report) and accounts, in a quarterly, half year and yearly basis;
- Monitorization of Internal Audit Activity, including the supervision of the execution of the Audit Plan for 2022, its Budget and headcount and pre-approval of the draft prepared for the 2023 Internal Audit Plan;
- Monitorization of the recommendations issued by Internal Audit;
- Follow-up and supervision of the quality, integrity and efficiency of the treasury management (finance and debt), the Internal Control System, Compliance (including the supervision of the execution of the Activity Plan for 2022 for EDPR and OW and approval of the draft prepared for the 2023 Activity Plan) and Risk Management;
- Monitorization and evaluation of the risk management performed during 2022, issuing a report including the assessment about Internal Control System and Risk Management;
- Information about claims received regarding financial irregularities;
- Information about the contingencies affecting to the Group;
- Issuance of the report of its activities performed during 2021;
- Issuance of a self-assessment about its performance and an appraisal of the Internal Audit functions regarding fiscal year 2021;
- Attended to a specific internal training regarding the investment process in EDPR, in which among others, there were exposed the framework processes applicable to investment and divestments, the internal approval requirements and thresholds, and the next steps followed after the acquisition of a project;
- Following the best Corporate Governance practice, the Committee held a specific and complementary meeting with the External Auditors twice a year to discuss any remark in the process of the elaboration of the Company half year and year end accounts;
- On October 2022, the Audit, Control and Related Party Transactions Committee of EDPR organized a two-day event in Oviedo (headquarters of the Company) for the other Audit

Committees of the listed companies of EDP Group, in order to discuss the best practices related to Internal Audit, Risk, Compliance and Accounting & Tax functions, to analyze the most relevant challenges of the competences of Audit Committees, and to agree on the approaches and next steps for achieving the highest standards and targets on all these matters.

- Analyzed the impact of the Ukraine War (long-lasting effects across all economy sectors, impacting pool prices across all EU wholesale markets and the need to accelerate the green transition);
- Review of the legal opinion issued by King & Wood Mallesons regarding the status of Internal Audit in Ocean Winds;
- Considering the growing tendency and the services hired to the external auditor, it was agreed to submit for the Board of Directors consideration, the Regulation on the provision of Services by the External Auditor of EDPR (both audit and non-audit), under which, they are regulated, among others, the provision of their services, and the relationship with the External Auditor;
- Concluded that it was advisable to consider the External Auditor appointed for EDPR S.A. as a preferred option for the other companies of its perimeter (including the new companies that are being acquired), provided that the independency of the External Auditor is guaranteed, as well as the quality of the scopes offered and the fees quoted;
- Analyzed the European whistleblowing Directive and the national transpositions that establish the new regulatory framework for whistle-blower channels, and agreed to set up the structure an Integrated Whistleblowing Management System in EDPR, and the incorporation of a single “Speak-up” channel;
- Approved, for its submission to the Board of Directors approval, the update to the Compliance standard, the Integrity Policy and Criminal Compliance Policy in order to include the reference to the sanctioning procedure and the Speak up Channel;
- Reviewed the organization, targets and challenges regarding H&S matters for 2022.

B) Related Party Transactions Activities:

In 2022, the Audit, Control and Related Party Transactions Committee revised, approved and submitted to the Board of Directors the transactions between related parties submitted to its consideration in accordance with its competences and the applicable law.

Section E – I, topic 90 of Chapter 5 this Annual Report includes a description of the fundamental aspects of the agreements and contracts between related parties.

The Audit, Control and Related Party Transactions Committee found no constraints during its control and supervision activities.

The information regarding the meetings celebrated by this Committee and the attendance of its related members during the year 2022 is described at topic 35.

Appointments and Remunerations Committee

Composition

Pursuant to Article 29 of the Company’s Articles of Association and Article 9 the Appointments and Remunerations Committee Regulations, this committee shall consist of no less than three (3) and no more than six (6) members. At least one of its members must be independent and shall be its Chairperson.

In accordance with its personal law (Spanish law), with recommendation V.3.3. of the Corporate Governance Code of IPCG, and to the extent possible with recommendation V.2.1. of the Corporate Governance Code of IPCG (as considering that in Spain this committee shall be created by the Board and being entirely comprised by members of its Board of Directors), the Appointments and Remunerations Committee of EDPR is entirely integrated by Non-Executive and Independent Directors.

The Appointments and Remunerations Committee consists of three (3) non-executive and independent, as of December 31st 2022, are the following:

- António Gomes Mota, who is the Chairperson
- Rosa García García
- José Félix Morgado

Additionally, María González Rodríguez is the Secretary of the Appointments and Remunerations Committee since November 2nd, 2021.

None of the committee members are spouses or up to third degree relatives in direct line of the other members of the Board of Directors.

The committee members shall maintain their positions for as long as they are Company Directors. Nonetheless, the Board may decide to discharge members of the committee at any time and the members may resign said positions while remaining Company Directors.

Competences

The Appointments and Remunerations Committee is a permanent body belonging to the Board of Directors with an informative and consultative nature and its recommendations and reports are not binding.

The Appointments and Remunerations Committee has no executive functions. The main functions of this committee are to assist and report to the Board of Directors about appointments (including by co-option), re-elections, removals and remuneration of Directors and members of the Management Team. It also informs the Board of Directors on general remuneration and incentives for Board members and executive staff. These functions include the following:

- Defining the standards and principles governing the composition of the Board of Directors and the selection and appointment of its members;
- Proposing the appointment and re-election of Directors (including nominations by co-option) for the submission to the General Shareholders' Meeting by the Board of Directors;
- Proposing to the Board of Directors the candidates for the different Committees;
- Proposing to the Board, within the limits established in the Articles of Association, the remuneration system, distribution method, and amounts payable to the Directors;
- Making proposals to the Board of Directors on the conditions of the contracts signed with Directors;
- Informing and making proposals to the Board of Directors regarding the appointment and/or removal of executives and the conditions of their contracts and generally defining the hiring and remuneration policies of executive staff;
- Reviewing and reporting on incentive plans, pension plans, and compensation packages;
- Any other functions assigned in the Articles of Association or by the Board of Directors.

Likewise, until October 25th, 2022, this Committee assumed the functions related reflection on the Corporate Governance structure of the Company and on its efficiency, and of supervising the compliance with, and the correct application of, the corporate governance principles and standards in force. At that date, the Board resolved to create a specialized Committee focused on Environmental, Social, and Corporate Governance matters, and therefore, to assign to it these competences. Considering this new distribution of functions, it was also agreed to adjust the name of the Appointments, Remunerations and Corporate Governance Committee to eliminate references to the assumption of Corporate Governance matters (thereinafter Appointments and Remunerations Committee), and to also amend its Regulations accordingly.

In accordance with the personal law of EDPR, all the Board Members shall attend to the General Shareholder's Meeting, and as exposed in topic 15 of this Chapter 5 of the Annual Report, all the Delegated Committees are composed Directors. As such, the Chairperson of the Appointments and Remunerations Committee shall attend the Shareholder's Meetings, and in case its agenda includes any topic related to remuneration of the company's governing bodies, this Director will be most adequate to answer.

In 2022 it was held one Shareholders' Meeting on March 31st, and the Chairperson of the Committee, Antonio Gomes Mota, attended.

Functioning

In addition to the Articles of Association, the Appointments and Remunerations Committee is governed by its Regulations (that were last amended on October 25th, 2022), which are available at the Company's website (www.edpr.com).

The notices and supporting documents of the topics to be discussed in each meeting of this committee are sent to its members in advance to their proper discussion during the meeting. Additionally, this committee shall draft minutes of every meeting held and inform the Board of Directors of its decisions at the first Board held after each committee meeting.

Decisions shall be adopted by majority and the Chairperson shall have the deciding vote in the event of a tie.

2022 Activity

In 2022 the Appointments and Remunerations Committee held four (4) meetings, and the main activities performed were:

- Issued its opinion regarding the performance evaluation for year 2021 of the Board of Directors, the CEO, the CFO and the COO of Europe & LatAm, as well as of the Delegated Committees;
- Reviewed and approved the Corporate Governance Report related to 2021, to be submitted by the Board of Directors to the General Shareholders' Meeting;
- Reviewed and approved the Remunerations Report related to 2021, to be submitted by the Board of Directors to the General Shareholders' Meeting;
- Prepared a proposal of a new Remuneration Policy to be applied to the Board of Directors and its Delegated Committees for 2023–2025, to be submitted by the Board of Directors for approval by the General Shareholders' Meeting;

- Issued a report required under the Spanish Companies Act regarding the new Remuneration Policy proposed for the Board of Directors and its Delegated Committees for 2023–2025, to be published as additional supporting document to the General Shareholders' Meeting;
- Reviewed the General Shareholders' Meeting bylaws proposed for EDPR, to be submitted by the Board of Directors for approval by the General Shareholders' Meeting;
- Reviewed and approved the statutory amendment proposal to be submitted by the Board of Directors for approval by the General Shareholders' Meeting, in order to align its contents with the new Spanish Companies' Act, and with the updates incorporated during 2021 with regards to the Board of Directors and Committees competences included under its Regulations;
- Acknowledged the resignation to the position as Board Member presented by Joan Avalyn Dempsey (with effects January 13th, 2022), and analyzed the criteria drivers for the recruitment process to be launched to cover this position;
- Drafted the report of its activities performed during the year 2021;
- Issued a reflection on the Corporate Governance system adopted by EDPR during 2021;
- Analyzed of the most adequate candidates to cover the vacancy left by Joan Avalyn Dempsey, proposing to this end to the Board of Directors the appointment by co-option of Kay Mc Call as Independent Director;
- Defined the criteria to be considered in a Succession Plan for the Management Team, and agreed on a final proposal for the one applicable to the COOs (COO APac, COO Europe & LatAm, COO NA) and the CTO;
- Reviewed and approved the Development Program proposed for the Non-Executive Directors (including General Training Programs regarding Corporate Governance Matters and Board effectiveness; specific trainings regarding Committee's competences, and in-house programs to be defined);
- Reviewed the Remuneration of the Management Team, and agreed on a final proposal to be submitted to the Board of Directors regarding the new remuneration package for EDPR COOs (COO APAC, COO Europe & LatAm, COO NA) and CTO;
- Analyzed and approved the appraisal proposed of the KPIS established under the LTIP for year 2021 for the Management Team (notwithstanding that the final evaluation would be after completing 2023);
- Analyzed the convenience of incorporating a delegated committee specialized on Environmental, Social and Corporate Governance matters;
- Analyzed the most adequate names, competences, composition and remuneration for the members of an Environmental, Social and Corporate Governance Committee in EDPR, and agreed to submit to the Board of Directors a proposal to on these regards, as well as of the regulations applicable to the Committee;
- Considering that the Corporate Governance matters that were assigned to the Appointments, Remunerations and Corporate Governance Committee would be assigned to the new Environmental Social and Corporate Governance Committee, agreed to adjust the name and competences established under its regulations, in order to eliminate the reference to Corporate Governance functions;
- Agreed to submit to the Board of Directors a proposal regarding the new remuneration package for EDPR COOs (COO APAC, COO Europe & LatAm, COO NA) and CTO;
- Discussed and acknowledged the feedback received by the CEAM regarding the Corporate Governance report issued for 2021, and agreed with the action plan proposed;
- In order ensure the suitability of the roles in the Governing Bodies of the Company, their contribution to a better performance and to safeguard a balanced composition, reviewed the selection criteria applicable to members of the governing bodies of the Company considering: i) Individual attributes (education, competence, independence, integrity, availability and experience), and ii) diversity attributes (considered as a wide criteria, analyzed in accordance with the nature and complexity of the businesses developed, as well as under the social and environmental context from time to time, that among others, would include gender, age and culture);
- With the aim of complying with the best governance practices, agreed to propose to the Board of Directors to rule the performance of EDPR Executive Directors when they have executive functions in entities outside the group, by amending the Board of Directors Regulations to include the rules of this accumulation of functions;
- Analyzed the proposal of review of the IPCG Corporate Governance code launched in 2022;
- Approved to propose to the Board of Directors the update of the Management Services Agreement between EDP and EDPR through the execution of the 8th Amendment, in order to align its terms with the corresponding modifications in the remunerations that were approved at the time both for non-executive directors, as well as for the positions of CEO and CFO;
- Analyzed and approved the Succession Plan proposed for the Chairman of the Board of Directors and of the Chairman of the Audit, Control and Related Party Transactions Committee, for its submission to the Board of Directors;
- Analyzed the revised version of the Code of Ethics proposed for EDPR.

Environmental, Social and Corporate Governance Committee

Considering that Environmental, Social and Corporate Governance issues are gaining more relevance, that the new investor profiles demand more and better information on the sustainable performance of companies and that the new regulation trends that aim to get

commitment with the integration of these aspects, during 2022 it was analyzed the convenience of incorporating a delegated committee specialized on these matters.

It was on October 25th, when the Board of Directors agreed, in accordance with the proposal submitted the Appointments and Remunerations Committee, to incorporate in EDPR an Environmental, Social and Corporate Governance Committee, and also specifically approving its competences, composition, remuneration of its members and the regulations applicable to the Committee.

Composition

Pursuant to Article 9 the Environmental, Social, and Corporate Governance Committee Regulations, this committee shall consist of no less than three (3) and no more than six (6) members, and the majority of them shall be independent. The Chairperson of the Environmental, Social, and Governance Committee shall be appointed by the Board of Directors amongst the Committee's members and must necessarily be an independent director.

The Environmental, Social, and Corporate Governance Committee consists of five (5) non-executive and independent, that as of December 31st 2022, are the following:

- Antonio Gomes Mota, who is the Chairperson
- Allan J. Katz
- Cynthia Kay Mc Call
- Rosa María García García
- José Manuel Félix Morgado

Additionally, María González Rodríguez is the Secretary of the Environmental, Social, and Corporate Governance Committee since its incorporation, on October 25th, 2022.

The committee members shall maintain their positions for as long as they are Company Directors. Nonetheless, the Board may decide to discharge members of the committee at any time and the members may resign said positions while remaining Company Directors.

Competences

The Environmental, Social, and Governance Committee is a specialized and delegated

committee of a merely informative and consultative nature whose recommendations are not binding and that performs no executive functions. This Committee assists and reports to the Board of Directors in the alignment with the market trends and the company needs regarding Environmental, Social, and Governance matters, with the aim of also providing the investors with more transparent and exhaustive information regarding matters related to Corporate Governance and Sustainability. These functions include the following:

- Oversee the Company's key environmental, social and corporate governance key performance indicators included in the Business Plan and monitor their achievement.
- Propose to the Board of Directors EDPR's sustainability and environmental, social, and corporate governance policies and their update.
- Promote, steer, and oversee the Company's objectives, action plans and practices in health, safety and occupational risk prevention.
- Review and present to the Board of Directors the Annual Report (EINF). The Committee shall also monitor the Company's relationship and reporting to investors, indexes and rating agencies on sustainability issues.
- Monitor and conduct a regular review of the main environmental, social, and corporate governance trends and regulatory developments relevant to the Company's activity.
- Analyse the integration of environmental, social, and corporate governance risks and opportunities into the Company's procedures and its Risk Management System.
- Update and inform the Board of Directors on the stakeholder relations and dialogue model, in order to understand the needs and expectations of all EDPR's stakeholders (employees, clients, suppliers, subcontractors, and others).
- Oversee and assess the Company's corporate image and its reputation with the various stakeholders, namely in terms of the market in general and consumers, investors and supervisory authorities, public and published opinion, monitoring the activity of the Company's competent services, taking into consideration the implemented strategies, policies, process and procedures implemented, privileging the spirit of service to the Community.
- Oversee and assess the suitability of the corporate governance model implemented by the Company and their compliance with internationally accepted models of corporate governance, forwarding any appropriate recommendations in this area to the Board of Directors.
- Supervise compliance with, and the correct application of, the corporate governance principles and standards in force, promoting and requesting the exchange of information necessary for this purpose.
- Any other functions assigned to it in the Articles of Association or by the Board of Directors.

Functioning

In addition to the Articles of Association, the Environmental, Social and Corporate Governance Committee is governed by its Regulations (approved on October 25th, 2022), which are available at the Company's website (www.edpr.com).

The committee shall meet whenever its Chairperson deems fit. The notices and supporting documents of the topics to be discussed in each meeting of this committee shall be sent to its members in advance to their proper discussion during the meeting. Additionally, this committee shall draft minutes of every meeting held and inform the Board of Directors of its decisions at the first Board held after each committee meeting.

Decisions shall be adopted by majority and the Chairperson shall have the casting vote in the event of a tie.

2022 Activity

As the Committee was incorporated by the end of year 2022, this Committee has not met yet, but the first meeting is foreseen for February 2023.

III. Supervision

a) Supervision

30. Supervisory Board – model adopted

EDPR's governance model, as long as it is compatible with its personal law (Spanish law), corresponds to the so –called “Anglo– Saxon” model set forth in the Portuguese Commercial Companies Code, in which the management body is a Board of Directors, and the supervision and control duties are of the responsibility of an Audit, Control and Related Party Transactions Committee.

32. Independence of the Members of the Audit, Control and Related Party Transactions Committee

Information concerning the independence of the members of the Audit, Control and Transactions Party Committee is available on the chart of topic 18 of this Chapter 5 of the Annual Report. As mentioned on the first paragraph of topic 18, the independence of the

members of the Board and of its committees is evaluated according to the Company's personal law, the Spanish law.

33. Professional qualifications and biographies of the Members of the Audit, Control and Related Party Transactions Committee

Professional qualifications of each member of the Audit, Control and Related Party Transactions Committee and other important curricular information, are available in the Annex I of this Chapter 5 of the Annual Report.

b) Functioning

34. Audit, Control and Related Party Transactions Committee Regulations

The Audit, Control and Related Party Transactions Committee regulations are available at the Company's website (www.edpr.com) and at the Company's Headquarters at Plaza de la Gesta, 2, Oviedo, Spain.

35. Number of meetings held by the Audit, Control and Related Party Transactions Committee

The Audit, Control and Related Party Transactions Committee periodically meets representatives of the internal specialized departments involved in the areas under committee's competences in order to discuss the information periodically reported about, among others, work plans and resources of Internal Audit, Compliance and SCIRF, Company accounts, detection claims regarding financial irregularities, global risk management and audit and non-audit services provided by the External Auditor (including the appraisal about its independence). This regular interaction, in particular with regards to the periodical discussion of the development and status of the alignment of the level of risk and the accomplishment of objectives set by the Board of Directors, provides the committee with the necessary information for the development of its functions and in particular, for the assessments issued under the appraisal report over the functions of Internal Audit, and the Report regarding Risk Management and appraisal of the Internal Control System , that this committee issues for every fiscal year.

During 2022, the Audit, Control and Related Party Transactions Committee held a total of eleven (11) meetings, and as referred in paragraph above, in order to better perform its supervisory functions over the activities reported by the areas within its competences, the

committee invited the responsible teams of the related areas to several of these meetings to provide the updates of the status of their activity and accomplishment of targets. As such, the participation of these departments at these meetings in 2022 was as follows: Internal Audit participated in nine (8), Compliance and Internal Control in four (4), Global Risk in five (5), Planning and Control in four (4); Finance in three (3) and Administration, Consolidation and Tax in six (6). Likewise, the committee invited the External Auditors to six (6) of these meetings.

The following table reflect the attendance of the members of the Audit, Control and Related Party Transactions Committee to its meetings held during 2022:

MEMBER	POSITION	ATTENDANCE
Acacio Piloto	Chairperson	100%
Rosa García García	Vocal	100%
José Manuel Félix Morgado	Vocal	100%

Likewise, on January 28th, 2022, it was arranged a training for the Committee regarding the investment process in EDPR, in which among others, there were exposed: the framework processes applicable to investment and divestments, the internal approval requirements and thresholds, and the next steps to be followed after the acquisition of a project.

36. Availability of the Members of the Audit, Control and Related Party Transactions Committee

The members of the Audit, Control and Related Party Transactions Committee are fully available for the performance of their duties having no constraints for the execution of this function simultaneously with positions in other companies. The positions held simultaneously in other companies inside and outside the Group and other relevant activities undertaken by members of this committee throughout the financial year are listed in Annex I of this Chapter 5 of the Annual Report.

c) Powers and duties

37. Procedures for hiring additional services to the External Auditor

On July 2022, EDPR approved an internal regulation to rule the provision of services and relationship with the External Auditor, with regards to both audit and non-audit services to be

hired, and the reporting and approval procedure to be applied. These regulations also establish the independence criteria to be considered.

In accordance to the rules included under this regulation, and in line with recommendation VII.2.1. of the IPCG Corporate Governance Code, in EDPR there is a policy of pre-approval by the Audit, Control and Related Party Transactions Committee of the provision of non-audit services to be provided by the External Auditor and any related entity. This policy was strictly followed during 2022. This competence is also established under Article 8. A) b) of the Committee Regulations.

The analysis of the adequacy of the provision of non-audit services by the External Auditor and entities in a holding relationship (with or incorporated in the same network as the External Auditor) is performed considering the following aspects: (i) such services having no effect on the independence of the External Auditor and any safeguards used; and (ii) the position of the External Auditor in the provision of such services – notably the External Auditor's experience and knowledge of the Company.

Furthermore, although hiring services other than auditing services to the External Auditor is admissible, it is envisaged as an exception. In 2022 such services reached only around 5.33% of the total amount of services provided to the Company.

38. Other duties of the Audit, Control Related Party Transactions Committee

Apart from the competences expressly delegated on the Audit, Control and Related Party Transactions Committee according to Article 8 of its Regulations, and in order to safeguard the independence of the External Auditor, the following additional competences of this committee were exercised during the 2022 financial year and should be highlighted:

- Pre-approval of any services to be hired from the External Auditor and perform its direct and exclusive supervision;
- Assessment of the qualifications, independence, and performance of the External Auditors, and obtaining, yearly and directly from the External Auditors, written information on all relations existing between the Company and the Auditors or associated persons, including all services rendered and all services in progress. In order to evaluate independence, the Audit Committee, obtained the information regarding External Auditors' independence in light of the Spanish Law no. 22/2015 of July 20th, 2015 ("Ley de Auditoría de Cuentas");
- Review of the transparency report, signed by the Auditor and disclosed at its website. This report covers the matters provided for under Law no. 22/2015 of July 20th, 2015 ("Ley de

Auditoría de Cuentas”); including those regarding the quality control internal system of the audit firm and the quality control procedures carried out by the competent authorities;

- Review with the External Auditors their scope, planning, and resources to be used in their provision of services;
- Following the best Corporate Governance practice, the Committee held a specific and complementary meeting with the External Auditors twice a year to discuss any remark in the process of the elaboration of the Company half year and year end accounts;
- Considering the growing tendency and the services hired to the external auditor, it was agreed to submit for the Board of Directors consideration, the Regulation on the provision of Services by the External Auditor of EDPR (both audit and non- audit), under which, there are regulated, among others, the provision of their services, and the relationship with the external Auditor.

IV-V. STATUTORY AND EXTERNAL AUDITORS

39-41.

According to the Spanish law, the External Auditor (“*Auditor de Cuentas*”) is appointed by the General Shareholders’ Meeting and corresponds to the statutory auditor body (“*Revisor Oficial de Contas*”) described on the Portuguese Law.

The information about the External Auditor is available in topics 42 to 47 of this Chapter 5 of the Annual Report.

42. External Auditor identification

The main criteria considered in the selection of the most suitable and competitive firm to be appointed as External Auditor of EDPR are the following:

- Recognized technical and professional track record as External Auditor;
- Consolidated *Know-How* about the business developed by the whole Group;
- Tailored and highly prepared working team;
- Competitive contractual conditions and working methodology (including but without limitation, the total estimation of hours required for the development of the services- both

as a total for the complete provision of services, and per each professional category of the proposed team);

- Competitive fee proposal, including the final cap and a breakdown referring the price average per hour, and the remuneration per hour for each professional category of the proposed team.

As a result of a competitive process launched in 2017, during which the above criteria were exhaustively analyzed, PricewaterhouseCoopers Auditores, S.L. was appointed as EDPR SA External Auditor by the Shareholder’s Meeting held on April 3rd, 2018. PricewaterhouseCoopers Auditores, S.L., is a Spanish Company registered at the Spanish Official Register of Auditors under number S0242 with Tax Identification Number B-79031290. The renewal of PricewaterhouseCoopers Auditores, S.L. as External Auditor of EDPR SA for years 2021, 2022 and 2023 was approved by EDPR’s Shareholders Meeting on April 12th, 2021, and the audit partner in charge of EDPR is Iñaki Goiriena Basualdu.

43. Number of years of the External Auditor

PricewaterhouseCoopers Auditores, S.L. is in charge of the audit of EDPR S.A. accounts for the years 2021, 2022 and 2023, being 2018 the first year performing these duties.

44. Rotation Policy

Until year end of 2022, the personal Law of EDPR – the Spanish Law- and EDPR External Auditor Regulations, established the maximum term for an audit firm as the External Auditor of a listed company in a 10-year term. However, this reference was updated under the Spanish Law with effects January 2023, in order to establish that the maximum term will be a total of 20 years, provided that a public tender is launched after completing the tenth fiscal year.

Following the proposal of the Audit, Control and Related Party Transactions Committee presented to the Board of Directors to its submission to the General Shareholders’ Meeting, on its meeting held on April 3rd 2018, it was approved to appoint PricewaterhouseCoopers Auditores, S.L. as EDPR’s External Auditor for the years 2018, 2019 and 2020. The renewal of PricewaterhouseCoopers Auditores, S.L. as External Auditor of EDPR SA for years 2021, 2022 and 2023 was approved by EDPR’s Shareholders Meeting on April 12th, 2021.

Likewise, the applicable regulation requires that in case of listed companies, every five (5) years since the initial contract, the person designated by the External Auditor as its signatory of the audit report shall also rotate. For these purposes, it is hereby stated that 2022 is the fifth year of Iñaki Goiriena Basualdu, current partner signing the audit report of the Group, as auditor of EDPR Group.

45. External Auditor evaluation

The Audit, Control and Related Party Transactions Committee is responsible for the monitorization and annual evaluation of the services provided by the External Auditor according to the competences granted by its Regulations and in line with the rules established under the Regulations for the provision of services by the Statutory Auditor. In order to perform this assessment, this committee periodically includes in the agenda of its meetings a topic regarding the review of the services provided by the External Auditor (both audit and *non-audit*) and the fees already incurred and those estimated until year end. Likewise, and as exposed in topic 35 of this Chapter 5 of the Annual Report, the External Auditor attends and participates in some of the meetings held by this committee, mainly in order to analyze the results of their audit reports. As such, the Audit, Control and Related Party Transactions Committee acts as the company speaker with the External Auditor, with whom establishes a permanent contact throughout the year to assure the proper conditions for the provision of both the statutory audit services and non-audit services, and being also the body in charge of monitoring its independence along the year. Likewise, the External Auditor shall sign an annual statement declaring its independence.

During 2022, according to the Audit, Control and Related Party Transactions Committee's competences and in line with Recommendation VII.2.2, this committee was the first and direct recipient and the corporate body in charge of the permanent contact with the External Auditor on matters that may pose a risk to their independence as well as any other matters related to the auditing of accounts.

Additionally, in compliance with the auditing standards in effect, it also receives and maintains the record of information about other matters as provided in the applicable auditing and accounting legislation. The External Auditor, within the scope of its duties, verified the implementation of the remuneration policies and systems of the corporate bodies as well as the efficiency and effectiveness of the internal control mechanisms and report any shortcomings to the Audit, Control and Related Party Transactions Committee of the Company.

46. Non-Audit Services carried out by the External Auditor

As previously referred, on July, 2022, it was approved the regulation on the provision of services by the Statutory Auditor or Statutory Audit Firm, which defines and promotes criteria and methodologies to safeguard the independence of the audit and non-audit services.

In accordance with such regulation, the Audit, Control and Related Party Transactions Committee closely follows the requests of non-audit services, each of which necessarily require the preapproval of this committee before its provision as per exposed in topic 29 of this Chapter 5 of the Annual Report and Article 8.A),b) of its Regulations.

The identification of such non-audit services that will eventually be provided by the External Auditors is performed under the rules issued by the European Union on this matter, in particular under Regulation 537/2014 and the Spanish Auditing Law nº 22/2015, of 20th July, as well as when applicable, in line with the particularities of the local regulations where the service is to be provided.

During 2022 the non-audit services provided by the External Auditor of EDP Renováveis S.A (PricewaterhouseCoopers Auditores, S.L) consisted mostly on i) limited review as of March 31, 2022, June 30th, 2022 and September 30th, 2022 of the EDPR Interim Consolidated information; ii) review of the internal control system on financial reporting for the EDPR Group; iii) review of the non-financial information related to sustainability included in the EDPR Group's annual report; and iv) access to a repository of international accounting standards as well as to the PwC Accounting Manual in digital version. Other non-audit services provided by the External Auditor or its network to EDPR's subsidiaries mainly refer to i) agreed-upon procedures related to the review of covenants in the context of bank financing agreements; ii) IFRS adoption for some EDPR subsidiaries, iii) procedures for reviewing compliance with financing capacity in accordance with the criteria defined by the European Commission, within the framework of European Regulation 2021/2041 and iv) services in relation to compliance with the merger project of certain group companies.

PricewaterhouseCoopers Auditores, was engaged to provide the above-mentioned services due to its in-depth knowledge of the Group's activities and processes. These engagements did not risk their independence as External Auditors and were pre-approved by the Audit, Control and Related Party Transactions Committee prior to rendering the services.

47. External Auditor remuneration in 2022 for EDP Renováveis S.A. and subsidiaries

SERVICE	EUROPE	NORTH AMERICA	LATAM	APAC	TOTAL	%
Audit and statutory audit of accounts	1,603,000€	1,795,000€	368,000€	994,000€	4,760,000€	94.67%
Other non-audit services	218,000€	12,000€	38,000€	-	268,000€	5.33%
Total	1,821,000€	1,807,000€	406,000€	994,000€	5,028,000€	100%

The amount of other non-audit services in Europe includes among others, services that refer to the entire Group such as the review of the internal control system on financial reporting and review of the non-financial information related to sustainability included in EDPR Annual Report, which are invoiced to a European company. This amount also includes the limited review as of June 30th, 2022 of the EDPR Consolidated Financial Statements and other reviews for Group consolidation purposes which are considered non-audit services according to the respective local regulation.

Total amount for Europe includes 857,000 Euros of services provided by PricewaterhouseCoopers Auditores S.L. from which 676,000 Euros refer to audit services and 181,000 Euros refer to non-audit services.

C. Internal organisation

I. Articles of Association

48. Amendments to the articles of association

The amendments of the Articles of Association of the Company are of the responsibility of the General Shareholders' Meeting. According to Article 17 of the Company's Articles of Association ("Constitution of the General Shareholders' Meeting, Adoption of resolutions"), and article 9 of the General Shareholders' Meeting Regulations ("Competences"). In accordance to the applicable law, and the internal regulations, to validly approve any

amendment to the Articles of Association, the Ordinary or Extraordinary Shareholders' Meeting will need:

- On first call, that the Shareholders either present or represented by proxy, represent at least fifty percent (50%) of the subscribed voting capital.
- On second call, that the Shareholders either present or represented by proxy, represent at least twenty-five percent (25%) of the subscribed voting capital.

In the event that the shareholders attending represent more than fifty percent (50%) of the subscribed voting capital, the resolutions referred to in the present paragraph will be validly adopted when reached absolute majority. If the shareholders attending represent between twenty-five percent (25%) and fifty percent (50%) – but without reaching it – the favorable vote of two-thirds (2/3) of the present or represented capital in the General Shareholders' Meeting will be required in order to validly approve these resolutions.

In 2022 there was approved one amendment proposal to EDPR Bylaws at the General Shareholders' Meeting held on March 31st, in accordance to which there were adjusted article 1, article 12, article 13, article 14, article 15, article 22, article 23, article 26, article 27, article 28, article 29 and article 31 of corporate articles of association, mainly in order to:

- Adapt them to the new developments deriving from the approval of the amendment of the Spanish Companies Act, approved by Royal Legislative Decree related to the promotion of the long-term involvement of shareholders in listed companies (Law 5/2021). For these purposes, it was adjusted the regulation established for the convening procedure and the competences of the General Meeting of shareholders, the mechanisms at the disposal of the shareholders for the exercising of the rights to information, attendance, representation and vote during the course thereof and the possibility of holding Meeting solely on an electronic basis; and the regulation of the Board of Directors and its Committees;
- Update the duties assigned to the Committees which report to the Board of Directors with a view to assigning them those duties required based on the best market practices and normative compliance, recommendations of good governance and reflecting those duties that each Committee was actually performing;
- Adapt the directors' remuneration system foreseen in the Articles of Association to the new Directors' Remuneration Policy of the Company for the period 2023–2025.

II. Reporting of irregularities

49. Irregularities communication channels

Speak up channel

EDPR has always carried out its activity by consistently implementing measures to ensure the good governance and the transparency of its companies, including the prevention of incorrect practices, giving voice to those who consider that certain conducts do not comply with ethical principles, legal provisions or internal regulations.

In this sense, EDPR believes that speaking openly about the concerns we have that relate to the way we act in the workplace is crucial for creating a good environment and increasing the psychological security of both individuals and teams.

With this goal and taking into account the need to adapt the whistleblowing channels to the requirements of the Directive (EU) 2019/1937 on the protection of persons who report violations of Union law, in 2022, EDPR has reviewed and merged all its whistleblowing channels and has launched the corporate channel “Speak up”.

The “Speak Up” channel is a global channel, that welcomes the reporting of alleged violations, either of the Code of Ethics, or of any legal issues – among which are those provided for in the Directive (EU) 2019/1937– as well as internal policies and regulations.

Additionally, in geographies where required by local laws, EDPR has specific Speak Up channels.

These channels are published in the official website available to all the employees and also to any interested party (<https://www.edpr.com/en/speak-up>).

An essential aspect of the reporting process is the protection of the whistle-blowers, who can also make denounces in an anonymous way. This commitment is predicated on full respect for the principle that anyone who uses the reporting methods in good faith and with justification will be protected from censure or retaliation.

Processes have been designed and implemented to ensure that the complaints are handled and managed with total security, independence, integrity and privacy. All information exchanged is kept confidential and secured against unauthorised access, so that personal data protection is assured.

In 2022, there were nine (9) claims submitted through the Speak up channel or the previous existing channels: 4 of them were closed and the others 5 are under analysis.

Code of ethics

EDPR has a strong commitment in relation to the dissemination and promotion of compliance with ethic guidelines and principles like transparency, honesty, integrity, non-discrimination, equal opportunity, and sustainability, which is encouraged to all employees.

This commitment is faithfully reflected in the Code of Ethics which is reviewed and updated every two years to guarantee compliance with current legislation and the integration of the challenges that EDPR has and may can come across.

The Code of Ethics has been reviewed and approved in October 2022 by the Ethics Committee and the Board of Directors of EDPR.

This review aims to comply with the Directive (EU) 2019/1937 on the protection of persons who report violations of Union law incorporation of the speak up channel and also to achieve a greater alignment with the purpose and strategy of EDP Group: “Changing Now Tomorrow”.

The Code of Ethics applies, regardless of functions, geographical location or functional reporting to all employees of all EDPR companies. The employee’s commitments set out in the Code are also applicable to proxies, as well as to agents and suppliers who are in any way empowered to act on behalf of EDPR.

Other suppliers are explicitly required to respect this Code, in accordance with the obligations arising from qualification procedures or signed contracts.

The Code of Ethics is an “action guide” reflecting the way EDPR believes one should work, therefore its enforcement is inevitably mandatory; and employees who do not comply with this Code should be subject to disciplinary actions under the terms of the applicable regulations. The Code is a privileged tool that helps to “do what we have to do well”.

The Code of Ethics is published on the corporate website (<https://www.edpr.com/en/edpr/our-company/ethics-compliance>) and there is also a digital version available in the intranet. Annually all employees, including new hires, declare that they have received, read and understood the EDPR Code of Ethics, and they agree to comply with its provisions.

Likewise, this Code has been, in 2022, widely circulated to the employees of the Group through internal communications every month with the most relevant principles of the Code. Additionally, new hires receive a specific training on introduction to the Code of Ethics called *"Let's live our Code of Ethics"*

In order to support and achieve the Ethics Code and Ethics commitments and initiatives, and with the aim of minimizing the risk of unethical practices, generating transparency and trust in relationships, EDPR has also approved and implemented the following initiatives:

New Ethics Committee: in 2021, EDPR decided to review organization and functioning of its Ethics Commission, namely to:

- Ensure independence from executive management;
- Decrease the number of members for more efficient operation;
- Allow the analysis and decision on ethical complaints in a more restricted context;
- Allow more participatory debates on structuring Ethics themes, as well as on the annual Ethics Plan and its regular follow-up.

As a consequence, a new Ethics Committee was created with the following main functions:

- To establish guidelines for complying with the Code of Ethics;
- To propose to the Board of Directors multi-annual Ethics Programs and the relevant annual Plans prepared by the Compliance Area and the Ethics Ombudsperson;
- To appraise the quarterly Reports on the implementation of the Group's annual ethics plans prepared by the Compliance area and the Ethics Ombudsperson or other elements on ethical performance;
- To review the cases of infraction of the Code of Ethics instructed by the Ethics Ombudsperson with the support of the teams that manage complaints at EDPR and to issue a binding opinion thereon;
- To issue recommendations, when requested by any of the management bodies of the companies that make the EDPR Group, on practices or codes of conduct in the fields of ethics or deontology, developed within the framework of specific, legal, or regulatory needs;
- To continuously ensure that the Code of Ethics and the procedures deriving from it are appropriate to the needs of the EDPR Group and to promote reviews of that document, at least every two years, duly supported by a review report to be sent to the Board of Directors for approval.

In this sense, the new Ethics Committee is composed by:

- i. The Chairperson of the Appointments and Remunerations Committee, who shall chair the Committee;
- ii. The Chairperson of the Audit, Control, and Related Party Transactions Committee;
- iii. The Ethics Ombudsperson;
- iv. The Compliance Officer;
- v. The Human Resources Director;
- vi. The General Counsel & Compliance of EDPR North America LLC.;
- vii. The Secretary of the Board of Directors, who shall also perform the duties of the Secretary of the Ethics Committee meetings.

Ethics Ombudsperson: is an external person from the Company that receives complaints and doubts submitted through the Speak Up Channel and investigates and documents the procedure for each of them, with guaranteed confidentiality in relation to the identity of the claimant. The appointment for this position is made by the Ethics Committee and approved by the Board of Directors. Its main functions are therefore as follows:

- To be an independent, impartial listener, respecting confidentiality, and anonymity, at the disposal of those who seek him/her to clarify any situations on allegedly ethical grounds, bearing in mind the framework and the provisions of the EDPR Code of Ethics;
- To receive communications of an ethical nature and, where appropriate, to instruct, document and submit the respective ethical infraction processes to the Ethics Committee;
- To monitor each of the infraction proceedings, until their adjournment, establishing, whenever necessary and appropriate, the liaison with the complainant;
- To regularly promote, jointly with the Compliance area, initiatives with the areas of the Group that are the subject of complaints, to improve procedures and practices that will enable future complaints to be avoided and especially, to promote behavior that is more in line with the EDPR Code of Ethics;
- Prepare with the Compliance Area initiatives to be included in the Compliance and Ethics Programmes and Annual Plans;
- To advise the Ethics Committee regarding strengthening the consistency of the Group's Ethic Policy;
- To annually report on the activity with the scope of their assigned function;
- To annually review and update the procedure for managing all contacts addressed to them.

Since January 2019, the Ombudsperson of EDPR is Maria Manuela Casimiro da Silva.

Other activities: in 2022, with the goal of reinforcing the ethics culture, EDPR has launched different communication campaigns to all the employees as the publication of the Ethics & Compliance Comic: *“Do the right thing”* and the celebration of the Global Ethics Day. Every month a comic story has been published on intranet and internal platforms where an ethical dilemma appeared and the employees could see the practical application of the principles of the Code of Ethics to resolve the dilemma. Regarding the Global Ethics Day (October 19th), different initiatives were performed as publication of news on the intranet, videos with messages from the Ethics Ombudsperson and the Compliance officer, different posts with the theme: *“Do you think you know everything about Ethics in our company?”*. Additionally, a talk about mental health was took place with a known speaker specialist on the subject.

III. Internal Control and Risk Management

50. Internal Audit

EDPR's Internal Audit Department (“IAD”) is composed by eleven (11) members.

Internal auditing is an independent, objective assurance and consulting activity designed to add value and improve an organization's operations. It helps an organization accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control and governance processes.

The Internal Audit department has the mission of enhance and protect organizational value by providing risk-based and objective assurance, advice and insight, covering the following areas of activity:

- Evaluate and issue recommendations to improve the Company's governance processes;
- Assist the organization to improve risk management processes and maintaining effective controls by evaluating their effectiveness and efficiency and by promoting continuous improvements covering the governance, operations and information systems of the organization, regarding to:
 - i) Achievement of the organization's strategic objectives;
 - ii) Reliability and integrity of financial, non-financial and operational information;
 - iii) Effectiveness and efficiency of operations and programs;
 - iv) Safeguarding assets;
 - v) Compliance with laws, regulations, policies, procedures and contracts.

The Internal Audit services can be divided into two categories: assurance services and consulting.

- Assurance services consist in objective analyses of evidence to provide an independent assessment of the organization's governance, risk management, and control.
- The consulting services performed at the specific request of the Company Governing Bodies or of any of its Officers. They consist of advisory activities and related services designed to add value and improve the organization's governance, risk management, and control processes without the internal auditor assuming any management responsibility.

The fulfillment of these objectives aims to reduce the risks in pursuing the activity and increase the creation of value for the Group. Therefore, approaches based on a proactive view of internal control measures geared to the relevant risks must be taken, making them a relevant support tool for management.

The IAD is not an executive body of EDPR, so it has no power in making management decisions in the Group's activities, nor any hierarchical or functional link with the audited units, thus maintaining a relationship of total independence and objectivity in relation to them. This positioning makes it possible to achieve the following objectives:

- Ensure the independence of the Internal Audit activity and fulfils its responsibilities;
- Ensure objectivity in obtaining the conclusions of work carried out and the resulting recommendations, as well improvement actions to be implemented.

As such, the Internal Audit, in development of its function, should be an instrument to support management with proactive view of internal control systems. In this sense, the collaboration of the entire Organization is essential to achieve the objective set.

The functions of the Internal Audit Department of EDPR were evaluated by the “Instituto de Auditores Internos” for the first time in 2020, obtaining the highest qualification.

51. Organisational structure of Internal Audit

The Internal Audit function in the EDPR Group is a corporate function, carried out by the Internal Audit Department (IAD), which has administrative dependence to the CEO of EDPR and functional dependence to the Audit, Control and Related Parties Committee which supervise the activities and to which Internal Audit activities are reported.

Administrative Dependence

In terms of the IAD's administrative dependence to the CEO of EDPR, the CEO of EDPR shall:

- Create adequate information flows that allow IAD to keep up to date on the company's activities, plans and initiatives;
- Support the internal audit function, positioning the IAD at an appropriate level within the EDPR's organization;
- Facilitate direct and open communication to the EDPR Group's Management and Administration bodies;
- Provide the appropriate technical, human, financial and information-gathering means that enable the IAD to fulfill its functions, in accordance with the approved Audit Plan;
- Request assurance and consultancy projects from IAD that it deems necessary considering the Organization's objectives and risks;
- Approve, annually, in coordination with the Audit, Control and Related Party Transactions Committee, the IAD Audit Plan, based on the EDPR's risk matrix and the Basic Standard for Internal Audit;
- Approve, whenever applicable, in coordination with the Audit, Control and Related Party Transactions Committee, the remuneration of the IAD Director and the process of his/her appointment, evaluation and removal.

Functional Dependence

In terms of the IAD's functional dependence to the Audit, Control and Related Party Transactions Committee, the Audit, Control and Related Parties Committee should:

- Approve, annually, in coordination with the CEO of EDPR, the IAD Audit Plan, based on the EDPR's risk matrix and the Basic Standard for Internal Audit. In this context, also approve the human and financial resources to be made available by EDPR to the IAD;
- Approve, in coordination with the CEO of EDPR, the remuneration of the IAD Director and the process for his/her appointment, evaluation and removal;
- Receive communications and individual reports and conclusions, issued by IAD, on the activity developed by IAD;
- Assess the activity and performance of the IAD and the adequacy of working conditions, namely in terms of human resources and technical and financial means, checking if there are limitations or interferences within the scope of the Internal Audit function or its budget that may make it impossible to IAD to fulfill its responsibilities;
- Overseeing the effectiveness of the internal audit systems and, if necessary, proposing improvement measures.

The functions of the Audit, Control and Related Party Transactions Committee regarding to Internal Audit are defined in its Internal Regulation.

The articulation between EDPR Internal Audit and EDP Internal Audit is carried out through the Functional Reporting of the EDPR Internal Audit Director to the EDP Internal Audit Corporate Director, in which the associated management function includes the promotion and harmonization of work policies and methodologies, the management of action plans and reporting activities to EDP Internal Audit Director.

52. Risk Management

EDPR's Enterprise Risk Management Process is an integrated and transversal management model that ensures the minimization of the effects of risk on EDPR's capital and earnings, as well as the implementation of best practices of Corporate Governance and transparency. The process aligns EDPR's risk exposure with the company's desired risk profile.

The Enterprise Risk Management Framework was approved in 2016, in accordance with the guidelines agreed at its Board of Directors level. Based on this risk framework, the Company develops a Risk Management System through individual risk policies and procedures for most relevant risks, where it is defined the methodology to calculate probability of occurrence and impacts, as well as mitigation measures and thresholds. In addition, these risk policies and procedures establish the process for control, periodic evaluation and eventual adjustments. The approvals necessary to proceed with this system are submitted to the Management Team, which will inform the Board of Directors of the progress. Likewise, the Risk Management System is closely followed and supervised by the Audit, Control and Related Party Transactions Committee, an independent supervisory body composed of non-executive members that reports to the Board of Directors, in charge, among others, of the monitorization of the compliance and progresses of the Risk Management Plan and possible improvements to the measures and controls for mitigating potential risks identified within EDPR.

Market, counterparty, operational, business and strategic risks are identified and evaluated and, following the result of the assessment, Risk Policies are defined and implemented across the Company. These policies are aimed to mitigate risks without compromising potential opportunities, thus, optimizing return versus risk exposure.

In 2022, EDPR analyzed the impact of the current inflationary scenario on costs and revenues. On costs, it was considered the exposure to inflation of operating expenses, capital expenses and interest payments, while on revenues, the exposure of inflation-indexed PPAs and

merchant revenues. Different measures were put in place to balance inflation exposure, namely the increase in the duration of the corporate debt with EDP.

Moreover, a detailed analysis on the effects of the conflict between Ukraine and Russia was performed to determine which are the main risks to which EDPR is exposed and to define a contingency plan to reduce potential impacts. As a follow-up of this analysis, EDPR took some business continuity measures in bordering countries with Ukraine.

Also during 2022, EDPR reassessed the Operational Risk of the company, executing a bottom-up analysis across all departments, as stated in EDPR's Operational Risk Policy. Following the growth of the installed capacity at EDPR in recent years, together with the planned growth within the current Business Plan, it was agreed to adjust the Operational Risk threshold accordingly in EDPR's Operational Risk Policy and Enterprise Risk Management framework.

Finally, EDPR performed a deep-dive analysis on current and expected future Counterparty exposure to capital equipment suppliers, within the context of the main challenges faced by the industry, such as supply chain bottlenecks, inflationary pressures and increase in commodity prices, with individual counterparty risk limits adjusted accordingly. Additionally, EDPR also proposed to adjust its Portfolio risk limits to account for its Distributed Generation activity in Asia-Pacific, following EDPR's acquisition of a majority stake in Sunseap during 2022.

53. Risk Map

Risk Management at EDPR is focused on covering all risks of the company. In order to have a holistic view of risks, they are grouped in Risk Categories, which are Market, Counterparty, Operational, Business and Strategic. The definition of Risk Categories at EDPR is as follows:

- **Market Risk** – It refers to the risk to EDPR resulting from movements in market prices. Due to the relationship between wind production and energy price, production risk is considered within market risk. In particular, market risk consists of changes in energy prices, production, interest rates, foreign exchange rates, inflation and commodity prices (other than energy);
- **Counterparty Risk (credit and operational)** – Risk that a counterparty to a transaction could default before final settlement of the transaction's cash flows. A direct economic loss would occur if transactions with the counterparty had positive economic value at the time of default. Even in the case of not defaulting, it may not comply with its contract

obligations (timing, quality, etc.), implying additional higher costs due to its replacement or to delays in fulfilling the contract;

- **Operational Risk (other than counterparty)** – Defined as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events (such as an increase in equipment default rates, increasing O&M, or natural disasters), including the effect of a loss created by not being able to ensure business continuity;
- **Business Risk** – Potential loss in the company's earnings due to adverse changes in business margins. Such losses can result above all from a serious increase in equipment prices or changes in the regulatory environment. Changes in energy prices and production are considered market risks;
- **Strategic Risk** – It refers to risks coming from macroeconomic, political, social or environmental situation in countries where EDPR is present, as well as those coming from a change in competitive landscape, from technology disruptions, from changes in energy markets or from governance decisions (investment decisions criteria, Corporate Governance and Reputational issues).

Within each Risk Category, risks are classified in Risk Groups.

1. Market Risk

1. i) Energy price risk

EDPR faces limited energy price risk as it pursues a strategy of being present in countries or regions with long -term visibility on revenues. In most countries where EDPR is present, prices are determined through regulated framework mechanisms. In those countries with no regulated tariffs, power purchase agreements are negotiated with different offtakers to eliminate electricity and Green Certificate or Renewable Energy Credit (REC) price risks.

Despite EDPR's strategy of eliminating market price risk, EDPR still has some plants with merchant exposure.

In Europe, EDPR operates in countries where the selling price is defined by a feed-in-tariff (Portugal and France) or a contract for differences remuneration scheme (Italy, UK or Greece). EDPR also operates in markets where, on top of the electricity price, it receives either a pre-defined regulated premium or a green certificate, whose price is achieved on a regulated market (Spain, Belgium, Poland or Romania).

In countries with a predefined regulated premium or a green certificate scheme, EDPR is exposed to electricity price fluctuations.

Considering current Power Purchase Agreements (PPAs) in place, EDPR is exposed to electricity price risk in Romania, in Poland, in Belgium and partially in Spain. Additionally, in European countries with a green certificate scheme (Romania, Belgium and Poland), EDPR is exposed to fluctuation on the price of green certificates.

The US market does not provide a regulated framework system for the electricity price. Nevertheless, renewable generation is incentivized through PTCs (Production Tax Credits) and regional Renewable Portfolio Standard (RPS) programs that allow receiving RECs for each MWh of renewable generation. REC prices are very volatile and depend on the regional supply/demand equilibrium in the relevant market.

Most of EDPR's capacity in the US has predefined prices determined by bundled (electricity + REC) long-term contracts with local utilities or C&Is, in line with the Company's policy of avoiding electricity price risk. Despite existing long-term contracts, some EDPR's plants in the US do not have PPA and are selling merchant with exposure to electricity and REC prices. Additionally, some plants with existing PPAs do not sell their energy where it is produced and are therefore exposed to basis risk (difference in price between the location where energy is produced and that where energy is sold).

In Ontario (Canada), the selling price is defined by a long-term feed-in-tariff, thus, there is no electricity price exposure.

In Brazilian, Colombian and Chilean operations, the selling price is defined through a public auction which is later translated into a long-term contract. Electricity price exposure is almost null, with little exposure for the production above or below the contracted production.

In APAC, EDPR operates in markets where the selling price is defined by a feed-in-tariff (Vietnam, Japan, Malaysia and Taiwan) or through Power Purchase Agreements (Singapore, Cambodia, China, Malaysia and Thailand).

Under EDPR's global approach to minimize the exposure to market electricity prices, the Company evaluates on a permanent basis, if there are any deviations to the pre-defined limits (measured through EBITDA at risk, Net Income at risk and total merchant exposure).

EDPR intends to eliminate Green Certificates and REC price risk with the signing of bundled PPAs with private off-takers, which include the sale of the electricity and the Green Certificate or REC. In some cases, the offtaker may be interested in contracting only the Green Certificate or the REC, thus a GCPA (Green Certificate Purchase Agreement) or a RECPA (REC Purchase Agreement) is signed.

In those geographies with remaining merchant exposure, EDPR uses various commodity-hedging instruments in order to minimize the exposure to fluctuating market prices. In some cases, due to the lack of liquidity of financial derivatives, it may not be possible to successfully hedge all existing merchant exposure, after considering PPAs in place.

As aforementioned, some US plants have exposure to REC price risk and/or basis risk (difference in electricity price between locations). EDPR hedges REC prices through forward sales and basis exposure through financial swaps or FTR (Financial Transmission Rights).

1. ii) Energy Production Risk

The amount of electricity generated by EDPR's renewable plants is dependent on weather conditions, which vary across locations, from season to season and from year to year.

Variation on the amount of electricity that is generated affects EDPR's operating results and efficiency.

Not only the total wind or solar production in a specific location is relevant, but also the profile of production. Wind usually blows more at night than at daytime when energy prices are lower and the opposite for solar. Generation profile will affect the discount or add-on in price of a plant versus a baseload generation.

Finally, curtailment of a plant will also affect its production. Curtailment occurs when the production of a plant is stopped by the TSO (Transmission System Operators) for external reasons to the Company. Examples of cases of curtailment are upgrades in transmission lines or exceptional congestion (high level of electricity generation for available transmission capacity).

EDPR mitigates wind and solar resource volatility and seasonality through geographical diversification of its asset base in different countries and regions.

EDPR acknowledges the correlation between different plants in its portfolio that allows for this geographical diversification, which enables EDPR to partially offset production variations in each region and to keep the total energy generation relatively steady. Currently, EDPR is present in 28 markets: Spain, Portugal, France, Belgium, Poland, Romania, Italy, UK, Greece, Germany (no generation), Hungary (no generation), Netherlands (no generation), South Korea (no generation), Vietnam, Cambodia, China, Indonesia, Japan, Malaysia, Singapore, Taiwan, Thailand, US, Canada, Mexico, Colombia (no generation), Chile (no generation) and Brazil.

Nevertheless, 2022 was a year with generation above the one initially forecasted.

EDPR continues to analyze the potential use of financial products to hedge wind risk and might use this product to mitigate risk in specific cases.

Profile risk and curtailment risk are managed ex-ante. For every new investment, EDPR factors the effect that expected generation profile and curtailment will have on the output of the plant. Generation profile and curtailment of EDPR's plants are constantly monitored by EDPR's Risk department to detect potential future changes.

1. iii) Risks related to financial markets

EDPR finances its plants through project finance or corporate debt. In both cases, a variable interest rate might imply significant fluctuations in interest payments.

On the other hand, due to EDPR's presence in several countries, revenues are denominated in different currencies. Consequently, exchange rate fluctuations may have a material adverse effect on financial results or on the value of the foreign investment.

1. iii) a) Interest rate risk

Given the policies adopted by EDPR Group, current exposure to variable interest rate is not significant and financial cash flows are substantially independent from the fluctuation of interest rates.

The purpose of interest rate risk management policies is to reduce the exposure of long-term debt cash flows to market fluctuations, mainly by contracting long term debt with a fixed rate.

When long-term debt is issued with floating rates, EDPR settles derivative financial instruments to swap from floating to fixed rate.

EDPR has a portfolio of interest-rate derivatives with maturities of up to 15 years. Sensitivity analyses of the fair value of financial instruments to interest-rate fluctuations are periodically performed.

With most of interest rate being fixed, main exposure to interest rates arises at refinancing. To protect against this risk, EDPR intends to maintain a balanced maturity profile for its corporate

fixed debt, thus, diversifying the risk of bad timing when refinancing occurs.

Moreover, during 2022, pre-hedges were carried out at EDP and EDPR level for corporate debt to protect against interest rate rises when refinancing debt for 2022-2025 horizon.

Repricing calendar of debt is continuously monitored together with interest rates in order to detect good timing for restructuring debt.

Taking into account risk management policy and approved exposure limits, Global Risk Area supports the Finance team in interest rate hedging decisions and the Finance team submits the financial strategy appropriate to each project/location for Management Team's approval.

1. iii) b) Exchange rate risk

EDPR has international operations and is exposed to the exchange-rate risk resulting from investments in foreign subsidiaries. Currency exposure in operating plants is to U.S. dollar, Romanian leu, Polish zloty, Brazilian real, British pound, Canadian dollar, Colombian pesos. In APAC, main exposure comes from Singaporean dollar, but relatively small exposure to other southeast Asian currencies is still present. In addition, EDPR has a marginal fiscal exposure to MXN due to Mexican assets.

EDPR hedges risk against currency fluctuations by financing in the same currency as the revenues of the project. When local financing is not available, EDPR hedges debt cash flows through cross currency interest rate swaps.

EDPR also hedges net investment (investment after deducting local debt) in foreign currency through cross currency interest rate swaps.

Finally, EDPR contracts foreign exchange forwards to hedge the risk in specific transactions, mainly in payments to suppliers which may be denominated in different currencies.

EDPR's hedging efforts minimize exchange rate volatility, but do not eliminate completely this risk due to high costs associated to hedging FX in certain situations.

1. iii) c) Inflation risk

In specific projects, regulated remuneration is linked to inflation. Additionally, O&M costs are considered to be linked to inflation in most cases.

Exposure to inflation in revenues may be naturally hedged with exposure to interest rates and EDPR regularly analyses inflation exposure and its relationship with interest rates to adjust level of interest rate coverage in project finance structures.

Exposure to inflation in O&M costs is managed at the moment of the investment decisions, by executing sensitivity analyses.

1. iii) d) Liquidity risk

Liquidity risk is the risk of EDPR not meeting its financial obligations. Liquidity risk is mainly related to extreme market movements in energy prices, interest rates, exchange rates or credit markets, which may change the expected cash flow from revenues, opex, margin calls or funding (due to credit downgrades).

EDPR tracks liquidity risk in the short term (margin calls, etc.) and in the long term (financing sources) in order to meet strategic targets previously set (EBITDA, debt ratio and others).

EDPR's strategy to manage liquidity risk is to ensure that its liquidity is sufficient to meet financial liabilities when due, under both normal and stressed conditions, and without incurring unacceptable losses or risking damage to EDPR's reputation.

Different funding sources are used such as Tax Equity investors, commercial banks, multilateral organizations, corporate debt and asset rotation in order to ensure long-term liquidity to finance planned projects and working capital.

The Directors have estimated cash flows that show that the Group will meet the commitments existing at the close of the 2022 financial year and those foreseen for 2023.

1.iv) Commodity price risk (other than energy)

In projects in which there is a significant number of years between investment decision and start of construction, EDPR may be exposed to the price of the materials used in turbine and solar panel manufacturing, foundations and interconnection through escalation formulae included in the contracts with suppliers.

In order to manage this risk, EDPR may hedge the market exposure in OTC/future commodity markets, considering the risks (potential losses) and the cost of the hedge.

2. Counterparty Risk

Counterparty risk is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. An economic loss could occur, either a direct economic loss if the transaction has a positive value at the moment of default (counterparty credit risk) or a replacement cost due to change of the counterparty (counterparty operational risk).

2. i) Counterparty Credit Risk

If the transactions or portfolio of transactions with the counterparty has a positive economic value at the time of default, an economic loss would occur.

To control credit risk at EDPR, thresholds of Expected Loss and Unexpected Loss are established at company level as defined under Basel Standards and re-evaluated monthly. If the threshold is surpassed by the company as a whole, mitigation measures are implemented in order to remain within the pre-established limit.

Additionally, Expected Loss limits are established for each individual counterparty or Group of counterparties (parent and subsidiaries).

2.ii) Counterparty Operational Risk

If the transactions or portfolio of transactions with the counterparty do not have a positive economic value at the time of default, it will impact operations. Despite no direct loss at the time of default, the replacement of the counterparty could imply a cost to EDPR due to potential delays, higher contract value with a new counterparty (replacement costs), etc.

Construction and O&M subcontractors are counterparties to which EDPR is exposed from an operational point of view.

To minimize the probability of incurring in potential replacement costs with counterparties, EDPR's policy concerning counterparty operational risk is managed by an analysis of the technical capacity, competitiveness, credit quality and replacement cost of the counterparty.

3. Operational Risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events (such as an increase in equipment default rates,

increasing O&M, or natural disasters). Moreover, it includes the risk of the business being disrupted due to internal or external causes (such as a pandemic, cyberattack or IT systems malfunctioning), affecting business continuity.

3. i) Development Risk

Renewable plants are subject to strict regulations at different authority levels (international, national, state, regional and local) relating to the development, construction, grid interconnection and operation of power plants. Among other things, these laws regulate landscape and environmental aspects, building licenses, land use and land securing and access to the grid issues.

While level of exigency might be different depending on the geographies, EDPR acknowledges a trend for legislations to align towards concentrating the most restrictive rules and development risks on the consenting (environmental and urban permissions) and interconnection (electricity connection of the plant to the national grid).

In this context, EDPR's experience gathered in different markets is useful to anticipate and deal with similar situations in other countries.

During the development and design phase, EDPR focuses on the optimization of its projects. By mastering the variables, such as choice of locations, layout, etc., the objective is to make the projects more resilient to permitting risks.

Additionally, EDPR mitigates development risk by generating optionality, with development activities in 28 different markets and a portfolio of projects in several stages of maturity. EDPR has a large pipeline of projects that provide a "buffer" to overcome potential delays in the development of prioritized projects, ensuring growth targets and being able to compensate permitting delays in some geographies.

3. ii) Execution Risk

During the construction of the foundations, interconnection and substation of a plant, and the installation of the equipment, different events (bad weather, accidents, etc.) might occur that could imply an over cost or a delay in the commercial operation date of the plant:

- The delay implies a postponement of cash flows, affecting profitability of the investment.

- When a plant has a PPA, a delay of the commercial operation date might imply the payment of Liquidated Damages (LDs), with the consequent loss of revenues and the impact on annual financial results.

During the design phase, EDPR engineering teams supervise the engineering and the installation method. Construction is subcontracted to technically capable construction companies.

In both cases, a critical path analysis is performed to assess the reliability of construction and installation plan. Also, collaterals may be required to the counterparty following EDPR's Counterparty Risk Policy.

3.iii) Operation Risk

Damage to Physical Assets Risk

Renewable plants in construction and in operation are exposed to weather hazards, natural disasters, etc. These risks depend on the location of the assets.

All plants are insured the physical damage during construction and operation. During operation, any natural disaster, weather hazard or accident will be partially insured to revenue losses due to the event.

Equipment Performance Risk (O&M costs)

Output from renewable plants depends upon the operating availability of the equipment.

EDPR mitigates this risk by using a mix of suppliers which minimizes technological risk, avoiding exposure to a unique manufacturer.

EDPR also engages suppliers through medium-term full-scope maintenance agreements during the first years of operation to ensure alignment with supplier in minimizing technology risk.

Finally, for older plants, EDPR has created an Operation and Maintenance (O&M) program with an adequate preventive and scheduled maintenance program. EDPR externalizes non-core technical O&M activities of its renewable plants, while primary and value-added activities continue to be controlled by EDPR.

3. iv) Information Technology Risk

IT (Information Technologies) risk may occur in the technical network (information network for plants operation) or in the office network (information network of corporate services: ERP, accounting...)

EDPR mitigates this risk creating redundancy of servers and control centers of renewable plants. Redundancy is created in a different location to anticipate potential natural disasters, etc.

3. v) Legal claims Risk (compliance, corruption, fraud)

EDPR faces potential claims of third parties, corruption and fraud of its employees.

EDPR has implemented an internal “Code of Ethics” and an Anticorruption Policy where the company commits to comply with legal obligations in every community where EDPR is established.

Additionally, the company Ombudsperson receives all the complaints sent through the “Code of Ethics” channel and decides the appropriate procedure for each one of them. An anticorruption mailbox is also available to report any questionable practice.

3. vi) Personnel Risk

EDPR identifies four main risk factors regarding personnel: turnover, health and safety, human rights, and discrimination, violence or behavior against human dignity.

- **Turnover:** A high turnover implies direct costs of replacement and indirect costs of knowledge loss. EDPR mitigates turnover through constant reassessment and benchmarking of remuneration schemes in different geographies. Additionally, EDPR offers flexibility to its employees to improve work life balance. In 2022, EDPR was elected as “Top Employer” in Spain by the Top Employers Institute.
- **Health and safety:** EDPR has deployed an H&S management system, complying with OHSAS 18001, pursuing the “zero accidents” target.
- **Human rights:** EDPR has committed, through its “Code of Ethics”, to respect international human rights treaties and best work practices. All counterparties which sign a contract with EDPR are committed to respect EDPR’s “Code of Ethics”.

- **Discrimination, violence or behavior against human dignity:** EDPR forbids any kind of discrimination, violence or behavior against human dignity, as stated in its “Code of Ethics”. Strict compliance is enforced, not only through the reporting channel of the Ombudsperson, but also through constant awareness from all employees of the company.

3. vii) Processes Risk

Internal processes are subject to potential human errors that may negatively affect the outcome. Internal Audit Department regularly reviews internal processes and recommends the establishment of new controls or the improvement in the implementation of existing procedures.

Moreover, business continuity is ensured by a Global Crisis Plan, which defines the procedure to follow for each level of crisis and frames individual emergency plans at activity or asset level. Also, a tool to oversee different events that could impact Business Continuity is being used to ensure correct management of crisis.

3. viii) ESG Risk

Identify climate-related risks and opportunities, such as those based on Task-Force on Climate-Related Financial Disclosures (TCFD) recommendations.

The impact of these risks and opportunities are assessed and mitigated through environmental measures, contingency plans and other related initiatives.

4. Business Risk

4. i) Regulatory Risk (renewables)

The development and profitability of renewable energy projects are subject to policies and regulatory frameworks. The jurisdictions in which EDPR operates provide different types of incentives supporting energy generated from renewable sources.

Remuneration schemes have become less competitive in some countries due to the financial crisis and it cannot be guaranteed that current support will be maintained in all EDPR’s geographies or that future renewable energy projects will benefit from current support

measures. Regulation promoting green energy has been revised or is under revision in some of the countries where EDPR is present.

In 2022, the conflict between Ukraine and Russia led to record-high electricity prices, particularly in Europe, which led the EU to implement a cap on gas prices. Some countries, like Spain, Poland or Romania also implemented their own cap measures, with the aim of limiting electricity prices for 2022 and beyond.

In the US, the Inflation Reduction Act (IRA) was signed into law extending, at the Federal level, Production Tax Credits (PTC) for wind energy for an additional 3 years, for all projects beginning construction before the end of 2024. The phaseout of PTC incentives for wind projects placed in service after 2021 was also removed by the IRA. Additionally, wind and solar production is also incentivized through State RPS Programs that allow receiving RECs (Renewable Energy Credit) for each MWh of renewable generation.

EDPR is managing its exposure to regulatory risks through diversification, by being present in several countries and through participation as an active member in several wind and solar associations.

Regulatory Risk in each of EDPR's countries is monitored continuously, considering current regulation, potential drafts of new laws, feedback from associations, evolution of installed renewable generation capacity and other inputs. EDPR has developed an internal quantitative assessment of Regulatory Risk that serves as an indicator for changes in supporting schemes. This measure is updated regularly in all EDPR's geographies.

Regulatory Risk is also considered ex-ante, at the moment of the investment, through sensitivity analyses that are performed to evaluate its impact in project profitability under different scenarios.

4. ii) Equipment Market Risk/Equipment Price Risk

Price of equipment is affected, not only by market fluctuations of the materials used, but also by the demand of this equipment or a possible increase in trade tariffs and levies.

For every new project, EDPR secures the demand risk by engaging in advance with manufacturers, elected through a competitive process.

5. Equipment Supply Risk

The demand for new plants may offset the offer of equipment. Currently, the local component requirement in some geographies (Ex: Brazil) may create this shortfall situation. In the event of a trade war, supply chain of equipment suppliers may be affected, creating further imbalances in local component requirements.

EDPR currently faces limited risk to the availability and price increase of equipment due to existing framework agreements with major global suppliers. The Company uses a large mix of suppliers in order to diversify equipment supply risk. For geographies with specific requirements of local component, EDPR does not engage in a project before securing the supply of the equipment. This risk is further explained on EDPR's annual report due to its current relevance in the business.

6. Strategic Risk

6. i) Country Risk

Country Risk is defined as the probability of occurrence of a financial loss in a given country due to macroeconomics, political or natural disasters. EDPR has defined a Country Risk Policy that assesses country risk through an internal scoring based on publicly available data. This internal scoring is compared with external assessments from renowned organizations. Each risk factor affecting country risk is evaluated independently to decide on potential mitigating actions:

- **Macroeconomic Risk:** risks from the country's economic evolution, affecting revenue or cost time of the investments.
- **Political Risk:** all possible damaging actions or factors for the business of foreign companies that emanate from any political authority, governmental body or social group in the host country.
- **Natural disaster risk:** natural phenomena (seismicity, weather) that may impact negatively in the business conditions

Before approving a project in a new geography, EDPR analyses the risk of the new country and compares it to its existing portfolio. Mitigation measures may be decided when this risk is above a certain threshold.

In addition, EDPR uses a Security risk index to rank countries from a security and safety standpoint, establishing mitigation measures for employees when above a pre-defined threshold.

6. ii) Competitive landscape

In the renewable business, size can be an advantage or disadvantage in specific situations. For example, in development of renewable plants, small and dynamic companies are usually more competitive than larger companies.

On the other hand, when participating in tender processes for offshore wind farms, the size of the investment benefits larger companies.

Additionally, the consequences of a change in the competitive landscape due to mergers and acquisitions may also be a risk.

To mitigate the risks, EDPR has a clear knowledge of its competitive advantages and tries to leverage on them. When EDPR has no advantage versus its competitors, alternatives are considered in order to become competitive. For example, for offshore wind farms, EDPR has partnered with large companies with previous experience in large electricity generation projects, in order to become a more competitive consortium.

6. iii) Technology disruptions

Most renewables are relatively recent technologies, which are continuously evolving and improving efficiency. As such, some initially expensive technologies can become competitive in a relatively short time.

EDPR growth focuses in the most competitive renewable technologies at the moment, which are onshore wind, offshore wind and PV solar, but also participates in other innovative projects such as floating offshore wind.

6. iv) Meteorological changes

Future estimations of wind and solar production are based on analysis of historical measurements for more than 20 years, and they are considered to be representative of the

future. Relevant unexpected meteorological changes could lead to a lower production than the one expected from historical data.

When evaluating a new investment, EDPR considers potential changes in the production forecasted, however, the size of the potential deviation in the case of relevant meteorological changes is uncertain.

6. v) Investment decisions criteria

Not all projects have the same risk profile. This will depend on merchant exposure of remuneration, construction risk, etc.

In order to take proper business decisions, EDPR uses Risk Adjusted Metrics for investment decisions, which take into consideration the different risks inherent of each project.

6. vi) Energy Planning

Assumptions in future evolution of energy markets affect the profitability of the investments for the period after the fixed remuneration (regulated tariff or PPAs). Structure of electricity markets in most of EDPR geographies (marginal setting price) were not designed to consider a great share of generation from renewable sources with zero marginal price. Thus, the increase in renewable generation could lead to lower pool prices in medium term if reforms of electricity markets are not properly undertaken.

When investing, EDPR performs sensitivity analyses to stress pool price scenarios for the period without fixed remuneration to understand the robustness of the profitability of the investment.

6. vii) Corporate Organization and Governance

Corporate governance systems should ensure that a company is managed in the interests of its shareholders and other relevant stakeholders.

In particular, EDPR has an organization in place with a special focus on transparency, where the management body (Board of Directors) is separated from the supervision and control duties (Audit, Control and Related Party Transactions Committee). Members of this Committee are invited to the General Risk Committee of EDPR.

6. viii) Reputational risk

Companies are exposed to public opinion and today's social networks are a rapid mean to express particular opinions. A bad reputation could eventually harm financial results of a company in the short and in the long term.

Sustainability makes part of the essence of EDPR. EDPR is not only committed in building a better future, but also in doing it well, in an ethical and sustainable manner, consequently limiting reputational risk.

54. Risk functions and framework

A corporation can manage risks in two different ways, one risk at a time on a largely and compartmentalized basis, or all risks together within a coordinated and strategic framework. The latter approach is called "Enterprise Risk Management" and is the approach used at EDPR. Risk Management at EDPR is supported by three distinct organizational functions, each on a different role: Strategy (Risk Profiler), Management (Risk Manager) and Controlling (Risk Controller).

RISK FUNCTIONS	DESCRIPTION
Strategy – General risk strategy & policy	Global Risk Department provides analytically supported proposals to general strategic issues. Responsible for proposing guidelines and policies for risk management within the company.
Management – Risk management & risk business decisions	Implement defined policies by Global Risk Responsible for day-to-day operational decisions and for related risk taking and risk.
Controlling – Risk monitoring	Responsible for follow-up of the results of risk-taking decisions and for contrasting alignment of operations with general risk policy approved by the board.

The Risk Committee is the forum where the different Risk Functions discuss the policies to be implemented and control the risk exposure of the company. EDPR's Risk Committee integrates and coordinates all Risk Functions and assures the link between corporate's risk appetite and defined strategy and the operations of the company.

EDPR created three distinct meetings of the Risk Committee in order to separate discussions on execution of mitigation strategies from those on the definition of new policies:

- **Restricted Risk Committee:** Held every month, it is mainly focused on development risk and market risk from selling energy (electricity price, basis, profile, GCs and RECs). It is the forum to discuss the evolution of projects under development and construction and the execution of mitigation strategies to reduce merchant exposure. It also monitors compliance with risk thresholds defined within risk policies (market risk, counterparty risk, operational risk and country risk).
- **Financial Risk Committee:** Held every quarter, it is held to review main financial markets risks (exchange rates, interest rates and inflation), liquidity risk, commodity risk and credit risk to financial institutions and discuss the execution of mitigation strategies.
- **Risk Committee:** Held every quarter, it is the forum where new strategic analysis is discussed, and new policies and procedures are proposed for approval to the Management Team. Additionally, EDPR's overall risk position is reviewed, together with EBITDA@Risk and Net Income@Risk.

55. Details on the internal control and risk management systems implemented in the company regarding the procedure for reporting financial information

With the purpose of not only controlling risks, but also managing them ex-ante, EDPR has created Global Risk policies that are enforceable at a Global Level. These policies are proposed and discussed in the Risk Committee and approved by the Management Team.

EDPR's Enterprise Risk Management Process is inspired on Basel Committee on Banking Supervision's principles, guidelines and recommendations and is similar to other risk management frameworks. In this respect, performance of risk metrics at EDPR and their compliance with established internal risk limits are assessed on a monthly basis. Additionally, a formal review and update of each Risk Policy, and the adequacy of its limits, is performed every two years.

Internal control system over financial reporting

EDPR has an Internal Control System over Financial Reporting (SCIRF) updated and monitored in line with international standards of Internal Control.

This system covers the main aspects of the COSO framework: maintaining a control environment for the preparation of qualified financial information, assessment of the risks of financial reporting, existence of control activities to mitigate risks of error, information and communication and evaluation mechanisms.

In addition, the SCIRF Standard was approved in 2022; the purpose of this Standard is to formalize the mission and responsibilities of the SCIRF function, as well as to define the principles and methodological rules governing the exercise of its function and the relationship model with all its stakeholders.

Scope revision and update

The SCIRF Manual includes the annual update of the scope that aims to identify companies, areas and processes that must be included in the scope of SCIRF, according to criteria of materiality and risk, including the risk of error or fraud.

The risk analysis included in the scoping process for SCIRF, includes both the different types of risk (operational, economic, financial, technological or legal) and the control objectives of financial reporting (existence and occurrence, completeness, measurement, presentation, disclosure and comparability, and rights and obligations in terms of their potential impact on the financial statements).

The results of the updated scope with the methodology outlined are communicated at all levels of the organization involved in the SCIRF and supervised by the Audit, Control and Related Party Transactions Committee.

Control activities

In documented SCIRF processes and controls, information capture mechanisms are established (including identification of the scope of consolidation) and are specified the steps and checks that are carried out for the preparation of the financial information that will be part of consolidated financial statements.

The procedures for the review and approval of financial information are provided by the areas of Planning and Control, and Administration, Consolidation and Tax. Financial information is supervised in the scope of its competences by the Audit, Control and Related Party Transactions Committee, prior to the formulation of the accounts by the Board of Directors.

The SCIRF includes control activities related to these processes, embodied in Entity Level Controls, Process Controls and General IT Controls. These processes include review and approval activities of the financial information which are described in the processes of elaboration of individual and consolidated accounts and processing of consolidated financial statements.

EDPR has descriptions of Competency Profiles for the Positions to be carried out in the exercise of the main features of each position that includes a description of the main responsibilities. These include the descriptions of the key positions involved in the preparation of financial information. These descriptions include responsibilities in the preparation of financial information and compliance with internal control procedures.

The documentation of processes and associated controls designed include among others, the completion of closure activities by completing monthly closing checklists, setting due dates for the closures, the identification of the relevance of the operations in order to be reviewed at the appropriate level, conducting analytical reviews of financial information, the existence of limitations in systems to prevent erroneous records or access by unauthorized persons, analysis of deviations from the budget, the analysis by the Management Team of relevant and significant facts that could cause a significant impact on the accounts, or the allocation of responsibilities for calculating amounts to be provisioned for them to be carried out by authorized personnel with the right skills.

In addition to the mentioned reporting processes, major transactional processes resulting from the scope are documented. The description of the activities and controls are designed with the aim of ensuring the registration, evaluation, appropriate presentation and disclosure of transactions in financial reporting.

Control activities of EDPR's SCIRF also include those relating to systems and information technology (General IT Controls) following an international reference, the COBIT framework (Control Objectives for Information and related Technologies). The importance of this area is that information systems are the tools with which financial information is prepared and is therefore relevant for transactions conducted with them.

These control activities include those related to access control to applications and systems, segregation of duties, management of corrective and preventive maintenance, new projects implementation, administration and management of the systems, facilities and operations (back-ups, security incidents) and their proper monitoring and planning. These activities are developed taking into account the requirements of control and supervision.

Among the activities of SCIRF's scope update, there is a periodic analysis of the existence of service suppliers that perform relevant activities in relation to the processes of preparing financial information.

SCIRF supervision

The Audit, Control and Related Party Transactions Committee supervises the SCIRF in the scope of the exercise of their activities through the monitoring and supervision of the developed mechanisms for SCIRF's implementation, evolution and evaluation, and the results of the scope analysis and the extent of the situation in terms of coverage. To this extent, the Internal Control Area assists the Audit, Control and Related Party Transactions Committee.

EDPR has an Internal Control area, integrated in the Compliance and Internal Control Department, which report to the CEO. The Audit, Control and Related Party Transactions Committee supervises the Internal Control area activities.

The main functions of the Internal Control area are set out in the SCIRF Manual, which includes, among others, the evaluation of the activities of internal control systems or support in the implementation and maintenance of the Internal Control system over Financial Reporting.

Internal Control supports the Audit, Control and Related Party Transactions Committee in supervising the implementation and maintenance of SCIRF and reports the results of the evaluation, improvement actions identified and their evolution.

The entity has action plans for improvement actions identified in SCIRF's assessment processes, which are accompanied and supervised by the Internal Control area, considering their impact on the financial information.

Also, in the year 2022, as in previous years, a process of self-certification was made by the owners of the various controls and Entity Level Control regarding proper documentation update on SCIRF controls and processes in their area of responsibility and the implementation of controls with corresponding evidence.

Additionally, in 2022, additional activities have been carried out for the integration of new platforms and businesses acquired by the company within the existing Internal Control System. In this regard, a specific identification of their associated risks and a review of the control matrix have been carried out.

Finally, in 2022, the Internal Control area, as part of its supervisory functions as a second line of defense, has carried out a monitoring activity of a selection of controls, reviewing their design and risks and reviewing the evidence of execution of the controls in order to verify that they are updated, in operation and that their design is adequate.

SCIRF evaluation

Besides the monitoring and evaluation activities described in the preceding paragraphs, in case the auditors identified internal control weaknesses in the scope of their financial audit work, they are expected to communicate these circumstances to the Audit, Control and Related Party Transactions Committee, which regularly monitors the results of the audit work.

Additionally, in 2022 the EDPR Group decided to have its SCIRF audited by the external auditor. As a result of its evaluation, the external auditor issued a report with a favorable opinion on the SCIRF of the EDPR Group, according to ISAE 3000 (International Standard on Assurance Engagements 3000), included in Annex II of this Chapter 5 of this Annual Report.

Corporate Compliance

The implementation of a solid corporate culture of compliance, integrity and transparency has always been a priority for EDPR, structuring its supervision and monitoring, through a regulatory compliance conduct basis and through the adoption of ethical values and principles; both consolidated as central elements of its business model.

Taking into account the Group's priority, the Compliance Model has evolved over the years:

- During 2016 and 2017, the Compliance Officer position and the Criminal and Legal Risk Prevention Model (Specific Compliance Model) were created.
- During 2018, the Company completed the first update of the Criminal Compliance Model and started working on the definition of a criminal risk matrix at an international level including an inventory of the potential risks and its controls in each of the geographies where EDPR operates.

- In June 2019, the Compliance Area was created to support and provide assistance to the Compliance Officer. In February 2020, with the commitment of strengthening the Compliance culture and to comply with the international standards in Corporate Governance, the area evolved to the Department of Compliance and Internal Control – a new department which reports, directly, to the CEO.
- In 2022, the Compliance Area has been working on the implementation of a Global Compliance Model with actions addressed to reinforce the establishing of a Ethic and Compliance culture in the whole Group.

Reinforcing what stated in the previous point, in 2022, the Compliance Areas has created the Ethics and Corporate Compliance Area (ECC) in the North America platform as support area of the Compliance Officer.

Global compliance model

In the definition of the Global Compliance Model, the Global Compliance structure has been defined, and a great effort has been made to develop a robust set of policies and procedures for the Group, which includes the following:

- The Compliance Standard, approved by the Board of Directors in November 2021 and reviewed and updated in October 2022, which establishes the basic principles, the methodological rules that govern the carrying out of the Compliance function and the specific Compliance functions of all employees.
- The Code of Conduct for Top Management and Senior Financial Officers, approved by the Board of Directors in July 2021, that reinforces and complements the Code of Ethics, and reflects the commitment of the people who have been given the responsibility and power to carry out the supervisory and administrative functions of the EDPR Group.

The Global Compliance Model integrates specific models depending on the risks affecting the Group:

- A specific Integrity Compliance Program focused on the prevention of corruption and bribery risks. EDPR has a zero-tolerance approach to bribery and corruption and is committed to act professionally, fairly and with integrity in all business dealings and relationships wherever the Group operates. For this reason, the specific Integrity

Compliance Program has as its central axis the Integrity Policy, which replaces the

previous Anticorruption Policy; was approved by the Board of Directors in July 2021 and reviewed and updated in October 2022. The Integrity Policy has been complemented by other procedures that facilitate the application of this Policy. Among others:

- The Donations and Sponsorships Procedure, approved by the Management Team in June 2021.
 - The Offers and Events Procedure, approved by the Management Team in June 2021 and reviewed and updated in December 2022.
 - The Conflict of Interest Procedure, approved by the Management Team in June 2021.
 - The Integrity Due Diligence Procedure and the Procedure for relationship with Public Officials and Politically Exposed Persons, approved on 2020 and developed during 2021 through different electronic platforms. The creation of a technological platform for third-party analysis, which can be used by all Group employees, is noteworthy. Both of them have been reviewed and updated in December 2022.
 - The Intermediary Agreements Procedure, approved by the Management Team in July 2022.
 - A specific Criminal Compliance Program focused on the prevention of criminal risks in Spain taking into consideration the regulation in Spain.
- During this 2022 the Criminal Compliance Policy has been updated (initially approved in December 2017).
 - The risk and control matrix has been updated. All the Areas/departments of EDPR Group have reviewed the assigned controls and have validated the applicable controls (self-assessment).
 - A Control Audit Plan has been established and the controls assigned in the Plan have been audited by an independent third party.

In addition, the Risk Assessment Methodology has been updated in order to have a more objective risk assessment.

A specific Personal Data Protection Compliance Program focused on the protection of personal data to which EDPR has access and for which it is responsible. In this context, EDPR

has been strengthening its management system to ensure the compliance and adequacy of EDPR Group's entities to the applicable legal requirements regarding Data Protection in the different geographies. The specific Personal Data Protection Compliance Program has as its central axis in the principles reflected on the Personal Data Protection Policy, approved by the Board of Directors in 2020. The main matters involved this Program are periodically reviewed taking into account new requirements and the expansion of the Group in new geographies. The Cookie Policies across different geographies have been updated in 2022.

Since September 2022, the internal Data Protection Procedures and Methodologies, defined and developed at a group level in 2021, are being reviewed taking in to account the regulatory requirements established in the legislations of the new geographies in which EDPR has a presence.

In October 2022, EDPR started a Project for the review and identification of International Personal Data Transfers accompanied by the elaboration of a Gap Analysis and Action Plan for the subsequent regularization of those transfers that may require it.

In December 2022, EDPR has started the development of a new Master Data Protection Policy at a Group Level.

All this normative development has implied a strong work to make the new policies and procedures of the Group known, having made special focus this year in training and communication in the field of Compliance.

Training and communication

Training and communication are fundamental tools to strengthen and disseminate the ethic and compliance culture. In this sense, the following training courses have been developed:

- *Compliance at EDP* with the goal of showing all the employees how the EDPR's Compliance Management System works.
- *ComplianceFLIX "how I met integrity"* which aims to make employees reflect on situations that may involve illegal acts and improper/unethical conducts, and show them how they should act to comply with the EDPR Integrity Policy.

ComplianceFLIX The Personal Data Protection Lady with the goal of reflecting on situations involving the processing of personal data, sometimes resulting in personal data incidents, and showing all the employees how they should act to comply with the law and internal regulations on data protection.

- *Follow Criminal Compliance* which contains the main guidelines of EDPR's Criminal Compliance Policy and the consequences of not complying with them. This training is addressed to new hires or employees who had not completed this training last year.
- *Ethics is value: Let's live our Code of Ethics*, which is based on different videos of the Directors of EDPR who describe the structure and the main elements of the Code of Ethics.
- Ethics for leaders to guarantee that middle management knows the relevant ethics tools to apply in the management of their teams.
- Specific trainings online to different areas (Procurement, M&A, Legal) and geographies in order to guarantee the correct implementation of the Integrity Due Diligence Process.
- Training sessions in person in different geographies (Italy, Greece, France, Romania, Brazil, Colombia and Hungary) in order to assure the correct acknowledge of all compliance policies and procedures.

These trainings have been complemented with communication activities as the (i) monthly Ethics and Compliance Comic which shows practices cases where apply the Code of Ethics and the Compliance policies and procedures, (ii) Global Ethics Day campaign, (iii) periodic posts on the intranet and internal platforms over compliance topics and (iv) different thematic campaigns as the Privacy Day, GRPD anniversary or Anticorruption day.

Reporting system

Lastly, the reporting system to Top Management and Senior Management has also been improved, establishing reports about the Global Compliance Model to: (i) the CEO (monthly), (ii) the Audit Control and Related Party Transactions Committee (CAUD) (quarterly), (iii) the Management Team (at least quarterly) and (iv) to the Board of Directors (yearly).

Operation, methodology and certifications

The entire operation and methodology for the management of the Criminal Compliance Program and the Integrity Compliance Program has been compiled in an internal departmental document called Integrated Management System for Criminal Compliance and Antibribery Handbook updated during 2022. Additional documents, for the support and documentation of this system, have been also drafted.

All this development has allowed EDPR, at the end of 2021, to obtain a double certification from AENOR that verifies and accredits that the company has developed a system of criminal and anti-bribery compliance that meets the requirements of reference standards UNE 19601 and ISO 37001.

With said recognitions, EDPR demonstrates that it has an effective anti-bribery management system (ISO 37001) and that its Spanish criminal risks Prevention Model complies with best practices to prevent crime, reduce risk, and foster an ethical and legally compliant business culture (UNE 19601).

In 2022, EDPR has renewed its AENOR certifications in Criminal Compliance and Anti Bribery, reinforcing, once more time, EDPR's commitment to promote a culture of compliance and strengthen values such as integrity, accountability and transparency.

IV. Investor Assistance

56. Investor Relations department

EDPR seeks to provide to shareholders, investors, financial analysts and other stakeholders and the market in general, all the relevant information about the Company and its business environment, on a regular basis and whenever a relevant fact takes place. The promotion of transparent, consistent, rigorous, easily accessible, and high-quality information is essential to an accurate perception of the Company's strategy, financial situation, accounts, assets, prospects, risks, and significant events.

EDPR, therefore, looks to provide the market with accurate information that can support them in making informed, clear and concrete investment decisions.

The Investor Relations Department was created to ensure a direct and permanent contact with all market related agents and stakeholders, to guarantee effective communication, equality between shareholders and to prevent imbalances in the information access.

The EDPR Investor Relations Department (IR) is the intermediary between EDPR and its actual and potential shareholders, the financial analysts that follow Company's activity, all investors and other members of the financial community. The main purpose of the department is to guarantee the principle of equality among shareholders, by preventing asymmetries in the access of the information and reducing the gap between market perception and Company's strategy and intrinsic value. The Investor Relations department centralizes all relevant and material information that could impact EDPR share price. This information is prepared by the different departments of EDPR, with the support when necessary, of external experts, and always managed in a strictly confidential basis. The department responsibility also comprises developing and implementing EDPR's communication strategy and preserving an appropriate institutional and informative relationship with the financial market, the stock exchange at which EDPR shares trade and the regulatory and supervisory entities (CMVM – *Comissão de Mercado de Valores Mobiliários* – in Portugal and CNMV – *Comisión Nacional del Mercado de Valores* – in Spain).

EDPR is clearly aware of the importance of detailed and transparent information, delivered on-time to the market. Consequently, EDPR publishes Company's price sensitive information before the opening or following the closing of the Euronext Lisbon stock exchange through CMVM's information system and, simultaneously, make that same information available on the website investors' section and through the IR department's mailing list. In 2022, EDPR made more than 35 market notifications, in addition to quarterly, semi-annual and annual results presentations, handouts and operating data statement elaborated by the IR Department. In addition, the IR Department also elaborates key data files and interim presentations which are available on the website investors' section.

On each earnings announcement, EDPR promotes a conference call and webcast, opened to the market in general, at which the Company's management updates the market on EDPR's activities. On each of these events, shareholders, investors and analysts had the opportunity to directly submit their questions and to discuss EDPR's results as well as the Company's outlook and strategy.

EDPR IR Department is coordinated by Miguel Viana and is located at the Company's head offices in Madrid, Spain. The department structure and contacts are as follows:

- Miguel Viana, Head of Investor Relations and Sustainability
- Calle Serrano Galvache, 56; Centro Empresarial Parque Norte; Edificio Olmo – 7th floor; 28033 – Madrid – España
- Website: www.edpr.com/en/investors
- E-Mail: ir@edpr.com
- Phone: +34 900 830 004

EDPR IR Department was in continuous contact with capital markets agents, namely shareholder and investors, along with financial analysts who evaluate the Company. In 2022, as far as the Company is aware, sell-side analysts issued more than 60 reports evaluating EDPR's business and performance.

At the end of the 2022, as far as the Company is aware of, there were 25 institutions elaborating research reports and following actively EDPR activity. As of December 31st 2022, the average price target of those analysts was of Euro 23.63 per share with 14 "Neutral", 8 "Buy" and 3 "Sell" recommendations.

COMPANY	ANALYST	PRICE TARGET	DATE	RECOMMENDATION

57. Market Relations Representative

EDPR representative for relations with the market at CNMV and CMVM is Rui Teixeira, Chief Financial Officer.

58. Information Requests

During the year, IR Department received more than 300 information requests and interacted more than 400 times with institutional investors. On average, information requests were replied in less than 24 hours, with complex requests being replied within one-week time. As of December 31st 2022 there was no pending information request.

V. Website – Online information

59–65.

EDPR considers online information a powerful tool in the dissemination of material information, updating its website with all the relevant documents. Apart from all the required information by CMVM and CNMV regulations, EDPR website also carries financial and operational updates of Company's activities ensuring an easy access to the information.

D. Remuneration

I. Power to establish

66. Competences to determine the Remuneration of the Corporate Bodies and Executive Staff

The Appointments and Remunerations Committee is a permanent body belonging to the Board of Directors with an informative and advisory nature. Its recommendations and reports are non-binding.

The Appointments and Remunerations Committee has no executive functions. The main functions of the Appointments and Remunerations Committee are to assist and inform the Board of Directors regarding the appointments (including by co-option), re-elections, dismissals, and the remuneration of the Directors and executive staff. It also informs the Board of Directors on general remuneration and incentive policies and incentives for Board members and executive staff.

As such, the Appointments and Remunerations Committee is the body responsible for proposing to the Board of Directors the remuneration of the Executive and Non-Executive Directors, the members of the Board Committees and the Executive Staff; the Remuneration Policy; the evaluation and compliance of the KPI's (Key Performance Indicators); the annual and multi annual variable remuneration, if applicable.

The Board of Directors is responsible for the approval of the above-mentioned proposals except the Remuneration Policy which is approved by the General Shareholders' Meeting. The Board of Directors also evaluates with an annual periodicity its own performance and the performance of its delegated Committees. The evaluation of the performance of the Board of Directors, is then additionally submitted for the approval of the General Shareholders' Meeting.

The proposal on the Remuneration Policy is submitted by the Board of Directors for the approval of the General Shareholders' Meeting as an independent proposal, which will be in effect for a maximum of a three-year period. According to the Company's Articles of Association the Board of Directors remuneration is subject to a maximum value that can only be modified by a Shareholders' agreement.

II. Appointments and Remunerations Committee

67. Appointments and Remunerations Committee composition. Relevant service providers in 2022.

The composition of the Appointments and Remunerations Committee is reflected on topic 29 of this Chapter 5 of the Annual Report.

The Company has not established any restrictions within its Articles of Association, Regulations or internal policies limiting the competence of the Appointments and Remunerations Committee to hire any consulting services that may be considered necessary to carry out its duties; additionally in case such services would be hired, it should be noted that they should be rendered independently, ensuring that the service provider do not provide any other services to EDPR or to any company in controlling or group relationship.

In 2022 the Committee hired the services of Egon Zehnder for the identification of the best profiles to cover the vacancy left by Joan Avalyn Dempsey, and the provision of these services strictly complied with the referred requirements.

68. Knowledge and experience regarding Remuneration Policy

The members of the Appointments and Remunerations Committee have knowledge and experience regarding Remuneration Policy.

III. Remuneration structure

69. Remuneration Policy

Pursuant to Article 26 of the Company's Articles of Association the Directors shall be entitled to a remuneration which consists of a fixed amount to be determined annually by the General Shareholders' Meeting for the whole Board of Directors. The above-mentioned article also establishes the possibility of the Directors of receiving attendance fees or being remunerated with Company shares, share options, or other securities granting the right to obtain shares or by means of share-indexed remuneration systems. In any case, the system chosen must be approved by the General Shareholders' Meeting and comply with current legal provisions.

The total amount of the remunerations that the Company will pay to its Directors shall not exceed the amount determined by the General Shareholders' Meeting.

Pursuant to Article 26.5 of the Company's Articles of Association, the rights and duties of any kind derived from the condition of Board Member shall be compatible with any other rights and obligations either fixed or variable that could correspond to the Board Members as a consequence of other employment or professional engagements, if any, carried out in the Company.

Variable remuneration resulting from said contracts or from any other relationship, including being a Board Member, will be limited to a maximum annual amount to be also established by the General Shareholders' Meeting.

For these purposes, the General Shareholders' Meeting held on May 13th, 2008 set a maximum annual amount for the Board of Directors for fixed remuneration of EUR 2,500,000; and at its meeting held on April 8th, 2014 also resolved to establish a maximum annual amount for variable remuneration of EUR 1,000,000 for executive directors.

For 2023 onwards, the maximum annual amount for fix and variable remuneration for the Board of Directors has been set in EUR 3,500,000 by the approval of the General Shareholders' Meeting held on March 31st, 2022. This amount results of the merge of the former EUR 2,500,000 that was established for fix remuneration and the EUR 1,000,000 that was established for variable annual remuneration.

EDPR, in line with EDP Group corporate governance practices, has signed a Management Services Agreement with EDP, under which the Company bears the cost for such services to some of the members of the Board of Directors to the extent their services are devoted to EDPR.

The Non-Executive Directors only receive a fixed remuneration, which is calculated on the basis of their work as Directors and a complement as Member or Chairperson of the Appointments and Remunerations Committee, and /or the Audit, Control and Related Party Transactions Committee and/or the Environmental, Social and Corporate Governance Committee. Such amounts are cumulative, except for the Chairman of the Board of Directors who does not receive any complement derived from his role at any Committee.

EDPR has not incorporated any share remuneration or share purchase options plans as components of the remuneration of its Directors.

No Director has entered into any contract with the Company or third parties that have the effect of mitigating the risk inherent in the variability of the remuneration established by the Company.

In EDPR there are not any payments for the dismissal or termination of Director's duties.

In 2022, the Board of Directors Remuneration Policy in place for this term was duly applied. Additionally, the General Shareholders' Meeting held on March 31, 2022 approved the Remuneration Policy to be applied for 2023-2025 term, following the proposal of the Appointments and Remunerations Committee.

70. Remuneration Structure

The Remuneration Policy applicable for 2020-2022 was approved by the General Shareholders' Meeting (the "Remuneration Policy"). This Remuneration Policy maintains a structure with a fixed remuneration for all members of the Board of Directors, whereas for the Executive Directors also defines a fixed and a variable remuneration, with an annual component and a multi-annual component.

71. Variable Remuneration

Variable annual and variable multi-annual remuneration apply to the Executive Directors.

Variable annual and multi-annual remuneration will be a percentage of fixed annual component, with a superior weight for multiannual vs. annual component (120% vs. 80%). Thus, the value of the variable remuneration may range between 0% and 85% of the 80% in the case of the annual variable, and between 0% and 85% of the 120% in the case of the multi-annual variable. Such percentages are applied over the gross annual fixed remuneration. According to the Remuneration Policy approved by the General Shareholders' Meeting, the maximum variable remuneration (annual and multi-annual) is applicable if all the KPI's were achieved and the performance evaluation is equal or above 110%.

The key performance indicators (KPIs) used to determine the amounts of the annual and multi-annual variable remuneration for each year of the term are proposed by the Appointments, and Remunerations Committee with the aim of aligning them with the strategic pillars of the Company: growth, risk control and efficiency. The KPIs considered for the variable remuneration paid in 2022 (as a result of the performance developed in 2021), as well as those to be considered in 2023 for the appraisal of the performance of year 2022 were the following:

			KEY PERFORMANCE	CEO/CFO	
	WEIGHT		INDICATOR	WEIGHT	EDPR RESULTS
Total Shareholder return	15%	100%	TSR vs. Wind peers & Psi 20	100%	100%
Shareholders	80%	60%	Operating Cash Flow (€ million)	10%	100%
			AR/Sell-down + Tax Equity (€ million)	10%	100%
			EBITDA+ sell down gains (€ million)	10%	100%
			Net Profit (€ million)	10%	100%
			Core Opex Adjusted (€ thousand/MW)	10%	100%
			Projects with FID (% of total '19-'22 additions in BP)	10%	100%
Clients	80%	10%	Renewable Capacity Built (in MW)	10%	100%
Assets & Operations		10%	Technical Energy Availability (%)	5%	100%
			Capex per MW (€ thousand)	5%	100%
Environment & Communities		5%	Certified MW %	5%	100%
Innovation & partners		5%	H&S frequency rate (employees + contractors)	5%	100%
People ⁵ Management	10%	People Management	10%	100%	
Remuneration Committee	5%	100%	Appreciation Remuneration Committee	100%	100%

⁵ The policy has considered the labour conditions and the remuneration of the Company employees in order to define its terms, and in particular, has established this KPI, that includes the results of the Climate Survey launched to the employees in which the satisfaction level with the performance and applicable conditions is reflected.

72. Deferral period applicable to variable Remuneration

In line with corporate governance practices, the Remuneration Policy incorporates the deferral for a period of three years of the multi-annual variable remuneration, being the relevant payment conditioned to the lack of any willful illicit action, known after the appraisal and which endangers the sustainable performance of the company.

73. Variable Remuneration based on shares

EDPR has not allocated variable remuneration on shares and does not maintain Company shares that the Executive Directors have had access to.

74. Variable Remuneration based on options

EDPR has not allocated variable remuneration on options.

75. Annual Bonus and non-monetary benefits

The key factors and grounds for any annual bonus scheme are described on topics 71 and 72.

No non-monetary benefits are paid by EDPR to its Board Members, except for a company car for the Chairman of the Board of Directors (whose total related cost for four years was borne and reported in in 2021) and the retirement savings plan for Executive Directors referred in the following section.

76. Retirement Savings Plan

The retirement savings plan applicable to 2022, which is included within the Remuneration Policy applicable for such term was defined and proposed by the Appointments and Remunerations Committee to the Board of Directors for its submission to the General Shareholder's Meeting, which was duly approved. For the Executive Directors of EDPR (Miguel Stilwell d' Andrade and Rui Teixeira) it was established in a 5% of the fixed fee under the Management Services Agreement. For the year 2022, EDPR paid a fee to EDP under the Management Services agreement of 19,200€ corresponding to the retirement saving plan of Miguel Stilwell d' Andrade, and of 14,500€ corresponding to the retirement saving plan of Rui Teixeira.

IV. Remuneration disclosure

77. Board of Directors remuneration

Below the list of EDPR Directors that composed the Board during 2022, and the amounts paid by EDPR either (i) as remuneration to them for their functions at the Board level or (ii) as fee to EDP under the Management Services Agreement for their services (not remuneration). The following figures reflect the period of 2022 in which each relevant Director was member of the Board:

DIRECTOR	REMUNERATION	FEES MANAGEMENT SERVICES AGREEMENT EDP-EDPR	
EXECUTIVE DIRECTORS		Fixed component	Variable component
Miguel Stilwell d' Andrade	-	384,000€*	173,664.84€
Rui Teixeira	-	290,000€*	131,153.13€

*These amounts correspond to the service fee paid by EDPR to EDP under the Management Services Agreement for the services rendered in 2022 by such director. In addition, EDPR pays to EDP a 5% of such service fee which is applied to the retirement savings plan for Executive Directors described in topic 76 of this Chapter 5 of the Annual Report.

**These Directors also received remuneration for their participation in the Delegated Committees that is detailed at Chapter 6 of this Annual Report.

***The remuneration reflected for this Director corresponds to 2022, provided that she was appointed by co-option on May 3rd, 2022 (with effects June 1st, 2022).

**** Joan Avalyn Dempsey presented the resignation to her positions as Board Members with effects January 13th, 2022, and therefore the amounts indicated in the table above reflect the remuneration accrued in 2022 until her resignation.

78. Remuneration from other Group Companies

The members of the Board of Directors as of end of December 2022 do not receive any payment from any company under EDPR control or subject to EDPR common control.

79. Remuneration paid in form of profit sharing and/or bonus payments

In EDPR there is no payment of remuneration in the form of profit sharing and/or bonus payments and the reasons for said bonuses or profit sharing being awarded.

80. Compensation for contract termination of Executive Board Members

In 2022 there was no compensation paid or owed to former Executive Directors concerning contract termination during the financial year.

Should be noted for these purposes that in 2022, the General Shareholders' Meeting approved the Remuneration Policy to be applied for 2023 -2025 under which, except as provided in section below, is specifically established that no severance payment shall be made to Directors for termination of their duties before the end of the term of office for which they were appointed, and that Executive Directors shall not sign contracts, either with EDPR or with third parties, that have the effect of mitigating the risk inherent in the variability of the remuneration set by EDPR.

Considering the terms laid down by law and market practice, and approved under the Remuneration Policy for 2023-2025, as on the remuneration of Executive Directors in the event of early termination of office it has been established that:

- In the event of termination for reasons not attributable to the Executive Director, he/she shall be entitled to receive the full fixed component until the end of the term of office for which he/she was elected, and the variable component accrued until the date of termination of office, but shall lose the right to receive any other benefits inherent to the effective exercise of functions for periods of annual or multi-annual performance not completed in their entirety.
- In the event of resignation not arising from an early termination agreement with EDPR, the Executive Director shall be entitled to receive only the fixed and variable remuneration accrued up to the date of resignation, the payment of which shall be made on the same terms and conditions as for serving executive Directors.

- In the event of termination of service by agreement with EDPR whereby the Executive Director agrees to resign, the Executive Director shall be entitled to receive the amount agreed at that time, which shall not exceed (i) the amount of the fixed component until the end of the term of office, plus (ii) the full variable component for the annual or multi-year period payable after it is determined at the end of the relevant period, as if the Executive Director had remained in office.

81. Audit, Control and Related Party Transactions Committee Remuneration

Except in the case of the Chairperson of the Board of Directors, the directors that are also members/chairperson of the Delegated Committees receive for these functions a complement to their fixed remuneration as members of the Board. Below the list of members of the Audit, Control and Related Party Transactions Committee as of December 31st 2022, and the amounts paid by EDPR as remuneration to them for the functions performed at this body.

COMMITTEE MEMBER	POSITION	REMUNERATION
Acacio Piloto	Chairman	55,000€
Rosa García García	Vocal	25,000€
José Félix Morgado	Vocal	25,000€

82. Remuneration of the Chairperson of the General Shareholders' Meeting

In 2021 it was decided to adopt the general practice followed under the personal law of the Company (Spanish one) that allows the Shareholders Meeting to be chaired by the Board of Directors Chairman. Therefore, there are no additional remunerations applies for the chairmanship of the General Shareholders' Meeting, as it is performed by the Chairperson of the Board of Directors (António Gomes Mota).

V. Agreements with remuneration implication

83-84.

EDPR has no agreements with remuneration implication.

For avoidance of doubt, the Company has not adopted any mechanism that imply payments or assumption of fees in the case of change in the composition of the managing body (Board

of Directors), and which could be likely to harm the free transferability of shares and a shareholder assessment of the performance of the members of this managing body.

VI. Share-allocation and/or Stock Option Plans

85–88.

EDPR does not have any Share-Allocation and/or Stock Option Plans.

E. Related-Party Transactions

I. Control mechanisms and procedures

89. Related-Party Transactions Controlling Mechanisms

The Spanish Companies Act sets a the regulation and requirements for Related Party Transactions, including the definition of Related Party Transactions, and the approval and disclosure procedures of these type of operations.

This definition of Related Party Transactions under Spanish Law considers those performed by a company or its subsidiaries, with Directors, shareholders holding a 10% or more of the voting rights or represented at the Board of the company, or with whomever that shall be considered as related party under the International Accounting Standards.

With regards the competence to approve Related Party Transactions, as of such amendment, it has been established an assignation of competence to different governing bodies depending on the amount as follows:

- The Shareholders Meeting: transactions of an amount equal or above a 10% of the total assets according to the last annual balance sheet. These transactions shall be

- submitted together with a supporting report issued by the Audit Committee of the Company.
- The Board of Directors: transactions of an amount below a 10% of the total assets according to the last annual balance sheet. These transactions shall be also submitted together with a supporting report issued by the Audit Committee of the Company.
- Delegated Bodies: the Board of Directors may delegate the approval of: (i) transactions performed between companies of the same group that are performed in the ordinary management of the company and under market conditions, and (ii) that are executed under contracts with standardized terms that are wholesale applied to a high number of clients under prices or tariffs generally established by the supplier of the goods or services, the amount of which does not exceed the 0.5% of the net amount of the annual company business value.

The transactions approved by the delegated body will not require the issuance of the Audit Committee report, but the Board shall establish a periodic internal reporting and control procedure involving the Audit Committee, which will verify the fairness and transparency of the transactions and the compliance with the applicable legal criteria.

In light of the above, on July 27th, 2021, the Board of Directors approved to implement the necessary adjustments in the process of analysis and approval of Related Party Transactions, and in particular resolved to take the following decisions:

- To approve the delegation in the Audit, Control and Related Party Transactions Committee of the competence to approve Related Party Transactions that are delegable under the law;
- To approve a procedure for reporting and control of such transactions involving the Audit, Control and Related Party Transactions Committee;
- To approve a new definition of Related Party Transactions to be regulated under the Audit, Control and Related Party Transactions Committee, considering as Related Party the following: (i) any company of the EDP Group, (ii) any company in which both EDPR SA and a Related Party have a stake, (iii) any shareholder holding a 10% or more of the voting rights or with representation at the Board of the Company, and (iv) any party deemed as

ated Party under the International Accounting Standards, including without limitation, Board members, Key Employees⁶ and Relatives⁷.

- In order to formalize the above referred delegations, to amend article 8.B. (“Nature and Competence”) of the Regulations of the Audit, Control and Related Party Transactions Committee including the necessary competences to perform its duties, as follows:
 - i. Analyse and, where appropriate, approve the (i) (a) intragroup transactions or (b) transactions performed between EDPR Group and EDP Group when their amount is below 10% of the total assets at the last annual balance sheet approved by the company, as long as they are in the ordinary management of the company and under market conditions; (ii) transactions executed under contracts with standardized terms that are wholesale applied to a high number of clients under prices or tariffs generally established by the supplier of the goods or services, and which amount does not exceed the 0,5% of the net annual company turnover, and
 - ii. Periodically inform the Board of Directors about the transactions approved by this Committee in the exercise of the above referred delegation, stating the fairness and transparency of such transactions, and as the case may be, the compliance with the applicable legal criteria.
 - iii. Analyse and inform about any modification of the Framework Agreement signed by EDP and EDP Renováveis on 7 May 2008.⁸
 - iv. Submit a report to the Board of Directors of the Company regarding the Related Party Transactions that shall be approved by the Board of Directors of EDPR SA or by its Shareholder’s Meeting in accordance with the law, and that shall include: (i) the information regarding the nature of the operation and the relation with the Related Party, (ii) the identity of the Related Party, the date and value or amount of the compensation of the transaction, and any other information necessary to appraise if the operation is fair and reasonable for the company and for the shareholders that are not Related Parties.

- v. Request EDP for access to the information needed to perform its duties.

It should be also noted that in accordance with article 13.3 of the Regulations of the Audit, Control and Related Party Transactions Committee, the resolutions adopted by this committee are reported to the Board of Directors at the first Board meeting held following the meeting of the committee in which such proposals were discussed. That means that in case there are Related Party Transactions, they are reported to the Board of Directors at least every quarter (maximum period elapsed between Board of Directors Meeting in accordance with Article 22 of its Regulations).

90. Transactions subject to control during 2022

During 2022, EDPR has not signed any contracts with the members of its corporate bodies or with holders of qualifying holdings, excluding EDP, as mentioned below.

The contracts signed between EDPR and its related parties have been analyzed by the Audit, Control and Related Party Transactions Committee according to its competences, as mentioned on the previous topic, and have been concluded according to the market conditions.

The total amount of supplies and services in 2022 incurred with or charged by the EDP Group was EUR 44,293,208 thousand corresponding to 10% of the total value of Supplies & Services for the year (EUR 438,973,930 thousand).

The most significant contracts in force during 2022 are the following:

Framework agreement

The framework agreement was signed by EDP and EDPR on May 7th 2008 and came into effect when the latter was admitted to trading. The purpose of the framework agreement is to

⁶To this extent the following shall be considered as Key Employees: (i) the members of the Management Team of EDP Renováveis, S.A., (ii) the General Secretary of the Company, (iii) the Directors of Internal Audit, Compliance and Internal Control, Global Risk, Finance, ACT, Planning and Control, Investor Relations, Legal, IT, as well as (iv) any other that the Audit, Control, and Related Party Transactions Committee may designate.

⁷To this extent the following shall be considered as Relatives: the spouse or assimilated partners of a Board Member and or/ of a Key Employee, the children of a Board Member and/or of a Key Employee, or of his/her spouse or assimilated partner, as well as the dependent individuals of the Board Member and/or Key Employee or of his/her spouses or assimilated partners.

⁸This Framework Agreement was signed between EDP and EDPR in order to regulate the transactions closed between companies of EDP Group and EDPR Group, stating that in compliance with the transparency purposes for future investors, such shall continue to be developed in line with the market prices, in an arm's length basis, and following certain predefined principles and rules (considering criteria as parties involved, scope and amount).

set out the principles and rules governing the legal and business relations existing when it came into effect and those entered into subsequently.

The framework agreement establishes that neither EDP nor the EDP Group companies other than EDPR and its subsidiaries can engage in activities in the field of renewable energies without the consent of EDPR. EDPR shall have worldwide exclusivity, with the exception of Brazil, where it shall engage its activities through a joint venture with EDP Energias do Brasil S.A., for the development, construction, operation, and maintenance of facilities or activities related to wind, solar, wave and/or tidal power, and other renewable energy generation technologies that may be developed in the future. Nonetheless, the agreement excludes technologies being developed in hydroelectric power, biomass, cogeneration, and waste in Portugal and Spain.

It lays down the obligation to provide EDP with any information that it may request from EDPR to fulfil its legal obligations and prepare the EDP Group's consolidated accounts. The framework agreement shall remain in effect for as long as EDP directly or indirectly owns more than 50% of the share capital of EDPR or appoints more than 50% of its Directors.

Management services agreement

On November 4th, 2008 EDP and EDPR signed a Management Services Agreement that has been amended during the last years in accordance of the variations in the services rendered by EDP to the Company.

Through this contract, EDP provides management services to EDPR, including matters related to the day-to-day running of the Company. As of 31 December 2022, under this agreement EDP renders management services corresponding to five (5) people from EDP which are part of EDPR's Management: (i) two Executive Directors, who are also the CEO and CFO of EDPR, and (ii) three Non-Executive Directors, for which EDPR pays EDP an amount defined both by the Appointments and Remunerations Committee and by the Audit, Control and Related Party Transactions Committee, and approved by the Board of Directors and the Shareholders Meeting. Under this contract, EDPR incurred an amount of EUR 3,093,967,282 for the management services rendered in 2022.

Finance agreements and guarantees

The most significant finance agreements between EDP Group companies and EDPR Group companies were established under the above-described Framework Agreement and currently include the following:

Loan agreements

EDPR and EDPR Servicios Financieros SA ("EDPR SF" as the borrower) have loan agreements with EDP Finance BV and EDP Servicios Financieros España ("EDP SFE" as the lender), companies 100% owned by EDP. Such loan agreements can be established both in EUR and USD, up to 10-year tenor and are remunerated at rates set at an arm's length basis. As of December 31st 2022, such loan agreements totaled USD 3,093,967,282 and EUR 1,500,754,189.

Current account agreement

EDPR SF and EDP SFE signed an agreement through which EDP SFE manages EDPR SF's cash accounts. The agreement also regulates the current account scheme on arm's length basis. As of December 31st 2022, there are two different current accounts with the following balance and counterparties:

- in USD, for a total amount of USD 348,581,315.39 in favour of EDPR SF
- in EUR, for a total amount of 311,807,352.06 in favour of EDP SFE

The agreements in place are valid for one year as of date of signing and are automatically renewed for equal periods.

Counter-guarantee agreement

A counter-guarantee agreement was signed, under which EDP or EDP Energias de Portugal S.A., Sucursal en España (hereinafter guarantor or EDP Sucursal) undertakes on behalf of EDPR, EDP Renewables Europe SLU (hereinafter EDPR EU), and EDP Renewables North America LLC (hereinafter EDPR NA) to provide corporate guarantees or request the issue of any guarantees, on the terms and conditions requested by the subsidiaries, which have been approved on a case by case basis by the EDP's Executive Board.

EDPR will be jointly liable for compliance by EDPR EU and EDPR NA. The subsidiaries of EDPR undertake to indemnify the guarantor for any losses or liabilities resulting from the guarantees provided under the agreement and to pay a fee established in arm's length basis.

Nonetheless, certain guarantees issued prior to the date of approval of these agreements may have different conditions. As of December 31st 2022, such counter-guarantee agreements totaled in EUR equivalent 446.921.823.

A counter-guarantee agreement was signed between EDPR Group and EDP Sucursal, under which, EDPR Group can request the issue of any guarantee, on the terms and conditions requested by the subsidiaries of EDPR. EDPR group undertake to indemnify the guarantor for any losses or liabilities resulting from the guarantees provided under this agreement and to pay a fee established in arm's length basis. As of December 31st 2022, the amount of guarantees issued under this agreement totalled EUR 9,675,558.54.

Cross currency interest rate swaps

Due to the net investments in North America, Canada, Brazil, United Kingdom, Poland, Romania and in Colombian companies, EDPR's accounts were exposed to the foreign exchange risk. With the purpose of hedging this foreign exchange risk, EDPR Group companies settled the following Cross Currency Interest Rate Swap (CIRS). As of December 31st 2022 the total amount of CIRS by geography and currency are as following:

- in USD/EUR, with EDP for a total amount of USD 3,142,365,770
- in CAD/EUR, with EDP for a total amount of CAD 139,148,471.50
- in BRL/EUR, with EDP for a total amount of BRL 72,500,000
- in GBP/EUR, with EDP for a total amount of GBP 35,100,000
- in PLN/EUR, with EDP for a total amount of PLN 771,408,528
- in COP/EUR with EDP for a total amount of COP 25,598,000,000

Hedge agreements – exchange rate

EDPR Group companies entered into several hedge agreements with EDP, with the purpose of managing the transactional exposure related to the short term or transitory positions, in Brazil, Colombian, Canada, Hungary, Chile, APAC, Polish, United Kingdom and other subsidiaries, with USD exposure, fixing the exchange rate mainly for USD and EUR, in accordance to the prices in the forward market in each contract date. As of December 31st 2022, the total amount of Forwards ("FWDs") and Non Delivery Forwards ("NDFs") by geography and currency are as following:

- APAC operations, for EUR/JPY, a total amount of EUR 6,840,154 (FWDs), for EUR/KRW a total amount of EUR 2,246,471 (NDF), for EUR/SGD a total amount of EUR 746,296,712 (FWDs plus NDFs), and for EUR/TWD a total amount of EUR 18,977,221.05 (FWDs plus NDFs)
- Brazilian operations, for EUR/BRL, a total amount of EUR 279,358,887 (NDFs) and, for USD/BRL, a total amount of USD 14,138,445 (NDF)
- Colombian operations, for EUR/COP, a total amount of EUR 83,323,119 (NDFs)

- Canada operations, for USD/CAD, a total amount of USD 257,796,000 (FWDs) and EUR/CAD, a total amount of EUR 51,005,363 (FWDs)
- Hungary operations, for EUR/HUF, a total amount of EUR 21,985,908.46 (FWDs) and HUF/USD, a total amount of USD 19.313.279 (FWDs)
- Polish operations, for EUR/PLN, a total amount of EUR 307,336,474 (FWDs plus NDFs) and for USD/PLN, a total amount of USD 99,439,309 (FWDs)
- United Kingdom operations, for GBP/EUR a total amount of EUR 178,463,478.40 (FWDs)
- Chile operations, for EUR/USD, a total amount of EUR 12,251,692 (FWDs) and other Subsidiaries operations, for EUR/USD, a total amount of EUR 884.420.715 (FWDs) and for USD/EUR, a total amount of USD 177.902.024.

Hedge agreements – commodities

EDP and EDPR EU entered into hedge agreements for 2022 for a total volume of 3,939,689.69 MWh (sell position) and 1,237,673 MWh (buy position) at the forward market price at the time of execution related with the expected sales of energy in the Spanish market.

Consultancy service agreement

On June 4th 2008, EDP and EDPR signed a consultancy service agreement. Through this agreement, and upon request by EDPR, EDP (or through EDP Sucursal) shall provide consultancy services in the areas of legal services, internal control systems, financial reporting, taxation, sustainability, regulation and competition, risk management, human resources, information technology, brand and communication, energy planning, accounting and consolidation, corporate marketing, and organizational development.

The price of the agreement is calculated as the cost incurred by EDP plus a margin. For the first year, it was fixed at 8% based on an independent expert on the basis of market research. For 2022 the estimated cost of these services is EUR 13,403,800.59. This was the total cost of services provided for EDPR, EDPR EU, and EDPR NA.

The duration of the agreement is one (1) year tacitly renewable for equal periods.

Research and development agreement

On May 13th, 2008, EDP Inovação S.A. (hereinafter EDP Inovação), an EDP Group Company, and EDPR signed an agreement regulating relations between the two companies regarding projects in the field of renewable energies (hereinafter the R&D Agreement).

The object of the R&D Agreement is to prevent conflicts of interest and foster the exchange of knowledge between companies and the establishment of legal and business relationships. The agreement forbids EDP Group companies other than EDP Inovação to undertake or invest in companies that undertake the renewable energy projects described in the agreement.

The R&D Agreement establishes an exclusive right on the part of EDP Inovação to project and develop new renewable energy technologies that are already in the pilot or economic and/or commercial feasibility study phase, whenever EDPR exercises its option to undertake them. The fee corresponding to this agreement in 2022 is EUR 101,824.47.

The agreement shall remain in effect for as long as EDP directly or indirectly maintains control of more than 50% of both companies or appoint the majority of the members of the Board and Executive Committee of the parties to the agreement.

Management support services agreement between EDP Renováveis Portugal S.A., and EDP GLOBAL SOLUTIONS – GESTÃO INTEGRADA de Serviços S.A.

On January 1st, 2003, EDPR – Promoção e Operação S.A., and EDP Global Solutions – Gestão Integrada De Serviços S.A. (hereinafter EDP Global Solutions), an EDP Group Company, signed a management support service agreement.

The object of the agreement is the provision to EDPR – Promoção e Operação S.A. by EDP Global Solutions of services in the areas of procurement, economic and financial management, fleet management, property management and maintenance, insurance, occupational health and safety, and human resource management and training.

The remuneration accrued by EDP Global Solutions by EDPR Promoção e Operação S.A. and its subsidiaries for the services provided in 2022 totaled EUR 2,013,454.78. The initial duration of the agreement was five (5) years from date of signing on January 1st 2008, and tacitly renewable for equal periods of one (1) year. Either party may renounce the contract with one (1) year's notice.

Information technology management services agreement between EDP Renováveis S.A. and EDP Energias de Portugal S.A.

There exists an IT management services agreement effective since January 1st, 2020, which supersedes the existing IT management services agreement from that date.

The object of the agreement is to provide to EDPR the information technology services described on the contract and its attachments by EDP.

The amount incurred for the services provided in 2022 totaled EUR 9,958,208.13.

The initial duration of the agreement is one (1) year from date of signing and it is tacitly renewed for a new period of one (1) year. Either party may renounce the contract with one (1) month notice.

Consultancy agreement between EDP Renováveis Brasil S.A., and EDP Energias do Brasil S.A.

The object of the agreement is to provide to EDP Renováveis Brasil S.A. (hereinafter EDPR Brasil) the consultancy services described on the contract and its attachments by EDP – Energias do Brasil S.A. (hereinafter EDP Brasil).

Through this agreement, and upon request by EDPR Brasil, EDP Brasil shall provide consultancy services in the areas of legal services, internal control systems, financial reporting, taxation, sustainability, regulation and competition, risk management, human resources, information technology, brand and communication, energy planning, accounting and consolidation, corporate marketing, and organizational development.

The amount incurred by EDP Brasil for the services provided in 2022 totalled BRL 275.684.

The initial duration of the agreement is one (1) year from the date of signing and it is tacitly renewed for a new period of one (1) year.

General Services Agreement between EDPR Renováveis S.A. and EDP Energías de Portugal, S.A. Sucursal en España

On October 1st, 2022, EDPR and EDP Sucursal signed a General Services Agreement.

The object of the agreement is the provision by EDPR of preventive and corrective maintenance of the offices leased by EDP in Serrano Galvache (Madrid), as well as the management of accesses to the facilities, the supply of food and the use of canteen.

The remuneration accrued by EDPR by EDP Sucursal for the services provided in 2022 under this agreement totaled EUR 15,941.28. The duration of the agreement is unlimited from date of signing.

Additional Transactions analysed in 2022

Likewise, in the development of the delegation made by the Board of Directors to the Audit, Control and Related Party Transactions Committee regarding the supervision of Related Party Transactions, during 2022, the following were analyzed and approved by this body, and further reported to the Board of Directors:

- PPA between EDPR through EDPR EU (Seller), and EDP (Buyer) to support the investment decision of the repowering of 2 wind farms in Portugal (SE Coentral – Safrá, of 7,9 MW; and SE Alto de Coutada, of 22,8 MW);
- Update of the spreads applicable to medium and short term intercompany loans in USD and in EUR, executed between EDP Group (Lender) and EDPR SF (Borrower) in EUR and in USD;
- New Long Term Loan in USD between EDP Finance BV (Lender) and EDPR SF (Borrower) to renew USD 370M of loans with maturity on February 15th, 2022, and to cover the investment of USD 148M in a new opportunity in EDPR NA (Longroad – DG platform);
- Awarding to EDP Commercial the construction works of two High Voltage lines for the solar Project Cerca (Portugal);
- New long term loan in USD between EDP Finance BV (Lender) and EDPR SF (Borrower) of USD 500M for the repayment of the current account debt, and in accordance with the long term funding needs established under the Budget for 2022;
- Renegotiation of the cross-currency interest rate swap of EUR/USD 1.000 to a new tenor, between EDP Finance BV (payer in EUR) and EDPR SF (payer in USD);
- Memorandum of understanding between (i) EDPR and (ii) EDP, EDP Produção, EDP España y Generaciones Eléctricas Andalucía to regulate the partnerships that may be implemented in relation to hybrid and conversion projects;
- Data Process Agreement between EDP Inovação and EDPR. in the frame of the contract regulating the relationship between EDPR and EDP Inovação dated May 13th, 2008;
- PPA between EDPR Europe (Seller) and EDP S.A (Buyer) for a wind portfolio of 40 MWs in Spain;
- Amendment to the current account Agreement between EDP SF. (Lender) y EDPR SF. (Borrower), to include, with effects April 1st 2022, the terms applicable to: risk spread, maximum limits, prices applicable to positive and negative balance, as well as the implementation of a commitment fee;
- Incorporation of a Global Energy Management Platform (GEM) for the whole Group at EDP level to support the short-term and market access activities;
- Transfer of Access to Energy assets to EDP (including an internal team of 4 members, the stake in two companies – Solarworks! and Rensource–, two loans with Solarworks!, and a consultancy agreement with Tetra Tech);
- Internal services agreement between H2BU (Hydrogen Business Unit) and EDPP for the development of renewable hydrogen activities;
- PPA between EDPR (through Fotovoltaica Flutuante do Grande Lago, S.A.) as Seller, and EDP, as Buyer, for a floating solar (overpowering) of 12,4 MWac and a wind hybrid project of 50,4 MWac (Project Alqueva), located in Grande Lago (Portugal);
- PPA between EDPR (through EDPR SF) as Seller y and EDP as Buyer for the solar hybrid project of 19,6 MW Castillo de Garcimuñoz (Spain);
- Update of the spreads applicable to the long-term intercompany loans in EUR and USD, between companies of EDP Group to align with the trends of the market and the actual/real cost of funding;
- Market Representation Services Agreement between EDPR and EDP for Minas de Orgueirel, a solar PV hybridized Project located in Portugal;
- Amendment to the current account agreement signed between EDP SF (Lender) and EDPR SF (Borrower) to update the interest in accordance with the current markets rates;
- PPA between EDPR (through EDPR PT) as Seller and EDP. – GEM – as Buyer for the volumes produced during 15 years by Minas de Orgueirel, Cesaredas y Charneca das Lebres three solar PV hybrid projects located in Portugal;
- Substitution of Las Sardas wind farm by Acampo Sancho in an already executed PPA between EDPR (through EDPR SF) as Seller and EDP as Buyer (but being AZSA the final costumer);
- PPA between EDPR, (through EDPR SF) as seller and y EDP – GEM – as Buyer, for Rocio, a solar project of 24.6 MW located in Spain;
- 8º Amendment to the Management Services Agreement between EDP and EDPR in order to formalize the updates approved for the remuneration of the non- Executive Directors, and the CEO and CFO;
- Market Representation Services Agreement (including balancing cost and ancillary services) between EDPR (through EDPR España and its SPVs) as Seller and EDP España as Buyer for EDPR wind portfolio in Spain (429 MW);
- New Long-Term Loans between EDP Group (as Lender) and EDP SF (as Borrower) of USD 994M combined, 5Y, 8Y AND 9Y tenor;
- Long Term hedge in Spain for operational assets between EDPR SF and EDP S.A. ;
- Methodology to be applied to the sale of guarantees of origin to GEM.

91. Description of the procedures applicable to the supervisory body for the assessment of the business deals.

The most significant contracts signed between EDPR and its Qualified Shareholders are analyzed by the Audit, Control and Related- Party Transactions Committee according to its competences, as mentioned on topic 89 of the Chapter 5 of this Annual Report.

II. Data on business deals

92. Details of the place where the financial statements including information on business dealings with related parties are available, in accordance with IAS 24, or alternatively a copy of said data.

The information on business dealings with related parties is available on Note 39 of the Financial Statements.

PART II – Corporate Governance Assessment

I. Details of the Corporate Governance code implemented

Following the protocol signed between the CMVM and the Portuguese Institute of Corporate Governance (IPCG) on October 13th, 2017, the CMVM revoked its Corporate Governance Code (2013), which was replaced by a single applicable code, the new Corporate Governance Code of the IPCG, which entered into force on January 1st, 2018, and that was reviewed in 2020.

For the purposes of the proper preparation of corporate governance reports for the year beginning in 2022, and to be reported in 2023, they should continue to be prepared in accordance with the structure of contents referred the annex to CMVM Regulation No. 4/2013 available at the CMVM website (www.cmvm.pt). The report template is divided into two parts:

- Part I – mandatory information on shareholder structure, organisation and governance of the company. This information shall be referred within points 1 to 92 of this Corporate Governance Report in accordance with the structure included in that Annex.
- Part II – Corporate governance assessment: should include a declaration in which they must: (i) identify the applicable code, (ii) state whether or not they adhere to each of the recommendations of this code and, (iii) with respect to recommendations that do not follow, explain reasonably why.

The agreement between CMVM and IPCG on the new Corporate Governance Code may be found on the Protocol signed on October 13th, 2017, which is available at the website of CMVM (<http://www.cmvm.pt/>). Likewise, the reviewed version Corporate Governance Code of the IPCG is published on the website of IPCG and of the Monitoring Committees (<https://cam.cgov.pt/>)

II. Analysis of Compliance with the Corporate Governance code implemented

The following table shows the recommendations set forth in the Corporate Governance Code of the IPCG and indicates EDPR's compliance with it and the place in this report in which they are described in more detail.

Also in order to comply with the best Corporate Governance recommendations, and according to the results of the reflection made by the Appointments and Remunerations Committee, the governance model that was adopted has been ensuring an effective performance and articulation of EDPR Governing Bodies and proved to be adequate to the Company's governance structure without any constraints to the performance of its checks and balances system adopted to justify the changes made in the governance practices of EDPR.

The explanation of the Corporate Governance Code of the IPCG recommendations that EDPR does not adopt or that the Company deems not applicable, reasoning and other relevant comments as well as reference to the part of the report where the description may be found, are in the table below.

In this context, EDPR states that it has adopted the Corporate Governance recommendations on the governance of listed companies provided in the Corporate Governance Code of the IPCG, with the exceptions indicated in the following table.

CORPORATE GOVERNANCE RECOMMENDATIONS – STATEMENT OF COMPLIANCE

CHAPTER I – GENERAL PROVISIONS

1.1. Company's relationship with investors and disclosure

I.1.1

The Company should establish mechanisms to ensure the timely disclosure of information to its governing bodies, shareholders, investors and other stakeholders, financial analysts, and to the markets in general.

Adopted

Section B – II, a) Topic 15
Section C) – III, Topic 55
Section C–IV, Topic 56
Section C–V, Topics 59 – 65

1.2. Diversity in the composition and functioning of the company's governing bodies

I.2.1

Companies should establish standards and requirements regarding the profile of new members of their governing bodies, which are suitable according to the roles to be carried out. Besides individual attributes (such as competence, independence, integrity, availability, and experience), these profiles should take into consideration general diversity requirements, with particular attention to gender diversity, which may contribute to a better performance of the governing body and to the balance of its composition.

Adopted

Section B–II, a) Topics 16 and 17

I.2.2

The company's managing and supervisory boards, as well as their committees, should have internal regulations — namely regulating the performance of their duties, their Chairmanship, periodicity of meetings, their functioning and the duties of their members —, disclosed in full on the company's website. Minutes of the meetings of each of these bodies should be drawn out.

Adopted

Section B–II, a) Topic 15

I.2.3

The composition and the number of annual meetings of the managing and supervisory bodies, as well as of their committees, should be disclosed on the company's website

Adopted

Section B–II, a) Topic 15
Section B–II b), Topic 23
Section B–II, c) Topic 29
Section B – III, b) Topic 35
Section C–V, Topics 59 – 65

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

I.2.4

A policy for the communication of irregularities (whistleblowing) should be adopted that guarantees the suitable means of communication and treatment of those irregularities, with the safeguarding of the confidentiality of the information transmitted and the identity of its provider, whenever such confidentiality is requested.

Adopted

Section C-II, Topic 49

1.3. Relationships between the company bodies

I.3.1

The bylaws, or other equivalent means adopted by the company, should establish mechanisms that, within the limits of applicable laws, permanently ensure the members of the managing and supervisory boards are provided with access to all the information and company's collaborators, in order to appraise the performance, current situation and perspectives for further developments of the company, namely including minutes, documents supporting decisions that have been taken, calls for meetings, and the archive of the meetings of the managing board, without impairing the access to any other documents or people that may be requested for information.

Adopted

Section B-II, a) Topic 15

I.3.2

Each of the company's boards and committees should ensure the timely and suitable flow of information, especially regarding the respective calls for meetings and minutes, necessary for the exercise of the competences, determined by law and the bylaws, of each of the remaining boards and committees.

Adopted

Section B-II, a) Topic 15
Section B-II, c) Topic 29

1.4 conflicts of interest

I.4.1

The members of the managing and supervisory boards and the internal committees are bounded, by internal regulation or equivalent, to inform the respective board or committee whenever there are facts that may constitute or give rise to a conflict between their interests and the company's interest.

Adopted

Section B-II, a) Topic 18

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

I.4.2

Procedures should be adopted to guarantee that the member in conflict does not interfere in the decision-making process, without prejudice to the duty to provide information and other clarifications that the board, the committee or their respective members may request.

Adopted

Section B-II, a) Topic 18

1.5. Related party transactions

I.5.1

The managing body should disclose in the corporate governance report or by other means publicly available the internal procedure for verifying transactions with related parties.

Adopted

Section E-I, Topic 89

I.5.2

The managing body should report to the supervisory body the results of the internal procedure for verifying transactions with related parties, including the transactions under analysis, at least every six months.

Not applicable

This procedure is now regulated by law (art 249ªA, nº1 of the Código dos Valores Mobiliários) and therefore the recommendation has been surpassed by the Portuguese Law in force.

Should be noted that applicable law to EDPR to this extent is the Spanish Law. The procedure implemented by EDPR for the approval of Related Party Transactions is described in topic 89 of this Chapter 5 of the Annual Report.

Section E-I, Topic 89

CHAPTER II – SHAREHOLDERS AND GENERAL MEETINGS

II.1

The company should not set an excessively high number of shares to confer voting rights, and it should make its choice clear in the corporate governance report every time its choice entails a diversion from the general rule: that each share has a corresponding vote.

Adopted

As per the split of multiple recommendations, should be clarified that the part of this recommendation corresponding to II.1.(2) shall be considered as not applicable as each EDPR share corresponds to one vote.

Section B-I, b) Topics 12 and 13

II.2

The company should not adopt mechanisms that make decision making by its shareholders (resolutions) more difficult, specifically, by setting a quorum higher than that established by law.

Adopted

Please note EDPR's personal law is the Spanish one, and as such, the majorities and quorums applicable for the Shareholders' Meeting resolutions are not the ones set under Portuguese Law, but those established under the Spanish one, with which is completely aligned.

Section B-I, b) Topic 14

II.3.

The company should implement adequate means for the remote participation by shareholders in the general meeting, which should be proportionate to its size.

Not adopted

EDPR analyzed the needs and priorities of its shareholders worldwide, and therefore, since 2009, it is provided the possibility of fulfilling all the requirements necessary to validly exercise their right to vote by distance means (registry of intention to attend, submission of the certificate of title of shares, granting of representation proxies, and properly voting). The efficiency and interest of our

Section B-I, b) Topic 13

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

shareholders in these initiatives was clearly proved, as nearly almost all of the participation is exercised by these means.

In the same way, EDPR reviewed the track record of participation in the Shareholders' Meeting the day of its celebration (when generally all the votes are submitted beforehand by distance voting), the shareholding structure of the Company (under which a 75% is qualified shareholding held by EDP Energías de Portugal S.A and therefore the free float is only of 25%), and its shareholders' profiles; concluding that the implementation of a streaming system to digitally participate will imply a material cost where the demonstrated preferences of almost all EDPR shareholders is to submit their votes by distance means.

Notwithstanding the foregoing, EDPR has deeply analyzed the market trends during this year, and also with the aim of improving the compliance commitment with Corporate Governance recommendations, has been considering the possibility of providing this option to its shareholders. Considering that under Spanish law it is required to specifically regulate under the Company's bylaws the option of celebrating telematic Shareholders' Meetings, EDPR approved it in 2022, so that would be able to offer this option in the next meetings to be held thereafter, being planned to offer to EDPR shareholders the option of a telematic participation in streaming at the General Shareholders' Meeting to be held in 2023 (which is the first one in which EDPR will be legally able to offer it by its internal bylaws).

II.4.

The company should also implement adequate means for the exercise of remote voting, including by correspondence and electronic means.

Adopted

Section B-I, b) Topic 13

II.5.

The bylaws, which specify the limitation of the number of votes that can be held or exercised by a sole shareholder, individually or in coordination with other shareholders, should equally provide that, at least every 5 years, the amendment or maintenance of this rule will be subject to a shareholder resolution — without increased quorum in comparison to the legally established — and in that resolution, all votes cast will be counted without observation of the imposed limits.

Not applicable

Section A-I, Topic 5
Section B-I, b) Topic 12

II.6.

The company should not adopt mechanisms that imply payments or assumption of fees in the case of the transfer of control or the change in the composition of the managing body, and which are likely to harm the free transferability of shares and a shareholder assessment of the performance of the members of the managing body.

Adopted

Section A-I, Topic 4
Section D - IV, Topic 80
Section D - V, Topics 83- 84

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

CHAPTER III – NON-EXECUTIVE MANAGEMENT, MONITORING AND SUPERVISION

III.1

Without prejudice to the legal powers of the chair of the managing body, if he or she is not independent, the independent directors should appoint a coordinator from amongst them, namely, to: (i) act, when necessary, as an interlocutor near the chair of the board of directors and other directors, (ii) make sure there are the necessary conditions and means to carry out their functions; and (iii) coordinate the independent directors in the assessment of the performance of the managing body, as established in recommendation V.1.1.

Not applicable

Since, April 12th, 2021 EDPR has an independent Chairperson, António Gomes Mota.

Section B-II, a) Topic 18

III.2

The number of non- executive members in the managing body, as well as the number of members of the supervisory body and the number of the members of the committee for financial matters should be suitable for the size of the company and the complexity of the risks intrinsic to its activity, but sufficient to ensure, with efficiency, the duties which they have been attributed. The formation of such suitability judgment should be included in the corporate governance report.

Adopted

As per the split of multiple-recommendations, should be clarified that the part of this recommendation corresponding to III.2.(3) is not applicable, as EDPR does not have a German Governance Model.

Section B-II, a) Topic 18

III.3

In any case, the number of non-executive directors should be higher than the number of executive directors.

Adopted

Section B-II, a) Topic 18

III.4

Each company should include a number of non-executive directors that corresponds to no less than one third, but always plural, who satisfy the legal requirements of independence. For the purposes of this recommendation, an independent person is one who is not associated with any specific group of interest of the company, nor under any circumstance likely to affect his/her impartiality of analysis or decision, namely due to:

i. having carried out functions in any of the company's bodies for more than twelve years, either on a consecutive or nonconsecutive basis;

Not applicable

The independence criteria applicable to EDPR are those established under its personal law (Spanish law) that are materially equivalent to those identified in the IPCG Code. These criteria are the following:

- a) Not being employed or an executive director in the group, unless either 3 or 5 years respectively have elapsed;
- b) Not receiving from the company or company of the group, sum or benefit other than the remuneration of director, unless it is not material;
- c) Not being o have been during the last 3 years, a partner at the external auditors or responsible for the audit report, when the audit was carried out during said period in the listed company, or any other company in its group;
- d) Not being an executive director or senior management at other company where an executive director or senior management of the company is external director;

Section B-II, a) Topic 18

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

- | | |
|--|--|
| <ul style="list-style-type: none"> ii. having been a prior staff member of the company or of a company which is considered to be in a controlling or group relationship with the company in the last three years; iii. having, in the last three years, provided services or established a significant business relationship with the company or a company which is considered to be in a controlling or group relationship, either directly or as a shareholder, director, manager or officer of the legal person; iv. having been a beneficiary of remuneration paid by the company or by a company which is considered to be in a controlling or group relationship other than the remuneration resulting from the exercise of a director's duties; v. having lived in a non-marital partnership or having been the spouse, relative or any first degree next of kin up to and including the third degree of collateral affinity of company directors or of natural persons who are direct or indirect holders of qualifying holdings, or vi. having been a qualified holder or representative of a shareholder of qualifying holding. | <ul style="list-style-type: none"> e) Not maintaining or have maintained during the last year, a significant business relationship with the company or any company in its group, whether in their own name or as a significant shareholder, director or senior manager at an entity that maintains or has maintained said relationship; f) Not being a significant shareholder, executive director or senior management at an entity that receives or has received in the last 3 years, donations from the society or its group; g) Not being spouse or close relative of a similar nature or up to second degree kinship of who is executive director or senior manager at the company; h) Not having been proposed for appointment or renewal by the appointments committee; i) Not have been a director for a continuous period of more than 12 years; j) Not being a person that with regards to any significant shareholder or representative on the board, finds themselves in any of the scenarios detailed in aforementioned a), e), f) or g). In the case of the relationships detailed in point g), the limitation shall apply not just to the shareholder but also to their proprietary directors in the investee company |
|--|--|

III.5

The provisions of paragraph (i) of recommendation III.4 does not inhibit the qualification of a new director as independent if, between the termination of his/her functions in any of the company's bodies and the new appointment, a period of 3 years has elapsed (cooling-off period).

Not applicable

The independence criteria applicable to EDPR are those established under its personal law (Spanish law).

Section B-II, a) Topic 18

III.6

The supervisory body, in observance of the powers conferred to it by law, should assess and give its opinion on the strategic lines and the risk policy prior to its final approval by the management body.

Adopted

Section A -II, Topic 9

III.7

Companies should have specialised committees, separately or cumulatively, on matters related to corporate governance, appointments, and performance assessment. In the event that the remuneration committee provided for in article 399 of the Commercial Companies Code has been created and should this not be prohibited by law, this recommendation may be fulfilled by conferring

Adopted

Section B - II, a) Topic 15
Section B-II, c), Topics 27 and 29

CORPORATE GOVERNANCE RECOMMENDATIONS – STATEMENT OF COMPLIANCE

competence on such committee in the aforementioned matters.

CHAPTER IV – EXECUTIVE MANAGEMENT

IV.1

The managing body should approve, by internal regulation or equivalent, the rules regarding the action of the executive directors applicable to their performance of executive functions in entities outside of the group.

Adopted

Section B–II, b) Topic 26

IV.2

The managing body should ensure that the company acts consistently with its objects and does not delegate powers, namely, in what regards; i) the definition of the strategy and main policies of the company; ii) the organization and coordination of the business structure; iii) matters that should be considered strategic in virtue of the amounts involved, the risk, or special characteristics.

Adopted

Section A –II, Topic 9

IV.3

In the annual report, the managing body explains in what terms the strategy and the main policies defined seek to ensure the long-term success of the company and which are the main contributions resulting therein for the community at large.

Adopted

Chapter 2.2. of the Management Report

CHAPTER V – EVALUATION OF PERFORMANCE, REMUNERATION AND APPOINTMENT

V.1 Evaluation of performance

V.1.1

The managing body should annually evaluate its performance as well as the performance of its committees and executive directors, taking into account the accomplishment of the company's strategic plans and budget plans, the risk management, the internal functioning and the contribution of each member of the body to these objectives, as well as the relationship with the company's other bodies and committees.

Adopted

Section A –II, Topic 9
Section B–II b), Topic 24
Section D – I Topic 66
Section D – III, Topic 71

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

V.2 Remuneration

V.2.1

The company should create a remuneration committee, the composition of which should ensure its independence from the management, which may be the remuneration committee appointed under the terms of article 399 of the Commercial Companies Code.

Adopted

Section B – II, c) Topic 27
Section B – II, c) Topic 29
Section D – I, Topic 66

V.2.2

The remuneration should be set by the remuneration committee or the general meeting, on a proposal from that committee.

Adopted

Section D – I, Topic 66
Section D – III, Topic 69

V.2.3

For each term of office, the remuneration committee or the general meeting, on a proposal from that committee, should also approve the maximum amount of all compensations payable to any member of a board or committee of the company due to the respective termination of office. The said situation as well as the amounts should be disclosed in the corporate governance report or in the remuneration report.

Adopted

Section D – IV, Topic 80

V.2.4

In order to provide information or clarifications to shareholders, the chair or, in case of his/her impediment, another member of the remuneration committee should be present at the annual general meeting, as well as at any other, whenever the respective agenda includes a matter linked with the remuneration of the members of the company's boards and committees or, if such presence has been requested by the shareholders.

Adopted

Section B – I, a) Topic 11
Section B – II, a) Topic 29

V.2.5

Within the company's budgetary limitations, the remuneration committee should be able to decide, freely, on the hiring, by the company, of necessary or convenient consulting services to carry out the committee's duties.

Adopted

Section D – II Topic 67

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

V.2.6

The remuneration committee should ensure that those services are provided independently and that the respective providers do not provide other services to the company, or to others in controlling or group relationship, without the express authorization of the committee.

Adopted

Section D – II Topic 67

V.2.7

Taking into account the alignment of interests between the company and the executive directors, a part of their remuneration should be of a variable nature, reflecting the sustained performance of the company, and not stimulating the assumption of excessive risks.

Adopted

Section D – III, Topics 70 – 72

V.2.8

A significant part of the variable component should be partially deferred in time, for a period of no less than three years, being necessarily connected to the confirmation of the sustainability of the performance, in the terms defined by a company's internal regulation.

Adopted

Section D – III, Topic 72

V.2.9

When variable remuneration includes the allocation of options or other instruments directly or indirectly dependent on the value of shares, the start of the exercise period should be deferred in time for a period of no less than three years.

Not applicable

Section D – III, Topics 73 and 74

V.2.10

The remuneration of non- executive directors should not include components dependent on the performance of the company or on its value.

Adopted

Section D – III, Topic 69
Section D – IV, Topic 77

V.3 Appointments

V.3.1

The company should, in terms that it considers suitable, but in a demonstrable form, promote that proposals for the appointment of the members of the company's governing bodies are accompanied by a justification in regard to the suitability of the profile,

Adopted

Section B-II, a) Topics 16, 17

CORPORATE GOVERNANCE RECOMMENDATIONS – STATEMENT OF COMPLIANCE

the skills and the curriculum vitae to the duties to be carried out.

V.3.2

The overview and support to the appointment of members of senior management should be attributed to a nomination committee unless this is not justified by the company's size.

Adopted

Section B– II, c) Topic 29

V.3.3

This nomination committee includes a majority of non– executive, independent members.

Adopted

Section B– II, c) Topic 29

V.3.4

The nomination committee should make its terms of reference available, and should foster, to the extent of its powers, transparent selection processes that include effective mechanisms of identification of potential candidates, and that those chosen for proposal are those who present a higher degree of merit, who are best suited to the demands of the functions to be carried out, and who will best promote, within the organisation, a suitable diversity, including gender diversity.

Adopted

Section B–II, a) Topics 16, 17

CHAPTER VI – INTERNAL CONTROL

VI.1

The managing body should debate and approve the Company's strategic plan and risk policy, which should include the establishment of limits on risk-taking.

Adopted

Section A –II, Topic 9
Section C) – III, Topic 52

VI.2

The supervisory board should be internally organised, implementing mechanisms and procedures of periodic control that seek to guarantee that risks which are effectively incurred by the company are consistent with the company's objectives, as set by the managing body.

Adopted

Section B –III,b), Topic 35
Section C – II, Topic 52

VI.3

The internal control systems, comprising the functions of risk management, compliance, and internal audit should be structured in terms adequate to the size of the company and the complexity of the inherent risks

Adopted

Section B– II, c) Topic 29
Section B– III, Topic 30
Section B –III, b), Topic 35
Section C – III, Topics 50–55

CORPORATE GOVERNANCE RECOMMENDATIONS - STATEMENT OF COMPLIANCE

of the company's activity. The supervisory body should evaluate them and, within its competence to supervise the effectiveness of this system, propose adjustments where they are deemed to be necessary.

VI.4

The supervisory body should provide its view on the work plans and resources allocated to the services of the internal control system, including the risk management, compliance and internal audit functions, and may propose the adjustments deemed to be necessary.

Adopted

Section B – II, c) Topic 29
Section B – III, b) Topic 35

VI.5

The supervisory body should be the recipient of the reports prepared by the internal control services, including the risk management functions, compliance and internal audit, at least regarding matters related to the approval of accounts, the identification and resolution of conflicts of interest, and the detection of potential irregularities.

Adopted

Section B – II, c) Topic 29
Section B – III, b) Topic 35

VI.6

Based on its risk policy, the company should establish a risk management function, identifying (i) the main risks it is subject to in carrying out its activity; (ii) the probability of occurrence of those risks and their respective impact; (iii) the devices and measures to adopt towards their mitigation; and (iv) the monitoring procedures, aiming at their accompaniment.

Adopted

Section C) – III, Topics 52 – 55
Chapter 2 of this Annual Report

VI.7

The company should establish procedures for the supervision, periodic evaluation, and adjustment of the internal control system, including an annual evaluation of the level of internal compliance and the performance of that system, as well as the perspectives for amendments of the risk structure previously defined.

Adopted

Section C) – III, Topics 52, 54, 55

CORPORATE GOVERNANCE RECOMMENDATIONS – STATEMENT OF COMPLIANCE

CHAPTER VII – FINANCIAL INFORMATION

VII.1 Financial information

VII.1.1

The supervisory body's internal regulation should impose the obligation to supervise the suitability of the preparation process and the disclosure of financial information by the managing body, including suitable accounting policies, estimates, judgments, relevant disclosure and its consistent application between financial years, in a duly documented and communicated form.

Adopted

Section B – II, Topic 29
Section B – III, b) Topic 35

VII.2 Statutory Auditor, Accounts and Supervision

VII.2.1

By internal regulations, the supervisory body should define, according to the applicable legal regime, the monitoring procedures aimed at ensuring the independence of the statutory audit.

Adopted

Section B – II, c) Topic 29
Section B – III, c) Topics 37 and 38
Section B – IV – V, Topics 45, 46 and 47

VII.2.2

The supervisory body should be the main interlocutor of the statutory auditor in the company and the first recipient of the respective reports, having the powers, namely, to propose the respective remuneration and to ensure that adequate conditions for the provision of services are ensured within the company.

Adopted

Sections B – II, c) Topic 29
Section B – V, Topics 45, 46

VII.2.3

The supervisory body should annually assess the services provided by the statutory auditor, their independence and their suitability in carrying out their functions, and propose their dismissal or the termination of their service contract by the competent body when this is justified for due cause.

Adopted

Section B – II, c) Topic 29
Section B – III a), Topic 30
Section B – III, c) Topics 37 and 38
Section B – IV – V, Topic 45

Annex II

Report from Management concerning responsibility for the System of Internal Control over Financial Reporting

The board of directors and management are responsible for establishing and maintaining an adequate System of Internal Control over Financial Reporting (SCIRF).

The SCIRF of EDP Renováveis Group is a set of processes designed to provide reasonable assurance as to the reliability of the financial information and the preparation of the consolidated annual accounts for external purposes, in accordance with the applicable financial information reporting framework.

Due to the limitations inherent to all internal control systems, it is possible that the system of internal control over financial reporting does not prevent or detect all errors that could occur and may only provide reasonable assurance with respect to the presentation and preparation of the consolidated annual accounts. Furthermore, extrapolating the effectiveness assessment to future years entails a risk that controls may cease to be adequate due to changing conditions or erosion in the level of compliance with policies and procedures.

Management has assessed the effectiveness of the SCIRF at 31 December 2022 based on the criteria established in the Internal Control - Integrated Framework issued in 2013 by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

As a result of this assessment, and based on the aforementioned criteria, management concludes that at 31 December 2022 EDP Renováveis Group had an effective system of internal control over financial reporting.

The SCIRF of EDP Renováveis Group at 31 December 2022 has been audited by the independent auditors PricewaterhouseCoopers Auditores, S.L., as indicated in their report included in the Annual Corporate Governance Report.

Chief Executive officer

Miguel Stilwell De Andrade

Chief Financial Officer

Rui Manuel Rodrigues Lopes Teixeira

Independent Reasonable Assurance Report On The Design And Effectiveness Of The System Of Internal Control Over Financial Reporting (SICFR)

To the Board of Directors of EDP Renováveis, S.A.:

We have carried out a reasonable assurance engagement to report on the design and effectiveness of the System of Internal Control over Financial Reporting (hereinafter SICFR) and the description thereof included in the accompanying Report that forms part of the corresponding section of the Corporate Governance Report, prepared in accordance with applicable Portuguese legislation, of the consolidated management report accompanying the consolidated financial statements of EDP Renováveis, S.A and subsidiaries (hereinafter the EDPR Group) at 31 December 2022. This system is based on the criteria and policies defined by the EDPR Group pursuant to the guidance of the *Committee of Sponsoring Organizations of the Treadway Commission* (COSO) provided in its “*Internal Control-Integrated Framework*” report.

A System of Internal Control over Financial Reporting is a process designed to provide reasonable assurance on the reliability of financial information, in accordance with the applicable financial reporting framework and includes those policies and procedures that: (i) permit the maintenance, in reasonable detail, of records that accurately reflect the transactions performed; (ii) provide reasonable assurance that the transactions are appropriately recorded to permit the preparation of financial information, in accordance with the applicable financial reporting framework and that these transactions are only performed pursuant to the pertinent authorisation; and (iii) provide reasonable assurance in relation to the timely prevention or detection of unauthorised acquisitions, use or disposals of the Group's assets which could have a material effect on the financial information.

Inherent limitations

In this respect, it should be borne in mind that in view of the inherent limitations of all Systems of Internal Control over Financial Reporting, irrespective of the quality of their design and operation, they may only provide reasonable assurance but not absolute assurance, in relation to the objectives pursued. Therefore errors, misstatements or fraud may not be detected. Also, projections of any evaluation of the internal control to future periods are subject to the risk that controls may become inadequate because of future changes in applicable conditions or that the degree of compliance with the policies or procedures may deteriorate.

Responsibility of the Directors

The directors of EDP Renováveis, S.A. are responsible for taking the measures that are necessary to reasonably ensure the implementation, maintenance and supervision of an adequate system of internal control over financial reporting, as well as for the development of improvements to this system and the preparation and generation of the content of the accompanying Information concerning the SICFR.

Our responsibility

Our responsibility is to issue a reasonable assurance report on the design and effectiveness of the System of Internal Control over Financial Reporting of the EDPR Group, based on the work carried out and evidence obtained. We have performed our reasonable assurance engagement in accordance with International Standard on Assurance Engagements 3000 (ISAE 3000) (Revised), “Assurance Engagements other than Audits or Reviews of Historical Financial Information”, issued by the International Auditing and Assurance Standards Board (IAASB) of the International Federation of Accountants (IFAC).

A reasonable assurance engagement includes understanding the System of Internal Control over Financial Reporting, assessing the risk that there may be material internal control weaknesses, and that controls are not adequately designed or do not operate effectively, performing tests and evaluations of the design and effective application of that system, based on our professional judgement, and carrying out those other procedures which may be considered necessary.

We consider that the evidence obtained provides a sufficient and appropriate basis for our opinion.

Independence and Quality Control

We have complied with the independence requirements and other ethical requirements of the International Code of Ethics for Professional Accountants (including International Independence Standards) issued by the International Ethics Standards Board for Accountants (the IESBA Code), which is based on the fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behaviour.

Our firm applies the International Standard on Quality Control 1 (ISQC 1) and therefore has in place a comprehensive quality control system which includes documented policies and procedures designed to ensure compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Opinion

In our opinion, at 31 December 2022 the EDPR Group maintained, in all material respects, an effective System of Internal Control over Financial Reporting for the year ended 31 December 2022, which is based on the criteria and policies defined by EDPR Group management in accordance with the guidance from the *Committee of Sponsoring Organizations of the Treadway Commission (COSO)* provided in its "*Internal Control – Integrated Framework*" report.

Similarly, the description of the accompanying SICFR Report at 31 December 2022 has been prepared, in all material respects, in accordance with the requirements established in the IPCG Code of Recommendations and Appendix I of CMVM Regulation No. 4/2013 for the purposes of describing SICFR in Corporate Governance Reports.

Our work does not constitute an audit and is not subject to prevailing auditing regulations in Spain. We do not therefore express an audit opinion in the terms envisaged in said Law.

Remuneration Report

Remuneration Report

276

Remuneration Report

In compliance with both the Portuguese Securities Code, and the Spanish Companies Act, EDP Renováveis S.A. ("EDPR" or "Company") issues this Remuneration Report with the aim to provide a comprehensive view of the remuneration received by the members of its Governing Bodies, including all benefits, regardless of their form, attributed or due during the 2022 financial year.

The Remuneration Policy of EDPR for 2022 was defined by its Appointments and Remunerations Committee, and presented to its Board of Directors for its final approval at the Shareholders' Meeting level.

Approval procedure of the Remunerations Policy of the Board of Directors

The definition of the proposal of the Remuneration Policy for the members of the Board of Directors of EDPR is incumbent on the Appointments and Remunerations Committee which is a delegated body of the Board of Directors, that in order to avoid any conflict of interest, is entirely composed by non-executive and independent members. Under such competences this Committee takes the responsibility for proposing to the Board of Directors the determination of the remuneration of the Executive Directors of the Company; the Remuneration Policy, the evaluation and compliance of the KPI's (Key Performance Indicators); the annual and multi annual variable remuneration, and also proposes the remuneration of the Non-Executive Directors and members of the Board Committees.

As such, this Committee prepares a proposal that defines the remuneration to be attributed to Directors, with the purpose that it reflects the performance of each of them, establishing for the Executive Directors a variable component which is consistent with the maximization of the Company's long term performance (variable annual and multi-annual remuneration for a three-year period), for the achievement of the most challenging objectives of the business plan, thereby guaranteeing the alignment of the performance of the governing bodies with the interests of the shareholders.

The Board of Directors is responsible for the approval of the above-mentioned proposals except to the extent it concerns the Remuneration Policy which is approved by the General Shareholders' Meeting as an independent item of the agenda.

As a Company integrated in a multinational business group, EDPR aims to maintain a solid culture that ensures the management, monitoring, control and supervision of the risks that the Group, its shareholders, employees, customers and, in general, all its stakeholders face, including those arising from the remuneration systems it adopts. EDPR adopts the transversal remuneration practices applied in EDP group, consistent and based on common principles that comply with the regulations applicable in the jurisdictions where it operates.

As such, the remuneration systems applied, including those applicable to the Executive Directors, are defined to promote a culture of merit and high performance that ensures that people and teams are recognized, encouraged and awarded on the basis of responsibility, availability, loyalty and competence placed at Group's service, ensuring actions aligned with the long-term interests of shareholders and promoting sustainable initiatives.

The proposal for remuneration policy of the Executive Directors also aimed at simplifying, and provide transparency and clarity, favouring a complete understanding of the framework of principles and rules that constitute it, and which will be applied and evaluated by the Appointments and Remunerations Committee.

Definition, revision and renewal of the Policy

The definition of the Remuneration Policy of EDPR is submitted for approval by the General Meeting, on a proposal from the Board of Directors, based on the proposal presented by the Appointments and Remunerations Committee. Likewise, and in line with EDP Group corporate governance practices, EDPR has signed a Management Services Agreement with EDP under which the Company bears the cost for such services to some of the members of the Board of Directors (Executive and Non-Executive) to the extent their services are devoted to EDPR; and the Audit, Control and Related Party Transactions Committee (which is also entirely composed by non-executive and independent members) is involved in any revision and/or amendment of this agreement.

The definition and possible proposals for revision of the Remuneration Policy by the Appointments and Remunerations Committee are based on the articulation of EDPR long-term objectives, measured according to its strategic plan at all times, in the conclusions of comparative remuneration studies with national listed companies and with foreign sectoral

peers and on an articulation of principles with the remuneration plan of other employees of the Group.

The Appointments and Remunerations Committee may hire the external consultants and support necessary for the performance of comparative remuneration studies within the framework of directors' remuneration policies, assessing their conditions of independence for the provision of the services that may be requested.

Regulatory Framework and principles of the Remuneration Policy applied in 2022

EDPR is a Spanish Company listed in a regulated stock exchange in Portugal. The corporate organization of EDPR is subject to its personal law and to the extent possible, to the recommendations contained in the Corporate Governance Code of the Instituto Português de Corporate Governance ("IPCG"). As such, the Company intends to comply with both legal systems but always taking into account that its personal law is the Spanish one, and that in case of discrepancy, the aim is to adopt the law that entails more protectionism for its shareholders.

The Remuneration Policy applied in 2022 (duly approved by its Shareholders' Meeting) complies with Article 26 – C of the Securities Code (as amended by Law No. 99 A/2021 of 31st December), with article 529 novodecies of the Spanish Companies Act, with the IPCG Corporate Governance Code adopted by EDPR and with the international good practices, being aligned and consistent with the remuneration policy and remuneration practices applied to all employees of the Group.

Total remuneration, and the remuneration model in general, should be competitive, aligned with the practices of the international electricity sector and the renewables market, facilitating the attraction and retention of talent, and the commitment to the challenges and ambitions of the company.

A. Remuneration structure and disclosure

Pursuant to Article 26 of the Company's Articles of Association the Directors shall be entitled to a remuneration which consists of a fixed amount to be determined annually by the General

Shareholders' Meeting for the whole Board of Directors. This article also establishes the possibility of the Directors of receiving attendance fees or being remunerated with Company shares, share options, or other securities granting the right to obtain shares or by means of share-indexed remuneration systems. In any case, the system chosen must be approved by the General Shareholders' Meeting and comply with current legal provisions.

The remuneration policy applicable for 2022 defines a structure with a fixed remuneration for all members of the Board of Directors, whereas for the Executive Directors defines a fixed and a variable remuneration, with an annual component, and a multi-annual component.

The Non-Executive Directors only receive a fixed remuneration, which is calculated on the basis of their work exclusively as Directors or, if such is the case, considering their membership/chairmanship of the Appointments and Remunerations Committee, the Audit, Control and Related Party Transactions Committee and the Environmental, Social and Corporate Governance Committee. Except in the case of the Chairperson of the Board of Directors, the directors that are also members/chairperson of the Delegated Committees receive for these functions a complement to their fixed remuneration as members of the Board.

As already indicated, EDPR has signed a Management Services Agreement with EDP, under which the Company bears the cost for such services to some of the members of the Board of Directors to the extent their services are devoted to EDPR. In 2022 these Directors were Miguel Stilwell d'Andrade and Rui Teixeira (Executive Directors), and Vera Pinto, Ana Paula Marques and Miguel Setas (non-Executive Directors).

The total amount of the remunerations that the Company will pay to its Directors shall not exceed the amount determined by the General Shareholders' Meeting. For these purposes, the General Shareholders' Meeting held on May 13th, 2008 set a maximum annual amount for the Board of Directors for fixed remuneration of EUR 2,500,000; and at its meeting held on April 8th, 2014 also resolved to establish a maximum annual amount for variable remuneration of EUR 1,000,000 for executive directors.

For 2023 onwards, the maximum annual amount for fix and variable remuneration for the Board of Directors has been set in EUR 3,500,000 by the approval of the General Shareholders' Meeting held on March 31st 2022. This amount results of the merge of the former EUR 2,500,000 that was established for fix remuneration and the EUR 1,000,000 that was established for variable annual remuneration.

I) Remuneration of EDPR Directors for their functions as Members of the Board

This section includes the information regarding the remuneration received by EDPR Board members in 2022 for their functions at the Board of Directors.

a) Fixed component – base remuneration

Conditions

The fixed remuneration of the members of the Board of Directors is aligned with the basic remuneration practiced by a number of companies comparable to EDPR, the national market and the international electricity sector; in terms of size, market capitalization, risk profile, relevance and geographical implementation, while also considering, at all times, the complexity of the functions performed, the remuneration conditions of its employees and the non-increase of the average market pay gap between workers and administrators.

The Non-Executive Directors only receive a fixed remuneration, which is calculated on the basis of their work as Directors and if such is the case, a complement as Member or Chairperson of the Appointments and Remunerations Committee, the Audit, Control and Related Party Transactions Committee and/or the Environmental, Social and Corporate Governance Committee. Such amounts are cumulative, except for the Chairman of the Board of Directors who does not receive any complement derived from his role at any Committee.

Figures 2022

Hereunder it is detailed the list of EDPR Directors that composed the Board during 2022, and the amounts paid by EDPR either (i) as remuneration to them or (ii) as fee to EDP under the Management Services Agreement for their services (not remuneration), for their functions performed at the Board of Directors level:

Kay Mc Call (**) (***)	37,917€	-
Joan Avalyn Dempsey(****)	2,446€	
Sub- Total	595,363€	869,000€
Total		1,464,363€

*These amounts correspond to the service fee paid by EDPR to EDP under the Management Services Agreement for the services rendered in 2022 by such director. In addition, EDPR pays to EDP a 5% of such service fee which is applied to the retirement savings plan for Executive Directors described in topic 76 of this Chapter 5 of the Annual Report.

**These Directors also received remuneration for their participation in the Delegated Committees that is detailed at section A) II) of this Chapter 6 of the Annual Report.

***The remuneration reflected for this Director corresponds to 2022, provided that she was appointed by co-option on May 3rd, 2022 (with effects June 1st, 2022).

**** Joan Avalyn Dempsey presented the resignation to her positions as Board Member with effects January 13th, 2022, and therefore the amounts indicated in the table above reflect the remuneration accrued in 2022 until her resignation.

b) Variable component

Conditions

The annual variable remuneration has the nature of incentive/performance premium linked to financial and non-financial objectives (linked to the Business Plan and budget) of short-term, evaluated annually, reflecting in the year under analysis and possible repercussion in the following years, being paid in cash.

The amount of the annual performance premium shall be determined within three months of the approval of EDPR's accounts at the ordinary General Meeting in each year, by reference to the previous year/annual performance period.

Variable annual and multi-annual remuneration will be a percentage of fixed annual component, with a superior weight for multiannual vs. annual component (120% vs. 80%). Thus, the value of the variable remuneration may range between 0% and 85% of the 80% in the case of the annual variable, and between 0% and 85% of the 120% in the case of the multi-annual variable. Such percentages are applied over the gross annual fixed remuneration. According to the Remuneration Policy approved by the General Shareholders' Meeting, the maximum variable remuneration (annual and multi-annual) is applicable if all the KPI's were achieved, and the performance evaluation is equal or above 110%.

In line with corporate governance practices, the Remuneration Policy incorporates the deferral for a period of three years of the multi-annual variable remuneration, being the relevant payment conditioned to the lack of any wilful illicit action, known after the appraisal and which endangers the sustainable performance of the company.

The key performance indicators (KPIs) used to determine the amounts of the annual and multi-annual variable remuneration for each year of the term are proposed by the Appointments, and Remunerations Committee with the aim of aligning them with the strategic pillars of the Company: growth, risk control and efficiency. The remuneration policy establishes that the indicators shall be set in accordance with 6 clusters: (i) Shareholders, (ii) People, (iii) Environment & Communities, (iv) Assets and Operations, (v) Innovation & Partners, and (vi) Clients; each of such clusters shall have at least one indicator. The KPIs considered for the variable remuneration paid in 2022 (as a result of the performance developed in 2021), as well as those to be considered in 2023 for the appraisal of the performance of year 2022, were the following:

			KEY PERFORMANCE INDICATOR	CEO/CFO	
	WEIGHT			WEIGHT	EDPR RESULTS
Total Shareholder return	15%	100%	TSR vs. Wind peers & PSI 20	100%	100%
Shareholders	80%	60%	Operatin Cash Flow (€ million)	10%	100%
			AR/Sell-down + Tax Equity (€ million)	10%	100%
			EBITDA+ sell down gains (€ million)	10%	100%
			Net Profit (€ million)	10%	100%
			Core Opex Adjusted (€ thousand/MW)	10%	100%
			Projects with FID (% of total '19-'22 additions in BP)	10%	100%
Clients	80%	10%	Renewable Capacity Built (in MW)	10%	100%
Assets & Operations		10%	Technical Energy Availability (%)	5%	100%
			Capex per MW (€ thousand)	5%	100%
Environment & Communities		5%	Certified MW %	5%	100%
Innovation & part-ners		5%	H&S frequency rate (employees + contractors)	5%	100%
People ¹ Management	80%	10%	People Management	10%	100%
Remuneration Committee		5%	100%	Appreciation remuneration committee	100%

¹ The policy has considered the labour conditions and the remuneration of the Company employees in order to define its terms, and in particular, has established this KPI, but it includes the results of the Climate Survey launched to the employees in which the satisfaction level with the performance and applicable conditions is reflected.

Figures 2022

The variable remuneration only applies to Executive Directors, and the evaluation of compliance with the indicators and related level of performance is appraised by the Appointments and Remunerations Committee, which in turn submits it to the Board of Directors for approval.

- *Variable Annual*

As of December 31st 2022, the Executive Directors of EDPR were Miguel Stilwell d'Andrade and Rui Teixeira. As a result of the analysis of their performance, the following amounts were paid in 2022 by EDPR to EDP as management fee, for the variable annual component amounts accrued for their services provided in 2021:

DIRECTOR	VARIABLE COMPONENT
	FEES MANAGEMENT SERVICES AGREEMENT EDP-EDPR
EXECUTIVE DIRECTORS	
Miguel Stilwell d' Andrade	173,664.84€
Rui Teixeira	131,153.13€
Total	304,817.97€

- *Variable multiannual*

The multiannual variable component (three years) applies to Executive Directors. As the current Executive Directors of EDPR (Miguel Stilwell d' Andrade and Rui Teixeira) were appointed in 2021, no multiannual variable component was still paid to them for their functions performed at EDPR.

Non-Monetary Benefits

No non-monetary benefits are paid by EDPR to its Board Members, except for a company car

for the Chairman of the Board of Directors, (whose total related cost for four years was borne and reported in 2021) and the retirement savings plan for Executive Directors referred in the following section.

Retirement Savings Plan

The retirement savings plan applicable to 2022, which is included within the Remuneration Policy applicable for 2022, was defined and proposed by the Appointments and Remunerations Committee to the Board of Directors for its submission to the General Shareholder's Meeting. For the Executive Directors of EDPR (Miguel Stilwell d' Andrade and Rui Teixeira) it was established in a 5% of the fixed fee under the Management Services Agreement. For the year 2022, EDPR paid a fee to EDP under the Management Services agreement of 19,200€ corresponding to the retirement saving plan of Miguel Stilwell d' Andrade, and of 14,500€ corresponding to the retirement saving plan Rui Teixeira.

II) Remuneration of EDPR Directors for their functions as Members of the Delegated Committees

Conditions

In line with Spanish Law and as specifically foreseen in Article 10 of the Company's Articles of Association, the Board of Directors of EDPR is entitled to create delegated bodies. The Board of Directors of EDPR has set up three committees that are composed exclusively by non-executive and independent members:

- Audit, Control and Related-Party Transactions Committee
- Appointments and Remunerations Committee
- Environmental, Social and Corporate Governance Committee

Except in the case of the Chairperson of the Board of Directors, the directors that are also members/chairperson of the Delegated Committees receive for these functions a complement to their fixed remuneration as members of the Board.

Figures 2022 – Audit, Control and Related Party Transactions Committee

Below the list of members of the Audit, Control and Related Party Transactions Committee as of December 31st 2022, and the amounts paid by EDPR as remuneration to them for the functions performed at this body in 2022:

COMMITTEE MEMBER	POSITION	REMUNERATION
Acácio Piloto	Chairperson	50,000€
Rosa García García	Vocal	25,000€
José Félix Morgado	Vocal	25,000€

Figures 2022 – Appointments and Remunerations Committee

Below the list of members of the Appointments and Remunerations Committee as of December 31st 2022, and the amounts paid by EDPR as remuneration to them for the functions performed at this body in 2022. As indicated at the beginning of this section, the Chairman of this Committee, António Gomes Mota, does not receive a complement to its remuneration as Chairperson of the Board for the functions performed at this Committee:

COMMITTEE MEMBER	POSITION	REMUNERATION
António Gomes Mota	Chairperson	0
Rosa García García	Vocal	10,000€
José Félix Morgado	Vocal	10,000€

Figures 2022 – Environmental, Social and Corporate Governance Committee

Below the list of members of the Environmental, Social and Corporate Governance Committee as of December 31st 2022, and the amounts paid by EDPR as remuneration to them for the functions performed at this body in 2022. This Committee was incorporated on October 25th, 2022, and therefore the amounts indicated reflect the remuneration perceived for the services provided to this body since that date until year end. Likewise, as indicated at the beginning of this section, the Chairman of this Committee, António Gomes Mota, does not receive a complement to its remuneration as Chairperson of the Board for the functions performed at this Committee:

COMMITTEE MEMBER	POSITION	REMUNERATION
António Gomes Mota	Chairperson	0
Rosa García García	Vocal	1,667 €
José Félix Morgado	Vocal	1,667 €
Allan J.Katz	Vocal	1,667 €
Kay Mc Call	Vocal	1,667 €

B. Alignment of the application of the remuneration with the Remuneration Policy adopted. Contribution of the Remuneration Policy to the long-term performance of the Company and criteria taken into account.

In 2022, the Board of Directors Remuneration Policy in place for this term was duly applied.

As a summary of all the above breakdowns detailed, it is hereby provided a summary table including the total amounts paid by EDPR in 2022 either (i) as remuneration to them for Director functions at the Board level and Delegated Committees or (ii) as fee to EDP under the Management Services Agreement for their services (not remuneration):

DIRECTOR	(i) REMUNERATION	(ii) FEES MANAGEMENT SERVICES AGREEMENT EDP-EDPR		
EXECUTIVE DIRECTORS		FIXED COMPONENT	ANNUAL VARIABLE COMPONENT	RETIREMENT SAVINGS PLAN
Miguel Stilwell d'Andrade	-	384,000€*	173,664.84€	19,200€
Rui Teixeira	-	290,000€*	131,153.13€	14,500€
NON – EXECUTIVE DIRECTORS				
António Mota	230,000€			
Vera Pinto	-	65,000€		
Ana Paula Marques	-	65,000€		
Miguel Setas	-	65,000€		
Manuel Menéndez	65,000€			
Acácio Piloto	120,000€			
Allan J.Katz	66,667€			
Rosa García	101,667€			
José Morgado	101,667€			
Kay Mc Call	39,583€			
Joan Avalyn Dempsey	2,446€			
Sub- Total 1	727,030€	869,000€	304,818€	33,700€
Sub- Total 2	727,030€		1,207,518€	
Total		1.934.548€		

The total amount paid by EDPR in 2022 either (i) as remuneration and (ii) as fee to EDP under the Management Services Agreement, for the services performed by its Directors as members of its Board (including the retirement savings plan) was of 1,629,730€, which is below the maximum amount agreed by the Shareholders' Meeting for 2022 (2,500,000€). Likewise, the total amounts that were paid as fee to EDP under the Management Services Agreement for the variable remuneration paid to the Executive Directors in 2022 was of 304,818€ which is also aligned with the maximum amount agreed by the General Shareholders' Meeting for these purposes (1,000,000€).

The remuneration policy adopted by EDPR for 2022 included key elements to enhance a Company's management performance not only focused on short-term objectives, but also incorporate as part of its results the interests of the Company and of shareholders in the medium and long term. These elements are: (i) the definition of the indicators in accordance with the 6 clusters, (ii) the relative weight assigned to each KPIs to calculate annual and multiannual variable remuneration (iii) the relevance associated with the achievement of such KPIs (iv) the three-year term considered for determining the value of variable multi-annual component of the remuneration (v) the deferral in three years for the payment of the variable multi-annual as recommended by CMVM as a good corporate governance practices, as well as conditioning its payment to the fact of there has not been unlawful actions known after the performance evaluated that may jeopardize the sustainability of the company's performance, (vi) the use of the qualitative criteria focused on a strategic and medium term perspective of the development of the Company, and (vii) the existence of a maximum limit for the variable remuneration.

C. Performance of the company and remuneration average of the employees

Total shareholder return

Employee average remuneration (€)

Please note that this data has been restated due to an improvement in the calculation methodology.

D. Remuneration from other Group Companies

The members of the Board of Directors as of end of December 2022 do not receive any payment from any company under EDPR control or subject to EDPR common control.

E. Share-allocation and/or Stock Option Plans

EDPR does not have any Share-Allocation and/or Stock Option Plans.

F. Refund of a variable remuneration

In line with corporate governance practices, the Remuneration Policy of EDPR incorporates the deferral for a period of three years of the multi-annual variable remuneration, being the relevant payment conditioned to the lack of any willful illicit action, known after the appraisal and which endangers the sustainable performance of the company.

G. Compliance with the applicable Policy during 2022

The remuneration policy for 2022 was applied without exceptions since its approval.

Other remunerations

i) Remuneration of the Chairman of the General Shareholders' Meeting

Since 2021, EDPR decided to adopt the general practice followed under the personal law of the Company (Spanish one) that allows the Shareholders Meeting to be chaired by the Board of Directors Chairman. Therefore, there are no additional remunerations applies for the chairmanship of the General Shareholders' Meeting, as it is performed by the Chairperson of the Board of Directors (António Gomes Mota).

ii) External Auditor remuneration in 2022 for EDP Renováveis S.A. and subsidiaries

According to the Spanish law, the External Auditor ("Auditor de Cuentas") is appointed by the General Shareholders' Meeting and corresponds to the statutory auditor body ("Revisor Oficial de Contas") described on the Portuguese Law.

As a result of a competitive process launched in 2017, and following the proposal of the Audit, Control and Related Party Transactions Committee to the Board of Directors, PricewaterhouseCoopers Auditores, S.L. was appointed as EDPR SA External Auditor by the Shareholder's Meeting held on April 3rd, 2018. PricewaterhouseCoopers Auditores, S.L., is a Spanish Company registered at the Spanish Official Register of Auditors under number S0242 with Tax Identification Number B-79031290. The renewal of PricewaterhouseCoopers Auditores, S.L. as External Auditor of EDPR SA for years 2021, 2022 and 2023 was approved by EDPR's Shareholders Meeting on April 12th, 2021, and the audit partner in charge of EDPR is Iñaki Goiriena.

On July 2022, EDPR approved an internal regulation to rule the provision of services and relationship with the External Auditor, with regards to both audit and non-audit services to be hired, and the reporting and approval procedure to be applied. These regulations also establish the independence criteria to be considered.

Figures 2022

SERVICE	EUROPE	NORTH AMERICA	LATAM	APAC	TOTAL	%
Audit and statutory audit of accounts	1,603,000€	1,795,000€	368,000€	994,000€	4,760,000€	94.67%
Other non-audit services	218,000€	12,000€	38,000€	-	268,000€	5.33%
Total	1,821,000€	1,807,000€	406,000€	994,000€	5,028,000€	100%

The amount of other non-audit services in Europe includes among others, services that refer to the entire Group such as the review of the internal control system on financial reporting and review of the non-financial information related to sustainability included in EDPR Annual Report, which are invoiced to a European company. This amount also includes the limited review as of June 30th, 2022 of the EDPR Consolidated Financial Statements and other reviews for Group consolidation purposes which are considered non-audit services according to the respective local regulation.

Total amount for Europe includes 857.000 Euros of services provided by PricewaterhouseCoopers Auditores S.L. from which 676.000 Euros refer to audit services and 181.000 Euros refer to non-audit services.

Members of the Board of Directors of the Company EDP Renováveis, S.A.

DECLARE

To the extent of our knowledge, the information referred to in paragraph 1 of Article 29-G of Decree-Law no. 486/99 of November 13, in sub-paragraph a) of paragraph 1 of Article 8 of the Royal Decree 1362/2007 of October 19th, and other documents relating to the submission of accounts required by current regulations (including, among others, article 253 of the *Spanish Companies' Act* and article 44 of the *Spanish Commercial Code*), have been prepared in accordance with applicable accounting standards and principles, reflecting a true, faithful and appropriate view of the equity, assets, liabilities, financial position and results of EDP Renováveis, S.A. and the companies included in its scope of consolidation and the management report fairly presents the business evolution, the performance, the business results and the position of EDP Renováveis, S.A. and the companies included in its scope of consolidation, containing a description of the principal risks and uncertainties that they face.

That the Consolidated Annual Financial Statements and the Consolidated Management Report submitted, including the Non-Financial Statements, were drawn up by the Board of Directors following the single electronic format and mark up requirements set under the Commission Delegated Regulation (EU) 2019/815 of December 17th, 2018, at its meeting held on February 27th 2023.

PUBLIC

Ms. María González Rodríguez, Secretary non director of the Board of Directors of EDP Renováveis, S.A.

HEREBY CERTIFIES

That on February 27th, 2023 a meeting of the Board of Directors of EDP Renováveis, S.A. was held in Madrid, being present or represented all the Directors: Mr. Antonio Sarmiento Gomes Mota, Mr. Miguel Stilwell de Andrade, Mr. Rui Manuel Rodrigues Lopes Teixeira, Ms. Vera de Moraes Pinto Pereira Carneiro, Ms. Ana Paula Garrido de Pina Marques, Mr. Miguel Nuno Simões Nunes Ferreira Setas, Mr. Manuel Menéndez Menéndez, Mr. Acacio Liberado Mota Piloto, Mr. Allan Katz, Ms. Rosa María García García, Mr. José Manuel Félix Morgado and Ms. Cynthia Kay Mc Call.

That it was unanimously agreed to draw up the Individual and Consolidated Annual Financial Statements and the Individual and Consolidated Management Report (including the Non-Financial Information Report which is incorporated in the same) of EDP Renováveis, S.A. and its subsidiaries for the fiscal year 2022, expressly stating the approval and without any disconformity being raised.

That the Individual Annual Financial Statements and the Individual Management Report submitted, were drawn up following the single electronic reporting format requirements set under the Commission Delegated Regulation (EU) 2019/815 at the referred Board of Directors meeting.

That the Consolidated Annual Financial Statements and the Consolidated Management Report (including the Non-Financial Information Report which is incorporated in the same) submitted, were drawn up following the single electronic reporting format and mark up requirements set under the Commission Delegated Regulation (EU) 2019/815 also at the referred Board of Directors meeting.

That Individual and Consolidated Annual Financial Statements and the Individual and Consolidated Management Report for the financial year 2022 submitted are consistent with those audited, and that the Auditor's Reports attached to the xHTML files (including the Independent Verification Report ("EINF") and the report about the Internal Control System over Financial Reporting ("SCIIF")) are copy of the original signed by the Auditor.

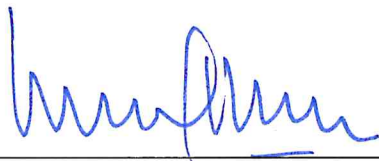

That the documentation described above was signed by all the members of the Board (either by those who were present, or by the related representatives) except in the case of Ms. Vera de Moraes Pinto Pereira Carneiro; Mr. Allan J. Katz and Ms. Cynthia Kay Mc Call, that attended the meeting by video conference as permitted under the By Laws, but expressly stating their agreement with drawing up the Individual and Consolidated Accounts. In that sense, the relevant minutes contains the favorable vote of such drawing up, issued by each of the Directors

(either by those present or through the related representatives) during the meeting.

That EDP Renováveis S.A. is hereby submitting its Individual and Consolidated Annual Financial Statements and the Individual and Consolidated Management Reports for the fiscal year 2022 in ESEF format which were drawn up both in Spanish and English languages and duly drawn up by the Board of Directors of the company at its meeting held on February 27th, 2023.

This certification, the authenticity of which I hereby guarantee, is issued at Madrid on February 27th, 2023.

Secretary Non-director

María González Rodríguez

Our change

PUBLIC

Concepts and definitions

Concepts and definitions

A

Asset Rotation

Strategy aimed at crystallizing the value of a project by selling a minority stake in an asset and reinvesting the proceeds in another asset, targeting greater growth.

Availability

The percentage of time a wind turbine is technically available to capture the wind resource and convert it to electricity.

B

Blades

The large “arms” of wind turbines that extend from the hub of a generator. Most turbines have either two or three blades. Wind blowing over the blades causes the blades to “lift” and rotate.

BOP

Balance of plant. All the supporting components and auxiliary equipment of the wind farm other than the generating unit.

BP

Business Plan.

BU

Budget.

C

CAGR

Compound annual growth rate.

Carbon leakage

Occurs when due to the higher costs related with climate change policies (for example taxes or other penalties on carbon emissions), the companies decide to move their production to countries with more relaxed policies, therefore leading to higher carbon emissions ex-post.

Capex

Capital Expenditure. Funds used by a company to acquire or upgrade physical assets such as property, industrial buildings, or equipment (ex: construction of wind farms).

Cash-flow

Amount of cash generated and used by a company in a given period. Cash flow can be used as an indication of a company’s financial strength.

CfD

Contract for difference. Remuneration scheme based on the difference between the market price and an agreed “strike price” where if the “strike price” is higher than the market price, the CfD. Counterparty pays the generator the price difference.

CO₂

Carbon dioxide. A heavy colorless gas that does not support combustion, dissolves in water to form carbonic acid, is formed especially in animal respiration and in the decay or combustion of animal and vegetable matter, is absorbed from the air by plants in photosynthesis, and is used in the carbonation of beverages.

COD

Commercial Operating Date. Date at which the project starts officially operating, after the testing and commissioning period.

Core opex

Includes costs of supplies and services and with personnel, costs that are controllable by the company.

Critical suppliers

Includes suppliers of turbines, balance of plant and O&M.

Curtailment

The forced shut-down of some or all the wind turbine generators within a wind farm to mitigate issues associated with turbine loading export to the grid, or certain planning conditions. Curtailment is controlled by the regional transmission operator.

CO2e avoided (by renewables)

Emissions that would have occurred if the electricity generated by renewable energy sources in each geography was produced from the mix of thermoelectric power plants in that geography.

D

Dividend pay-out ratio.

Measures the percentage of a company's net income that is given to shareholders in the form dividends. $(\text{Total Annual Dividends per Share} / \text{Earnings per Share})$.

Dividend policy

Set of guidelines a company uses to decide how much of its earnings it will pay out to shareholders.

E

EBITDA

An accounting measure calculated using a company's net earnings, before interest expenses, taxes, depreciation and amortization are subtracted, as a proxy for a company's current operating profitability.

EMS

Environmental Management System. System that assures the protection of the environment through a proactive environmental management of the facilities in operation.

EPS

Earnings per share. The portion of a company's profit allocated to each outstanding share of common stock.

Equity consolidation

Accounting process of treating equity investments, in associate companies. Equity account is usually applied where the entity holds 20–50% of voting stock.

F

Feed in tariffs

Remuneration framework that guarantees that a company will receive a set price from their utility, applied to all of the electricity they generate and provide to the grid.

Financial investment

An asset in which to put money into with the expectation of obtaining gains or an appreciation into a larger sum of money.

Forex/FX

The market in which currencies are traded.

Full scope

Scheme of maintenance in which a third-party supplier is directly responsible for the full maintenance of the project. The project pays a fixed fee and assumes low risk.

G

GC

Green certificate. Tradable commodity proving that certain electricity is generated using renewable energy sources.

GCF

Gross Capacity Factor – The ratio of a site's gross output over a period of time, to its potential output if it were possible for it to operate at full capacity continuously over the same period of time.

GHG

Greenhouse gases. Gases that trap the heat of the sun in the Earth's atmosphere, producing the greenhouse effect; the two major greenhouse gases are water vapor and carbon dioxide; lesser greenhouse gases include methane, ozone, chlorofluorocarbons, and nitrogen oxides.

GO/GoO

Guarantee of Origin. Tracking instrument that guarantees that electricity has been produced from renewable energy sources. Those GO are traded and used by suppliers to sell green energy.

Gross profit

An accounting measure calculated using a company's revenue minus its cost of goods sold. Gross profit is a company's residual profit for selling a product or service and deducting the cost associated with its production and sale.

GW

Unit of electric power equal to 1,000 MW.

GWh

Equal to 1,000 MW used continuously for one hour.

H

Hedging

Risk management strategy used in limiting or offsetting probability of loss from fluctuations in the prices of commodities, currencies, or securities.

I

IFRS16

Regulatory standard of operating leases that requires the recognition of lease commitments for the entire duration of contracts into the balance sheet liabilities as well as the recognition of a new asset "Right of Use Asset" as counterparty.

Installed capacity

Capacity installed and ready to produce energy.

ISO 14001

ISO 14001:2015 – Environmental Management Certification is an international standard for designing and implementing an effective environmental management system (EMS) to enhance the company's environmental performance.

ISO 45001

ISO 45001:2018 – Specifies requirements for an occupational health and safety (OH&S) management system, and gives guidance for its use, to enable organizations to provide safe and healthy workplaces by preventing work-related injury and ill health, as well as by proactively improving its OH&S performance.

ITC

Investment tax credit. Tax incentive in the US which differ from the Production Tax Credit in the sense that the Tax Equity Investor receives a one shot tax credit that covers a percentage of the investment.

L

LCOE

Levelized cost of electricity. Provides a common way to compare the cost of energy across technologies. LCOE takes into account the installed system price and associated costs such as financing, land, insurance, transmission, operation and maintenance, and depreciation. The LCOE is a true apples-to-apples comparison of electricity costs and is the most common measure used by electric utilities or purchasers of power to evaluate the financial viability and attractiveness of a wind energy project.

M

M3

Modular maintenance model. Maintenance scheme which is halfway between the self-perform and a full scope maintenance, with some activities being performed in-house.

MW

Unit of electric power equal to 106 watts.

MWh

Equal to 106 watts of electricity used continuously for one hour.

N

Net capacity factor (NCF)

The ratio of a plant's actual output over a period of time, to its potential output if it were possible for it to operate at full nameplate capacity continuously over the same period of time. Also known as Load Factor.

Net debt

A metric that shows a company's overall debt situation calculated using company's total debt less cash on hand.

Net investment

Equals (Capex + Financial investments – Financial divestments).

O

O&M

Operations and maintenance. All the activities necessary to run the wind farm in a reliable, safe and economical way including for instance maintenance, repair, monitoring and operation.

PPA

Power purchase agreement. A legal contract between an electricity generator (provider) and a power purchaser (host). The power purchaser buys energy, and sometimes also capacity and/or ancillary services, from the electricity generator.

PTC

Production tax credit. The result of the Energy Policy Act of 1992, a commercial tax credit in the US that applies to wholesale electrical generators of wind energy facilities based upon the amount of energy generated in a year.

R

Renewable energy

Energy that is derived from resources that are regenerative or that cannot be depleted including wind energy, solar, biomass, geothermal, and moving water. Also known as alternative energy.

REC

Renewable energy credit. Represents the property rights to the environmental, social, and other non-power qualities of renewable electricity generation. A REC can be sold separately from the electricity associated with a renewable energy generation source.

RES

Renewable energy sources.

RCF

Retained cash-flow. The amount to pay dividends to shareholders and/or to fund new investments and includes EBITDA after paying interests and tax equity investor's costs and after paying distributions to equity partners and taxes.

ROIC Cash

Return on Invested Capital (based on Cash Flows). Represents a measure of the profitability and value creation of a project or company.

RPS

Renewable Portfolio Standard. Regulation in the US that places an obligation in certain states on electricity supply companies to source a specific percentage of their energy from renewable sources.

S

Self-perform

Maintenance scheme in which all the maintenance works are done in-house which means that the project assumes the whole risk.

Sell-down

Divestment strategy by which the company sells majority stakes of projects in operation or under development to recycle capital, with up-front cash flow crystallization, and creates value by reinvesting the proceeds in accretive growth, while continuing to provide operating and maintenance services.

SF₆

Sulfur hexafluoride. Colorless, odorless, non-flammable and potent greenhouse gas which is used in the electrical industry especially in gas insulated switchgear power installations.

Solar DG

Solar Distributed Generation. Facilities that generate electricity by means of solar power through Distributed Generation (DG), a system that generates power near the point of consumption.

Solar PV

Solar photovoltaic. Plant that generates electricity by means of solar power through photovoltaics, consisting of an arrangement of several components, including solar panels to absorb and convert sunlight into electricity, a solar inverter, cables and other electrical accessories.

T

TSR

Total Shareholder Return. Measures the return that the stock provides to the shareholder, including dividends paid and the stock price appreciation.

Tax equity

Financing structure (US) where the tax equity investor contributes capital in exchange of tax benefits and cash distributions during the 1st ten years the park operates, or until investment is recovered.

TEI

Tax Equity Investor – Financing structure (US) where the tax equity investor contributes capital in exchange of tax benefits and cash distributions during the 1st ten years the park operates, or until investment is recovered.

Transition risks

Climate risks related to the transition to a lower-carbon economy, that may entail extensive policy, legal, technology and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, and focus of these

changes, transition risks may pose varying levels of financial and reputational risk to organizations.

UN SDG

United Nation's Sustainable Development Goal.

W

WATT (W)

The rate of energy transfer equivalent to one ampere under an electrical pressure of one volt. One watt equals 1/746 horsepower, or one joule per second. It is the product of voltage and current (amperage). Watts are the yardstick for measuring power.

Wind energy

Power generated by converting the mechanical energy of the wind into electrical energy using a wind generator.

Wind farm

Used in reference to the land, wind turbine generators, electrical equipment, and transmission lines for the purpose of generating wind energy and alternative energy.

Important Information

- In January-22, EDPR concluded an Asset Rotation deal in Europe of a 100% equity stake in a 211 MW wind portfolio. Capital gains are booked in 2021 along with MW deconsolidation. Equity proceeds have been received in January 2022.

2021 Highlights

Operational Results

EDPR had, by Dec-21, a portfolio of operating assets of 13.6 GW, with 9 years of avg. age, of which 12.5 GW fully consolidated and 1.1 GW equity consolidated (Spain, Portugal, US and Offshore). EDPR added a total of 2,584 MW of wind and solar capacity out of which 2,273 MW fully consolidated, specifically 682 MW in Europe, 1,204 MW in North America, 359 MW in Brazil, and 28 MW in APAC, namely in Vietnam. Equity consolidated increased by 311 MW on the back of offshore projects that entered in operation.

Pursuing its Asset rotation strategy, in the US, EDPR successfully concluded the sale of an 80% equity stake in a 405 MW operational wind portfolio, the sale of an 80% equity stake in a 200 MWac solar project and the sale of a 100% equity stake in a 302 MW wind B&T project. In Europe, EDPR successfully concluded the sale of a 100% equity stake in a 221 MW wind portfolio in Portugal (capital gains in 2021; equity proceeds in 2022) and the sale of a 25% equity stake of a project in Spain (11 MW net). All in all, EDPR YoY consolidated portfolio net variation was +1,411 MW.

As of Dec-21, EDPR had 1.8 GW of capacity under construction, of which 1,592 MW of wind onshore and 232 MW of solar.

In the year, EDPR produced 30.3 TWh of clean electricity (+6% YoY), avoiding 18mt of CO₂ emissions. The YoY evolution benefits from the capacity additions over the last 12 months along with a fairly stable renewable resource.

The average selling price increased +1% YoY driven by higher prices in the Rest of Europe and Brazil, partially offset by new capacity, the Spanish portfolio mix YoY and the impact of Spain regulatory and financial hedges.

Revenues to Net Profit

Revenues increased to €1,758m (+2% YoY; +€27m), where the impact from additional capacity MW (+€198m YoY) along with higher average selling price (+€33m YoY; ex-Sell-down), were not offset by the slightly lower renewable resource (-€12m YoY), Sell-down transactions (-€132m YoY), unfavourable forex translation and others (-€60m YoY).

Other operating income amounted to €636m (+€137m YoY). Operating Costs (Opex) totalled €675m (+19% YoY) given upfront costs to cope with expanded growth over the coming years. In comparable terms, Core Opex per avg. MW adjusted by Sell-down, offshore costs, service fees, one-offs and forex was flat YoY.

EBITDA summed €1,760m (+6% YoY) and EBIT €1,151m (+9% YoY) mainly driven by higher capital gains partially offset by top line performance in North America on the back of the US weather one-off event in the 1Q, lower average renewable resource in US and unfavourable forex translation. Net Financial Expenses decreased to €249m (-€36m vs 2020) with YoY comparison affected by lower tax equity costs and forex positive contribution.

At the bottom line, Net Profit summed €655m (+18% YoY) mainly due to higher capital gains, lower financials and a higher generation YoY. Non-controlling interests in the period totalled €154m, increasing by €27m YoY as a result of top line performance.

Cash-Flow & Net Debt

As of Dec-21, Net Debt totalled €2,935m (-€508m vs Dec-20) reflecting the investment strategy compensated by the Capital increase received in April and asset rotation proceeds.

Institutional Partnership Liabilities summed €1,537m (+€394m vs Dec-20), reflecting benefits captured by the projects and the deconsolidation of asset sold in the period.

The Board of Directors will propose a dividend distribution in the ASM of €86.5m, corresponding to €0.09 per share.

Sustainable Development Goals

As a clean energy company, EDPR is stepping-up to the challenge of the decarbonization of the economy, establishing an ambitious growth strategy that has a positive impact not only on the Sustainable Development Goals directly related to its business such as Climate Action and Affordable and Clean Energy, but also on others SDGs through a solid business model operated with the highest ESG standards.

Comments:

- In January 2021, EDPR was featured for the second consecutive year as part of the Bloomberg Gender Equality Index (GEI), a benchmark index that selects the listed companies most involved in the development of gender equality in the world.
- In 2021, EDPR received the title of Top Employer Europe for the third consecutive year as one of the best places to work. At a local level, EDPR was awarded a top employer in Spain, France, Portugal, Italy, Poland and Romania, a new addition in 2021. The Company was also recognized as a 2021 Top Workplace in the United States. These certifications value EDPR's excellence in the use of best practices in the field of Human Resources, thanks to a corporate culture that prioritises people above all else.

Comments:

- CO₂ avoided: YoY variation due to increase in energy generated (+6% YoY) offset by lower emission factors (-7% YoY).
- CO₂ emitted: Variation impacted by growth and resumption of business travel, partially offset by lower emission factors.
- Waste: 12M21 data in line with previous years (12M20 data impacted by Covid-19).
- Significant spills and fires: There was a fire incident at a solar plant in Mexico that resulted in a fatality of a snake protected under the country law. The incident is in analysis and corrective / preventive measures will be defined.

(1) CO₂ avoided calculated as energy generation * CO₂ eq. emission factors of each country and state within the US. Please note that these factors vary in accordance with the country/state's energy mix;

(2) Refers to operation data only;

(3) EDPR defines significant spills and fires as any spill affecting water bodies/courses, protected soils or soils of interest because of its natural value, or fire affecting protected areas and/or species (according to local protection laws), derived from the operation & maintenance activities in the facilities;

(4) Vegetal area restored after repowering works.

Comments:

- Turnover: YoY variation impacted by lower turnover in 2020 due to the pandemic.
- Training: YoY variations due to increase in global online courses of shorter duration at EDPR and EDP level, and increased participation in language courses.
- Fatal work-related injuries: The investigation carried out considered that the working methods and resources used did not in themselves represent a factor that contributed to the occurrence of the accident.
- Frequency rate: impacted by +58% accidents YoY, partially offset by +44% worked hours.
- Severity rate: 12M21 Severity rate adjusted (excluding 873 lost workdays derived from 2020 injuries); Non-adjusted severity rate: 132.
- H&S inspections to suppliers: YoY increase mainly due to an ongoing contractor evaluations program in North America.
- Investment in Access to Energy: Cumulative investment: SolarWorks! in Mozambique (€2.2 million) and Rensource in Nigeria (\$2.9 million).
- Social investment: YoY variation impacted by EDPR's Covid-19 Response Plan among local communities in 2020.

(1) Turnover calculated as: departures/headcount; 2020 data excludes transfers to JV with Engie;

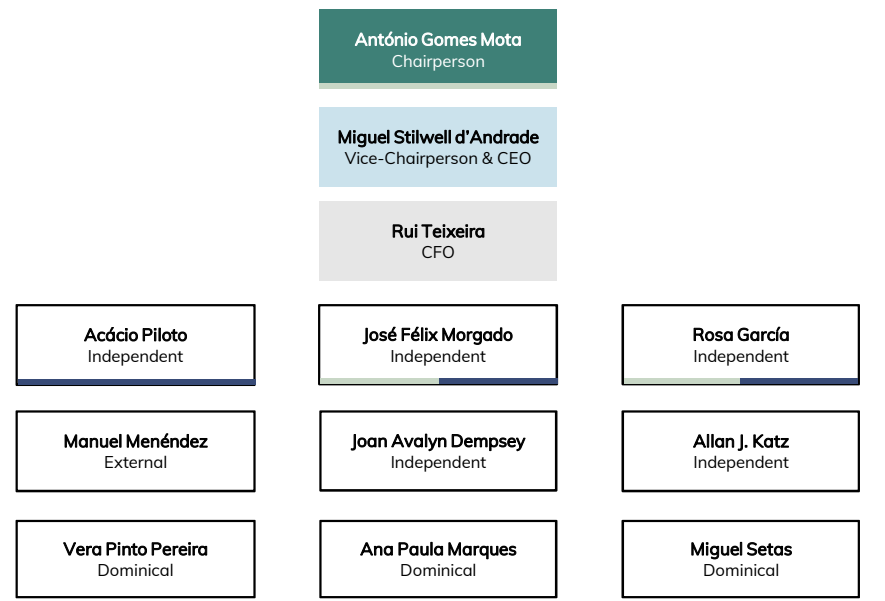

(2) Includes employees and contractors data, excludes commuting accidents, and excludes 1Q20 UK data;

(3) Frequency Rate calculated as [# of Work-related injuries with lost workdays/Hours worked * 1,000,000];

(4) Severity Rate calculated as [# of Lost workdays due to work-related injuries/Hours worked * 1,000,000].

Highlights

Comments:

On April 12, 2021, in EDPR's General Shareholders' Meeting and the BoD meeting held afterwards, the proposals for re-election and appointments of directors of the Company were approved:

- António Gomes Mota was appointed as Chairperson and Independent Director;
- Miguel Stilwell d'Andrade was appointed as Executive Vice-Chairperson and re-elected as CEO;
- Rui Teixeira was re-elected as Executive Director and CFO;
- Acácio Piloto, Allan J. Katz and Joan Avalyn Dempsey were re-elected as Independent Directors;
- Manuel Menéndez was re-elected as External Director;
- Vera Pinto Pereira and Ana Paula Marques were re-elected as Dominical Directors;
- Miguel Setas was appointed as Dominical Director.

On January 17th 2022, EDPR informed that the Company received the resignation of Mrs. Joan Avalyn Dempsey as member of EDPR's Board of Directors.

As announced on January 11, 2022, EDPR implemented a new operating model and is now organized in three Regions – Europe & Latin America, North America, and Asia-Pacific. In this context, and to reinforce its commitment to growth and to being a people-centric, global, agile and future-proof organization, EDPR renewed its Management Team. Miguel Stilwell d'Andrade (CEO) and Rui Teixeira (CFO) will work alongside the three COOs - Duarte Bello, leading Europe & Latin America; Sandhya Ganapathy, leading North America; and Pedro Vasconcelos, leading Asia-Pacific -, as well as Bautista Rodriguez, serving as Chief Technical Officer (CTO) and responsible for the offshore business through EDPR's JV Ocean Winds.

EDPR is committed to ESG best practices and focused on the continuous improvement of its corporate governance, and the resolutions mentioned above contribute to a more agile, independent and diverse corporate governance structure.

edp renewables

Annex

Remuneration Frameworks

Country	Short Description
 Portugal	<ul style="list-style-type: none"> Wind farms commissioned before 2006 are subject to a FIT whose value is correlated with production and indexed with CPI. Initial tenure was the soonest of 15y (or until 2020) or 33 GWh/MW but it was increased 7y (tariff extension) with a cap and floor scheme in exchange of annual payments between 2013-20 ENEOP: price defined in an international competitive tender and set for 15y (or the first 33 GWh/MW) + 7y tariff extension with cap a floor scheme, in exchange of annual payments between 2013-20. Tariff is CPI monthly update for following years & VENTINVESTE: price defined in an international competitive tender and set for 20y (or the first 44 GWh/MW) Wind farms under the new regime (COD after 2006) are subject to a FIT for the soonest of 20y from COD of 44 GWh/MW. Tariff is also indexed wit CPI Solar PV projects awarded in the latest auction (Jul-19) are subject to a flat FIT during 15y. Projects will bear the cost of imbalances
 Spain	<ul style="list-style-type: none"> Wind energy receives pool price and a premium per MW in order to achieve a target return defined by regulation. Already published for 2020-22 period RDL 17/2019 has set the target return (TRF) @7.398% for WF's prior to 2013 and @7.09% for new installations until 2031 Premium calculation is based on standard assets (standard load factor, production and costs) Since 2016, all the new renewable capacity is allocated through competitive auctions First auction of the new REER scheme celebrated in Jan-21 and Oct-21, awarding 12y CfDs
 Brazil	<ul style="list-style-type: none"> Old installed capacity under a feed-in tariff program ("PROINFA") Since 2008, competitive auctions awarding 20y PPAs Sales can be agreed under PPAs
 USA	<ul style="list-style-type: none"> Sales can be agreed under PPAs (up to 20y). Hedges or Merchant prices Green Certificates (Renewable Energy Credits, REC) subject to each state regulation Tax Incentives: PTC collected for 10y since COD (\$26/MWh in 2021) & Wind farms beginning construction in 2009 and 2010 could opt for 30% cash grant in lieu of PTC Tax Incentives: ITC for solar projects based upon its capex. This equates to 26% for projects that start construction before 2022 and 22% for projects starting construction in 2023, if COD is at least in 2025
 Canada	<ul style="list-style-type: none"> Feed-in Tariff (Ontario). Duration: 20y Renewable Energy Support Agreement (Alberta)
 Mexico	<ul style="list-style-type: none"> Technological-neutral auctions (opened to all technologies) in which bidders offer a global package price for the 3 different products (capacity, electricity generation and green certificates) EDPR project: bilateral Electricity Supply Agreement under self-supply regime for a 25y period
 Vietnam	<ul style="list-style-type: none"> 20y FIT and long term PPAs
 Offshore	<ul style="list-style-type: none"> UK: 15y CPI indexed. CfD allocated by tender @£57.5/MWh (2012 tariff-based) France: 20y indexed feed-in tariff Belgium: 17y CfD, CPI indexed Poland: 25y CfD, CPI indexed US: 20y PPA

Country	Short Description
 Poland	<ul style="list-style-type: none"> Electricity price can be established through bilateral contracts Wind farms before 2018 are subject to a GC scheme. Wind receive 1 GC/MWh during 15y that can be traded in the market. Electricity suppliers have a substitution fee for non-compliance with GC obligations Wind farms awarded in 2018/2019/2020 auctions are subject to a two-side CfD with a tenure of 15y
 UK	<ul style="list-style-type: none"> FIT scheme, granted for 20y and comprising two regulated components: generation tariff (indexed to RPI) and export tariff. New assets could opt for 15-years CfD via auction or PPAs
 France	<ul style="list-style-type: none"> The majority of existing wind farms receive Feed-in tariff for 15y: <ul style="list-style-type: none"> First 10y: €82/MWh; Years 11-15: depending on load factor €82/MWh @2,400 hours to €28/MWh @3,600 hours; indexed Wind farms under the CR 2016 scheme receive 15y CfD which strike price value similar to existing FIT fee plus a management premium Auctions (20y CfD)
 Belgium	<ul style="list-style-type: none"> Mkt price + green certificate (GC) scheme. The min-price for GC is set @€65 Option to negotiate long-term PPAs
 Italy	<ul style="list-style-type: none"> Wind farms in operation prior to 2012YE are under a feed-in-premium scheme applicable for the first 15y of operation. Wind farms commissioned from 2013 onwards awarded in competitive auctions until 2017 are subject to a 20y floor CfD scheme Wind farms awarded in 2019-20 auctions have 20y 2-side CfD scheme
 Hungary	<ul style="list-style-type: none"> Solar PV assets benefit from 15y CfD indexed with CPI-1% awarded through auctions under METAR scheme
 Greece	<ul style="list-style-type: none"> 20y non-indexed CfD, allocated through tenders
 Romania	<ul style="list-style-type: none"> Wind assets (installed until 2013) receive 2 GC/MWh until 2017 and 1 GC/MWh after 2017 until completing 15y. 1 out of the 2 GC earned until Mar-17 can only be sold from Jan-18 until Dec-25. Solar assets receive 6 GC/MWh for 15y. 2 out of the 6 GC earned until Dec-20 can only be sold after Jan-21 until Dec-30. GC are tradable on market under a cap and floor system (cap €35/floor €29.4) Wind assets (installed in 2013) receive 1.5 GC/MWh until 2017 and after 0.75 GC/MWh until completing 15y The GCs issued starting in Apr-17 and the GCs postponed to trading from Jul-13 will remain valid and may be traded until Mar-32
 Chile	<ul style="list-style-type: none"> 20y PPA with retailers awarded via auction (pre-2021) and 15y PPA for 2021 auction assets
 Colombia	<ul style="list-style-type: none"> Colombian wind farms have been awarded 15y long-term contracts though competitive pay-as-bid auction. Contracts are signed with several Colombian distribution counties Additionally, Colombian wind farms secured reliability charge contract, a monthly payment in exchange of having part of its capacity available when the system is under tight supply conditions

Important Information

- From Jan-20 onwards, Share of Profit of Associates will be accounted at EBITDA level. Only for YoY comparison purposes, 2019 data from this report is also adjusted.
- In Jul-19, EDPR announced the Sell-down of a 137 MW wind farm in Brazil, which cash-in occurred in February 12th 2020.

2020 Highlights

Operational Results

EDPR had, by Dec-20, a portfolio of operating assets of 12.2 GW, with 9 years of avg. age, of which 11.5 GW fully consolidated and 669 MW equity consolidated (Spain, Portugal, US and Offshore). Since Dec-19, EDPR added a total of 1,580 MW, including the 486 MW from the acquisition of the renewables business of Viesgo. During such period, pursuing its Sell-down strategy, EDPR successfully concluded the Sell-down of its entire ownership in the 137 MW Babilonia wind farm, 237 MW in a Spanish portfolio, 80% sell-down of a 563 MW portfolio in the US (of which 200 MW will become operational in 2021) and a 102 MW *Build and Transfer* wind farm in US. All in all, as of Dec-20, EDPR YoY consolidated portfolio net variation was of +806 MW.

As of Dec-20, EDPR had 2.4 GW of new capacity under construction, of which 1,648 MW related to wind onshore, 404 MW to solar PV and 311 MW to equity participations in offshore projects.

In the period, EDPR produced 28.5 TWh of clean electricity (-5% YoY), avoiding 18 mt of CO2 emissions. The YoY evolution comes in line with a lower average installed capacity YoY following the execution of EDPR's Sell-down strategy (3Q19: 997 MW of European assets (-1.2 TWh YoY); 1Q20: 137 MW in Brazil (-671 GWh YoY); and 4Q20: 237 MW in Spain (-64 GWh YoY)).

The avg. selling price declined -3% YoY driven by changes in the portfolio mix YoY post Sell-down transactions (Europe, Brazil and Spain).

Revenues to Net Profit

Revenues decreased to €1,731m (-5% YoY), where the impact from capacity MW (-€47m YoY; including Sell-down transactions), wind resource (-€89m YoY) and forex translation & others (-€9m YoY), were not offset by higher selling prices (+€53m YoY; ex-Sell-down).

Other operating income amounted to €498m (+€99m YoY), with YoY evolution reflecting the gains (€434m) related to Sell-down transactions closed by the end of the year in the US and Spain together with Offshore transactions, namely the stakes sold to the Offshore JV with Engie (as of Dec-20, all assets were transferred pursuant to the agreement signed in Jan-20).

Operating Costs (Opex) totalled €568m (-1% YoY). In comparable terms, adjusted by Sell-down, offshore costs (cross-charged to projects' SPVs), service fees, one offs and forex, Core Opex per avg. MW was +1% YoY, given upfront costs to support expected growth over the coming years.

As a consequence, EBITDA summed €1,655m (flat YoY) and EBIT €1,054m (flat YoY) with Sell-down transactions having a positive impact of -€17m in D&A offset by new capacity and a €28m write-down of a wind-farm (151 MW in US) approved for repowering in 2021. Net Financial Expenses decreased to €285m (-€64m vs 2019) with YoY comparison impacted by lower debt and lower avg. cost of debt in the period (3.5% vs 4.0% in 2019).

At the bottom line, Net Profit summed €556m (+17% YoY) mainly driven by the successful execution of the sell-down strategy. Non-controlling interests in the period totalled €127m, decreasing by €20m YoY as a result of assets sold.

Cash Flow & Net Debt

As of Dec-20, Net Debt totalled €3,443m (+€640m vs Dec-19) reflecting on the one hand assets' cash generated and on the other hand investments in the period including the acquisition of Viesgo renewables and forex translation. Institutional Partnership Liabilities summed €1,143m (-€143m vs Dec-19), with benefits captured by the projects and tax equity partners along with a new institutional tax equity financing in the period (flat vs Dec-19 in USD).

The Board of Directors will propose a dividend distribution in the ASM of €69.8m.

Annex

Remuneration Frameworks

Country	Short Description	Country	Short Description
 US	<ul style="list-style-type: none"> Sales can be agreed under PPAs (up to 20 years), Hedges or Merchant prices Green Certificates (Renewable Energy Credits, REC) subject to each state regulation Sales can be agreed under PPAs Tax Incentives: PTC collected for 10-years since COD (\$25/MWh in 2019) & Wind farms beginning construction in 2009 and 2010 could opt for 30% cash grant in lieu of PTC 	 France	<ul style="list-style-type: none"> The majority of existing wind farms receive Feed-in tariff for 15 years: <ul style="list-style-type: none"> First 10 years: €82/MWh; Years 11-15: depending on load factor €82/MWh @2,400 hours to €28/MWh @3,600 hours; indexed Wind farms under the CR 2016 scheme receive 15-yr CfD which strike price value similar to existing FIT fee plus a management premium Auctions (20-year CfD)
 Canada	<ul style="list-style-type: none"> Feed-in Tariff (Ontario). Duration: 20-years Renewable Energy Support Agreement (Alberta) 	 Poland	<ul style="list-style-type: none"> Electricity price can be established through bilateral contracts Wind farms before 2018 are subject to a GC scheme. Wind receive 1 GC/MWh during 15 years that can be traded in the market. Electricity suppliers have a substitution fee for non-compliance with GC obligations Wind farms awarded in 2018, 2019 and 2020 auctions are subject to a two-side CfD with a tenure of 15 years
 Mexico	<ul style="list-style-type: none"> Technological-neutral auctions (opened to all technologies) in which bidders offer a global package price for the 3 different products (capacity, electricity generation and green certificates) EDPR project: bilateral Electricity Supply Agreement under self-supply regime for a 25-year period 		
 Brazil	<ul style="list-style-type: none"> Old installed capacity under a feed-in tariff program ("PROINFA") Since 2008, competitive auctions awarding 20-years PPAs Sales can be agreed under PPAs 	 Romania	<ul style="list-style-type: none"> Wind assets (installed until 2013) receive 2 GC/MWh until 2017 and 1 GC/MWh after 2017 until completing 15 years. 1 out of the 2 GC earned until Mar-2017 can only be sold from Jan-2018 and until Dec-2025. Solar assets receive 6 GC/MWh for 15 years. 2 out of the 6 GC earned until Dec-2020 can only be sold after Jan-2021 and until Dec-2030. GC are tradable on market under a cap and floor system (cap €35 / floor €29.4) Wind assets (installed in 2013) receive 1.5 GC/MWh until 2017 and after 0.75 GC/MWh until completing 15 years The GCs issued starting in Apr-2017 and the GCs postponed to trading from Jul-2013 will remain valid and may be traded until Mar-2032
 Spain	<ul style="list-style-type: none"> Wind energy receives pool price and a premium per MW in order to achieve a target return defined by regulation. Already published for 2020-22 period RDL 17/2019 has set the target return (TRF) @7.398% for WF's prior to 2013 and @7.09% for new installations until 2031 Premium calculation is based on standard assets (standard load factor, production and costs) Since 2016, all the new renewable capacity is allocated through competitive auctions 		
	<ul style="list-style-type: none"> Wind farms commissioned before 2006 are subject to a FIT whose value is correlated with production and indexed with CPI. Initial tenure was the soonest of 15 years (or until 2020) or 33 GWh/MW but it was increased 7 years (tariff extension) with a cap and floor scheme in exchange of annual payments between 2013 and 2020 ENEOP: price defined in an international competitive tender and set for 15 years (or the first 33 GWh/MW) + 7 years (extension cap/floor system: €74-€98/MWh). Tariff for first year established at c.€74/MWh and CPI monthly update for following years & VENTINVESTE: price defined in an international competitive tender and set for 20 years (or the first 44 GWh/MW) Wind farms under the new regime (COD after 2006) are subject to a FIT for the soonest of 20-y from COD of 44 GWh/MW. Tariff is also indexed wit CPI Solar PV projects awarded in the latest auction (Jul-19) are subject to a flat FIT during 15 years. Projects will bear the cost of imbalances 	 Italy	<ul style="list-style-type: none"> Wind farms in operation prior to 2012YE are under a feed-in-premium scheme applicable for the first 15 years of operation. Wind farms commissioned from 2013 onwards awarded in competitive auctions until 2017 are subject to a 20-years floor CfD scheme Wind farms winning the 2019 and 2020 auctions will benefit from a 20-years two-side CfD scheme
 Portugal		 Greece	<ul style="list-style-type: none"> 20 years non-indexed CfD, allocated through tenders
		 Colombia	<ul style="list-style-type: none"> Colombian wind farms have been awarded 15-years long-term contracts though competitive pay-as-bid auction. Contracts are signed with several Colombian distribution counties Additionally, Colombian wind farms secured reliability charge contract, a monthly payment in exchange of having part of its capacity available when the system is under tight supply conditions
 Belgium	<ul style="list-style-type: none"> Market price + green certificate (GC) scheme. The min-price for GCs is set €65/GC Option to negotiate long-term PPAs 	 Offshore	<ul style="list-style-type: none"> UK: 15 years CPI indexed CfD, allocated by tender, at £57.5/MWh (2012 tariff-based) France: 20-year indexed feed-in tariff

(1) CO2 avoided calculated as energy generation * CO2 eq. emission factors of each country and state within the US. Please note that these factors vary in accordance with the country/state's energy mix;

(2) Includes staff and contractors data, excludes commuting and accidents without absence; Excludes 1Q UK data;

(3) Injury Rate calculated as [# of accidents with absence/Hours worked * 1,000,000];

(4) Lost Day Rate calculated as [# of working days lost/Hours worked * 1,000,000];

(5) Turnover calculated as: departures/headcount; excludes transfers to JV with Engie;

(6) EDPR defines significant spills and fires as any spill affecting water bodies/courses, protected soils or soils of interest because of its natural value, or fire affecting protected areas and/or species (according to local protection laws), derived from the operation & maintenance activities in the facilities;

(7) Excludes waste caused by non-recurrent events.

EDPR Share Price Performance

2020 Main Events

#	Date	Description	Share Price
1	13-Jan	EDPR secured a PPA for a new solar project in Brazil	10.34
2	23-Jan	EDPR reached an agreement with ENGIE to create a JV for offshore wind	11.17
3	29-Jan	EDPR informed about L-T contracts awarded at the Italian wind auction	11.67
4	12-Feb	EDPR concluded €0.3bn asset rotation deal for Brazilian wind farms	12.03
5	20-Feb	EDPR informed about its FY 2019 Results	12.84
6	28-Feb	Spain published the regulatory revision for wind energy assets	12.11
7	26-Mar	EDPR Annual Shareholders' Meeting	10.12
8	30-Mar	EDPR announced payment of dividends corresponding to 2019	10.34
9	16-Apr	EDPR secures a solar PPA in Mexico	10.66
10	21-Apr	EDPR secures a PPA for 59 MW in Spain	10.36
11	06-May	EDPR secures a 100 MW solar PPA in US	11.00
12	28-May	EDPR awarded L-T CfD for 54 MW at the Italian wind energy auction	11.72
13	06-Jul	Clarification on Public Prosecutor measures regarding EDPR Board	12.54
14	15-Jul	EDPR agreed to acquire 100% of the renewables business of Viesgo	13.36
15	10-Aug	EDPR announces €0.5bn Asset Rotation deal for wind farms in Spain	14.00
16	02-Sep	EDPR informed about a sale agreement in North America	14.42
17	13-Oct	EDPR secures PPA for 100 MW in the US	16.84
18	19-Nov	EDPR informs about PPA secured for 63 MW in Spain	17.26
19	24-Nov	EDPR announces PPA contract for a 74 MW solar project in the US	17.08
20	14-Dec	EDPR gets CFD for 5 project of wind and solar in Poland with 220 MW	18.94
21	15-Dec	EDPR announces conclusion of 242 MW sale agreement in Spain	19.44
22	16-Dec	EDPR concludes the acquisition of the renewables business of Viesgo	19.78
23	28-Dec	EDPR concludes an 80% equity stake sale agreement in North America	23.00

1 ENGIE 2023 RESULTS

ENGIE FY 2023 results

Another year of strong growth in results underpinned by
successful execution of our strategy
Proposed dividend of €1.43 per share for 2023
Robust medium-term outlook 2024 – 2026

Business highlights

- High pace of growth in Renewables with 3.9 GW of additional installed capacity in 2023 reaching a total of 41.4 GW
- Acceleration in battery storage with the acquisition of BRP in the United States and the commissioning of Hazelwood in Australia
- Visibility reinforced on the contribution of Networks in France
- Continued progress in Net Zero 2045 trajectory with a 54% reduction vs. 2017 in GHG emissions from energy production to 52Mt in 2023
Signature of the final agreement on Belgian nuclear, thereby fundamentally de-risking the Group

Financial performance

- *Guidance* 2023 achieved with NRIGs of €5.4 billion
- EBIT excluding nuclear of €9.5 billion, an organic increase of 18%, driven mainly by GEMS and Renewables
- Cash Flow From Operations⁽¹⁾ sharply up by €5 billion supported by improvement in working capital
- Growth capex up 48% to €8.1 billion
- Solid balance sheet with economic net debt to EBITDA at 3.1x
- Net financial debt at €29.5 billion, up €5.4 billion, economic net debt at €46.5 billion, up €7.7 billion
- 2024 NRIGs⁽²⁾ expected in the range of €4.2 to €4.8 billion
- Proposed dividend of €1.43 per share for 2023, corresponding to a pay-out ratio of 65%

1.1 Key financial figures at December 31, 2023

In billions of euros	Dec. 31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
Revenues	82.6	93.9	-12.0%	-11.4%
EBITDA (excluding Nuclear)	13.7	12.2	+12.5%	+12.7%
EBITDA	15.0	13.7	+9.5%	+9.7%
EBIT (excluding Nuclear)	9.5	8.0	+18.2%	+18.3%
Net recurring income of continuing activities, Group share	5.4	5.2	+2.8%	+2.7%
Net income, Group share	2.2	0.2		
CAPEX ⁽¹⁾	10.6	7.9	+17.4%	
Cash Flow From Operations (CFFO)	13.1	8.0	+63.1%	
Net financial debt	29.5	-€5.4 billion versus Dec. 31, 2022		
Economic net debt	46.5	+€7.7 billion versus Dec. 31, 2022		
Net financial debt	3.1x	+0.3X versus Dec. 31, 2022		

(1) Net of DBSO sell down (Develop, Build, Share & Operate), US tax equity proceeds, including net debt acquired.

(1) Cash Flow From Operations: Free Cash Flow before maintenance Capex and nuclear phase-out expenses

(2) Net recurring income Group share.

1.2 2024-2026 outlook and guidance

The objectives for the financial years ending December 31, 2024, 2025 and 2026 presented below are based on data, assumptions and estimates considered reasonable by the Group at the date of publication of this document.

These data and assumptions may change or be modified as a result of uncertainties relating to the financial, accounting, competitive, regulatory and tax environments, or other factors of which the Group is unaware at the date of registration of this document. Furthermore, the realization of forecasts depends on the success of the Group's strategy. Consequently, the Group neither undertakes nor gives any guarantee that the forecasts set out in this section will be achieved.

The objectives presented below and underlying assumptions have also been established in accordance with the provisions of Delegated Regulation (EU) No. 2019/980, a supplement to Regulation (EU) No. 2017/1129, and the ESMA recommendations on forecasts.

These objectives result from the budget and medium-term plan processes described in Note 13 to the consolidated financial statements; they have been established on a basis comparable to historical financial information and in accordance with the accounting policies applied to the Group's consolidated financial statements for the year ended December 31, 2023 described in the consolidated financial statements.

1.2.1. 2024-2026 outlook and guidance

ENGIE continues actively to roll out its Strategic Plan aimed at achieving carbon Net Zero by 2045.

Despite decrease in market prices in the last quarters and given the now embedded growth of GEMS contribution to our activities, ENGIE upgrades net recurring income Group share guidance for 2024 to a range of €4.2 to 4.8 billion compared to the previous range of €3.8 to 4.4 billion. EBIT excluding Nuclear is expected within an indicative range of €7.5 to 8.5 billion (compared to €7.2 to 8.2 billion previously announced).

2026: a pivotal year for ENGIE

By 2026, the Group anticipates growth in Renewables fuelled by investments, in Energy Solutions driven by additional capacity and improved margins as well as a higher contribution from Networks and GEMS with a normalized yearly EBIT upgraded from €1.0 billion to €1.5 billion, which allows to offset the impact of the decrease in commodity prices and spreads in Europe, occurred in the second half of last year, on activities exposed to market prices. Batteries activities are also expected to make an increasing contribution to the Group's results from 2024 onwards. Furthermore, as anticipated, ENGIE expects a decrease in Nuclear results following the shutdown of several power plants in Belgium by 2025 and the LTO of Doel 4 and Tihange 3 reactors.

Therefore, ENGIE outlook for 2024 – 2026 is:

<i>In billions of euros</i>	2024	2025	2026
EBIT excluding Nuclear (new)	7.5 - 8.5	7.9 - 8.9	8.2 - 9.2
EBIT excluding Nuclear (previous)	7.2 - 8.2	7.5 - 8.5	n/a
NRlgs guidance (new)	4.2 - 4.8	3.9 - 4.5	3.7 - 4.3
NRlgs guidance (previous)	3.8 - 4.4	4.1 - 4.7	n/a

Price assumptions for the 2024-2026 guidance are based on forward prices in Europe as of 29 December 2023.

ENGIE is committed to a strong investment grade credit rating and continues to target a ratio below or equal to 4.0x economic net debt to EBITDA over the long-term.

Main drivers for 2024-2026 EBIT evolution by activity:

2021	2023	Activity	Expectations for main EBIT evolution drivers	vs. 2021 ⁽¹⁾	vs. 2023 ⁽¹⁾	2026
EBIT excluding Nuclear €5,2 billion	EBIT excluding Nuclear €9,5 billion	Renewables	Investments contribution, lower prices	++	+	EBIT excluding Nuclear indication €8.2 billion to €9.2 billion
		Networks	Regulated tariffs reflecting inflation, cost and revenue clawback from previous period in France, new investments	++	++	
		Energy Solutions	Investments contribution, continued improvement of performance, negative one-offs in 2023	=+	+	
		FlexGen	Prices & volatility normalization, lower thermal volumes partially offset by acceleration in batteries	=-	-	
		Retail	Portfolio management and optimization, high comparison basis in 2023	=+	=-	
		GEMS	Normalization of prices and volatility	++	---	
		Nuclear	Plant shutdowns and LTO impact from 2026	-	-	

Convention: each "+" sign amounts to c. €+500m, each "-" sign amounts to c. €-500m, "=+" sign amounts to a variation between 0 and +250, "=-" sign amounts to a variation between -250 to 0.

ENGIE forecasts an EBIT excluding nuclear between €8.2 and 9.2 billion in 2026 compared to €9.5 billion in 2023 (and €5.2 billion in 2021). Expected contribution from investments (+€1.6-2.0 billion) and performance (+€0.5-0.7 billion) should be offset by negative price effects of circa -€2.9-3.5 billion and other effects such as exchange rates, scope effects or climate.

The average annual growth rate of EBIT excluding nuclear between 2021 and 2026 is expected to reach 10% to 12%.

Capex

ENGIE confirms its €22-25 billion growth Capex target over 2023 to 2025 and expects to invest a similar yearly amount on average in 2026. Capital allocation is based on strict discipline respecting financial and ESG criteria.

Performance

ENGIE continues its efforts towards efficiency by significantly controlling its general and administrative expenses, improving the efficiency of support functions, and restructuring underperforming activities. The Group aims for a positive impact of these measures on EBIT amounting to circa €200 million p.a. over the period 2024-26.

Disposals

After successfully completing its previous disposal plan with €11 billion over the period 2021-22, the Group significantly reduced the amount of disposals in 2023 (€0.3 billion). ENGIE expects a limited portfolio turnover until 2026, with disposals estimated at less than €1 billion per year in average.

1.2.2. Assumptions

The assumptions used are as follows:

- Guidance and indications based on continuing operations;
- No change in accounting policies;
- No major regulatory or macro-economic changes;

- Inframarginal rent caps based on current legal texts;
- Updated regulatory framework for 2024-2027 on French networks;
- Full pass through of supply costs in French B2C retail tariffs;
- Average temperature in France;
- Average hydro, wind, and solar productions;
- Average forex:
 - €/USD: 1.11 for 2024, 1.13 for 2025 and 1.15 for 2026,
 - €/BRL: 5.34 over 2024-26;
- Belgian nuclear availability: c. 92% in 2024 and c. 94% in 2025, based on reactors availabilities as published on REMIT as of 01/01/2024, excluding LTO;
- Contingencies on Belgian operations of €0.2 billion in 2024 and €0.1 billion in 2025;
- Market commodity prices as at 29 December 2023;
- Recurring net financial costs of €(2.5)-(2.8) billion over 2024-26;
- Recurring effective tax rate: 25-27% over 2024-26.

1.3 Dividend policy reaffirmed and €1.43 per share proposal for 2023

The Board has reaffirmed the Group's dividend policy with a payout ratio of 65-75% of net recurring income Group share, and a floor of €0.65 per share for the 2024 to 2026 period.

For 2023, the Board has proposed a payout ratio of 65%. This translates to a dividend of €1.43 per share, which will be proposed for shareholder approval at the Annual General Meeting on 30 April 2024.

1.4 Successful roll-out of the strategic plan

Renewables

ENGIE added 3.9 GW of renewable capacity in 2023, comprising 1.9 GW in Northern America, 0.8 GW in Europe, 0.7 GW in Latin America and 0.4 GW in the rest of the world. Total installed capacity of Renewables at ENGIE is now 41.4 GW. As of 31 December 2023, the Group reported 6.3 GW of capacity under construction from 60 projects. The Group signed more than 70 PPA contracts in 2023 for a total of 2.7 GW, of which 2.0 GW with a duration longer than five years, being the world leader in corporate PPAs.

In 2023, ENGIE strengthened its renewable energy platform in South Africa with the acquisition of BTE Renewables (340 MW in operation with a 3 GW pipeline) and the consolidation of Kathu, a 100 MW concentrated solar power plant.

The Group confirms its total installed capacity target of 50 GW by 2025 and 80 GW by 2030. This ambition is supported by a pipeline of 92 GW at the end of December 2023, up 12 GW compared to end-December 2022.

Networks - Renewable gas

The French Energy Regulatory Commission (CRE) has set the remuneration for gas transport, storage and distribution infrastructure for the period 2024-27. The CRE considers, for this regulatory period, a weighted average cost of capital of 4.10% for transport (compared to 4.25% previously), 4.60% for storage (compared to 4.75%) and 4.00% for distribution (compared to 4.10%). This decision reflects the regulator's desire to maintain the long-term sustainability of tariffs. These tariffs also allow for the recovery of a significant amount related to the regulatory period ending in 2024.

In Brazil, ENGIE Brasil Energia sold 15% of its stake in TAG to CDPQ. The main objective of this partial sale is to promote asset rotation and focus attention on the company's investment plan in renewables and transmission lines. Also in Brazil, ENGIE strengthened its electricity transmission activity by winning, at the beginning of 2023, a new 30-year concession for the construction and operation of 1,000 km of high-voltage lines in the states of Bahia, Minas Gerais and Espírito Santo.

Biomethane development in France continued its progress with an annual production capacity of up to 10.8 TWh connected to ENGIE networks, an increase of 2.6 TWh compared to end-2022. ENGIE enlarged its biomethane presence in Europe

with the acquisition of Ixora Energy Ltd, a leading biomethane producer based in the United Kingdom. The Group confirms its target of 10 TWh of biomethane production per year by 2030.

ENGIE has the ambition to develop green hydrogen production capacity of 4 GW by 2035.

FlexGen - Battery Energy Storage Systems (BESS)

In 2023, ENGIE accelerated its development in batteries with the commissioning of Hazelwood in Australia, its largest battery energy storage system in operation, and the acquisition of Broad Reach Power (BRP) in the United States.

ENGIE also obtained the construction permit for a 200 MW / 800 MWh battery energy storage system at the Vilvoorde site in Belgium, to be commissioned in 2025, with a 15-year capacity contract with Elia, the Belgian transmission network operator, from 2027.

At the end of December 2023, ENGIE had 1.3 GW of BESS in operation and 3.6 GW secured under development, mainly in the United States, Chile, Australia, Belgium and UK, in line with the objective to reach 10 GW of batteries installed by 2030.

Energy Solutions

Energy Solutions has achieved major wins in District Heating and Cooling (DHC). Backlog in French concessions stood at €21.3 billion in 2023, compared to €19.8 billion last year.

In line with ENGIE's objective of accelerating the transition to a carbon-neutral economy through environmentally friendly solutions, the Group was awarded several decarbonization contracts during the year as part of the on-site production activity.

The Group's ambition is to produce 20 TWh of Green Distributed Heat, Cooling and Power by 2030 for its DHC and on-site production activities.

Disciplined capital allocation

In 2023, gross Capex amounted to €10.6 billion. Growth Capex came to €8.1 billion, of which 83% in Renewables, Energy Solutions and FlexGen, in line with ENGIE's strategic roadmap.

Performance plan

Performance plan results contributed €178 million in 2023, with operational excellence across GBUs and improvement of loss-making entities partly offset by an increase in support function costs driven by a highly inflationary context. The Group reached €687 million in the cumulated performance plan between 2021 and 2023, above the €600 million target.

1.5 Belgian nuclear agreement

On December 13, 2023, ENGIE and the Belgian government signed the final agreements⁽¹⁾ for related to the 10-year extension of the Tihange 3 and Doel 4 nuclear reactors as well as all obligations related to nuclear waste. These transaction documents endorse the key principles of the framework agreement signed on July 21, 2023. It allows a balanced sharing of risks associated with the extended operation of the two nuclear units and eliminates uncertainties for the ENGIE Group related to the evolution of nuclear waste liabilities.

(1) Subject to the approval by the European Commission under state aid and the adoption of legislative amendments relating to the Belgian nuclear legal and regulatory framework.

1.6 Update on European proposals for windfall taxes

In December 2023, the French government extended the inframarginal rent cap until 31 December 2024.

The Finance Bill for 2024 provides for a rent cap applicable over a period of twelve months, from 1 January 2024 until 31 December 2024. The cap ranges from €42/MWh to €183/MWh depending on the power production technology. The excess revenue is subject to a tax rate of 50%. ENGIE is mainly impacted through the drawing rights on two EDF nuclear power plants (Chooz B and Tricastin, 1.2 GW, 9 TWh of annual output at an availability rate of 85%) subject to a €94/MWh cap and the gas power plants (1.4 GW capacity) subject to a €42/MWh cap on the clean spark spread.

1.7 Progress on key ESG targets

In 2023, greenhouse gas (GHG) emissions from energy production amounted to 52 million tons, down 54% from 2017. This represents 78% of the reduction target to 43 million tons to 2030 compared to 2017. In addition to the structural levers of decarbonisation, this better-than-expected performance is also the result of a lower utilisation rate of the combined cycle gas plants in Europe under the combined effect of mild temperatures and the normalisation of market conditions.

The share of renewables in ENGIE's total power generation capacity increased from 38% at the end of 2022 to 41% at the end of 2023, mainly thanks to the addition of 3.9 GW of renewable capacity during the year.

Concerning gender diversity target, ENGIE had 31% women in management positions at the end of 2023, another increase compared to the previous year. The Group continues to implement action plans to achieve the objective of managerial parity of 40% to 60% between women and men.

Finally, Moody's has assessed the Group's transition plan and given an overall rating of NZ-2, with an ambition aligned with a 1.5°C trajectory and a "solid" level on the implementation of objectives.

1.8 Health & Safety

In 2023, ENGIE completed a crucial turning point through the implementation of a global transformation plan, ENGIE One Safety, aimed at the long-term elimination of serious and fatal accidents. This plan strengthens our governance and oversight, as well as reinforces an ambitious engagement and communications program. Despite the roll-out of the transformation plan, six individuals lost their lives while working for or on behalf of the Group. Achieving the zero-fatality goal will be at the heart of priority in 2024. In addition, the Group continued to improve the prevention of lost-time accidents, as the frequency rate of these accidents fell from 2.0 at the end of 2022 to 1.8 at the end of 2023.

1.9 Full year 2023 financial review

1.9.3. Revenue

Revenue at €82.6 billion was down 12.0% on a gross basis and down 11.4% on an organic basis.

Contributive revenue, after elimination of intercompany operations, by activity:

In millions of euros	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
Renewables	5,512	6,216	-11.3%	-13.0%
Networks	6,873	6,961	-1.3%	+0.1%
Energy Solutions	11,033	11,441	-3.6%	-2.8%
FlexGen	5,264	7,126	-26.1%	-24.5%
Retail	16,443	16,810	-2.2%	-1.6%
Others	37,322	45,277	-17.6%	-17.0%
of which GEMS	37,221	45,137	-17.5%	-16.9%

TOTAL REVENUES (excluding Nuclear)	82,447	93,830	+12.1%	-11.5%
Nuclear	118	35	+237.6%	+237.6%
TOTAL REVENUES	82,565	93,865	-12.0%	-11.4%

Revenue for **Renewables** amounted to €5,512 million, -11.3% on a gross basis and -13.0% on an organic basis. Organically, revenue decreased mainly in Europe notably in France due to lower spot power prices compared to last year.

Revenue for **Networks** amounted to €6,873 million, -1.3% on a gross basis and +0.1% on an organic basis. Gross decrease included positive foreign exchange effects mainly in Latin America and scope out effects in Argentina. Organically, revenue increased driven by auctions of capacities for gas transport, favourable market for storage activities in Germany and in the UK and full commissioning of Novo Estado power transmission lines in Brazil partly offset by lower distributed volumes in French distribution.

Revenue for **Energy Solutions** amounted to €11,033 million, -3.6% on a gross basis and -2.8% on an organic basis. The gross decrease included scope out effect in France. Organically, decrease of commodity prices impacted negatively revenues mainly in France.

Revenue for **FlexGen** amounted to €5,264 million, -26.1% on a gross basis and -24.5% on an organic basis. Impact from foreign exchange amounts to €-98 million, mainly in Pakistan and Chile. The organic change is largely explained by Europe, mainly due to lower ancillaries and lower spreads in a normalizing market. In Latin America, revenue increased due to indexation of PPA contracts in Chile and higher generation and prices in Peru.

Revenue for **Retail** amounted to €16,443 million, -2.2% on a gross basis and -1.6% on an organic basis. Impact from foreign exchange amounts to €-93 million, mainly in Australia. Organically, the decrease was mainly driven by lower gas and power volumes due to sobriety and decrease of gas portfolio, partially offset by growth of power contracts and a higher average price of the portfolio.

Revenue for **Others** amounted to €37,332 million. The decrease compared to last year was mainly driven by GEMS, essentially impacted by a negative net impact of commodity prices and lower delivered volumes.

Nuclear reported almost no external revenue post-elimination of intercompany operations.

1.9.4. EBITDA

EBITDA (ex. Nuclear) at €13.7 billion, was up 12.5% on a gross basis and up 12.7% on an organic basis.

1.9.5. EBIT

EBIT (ex. Nuclear) at €9.5 billion was up 18.2% on a gross basis and up 18.3% on an organic basis.

- Foreign exchange: a net effect of €-26 million mainly driven by the depreciation of the US dollar and the UK pound sterling partly offset by the appreciation of the Brazilian real and the Australian dollar.
- Scope: net effect of €+31 million
- French temperatures: compared to the average, the temperature effect was a negative €182 million, generating a positive year-on-year variation of €7 million compared to FY 2022 across Networks, Retail and GEMS.

EBIT contribution by activity: growth mainly driven by GEMS, Renewables and Retail

<i>In millions of euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)	o/w temp. effect (France) vs. 2021
Renewables	2,005	1,627	+23.2%	+19.5%	
Networks	2,265	2,371	-4.5%	-4.5%	10
Energy Solutions	386	523	-26.2%	-26.2%	
FlexGen	1,513	1,768	-14.4%	-11.8%	
Retail	569	(6)	-	-	8
Others	2,741	1,736	+57.9%	+57.7%	2
<i>of which GEMS</i>	3,551	2,618	+35.7%	+35.6%	2
TOTAL EBIT (excluding Nuclear)	9,479	8,019	+18.2%	+18.3%	20
Nuclear	605	1,026	-41.0%	-41.0%	
TOTAL EBIT	10,084	9,045	+11.5%	+11.5%	20

Activity/geography matrix

<i>In millions of euros</i>	France	Rest of Europe	Latin America	USA & Canada	Middle East, Asia & Africa	Others	Dec. 31, 2023

FlexGen	-	1,278	50	44	417	(22)	1,768
Retail	(164)	115	6	-	49	(12)	(6)
Others	(1)	(16)	-	(11)	-	1,763	1,736
<i>Of which GEMS</i>	-	-	-	-	-	2,618	2,618
TOTAL EBIT (excluding Nuclear)	2,215	1,867	1,506	226	532	1,674	8,019
Nuclear	-	1,026	-	-	-	-	1,026
TOTAL EBIT	2,215	2,893	1,506	226	532	1,674	9,045

1.9.5.1. Renewables: strong growth mainly driven by contribution of new capacity commissioned as well as higher volumes and prices in Europe

<i>In millions of euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
EBIT	2,005	1,627	+23.2%	+19.5%
Total CAPEX	4,130	3,333	+23.9%	
CNR achieved prices (€/MWh) ⁽¹⁾	100	60	66.7%	
DBSO Margins (EBIT level)	19	102	-81.3%	
Operational KPIs				
Capacity additions (GW at 100%)	3.9	3.8		
Hydro volumes France (TWh at 100%)	14.6	12.8	1.8	

(1) Before hydro tax on CNR.

Renewables reported 19.5% organic EBIT growth, driven by the contribution of new capacity commissioned (€+167 million) mainly in the US, Europe and Latin America and by a positive volume effect (€+112 million) due to higher hydro volumes in France and Portugal. EBIT also benefitted from a positive price effect (€+75 million) with higher captured prices mainly for French hydro including the reversal of 2022 buybacks, partly offset by the increase in hydro taxes in France. These positive effects largely offset lower DBSO margins in 2023 (€-83 million).

1.9.5.2. Networks: lower distributed volumes and higher energy costs in France, growth in international activities

In millions of euros	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
EBITDA	4,151	4,212	-1.5%	-1.3%
EBIT	2,265	2,371	-4.5%	-4.5%
Total CAPEX	2,173	2,321	+6.4%	
Operational KPIs				
Normative temp. effect (EBIT - France)	(129)	(139) ⁽¹⁾	10	
Smart meters (m)	11.3	10.9	0.4	

(1) Considering ~8€/MWh vs ~7€/MWh used in FY2022 publication.

Networks EBIT was down 4.5% on an organic basis due to lower distributed volumes in France mainly related to energy sobriety as well as higher energy and staff costs driven by inflation. Part of this impact will be mitigated during the forthcoming regulatory period. These effects were partly offset by tariff increase in France, Germany and Romania, an additional contribution from capacity subscribed for gas transit between France and Germany as well as a favourable environment in storage activities mainly in the UK and Germany. Outside Europe, EBIT was up 22% due to full commissioning of Novo Estado power transmission lines in Brazil and good performance mainly from TAG.

1.9.5.3. Energy Solutions: impacted by one-offs, partly offset by better performance in other activities

In millions of euros	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
Revenues	11,033	11,441	-3.6%	-2.8%
EBIT	386	523	-26.2%	-26.2%
Total CAPEX	1,102	864	+27.5%	
Operational KPIs				
Distrib. Infra installed cap. (GW)	25.3	25	+0.4%	
EBIT margin (excluding one-off)	5.2%	4.6%	+63 pb	
EBIT margin	3.5%	4.6%	-107 pb	
Backlog - French concessions (bn€)	21.3	19.8	1.5	

Energy Solutions EBIT was down 26.2% on an organic basis. EBIT decreased mainly due to two one-offs, cost overruns in the construction of two cogeneration plants in the US (€150 million) and the recognition of a deferred tax liability on Tabreed (€38 million) following the introduction of a corporate income tax in the UAE. Excluding these one-offs, Energy Solutions EBIT was up 10% organically. For local energy networks and on-site energy production, this was driven by improved operational performance, higher contributions from cogeneration units in France and contribution from new commissioning. These elements were partly offset by negative impacts of strikes in France in the first half of 2023 and lower DBSO margins in US solar linked to a change in business model towards full consolidation. For energy performance management activities, EBIT benefitted from contract optimization and increased selectivity in business development.

1.9.5.4. *FlexGen: market normalization in Europe partly offset by positive comparison impacts and improvement in Chile*

<i>In millions of euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
EBITDA	1,929	2,235	-13.7%	-11.2%
EBIT	1,513	1,768	-14.4%	-11.8%
Operational KPIs				
Average captured CSS Europe (€/MWh)	37.0	28.0	+30.0%	
Capacity (GW at 100%)	59.0	59.5	(0.5)	

FlexGen EBIT was down 11.8% on an organic basis. This fall was mainly driven by price effects (€-377 million) on the back of lower utilization of the assets in Europe following market normalization, partly offset by improvement in Chile (reduction of short positions and lower sourcing prices). EBIT was also weighed by a lower contribution from ancillary services in Europe after very high levels of earnings in 2022. On the positive side, EBIT benefitted from two favourable comparison impacts, as the Group recognised an extraordinary tax in Italy in the first half of 2022 and was also impacted by the cost of unplanned outages on French gas assets last year.

1.9.5.5. *Retail: strong performance due to higher margins and portfolio optimization*

<i>In millions of euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
EBITDA	821	259		
EBIT	569	(6)		
Normative temp. effect (EBIT - France)	(45)	(53)	8	

Retail EBIT amounted to €569 million in 2023 compared to €(6) million in 2022. Organically, the EBIT increase was mainly driven by price effects due to portfolio management optimization resulting in higher margins as well as timing effects in sourcing. These positive factors were partly offset by mild winter and customer sobriety leading to long positions sold at low prices in 2023 versus long positions sold at high prices in 2022.

1.9.5.6. *Others: significant contribution from GEMS*

GEMS EBIT amounted to €3,551 million, up €933 million year-on-year, driven by the H1 2023 effects:

- the negative impact related to Gazprom contracts considering the risk of physical gas disruption in H1 2022, which did not repeat in 2023,
- the strong performance of energy management activities in Europe, still benefiting from good market conditions, albeit less favorable than in 2022,
- the gradual normalization of market conditions, leading to continuous reversal of market reserves,
- the good performance of the B2B business, in a market environment that allows full valuation of the cost of risk,
- the continued effect of deals signed in 2022 at good conditions which materialize at delivery date.

In the second half, GEMS' contribution decreased significantly compared to last year, as expected, due to a very elevated basis of comparison, the reduction of volumes and margins since the summer, positive timing effects in the first half that reversed in the second half, as well as the contribution from high-margin transactions locked in during 2022 which materialize at delivery date that have been smoothed over time. Excluding timing effects and variations in technical reserves, GEMS' operational performance in the second semester remains at a significantly higher level than in the years preceding the crisis.

1.9.5.7. Nuclear: negatively impacted by shutdowns and higher taxes, partly offset by higher captured prices and increased availability

<i>En millions d'euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported basis)	% change (organic basis)
EBITDA	1,285	1,510	-14.9%	-14.9%
EBIT	605	1,026	-41.0%	-41.0%
Total Capex	174	229	-24.0%	
Operational KPIs				
Output (BE + FR, @ share, TWh)	32.0	42.1	-24.0%	
Availability (Belgium at 100%)	+88.8%	+83.6%	+520 pb	

Nuclear EBIT decreased 41.0% organically, driven by the phase-out of the reactors Doel 3 in September 2022 and Tihange 2 in February 2023 (€-538 million), the nuclear inframarginal tax and Belgian nuclear taxes (€-333 million) as well as higher D&A following the increase of the dismantling assets resulting from the 2022 CPN triennial provision review. These negative effects were partly offset by a positive volume effect (€+425 million) mainly due to higher availability for Belgian assets at 88.8% and higher captured prices (€+363 million).

1.9.6. Comparable basis organic growth analysis

<i>In millions of euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported/organic basis)
Revenues	82,565	93,865	-12.0%
Scope effect	(220)	(399)	-
Exchange rate effect	-	(491)	-
Comparable data	82,345	92,977	-11.4%

<i>In millions of euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported/organic basis)
EBITDA	15,017	13,713	+9.5%
Scope effect	(96)	(65)	-
Exchange rate effect	-	(43)	-
Comparable data	14,922	13,606	+9.7%

<i>In millions of euros</i>	Dec.31, 2023	Dec. 31, 2022	% change (reported/organic basis)
EBIT	10,084	9,045	+11.5%
Scope effect	(76)	(45)	-
Exchange rate effect	-	(26)	-
Comparable data	10,008	8,974	+11.5%

The calculation of organic growth aims to present comparable data both in terms of the exchange rates used to convert the financial statements of foreign companies and in terms of contributing entities (consolidation method and contribution in terms of comparable number of months). Organic growth in percentage terms represents the ratio between the data for the current year (N) and the previous year (N-1) restated as follows:

- the N-1 data is corrected by removing the contributions of entities transferred during the N-1 period or prorata temporis for the number of months after the transfer in N;
- the N-1 data is converted at the exchange rate for the period N;
the N data is corrected with the N acquisition data or prorata temporis for the number of months prior to the N-1 acquisition.

2 OTHER INCOME STATEMENT ITEMS

The reconciliation between EBIT and Net income/(loss) is presented below:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022	% change (reported basis)
EBIT	10,084	9,045	+11.5%
(+) Mark-to-Market on commodity contracts other than trading instruments	2,430	(3,661)	
(+) Non-recurring share in net income of equity method entities	(22)	(17)	
Current operating income including operating MtM and share in net income of equity method entities	12,493	5,367	+132.7%
Impairment losses	(1,318)	(2,774)	
Restructuring costs	(47)	(230)	
Changes in scope of consolidation	(85)	91	
Other non-recurring items	(4,945)	(1,328)	
Income/(loss) from operating activities	6,098	1,127	+441.3%
Net financial income/(loss)	(2,163)	(3,003)	
Income tax benefit/(expense)	(1,031)	83

Net recurring income/(loss) Group share per share	2.18	2.24	
Net income/(loss) Group share	2,208	216	
Non-controlling interests	695	173	

The reconciliation between Net recurring income/(loss) Group share and Net income/(loss) Group share is presented below:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Net recurring income/(loss) relating to continuing operations, Group share	5,366	5,223
Impairment & Others	(5,456)	(1,494)
Restructuring costs	(47)	(230)
Changes in scope of consolidation	(85)	91
Mark-to-Market on commodity contracts other than trading instruments	2,430	(3,661)
Net recurring income/(loss) relating to discontinued operations, Group share	-	287
Net income/(loss) Group share	2,208	216

Income from operating activities amounted to €6,098 million, representing a strong increase compared to 2022, mainly due to the change in unrealized gains and losses on commodity financial instruments not qualified as hedges, lower impairment losses and EBIT growth, partly offset by the impact of the revision of nuclear provisions.

Income from operating activities was affected by:

- net impairment losses of €1,318 million (compared with €2,774 million in 2022), mainly relating to renewable energy production assets in North America and assets affected by the Group's exit from coal (see Note 9.1);
- restructuring costs of €47 million (compared with €230 million in 2022) (see Note 9.2);
- negative scope effects of €85 million (compared with a positive €91 million in 2022) (see Note 9.3);
- other non-recurring items amounting to a negative €4,945 million (compared with a negative €1,328 million in 2022), mainly comprising the effects of the revision of nuclear provisions to take into account the agreement signed with the Belgian government on June 29, 2023, which became binding following the signature of supplements to the initial agreement on July 21, 2023 and the implementation of which was set out in the transaction documents signed on December 13, 2023 (see Note 9.4).

The **net financial loss** amounted to €2,163 million in 2023, compared with €3,003 million in 2022 (see Note 10), mainly due to the rise in the cost of debt.

Adjusted for non-recurring items, the net financial loss amounted to €1,975 million in 2023, compared with €1,819 million in 2022. This €156 million deterioration is due to the €96 million increase in other financial expenses (notably the increase in the unwinding adjustment) and the €60 million rise in the cost of net debt.

Income tax for 2023 amounted to a benefit of €1,031 million (compared with a benefit of €83 million in 2022).

Adjusted for these non-recurring items, the recurring effective tax rate was 27.1% at December 31, 2023 compared with 22.6% at December 31, 2022, mainly due to:

- the change in the tax situation in certain countries that only partially recognize, in 2023 and/or 2022, their deferred tax assets (notably Belgium, Italy, Luxembourg, Germany and the Netherlands) – approximately +8.3 points;
- the unfavorable impact in 2022 of the non-deductibility of the one-off tax contribution, recognized as an operating expense, and the temporary solidarity contribution voted in Italy – approximately -3.3 points.

Net recurring income, Group share relating to continuing operations amounted to €5,366 million compared with €5,223 million in 2022. This increase was mainly driven by the growth in EBIT, partly offset by the increase in the tax expense.

Net income, Group share amounted to €2,208 million, up sharply compared to 2022, mainly due to the change in unrealized gains and losses on commodity financial instruments not qualified as hedges, partially offset by the impact of the revision of nuclear provisions.

Net income attributable to non-controlling interests amounted to €695 million, an improvement on the 2022 figure (up €521 million), notably in Renewables in the United States.

3 CHANGES IN NET FINANCIAL DEBT

Net financial debt stood at €29.5 billion, up €5.4 billion compared to December 31, 2022.

This increase was mainly driven by:

- capital expenditure over the period of €10.6 billion;
- dividends paid to ENGIE SA shareholders and to non-controlling interests of €4.1 billion;
- Belgian nuclear phase-out funding and expenses⁽¹⁾ of €3.4 billion;
- other elements of €0.7 billion.

These elements were partly offset by:

- Cash Flow From Operations of €13.1 billion;
- disposals of €0.3 billion.

Changes in net financial debt break down as follows:

In billions of euros

(1) Capital expenditure net of DBSO and tax equity proceeds.

(2) Including scope effects relating to disposals and acquisitions.

(1) Synatom funding previously reported in gross Capex and waste/dismantling expenses previously reported in CFFO.

3 CHANGES IN NET FINANCIAL DEBT

Economic net debt stood at €46.5 billion, up €7.7 billion compared to December 31, 2022, mostly due to the increase in Asset Retirement Obligation provisions (+€5.6 billion, mainly the increase of nuclear provisions following the agreement reached with the Belgian State) and higher financial net debt (+€5.4 billion), partly offset by the change in nuclear provision assets related to additional funding (-€3.4 billion).

Changes in economic net debt break down as follows:

In billions of euros

(1) Increase in nuclear provisions following the agreement signed with the Belgian government

The **net financial debt to EBITDA ratio** stood at 2.0x, up 0.2x compared to December 31, 2022. The average cost of gross debt was 4.31%.

<i>In millions of euros</i>	Dec 31, 2023	Dec 31, 2022
Net financial debt	29,493	24,054
EBITDA	15,017	13,713
NET DEBT/EBITDA RATIO	1.96	1.75

The **economic net debt to EBITDA ratio** stood at 3.1x, up 0.3x compared to December 31, 2022, and in line with the target ratio of below or equal to 4.0x.

<i>In millions of euros</i>	Dec 31, 2023	Dec 31, 2022
Economic net debt	46,517	38,808
EBITDA	15,017	13,713
ECONOMIC NET DEBT/EBITDA RATIO	3.10	2.83

3.1 Cash flow from operations (CFFO)

Cash Flow From Operations (CFFO) amounted to €13.1 billion, up €5.1 billion compared to 2022. This increase was mainly supported by an improvement in change in Working Capital Requirements (€+2.8 billion).

Working Capital Requirements were positive at €0.4 billion, with a positive year-on-year variation of €2.8 billion mainly driven by price effects due to gas withdrawal at higher prices (€+3.9 billion), unbilled energy volumes (€+3.5 billion), margin calls (€+1.3 billion) and the positive timing effect on tariff shields (€+0.9 billion). These positive effects were partly offset by the impact of reversal of market reserves at GEMS (€-2.2 billion) which is neutral on CFFO, net receivables (€-1.9 billion) and nuclear impacts (€-2.1 billion) of which mainly taxes.

3.2 Liquidity

Liquidity stood at €23.6 billion at December 3, 2023, including €17.0 billion of cash⁽¹⁾.

3.3 Capital expenditure (CAPEX)

Total Capex amounted to €10.6 billion, including growth CAPEX of €8.1 billion.

Capital expenditure (CAPEX) by activity

In billions of euros

Growth capital expenditure amounted to €8.1 billion, breaking down as follows by activity:

(1) Net of disposals under DBSO operations, excluding Corporat, and tax equity proceeds.

(1) Cash and cash equivalents plus liquid debt instruments held for cash investment purposes minus bank overdrafts.

The **geography/activity matrix** for growth capital expenditure is presented below:

<i>In millions of euros</i>	France	Rest of Europe	Latin America	USA & Canada	Middle East, Asia & Africa	Others	Dec. 31, 2023

3.4 Dividends and movements in treasury stock

Dividends paid and movements in treasury stock during the period amounted to €4.1 billion and mainly include ENGIE's dividend payment in April for the 2022 fiscal year for €3.4 billion, and dividends paid by various subsidiaries to their non-controlling interests in an amount of €0.5 billion.

3.5 Net financial debt at December 31, 2023

Excluding amortized cost but including the impact of foreign currency derivatives, at December 31, 2023 a total of 65% of net financial debt was denominated in euros, 19% in US dollars and 10% in Brazilian real.

Including the impact of financial instruments, 89% of net debt was at fixed rates.

The average maturity of the Group's net financial debt is 13.2 years.

At December 31, 2023, the Group had total undrawn confirmed credit lines of €12.2 billion.

3.6 Rating

On 23 November 2023, S&P reaffirmed ENGIE SA long-term issuer rating at BBB+ and short-term rating at A-2 with stable outlook.

On 13 July 2023, Moody's confirmed ENGIE SA long-term issuer rating at Baa1 and short-term rating at P-2 with stable outlook.

On 18 July 2023, Fitch reaffirmed ENGIE SA long-term issuer rating at A- and short-term rating at F1 with stable outlook.

4 OTHER ITEMS IN THE STATEMENT OF FINANCIAL POSITION

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022	Net change
Non-current assets	119,023	131,521	(12,498)

<i>Of which derivative instruments</i>	12,764	33,134	(20,370)
<i>Of which investments in equity method entities</i>	9,213	9,279	(66)
Current assets	75,617	103,969	(28,352)
<i>Of which trade and other payables</i>	20,092	31,310	(11,218)
<i>Of which derivative instruments</i>	8,481	15,252	(6,772)
<i>Of which assets classified as held for sale</i>	-	428	(428)
Total equity	35,724	39,285	(3,560)
Provisions	32,593	27,027	5,566
Borrowings	47,287	40,591	6,696
Derivative instruments	24,561	51,276	(26,715)
Other liabilities	54,475	77,311	(22,835)
<i>Of which liabilities directly associated with assets classified as held for sale</i>	-	371	(371)

The **carrying amount of property, plant and equipment** and intangible assets was €66.4 billion, up €3.5 billion compared with December 31, 2022. This change is mainly due to capital expenditure over the period (positive €8.8 billion), changes in the scope of consolidation (positive €1.9 million), partially offset by depreciation (negative €4.9 billion) and impairment losses recognized over the period (negative €1.2 billion) (see Note 13).

Goodwill amounted to €12.9 billion, stable compared with December 31, 2022 (see Note 13).

Investments in equity method entities increased by €0.1 billion (see Note 4.2).

Total equity amounted to €35.7 billion, a decrease of €3.6 billion compared with December 31, 2022. This decrease stemmed mainly from dividends distributed (negative €3.9 billion), and other comprehensive income (negative €2.6 billion, including a negative €3.1 billion of cash flow hedges on commodities, a negative €0.6 billion of actuarial gains and losses and a positive €0.9 billion of deferred taxes) partially offset by net income for the period (positive €2.9 billion).

Provisions increased by €5.6 billion to €32.6 billion compared with December 31, 2022. This increase is mainly due to the effects of the revision of nuclear provisions to take into account the interim agreement signed with the Belgian government on June 29, 2023, which became binding following the signature of the supplements to the initial agreements on July 21, 2023 and the implementation of which was set out in the transaction documents signed on December 13, 2023 as well as the final opinion of the Commission for Nuclear Provisions (CNP) on July 7, 2023 (see Note 17).

The decrease in **derivative instruments** is mainly due to the extreme volatility in commodity prices over the period.

5 PARENT COMPANY FINANCIAL STATEMENTS

The figures provided below relate to the financial statements of ENGIE SA, prepared in accordance with French GAAP and applicable regulations.

Revenues for ENGIE SA in 2023 totaled €54,149 million, a decrease compared to 2022 (€68,500 million) on the gas market.

The company reported a net operating loss of €987 million in 2023, a sharp deterioration of €2,038 million compared with income of €1,051 million in 2022. The energy margin deteriorated by €1,042 million.

Net financial income amounted to €662 million, down €1,125 million compared to 2022, mainly due to lower dividends received.

Non-recurring items represented income of €578 million in 2023, mainly comprising changes in the value of equity interests (including Electrabel).

The income tax benefit amounted to €247 million, versus an income tax benefit of €321 million in 2022, including a tax consolidation benefit of €233 million.

Net income for the year came in at €500 million.

Shareholders' equity amounted to €28,376 million compared with €31,118 million at the end of 2022. The €2,742 million decrease was mainly due to the 2022 net income of €500 million, and to the 2022 dividend payment of €3,449 million.

At December 31, 2023, borrowings and debt stood at €47,084 million, and cash and cash equivalents totaled €14,004 million (of which €7,828 million relating to subsidiaries' current accounts).

Information relating to payment terms

Pursuant to Articles L.441-14 and D.441-6 of the French Commercial Code, companies whose annual financial statements are subject to a statutory audit must publish information regarding supplier and customer payment terms. The purpose is to demonstrate that there is no significant failure to comply with such terms.

<i>Of which Diluted earnings/(loss) relating to discontinued operations per share</i>		<i>-</i>	<i>0.90</i>

(1) Net income from discontinued operations for 2022 corresponds to the share of income from Equans.

NB: The amounts shown in the tables are expressed in millions of euros. In certain cases, rounding may cause non-material discrepancies in the totals.

STATEMENT OF COMPREHENSIVE INCOME

<i>In millions of euros</i>	Notes	Dec. 31, 2023	Dec. 31, 2022
NET INCOME/(LOSS)		2,903	390
Debt instruments	14.1	325	(378)
Net investment hedges	15	148	(15)
Cash flow hedges (excl. commodity instruments)	15	(83)	938
Commodity cash flow hedges ⁽¹⁾	15	(3,162)	(4,719)
Deferred tax on recyclable or recycled items		765	951
Share of equity method entities in recyclable items, net of tax		36	871
Translation adjustments		(343)	848
Recyclable items relating to discontinued operations, net of tax		-	(118)
TOTAL RECYCLABLE ITEMS		(2,315)	(1,622)
Equity instruments	14.1	120	(685)
Actuarial gains and losses		(580)	2,718
Deferred tax on non recyclable items		135	(613)
Share of equity method entities in actuarial gains and losses, net of tax		1	5
Non-recyclable items relating to discontinued operations, net of tax		-	48
TOTAL NON-RECYCLABLE ITEMS		(324)	1,472
TOTAL RECYCLABLE ITEMS AND NON-RECYCLABLE ITEMS		(2,639)	(150)
TOTAL COMPREHENSIVE INCOME/(LOSS)		264	240
<i>Of which owners of the parent</i>		<i>(717)</i>	<i>(257)</i>
<i>Of which non-controlling interests</i>		<i>981</i>	<i>497</i>

(1) The fall in commodity market prices during 2023 contributed to significant changes in the fair value of financial instruments, impacting other comprehensive income. In 2023, the hedging of electricity supply activities in France, Belgium and the Netherlands and sales resulting from the production of some of our assets in these same areas qualified as cash flow hedging instruments in accordance with IFRS 9. Unrealized gains and losses on the effective portion of the hedges are now recorded in Other comprehensive income, as are hedges of our gas supply activities in Europe that already qualified, and are recycled to operating income at the same time as the hedged transactions to which they relate.

NB: The amounts shown in the tables are expressed in millions of euros. In certain cases, rounding may cause non-material discrepancies in the totals.

ENGIE SA, the parent company of the Group, is a French société anonyme with a Board of Directors that is subject to the provisions of Book II of the French Commercial Code (Code du commerce), as well as to all other provisions of French law applicable to French commercial companies. It was incorporated on November 20, 2004 for a period of 99 years.

It is governed by current and future laws and by regulations applicable to *sociétés anonymes* and its bylaws.

The Group is headquartered at 1 place Samuel de Champlain, 92400 Courbevoie (France).

ENGIE shares are listed on the Paris, Brussels and Luxembourg stock exchanges.

On February 21, 2024, the Group's Board of Directors approved and authorized for issue the consolidated financial statements of the Group for the year ended December 31, 2023.

NOTE 1 ACCOUNTING FRAMEWORK AND BASIS FOR PREPARING THE CONSOLIDATED FINANCIAL STATEMENTS

1.1 Accounting standards

Pursuant to European Regulation (EU) 2019/980 dated March 14, 2019, financial information concerning the assets, liabilities, financial position and profit and loss of ENGIE has been provided for the last two reporting periods (ended December 31, 2022 and 2023). This information was prepared in accordance with European Regulation (EC) 1606/2002 "on the application of international accounting standards" dated July 19, 2002. The Group's consolidated financial statements for the year ended December 31, 2023 have been prepared in accordance with IFRS Standards as published by the International Accounting Standards Board and endorsed by the European Union ⁽¹⁾.

The accounting standards applied in the consolidated financial statements for the year ended December 31, 2023 are consistent with the policies used to prepare the consolidated financial statements for the year ended December 31, 2022, except for those described below.

1.1.1 IFRS Standards, amendments or IFRIC Interpretations applicable as from 2023

- IFRS 17 - *Insurance Contracts* (including amendments).
- Amendments to IAS 1 – *Presentation of Financial Statements* and the Materiality Practice Statement: Disclosure of Accounting Policies.
- Amendments to IAS 8 – *Accounting Policies, Changes in Accounting Estimates and Errors*: Definition of Accounting Estimates.
- Amendments to IAS 12 – *Income Taxes*: Deferred Tax related to Assets and Liabilities arising from a Single Transaction.
- Amendments to IAS 12 – *Income Taxes*: International Tax Reform - Pillar 2 Model.

This standard and these amendments have no material impact on the Group's consolidated financial statements.

(1) Available on the European Commission's website:

<http://eur-lex.europa.eu/legal-content/FR/TXT/?uri=CELEX:02002R1606-20080410>

1.1.2 IFRS Standards, amendments or IFRIC Interpretations effective from 2024 and that the Group has elected not to early adopt

- Amendments to IAS 1 – *Presentation of Financial Statements*: Classification of Liabilities as Current or Non-Current.
- Amendments to IFRS 16 – *Leases*: Lease Liability in a Sale and Leaseback.
- Amendments to IAS 7 – *Statement of Cash Flows* and IFRS 7 – *Financial Instruments*: Disclosures – Supplier Finance Arrangements ⁽¹⁾.
- Amendments to IAS 21 – *The Effects of Changes in Foreign Exchange Rates*: Lack of Exchangeability ⁽¹⁾.

The impact of these amendments is currently being assessed.

1.2 Measurement and presentation basis

1.2.1 Historical cost convention

The Group's consolidated financial statements are presented in euros and have been prepared using the historical cost convention, except for financial instruments, which are accounted for under the financial instrument categories defined by IFRS 9.

1.2.2 Chosen options

1.2.2.1 Reminder of IFRS 1 transition options

The Group used some of the options available under IFRS 1 for its transition to IFRS in 2005. The options that continue to have an impact on the consolidated financial statements are:

- translation adjustments: the Group elected to reclassify cumulative translation adjustments within consolidated equity at January 1, 2004;
- business combinations: the Group elected not to restate business combinations that took place prior to January 1, 2004 in accordance with IFRS 3.

1.2.2.2 Business combinations

Business combinations carried out prior to January 1, 2010 were accounted for in accordance with IFRS 3 prior to the revision. In accordance with IFRS 3 revised, these business combinations have not been restated.

Since January 1, 2010, the Group applies the purchase method as defined in IFRS 3 revised, which consists in recognizing the identifiable assets acquired and liabilities assumed at their fair values at the acquisition date, as well as any non-controlling interests in the acquiree. Non-controlling interests are measured either at fair value or at the entity's proportionate interest in the net identifiable assets of the acquiree. The Group determines on a case-by-case basis which measurement option to be used to recognize non-controlling interests.

⁽¹⁾ These standards and amendments have not yet been adopted by the European Union.

1.2.2.3 Consolidated statement of cash flows

The consolidated statement of cash flows is prepared using the indirect method starting from net income.

“Interest received on non-current financial assets” is classified within investing activities because it represents a return on investments. “Interest received on cash and cash equivalents” is shown as a component of financing activities because the interest can be used to reduce borrowing costs. This classification is consistent with the Group's internal organization, where debt and cash are managed centrally by the Group treasury department.

As impairment losses on current assets are considered to be definitive losses, changes in current assets are presented net of impairment.

Cash flows relating to the payment of income tax are presented on a separate line.

1.2.3 Foreign currency transactions

1.2.3.1 Translation of foreign currency transactions

Foreign currency transactions are recorded in the functional currency at the exchange rate prevailing on the date of the transaction.

Functional currency is the currency of the primary economic environment in which an entity operates, which in most cases corresponds to local currency. However, certain entities may have a functional currency different from the local currency when that other currency is used for an entity's main transactions and better reflects its economic environment.

At each reporting date:

- monetary assets and liabilities denominated in foreign currencies are translated at year-end exchange rates. The resulting translation gains and losses are recorded in the consolidated income statement for the year to which they relate;
- non-monetary assets and liabilities denominated in foreign currencies are recognized at the historical cost applicable at the date of the transaction.

1.2.3.2 Translation of the financial statements of subsidiaries with a functional currency other than the euro (the presentation currency)

The statements of financial position of these subsidiaries are translated into euros at the official year-end exchange rates. Income statement and cash flow statement items are translated using the average exchange rate for the year. Any differences arising from the translation of the financial statements of these subsidiaries are recorded under “Translation adjustments” as other comprehensive income.

Goodwill and fair value adjustments arising on the acquisition of foreign entities are classified as assets and liabilities of those foreign entities and are therefore denominated in the functional currencies of the entities and translated at the year-end exchange rate.

1.3 Use of estimates and judgment

1.3.1 Estimates

The preparation of consolidated financial statements requires the use of estimates and assumptions to determine the value of assets and liabilities and contingent assets and liabilities at the reporting date, as well as income and expenses reported during the period.

Developments in the economic and financial environment, particularly relating to volatile commodities markets, and the war in Ukraine have prompted the Group to step up its risk oversight procedures, mainly in measuring financial instruments and assessing counterparty and liquidity risk. The estimates used by the Group, among other things, to test for impairment and to measure provisions, also take into account this environment and the market volatility.

Accounting estimates are made in a context that remains sensitive to energy market developments, therefore making it difficult to apprehend medium- and short-term economic prospects. Particular attention has been paid to the consequences of fluctuations in the price of gas and electricity.

Due to uncertainties inherent in the estimation process, the Group regularly revises its estimates in light of currently available information. Final outcomes could differ from those estimates.

The key estimates used in preparing the Group's consolidated financial statements relate mainly to:

- measurement of the recoverable amount of goodwill (*see Note 13.1*), other intangible assets (*see Note 13.2*) and property, plant and equipment (*see Note 13.3*);
- measurement of the fair value of financial assets and liabilities, and, in the current context, factoring in the uncertainty surrounding the key assumptions used, in particular updating the main valuation inputs of commodity derivatives, in particular the "bid ask" reserve, to reflect the volatility of commodity prices (*see Notes 14 and 15*);
- assessment of expected credit losses, particularly in order to update probabilities of default and other inputs, mainly for calculating the CVA (Credit Valuation Adjustment) in a context of market price uncertainty and volatility (*see Note 15*);
- the measurement of provisions, in particular those relating to the treatment of nuclear waste under the agreement signed on June 29, 2023 with the Belgian government on the extension of the Tihange 3 and Doel 4 nuclear reactors and on all nuclear waste-related obligations, which became binding following the signature of supplements to the initial agreements on July 21, 2023. Transaction documents signed on December 13, 2023 specify the practical implementation of the first agreements of June and July. These estimates also concern provisions for dismantling facilities, disputes, and pensions and other employee benefits (*see Notes 17 and 18*);
- measurement of un-metered revenues (energy in the meter), for which the valuation techniques have been impacted by changes in certain customers' consumption habits in a context of fluctuations in commodity prices (*see Note 7*);
- measurement of recognized tax loss carry-forwards, taking into account, where applicable, taxable income revisions and projections (*see Note 11*).

1.3.2 Judgment

As well as relying on estimates, Group management also makes judgments to define the appropriate accounting policies to apply to certain activities and transactions, particularly when the IFRS Standards and IFRIC Interpretations in force do not specifically deal with the related accounting issues.

In particular, the Group exercised its judgment in:

- assessing the nature of control (*see Notes 2 and 3*);
- identifying the performance obligations of sales contracts (*see Note 7*);
- determining how revenues are recognized for distribution or transmission services invoiced to customers (*see Note 7*);
- recognizing support measures granted by certain governments, particularly in France and Romania ("tariff shield"), aimed at protecting both consumers and suppliers of gas and electricity against sharp fluctuations in commodity prices (*see Note 7*);
- identifying "own use contracts" as defined by IFRS 9 within non-financial purchase and sale contracts (electricity, gas, etc.) (*see Note 14*);
- identifying offsetting arrangements that meet the criteria set out in IAS 32 *Financial Instruments: Presentation* (*see Note 14*);
- determining whether arrangements are or contain a lease (*see Note 13.3*);
- recognizing contributions in the energy sector in Europe (*see Note 8*).

Entities for which judgment on the nature of control has been exercised are listed in Note 2 “Main subsidiaries at December 31, 2023” and Note 3 “Investments in equity method entities”.

1.3.3 Consideration of climate issues in the preparation of the Group's financial statements

In addition to the operational and financial issues and risks taken into account in determining future cash flows, the discount rate net of inflation and projected growth, the Group has also exercised its judgment to use assumptions reflecting climate change issues, in order to determine their potential impact on the consolidated financial statements. In particular, the Group checked whether there were any indications that non-financial assets might be impaired:

- the commitments made by France, Europe and various countries at international level, in particular with regard to long-term carbon neutrality, are taken into account (i) in assessing the value of the Group's assets, in particular through the long-term price scenarios used in impairment tests (see *Note 13.4*), and (ii) in assessing dismantling provisions, in particular by assessing the useful life of gas infrastructures in France based on the expected change in the energy mix (see *Note 17*);
- the commitments made specifically by ENGIE are also reflected in the assessment of the value of the Group's assets (see *Note 13.4.1*), in particular (i) the complete withdrawal from coal activities by 2027, which primarily concerns South America, depending on each asset's specific prospects (closure, conversion or disposal) and (ii) the gradual decarbonization of the Group's power generation activities to net zero by 2045 and, more broadly, the Group's investment strategy in favor of the energy transition by expanding its renewable energy fleet, substituting natural gas with renewable gas, thereby confirming a mixed gas/electricity scenario in the Group's long-term projections under the present regulation/remuneration methods for regulated assets (in France in particular), and developing low-carbon services offerings.

As a reminder, the management of climate and environmental risks and their challenges for the Group are presented in Chapter 2 “Risk factors” and Chapter 3 “Non-Financial Statement and CSR Information” of the Universal Registration Document.

NOTE 2 MAIN SUBSIDIARIES AT DECEMBER 31, 2023

Accounting standards

Controlled entities (subsidiaries) are fully consolidated in accordance with IFRS 10 – *Consolidated Financial Statements*. An investor (the Group) controls an entity and therefore must consolidate it if all of the following three criteria are met:

- it has the ability to direct the relevant activities of the entity;
- it has the rights and is exposed to variable returns from its involvement with the entity;
- it has the ability to use its power over the entity to affect the investor's return.

2.1 List of main subsidiaries at December 31, 2023

The following lists are made available by the Group to third parties, pursuant to Regulation No. 2016-09 of the French accounting standards authority (ANC) issued on December 2, 2016:

- list of companies included in consolidation;
- list of companies excluded from consolidation because their individual and cumulative incidence on the Group's consolidated financial statements is not material. They correspond to entities deemed not significant as regards the Group's main key figures (revenues, total equity, etc.) or entities that have ceased all activities and are undergoing liquidation/closure proceedings;
- list of main non-consolidated interests.

This information is available on the Group's website (www.engie.com, Investors/Regulated information section). Non-consolidated companies are classified as non-current financial assets (see *Note 14.1.1.1*) under "Equity instruments at fair value".

The list of the main subsidiaries consolidated under the full consolidation method presented below was determined, as regards operating entities, based on their contribution to Group revenues, EBITDA, net income and net debt. The main equity-accounted investments (associates and joint ventures) are presented in Note 3 "Investments in equity method entities".

Some entities such as ENGIE SA, ENGIE Énergie Services SA or Electrabel SA comprise both operating activities and headquarters functions which report to management teams of different reportable segments. In the following tables, these operating activities and headquarters functions are shown within their respective reportable segments under their initial company name followed by a (*) sign.

Renewables

Company name	Activity	Country	% interest	
			Dec. 31, 2023	Dec. 31, 2022
BTE Renewables	Electricity distribution and generation	South Africa	60.0	-
Compagnie Nationale du Rhône	Electricity distribution and generation	France	50.0	50.0

(1) On February 20, 2024, ENGIE finalized the acquisition of an additional 12% stake in ENGIE Romania.

2.2 Significant judgments exercised when assessing control

The Group primarily considers the following information and criteria when determining whether it has control over an entity:

- governance arrangements: voting rights and whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities;
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity.

The Group exercised its judgment regarding the entities and sub-groups described below.

Entities in which the Group has the majority of the voting rights

GRTgaz (France Infrastructures): 60.8%

The analysis of the shareholders' agreement concluded with Société d'Infrastructures Gazières, a subsidiary of *Caisse des Dépôts et Consignations* (CDC), which holds 38.6% of the share capital of GRTgaz, was completed by an assessment of the rights granted to the French Energy Regulatory Commission (*Commission de Régulation de l'Énergie* – CRE). As a regulated activity, GRTgaz has a dominant position on the gas transportation market in France. Accordingly, since the transposition of the Third European Directive of July 13, 2009 into French law (*Code de l'énergie* – Energy Code) on May 9, 2011, GRTgaz has been subject to independence rules as regards its directors and senior management team. The French Energy Code confers certain powers on the CRE in the context of its duties to control the proper functioning of the gas markets in France, including verifying the independence of the members of the Board of Directors and senior management and assessing the choice of investments. The Group considers that it exercises control over GRTgaz and its subsidiaries (including Elengy) based on the Group's ability to appoint the majority of the members of the Board of Directors and take decisions about the relevant activities, especially in terms of the level of investment and planned financing.

Entities in which the Group does not have the majority of the voting rights

For entities in which the Group does not have the majority of the voting rights, judgment is exercised with regard to the following items, in order to assess whether there is a situation of *de facto* control:

- dispersion of the shareholding structure: number of voting rights held by the Group relative to the number of rights held respectively by the other holders of voting rights and their dispersion;
- voting patterns at shareholders' meetings: the percentages of voting rights exercised by the Group at shareholders' meetings in recent years;
- governance arrangements: representation in the governing body with strategic and operational decision-making power over the relevant activities;
- rules for appointing key management personnel;
- contractual relationships and material transactions.

The main fully consolidated entity in which the Group does not have the majority of the voting rights at December 31, 2022 is Compagnie Nationale du Rhône (49.98%).

Compagnie Nationale du Rhône ("CNR" – Renewables France): 49.98%

The Group holds 49.98% of the share capital of CNR, with CDC holding 33.2%, and the balance of 16.82% being dispersed among around 200 local authorities. In view of the current provisions of the French "Murcef" law, under which a majority of CNR's share capital must remain under public ownership, the Group is unable to hold more than 50% of the share capital. However, the Group considers that it exercises *de facto* control as it holds the majority of the voting rights exercised at shareholders' meetings due to the widely dispersed shareholding structure and the absence of evidence of the minority shareholders acting in concert.

2.3 Main subsidiaries with non-controlling interests

The following table shows the subsidiaries with non-controlling interests that are deemed to be material, the respective contributions to equity and to net income at December 31, 2023 and December 31, 2022, as well as the dividends paid to non-controlling interests:

Company name	Activity	Percentage interest of non-controlling interests		Net income/(loss) of non-controlling interests		Equity of non-controlling interests		Dividends paid to non-controlling interests	
		Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022
In millions of euros									
GRTgaz Group (France Infrastructures, France)	Regulated gas transportation activities and management of LNG terminals	39.2	39.2	158	190	1,611	1,614	194	168

NOTE 3 INVESTMENTS IN EQUITY METHOD ENTITIES

Accounting standards

The Group accounts for its investments in associates and joint ventures using the equity method. Under IFRS 11 – *Joint Arrangements*, a joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement. An associate is an entity over which the Group has significant influence.

The respective contributions of associates and joint ventures in the statement of financial position, the income statement and the statement of comprehensive income at December 31, 2023 and December 31, 2022 are as follows:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Statement of financial position		
Investments in associates	4,259	4,187
Investments in joint ventures	4,954	5,092
INVESTMENTS IN EQUITY METHOD ENTITIES	9,213	9,279
Income statement		
Share in net income/(loss) of associates	486	400
Share in net income/(loss) of joint ventures	580	659
SHARE IN NET INCOME/(LOSS) OF EQUITY METHOD ENTITIES	1,066	1,059
Statement of comprehensive income		
Share of associates in "Other comprehensive income/(loss)"	11	510
Share of joint ventures in "Other comprehensive income/(loss)"	26	366
SHARE OF EQUITY METHOD ENTITIES IN "OTHER COMPREHENSIVE INCOME/(LOSS)"	37	876

Significant judgments

The Group primarily considers the following information and criteria in determining whether it has joint control or significant influence over an entity:

- governance arrangements: whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities. This can be difficult to determine in the case of "project management" or "one-asset" entities, as certain decisions concerning the relevant activities are made upon the creation of the joint arrangement and remain valid throughout the project. Accordingly, the analysis of rights relates to the relevant residual activities of the entity (those that significantly affect the variable returns of the entity);
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity. This can also involve analyzing the Group's contractual relations with the entity, in particular the conditions in which these contracts are entered into, their duration as well as the management of conflicts of interest that may arise when the entity's governing body casts votes.

The Group exercised its judgment regarding the following entities and sub-groups:

Project management entities in the Middle East and in Africa

The significant judgments made in determining the consolidation method to be applied to these project management entities related to the risks and rewards relating to contracts between ENGIE and the entity concerned, as well as an analysis of the residual relevant activities over which the entity retains control after its creation. The Group considers that it exercises significant influence or joint control over these entities, since the decisions taken throughout the term of the project about the relevant activities such as refinancing, or the renewal or amendment of significant contracts (sales, purchases, operating and maintenance services) require, depending on the case, the unanimous consent of two or more parties sharing control.

Joint ventures in which the Group holds an interest of more than 50%

Tihama (60%)

ENGIE holds a 60% stake in the Tihama cogeneration plant in Saudi Arabia and its partner Saudi Oger holds 40%. The Group considers that it has joint control over Tihama since decisions about its relevant activities, including for example the approval of the budget and amendments to major contracts, etc., require the unanimous consent of the parties sharing control.

Transportadora Asociada de Gas S.A. ("TAG" - Latin America): 65.0% holding interest representing a net interest in TAG of 54.8% ⁽¹⁾

The Group exercises joint control over TAG since decisions about its relevant activities, including, for example, the preparation of the budget and medium-term plan, investments, operations and maintenance, etc., are taken by a majority vote requiring the agreement of ENGIE and *Caisse de dépôt et placement du Québec* (CDPQ).

Joint control – difference between joint ventures and joint operations

Classifying a joint arrangement requires the Group to use its judgment to determine whether the entity in question is a joint venture or a joint operation. IFRS 11 requires an analysis of "other facts and circumstances" when determining the classification of jointly controlled entities.

The IFRS Interpretations Committee (IFRS IC) (November 2014) decided that for an entity to be classified as a joint operation, other facts and circumstances must give rise to direct enforceable rights to the assets, and obligations for the liabilities, of the joint arrangement.

In view of this position and its application to our analyses, the Group has no material joint operations at December 31, 2023.

3.1 Investments in associates

3.1.1 Contribution of material associates and of associates that do not have a material impact on the Group's financial statements taken individually

The table below shows the contribution of each material associate along with the aggregate contribution of associates deemed not material taken individually, in the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from equity method entities" line of the statement of cash flows.

(1) In January 2024, the Group completed the sale of a 15% stake in TAG to CDPQ (current partner). On completion of this transaction the Group no longer holds any potential voting rights. The Group's holding in TAG amounts to 50%, resulting in a net interest of 44.5% (the impact of this partial disposal on net financial debt 2024 amounts to €0.5 billion).

NOTE 3 INVESTMENTS IN EQUITY METHOD ENTITIES

The Group used qualitative and quantitative criteria to determine material associates. These criteria include the contribution to the consolidated line items “Share in net income/(loss) of associates” and “Investments in associates”, the total assets of associates in Group share, and associates carrying major projects in the study or construction phase for which the related investment commitments are material.

Company name	Activity	Capacity	Consolidation percentage of investments in associates		Carrying amount of investments in associates		Share in net income/(loss) of associates		Other comprehensive income/(loss) of associates		Dividends received from associates

INVESTMENTS IN ASSOCIATES					4,259	4,187	486	400	11	510	316	271

(1) Investments in associates operating gas-fired power plants and seawater desalination facilities in the Arabian Peninsula have been grouped together under “Project management entities in the Middle East”. This mainly includes around 40 associates operating thermal power plants with a total installed capacity of 26,388 MW (at 100%).

These associates have fairly similar business models and joint arrangements: the project management entities selected as a result of a competitive bidding process develop, build and operate power generation plants and seawater desalination facilities. The entire output of these facilities is sold to government-owned companies under power and water purchase agreements, over periods generally spanning 20 to 30 years.

In accordance with their contractual arrangements, the corresponding plants are recognized in accordance with IFRIC 12, IFRS 16 or IAS 16 as property, plant and equipment or as financial receivables. The shareholding structure of these entities systematically includes a government-owned company based in the same country as the project management entity. The Group’s percentage interest and percentage voting rights in each of these entities varies between 20% and 50%.

The share in net income/(loss) of associates includes a net non-recurring income of €18 million in 2023 (compared to a net non-recurring loss of €18 million in 2022), mainly including changes in the fair value of derivative instruments, impairment losses and disposal gains and losses, net of tax (see Note 5.3 “Net recurring income Group share (NriGs)”).

3.1.2 Financial information regarding material associates

The tables below provide condensed financial information for the Group's main associates. The amounts shown have been determined in accordance with IFRS, before the elimination of intragroup transactions and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the associate performed at the acquisition date at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE".

<i>In millions of euros</i>	Revenues	Net income/(loss)	Other comprehensive income/(loss)	Total comprehensive income/(loss)	Current assets	Non-current assets	Current liabilities	Non-current liabilities	Total equity	Consolidation % of Group	Total equity attributable to ENGIE

AT DECEMBER 31, 2023	248	271	22	311	395	62	(33)

- (1) Contassur is a life insurance company accounted for using the equity method. Contassur offers insurance contracts, chiefly with pension funds that cover post-employment benefit obligations for Group employees and also employees of other companies mainly engaged in regulated activities in the electricity and gas sector in Belgium. Insurance contracts entered into by Contassur represent reimbursement rights recorded within "Other assets" in the statement of financial position. These reimbursement rights totaled €242 million at December 31, 2023 (€208 million at December 31, 2022).

3.2 Investments in joint ventures

3.2.1 Contribution of joint ventures to the Group

The table below shows the contribution of each material joint venture along with the aggregate contribution of joint ventures deemed not material taken individually to the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from equity method entities" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material joint ventures. These criteria include the contribution to the line items "Share in net income/(loss) of joint ventures" and "Investments in joint ventures", the Group's share in the total assets of joint ventures, and joint ventures conducting major projects in the study or construction phase for which the related investment commitments are material.

Company name	Activity	Capacity	Consolidation percentage of investments in joint ventures		Carrying amount of investments in joint ventures		Share in net income/(loss) of joint ventures		Other comprehensive income/(loss) of joint ventures		Dividends received from joint ventures	
			Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022

Other investments in joint ventures that are not material taken individually					1,169	1,071	104	120	7	37	121	53
INVESTMENTS IN JOINT VENTURES					4,954	5,092	580	659	26	366	715	442

(1) The Group's interest in Transportadora Associada de Gás S.A. (TAG) is 54.83%. In January 2024, the Group completed the sale of a 15% stake in TAG to CDPQ (current partner). On completion of this transaction, the Group's holding stands at 50%, resulting in a net interest of 44.5% (the impact of this partial disposal on net financial debt in 2024 amounts to €0.5 billion).

(2) The Group's interest in Transmisora Eléctrica del Norte is 30%.

The share in net income/(loss) of joint ventures includes a non-recurring loss of €39 million in 2023 (non-recurring gain of €1 million in 2022), resulting chiefly from changes in the fair value of derivatives, impairment losses and disposal gains and losses, net of tax (see Note 5.3 "Net recurring income Group share (NriGs)").

3.2.2 Financial information regarding material joint ventures

The amounts shown have been determined in accordance with IFRS before the elimination of intragroup items and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the joint venture performed at the date of acquisition at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE" in the statement of financial position.

3.3 Other information on investments accounted for using the equity method

3.3.1 Unrecognized share of losses of associates and joint ventures

Cumulative unrecognized losses of associates (corresponding to the cumulative amount of losses exceeding the carrying amount of investments in the associates concerned) including other comprehensive income/(loss), amounted to €37 million in 2023 (versus €6 million in 2022).

These unrecognized losses correspond to the negative fair value of derivative instruments designated as interest rate and commodity hedges ("Other comprehensive income/(loss)") contracted by associates in the Middle-East, Africa and Asia in connection with the financing of construction projects for power generation plants.

3.3.2 Commitments and guarantees given by the Group in respect of equity method entities

At December 31, 2023, the main commitments and guarantees given by the Group in respect of equity method entities concern:

- Energia Sustentável do Brasil ("Jirau"), for an aggregate amount of BRL 4,008 million (€742 million). At December 31, 2023, the loans granted by Banco Nacional de Desenvolvimento Econômico e Social, the Brazilian Development Bank, to Energia Sustentável do Brasil amounted to BRL 10,021 million (€1,855 million). Each partner stands as guarantor for this debt to the extent of its ownership interest in the consortium;
- TAG, mainly for bank guarantees for an amount of €143 million;
- The project management entities for an aggregate amount of €1,695 million. Commitments and guarantees given by the Group in respect of these project management entities chiefly correspond to:
 - equity contribution commitments for projects in the construction phase for an amount of € 1,088 million,
 - letters of credit to guarantee debt service reserve accounts for an aggregate amount of €167 million. The project financing set up in certain entities can require those entities to maintain a certain level of cash within the company (usually enough to service its debt for six months). This is particularly the case when the financing is without recourse. However, this level of cash may be replaced by letters of credit,
 - collateral given to lenders in the form of pledged shares in the project management entities, for an aggregate amount of €270 million,
 - performance bonds and other guarantees for an amount of €135 million.

NOTE 4 MAIN CHANGES IN GROUP STRUCTURE

Accounting standards

In accordance with IFRS 5 – *Non-Current Assets Held for Sale and Discontinued Operations*, assets or groups of assets held for sale are presented separately on the face of the statement of financial position and are measured and accounted for at the lower of their carrying amount and fair value less costs to sell.

An asset is classified as “held for sale” when its sale is highly probable within twelve months from the date of classification, when it is available for immediate sale under its present condition and when management is committed to a plan to sell the asset and an active program to locate a buyer and complete the plan has been initiated. To assess whether a sale is highly probable, the Group takes into consideration among other things indications of interest and offers received from potential buyers as well as specific execution risks attached to certain transactions.

If an asset classified as “held for sale” no longer meets the above conditions it will be reclassified in accordance with the standard.

Furthermore, assets or groups of assets are presented as discontinued operations in the Group’s consolidated financial statements when they are classified as “held for sale” and represent a separate major line of business under IFRS 5.

4.1 Disposals carried out in 2023

The table below shows the impact of the main disposals and sale agreements of 2023 on the Group’s net financial debt, excluding partial disposals with respect to DBSO ⁽¹⁾ activities:

<i>In millions of euros</i>	Disposal price	Reduction in net debt
Disposal of a thermal plant - Brazil	75	-
Other disposals that are not material taken individually	192	246
TOTAL	267	246

On May 31, 2023, ENGIE finalized the sale of its entire stake in the Pampa Sul thermal power plant to Grafito Fundo de Investimento em Participações Infraestrutura and Perfin Space X Fundo de Investimento em Participações em Infraestrutura.

Given the classification of this investment within “Assets held for sale” in 2022 and the deferral to 2025 of the payment of the contractual sale price, this transaction has no material impact on the Group’s net financial debt at December 31, 2023. The disposal loss before tax amounted to €47 million in 2023.

No Group assets are classified within “Assets held for sale” at December 31, 2023.

(1) Develop, Build, Share and Operate, a model used in renewable energies based on continuous rotation of capital employed.

4.2 Acquisitions carried out in 2023

In total, acquisitions carried out in 2023 (including financial investments in entities accounted for under the equity method) had an impact of €3,348 million on net financial debt. The main acquisitions carried out in 2023 are as follows:

- in October 2023, ENGIE finalized the acquisition of 100% of Broad Reach Power, a Houston-based company specialized in battery storage, from private equity funds EnCap and Apollo. The transaction involves 350 MW of operating assets, 880 MW of under-construction assets with a commissioning expected before the end of 2024, 1.7 GW of advanced stage projects and a significant pipeline of early stage projects. The projects are located in Texas, California and the central states of the United States. This investment is fully consolidated. This transaction had an impact of €1.4 billion on the Group's net financial debt (of which €0.1 billion in January 2024). The Group carried out a preliminary purchase price allocation, which will be finalized in the first half of 2024;
- in September 2023, ENGIE purchased an additional stake in Kathu Solar Park (RF) Proprietary Trading from Lereko Metier REIPPP Fund Trust, increasing its holding from 48.5% to 57.725%. Following this transaction, Kathu Solar Park (RF) Proprietary Trading is now fully consolidated by ENGIE (previously accounted for under the equity method). This transaction had an impact of approximately €0.6 billion on the Group's net financial debt, taking into account the consolidation of external debt;
- in December 2023, ENGIE and Meridiam purchased from ACTIS the full scope of BTE Renewables, a developer, owner and operator of renewable assets on the African continent, with an operating presence in South Africa and Kenya. The deal also included a carve-out of the Kenyan assets by ENGIE to Meridiam at closing. Following this transaction, BTE Renewables (South-African assets) has been fully consolidated by ENGIE. This transaction had an impact of approximately €0.4 billion on the Group's net financial debt;
- in December 2023, ENGIE finalized the acquisition of the minority stake (28%) held by Mitsui & Co, Ltd ("Mitsui") in International Power (Australia) Holdings Pty Limited ("IPAH"), a fully consolidated company in which the Group had a 72% stake. On completion of the transaction, the Group holds 100% of IPAH. The impact of this transaction on the Group's net financial debt amounted to around 0.2 billion euros;
- in September 2023, ENGIE also purchased the biomethane producer Ixora Energy Ltd. This investment is fully consolidated. This transaction had an impact of approximately €0.1 billion on the Group's net financial debt.

NOTE 5 FINANCIAL INDICATORS USED IN FINANCIAL COMMUNICATION

The purpose of this note is to present the main non-GAAP financial indicators used by the Group as well as their reconciliation with the indicators of the IFRS consolidated financial statements.

5.1 EBITDA

The reconciliation between EBITDA and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Current operating income including operating MtM and share in net income of equity method entities	12,493	5,367
Mark-to-market on commodity contracts other than trading instruments	(2,430)	3,661
Net depreciation and amortization/Other	4,886	4,576
Share-based payments (IFRS 2)	47	92
Non-recurring share in net income of equity method entities	22	17
EBITDA	15,017	13,713
Nuclear	1,285	1,510
EBITDA excluding Nuclear	13,732	12,204

5.2 EBIT

The reconciliation between EBIT and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Current operating income including operating MtM and share in net income of equity method entities	12,493	5,367
Mark-to-market on commodity contracts other than trading instruments	(2,430)	3,661
Non-recurring share in net income of equity method entities	22	17
EBIT	10,084	9,045
Nuclear	605	1,026
EBIT excluding Nuclear	9,479	8,019

5.3 Net recurring income Group share (NriGs)

Net recurring income Group share is a financial indicator used by the Group in its financial reporting to present net income Group share adjusted for unusual, abnormal or non-recurring items.

The reconciliation of net income/(loss) with net recurring income Group share is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2023	Dec. 31, 2022
NET INCOME/(LOSS) GROUP SHARE		2,208	216
NET INCOME/(LOSS) RELATING TO DISCONTINUED OPERATIONS, GROUP SHARE		-	2,182
NET INCOME/(LOSS) RELATING TO CONTINUING OPERATIONS, GROUP SHARE		2,208	(1,965)

Net recurring income/(loss) relating to discontinued operations, Group share		-	287
NET RECURRING INCOME/(LOSS) GROUP SHARE		5,366	5,510

5.4 Industrial capital employed

The reconciliation of industrial capital employed with items in the statement of financial position is as follows:

In millions of euros		Dec. 31, 2023	Dec. 31, 2022
(+)	Property, plant and equipment and intangible assets, net	66,399	62,853
(+)	Goodwill	12,864	12,854
(-)	Goodwill Gaz de France - SUEZ and International Power ⁽¹⁾	(7,229)	(7,241)
(+)	IFRS 16 and IFRIC 12 receivables	3,348	2,521
(+)	Investments in equity method entities	9,213	9,279
(-)	Goodwill arising on the International Power combination ⁽¹⁾	(39)	(40)
(+)	Financial assets covering nuclear provisions ⁽²⁾	9,984	6,626
(+)	Initial Margins ⁽²⁾	1,276	1,741
(+)	Trade and other receivables, net	20,092	31,310
(-)	Margin calls ^{(1) (3)}	(3,207)	(5,405)
(+)	Inventories	5,343	8,145
(+)	Assets from contracts with customers	9,531	12,584
(+)	Other current and non-current assets	14,414	19,060
(+)	Deferred tax	(3,658)	(4,379)
(+)	Cancellation of deferred tax on other recyclable items ^{(1) (3)}	(745)	(14)
(-)	Provisions	(32,593)	(27,027)
(+)	Actuarial gains and losses in shareholders' equity (net of deferred tax) ⁽¹⁾	1,500	1,058
(-)	Trade and other payables	(22,976)	(39,801)
(+)	Margin calls ^{(1) (3)}	3,269	6,351
(-)	Liabilities from contracts with customers	(4,053)	(3,412)
(-)	Other current and non-current liabilities	(21,777)	(27,279)
INDUSTRIAL CAPITAL EMPLOYED		60,957	59,782

- (1) For the purpose of calculating industrial capital employed, the amounts recorded in respect of these items have been adjusted from those appearing in the statement of financial position.
- (2) The Group changed the definition of industrial capital employed from January 1, 2023 to include financial assets hedging nuclear provisions and Initial Margins required by certain market activities.
- (3) Margin calls included in "Trade and other receivables, net" and "Trade and other payables" correspond to advances received or paid as part of collateralization agreements set up by the Group to manage counterparty risk on commodity transactions.

5.5 Cash flow from operations (CFFO)

The reconciliation of cash flow from operations (CFFO) with items in the statement of cash flows is as follows:

In millions of euros	Dec. 31, 2023	Dec. 31, 2022
Cash generated from operations before income tax and working capital requirements	14,407	12,415
Tax paid	(1,687)	(1,504)
Change in working capital requirements	397	(2,424)
Interest received on financial assets	118	(37)
Dividends received on equity investments	9	18
Interest paid	(1,058)	(822)
Interest received on cash and cash equivalents	569	194
Nuclear - expenditure on power plant dismantling and reprocessing, fuel storage	321	163
Change in financial assets held for investment or financing purposes	15	188
(+) Change in financial assets held for investment or financing purposes recorded in the statement of financial position and other	(15)	(176)
CASH FLOW FROM OPERATIONS (CFFO)	13,075	8,016

5.6 Capital expenditure (CAPEX) and growth CAPEX

The reconciliation of capital expenditure (CAPEX) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Acquisitions of property, plant and equipment and intangible assets	7,328	6,379
Acquisitions of controlling interests in entities, net of cash and cash equivalents acquired	1,392	289
(+) <i>Cash and cash equivalents acquired</i>	204	14
Acquisitions of investments in equity method entities and joint operations	237	407
Acquisitions of equity and debt instruments	1,675	(175)
Change in loans and receivables originated by the Group and other	1,585	2,877
(+) <i>Other</i>	-	(10)
(-) Disposal impacts relating to DBSO ⁽¹⁾ activities	(62)	(472)
(-) Financial investments Synatom / Disposal of financial assets Synatom	(3,082)	(1,822)
(+) Change in scope - Acquisitions	1,338	371
TOTAL CAPITAL EXPENDITURE (CAPEX)	10,614	7,858
(-) Maintenance CAPEX	(2,524)	(2,373)
TOTAL GROWTH CAPEX	8,090	5,485

(1) Develop, Build, Share & Operate; including Tax equity financing received (See Note 22 "Working capital requirements, inventories, other assets and other liabilities").

5.7 Net financial debt

The reconciliation of net financial debt with items in the statement of financial position is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2023	Dec. 31, 2022
(+) Long-term borrowings	14.2 & 14.3	37,920	28,083
(+) Short-term borrowings	14.2 & 14.3	9,367	12,508
(+) Derivative instruments - carried in liabilities	14.4	24,561	51,276
(-) <i>Derivative instruments hedging commodities and other items</i>		(23,973)	(50,542)
(-) Other financial assets	14.1	(16,987)	(12,992)
(+) <i>Loans and receivables at amortized cost not included in net financial debt</i>		8,891	6,720
(+) <i>Equity instruments at fair value</i>		2,124	1,495
(+) <i>Debt instruments at fair value not included in net financial debt</i>		4,558	3,394
(-) Cash and cash equivalents	14.1	(16,578)	(15,570)
(-) Derivative instruments - carried in assets	14.4	(21,245)	(48,386)
(+) <i>Derivative instruments hedging commodities and other items</i>		20,854	48,067
NET FINANCIAL DEBT		29,493	24,054

5.8 Economic net debt

Economic net debt is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2023	Dec. 31, 2022
NET FINANCIAL DEBT	14.3	29,493	24,054
Provisions for back-end of the nuclear fuel cycle and dismantling of nuclear facilities	17	23,887	19,017
Other nuclear liabilities ⁽¹⁾	17	816	-
Provisions for dismantling of non-nuclear facilities	17	1,384	1,330
Post-employment benefits - Pensions	18	957	452
(-) <i>Infrastructures regulated companies</i>		253	272
Post-employment benefits - Reimbursement rights	18	(242)	(208)
Post-employment benefits - Other benefits	18	3,962	3,704
(-) <i>Infrastructures regulated companies</i>		(2,578)	(2,392)
Deferred tax assets for pensions and related obligations	11	(1,013)	(812)
(-) <i>Infrastructures regulated companies</i>		541	490
Plan assets relating to nuclear provisions, inventories of uranium and receivables of Electrabel towards EDF ⁽¹⁾	17 & 22	(10,944)	(7,098)
ECONOMIC NET DEBT		46,517	38,808

- (1) Following the agreements with the Belgian government on the extension of the Tihange 3 and Doel 4 nuclear reactors and on all obligations related to nuclear waste, economic net debt now includes all existing nuclear liabilities, including payables and receivables previously recognized under working capital. The impact on the indicator at December 31, 2022 would have been an increase in economic net debt of around € 556 million.

NOTE 6 SEGMENT INFORMATION

6.1 Operating segment and reportable segment

ENGIE is organized around:

- four Global Business Units (GBUs) representing the Group's four strategic activities: Renewables GBU, Networks GBU, Energy Solutions GBU, and FlexGen & Retail GBU;
- two operating entities: Nuclear and Global Energy Management & Sales ("GEMS");
- an Other group mainly comprising the Corporate functions and certain Holdings.

The reportable segments are identical to the operating segments and correspond to the activities of the GBUs.

- **Renewables:** comprises all centralized renewable energy generation activities, including financing, construction, operation and maintenance of renewable energy facilities, using various energy sources such as hydroelectric, onshore wind, photovoltaic solar, offshore wind, and battery storage combined with a renewable asset. The energy produced is fed into the grid and sold either on the open or regulated market or to third parties through electricity sale agreements.
- **Networks:** comprises the Group's electricity and gas infrastructure activities and projects. These activities include the management and development of (i) gas and electricity transportation networks and natural gas distribution networks in and outside of Europe, (ii) underground natural gas storage in Europe, and (iii) regasification infrastructure in France and Chile. Apart from the historical infrastructure management activities, its asset portfolio also contributes to energy decarbonization and network greening (gradual integration of green gas, hydrogen-based projects, etc.).
- **Energy Solutions:** encompasses the construction and management of decentralized energy networks to produce energy (heating and cooling networks, distributed power generation plants, distributed solar power parks, low-carbon mobility, low-carbon cities and public lighting, etc.) and related services (energy efficiency, technical maintenance, sustainable development consulting).
- **FlexGen:** includes activities to compensate for the intermittent nature of renewable energy by providing upstream flexibility (flexible thermal generation and electricity, pumping or battery storage) and downstream flexibility (shaving or shifting consumption for BtoC customers). They also provide solutions for decarbonizing industry with low-carbon hydrogen. The GBU plays a key role in the energy transition. It also includes the financing, construction and operation of desalination plants, whether or not coupled with power generation plants.
- **Retail:** encompasses all the Group's activities relating to the sale of gas and electricity to end customers, whether professional or individual. It also includes all the Group's activities in services for residential clients.
- **Nuclear:** encompasses all of the Group's nuclear activities, with seven reactors in Belgium (four in Doel and three in Tihange) among which five in operation and drawing rights in France.
- **Others:** encompasses the activities of GEMS as well as Corporate and holding companies. The GEMS operating entity is responsible, at the global level, for the supply of energy and the management of risk and optimization of assets on the markets. It sells energy to companies and offers energy management services and solutions to support the decarbonization of the Group and its customers.

6.2 Key indicators by reportable segment

REVENUES

In millions of euros	Dec. 31, 2023			Dec. 31, 2022 ⁽¹⁾		
	External revenues	Intra-Group Revenues	Total	External revenues	Intra-Group Revenues	Total
Renewables	5,512	172	5,684	6,216	136	6,352

Nuclear	19	1
Others	368	108
<i>Of which GEMS</i>	82	63
TOTAL GROWTH CAPEX	8,091	5,485

(1) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at January 1, 2023. The main internal reclassifications concern the transfer of EV Box from Energy Solutions to Others.

6.3 Key indicators by geographic area

The amounts set out below are analyzed by:

- destination of products and services sold for revenues;
- geographic location of consolidated companies for industrial capital employed.

<i>In millions of euros</i>	Revenues		Industrial capital employed	
	Dec. 31, 2023	Dec. 31, 2022	Dec. 31, 2023	Dec. 31, 2022
France	36,676	34,248	32,802	33,912
Belgium	8,408	12,705	(9,259)	(7,575)
Other EU countries	18,303	22,687	9,713	9,261
Other European countries	4,480	4,202	1,991	1,610
North America	5,329	6,133	8,989	7,264
Asia, Middle East & Oceania	4,366	8,875	3,830	3,667
South America	4,715	4,778	11,212	11,095
Africa	289	237	1,679	548
TOTAL	82,565	93,865	60,957	59,782

Due to the variety of its businesses and their geographical location, the Group operates in a very diverse range of situations and for a variety of customer types (industry, local authorities and individual customers). Accordingly, no external customer represents individually 10% or more of the Group's consolidated revenues.

NOTE 7 REVENUES

7.1 Revenues

Accounting standards

Revenues from contracts with customers concern revenues from contracts that fall within the scope of IFRS 15 – *Revenue from Contracts with Customers*. Revenues are recognized when the customer obtains control of goods or services promised in the contract, for the amount of consideration to which an entity expects to be entitled in exchange for said promised goods or services.

A contractual analysis of the Group's sale contracts has led to the application of the following revenue recognition principles:

- **Gas, electricity and other energies**
Revenues from sales of gas, electricity and other energies are recognized upon delivery of the power to the retail, business or industrial customer.
Power deliveries are monitored in real time or on a deferred basis for those customers whose energy consumption is metered during the accounting period, in which case the portion of not yet metered revenues "in the meter" is estimated on the closing date.
- **Gas, electrical and other energy infrastructures**
Revenues derived by gas and electricity infrastructure operators upon providing transportation or distribution or storage capacities, are recognized on a straight-line basis over the contract term.
In the countries where the Group acts as an energy provider (supplier) without being in charge of its distribution or transportation, mainly in France and Belgium, an analysis of the energy sales contracts and of the related regulatory framework is carried out to determine whether the distribution or transportation services invoiced to the customers have to be excluded from the revenues recognized under IFRS 15.
Judgment may be exercised by the Group for this analysis in order to determine whether the energy provider acts as an agent or a principal for the gas or electricity distribution or transportation services re-invoiced to the customers. The main criteria used by the Group to exercise its judgment and conclude, in certain countries, that the energy provider acts as an agent of the infrastructure operator are as follows: who is primarily responsible for fulfillment of the distribution or transportation services? Does the energy provider have the ability to commit to capacity reservation contracts towards the infrastructure operator? To what extent does the energy provider have discretion in establishing the price for the distribution or transportation services?
- **Constructions, installations, Operations and Maintenance (O&M)**
Construction and installation contracts mainly concern assets built on the premises of customers such as cogeneration units, heaters or other energy-efficiency assets. The related revenues are usually recognized according to the percentage of completion on the basis of the costs incurred where the contracts fall within the scope of IFRS 15.
O&M contracts generally require the Group to perform services ensuring the availability of power generating facilities. These services are performed over time and the related revenues are recognized according to the percentage of completion on the basis of the costs incurred.

If it is not possible to conclude from the contractual analysis that the contract falls within the scope of IFRS 15, the revenues are accounted for as non-IFRS 15 revenues.

Revenues from other contracts, corresponding to revenues from operations that do not fall within the scope of IFRS 15, presented in the "Others" column include trading, lease and concession income, as well as any financial component of operating services, and the effects of the tariff shield mechanisms

NOTE 7 REVENUES

The table below shows a breakdown of revenues by type:

<i>In millions of euros</i>	Sales of gas	Sales of electricity and other energies	Sales of services linked to infrastructures	Constructions, installations, and O&M	Others	Dec. 31, 2023
Renewables	-	5,010	106	261	135	5,512
Networks	138	5	6,068	434	228	6,873
Energy Solutions	268	4,163	88	6,434	80	11,033
FlexGen	92	4,332	274	400	166	5,264
Retail	7,631	6,229	82	1,003	1,497	16,443
Nuclear	-	4	7	28	79	118
Others	13,943	19,619	246	142	3,372	37,322
<i>Of which GEMS</i>	13,943	19,619	241	46	3,372	37,221
TOTAL REVENUES	22,072	39,362	6,872	8,703	5,557	82,565

The significant change in natural gas and electricity prices has led some governments to introduce a “tariff shield” for natural gas and electricity, particularly in France and Romania.

The measures having the most significant impact on the Group's consolidated financial statements are those introduced by the French government for natural gas and electricity. The Finance Act for 2023 (Law no. 2022-1726 of December 30, 2022) extended and modified the tariff shield arrangements for gas (until June 30, 2023) and electricity (until January 31, 2024). The loss of revenue borne by ENGIE constitutes an expense attributable to public service obligations, and is subject to State-guaranteed compensation calculated in accordance with the application procedures published by the French Energy Regulatory Commission (*Commission de Régulation de l'Énergie*).

These effects are mainly included in the “Others” column (“Revenues excluding IFRS 15”) of the “Retail” business.

<i>In millions of euros</i>	Sales of gas	Sales of electricity and other energies	Sales of services linked to infrastructures	Constructions, installations, and O&M	Others	Dec. 31, 2022
Renewables	-	5,797	88	242	89	6,216
Networks	232	1	6,021	478	230	6,961
Energy Solutions	246	4,713	96	6,424	73	11,552

Retail	7,793	5,372	153	958	2,534	16,810
Nuclear	-	5	8	24	(3)	35
Others	21,405	19,595	170	70	3,923	45,163
<i>Of which GEMS</i>	21,405	19,595	170	45	3,923	45,137
TOTAL REVENUES	29,697	40,004	8,135	8,593	7,435	93,865

7.2 Trade and other receivables, assets and liabilities from contracts with customers

Accounting standards

On initial recognition, trade and other receivables are recorded at their transaction price as defined in IFRS 15.

A contract asset is an entity's right to consideration in exchange for goods or services that have been transferred to a customer but for which payment is not yet due or is contingent on the satisfaction of a specific condition stipulated in the contract. When an amount becomes due, it is transferred to receivables.

A receivable is recorded when the entity has an unconditional right to consideration. A right to consideration is unconditional if only the passage of time is required before payment of that consideration.

A contract liability is an entity's obligation to transfer goods or services to a customer for which the entity has already received consideration from the customer. The liability is derecognized upon recognition of the corresponding revenue.

Trade and other receivables and assets from contracts with customers are tested for impairment in accordance with the provisions of IFRS 9 on expected credit losses.

The impairment model for financial assets is based on the expected credit loss model. To calculate expected losses, the Group uses a matrix for trade receivables and assets from contracts with customers, for which the change in credit risk is monitored on a portfolio basis. The change in credit risk of for large customers and other large counterparties is monitored on an individual basis.

See Note 15 "Risks arising from financial instruments" for the Group's assessment of counterparty risk.

7.2.1 Trade and other receivables and assets from contracts with customers

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Trade and other receivables, net	20,092	31,310
Of which IFRS 15	8,083	7,587
Of which non-IFRS15	12,009	23,723
Assets from contracts with customers	9,531	12,584
Accrued income and unbilled revenues	6,989	9,513
Energy in the meter ⁽¹⁾	2,542	3,071

(1) Net of advance payments.

In 2023, the most significant assets from contracts mainly concerned GEMS (€3,766 million), Energy Solutions (€2,516 million) and Retail (€1,922 million).

<i>In millions of euros</i>	Dec. 31, 2023			Dec. 31, 2022		
	Gross	Allowances and expected credit losses	Net	Gross	Allowances and expected credit losses	Net
Trade and other receivables, net	22,160	(2,068)	20,092	33,282	(1,973)	31,310
Assets from contracts with customers	9,558	(27)	9,531	12,632	(48)	12,584
TOTAL	31,718	(2,095)	29,623	45,914	(2,020)	43,894

Gas and electricity in the meter

For customers whose energy consumption is metered during the accounting period, the gas supplied but not yet metered at the reporting date is estimated based on historical data, consumption statistics and estimated selling prices.

For sales on networks used by a large number of grid operators, the Group is allocated a certain volume of energy transiting through the networks by the grid managers. As the final allocations are sometimes only known several months down the line, revenue figures cannot be determined with absolute certainty. However, the Group has developed measuring and modeling tools allowing it to estimate revenues with a reasonable degree of accuracy and subsequently ensure that risks of error associated with estimating quantities sold and the related revenues can be considered as immaterial.

In France and Belgium, un-metered revenues ("gas in the meter") are calculated using a direct method taking into account customers' estimated consumption based on the last invoice or metering not yet billed. These estimates are in line with the volume of energy allocated by the grid managers over the same period. The average price is used to measure "gas in the meter" and takes account of the category of customer and the age of the delivered unbilled "gas in the meter". The portion of unbilled revenues at the reporting date varies according to the assumptions about volume and average price.

"Electricity in the meter" is also determined using a direct allocation method similar to that used for gas, but taking into account specific factors related to electricity consumption. It is also measured on a customer-by-customer basis or by customer type.

Realized but not yet metered revenues ("un-metered revenues") mainly related to France and Belgium for an amount of €5,279 million at December 31, 2023 (€5,883 million at December 31, 2022).

7.2.2 Liabilities from contracts with customers

In millions of euros	Dec. 31, 2023			Dec. 31, 2022		
	Non-current	Current	Total	Non-current	Current	Total
Liabilities from contracts with customers	93	3,960	4,053	121	3,292	3,412
Advances and downpayments received	23	2,998	3,020	53	2,201	2,253
Deferred revenues	71	963	1,033	68	1,091	1,159

In 2023, the Global Business Units reporting the greatest amounts of liabilities from contracts with customers were Retail (€1,563 million) and Energy Solutions (€1,638 million).

7.3 Revenues relating to performance obligations not yet satisfied

Revenues relating to performance obligations only partially satisfied at December 31, 2023 amounted to €867 million. They mainly concern Energy Solutions (€849 million) which handle a large number of construction, installation, and maintenance contracts under which revenues are recognized over time.

NOTE 8 OPERATING EXPENSES

Accounting standards

Operating expenses include:

- purchases and operating derivatives including:
 - the purchase of commodities and associated costs (infrastructure, transport, storage, etc.),
 - the realized impact, as well as the change in fair value (MtM), of commodity transactions, with or without physical delivery, that fall within the scope of IFRS 9 – *Financial Instruments* and that do not qualify as trading or hedging. These contracts are set up as part of economic hedges of operating transactions in the energy sector;
- purchases of services and other items such as subcontracting and interim expenses, lease expenses (short-term lease contracts, leases with a low underlying asset value or leases with variable expenses), concession expenses, etc.;
- personnel costs;
- depreciation, amortization, and provisions; and
- taxes.

8.1 Purchases and operating derivatives

In millions of euros	Dec 31, 2023	Dec 31, 2022
Purchases and other income and expenses on operating derivatives other than trading ⁽¹⁾	(49,650)	(67,676)
Service and other purchases ⁽²⁾	(7,342)	(6,860)
PURCHASES AND OPERATING DERIVATIVES	(56,992)	(74,535)
(1) Of which net income of €2,430 million in 2023 relating to MtM on commodity contracts other than trading (compared to a net expense of €3,661 million in 2022), notably on certain economic gas and electricity hedging positions not documented as cash flow hedges.		
(2) Of which €75 million in lease expenses not included in the IFRS 16 lease liability (compared to €56 million in lease expenses in 2022).		

The decrease in purchases and operating derivatives is mainly due to changes in commodity prices over the period.

8.2 Personnel costs

In millions of euros	Notes	Dec 31, 2023	Dec 31, 2022
Short-term benefits		(7,688)	(7,623)
Share-based payments	19	(47)	(104)
Costs related to defined benefit plans	18.3.4	(322)	(261)
Costs related to defined contribution plans	18.4	(92)	(91)
PERSONNEL COSTS		(8,149)	(8,078)

8.3 Depreciation, amortization and provisions

<i>In millions of euros</i>	Notes	Dec 31, 2023	Dec 31, 2022
Depreciation and amortization	13	(4,886)	(4,576)
Net change in write-downs of inventories, trade receivables and other assets		(203)	(768)
Net change in provisions	17	178	157
DEPRECIATION, AMORTIZATION AND PROVISIONS		(4,911)	(5,187)

At December 31, 2023, depreciation and amortization mainly break down as €1,124 million for intangible assets and €3,762 million for property, plant and equipment.

8.4 Taxes

<i>In millions of euros</i>	Dec 31, 2023	Dec 31, 2022
TAXES	(2,627)	(3,380)

Taxes at December 31, 2023 include the Belgian nuclear tax and the inframarginal rent caps from electricity generation for a total of €969 million, including €329 million for the nuclear tax (compared with approximately €1,348 million and €917 million respectively at December 31, 2022). In addition, in 2022, the Group recognized an expense of €308 million corresponding to the exceptional tax on the energy sector introduced by the Italian authorities (the temporary Italian solidarity contribution was recognized in income tax and amounted to €132 million).

NOTE 9 OTHER ITEMS OF NET INCOME/(LOSS) FROM OPERATING ACTIVITIES

Accounting standards

Other items of Net income/(loss) from operating activities include:

- “Impairment losses”: this line includes impairment losses on goodwill, other intangible assets, property, plant and equipment and investments in entities consolidated using the equity method;
- “Restructuring costs”: this line concerns costs corresponding to a restructuring program planned and controlled by management that materially changes either the scope of a business undertaken by the entity, or the manner in which that business is conducted, based on the criteria set out in IAS 37;
- “Changes in the scope of consolidation”. This line includes:
 - direct costs related to acquisitions of controlling interests,
 - in a business combination achieved in stages, remeasurement at fair value at the acquisition date of the previously held interest,
 - subsequent changes in the fair value of contingent consideration,
 - gains or losses from disposals of investments which result in a change of consolidation method, as well as any impact from the remeasurement of retained interests with the exception of gains and losses arising from transactions realized in the framework of “Develop, Build, Share & Operate” (DBSO) or “Develop, Share, Build & Operate” (DSBO) business models. As they are part of the recurring rotation of the Group’s capital employed, these transactions are recognized in current operating income subject to certain criteria being met (notably their recurrence).
- “Other non-recurring items”: this line includes other elements of an unusual, abnormal or infrequent nature.

9.1 Impairment losses

<i>In millions of euros</i>	Notes	Dec. 31, 2023	Dec. 31, 2022
Impairment losses:			
Goodwill	13.1	(94)	-
Property, plant and equipment and other intangible assets	13.2 & 13.3	(1,587)	(2,306)
Investments in equity method entities and related provisions		(72)	(536)
TOTAL IMPAIRMENT LOSSES		(1,753)	(2,841)
Reversal of impairment losses:			
Property, plant and equipment and other intangible assets		435	67
TOTAL REVERSALS OF IMPAIRMENT LOSSES		435	67
TOTAL		(1,318)	(2,774)

9.1.1 Impairment losses recognized in 2023

Net impairment losses recognized at December 31, 2023 amounted to €1,318 million and relate notably to:

- renewable energy production assets in North America (€714 million), due to very specific operational difficulties linked to turbine performance on a wind asset, and the fall in long-term market prices affecting certain projects exposed to the SPP market in particular. It should be noted that for these projects, the fall in market prices had a positive impact on the fair value of VPPA (Virtual Power Purchase Agreement) contracts of around €+0.3 billion,

with these mark-to-market changes, over the period covered by these contracts, recognized in operating expenses (see Note 8.1 “Operating expenses”);

- coal-fired generation assets in South America, for which the Group has decided to accelerate decommissioning from end 2025, in line with the Group's decarbonization plan (€515 million);
- other production or support assets for less significant amounts taken individually.

In addition, following the review procedure initiated by the Commission for Nuclear Provisions (CNP) in September 2022, the industrial scenario and all the technical and financial assumptions were approved on July 7, 2023. This resulted in a €646 million decrease in the dismantling asset provision (see Note 17 “Provisions”), against a reduction in dismantling assets. Given the impairment losses recognized on some of these assets at the end of the last year, an impairment reversal of €400 million was recorded in 2023.

These impairment losses mainly concern property, plant and equipment and intangible assets. Considering the effects of deferred taxes and the portion of impairment losses attributable to non-controlling interests, the impact of the impairment losses on net income Group share amounted to €642 million.

With the exception of the effects of decisions to dispose of non-strategic assets, no impairment losses were recognized on non-financial assets as a result of measures to prevent or mitigate climate risks or to achieve the 2045 net zero-carbon objective.

Impairment tests are carried out in accordance with the procedures described in Note 13.4.

9.1.2 Impairment losses recognized in 2022

Net impairment losses recognized at December 31, 2022 amounted to €2,774 million and related mainly to:

- the effects of the triennial revision of nuclear provisions on assets to be recognized against nuclear power plant dismantling provisions;
- the effects of the ongoing program to exit coal activities;
- the consequences of negotiations initiated or finalized during the year in connection with the renegotiation of PPA contracts or the disposal of non-strategic assets.

9.2 Restructuring costs

In 2023, restructuring costs totaled € 47 million (versus €230 million in 2022). Restructuring costs in both years mainly included costs related to staff reduction plans and measures to adapt to the economic situation in 2023 and 2022, as well as the shutdown or sale of operations, the closure or restructuring of certain facilities as well as other miscellaneous restructuring costs.

9.3 Changes in scope of consolidation

At December 31, 2023, the impact of changes in the scope of consolidation was a negative €85 million and mainly comprised the disposal of a coal-fired generation unit in Brazil (a negative €47 million).

At December 31, 2022, the impact of changes in the scope of consolidation was a positive €91 million and mainly comprised:

- a positive impact of €280 million relating to the disposal of shares held in Gaztransport et Technigaz (GTT) for a total representing approximately 24.6% of its share capital. This result includes the effects of the almost full conversion of the exchangeable bond issued by the Group in June 2021;
- a positive impact of €111 million relating to the disposal of geothermal assets in Indonesia;
- a negative impact of €127 million relating to the disposal of the Energy Solutions activities in Africa and France;

- a negative impact of €110 million relating to the purchase of shares in renewable assets in India with refinancing obligations carried out in 2023;
- a negative impact of €63 million relating to miscellaneous disposals that are not individually significant.

9.4 Other non-recurring items

Other non-recurring items amounted to a negative €4,945 million at December 31, 2023 and include the €-4,750 million impact of the revision of nuclear provisions to take account of the agreement reached with the Belgian government on June 29, 2023, which became binding following the signature of the supplements to the initial agreements on July 21, 2023 and whose implementation was specified in the transaction documents signed on December 13, 2023 (see Note 17 "Provisions"). This amount includes the additional provisions set aside under the agreement (€-5.1 billion), diminished by the effects of recognizing the receivable relating to Electrabel's partners' share in certain power plants (€0.4 billion).

Other non-recurring items also include the impact of the revision of the dismantling provision of the Hazelwood site in Australia for around €90 million.

Other non-recurring items at December 31, 2022 totaled a negative €1,328 million and mainly comprised:

- a negative impact of €979 million related to the triennial review of provisions for the management of the back-end nuclear cycle;
- a negative impact of €205 million related to provisions set up to cover clean-up obligations in France;
- a negative impact of €161 million related to the write-off of intangible assets and property, plant and equipment, mainly in France.

NOTE 10 NET FINANCIAL INCOME/(LOSS)

<i>In millions of euros</i>	Expense	Income	Dec. 31, 2023	Expense	Income	Dec. 31, 2022

NET FINANCIAL INCOME/(LOSS)	(3,340)	1,177	(2,163)	(3,700)	697	(3,003)

In 2023, the average cost of debt after hedging came out at 4.31% compared to 2.73% at December 31, 2022.

Net income/(loss) from debt and equity instruments amounted to a loss of €239 million and mainly included the loss on bonds and money market funds held by Synatom for €-149 million (see Note 17.2.4 "Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material").

NOTE 11 INCOME TAX EXPENSE

Accounting standards

The Group calculates taxes in accordance with prevailing tax legislation in the countries where income is taxable.

In accordance with IAS 12, deferred taxes are recognized according to the liability method on temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their tax bases, using tax rates that have been enacted or substantively enacted by the reporting date. However, under the provisions of IAS 12, no deferred tax is recognized for temporary differences arising from goodwill for which impairment losses are not deductible for tax purposes, or from the initial recognition of an asset or liability in a transaction which (i) is not a business combination and (ii) at the time of the transaction, affects neither accounting income nor taxable income. In addition, deferred tax assets are only recognized to the extent that it is probable that taxable income will be available against which the deductible temporary differences can be utilized.

A deferred tax liability is recognized for all taxable temporary differences associated with investments in subsidiaries, associates, joint ventures and branches, except if the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

Net balances of deferred taxes are calculated based on the tax position of each company or on the total income of companies included within the relevant consolidated tax group, and are presented in assets or liabilities for their net amount per tax entity.

Deferred taxes are reviewed at each reporting date to take into account factors including the impact of changes in tax laws and the prospects of recovering deferred tax assets arising from deductible temporary differences.

Deferred tax assets and liabilities are not discounted.

Tax effects relating to coupon payments on deeply-subordinated perpetual notes are recognized in profit or loss.

11.1 Actual income tax expense recognized in the income statement

11.1.1 Breakdown of actual income tax expense recognized in the income statement

The income tax expense recognized in the income statement for 2023 amounted to €1,031 million (€83 million income tax benefit in 2022). It breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Current income taxes	(833)	(1,762)
Deferred taxes	(198)	1,845
TOTAL INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(1,031)	83

11.1.2 Reconciliation of theoretical income tax expense with actual income tax expense

A reconciliation of theoretical income tax expense with the Group's actual income tax expense is presented below:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Net income/(loss)	2,903	390
Share in net income of equity method entities	993	523
Net income/(loss) from discontinued operations	-	2,183
Income tax expense	(1,031)	83
Income/(loss) before income tax of consolidated companies (A)	2,941	(2,400)
Of which French companies	1,532	(2,130)
Of which companies outside France	1,409	(270)
Statutory income tax rate of the parent company (B)	25.8%	25.8%
THEORETICAL INCOME TAX BENEFIT/(EXPENSE) (C) = (A) X (B)	(759)	620
Reconciling items between theoretical and actual income tax expense		
Difference between statutory tax rate applicable to the parent and statutory tax rate in force in jurisdictions in France and abroad	(14)	(8)
Permanent differences ⁽¹⁾	(120)	(313)
Income taxed at a reduced rate or tax-exempt ⁽²⁾	(22)	427
Additional tax expense ⁽³⁾	(60)	(327)
Effect of unrecognized deferred tax assets on tax loss carry-forwards and other tax-deductible temporary differences ⁽⁴⁾	(430)	(940)
Recognition or utilization of tax income on previously unrecognized tax loss carry-forwards and other tax-deductible temporary differences ⁽⁵⁾	93	643
Impact of changes in tax rates ⁽⁶⁾	8	(37)
Tax credits and other tax reductions ⁽⁷⁾	360	20
Other ⁽⁸⁾	(86)	(1)
INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	(1,031)	83

- (1) Mainly includes disallowable impairment losses on goodwill, disallowed operating expenses and the deduction of interest expenses arising from hybrid debt.
- (2) Mainly includes capital gains on disposals of securities exempt from tax or taxed at a reduced rate in some tax jurisdictions, the impact of the specific tax regimes used by some entities, disallowable impairment losses and capital losses on securities, and the impact of untaxed income from remeasuring previously-held (or retained) equity interests in connection with acquisitions and changes in consolidation methods.
- (3) Mainly includes tax on dividends resulting from the parent company tax regime, withholding tax on dividends and interest levied in several tax jurisdictions, allocations to provisions for income tax, and regional and flat-rate corporate taxes. In 2022, this line also included the temporary Italian solidarity contribution (€132 million).
- (4) Includes (i) the cancellation of the net deferred tax asset position for some tax entities in the absence of sufficient profit being forecast and (ii) the impact of disallowable impairment losses on fixed assets.
- (5) Includes the impact of the recognition of net deferred tax asset positions for some tax entities.
- (6) Mainly includes the impact of tax rate changes on deferred tax balances in the United Kingdom for 2023 and for 2022.
- (7) Mainly includes reversals of provisions for tax litigation in Luxembourg, tax credits in France and in Singapore and other tax reductions.
- (8) Mainly includes the correction of previous tax charges.

With regard to the future implementation of the OECD Pillar 2 rules, the Group does not have significant operations in countries where a minimum tax may be due, and therefore does not expect from this reform any material impacts on its income tax expense.

11.1.3 Analysis of the deferred tax income/(expense) recognized in the income statement, by type of temporary difference

In millions of euros	Impact in the income statement	
	Dec. 31, 2023	Dec. 31, 2022
Deferred tax assets:		
Tax loss carry-forwards and tax credits	(103)	1,051
Pension and related obligations	(3)	(1)
Non-deductible provisions	976	55
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(84)	454
Measurement of assets and liabilities at fair value (IAS 32/IFRS 9)	(2,373)	(1,260)
Other	265	(135)
TOTAL	(1,322)	164
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	61	(545)

DEFERRED TAX INCOME/(EXPENSE)	(198)	1,798
Of which continuing activities	(198)	1,845

11.2 Deferred tax income/(expense) recognized in "Other comprehensive income"

Net deferred tax income/(expense) recognized in "Other comprehensive income" is broken down by component as follows:

In millions of euros	Dec. 31, 2023	Dec. 31, 2022
Equity and debt instruments	(6)	33
Actuarial gains and losses	141	(646)
Net investment hedges	(41)	11
Cash flow hedges on other items	802	943
Cash flow hedges on net debt	4	(3)
TOTAL EXCLUDING SHARE OF EQUITY METHOD ENTITIES AND DISCONTINUED OPERATIONS	900	338
Share of equity method entities	(28)	(132)
Discontinued operations	-	(21)
TOTAL	872	185

11.3 Deferred taxes presented in the statement of financial position

11.3.1 Change in deferred taxes

Changes in deferred taxes recognized in the statement of financial position, after netting deferred tax assets and liabilities by tax entity, break down as follows:

In millions of euros	Assets	Liabilities	Net position
AT DECEMBER 31, 2022	2,029	(6,408)	(4,379)
Impact on net income for the year	(1,322)	1,124	(198)
Impact on other comprehensive income items	1,559	(665)	894
Impact of changes in scope of consolidation	215	(214)	-
Impact of translation adjustments	(13)	5	(8)
Transfers to assets and liabilities classified as held for sale	(4)	4	-
Other	(210)	243	33
Impact of netting by tax entity	(279)	279	-
AT DECEMBER 31, 2023	1,974	(5,632)	(3,658)

11.3.2 Analysis of the net deferred tax position recognized in the statement of financial position (before netting deferred tax assets and liabilities by tax entity), by type of temporary difference

Accounting standards

Measurement of recognized tax loss carry-forwards

Deferred tax assets are recognized on tax loss carry-forwards when it is probable that taxable profit will be available against which the tax loss carry-forwards can be utilized. The probability that taxable profit will be available against which the unused tax losses can be utilized, is based on taxable temporary differences relating to the same taxation authority and the same taxable entity and estimates of future taxable profits. These estimates and utilizations of tax loss carry-forwards were prepared on the basis of profit and loss forecasts over a six-year tax projection period as included in the medium-term business plan approved by Management, subject to exceptions justified by a particular context and, if necessary, on the basis of additional forecasts.

In millions of euros	Statement of financial position at	
	Dec. 31, 2023	Dec. 31, 2022
Deferred tax assets:		
Tax loss carry-forwards and tax credits	2,121	2,202
Pension obligations	1,013	812
Non-deductible provisions	1,485	518
Difference between the carrying amount of PP&E and intangible assets and their tax bases	1,659	1,830
Measurement of assets and liabilities at fair value (IAS 32/IFRS 9)	7,649	8,346
Other	626	620
TOTAL	14,553	14,328
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(9,893)	(9,873)
Measurement of assets and liabilities at fair value (IAS 32/IFRS 9)	(7,419)	(8,141)
Other	(897)	(693)
TOTAL	(18,210)	(18,707)
NET DEFERRED TAX ASSETS/(LIABILITIES)	(3,658)	(4,378)

In accordance with the amendment to IAS 12, no deferred tax is recognized in respect of the future implementation of the OECD Pillar 2 rules.

11.4 Unrecognized deferred taxes

At December 31, 2023, the tax effect of tax losses and tax credits eligible for carry-forward but not utilized and not recognized in the statement of financial position amounted to €4,563 million (€4,165 million at December 31, 2022). Most of these unrecognized tax losses relate to companies based in countries which allow losses to be carried forward indefinitely (mainly Belgium, the Netherlands, Australia, and the United States). These tax losses carried forward did not give rise to the full or partial recognition of a deferred tax asset due to the absence of sufficient profit forecasts in the medium term.

The tax effect of other tax-deductible temporary differences not recorded in the statement of financial position was €1,778 million at end-December 2023 versus €1,590 million at end-December 2022.

NOTE 12 EARNINGS PER SHARE

Accounting standards

Basic earnings per share is calculated by dividing net income Group share for the year by the weighted average number of ordinary shares outstanding during the year. The average number of ordinary shares outstanding during the year is the number of ordinary shares outstanding at the beginning of the year, adjusted by the number of ordinary shares bought back or issued during the year.

For the diluted earnings per share calculation, the weighted average number of shares and basic earnings per share are adjusted to take into account the impact of the conversion or exercise of any dilutive potential ordinary shares (options, warrants and convertible bonds, etc.).

In compliance with IAS 33 – *Earnings per Share*, earnings per share and diluted earnings per share are based on net income/(loss) Group share after deduction of payments to bearers of deeply-subordinated perpetual notes (see Note 16.2.1 “Issuance of deeply-subordinated perpetual notes”).

The Group's dilutive instruments included in the calculation of diluted earnings per share include bonus shares and performance shares granted in the form of ENGIE securities.

	Dec. 31, 2023	Dec. 31, 2022
Numerator (in millions of euros)		
Net income/(loss) Group share	2,208	216
Of which Net income/(loss) relating to continuing operations, Group share	2,208	(1,965)
Interest from deeply-subordinated perpetual notes	(80)	(77)
Net income/(loss) used to calculate earnings per share	2,129	140
Of which Net income/(loss) relating to continuing operations, Group share, used to calculate earnings per share	2,129	(2,042)
Net recurring income/(loss) Group share		
Net recurring income/(loss) Group share	5,366	5,510
Of which Net recurring income/(loss) relating to continuing operations, Group share	5,366	5,223
Interest from deeply-subordinated perpetual notes	(80)	(77)
Net recurring income/(loss) used to calculate earnings per share	5,287	5,433
Of which Net recurring income/(loss) relating to continuing operations, Group share, used to calculate earnings per share	5,287	5,146
Denominator (in millions of shares)		
Average number of outstanding shares	2,422	2,420
Impact of dilutive instruments:		
Bonus share plans reserved for employees	11	-
Diluted average number of outstanding shares	2,433	2,420
Earnings per share (in euros)		
Basic earnings/(loss) per share	0.88	0.06
Of which Basic earnings/(loss) Group share relating to continuing operations per share	0.88	(0.84)
Diluted earnings/(loss) per share	0.87	0.06
Of which Diluted earnings/(loss) Group share relating to continuing operations per share	0.88	(0.84)
Basic recurring earnings/(loss) per share		
Basic recurring earnings/(loss) per share	2.18	2.24
Of which Basic recurring earnings/(loss) Group share relating to continuing operations per share	2.18	2.13
Diluted recurring earnings/(loss) per share ⁽¹⁾	2.17	2.23
Of which Diluted recurring earnings/(loss) Group share relating to continuing operations per share ⁽¹⁾	2.17	2.12

(1) In 2022, the calculation of the denominator included 11 million potential ENGIE shares that had a dilutive effect on the NRIGs and NRIGs relating to continuing operations per share. This effect was not taken into account in the calculation of the NIIGs and the NIIGs relating to continuing operations per share due to the antidilutive effect on the latter.

NOTE 13 FIXED ASSETS

13.1 Goodwill

Accounting standards

Upon a business combination, goodwill is measured as the difference between:

- on the one hand the sum of:
 - the consideration transferred;
 - the amount of non-controlling interests in the acquiree, and
 - in a business combination achieved in stages, the acquisition-date fair value of the previously held equity interest in the acquiree;
- on the other hand the net fair value of the identifiable assets acquired and liabilities assumed. The key assumptions and estimates used to determine the fair value of assets acquired and liabilities assumed include the market outlook for the measurement of future cash flows as well as applicable discount rates. These assumptions reflect management's best estimates at the acquisition date.

The amount of goodwill recognized at the acquisition date cannot be adjusted after the end of the 12-month measurement period.

Goodwill relating to interests in associates is included in the carrying amount of the investment consolidated under the equity method entities.

13.1.1 Movements in the carrying amount of goodwill

<i>In millions of euros</i>	Net amount
AT DECEMBER 31, 2022	12,855
Impairment losses	(95)
Changes in scope of consolidation and Other	134
Translation adjustments	(29)
AT DECEMBER 31, 2023	12,864

13.1.2 Information on goodwill

For the purposes of impairment testing, goodwill is allocated to operating segments, which represent the lowest level at which it is monitored for internal management purposes.

The table below shows the amount of goodwill at December 31, 2023:

<i>In millions of euros</i>	Dec. 31, 2023
Networks	5,366
Renewables	2,185
Retail	1,838
Energy Solutions	1,209
FlexGen	1,123
Nuclear	797
Other	346
TOTAL	12,864

13.2 Intangible assets

Accounting standards

Initial measurement

Intangible assets are carried at cost less any accumulated amortization and any accumulated impairment losses.

Amortization

Intangible assets are amortized on the basis of the expected pattern of consumption of the estimated future economic benefits embodied in the asset. Amortization is calculated mainly on a straight-line basis over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Concession rights	10	30
Customer portfolio	3	20
Other intangible assets	1	50

Intangible assets with an indefinite useful life are not amortized but are tested for impairment annually.

Intangible rights arising on concession contracts

IFRIC 12 – *Service Concession Arrangements* deals with the treatment to be applied by the concession operator in respect of certain concession arrangements.

For a concession arrangement to fall within the scope of IFRIC 12, usage of the infrastructure must be controlled by the concession grantor. This requirement is satisfied when the following two conditions are met:

- the grantor controls or regulates what services the operator must provide with the infrastructure, to whom it must provide them, and at what price; and
- the grantor controls any residual interest in the infrastructure at the end of the term of the arrangement, for example it retains the right to take back the infrastructure at the end of the concession.

The intangible asset model according to paragraph 17 of IFRIC 12 applies if the operator receives a right (a license) to charge the users, or the grantor, depending on the use made of the public service. There is no unconditional right to receive cash, as the amounts depend on the extent to which the public uses the service.

Concession infrastructures that do not meet the requirements of IFRIC 12 are presented as property, plant and equipment. This is the case of gas distribution infrastructures in France. The related assets are recognized in accordance with IAS 16, given that GRDF operates its network under long-term concession arrangements, most of which are mandatorily renewed upon expiration pursuant to French law No. 46-628 of April 8, 1946.

Research and development costs

Research costs are expensed as incurred.

Development costs are capitalized when the asset recognition criteria set out in IAS 38 are met. Capitalized development costs are amortized over the useful life of the intangible asset.

13.2.1 Movements in intangible assets

<i>In millions of euros</i>	Intangible rights arising on concession contracts	Capacity entitlements	Others	Total
GROSS AMOUNT				
AT DECEMBER 31, 2022	3,630	3,282	13,498	20,410
Acquisitions	269	-	1,143	1,412
Disposals	(43)	-	(271)	(315)
Translation adjustments	5	-	(52)	(46)
Changes in scope of consolidation	-	-	965	965
Transfer to "Assets classified as held for sale and discontinued operations"	-	-	-	-
Other	44	11	(59)	(4)
AT DECEMBER 31, 2023	3,906	3,293	15,223	22,422
ACCUMULATED AMORTIZATION AND IMPAIRMENT				
AT DECEMBER 31, 2022	(1,706)	(2,208)	(9,131)	(13,046)
Amortization	(151)	(106)	(867)	(1,124)

Disposals	37	-	180	217
Translation adjustments	(1)	-	22	21
Changes in scope of consolidation	-	-	(19)	(19)
Other	(9)	-	37	29
AT DECEMBER 31, 2023	(1,838)	(2,314)	(9,821)	(13,973)
CARRYING AMOUNT				
AT DECEMBER 31, 2022	1,924	1,074	4,366	7,364
AT DECEMBER 31, 2023	2,067	979	5,403	8,449

In 2023, the net increase in "Intangible assets" was mainly attributable to:

- investments during the period (€1,412 million) relating mainly to intangible assets in progress (€863 million) notably capitalized costs in connection with the renewable business in the United States (€207 million), as information technology projects (€141 million) mainly at corporate ENGIE group level in France, and as investments in the extension and maintenance of transmission and distribution networks (€215 million) mainly in France, and relating to concession contracts in the business of Energy Solutions in France (€269 million);
- a net positive impact of changes in the scope of consolidation of €946 million, relating mainly to preliminary purchase price allocation carried out for the acquisition of Broad Reach Power, a US-based company specializing in battery storage (€760 million) and to the acquisition of the group BTE Renewables, a renewable energy producer with wind and solar PV projects in South Africa (€134 million) (see Note 4 "Main changes in the Group structure");

partially offset by:

- amortization (negative €1,124 million);
- impairment losses (negative €51 million).

13.2.2 Capacity entitlements

The Group has acquired capacity entitlements from power stations operated by third parties. These power station capacity rights were acquired in connection with transactions or within the scope of the Group's involvement in financing the construction of certain power stations. In consideration, the Group received the right to purchase a share of the production over the useful life of the underlying assets. These rights are amortized over the useful life of the underlying right, not exceeding 50 years. The Group currently holds rights in the Chooz B and Tricastin power plants in France and in the virtual power plant (VPP) in Italy (2028 maturity).

13.2.3 Other

At December 31, 2023, this caption mainly relates to software and licenses for €1,436 million, as well as intangible assets in progress for €1,576 million and intangible assets (client portfolio) acquired for €2,097 million as a result of business combinations and capitalized acquisition costs for customer contracts.

13.2.4 Information regarding research and development costs

Research and development activities primarily relate to various studies regarding technological innovation, improvements in plant efficiency, safety, environmental protection, service quality, and the use of energy resources. Research and development priorities are focused on climate change adaptation and mitigation, including renewable energy systems (photovoltaic solar, onshore and offshore wind), the production and use of green gases (hydrogen, biomethane) or the development of decentralized energy infrastructure (district heating and cooling, decentralized solar energy, low carbon cities and mobility).

Capitalized development costs, related to projects in the development phase that meet the criteria for recognition as an intangible asset as defined in IAS 38, totaled €21 million in 2023.

13.3 Property, plant and equipment

Accounting standards

Initial recognition and subsequent measurement

Items of property, plant and equipment are recognized at historical cost less any accumulated depreciation and any accumulated impairment losses.

The carrying amount of these items is not revalued as the Group has elected not to apply the allowed alternative method, which consists of regularly revaluing one or more categories of property, plant and equipment.

Investment subsidies are deducted from the gross value of the assets concerned.

In accordance with IAS 16, the initial cost of the item of property, plant and equipment includes an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, when the entity has a present, legal or constructive obligation to dismantle the item or restore the site. A corresponding provision for this obligation is recorded for the amount of the asset component.

Borrowing costs that are directly attributable to the construction of the qualifying asset are capitalized as part of the cost of that asset.

Leases

In accordance with IFRS 16, the Group recognizes a right-of-use asset and a corresponding lease liability with respect to contracts considered as a lease in which the Group acts as lessee, except for leases with a term of 12 months or less ("short-term leases"), and leases for which the underlying asset is of a low value ("low-value asset"). Payments associated with these leases are recognized on a straight-line basis as expenses in profit and loss. The lease contracts in the Group mainly concern real estate, vehicles, LNG vessels, an hydroelectric concession contract and other equipment.

The right-of-use asset is initially measured at cost, which comprises the initial amount of the lease liability adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred and an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received.

The lease liability is initially measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate. This rate is calculated based on the Group's incremental borrowing rate adjusted in accordance with IFRS 16, taking into account (i) the economic environment of the subsidiaries, and in particular their credit risk, (ii) the currency in which the contract is concluded and (iii) the duration of the contract at inception (or the remaining duration for contracts existing upon the initial application of IFRS 16). The methodology applied to determine the incremental borrowing rate reflects the profile of the lease payments (duration method).

The lease term is assessed, including whether a renewal option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised, on a case-by-case basis. The lease term is reassessed if a significant event or a significant change in circumstances that is within the control of the lessee occurs and may affect the assessment made. In determining the enforceable period of a lease, the Group applies a broad interpretation of the term penalty and takes into consideration not only contractual penalties arising from termination, but also ancillary costs that could arise in case of an early termination of the lease.

Cushion gas

"Cushion" gas stored in underground storage facilities is essential for ensuring that reservoirs can be operated effectively, and is therefore inseparable from these reservoirs. Unlike "working" gas which is included in inventories (see Note 22.2 "Inventories"), cushion gas is reported in other property, plant and equipment.

Depreciation

In accordance with the components approach, each significant component of an item of property, plant and equipment with a different useful life from that of the main asset to which it relates is depreciated separately over its own useful life.

Property, plant and equipment is depreciated mainly using the straight-line method over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Plant and equipment		
• Storage - Production - Transport - Distribution	5	60 ^(*)
• Installation – Maintenance	3	10
• Hydraulic plant and equipment	20	65
Solar and wind farms	25	30
Other property, plant and equipment	2	33

(*) Excluding cushion gas.

The range of useful lives is due to the diversity of the assets in each category. The minimum periods relate to smaller equipment and furniture, while the maximum periods concern network infrastructures and storage facilities.

Fixtures and fittings relating to hydro plants operated by the Group are depreciated over the shorter of the contract term and the useful life of the assets, taking into account the renewal of the concession period if such renewal is considered to be reasonably certain.

The right-of-use asset related to leases is depreciated using the straight-line method from the commencement date to the end of the lease term, unless the lease transfers ownership of the underlying asset to the Group by the end of the lease term. In that case the right-of-use asset is depreciated over the useful life of the underlying asset, which is determined on the same basis as that used for property, plant and equipment mentioned above.

13.3.1 Movements in property, plant and equipment

<i>In millions of euros</i>	Land	Buildings	Plant and equipment	Vehicles	Dismantling costs	Assets in progress	Right of use	Other	Total

AT DECEMBER 31, 2023	(158)	(1,793)	(56,306)	(239)	(4,467)	(229)	(1,893)	(794)	(65,879)
CARRYING AMOUNT									
AT DECEMBER 31, 2022	497	991	43,307	78	1,883	4,925	3,384	424	55,488
AT DECEMBER 31, 2023	516	971	44,993	90	928	6,487	3,561	404	57,950

In 2023, the net increase in "Property, plant and equipment" essentially takes into account:

- maintenance and development investments for a total amount of €6,724 million mainly related to the construction and the development of wind and solar farms primarily in France, the United States, Latin America and Poland (€3,450 million), as well as to the extension of the transportation and distribution networks in France, Romania and Latin America (€1,765 million), to FlexGen operating segment assets (€868 million) and to Energy Solutions operating activities (€437 million);
- a net positive impact of changes in the scope of consolidation of €1,003 million, relating mainly to the acquisition of Broad Reach Power, a US-based company specialized in battery storage (€531 million), the acquisition of BTE Renewables, one of Africa's leading renewable energy companies based in South Africa (€311 million) and the acquisition of Ixora in the UK (€22 million) in the Networks operating segment;

offset by:

- depreciation for a total amount of €3,762 million;
- a €646 million decrease in dismantling assets following the adoption of the industrial scenario and of all the technical and financial assumptions which were approved by the Commission for Nuclear Provisions (CNP) on July 7, 2023 at the end of the review procedure initiated in September 2022. This decrease was partially offset by a €403 million reversal of impairment on some of these assets (see Note 13.4 "Impairment testing of goodwill, intangible assets and property, plant and equipment");
- negative foreign exchange effects of €286 million, mainly resulting from the depreciation of the US dollar (negative €445 million), partially offset by the appreciation the Brazilian real (positive €88 million), the Mexican peso (positive €47 million) and the pound sterling (positive €33 million) against euro.

13.3.2 Pledged and mortgaged assets

Items of property, plant and equipment pledged by the Group to guarantee borrowings and debt amounted to €1,625 million at December 31, 2023 compared to €1,120 million at December 31, 2022.

The net increase primarily relates to the renewable assets pledged in Brazil for €392 million.

13.3.3 Contractual commitments to purchase property, plant and equipment

In the ordinary course of their operations, some Group companies have entered into commitments to purchase, and the related third parties to deliver plant and equipment. These commitments relate mainly to orders for equipment and material related to the construction of energy production units and to service agreements.

Contractual investment commitments made by the Group to purchase property, plant and equipment totaled €2,859 million at December 31, 2023 compared to €3,548 million at December 31, 2022.

The net reduction in contractual commitments relates mainly to renewable assets in the United States for €585 million.

13.3.4 Other information

Borrowing costs included in the cost of property, plant and equipment amounted to €268 million at December 31, 2023 compared to €109 million at December 31, 2022.

13.4 Impairment testing of goodwill, intangible assets and property, plant and equipment

Accounting standards

Risk of impairment

Goodwill

Goodwill is not amortized but is tested for impairment each year in accordance with IAS 36, or more frequently where an indication of impairment is identified. All goodwill is tested for impairment based on data at the end of June, supplemented by a review of events in the second half.

Impairment tests are carried out at the level of cash-generating units (CGUs) or groups of CGUs, which constitute groups of assets which generate cash flows that are largely independent from cash flows generated by other CGUs.

Goodwill is impaired if the net carrying amount of the CGU (or group of CGUs) to which the goodwill is allocated is greater than the recoverable amount of that CGU.

Impairment losses in relation to goodwill cannot be reversed and are shown as "Impairment losses" in the income statement.

Intangible assets and property, plant and equipment

In accordance with IAS 36, impairment tests are carried out on items of property, plant and equipment and intangible assets where there is an indication that the assets may be impaired. Such indications may be based on events or changes in the market environment, or on internal sources of information. Intangible assets that are not amortized are tested for impairment annually.

Property, plant and equipment and intangible assets with finite useful lives are only tested for impairment when there is an indication that they may be impaired. This is generally the result of significant changes in the environment in which the assets are operated or when economic performance is lower than expected.

Items of property, plant and equipment and intangible assets are tested for impairment at the level of the cash-generating unit (CGU), as appropriate and determined in accordance with IAS 36. If the recoverable amount of an asset is lower than its carrying amount, the carrying amount is written down to the recoverable amount by recording an impairment

loss. Upon recognition of an impairment loss, the depreciable amount and possibly the useful life of the asset concerned is revised.

Impairment losses recorded in relation to property, plant and equipment or intangible assets may be subsequently reversed if the recoverable amount of the asset increases to exceed the carrying amount. The increased carrying amount of an item of property, plant or equipment following the reversal of an impairment loss may not exceed the carrying amount that would have been determined (net of depreciation/amortization) had no impairment loss been recognized in prior periods.

Indicators of impairment

The main indicators of impairment used by the Group are:

- using external sources of information
 - a decline in an asset's value over the period that is significantly more than would be expected from the passage of time or normal use;
 - significant adverse changes that have taken place over the period, or will take place in the near future, in the technological market, economic or legal environment in which the entity operates or in the market to which an asset is dedicated;
 - an increase over the period in market interest rates or other market rates of return on investments if such increase is likely to affect the discount rate used in calculating an asset's value in use and decrease its recoverable amount materially;
 - the carrying amount of the net assets of the entity exceeds its market capitalization;
- using internal sources of information
 - evidence of obsolescence or physical damage to an asset;
 - significant changes in the extent to which, or manner in which, an asset is used or is expected to be used, that have taken place in the period or soon thereafter and that will adversely affect it. These changes include the asset becoming idle, plans to dispose of an asset sooner than expected, reassessing its useful life as finite rather than indefinite or plans to restructure the operations to which the asset belongs;
 - internal reports that indicate that the economic performance of an asset is, or will be, worse than expected.

Measurement of recoverable amount

For operating entities which the Group intends to hold on a long-term and going concern basis, the recoverable amount of a CGU corresponds to the higher of its fair value less costs to sell and its value in use. Value in use is primarily determined based on the present value of future operating cash flows including a terminal value. Standard valuation techniques are used based on the following main economic assumptions:

- market perspectives and developments in the regulatory framework;
- discount rates based on the specific characteristics of the operating entities concerned;
- terminal values in line with available market data specific to the operating segments concerned and growth rates associated with these terminal values, not exceeding the inflation rate.

Discount rates are determined on a post-tax basis and applied to post-tax cash flows. The recoverable amounts calculated on the basis of these discount rates are the same as the amounts obtained by applying the pre-tax discount rates to cash flows estimated on a pre-tax basis, as required by IAS 36.

For operating entities which the Group has decided to sell, the related recoverable amount of the assets concerned is based on market value less disposal costs. Where negotiations are ongoing, this value is determined based on the best estimate of their outcome as of the reporting date.

13.4.1 General assumptions

The impairment tests were performed in the context of a highly volatile economic environment, as described in Note 1.3 "Use of estimates and judgments".

In most cases, the recoverable amounts are determined by reference to a value in use that is calculated using cash flow projections drawn up on the basis of the 2024 budget and the 2025-2026 medium-term business plan, as approved by the Executive Committee and the Board of Directors, and on the basis of extrapolated cash flows beyond that time frame.

Cash flow projections are determined on the basis of macroeconomic assumptions (inflation, exchange rates and growth rates), and price forecasts resulting from the Group's reference scenario for 2027-2050 as revised and validated by the Executive Committee in July 2023. The forecasts and projections included in the reference scenario were determined on the basis of the following inputs:

- forward market prices over the liquidity period for fuel (coal, oil and gas), CO₂ and electricity on each in a context of highly volatile energy prices;
- beyond this period, medium- and long-term energy prices were determined by the Group based on macroeconomic assumptions and fundamental supply and demand equilibrium models, the results of which are regularly compared against forecasts prepared by external energy sector specialists. Long-term projections for CO₂ prices are in line with the 2030 emissions reduction target of 55% and the 2050 climate neutrality objectives set by the European Commission as part of the "European Green Deal" presented in December 2019 and July 2021. Among the external scenarios, the Group's scenario is similar to that of the International Energy Agency, with its APS (Announced Pledges Scenario) model, and that of ADEME ("green technology");
- more specifically, medium- and long-term electricity prices were determined by the Group using electricity demand forecasting models, medium- and long-term forecasts of fuel and CO₂ prices, and expected trends in installed capacity and in the technology mix of the production assets within each power generation system. ENGIE has opted for a balanced mix, integrating renewable gas and carbon dioxide capture and storage in order to guarantee an energy system with the best levels of efficiency and resilience. This trajectory has been included in the Group's report as part of the "Task Force on Climate Related Financial Disclosures" (TCFD) initiative. The risk factors arising from climate and environmental issues are also detailed in the Group's Universal Registration Document.

Finally, as part of the Group's efforts to take climate issues into account (see Note 1.3.3 "Consideration of climate issues in the preparation of the Group's financial statements"), the Group has taken into account, in the valuation of non-financial assets, its commitment to completely withdraw from coal activities by 2027 (see Note 13.4.5).

13.4.2 Renewables

At December 31, 2023, goodwill amounted to €2,185 million, intangible assets to €1,756 million and property, plant and equipment to €17,124 million. Renewables comprises all centralized renewable energy generation activities, including financing, construction, operation and maintenance of renewable energy facilities, using various energy sources such as hydropower, onshore wind, photovoltaic solar, biomass, offshore wind, and battery storage linked to a renewable asset. The energy produced is fed into the grid and sold either on the open or regulated market or to third parties through electricity sale agreements.

The main assumptions and key estimates relate primarily to discount rates, assumptions as to the renewal of the hydropower concession agreements and changes in electricity prices beyond the liquidity period.

The value in use of the Compagnie Nationale du Rhône and SHEM was calculated based on assumptions including the extension or renewal through a tender process for the concession agreements.

The cash flows for the periods covered by the renewal of the concession agreements are based on a number of assumptions relating to the economic and regulatory conditions for operating these assets (royalty rates, required level of investment, etc.) during this period.

In 2023, the discount rates applied to these activities ranged between 5.3% and 10.3%. In 2022, they ranged between 4.5% and 10.2%.

Results of the impairment tests

At December 31, 2023, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses on property, plant and equipment totaling €784 million were nevertheless recognized over the year, notably on renewable energy production assets in North America (€714 million), due to very specific operational difficulties linked to turbine performance on a wind power asset, and the fall in long-term market prices affecting certain projects exposed to the SPP market in particular. It should be noted that for these projects, the fall in market prices had a positive impact on the fair value of VPPA (Virtual Power Purchase Agreement) contracts of around €+0.3 billion, with these mark-to-market changes, on the period covered by these contracts, recognized in operating expenses (see Note 8.1 "Operating expenses").

Sensitivity analyses

The sensitivity of the hydropower generation business in France and the renewable power generation business in North America to changes in electricity prices and changes in discount rates (impact on the recoverable amount) is shown in the table below:

In billion of euros	31 déc. 2023			
	Electricity prices		Discount rates	
	+10€/MWh	-10€/MWh	+50 bp	-50bp
Hydropower generation in France	0.2	(0.4)	(0.2)	0.2
Renewables assets in North America	0.4	(0.4)	(0.1)	0.1

Non-linear increase or decrease due to the method of calculation of the hydro tax.

An increase of 50 basis points in the discount rates and a decrease of €10/MWh in the electricity price have a negative impact on the recoverable amount. However, the recoverable amount of goodwill would remain above the carrying amount.

13.4.3 Networks

Networks comprises the Group's electricity and gas infrastructure activities and projects. These activities include the management and development of (i) gas and electricity transportation networks and natural gas distribution networks in and outside of Europe, (ii) underground natural gas storage in Europe, and (iii) regasification infrastructure in France and Chile.

Apart from the historical infrastructure management activities, its asset portfolio also contributes to the challenges of the energy transition and network greening (biomethane, hydrogen, etc.).

At December 31, 2023, goodwill amounted to €5,366 million, intangible assets to €1,090 million and property, plant and equipment to €29,975 million. Regulated infrastructure assets in France amounted to €928 million for intangible assets and €27,220 million for property, plant and equipment.

The valuation of activities in France is mainly based on cash flow projections determined on the basis of tariffs negotiated with the French energy regulator (CRE) and terminal values corresponding to the expected value of the Regulated Asset Base (RAB). The RAB is the value assigned by the CRE to the assets operated by distributors. It is the sum of the future pre-tax cash flows, discounted at the pre-tax rate of return guaranteed by the regulator.

In respect of the valuation of activities in France, the energy mix scenario for 2050, adopted by the Group and detailed in Note 17.3.1 "Dismantling obligations arising on non-nuclear plant and equipment", will not lead to any significant change in the RAB. Given the vital role of gas, a reliable energy source able to supplement renewable energy sources that are intermittent by nature, non-controllable and difficult to store, the Group is planning to maintain or convert its gas network infrastructures to allow for the transportation of green gases (biomethane, hydrogen, etc.), which will progressively replace

natural gas. This strategic role will be further strengthened by the new opportunities offered in terms of CO₂ storage and transportation.

To achieve this, the Group plans to maintain its current level of investment. This approach is largely supported by a rapidly developing regulatory framework supporting the rise in the use of hydrogen and biomethane in the European Union, which will result in concrete European targets. This legal framework should be in place within the next two years.

France's political and social strategy concerning the energy transition aims to achieve carbon neutrality by 2050. The priorities of the French climate and energy policy are being updated with France's future roadmap *Stratégie Française sur l'Énergie et le Climat* (SFEC), in particular with the document published on November 22, 2023 by the Ministry of Ecological Transition ahead of the consultation that was launched in December 2023. In addition, the scenario adopted by the Group is largely supported by the main conclusions of the CRE report of April 2023 on the future of gas infrastructures, as well as those of the public consultation on "decarbonizing the building industry" held during the 2023 summer, which highlighted the difficulties associated with a potential ban on the installation of new gas boilers in existing homes.

In 2023, the discount rates applied to all these activities ranged between 4.9% and 9.4%. In 2022, they ranged between 4.7% and 8.5%.

Results of the impairment tests

At December 31, 2023, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €82 million were recognized during the year on certain biomethane production assets.

Sensitivity analysis

Given the regulated nature of the Networks business in France, as well as the progressive transition from natural gas to green gas, a reasonable change in any of the valuation inputs (discount rate, inflation rate and rate of return on assets) would not result in any impairment losses. A very substantial change in the regulatory framework and political orientations could have a significant impact on the valuation of gas infrastructure assets in France. In this respect, the 2023 RAB of Networks assets in France, as well as the related depreciation and amortization expenses, are as follows:

<i>In millions of euros</i>	2023 RAB	Depreciation and amortization
GRDF	16,941	(1,083)
GRTgaz	9,362	(546)
Storengy	4,120	(153)
Elengy	930	(61)

13.4.4 Energy Solutions

At December 31, 2023, goodwill amounted to €1,209 million, intangible assets to €2,351 million and property, plant and equipment to €2,646 million.

Energy Solutions encompasses the construction and management of decentralized energy networks to produce energy (heating and cooling networks, distributed power generation plants, distributed solar power parks, low carbon mobility, low-carbon cities and public lighting, etc.) and related services (energy efficiency, technical maintenance, sustainable development consulting).

The terminal value used to calculate the value in use of the services and energy sales businesses in France was determined by extrapolating the cash flows beyond the medium-term business plan period using a long-term growth rate of 2% per year.

The main assumptions and key estimates relate primarily to discount rates and changes in price beyond the liquidity period.

In 2023, the discount rates applied to these activities ranged between 5.3% and 9%. In 2022, they ranged between 4.9% and 8.9%.

Results of the impairment tests

At December 31, 2023, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €137 million were recognized during the year on property, plant and equipment, mainly in connection with renegotiations of contracts due to expire shortly in France, as well as assets that were subject to revisions to their medium- and long-term forecasts or that encountered operational difficulties in Germany and North America.

Sensitivity analyses

Given the essentially contractual nature of Energy Solutions activities, a reasonable change in any of the valuation inputs would not result in impairment losses on goodwill.

13.4.5 FlexGen

At December 31, 2023, goodwill amounted to €1,123 million, intangible assets to €894 million and property, plant and equipment to €5,883 million.

FlexGen encompasses all the Group's the activities involved in compensating the intermittent nature of renewable energies by providing upstream flexibility (flexible generation as well as pump- or battery- operated storage plants) and downstream flexibility (shaving or shifting the consumption of BtoC customers). They also provide solutions to decarbonize the industry with low-carbon hydrogen. The GBU plays a key role in the energy transition. It also includes the financing, construction, and operation of desalination plants, whether or not connected to power plants.

The main assumptions and key estimates relate primarily to discount rates, estimated demand for electricity and changes in the price of CO₂, fuel and electricity beyond the liquidity period. These assumptions also concern the duration of tax measures involving inframarginal rent caps in France and Italy.

In 2023, the discount rates applied to these activities ranged between 6.4% and 10.4%. In 2022, they ranged between 6% and 10.3%.

Results of the impairment tests

At December 31, 2023, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €624 million were recognized during the year on property, plant and equipment, notably on coal-fired power generation assets in South America for which the Group has decided to accelerate the end of operations by the end of 2025, in line with the Group's decarbonization plan.

Sensitivity analyses

An increase of 50 basis points in the discount rates used would have a negative 1% impact on the recoverable amount of thermal power plants in France, Belgium, the Netherlands and Spain. However, the recoverable amount of goodwill would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 1% impact on the calculation.

A 10% decrease in the margin captured by thermal power plants in France, Belgium, the Netherlands and Spain would have a negative impact of 6% on the recoverable amount of goodwill over the carrying amount. An increase of 10% in the margin captured would have a positive 6% impact on this calculation.

13.4.6 Retail

At December 31, 2023, goodwill amounted to €1,838 million, intangible assets to €610 million and property, plant and equipment to €136 million.

Retail encompasses all the Group's activities relating to the sale of gas and electricity to end customers. It also includes all the Group's activities in services for residential clients.

The terminal value used to calculate the value in use of the main services and energy sales businesses in Europe was determined by extrapolating cash flows beyond the medium-term business plan period using a long-term growth rate of approximately 2% per year.

In 2023, the discount rates applied to these activities ranged between 8% and 10.6%. In 2022, these rates ranged between 7.8% and 10%.

Results of the impairment tests

At December 31, 2023, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

Sensitivity analyses

Given the capital-light nature of Retail activities, a reasonable change in any of the valuation inputs would not result in any impairment losses on goodwill.

13.4.7 Nuclear

At December 31, 2023, goodwill amounted to €797 million, intangible assets to €979 million and property, plant and equipment to €1,045 million.

Nuclear encompasses the power generation activities from the Group's nuclear power plants in Belgium and drawing rights on the Chooz B and Tricastin power plants in France.

Key assumptions used for the impairment test

On June 29, 2023, ENGIE and the Belgian government signed an intermediate agreement defining the terms of the extension of the Doel 4 and Tihange 3 nuclear units only. This agreement became binding on July 21, 2023, following the signature of the supplements to the initial agreements. Transaction documents signed on December 13, 2023 have clarified the implementation of the first agreements of June and July (*see Note 17.2 "Obligations relating to nuclear power generation activities"*). This agreement also provides for the establishment of a legal structure dedicated to the two extended nuclear units, equally owned by the Belgian State and ENGIE, aligning the interests of the two parties and ensuring the sustainability of their commitments. The business model of the extension is based on a balanced allocation of risks, notably through a Contract for Difference mechanism guaranteeing the value of extension investments, with a limited incentive for the industrial operator to achieve a favorable technical and economic performance at the plants.

In addition, for the period up to the extension of the two Belgian nuclear units, and for the period covering drawing rights on nuclear power plants in France, the cash flow projections are based on a large number of key assumptions, such as prices of fuel and CO₂, expected trends in electricity prices, availability of power plants, market outlook, and changes in the regulatory environment (especially concerning the extension of drawing rights agreements for French nuclear plants and the tax measures involving inframarginal rent caps). Lastly, the key assumptions also include the discount rate used to calculate the value in use of these activities, which amounted to 7% for 2023, unchanged from 2022.

Cash flow projections beyond the medium-term business plan for drawing rights on the Chooz B and Tricastin power plants have been determined on the basis of the residual term of the contracts and the assumption of a 10-year extension.

In France, the Nuclear Safety Authority authorized the start-up of Tricastin 1 on December 20, 2019 after its shutdown for its fourth 10-yearly inspection and, on December 3, 2020, published a draft decision setting out the conditions for the 900 MW reactors to continue operating beyond 40 years. Confirmation of a 10-year extension of the operating life of the 900 MW series reactors is therefore expected to be formalized in the next few years, once the conditions for continued operation have been determined by the Nuclear Safety Authority and a public inquiry has been held. The Group has therefore considered the 10-year extension of the nuclear units, and the corresponding drawing rights, beyond their fourth 10-yearly outage. The last 10-yearly inspection took place in 2021 for Tricastin (VD4) and in 2019 for Chooz B (VD3). The assumption of an extension was already considered in the impairment tests of previous years.

Results of the impairment test

The recoverable amount of the Nuclear assets remains above the value of goodwill, particularly due to the excess value attached to the plants in France.

Following the review procedure initiated by the Commission for Nuclear Provisions (CNP) in September 2022, the industrial scenario and all the technical and financial assumptions were approved on July 7, 2023. This resulted in a €646 million decrease in the plant dismantling provision (see Note 17.2 “Obligations relating to nuclear power generation activities”), against a reduction in the dismantling assets. Given the impairment losses recognized on some of these assets at the end of the previous year, an impairment reversal of €400 million was recorded.

Sensitivity analyses

A decrease of €10/MWh in electricity prices for nuclear power generation in France beyond the liquidity period would lead to a decrease of €0.5 billion in the recoverable amount, but without any impairment of goodwill.

Given the hedging of energy prices for electricity generated by Belgian power plants, and the implementation of the Contract for Difference mechanism as part of the extension of the Doel 4 and Tihange 3 nuclear units, the recoverable amount is not very sensitive to changes in electricity prices for nuclear-generated electricity in Belgium.

An increase of 50 basis points in the discount rates would lead to a non-material decrease in the recoverable amount on the Belgian plants.

A 5% decrease in availability of all Belgian nuclear power plants would lead to a decrease in value of around €0.3 billion on the Belgian plants. A similar decrease for the French plants would lead to a decrease of €0.2 billion in the recoverable amount, but without any impairment.

13.4.8 Other

Goodwill amounted to €346 million at December 31, 2023. The Other segment encompasses energy management and optimization activities, the BtoB supply activities in France of *Entreprises & Collectivités* (E&C), and the Corporate and holding activities. These entities present a significant difference between recoverable amount and the carrying amount of the segment's operating activities carrying goodwill at December 31, 2023.

NOTE 14 FINANCIAL INSTRUMENTS

14.1 Financial assets

Accounting standards

In accordance with the principles of IFRS 9 – *Financial Instruments*, financial assets are recognized and measured either at amortized cost, at fair value through equity or at fair value through profit or loss based on the following two criteria:

- a first criterion relating to the contractual cash flow characteristics of the financial asset. The analysis of contractual cash flow characteristics makes it possible to determine whether these cash flows are “only payments of principal and interest on the outstanding amounts” (known as the “SPPI” test or Solely Payments of Principal and Interest);
- a second criterion relating to the business model used by the Group to manage its financial assets. IFRS 9 defines three different business models: a first business model whose objective is to hold assets in order to collect contractual cash flows (hold to collect), a second model whose objective is achieved by both collecting contractual cash flows and selling financial assets (hold to collect and sell), and other business models.

The identification of the business model and the analysis of the contractual cash flow characteristics require judgment to ensure that the financial assets are classified in the appropriate category.

Where the financial asset is an investment in an equity instrument and is not held for trading, the Group may irrevocably elect to present the gains and losses on that investment in other comprehensive income.

Except for trade receivables, which are measured at their transaction price in accordance with IFRS 15, financial assets are measured, on initial recognition, at fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs that are directly attributable to their acquisition.

At the end of each reporting period, financial assets measured using the amortized cost method or at fair value through other comprehensive income (with a recycling mechanism) are subject to an impairment test based on the expected credit losses method.

Financial assets also include derivatives that are measured at fair value in accordance with IFRS 9.

In accordance with IAS 1, the Group presents current and non-current assets and current and non-current liabilities separately in the statement of financial position. In view of the majority of the Group's activities, it was considered that the criterion to be used to classify assets is the expected time to realize the asset or settle the liability: the asset is classified as current if this period is less than 12 months and as non-current if it is more than 12 months after the reporting period.

The following table presents the Group's different categories of financial assets, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2023			Dec. 31, 2022		
		Non-current	Current	Total	Non-current	Current	Total
Other financial assets	14.1	14,817	2,170	16,987	10,599	2,394	12,992
Equity instruments at fair value through other comprehensive income		1,902	-	1,902	1,217	-	1,217
Equity instruments at fair value through income		222	-	222	278	-	278
Debt instruments at fair value through other comprehensive income		1,753	119	1,873	2,128	290	2,418
Debt instruments at fair value through income		2,915	654	3,569	1,178	568	1,745
Loans and receivables at amortized cost		8,024	1,397	9,421	5,798	1,537	7,334
Trade and other receivables	7.2	-	20,092	20,092	-	31,310	31,310
Assets from contracts with customers	7.2	1	9,530	9,531	9	12,575	12,584
Cash and cash equivalents		-	16,578	16,578	-	15,570	15,570
Derivative instruments	14.4	12,764	8,481	21,245	33,134	15,252	48,386
TOTAL		27,582	56,850	84,433	43,741	77,101	120,843

14.1.1 Other financial assets

14.1.1.1 Equity instruments at fair value

Accounting standards

Equity instruments at fair value through other comprehensive income (OCI)

Under IFRS 9 an irrevocable election can be made to present subsequent changes in the fair value of an investment in an equity instrument that is not held for trading in other comprehensive income. This choice is made on an instrument by instrument basis. Amounts presented in other comprehensive income should not be transferred to profit or loss including proceeds of disposals. However, IFRS 9 authorizes the transfer of the accumulated profits and losses to another component of equity. Dividends from such investments are recognized in profit or loss unless the dividend clearly represents the recovery of a portion of the cost of the investment.

The equity instruments recognized under this line item mainly concern investments in companies that are not controlled by the Group and for which OCI measurement has been selected given their strategic and long-term nature.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost, plus transaction costs.

At each reporting date, for listed securities, fair value is determined based on the quoted market price at the reporting date. For unlisted securities, fair value is measured using valuation models based primarily on the latest market transactions, the discounting of dividends or cash flows and the net asset value.

Equity instruments at fair value through profit or loss

Equity instruments that are held for trading or for which the Group has not elected for measurement at fair value through other comprehensive income are measured at fair value through profit or loss.

This category mainly includes investments in companies not controlled by the Group.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost.

At each reporting date, for listed and unlisted securities, the same measurement method as described above should be applied.

<i>In millions of euros</i>	Equity instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Total
AT DECEMBER 31, 2022	1,217	278	1,495
Increase	666	84	749
Decrease	(105)	(4)	(109)
Changes in fair value	136	(49)	87
Changes in scope of consolidation, translation adjustments and other	(11)	(87)	(98)
AT DECEMBER 31, 2023	1,902	222	2,124
Dividends	2	7	8

Equity instruments break down as €1,653 million of listed equity instruments (€875 million at December 31, 2022) and €473 million of unlisted equity instruments (€620 million at December 31, 2022). Changes in fair value include in particular the impairment of the minority interest held by the Group in Nord Stream AG, now valued at zero (€90 million at December 31, 2022). This change in fair value does not affect the income statement, as it is recorded as a reduction in other items of comprehensive income.

14.1.1.2 Debt instruments at fair value

Accounting standards

Debt instruments at fair value through other comprehensive income

Financial assets that are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets and for which the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the outstanding amount (SPPI), are measured at fair value through OCI (with a recycling mechanism). This involves a measurement through profit or loss for interest (at amortized cost using the effective interest method), impairment and foreign exchange gains and losses, and through OCI (with a recycling mechanism) for other gains or losses.

This category mainly includes bonds.

Fair value gains and losses on these instruments are recognized in other comprehensive income, except for the following items which are recognized in profit or loss:

- expected credit losses and reversals;
- foreign exchange gains and losses.

When the financial asset is derecognized, the cumulative gain or loss that was previously recognized in other comprehensive income is reclassified from equity to profit or loss.

Debt instruments at fair value through profit or loss

Financial assets whose contractual cash flows do not consist solely of payments of principal and interest on the amount outstanding (SPPI) or that are held in view of an “other” business model are measured at fair value through profit or loss.

The Group's investments in UCITS are accounted for in this caption. They are considered as debt instruments, according to IAS 32 – *Financial Instruments: Presentation*, given the existence of an obligation for the issuer to redeem units, at the request of the holder. They are measured at fair value through profit or loss because the contractual cash flow characteristics do not meet the SPPI test.

In millions of euros	Debt instruments at fair value through other comprehensive income	Liquid debt instruments held for cash investment purposes at fair value through other comprehensive income	Debt instruments at fair value through income	Liquid debt instruments held for cash investment purposes at fair value through income	Total
AT DECEMBER 31, 2022	2,418	-	977	769	4,163
Increase	2,147	-	2,942	228	5,317
Decrease	(2,717)	(24)	(1,375)	(139)	(4,255)
Changes in fair value	25	-	141	26	192
Changes in scope of consolidation, translation adjustments and other	-	24	-	-	24
AT DECEMBER 31, 2023	1,873	-	2,685	884	5,441

Debt instruments at fair value at December 31, 2023 primarily included bonds and money market funds held by Synatom for €4,536 million (see Note 17.2.4 “Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material”) and liquid instruments deducted from net financial debt for €884 million (respectively €3,350 million and €769 million at December 31, 2022).

14.1.1.3 Loans and receivables at amortized cost

Accounting standards

Loans and receivables held by the Group under a business model consisting in holding the instrument in order to collect the contractual cash flows, and whose contractual cash flows consist solely of payments of principal and interest on the principal amount outstanding (SPPI test) are measured at amortized cost. Interest is calculated using the effective interest method.

The following items are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

The Group has entered into concession agreements with certain public authorities under which the construction, extension or improvement of infrastructure is carried out in return for an unconditional right to receive payment from the concession holder in cash or other financial assets. In this case, the Group recognizes a financial receivable from the concession holders.

The Group has entered into services or take-or-pay contracts that are, or contain, a lease and under which the Group acts as lessor and its customers as lessees. Leases are analyzed in accordance with IFRS 16 in order to determine whether they constitute an operating lease or a finance lease. Whenever the terms of the lease transfer substantially all the risk and rewards of ownership of the related asset, the contract is classified as a finance lease and a finance receivable is recognized to reflect the financing deemed to be granted by the Group to the customer.

Leasing security deposits are presented in this caption and recognized at their nominal value.

Please refer to Note 15 “Risks arising from financial instruments” regarding the assessment of counterparty risk.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 14 FINANCIAL INSTRUMENTS

In millions of euros	Dec. 31, 2023			Dec. 31, 2022		
	Non-current	Current	Total	Non-current	Current	Total
Loans granted to affiliated companies and other debt instruments at amortized cost	5,021	350	5,371	3,583	427	4,010
Other receivables at amortized cost	219	648	867	261	734	995
Amounts receivable under concession contracts	2,349	211	2,559	1,564	187	1,751
Amounts receivable under finance leases	435	188	624	390	189	579
TOTAL	8,024	1,397	9,421	5,798	1,537	7,334

Loans granted to affiliated companies and other debt instruments at amortized cost include the cash of the debt instruments held by Synatom, awaiting investment for €3,777 million (€2,270 million at December 31, 2022) (see Note 17.2.4. "Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material").

Amounts receivable under concession contracts amounted to €2,559 million at December 31, 2023 (€1,751 million at December 31, 2022). They are mainly related to the Novo Estado and Gralha Azul electric power transmission networks in Brazil, as well as Kathu's Solar Park (RF) Proprietary Trading concession in South-Africa.

Other net gains and losses recognized in the income statement relating to loans and receivables at amortized cost break down as follows:

In millions of euros	Interest income	Post-acquisition measurement	
		Foreign currency translation	Expected credit loss
AT DECEMBER 31, 2023	280	(35)	(6)
AT DECEMBER 31, 2022	211	(64)	(6)

Amounts receivable under finance leases

These contracts refer to lease contracts in which ENGIE acts as lessor, classified as finance leases in accordance with IFRS 16. They relate to energy purchase and sale contracts where the contract conveys an exclusive right to use a production asset, and certain contracts with industrial customers relating to assets held by the Group.

The Group has recognized finance lease receivables, notably for cogeneration plants for Wapda and NTDC (Uch - Pakistan) one of whose contracts has been extended into 2023.

In millions of euros	Dec. 31, 2023	Dec. 31, 2022
Undiscounted future minimum lease payments	1,006	758
Unguaranteed residual value accruing to the lessor	46	12
TOTAL GROSS INVESTMENT IN THE LEASE	1,052	770
Unearned financial income	276	47
NET INVESTMENT IN THE LEASE (STATEMENT OF FINANCIAL POSITION)	776	723
Of which present value of future minimum lease payments	733	718
Of which present value of unguaranteed residual value	43	5

Undiscounted minimum lease payments receivable under finance leases can be analyzed as follows:

In millions of euros	Dec. 31, 2023	Dec. 31, 2022
Year 1	222	137
Years 2 to 5 inclusive	360	376
Beyond year 5	423	245
TOTAL	1,006	758

14.1.2 Trade and other receivables, assets from contracts with customers

Information on trade and other receivables and assets from contracts with customers are provided in Note 7.2. "Trade and other receivables, assets and liabilities from contracts with customers".

14.1.3 Cash and cash equivalents

Accounting standards

This item includes cash equivalents as well as short-term investments that are considered to be readily convertible into a known amount of cash and where the risk of a change in their value is deemed to be negligible based on the criteria set out in IAS 7.

Bank overdrafts are not included in the calculation of cash and cash equivalents and are recorded under “Short-term borrowings”.

Cash and cash equivalent items are subject to impairment tests in accordance with the expected credit losses model of IFRS 9.

“Cash and cash equivalents” totaled €16,578 million at December 31, 2023 (€15,570 million at December 31, 2022). This item comprises standard money market funds with daily liquidity (49%), term deposits with a maturity of less than one month (40%), and deposits with a maturity of less than three months and other products (11%).

This amount included funds related to the green bond issues, which remain unallocated to the funding of eligible projects (see section 5 of the *Universal Registration Document*).

Gains recognized in respect of “Cash and cash equivalents” amounted to €596 million in 2022 compared to €196 million in 2022.

14.1.4 Transfer of financial assets

At December 31, 2023, the outstanding amount of disposals without recourse of financial assets as part of transactions leading to full derecognition, amounted to approximately €1,3 billion at December 31, 2023 (compared with €3.7 billion at December 31, 2022).

14.1.5 Financial assets and equity instruments pledged as collateral for borrowings and debt

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Financial assets and equity instruments pledged as collateral	3,685	3,532

This item mainly includes the carrying amount of equity instruments pledged as collateral for borrowings and debt.

14.2 Financial liabilities

Accounting standards

Borrowings and other financial liabilities are measured at amortized cost using the effective interest rate method.

On initial recognition, any issue or redemption premiums and discounts and issuing costs are added to/deducted from the nominal value of the borrowings concerned. These items are taken into account when calculating the effective interest rate and are therefore recorded in the consolidated income statement over the life of the borrowings using the amortized cost method.

As regards structured debt instruments that do not have an equity component, the Group may be required to separate an “embedded” derivative instrument from its host contract. When an embedded derivative is separated from its host contract, the initial carrying amount of the structured instrument is broken down into an embedded derivative component, corresponding to the fair value of the embedded derivative, and a financial liability component, corresponding to the difference between the amount of the issue and the fair value of the embedded derivative. The separation of components upon initial recognition does not give rise to any gains or losses.

The debt is subsequently recorded at amortized cost using the effective interest method while the derivative is measured at fair value, with changes in fair value recognized in profit or loss.

Financial liabilities are recognized either:

- as “Amortized cost liabilities” for borrowings, trade payables and other creditors, and other financial liabilities;
- as “Liabilities measured at fair value through profit or loss” for derivative financial instruments and for financial liabilities designated as such.

The following table presents the Group’s different financial liabilities at December 31, 2023, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2023			Dec. 31, 2022		
		Non-current	Current	Total	Non-current	Current	Total
Borrowings and debt	14.3	37,920	9,367	47,287	28,083	12,508	40,591
Trade and other payables	14.2	-	22,955	22,955	-	39,801	39,801
Liabilities from contracts with	7.2	93	3,960	4,053	121	3,292	3,412
Derivative instruments	14.4	16,755	7,806	24,561	39,417	11,859	51,276
Other financial liabilities		82	-	82	90	-	90
TOTAL		54,851	44,087	98,938	67,711	67,460	135,171

14.2.1 Trade and other payables

In millions of euros	Dec. 31, 2023	Dec. 31, 2022
Trade payables	22,188	39,165
Payable on fixed assets	787	636
TOTAL	22,976	39,801

The carrying amount of these financial liabilities represents a reasonable estimate of their fair value.

The decrease in trade payables is mainly due to a decrease in commodity prices over the period.

14.2.2 Liabilities from contracts with customers

Information on liabilities from contracts with customers are provided in Note 7.2. "Trade and other receivables, assets and liabilities from contracts with customers".

14.3 Net financial debt

14.3.1 Net financial debt by type

		Dec. 31, 2023			Dec. 31, 2022		
		Non-current	Current	Total	Non-current	Current	Total
<i>In millions of euros</i>							
Borrowings and debt	Bond issues	29,217	1,039	30,256	21,007	2,550	23,557
	Bank borrowings	5,985	763	6,748	4,679	797	5,476
	Negotiable commercial paper	-	5,606	5,606	-	7,386	7,386
	Lease liabilities	2,677	470	3,147	2,482	393	2,875
	Other borrowings ⁽¹⁾	41	1,034	1,074	(85)	768	682
	Bank overdrafts and current account	-	455	455	-	615	615
	BORROWINGS AND DEBT	37,920	9,367	47,287	28,083	12,508	40,591
Other financial assets	Other financial assets deducted from net financial debt ⁽²⁾	(303)	(1,111)	(1,414)	(249)	(1,133)	(1,383)
Cash and cash equivalents	Cash and cash equivalents	-	(16,578)	(16,578)	-	(15,570)	(15,570)
Derivative instruments	Derivatives hedging borrowings ⁽³⁾	177	20	198	394	22	416
NET FINANCIAL DEBT		37,795	(8,302)	29,493	28,228	(4,174)	24,054

(1) This item corresponds to the revaluation of the interest rate component of debt in a qualified fair value hedging relationship for a negative €-41 million, margin calls on debt hedging derivatives carried in liabilities for €481 million and the impact of amortized cost for €268 million (compared to, respectively, a negative €200 million, a positive €364 million and a positive €144 million at December 31, 2022).

(2) This item notably corresponds to assets related to financing for €105 million, liquid debt instruments held for cash investment purposes for €884 million and margin calls (assets) on derivatives hedging borrowings for €425 million (compared to, respectively, €67 million, €769 million and €547 million at December 31, 2022).

(3) This item represents the interest rate component of the fair value of derivatives hedging borrowings in a designated fair value hedging relationship. It also represents the exchange rate and outstanding accrued interest rate components of the fair value of all debt-related derivatives irrespective of whether or not they qualify as hedges.

The fair value of gross borrowings and debt (excluding lease liabilities) amounted to €42,994 million at December 31, 2023, compared with a carrying amount of €44,111 million.

Financial income and expenses related to borrowings and debt are presented in Note 10 "Net financial income/(loss)".

14.3.2 Reconciliation between net financial debt and cash flow from (used in) financing activities

		Dec. 31, 2022	Cash flow from financing activities	Cash flow from operating and investing activities and change in cash and cash equivalents	Change in fair value	Translation adjustments	Change in scope of consolidation and others	Dec. 31, 2023
<i>In millions of euros</i>								
Borrowings and	Bond issues	23,557	6,628	-	-	24	48	30,256
	Bank borrowings ⁽¹⁾	5,476	(216)	-	-	5	1,483	6,748
	Negotiable commercial paper	7,386	(1,761)	-	-	(18)	-	5,606
	Lease liabilities ^{(2) (3)}	2,875	(418)	-	-	(31)	721	3,147
	Other borrowings	682	(129)	-	570	16	(65)	1,074
	Bank overdrafts and current account	615	(173)	-	-	(14)	27	455
	BORROWINGS AND DEBT	40,591	3,930	-	570	(18)	2,214	47,287
Other financial assets	Other financial assets deducted from net financial debt	(1,383)	15	-	(50)	5	(1)	(1,414)
Cash and cash equivalents	Cash and cash equivalents	(15,570)	-	(887)	-	188	(309)	(16,578)
Derivative instruments	Derivatives hedging borrowings	416	118	-	(104)	(232)	-	198
NET FINANCIAL DEBT		24,054	4,063	(887)	417	(57)	1,904	29,493

- (1) Bank borrowings: the amount of €1,483 million in the "Change in scope of consolidation and others" column corresponds mainly to the full consolidation of Kathu Solar Park for €475 million, as well as the effect of recognizing Broad Reach Power (€436 million) and BTE Renewables (€301 million) bank borrowings following their acquisition.
- (2) Lease liabilities: the negative amount of €418 million included in the "Cash flow from financing activities" column corresponds to lease payments, excluding interest (total cash outflow for leases amounted to a negative €480 million, of which €62 million relating to interest).
- (3) Lease liabilities: the amount of €721 million in the "Change in scope of consolidation and others" column corresponds mainly to the recognition of right-of-use assets for €324 million relating to new LNG vessels leasing contract.

14.3.3 Main events of the period

14.3.3.1 Impact of changes in the scope of consolidation and in exchange rates on net financial debt

In 2023, changes in exchange rates resulted in a €-57 million decrease in net financial debt, including a €-179 million decrease in relation to the US dollar and a +€94 million increase in relation to the Brazilian real.

Disposals and acquisitions during 2023 (including the effects of changes in the scope of consolidation) impacted net debt by €3,102 million. This change mainly reflects:

- asset disposals during the period, resulting in a €-246 million decrease in net financial debt (see Note 4.1 "Disposals carried out in 2023"), none of which was individually significant.
- acquisitions carried out in 2023 which increased net financial debt by €3,348 million (see Note 4.2 "Acquisitions carried out in 2023"). They include:
 - the acquisition of Broad Reach Power in the USA, specialized in battery storage;
 - the full consolidation of Kathu Solar Park (RF) Proprietary Trading in South-Africa following the purchase of an additional stake;
 - the acquisition of the activities of BTE Renewables, operating in South Africa;
 - the acquisition of the biomethane producer Ixora Energy Ltd in the United Kingdom.

14.3.3.2 Financing and refinancing transactions

The Group carried out the following main transactions in 2023:

ENGIE SA

- on January 11, 2023 ENGIE SA issued a green bond for a total amount of €3,025 million, as follows:
 - a €1,000 million tranche, with a 3.625% coupon, maturing on January 11, 2030, plus an additional €100 million on August 14, 2023,
 - a €1,000 million tranche, with a 4% coupon, maturing on January 11, 2035, plus an additional €75 million on June 2, 2023, and €100 million on June 6, 2023,
 - a €750 million tranche, with a 4.25% coupon, maturing on January 11, 2043;
- on February 1, 2023 ENGIE SA redeemed at maturity €742 million worth of bonds, with a 3% coupon;
- on February 28, 2023 ENGIE SA redeemed at maturity €500 million worth of green bonds, with a 0.375% coupon;
- on April 3, 2023 ENGIE SA issued GBP650 million worth of green bonds (€752 million), maturing on April 3, 2053, with a 5.625% coupon;
- on July 3, 2023, ENGIE SA issued CHF190 million worth of green bonds (€197 million), maturing on January 4, 2027, with a 2.34% coupon, as well as a CHF225 million green bond (€233 million), maturing on July 4, 2031, with a 2.49% coupon;
- on September 6, 2023, ENGIE SA issued €3,000 million worth of bonds, as follows:
 - a €500 million tranche, with a 3.75% coupon, maturing on September 6, 2027,
 - a €800 million tranche, with a 3.875% coupon, maturing on January 6, 2031,
 - a €800 million tranche, with a 4.25% coupon, maturing on September 6, 2034,
 - a €900 million tranche green bond, with a 4.5% coupon, maturing on September 6, 2042;
- on December 6, 2023, ENGIE SA issued €1,500 million worth of bonds, as follows:
 - a €600 million tranche, with a 3.625% coupon, maturing on December 6, 2026,
 - a €900 million tranche green bond, with a 3.875% coupon, maturing on December 6, 2033.

Other Group entities

- on June 24, 2023 ENGIE Alliance redeemed at maturity €1,000 million worth of bonds, with a 5.75% coupon.
- in December 2023, EBE issued a BRL 2.5 bn worth of bonds (€464 million), with a floating coupon.

14.4 Derivative instruments

Accounting standards

Derivative financial instruments are measured at fair value. This fair value is determined on the basis of market data, available from external contributors. In the absence of an external benchmark, a valuation based on internal models recognized by market participants and favoring data directly derived from observable data such as OTC quotations is used.

The change in fair value of derivative financial instruments is recorded in the income statement except when they are designated as hedging instruments in a cash flow hedge or net investment hedge. In this case, changes in the value of the hedging instruments are recognized directly in equity, excluding the ineffective portion of the hedges.

The Group uses derivative financial instruments to manage and reduce its exposure to market risks arising from fluctuations in interest rates, foreign currency exchange rates and commodity prices, mainly for gas and electricity. The use of derivative instruments is governed by a Group policy for managing interest rate, currency and commodity risks (see Note 15 – *Risks arising from financial instruments*).

Derivative financial instruments are contracts (i) whose value changes in response to the change in one or more observable variables, (ii) that do not require any material initial net investment, and (iii) that are settled at a future date.

Derivative instruments include swaps, options, futures and swaptions, as well as forward commitments to purchase or sell listed and unlisted securities, and firm commitments or options to purchase or sell non-financial assets that involve physical delivery of the underlying.

For purchases and sales of electricity and natural gas, the Group systematically analyzes whether the contract was entered into in the “normal” course of operations and therefore falls outside the scope of IFRS 9. This analysis consists firstly in demonstrating that the contract is entered into and continues to be held for the purpose of physical delivery or receipt of the commodity in accordance with the Group’s expected purchase, sale or usage requirements for volumes intended to be used or sold by the Group within a reasonable time frame, as part of its operations.

The second step is to demonstrate that the Group has no practice of settling similar contracts on a net basis and that these contracts are not equivalent to written options. In particular, in the case of electricity and gas sales allowing the buyer a certain degree of flexibility concerning the volumes delivered, the Group distinguishes between contracts that are equivalent to capacity sales considered as transactions falling within the scope of ordinary operations and those that are equivalent to written financial options, which are accounted for as derivative financial instruments.

Only contracts that meet all of the above conditions are considered as falling outside the scope of IFRS 9. Adequate specific documentation is compiled to support this analysis.

Embedded derivatives

The main Group contracts that may contain embedded derivatives are contracts with clauses or options potentially affecting the contract price, volume or maturity. This is the case primarily with contracts for the purchase or sale of non-financial assets, whose price is revised based on an index, the exchange rate of a foreign currency or the price of an asset other than the contract’s underlying.

An embedded derivative is a component of a hybrid (combined) instrument that also includes a non-derivative host contract – with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

If a hybrid contract contains a host that is an asset within the scope of IFRS 9, the Group applies the presentation and measurement requirements described in Note 18.1 to the entire hybrid contract.

Conversely, when a hybrid contract contains a host that is not an asset within the scope of IFRS 9, an embedded derivative shall be separated from the host and accounted for as a derivative if, and only if:

- the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host;
- a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and
- the hybrid contract is not measured at fair value with changes in fair value recognized in profit or loss (i.e., a derivative that is embedded in a financial liability at fair value through profit or loss is not separated).

Where an embedded derivative is separate from the host contract, it is measured at fair value and fair value changes are recognized in profit or loss (except if the embedded derivative is documented in a hedge relationship).

Hedging instruments: recognition and presentation

Derivative instruments qualifying as hedging instruments are recognized in the consolidated statement of financial position and measured at fair value. However, their accounting treatment varies according to whether they are classified as (i) a fair value hedge of an asset or liability; (ii) a cash flow hedge, or (iii) a hedge of a net investment in a foreign operation.

Fair value hedges

A fair value hedge is defined as a hedge of the exposure to changes in fair value of a recognized asset or liability such as a fixed-rate loan or borrowing, or of assets, liabilities or an unrecognized firm commitment denominated in a foreign currency.

The gain or loss from remeasuring the hedging instrument at fair value is recognized in profit or loss. The gain or loss on the hedged item attributable to the hedged risk adjusts the carrying amount of the hedged item and is also recognized in profit or loss even if the hedged item is in a category in respect of which changes in fair value are recognized through other comprehensive income. These two adjustments are presented net in the consolidated income statement, with the net effect corresponding to the ineffective portion of the hedge.

Cash flow hedges

A cash flow hedge is a hedge of the exposure to variability in cash flows that could affect the Group's income. The hedged cash flows may be attributable to a particular risk associated with a recognized financial or non-financial asset or a highly probable forecast transaction.

The portion of the gain or loss on the hedging instrument that is determined to be an effective hedge is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in profit or loss. The gains or losses accumulated in equity are reclassified to the consolidated income statement under the same caption as the loss or gain on the hedged item – i.e., current operating income for operating cash flows and financial income or expenses for other cash flows – in the same periods in which the hedged cash flows affect income.

If the hedging relationship is discontinued, in particular because the hedge is no longer considered effective, the cumulative gain or loss on the hedging instrument remains recognized in equity until the forecast transaction occurs. However, if a forecast transaction is no longer expected to occur, the cumulative gain or loss on the hedging instrument is immediately recognized in profit or loss.

Hedge of a net investment in a foreign operation

In the same way as for a cash flow hedge, the portion of the gain or loss on the hedging instrument that is determined to be an effective hedge of the currency risk is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in profit or loss. The gains or losses accumulated in other comprehensive income are transferred to the consolidated income statement when the investment is liquidated or sold.

Hedging instruments: identification and documentation of hedging relationships

The hedging instruments and hedged items are designated at the inception of the hedging relationship. The hedging relationship is formally documented in each case, specifying the hedging strategy, the hedged risk and the method used to assess hedge effectiveness. Only derivative contracts entered into with external counterparties are considered as being eligible for hedge accounting.

Hedge effectiveness is assessed and documented at the inception of the hedging relationship and on an ongoing basis throughout the periods for which the hedge was designated.

Hedge effectiveness is demonstrated both prospectively and retrospectively using various methods, based mainly on a comparison between changes in fair value or cash flows between the hedging instrument and the hedged item. Methods based on an analysis of statistical correlations between historical price data are also used.

Derivative instruments not qualifying for hedge accounting: recognition and presentation

These items mainly concern derivative financial instruments used in economic hedges that have not been – or are no longer – documented as hedging relationships for accounting purposes.

When a derivative financial instrument does not qualify or no longer qualifies for hedge accounting, changes in fair value are recognized directly in profit or loss under (i) current operating income for derivative instruments with non-financial assets as the underlying, and (ii) financial income or expenses for currency, interest rate and equity derivatives.

Derivative instruments not qualifying for hedge accounting used by the Group in connection with proprietary commodity trading activities and other derivatives expiring in less than 12 months are recognized in the consolidated statement of financial position in current assets and liabilities, while derivatives expiring after this period are classified as non-current items.

Fair value measurement

The fair value of instruments listed on an active market is determined by reference to the market price. In this case, these instruments are presented in level 1 of the fair value hierarchy.

The fair value of unlisted financial instruments for which there is no active market and for which observable market data exist is determined based on valuation techniques such as option pricing models or the discounted cash flow method.

The models used to evaluate these instruments take into account assumptions based on market inputs:

- the fair value of interest rate swaps is calculated based on the present value of future cash flows;
- the fair value of forward foreign exchange contracts and currency swaps is calculated by reference to current prices for contracts with similar maturities by discounting the future cash flow spread (difference between the forward exchange rate under the contract and the forward exchange rate recalculated in line with the new market conditions applicable to the nominal amount);
- the fair value of currency and interest rate options is calculated using option pricing models;
- commodity derivatives are valued by reference to listed market prices based on the present value of future cash flows (commodity swaps or commodity forwards) and option pricing models (options), for which market price volatility may be a factor. Contracts with maturities exceeding the depth of transactions for which prices are observable, or which are particularly complex, may be valued based on internal assumptions;
- exceptionally, for complex contracts negotiated with independent financial institutions, the Group uses the values established by its counterparties.

These instruments are presented in level 2 of the fair value hierarchy except when the evaluation is based mainly on data that are not observable, in which case they are presented in level 3 of the fair value hierarchy. Most often, this is the case for derivatives with a maturity that falls outside the observability period for market data relating to the underlying or when certain inputs such as the volatility of the underlying are not observable.

Except in case of enforceable master netting arrangements or similar agreements, counterparty risk is included in the fair value of financial derivative instrument assets and liabilities. It is calculated according to the “expected loss” method and takes into account the exposure at default, the probability of default and the loss given default. The probability of default is determined on the basis of credit ratings assigned to each counterparty (“historical probability of default” approach).

Offsetting of financial assets and liabilities in the statement of financial position

Financial assets and liabilities are presented net in the statement of financial position when the offsetting criteria of IAS 32 are met. Offsetting relates to instruments entered into with counterparties for which the contractual terms provide for a net settlement of transactions and a collateralization agreement (margin calls). In particular, commodity derivative assets and liabilities are offset for transactions with the same counterparty, in the same currency, by type of commodity and delivery point and with identical maturities.

Derivative instruments recognized in assets and liabilities are measured at fair value and broken down as follows:

In millions of euros	Dec. 31, 2023						Dec. 31, 2022					
	Assets			Liabilities			Assets			Liabilities		
	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total
Derivatives hedging borrowings	279	111	390	457	131	588	226	92	319	620	114	735
Derivatives hedging commodities	10,984	8,344	19,328	15,132	7,516	22,648	30,932	15,076	46,008	37,210	11,698	48,907
Derivatives hedging other items ⁽¹⁾	1,501	26	1,526	1,167	159	1,325	1,975	84	2,059	1,587	47	1,634
TOTAL	12,764	8,481	21,245	16,755	7,806	24,561	33,134	15,252	48,386	39,417	11,859	51,276

(1) Derivatives hedging other items mainly include the interest rate component of interest rate derivatives (not qualifying as hedges or qualifying as cash flow hedges) that are excluded from net financial debt, as well as net investment hedge derivatives.

The net amount of derivatives hedging commodities recognized in the statement of financial position is measured after taking into account offsetting agreements that meet the criteria set out in paragraph 42 of IAS 32. This offsetting generated balance sheet effects of around €9.2 billion in 2023 and mainly concerned OTC derivatives concluded with counterparties for which the contractual terms provide for a net settlement of the transactions as well as a collateralization agreement (margin calls).

The balance of derivative hedging commodities is lower than at December 31, 2022 due to the decrease in commodity prices in 2023. Most of these derivatives mature in 2024 and 2025. This fair value incorporates market parameters at December 31, 2023, in particular the “bid ask” reserve, which has been updated to reflect the volatility of commodity prices observed on the markets. In the main markets where the Group operates (Europe, United States, Singapore) a 10% increase or decrease in these market parameters (including the “bid ask” spread) would impact the fair value of the derivatives concerned by a negative €85 million (increase) and a positive €85 million (decrease).

14.4.1 Offsetting of derivative instrument assets and liabilities

The net amount of derivative instruments after taking into account enforceable master netting arrangements or similar agreements, whether or not they are offset in accordance with paragraph 42 of IAS 32, are presented in the table below:

In millions of euros		Dec. 31, 2023				Dec. 31, 2022			
		Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount	Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount
Assets	Derivatives hedging commodities	28,522	19,328	(4,927)	14,401	72,322	46,008	(8,866)	37,142
	Derivatives hedging borrowings and other items	1,917	1,917	(469)	1,448	2,378	2,378	(364)	2,014
Liabilities	Derivatives hedging commodities	(31,843)	(22,648)	3,898	(18,750)	(75,221)	(48,907)	5,094	(43,813)
	Derivatives hedging borrowings and other items	(1,913)	(1,913)	415	(1,498)	(2,369)	(2,369)	547	(1,822)

(1) Net amount recognized in the statement of financial position after taking into account offsetting agreements that meet the criteria set out in paragraph 42 of IAS 32. Due to the volatility of commodity prices, this offsetting had a significant impact on the statement of financial position at December 31, 2023 and mainly concerns OTC derivatives concluded with counterparties for which the contractual terms provide for a net settlement of the transactions as well as a collateralization agreement (margin calls).

(2) Other offsetting agreements include collateral and other guarantee instruments, as well as offsetting agreements that do not meet the criteria set out in paragraph 42 of IAS 32.

14.5 Fair value of financial instruments by level in the fair value hierarchy

14.5.1 Financial assets

The table below shows the allocation of financial instruments carried in assets to the different levels in the fair value hierarchy:

In millions of euros	Dec. 31, 2023				Dec. 31, 2022			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Other financial assets (excluding loans and receivables at amortized cost)	7,552	6,189	-	1,363	5,658	4,225	-	1,433
Equity instruments at fair value through other comprehensive income	1,902	1,653	-	249	1,217	875	-	342
Equity instruments at fair value through income	222	-	-	222	278	-	-	278
Debt instruments at fair value through other comprehensive income	1,873	1,873	-	-	2,418	2,418	-	-
Debt instruments at fair value through income	3,555	2,663	-	891	1,745	933	-	813
Derivative instruments	21,245	43	20,087	1,114	48,386	138	44,730	3,518
Derivatives hedging borrowings	390	-	390	-	319	-	319	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	16,614	-	16,263	351	40,992	-	40,825	168
Derivatives hedging commodities - relating to trading	2,714	43	1,907	764	5,016	138	1,528	3,350
Derivatives hedging other items	1,526	-	1,526	-	2,059	-	2,059	-
TOTAL	28,796	6,232	20,087	2,477	54,044	4,363	44,730	4,951

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and electricity contracts measured at fair value through profit or loss. Due to geopolitical uncertainties, the fair value of contracts with Russian suppliers takes into account contingencies related to natural gas supply cuts since 2022.

A definition of these three levels is presented in Note 14.4 "Derivative instruments".

Other financial assets (excluding loans and receivables at amortized cost)

Changes in level 3 equity and debt instruments at fair value can be analyzed as follows:

In millions of euros	Equity instruments at fair value through other comprehensive income	Debt instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Debt instruments at fair value through income	Other financial assets (excluding loans and receivables)
AT DECEMBER 31, 2022	342	-	278	813	1,433
Acquisitions	14	-	84	228	326
Disposals	-	(24)	(4)	(139)	(167)
Changes in fair value ⁽¹⁾	(95)	-	(49)	(11)	(156)
Changes in scope of consolidation, foreign currency translation and other changes	(13)	24	(87)	1	(75)
AT DECEMBER 31, 2023	249	-	222	891	1,363
Gains/(losses) recorded in income relating to instruments held at the end of the period					(50)

(1) Changes in fair value notably comprise the decrease in value of the Group's minority interest in Nord Stream AG for €-90 million (see Note 14.1.1.1 "Equity instruments at fair value").

Derivative instruments

Changes in level 3 commodity derivatives can be analyzed as follows:

In millions of euros	Net Asset/(Liability)
AT DECEMBER 31, 2022	1,837
Changes in fair value recorded in income	(3,697)
Settlements	644
Transfer from level 3 to levels 1 and 2	(40)
Net fair value recorded in income	(1,256)
Deferred Day-One gains/(losses)	(16)
AT DECEMBER 31, 2023	(1,271)

14.5.2 Financial liabilities

The table below shows the allocation of financial instruments carried in liabilities to the different levels in the fair value hierarchy:

In millions of euros	Dec. 31, 2023				Dec. 31, 2022			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Borrowings used in designated fair value hedges	5,755	-	5,755	-	3,679	-	3,679	-
Borrowings not used in designated fair value hedges	37,239	23,251	13,988	-	31,500	17,093	14,407	-
Derivative instruments	24,561	112	22,063	2,385	51,276	-	49,595	1,681
Derivatives hedging borrowings	588	-	588	-	735	-	735	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	20,933	-	20,081	852	48,907	-	47,227	1,681
Derivatives hedging commodities - relating to trading activities ⁽¹⁾	1,715	112	70	1,533	-	-	-	-
Derivatives hedging other items	1,325	-	1,325	-	1,634	-	1,634	-
TOTAL	67,555	23,363	41,806	2,385	86,455	17,093	67,682	1,681

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and electricity contracts measured at fair value through profit and loss. Due to geopolitical uncertainties, the fair value of contracts with Russian suppliers takes into account contingencies related to natural gas supply cuts since 2022.

A definition of these three levels is presented in Note 14.4 "Derivative instruments".

Borrowings used in designated fair value hedges

This caption includes bonds in a designated fair value hedging relationship, which are presented in level 2 in the above table. Only the interest rate component of the bonds is remeasured, with fair value determined by reference to observable inputs.

Borrowings not used in designated fair value hedges

Listed bond issues are included in level 1.

Other borrowings not used in a designated hedging relationship, are presented in level 2 in the above table. The fair value of these borrowings is determined on the basis of future discounted cash flows and relies on directly or indirectly observable data.

NOTE 15 RISKS ARISING FROM FINANCIAL INSTRUMENTS

The Group mainly uses derivative instruments to manage its exposure to market risks. Financial risk management procedures are set out in Chapter 2 “Risk factors” of the Universal Registration Document.

15.1 Market risks

15.1.1 Commodity risk

Commodity risk arises primarily from the following activities:

- portfolio management; and
- trading.

The Group has primarily identified two types of commodity risks: price risk resulting from fluctuations in market prices, and volume risk inherent to the business.

In the ordinary course of its operations, the Group is exposed to commodity risks on natural gas, electricity, coal, oil and oil products, other fuels, CO₂ and other “green” products. The Group is active on these energy markets either for supply purposes, or to optimize and secure its energy production chain and its energy sales. The Group also uses derivatives to offer hedging instruments to its clients and to hedge its own positions.

15.1.1.1 Portfolio management activities

Portfolio management seeks to optimize the market value of assets (power plants, gas and coal supply contracts, energy sales and gas storage by pump and battery and transportation) over various timeframes (short-, medium- and long-term). Market value is optimized by:

- guaranteeing supply and ensuring the balance between physical needs and resources;
- managing market risks (price, volume) to unlock optimum value from portfolios within a specific risk framework.

The risk framework aims to safeguard the Group’s financial resources over the budget period and smooth out medium-term earnings (over three or five years, depending on the maturity of each market). It encourages portfolio managers to take out economic hedges on their portfolio.

Sensitivities of the commodity-related derivatives portfolio used as part of the portfolio management activities at December 31, 2023 are detailed in the table below. Due to the volatility in commodity prices on the markets since 2022, particularly impacting the European zone, the price assumptions for natural gas and electricity in Europe were revised upwards last year. These sensitivities have been established in the current uncertain context.

These new assumptions do not constitute an estimate of future market prices and are not representative of future changes in consolidated earnings and equity, insofar as they do not include the sensitivities relating to the purchase and sale contracts for the underlying commodities, which are not recognized at fair value.

Sensitivity analysis ⁽¹⁾

In millions of euros	Changes in price	Dec. 31, 2023		Dec. 31, 2022	
		Pre-tax impact on income	Pre-tax impact on equity	Pre-tax impact on income	Pre-tax impact on equity
Oil-based products	+USD 10/bbl	-	64	-	81
Natural gas - Europe ⁽²⁾	-€10/MWh	(411)	(1,288)	(700)	(1,237)
Natural gas - Europe ⁽²⁾	+€10/MWh	398	1,288	700	1,237
Natural gas - Rest of the world ⁽²⁾	+€3/MWh	37	138	29	206
Electricity - Europe ⁽²⁾	-€20/MWh	(353)	338	(51)	245
Electricity - Europe ⁽²⁾	+€20/MWh	353	(338)	51	(245)
Electricity - Rest of the world ⁽²⁾	+€5/MWh	(166)	-	(122)	-
Greenhouse gas emission rights	+€2/ton	12	9	24	1
EUR/USD	+10%	(40)	(111)	36	(186)
EUR/GBP	+10%	66	-	(17)	(34)

(1) The sensitivities shown above apply solely to financial commodity derivatives used for hedging purposes as part of the portfolio management activities.

(2) For December 2023 and in relation to the sensitivities shown, more drastic upward price changes, although difficult to quantify, could occur depending how the economic or political situation evolves. For example, an increase of 50€/MWh for natural gas and 100€/MWh for electricity would impact sensitivities by a positive €8.4 billion and a positive €0.1 billion, respectively for natural gas and electricity.

The decrease in commodity prices in 2023 contributed to substantial changes in the fair value of financial instruments, impacting the income statement (see Note 8 “Operating expenses”) as well as the other comprehensive income of the Group (see “Statement of comprehensive income”).

The sensitivity of equity to European electricity price changes is due to the application, since 2023, of cash flow hedge accounting to certain supply activities in France, Belgium and the Netherlands, as well as the sales resulting from the production of some of our assets in the same areas. The expected extension of this practice to other hedging strategies should contribute to reducing the sensitivity in the future of the pre-tax profit.

15.1.1.2 Trading activities

Revenues from trading activities totaled €3,441 million in 2023 (€4,499 million in 2022).

The Group's trading activities are primarily conducted within:

- ENGIE Global Markets. Its role is to manage the risks of the physical and financial energy portfolio for the Group or external customers, providing them with access to the market and implementing customized hedging strategies;
- ENGIE SA for the optimization of part of its long-term gas supply contracts, of a power swap contract, of part of its gas sales contracts with retail entities in France and Benelux and of power generation facilities in France and Belgium.

These entities operate on organized or OTC markets in derivative instruments such as futures, forwards, swaps, or options. Exposure to trading activities is strictly controlled by daily monitoring of compliance with Value at Risk (VaR) limits.

The use of VaR to quantify market risk arising from trading activities provides a transversal measure of risk, taking all markets and products into account. VaR represents the maximum potential loss on a portfolio over a specified holding period based on a given confidence interval. It is not an indication of expected results but is back-tested on a regular basis.

The Group uses a one-day holding period and a 99% confidence interval to calculate VaR, as well as stress tests, in accordance with banking regulatory requirements.

The VaR shown below corresponds to the global VaR of the Group's entities with trading activities.

Value at Risk

<i>In millions of euros</i>	Dec. 31, 2023	2023 average⁽¹⁾	2023 maximum⁽²⁾	2023 minimum⁽²⁾	2022 average⁽¹⁾
Trading activities	14	15	39	4	33

(1) Average daily VaR.

(2) Maximum and minimum daily VaR observed in 2023.

VaR limits are set within the framework of Group governance, which was strengthened since the beginning of the crisis to take into account the more volatile market environment. The minimum and the maximum, in 2023, are to be compared respectively with €6 million and with €143 million in 2022.

The continuous monitoring of market risks and the strict application of these measures have enabled the Group to perform its trading activities in a supervised environment during the year.

15.1.2 Hedges of commodity risks

Hedging instruments and sources of hedge ineffectiveness

The Group enters into cash flow hedges, using derivative instruments (firm or option contracts) contracted over the counter or on organized markets, to reduce its commodity risks, which relate mainly to future cash flows from contracted or expected sales and purchases of commodities. These instruments may be settled net or involve physical delivery of the underlying.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and potential mismatches in settlement dates, and, in a context of volatile commodity market prices, indices between the derivative instruments and the associated underlying exposures.

The fair values of commodity derivatives are indicated in the table below:

<i>In millions of euros</i>	Dec. 31, 2023				Dec. 31, 2022			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Derivative instruments relating to portfolio management activities	10,984	5,630	(15,132)	(5,801)	30,932	10,060	(37,210)	(11,698)
Cash flow hedges	1,648	4,268	(2,321)	(5,782)	3,538	4,400	(2,483)	(4,140)
Other derivative instruments	9,336	1,362	(12,811)	(19)	27,394	5,660	(34,726)	(7,558)
Derivative instruments relating to trading activities	-	2,714	-	(1,715)	-	5,016	-	-
TOTAL	10,984	8,344	(15,132)	(7,516)	30,932	15,076	(37,210)	(11,698)

The fair values shown in the table above reflect the amounts for which assets could be exchanged, or liabilities settled, at the end of the reporting period. They are not representative of expected future cash flows insofar as positions (i) are sensitive to changes in prices, (ii) can be modified by subsequent transactions, and (iii) can be offset by future cash flows arising on the underlying transactions.

15.1.2.1 Cash flow hedges

The fair values of cash flow hedges by type of commodity are as follows:

In millions of euros	Dec. 31, 2023				Dec. 31, 2022			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Natural gas	760	1,848	(1,052)	(2,733)	3,204	3,825	(1,825)	(3,149)
Electricity	660	2,081	(1,057)	(2,664)	114	324	(208)	(521)
Oil	227	338	(211)	(384)	219	248	(449)	(470)
Other (1)	1	1	(1)	(1)	1	3	(1)	1
TOTAL	1,648	4,268	(2,321)	(5,782)	3,538	4,400	(2,483)	(4,140)

(1) Mainly includes foreign currency hedges on commodities.

Notional amounts (net) ⁽¹⁾

Notional amounts and maturities of cash flow hedges are as follows:

	Unit	2024	2025	2026	2027	2028	Beyond 5 years	Total at Dec. 31, 2023
Natural gas	GWh	138,694	21,168	(8,934)	(1,392)	422	-	149,958
Electricity	GWh	88,624	50,082	16,065	8,515	871	(648)	163,509
Oil-based products	Thousands of barrels	(11,916)	(5,240)	-	-	-	-	(17,156)
Forex	Millions of euros	2	-	-	-	-	-	2
Greenhouse gas emission rights	Thousands of tons	(228)	(64)	(187)	20	20	-	(439)

(1) Long/(short) position.

Effects of hedge accounting on the Group's financial position and performance

In millions of euros	Dec. 31, 2023			Dec. 31, 2022		
	Fair Value		Total	Fair value		Total
	Assets	Liabilities		Total	Total	
Cash flow hedges	5,916	(8,103)	(2,187)	10,553	1,315	39,983
TOTAL	5,916	(8,103)	(2,187)	10,553	1,315	39,983

The fair values represented above are positive for assets and negative for liabilities.

In millions of euros	Nominal amount	Fair Value	Change in fair value used for calculating hedge ineffectiveness	Change in the value of the hedging instrument recognized in equity ⁽¹⁾	Ineffective portion recognized in profit or loss ⁽¹⁾	Amount reclassified from the hedge reserve to profit or loss ⁽¹⁾	Line item of profit or loss
Cash flow hedges							Current operating income
Hedging instruments	10,553	(2,187)		(3,873)	120	711	
Hedged items			(4,944)				

(1) Gains/(losses).

The amount of hedge inefficiency is affected in 2023 by the volatility of commodity prices during the year and the partial decorrelation of the various markets particularly in Europe. It is calculated based on the change in fair value of the hedging instrument compared to the change in fair value of the hedged items since inception of the hedging relationship. The fair value of the hedging instruments at December 31, 2023 reflects the cumulative change in fair value of the hedging instruments since inception of the hedges.

Maturity of commodity derivatives designated as cash flow hedges

<i>In millions of euros</i>	2024	2025	2026	2027	2028	Beyond 5 years	Dec. 31, 2023	Dec. 31, 2022
Fair Value of derivatives by maturity	(1,459)	(692)	(7)	(14)	(5)	(10)	(2,187)	1,315

Amounts presented in the statement of changes in equity and the statement of comprehensive income

The following table provides a reconciliation of each component of equity and an analysis of other comprehensive income:

<i>In millions of euros</i>	Cash flow hedge	Derivatives hedging commodities
At DECEMBER 31, 2022		(699)
Effective portion recognized in equity		(3,873)
Amount reclassified from hedge reserve to profit or loss		711
Translation differences		-
Changes in scope of consolidation and other		9
At DECEMBER 31, 2023		(3,852)

15.1.2.2 Other commodity derivatives

Other commodity derivatives include:

- commodity purchase and sale contracts that were not entered into or are no longer held for the purpose of the receipt or delivery of commodities in accordance with the Group's expected purchase, sale or usage requirements;
- embedded derivatives; and
- derivative financial instruments that are not eligible for hedge accounting in accordance with IFRS 9 or for which the Group has elected not to apply hedge accounting.

15.1.3 Currency risk

The Group is exposed to currency risk, defined as the impact on its statement of financial position and income statement of fluctuations in exchange rates affecting its operating and financing activities. Currency risk comprises (i) transaction risk arising in the ordinary course of business, (ii) specific transaction risk related to investments, mergers and acquisitions or disposal projects, and (iii) translation risk arising from the conversion into euros of income statement and statement of financial position items from subsidiaries with a functional currency other than the euro. The main translation risk exposures correspond to assets in US dollars, Brazilian real and pounds sterling.

15.1.3.1 Financial instruments by currency

The following tables present a breakdown by currency of outstanding borrowings and debt and net financial debt, before and after hedging:

15.1.3.2 Currency risk sensitivity analysis

A sensitivity analysis to currency risk on financial income/(loss) – excluding the income statement translation impact of foreign subsidiaries – was performed based on all financial instruments managed by the treasury department and representing a currency risk (including derivative financial instruments).

A sensitivity analysis to currency risk on equity was performed based on all financial instruments qualified as net investment hedges at the reporting date.

For currency risk, sensitivity corresponds to a 10% rise or fall in exchange rates of foreign currencies against the euro compared to closing rates.

	Dec. 31, 2023			
	Impact on income		Impact on equity	
In millions of euros	+10% ⁽¹⁾	-10% ⁽¹⁾	+10% ⁽¹⁾	-10% ⁽¹⁾
Exposures denominated in a currency other than the functional currency of companies carrying the liabilities on their statements of financial position ⁽²⁾	(32)	32	NA	NA
Financial instruments (debt and derivatives) qualified as net investment hedges ⁽³⁾	NA	NA	410	(410)

(1) +(-)10%: depreciation (appreciation) of 10% of all foreign currencies against the euro.

(2) Excluding derivatives qualified as net investment hedges.

(3) This impact is offset by the change in the net investment hedged.

15.1.4 Interest rate risk

The Group seeks to manage its borrowing costs by limiting the impact of interest rate fluctuations on its income statement. The Group's policy is therefore to arbitrate between fixed rates, floating rates and capped floating rates for its net debt. The interest rate mix may shift within a range defined by Group Management in line with market trends.

In order to manage the interest rate structure for its net debt, the Group uses hedging instruments, particularly interest rate swaps and options.

The Group also uses forward interest rate pre-hedges to protect the refinancing rate of part of its debt.

15.1.4.1 Analysis of financial instruments by type of interest rate

The following tables present a breakdown by type of interest rate of outstanding borrowings and debt and net financial debt before and after hedging:

15.1.4.2 Interest rate risk sensitivity analysis

Sensitivity was analyzed based on the Group's net debt position (including the impact of interest rate and foreign currency derivatives relating to net debt) at the reporting date.

For interest rate risk, sensitivity corresponds to a 100-basis-point rise or fall in the yield curve compared to year-end interest rates.

In millions of euros	Dec. 31, 2023			
	Impact on income		Impact on equity	
	+100 basis points	-100 basis points	+100 basis points	-100 basis points
Net interest expense on floating-rate net debt (nominal amount) and on floating-rate leg of derivatives	(29)	29	NA	NA
Change in fair value of derivatives not qualifying as	(39)	43	NA	NA
Change in fair value of derivatives qualifying as cash flow hedges	NA	NA	280	(343)

15.1.5 Currency and interest rate hedges

15.1.5.1 Currency risk management

Foreign currency exchange risk (or "FX" risk) is reported and managed based on a Group-wide approach, reflected in a policy approved by Group Management. The policy distinguishes between the three following main sources of currency risk:

- Regular transaction risk**

Regular transaction risk corresponds to the potential negative financial impact of currency fluctuations on business and financial operations denominated in a currency other than the functional currency.

The management of regular transaction risk is fully delegated to the subsidiaries for their scope of activities, while the risks related to central activities are managed at corporate level.

FX risks related to operational activities are systematically hedged when the related cash flows are certain, with a hedging horizon that corresponds at least to the medium-term plan horizon. For cash flows that are not certain, in their entirety, the hedge is initially based on a "no regret" volume. Exposures are monitored and managed based on the sum of nominal cash flows in FX, including highly probable amounts and related hedges.

For FX risks related to financial activities, all significant exposures related to cash, financial debt, etc. are systematically hedged. Exposures are monitored based on the net sum of balance sheet items in FX.

- **Project transaction risk**

Specific project transaction risk corresponds to the potential negative financial impact of FX fluctuations on specific major operations such as investment projects, acquisitions, disposals and restructuring projects, involving multiple currencies.

The management of these FX risks includes the definition and implementation of hedging transactions, taking into account the likelihood of the risk (including probability of project completion) and its evolution, the availability of hedging instruments and their associated cost. Management's aim is to ensure the viability and the profitability of the transactions.

- **Translation risk**

Translation risk corresponds to the potential negative financial impact of FX fluctuations concerning consolidated entities with a functional currency other than the euro. It relates to the translation of their income and expenses and their net assets.

Translation risk is managed centrally, with a focus on securing the net asset value.

The relevance of hedging this translation risk is assessed regularly for each currency (as a minimum) or set of assets in the same currency, taking into account notably the value of the assets and the hedging costs.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating currency risk:

- derivative instruments: these mostly correspond to over-the-counter contracts and include FX forward transactions, FX swaps, currency swaps, cross currency swaps, plain vanilla FX options or combinations (calls, puts or collars);
- monetary items such as debt, cash and loans.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and in some cases the amount of the future cash flows in foreign currency that are being hedged.

15.1.5.2 Interest rate risk management

The Group is exposed to interest rate risk through its financing and investing activities. Interest rate risk is defined as a financial risk resulting from fluctuations in base interest rates that may increase the cost of debt and affect the viability of investments. Base interest rates are market interest rates, such as EURIBOR, SOFR, etc., that do not include the borrower's credit spread.

Reform of interbank benchmark rates

As part of the interest rate benchmark reform in 2022, the Group benchmarked all new USD denominated financing contracts to the SOFR index. It also aligned its existing financing and derivative contracts with the same index in first-half 2023, following the end of the publication of the US Libor at June 30, 2023.

No impact has been recognized by the Group as a result of this transition.

The two main sources of interest rate risk are as follows:

- **Interest rate risk relating to Group net debt**

Interest rate risk relating to Group net debt designates the financial impact of base rate movements on the debt and cash portfolio from recurring financing activities. This risk is mainly managed centrally.

Risk management objectives are, by order of importance:

- to protect the long-term viability of assets;
- to optimize financing costs and ensure competitiveness; and
- to minimize uncertainty on the cost of debt.

Interest rate risk is actively managed by monitoring changes in market rates and their impact on the Group's gross and net debt.

- **Project interest rate risk**

Specific project interest rate risk corresponds to the potential negative financial impact of base rate movements on specific major operations such as investment projects, acquisitions, disposals and restructuring projects. Interest rate risk after the closing of an operation is considered as regular (see "Interest rate risk").

Interest rate risk is managed for specific project transactions in order to protect the economic viability of projects, acquisitions, disposals and restructuring initiatives against adverse changes in interest rates. It may include the implementation of hedging transactions, depending on a number of factors including the likelihood of completion, the availability of hedging instruments and their associated cost.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating interest rate risk:

- derivative instruments: these mostly correspond to over-the-counter contracts that are used to manage base interest rates. Such instruments include:
 - swaps, to change the nature of interest payments on debts, typically from fixed to floating rates or vice versa,
 - plain vanilla interest rate options;
- caps, floors and collars that allow the impact of interest rate fluctuations to be limited by setting minimum and/or maximum limits on floating interest rates.

Sources of hedge ineffectiveness are mainly related to changes in the credit quality of the counterparties and related charges, as well as potential gaps in settlement dates and in indices between the derivative instruments and the related underlying exposures.

15.1.5.3 Currency and interest rate hedges

The Group has elected to apply hedge accounting whenever possible and suitable for currency risk and interest rate risk management purposes and also manages a portfolio of undesignated derivative instruments, corresponding to economic hedges relating to net debt and foreign currency exposures.

The Group uses the three hedge accounting methods: cash flow hedging, fair value hedging and net investment hedging.

In general, the Group does not frequently reset hedging relationships, designate specific risk components as a hedged item or designate credit exposures as measured at fair value through income.

The Group qualifies interest rate or cross currency swaps transforming fixed-rate debt into floating-rate debt as fair value hedges.

Cash flow hedges are mainly used to hedge future cash flows in foreign currency, floating-rate debt as well as future refinancing requirements.

Net investment hedging instruments are mainly FX swaps, forwards and cross-currency swaps.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 15 RISKS ARISING FROM FINANCIAL INSTRUMENTS

The fair values of derivatives (excluding commodity instruments) are indicated in the table below:

	Dec. 31, 2023				Dec. 31, 2022			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
<i>In millions of euros</i>								
Derivatives hedging borrowings	279	111	(457)	(131)	226	92	(620)	(114)
Fair value hedges	190	43	(289)	(21)	167	4	(394)	(38)
Cash flow hedges	43	-	(120)	(45)	30	5	(195)	(11)
Derivative instruments not qualifying for hedge accounting	47	68	(48)	(66)	30	84	(32)	(65)
Derivatives hedging other items	1,501	26	(1,167)	(159)	1,975	84	(1,587)	(47)
Cash flow hedges	189	2	(351)	(91)	509	41	(222)	(7)
Net investment hedges	180	-	(1)	-	156	-	(1)	-
Derivative instruments not qualifying for hedge accounting	1,131	23	(815)	(67)	1,310	43	(1,364)	(40)
TOTAL	1,780	137	(1,623)	(290)	2,201	176	(2,208)	(161)

The fair values shown in the table above reflect the amounts relating to the price that would be received for the sale of an asset or paid for the transfer of a liability between market participants in the normal course of business. They are not representative of expected future cash flows insofar as the positions (i) are sensitive to changes in prices or to changes in credit ratings, (ii) can be modified by subsequent transactions, and (iii) can be offset by future cash flows arising on the underlying transactions.

Amount, timing and uncertainty of future cash flows

The following tables provide a profile of the timing at December 31, 2023 of the nominal amount of hedging instruments:

<i>In millions of euros</i>										
Buy/Sell	Interest rate type	Derivative instrument type	Currency	Total	2024	2025	2026	2027	2028	Beyond 5 years

Net investment hedges	180	(1)	179	5,596	155	5,939
Derivative instruments not qualifying for hedge accounting	55	(39)	16	12,086	123	12,007
TOTAL	286	(621)	(335)	22,391	(60)	21,085

Interest rate derivatives

In millions of euros	Dec. 31, 2023			Dec. 31, 2022		
	Fair value		Nominal amount	Fair value		Nominal amount
	Assets	Liabilities		Total	Total	Total
Fair value hedges	232	(309)	(77)	7,975	(261)	5,148
Cash flow hedges	183	(25)	158	3,399	491	5,260
Derivative instruments not qualifying for hedge accounting	1,215	(957)	258	25,438	(186)	25,885
TOTAL	1,631	(1,291)	339	36,812	44	36,293

The fair values presented in the above table are positive for assets and negative for liabilities.

In millions of euros		Nominal and outstanding amount	Fair value ⁽¹⁾	Change in fair value used for calculating hedge ineffectiveness	Change in the value of the hedging instrument recognized in equity ⁽²⁾	Ineffective portion recognized in profit or loss ⁽²⁾	Amount reclassified from the hedge reserve to profit or loss ⁽²⁾	Line item of the income statement
Fair value hedges	Hedging instruments	7,975	(77)	(77)	-	-	NA	Cost of net debt
	Hedged items ^{(3) (4)}	5,715	(41)	2,076	NA		NA	
Cash flow hedges								Other financial income and expenses / Current operating income including operating MtM
	Hedging instruments	8,107	(371)	(188)	402	(4)	(321)	
	Hedged items			186				
Net investment hedges								Other financial income and expenses / Current operating income including operating MtM
	Hedging instruments	5,596	179	148	(149)	NA	1	
	Hedged items			(148)				

(1) The adjustment of the fair value of hedged items is presented as long term and short-term borrowings and debt for a negative amount of €-41 million.

(2) Gains/(losses).

(3) The difference between the fair value used to determine the ineffective portion relating to hedging instruments and that relating to the hedged items corresponds to the amortized cost of borrowings and debt that are part of a fair value hedge relationship.

(4) Of which €40 million relating to hedging items that are no longer adjusted as a result of discontinuation of the fair value hedge relationship.

Hedge inefficiency is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedging relationship. The fair value of the hedging instruments

at December 31, 2023 reflects the cumulative change in their fair value since inception of the hedges. The same principle applies to the hedged items.

No significant impact in terms of ineffectiveness or discontinuation of certain hedges was recognized at December 31, 2023.

Foreign currency and interest rate derivatives designated as cash flow hedges can be analyzed as follows by maturity

In millions of euros	2024	2025	2026	2027	2028	Beyond 5 years	Total at Dec. 31, 2023	Total at Dec. 31, 2022
Fair value of derivatives by maturity	(64)	23	6	10	(85)	(262)	(371)	147

Amounts presented in the statement of changes in equity and the statement of comprehensive income

The following table provides a reconciliation of each component of equity and an analysis of other comprehensive income:

AT DECEMBER 31, 2022	46	179	35	(386)
Effective portion recognized in equity		(381)	(21)	149
Amount reclassified from the hedge reserve to profit or loss		321	-	(1)
Translation differences	-	-	-	-
Changes in scope of consolidation and other	-	(24)	-	-
AT DECEMBER 31, 2023	45	97	14	(238)

(1) Cash flow hedges for given periods.

(2) Cash flow hedges for given transactions.

(3) Comprises a positive €275 million of cumulated reserves related to hedge transactions (a negative €86 million at December 31, 2022) for which hedge accounting has been discontinued (instruments cancelled prior to their maturity).

(4) All of the reserves relate to continuing hedging relationships.

15.2 Counterparty risk

Due to its financial and operational activities, the Group is exposed to the risk of default of its counterparties (customers, suppliers, EPC contractors, partners, intermediaries, and banks). Default could affect payments, delivery of goods and/or asset performance.

The principles of counterparty risk management are set out in the Group counterparty risk policy, which:

- assigns roles and responsibilities for managing and controlling counterparty risk at different levels (Corporate, BU or entity), and ensures operational procedures are in place and consistent across the Group;
- characterizes counterparty risk and the mechanisms by which it impacts the economic performance and financial statements of the Group;
- defines indicators, reporting and control mechanisms to ensure visibility and to provide tools for financial performance management; and
- provides guidelines on the use of mitigating mechanisms such as collateral and guarantees, which are widely used by some businesses.

Depending on the nature of the business, the Group is exposed to different types of counterparty risk. As a result some businesses use collateral instruments – particularly the Energy Management business, where the use of margin calls and other types of financial collateral (standardized legal framework) is a market standard. In addition, other businesses may request guarantees from their counterparties in certain cases (parent company guarantees, bank guarantees, etc.).

Under the new IFRS 9 standard, the Group has defined and applied a Group-wide methodology, which includes two different approaches:

- a portfolio approach, whereby the Group determines that:
 - coherent customer portfolios and sub-portfolios have to be considered (i.e., portfolios that have comparable credit risk and/or comparable payment behavior), taking into account the following aspects:
 - public or private counterparties,
 - residential or BtoB counterparties,
 - geography,
 - type of activity,
 - size of the counterparty, and
 - any other aspects the Group may consider relevant,
 - impairment rates must be determined based on historical aging balances and, when correlation is proven and documentation possible, historical data must be adjusted by forward-looking elements; and
- an individualized approach for significant counterparties, for which the Group has set rules for defining the stage of the concerned asset for Expected Credit Loss (ECL) calculations:
 - stage 1 covers financial assets that have not deteriorated significantly since initial recognition. The ECL for stage 1 is calculated on a 12-month basis,
 - stage 2 covers financial assets for which the credit risk has significantly increased. The ECL for stage 2 is calculated on a lifetime basis. The decision to move an asset from stage 1 to stage 2 is based on certain criteria such as:
 - a significant downgrade in the creditworthiness of a counterparty and/or its parent company and/or its guarantor (if any),
 - significant adverse change in the regulatory environment,
 - changes in political or country-related risk, and
 - any other aspect the Group may consider relevant.

Regarding financial assets that are more than 30 days past due, the move to stage 2 is not systematically applied as long as the Group has reasonable and verifiable information that demonstrates that, even if payments become more than 30 days past due, this does not represent a significant increase in the credit risk since initial recognition.

- stage 3 covers assets for which default has already been observed, such as:
 - when there is evidence of significant and ongoing financial difficulty of the counterparty,
 - when there is evidence of failure in credit support from a parent company to its subsidiary (in this case the subsidiary is the Group's at risk counterparty),
 - when a Group entity has initiated legal proceedings against the counterparty for non-payment.

Regarding financial assets that are more than 90 days past due, the presumption can be rebutted if the Group has reasonable and supportable information that demonstrates that even if payments become more than 90 days past due, this does not indicate counterparty default.

The ECL formula applicable in stages 1 and 2 is $ECL = EAD \times PD \times LGD$, where:

- for 12-month ECL, Exposure At Default (EAD) equals the carrying amount of the financial asset, to which the relevant Probability of Default (PD) and the Loss Given Default (LGD) are applied;
- for lifetime ECL, the calculation method consists in identifying changes in exposure for each year, especially the expected timing and amount of the contractual repayments, then applying to each repayment the relevant PD and the LGD, and discounting the figures obtained. ECL is then the sum of the discounted figures; and
- probability of default is the likelihood of default over a particular time horizon (in stage 1, this time horizon is 12 months after the reporting period; in stage 2 this time horizon is the entire lifetime of the financial asset). This information is based on external data from a reputable rating agency. The PD depends on the time horizon and of

the rating of the counterparty. The Group uses external ratings if they are available; ENGIE's credit risk experts determine an internal rating for major counterparties with no external rating.

LGD levels are notably based on Basel standards:

- 75% for subordinated assets; and
- 45% for standard assets.

For assets considered to be of strategic importance for the counterparty, such as essential public services or goods, LGD is set at 30%.

The Group has decided that write-offs apply in the following situations:

- assets for which a legal recovery procedure is pending: these should not be written off as long as the procedure is ongoing; and
- assets for which no legal recovery procedure is pending: these should be written off once the trade receivable is 3 years overdue (5 years overdue for public counterparties).

In the context of its market activities (mainly concerning BtoB customers), the Group takes into account forward-looking information when assessing its expected credit losses, in order to best reflect the situation in a series of economic sectors deemed to be the most critical. Accordingly, the specific adjustment to the provisioning rate for expected credit losses made at December 31, 2022 on certain business sectors particularly exposed to fluctuations in commodity prices was maintained during the year, in the absence of a significant and lasting improvement in the general economic context.

In addition, the risk of default on the Group's BtoC energy supply activities has evolved differently in each country, depending on the mechanisms put in place. In France, for example, the risk of default has risen due to the end of government measures (i.e. gas tariff shield, energy vouchers) aimed at limiting price increases. This is reflected in longer collection times and more frequent requests for payment instalment plans. Conversely, lower prices in Belgium and the protection mechanisms put in place by the Romanian government have reduced our exposure to credit risk.

15.2.1 Counterparty risk arising on operating activities

Counterparty risk arising on operating activities is managed via standard mechanisms such as third-party guarantees, netting agreements and margin calls, using dedicated hedging instruments or special prepayment and debt recovery procedures, particularly for retail customers.

Under the Group's policy, each global business unit is responsible for managing counterparty risk, although the Group continues to manage the biggest counterparty exposures centrally.

For large and medium-sized customers with which the Group's credit risk exposure exceeds a certain threshold, a specific, comprehensive rating determination model is used to assess the Group's credit risk exposure as accurately as possible. A simplified scoring model is used for customers for whom the Group's credit risk exposure is lower. These processes are based on formally documented, consistent methods across the Group. Consolidated exposures are monitored by counterparty and by segment (credit rating, sector, etc.) using standard indicators (payment risk, mark-to-market exposure).

GEMS' large exposures to trading counterparties and large commercial clients are regularly monitored by the Group's governance committees.

15.2.1.1 Trade and other receivables, assets from contracts with customers

Total outstanding exposures presented in the tables below do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €4,579 million at December 31, 2023 (compared to €6,084 million at December 31, 2022).

15.2.1.2 Commodity derivatives

In the case of commodity derivatives, counterparty risk arises from positive fair value. When calculating the fair value of these derivative instruments, counterparty risk (CVA) is based on default probabilities whose parameters have been updated, in a context of uncertainty, to take account of an increased risk of default.

The volatility of commodity prices and the impact on the valuation of derivatives on the assets side of the balance sheet have not significantly altered the Group's exposure due to the credit quality of its counterparties.

In millions of euros	Dec. 31, 2023		Dec. 31, 2022	
	Investment Grade ⁽¹⁾	Total	Investment Grade ⁽¹⁾	Total
Gross exposure ⁽²⁾	15,954	19,324	36,371	46,012
Net exposure ⁽³⁾	6,385	8,050	12,434	16,124
% of credit exposure to "Investment Grade" counterparties	79.3%		77.1%	

(1) Investment Grade corresponds to transactions with counterparties that are rated at least BBB- by Standard & Poor's, Baa3 by Moody's, or equivalent by Dun & Bradstreet. "Investment Grade" is also determined based on an internal rating tool that has been rolled out within the Group, and covers its main counterparties.

(2) Corresponds to the maximum exposure, i.e. the value of the derivatives shown under assets (positive fair value).

(3) After taking into account the liability positions with the same counterparties (negative fair value), collateral, netting agreements and other credit enhancement techniques.

15.2.2 Counterparty risk arising on financing activities

For its financing activities, the Group has put in place procedures for managing and monitoring risk based on (i) the accreditation of counterparties according to external credit ratings, objective market data (credit default swaps, market capitalization) and financial structure, and (ii) counterparty risk exposure limits.

To reduce its counterparty risk exposure, the Group has drawn increasingly on a structured legal framework based on master agreements (including netting clauses) and collateralization contracts (margin calls).

The oversight procedure for managing counterparty risk arising from financing activities is managed by a Middle Office that operates independently of the Group's Treasury department and reports to the Finance division.

15.2.2.1 Loans and receivables at amortized cost

The total outstanding exposures presented in the tables below do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €425 million at December 31, 2023 (compared to €547 million at December 31, 2022).

In millions of euros	Dec. 31, 2023						
	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Other	Total by counterparty type
Gross	8,879	285	700	9,865	5,754	4,111	9,865
Expected credit losses	(78)	(45)	(1,180)	(1,302)	(174)	(1,128)	(1,302)
TOTAL	8,802	240	(479)	8,563	5,580	2,983	8,563

In millions of euros	Dec. 31, 2022						
	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Other	Total by counterparty type
Gross	6,596	274	720	7,591	3,490	4,101	7,591
Expected credit losses	(99)	(38)	(1,154)	(1,291)	(158)	(1,133)	(1,291)
TOTAL	6,497	236	(434)	6,300	3,332	2,967	6,300

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's.

In 2022, the Group had impaired the loan related to the financing of the Nord Stream 2 pipeline project for a total amount of €987 million (including capitalized interest).

15.2.2.2 Counterparty risk arising on investing activities and the use of derivative financial instruments

The Group is exposed to counterparty risk arising on investments of surplus cash and from the use of derivative financial instruments. In the case of financial instruments at fair value through income, counterparty risk arises on instruments with a positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

In millions of euros	Dec. 31, 2023				Dec. 31, 2022			
	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non Investment-Grade ⁽²⁾	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non-Investment Grade ⁽²⁾
Exposure	17,577	89.6%	3.3%	7.1%	15,738	92.3%	4.5%	3.2%
(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's or Baa3 by Moody's.								
(2) The bulk of these two exposures is carried by consolidated companies that include non-controlling interests, or by Group companies that operate in emerging countries, where cash cannot be pooled and is therefore invested locally.								

Furthermore, at December 31, 2023, Crédit Agricole SA is the main Group counterparty and represents 31% of cash surpluses. This relates mainly to a depositary risk.

15.3 Liquidity risk

In the context of its operating activities, the Group is exposed to a risk of having insufficient liquidity to meet its contractual obligations. As well as the risks inherent in managing working capital requirements (WCR), margin calls are required in certain market activities, which are a way of mitigating counterparty risk on hedging instruments through the use of collateral.

The Group has set up a committee that meets weekly and is tasked with managing and monitoring liquidity risk throughout the Group, by maintaining a broad range of investments and sources of financing, and preparing forecasts of cash investments and divestments. ENGIE has set up a comprehensive framework to monitor and streamline cash movements related to OTC margin calls and margin calls via clearing houses, based on the use of liquidity swaps with its key counterparties, as well as the issuing of letters of credit. Given the current volatility of the markets, these margin calls may have a significant timing impact on the Group's cash position, and the use of the two above-mentioned levers has therefore been reinforced in order to monitor the impact on its cash position. Quarterly stress-tests are also performed on the margin calls put in place when commodity, interest rate and currency derivatives are negotiated to assess the Group's resilience in terms of liquidity.

The Group centralizes virtually all the financing needs and cash flow surpluses of the companies it controls, as well as most of their medium- and long-term external financing requirements. Centralization is provided by financing vehicles (long-term and short-term) and by dedicated Group cash pooling vehicles based in France, Belgium and Luxembourg.

Surpluses held by these structures are managed in accordance with a uniform policy. In accordance with this policy, unpooled cash surpluses are invested in instruments selected on a case-by-case basis in light of local financial market imperatives and the financial strength of the counterparties concerned.

The succession of financial crises since 2008 and the ensuing rise in counterparty risk prompted the Group to tighten its investment policy with the aim of keeping an extremely high level of liquidity and protecting invested capital, with a daily monitoring of performance and counterparty risk, allowing the Group to take immediate action where required in response to market developments. Consequently, 89% of the cash pooled at December 31, 2023 was invested in overnight bank deposits and standard money market funds with daily liquidity.

The Group's financing policy is based on:

- centralizing external financing;
- diversifying sources of financing between credit institutions and capital markets;
- achieving a balanced debt repayment profile.

The Group seeks to diversify its sources of financing by carrying out public or private bond issues within the scope of its Euro Medium Term Notes program. It also issues negotiable commercial paper in France (Negotiable European Commercial Paper) and in the United States (U.S. Commercial Paper) as well as deeply-subordinated perpetual notes. As negotiable commercial paper is relatively inexpensive and highly liquid, it is used by the Group in a cyclical or structural manner to finance its short-term cash requirements. However, the refinancing of all outstanding negotiable commercial paper remains secured by confirmed bank lines of credit – mainly centralized – allowing the Group to continue to finance its activities if access to this financing source were to dry up. These facilities are appropriate for the scale of its operations and for the timing of contractual debt repayments.

The various actions carried out by the Group ensure a high and reinforced level of liquidity.

Diversifying sources of financing and liquidity ⁽¹⁾

In millions of euros

- (1) These sources of financing and liquidity do not include the deeply-subordinated perpetual notes recognized in equity (see Note 16.2.1 "Issuance of deeply-subordinated perpetual notes").
- (2) Net amount of negotiable commercial paper.
- (3) Cash corresponds to cash and cash equivalents for €16,578 million, other financial assets deducted from net financial debt for €884 million, net of bank overdrafts and current accounts for €455 million, of which 76% was invested in the Eurozone.

At December 31, 2023, all Group entities whose debt is consolidated complied with the covenants and declarations included in their financial documentation, except for some non-significant entities for which compliance actions are being implemented. There are no defaults linked to financial ratios or rating levels on available centralized credit lines.

15.3.1 Undiscounted contractual payments relating to financial activities

Undiscounted contractual payments on outstanding borrowings and debt by maturity

In millions of euros	2024	2025	2026	2027	2028	Beyond 5 years	Total at Dec. 31, 2023	Total at Dec. 31, 2022
Bond issues	1,039	1,463	2,922	3,130	3,230	18,472	30,256	23,557
Bank borrowings	763	485	387	637	245	4,231	6,748	5,476
Negotiable commercial paper	5,606	-	-	-	-	-	5,606	7,386
Lease liabilities	510	480	398	365	407	2,552	3,147	2,875
Other borrowings	92	22	3	3	2	244	366	374
Bank overdrafts and current accounts	455	-	-	-	-	-	455	615

Other financial assets and cash and cash equivalents deducted from net financial debt have a liquidity of less than one year.

Undiscounted contractual interest payments on outstanding borrowings and debt by maturity

<i>In millions of euros</i>	2024	2025	2026	2027	2028	Beyond 5 years	Total at Dec. 31, 2023	Total at Dec. 31, 2022
Undiscounted contractual interest flows on outstanding borrowings and debt	1,319	1,267	1,230	1,116	1,053	10,915	16,900	11,131

Undiscounted contractual payments on outstanding derivatives (excluding commodity instruments) by maturity

<i>In millions of euros</i>	2024	2025	2026	2027	2028	Beyond 5 years	Total at Dec. 31, 2023	Total at Dec. 31, 2022
Derivatives (excluding commodity instruments)	(233)	1	18	17	(20)	743	527	239

To better reflect the economic substance of these transactions, the cash flows linked to the derivatives recognized in assets and liabilities shown in the table above relate to net positions.

Undiscounted contractual payments related to leases

At December 31, 2023, the Group, as lessee, was potentially exposed to future cash outflows not reflected in the measurement of lease liabilities for €1,045 million (of which approximately 75% relate to potential cash outflows beyond 2028). Those potential future cash outflows relate to leases not yet commenced to which the Group is committed (real estate and LNG vessels).

In addition, the Group is also exposed to future cash outflows in the form of variable lease payments in connection with the extension of the Rhone concession. These variable lease payments are dependent on revenue from electricity sales.

Undrawn credit facility programs

<i>In millions of euros</i>	2024	2025	2026	2027	2028	Beyond 5 years	Total at Dec. 31, 2023	Total at Dec. 31, 2022
Confirmed undrawn credit facility programs	1,619	738	552	-	8,500	822	12,231	12,511

Of these undrawn programs, an amount of €5,606 million is allocated to covering commercial paper.

At December 31, 2023, no single counterparty represented more than 10% of the Group's confirmed undrawn credit lines.

15.3.2 Undiscounted contractual payments relating to operating activities

The table below provides an analysis of undiscounted fair values due and receivable in respect of commodity derivatives recorded in assets and liabilities at the reporting date.

The Group provides an analysis of residual contractual maturities for commodity derivative instruments included in its portfolio management activities. Derivative instruments relating to trading activities are considered to be liquid in less than one year, and are presented under current items in the statement of financial position.

<i>In millions of euros</i>	2024	2025	2026	2027	2028	Beyond 5 years	Total at Dec. 31, 2023	Total at Dec. 31, 2022
Derivative instruments carried in								
relating to portfolio management	(5,831)	(497)	(9,539)	(2,971)	(1,249)	(994)	(21,080)	(49,260)
relating to trading activities	(1,787)	-	-	-	-	-	(1,787)	-
Derivative instruments carried in assets								
relating to portfolio management	5,624	341	6,682	2,934	681	472	16,734	40,975
relating to trading activities	2,766	-	-	-	-	-	2,766	5,098
TOTAL	772	(155)	(2,857)	(37)	(568)	(522)	(3,366)	(3,187)

15.3.3 Commitments relating to commodity purchase and sale contracts entered into in the ordinary course of business

Some Group operating companies have entered into long-term contracts, some of which include “take-or-pay” clauses. These consist of firm commitments to purchase or sell specified quantities of gas, electricity or steam as well as related services, in exchange for a firm commitment from the other party to deliver or purchase said quantities and services. These contracts were documented as falling outside the scope of IFRS 9. The table below shows the main future commitments arising from contracts entered into by GBU Renewables and GEMS (expressed in TWh).

<i>In TWh</i>	2024	2025-2028	Beyond 5 years	Total at Dec. 31, 2023	Total at Dec. 31, 2022
Firm purchases	(450)	(566)	(1,134)	(2,150)	(1,884)
Firm sales	617	470	224	1,310	1,243

NOTE 16 EQUITY

16.1 Share capital

	Number of shares			Value (in millions of euros)		
	Total	Treasury stock	Outstanding	Share capital	Additional paid-in capital	Treasury stock
AT DECEMBER 31, 2022	2,435,285,011	(14,530,427)	2,420,754,584	2,435	25,667	(189)
Dividend paid in cash	-	-	-	-	(1,752)	-
Purchase/disposal of treasury stock	-	(3,755,821)	(3,755,821)	-	-	(53)
Delivery of treasury stock (bonus)	-	4,450,881	4,450,881	-	-	65
AT DECEMBER 31, 2023	2,435,285,011	(13,835,367)	2,421,449,644	2,435	23,916	(177)

Changes in the number of outstanding shares in 2023 resulted exclusively from the disposal of 0.7 million treasury shares, as part of bonus share plans.

16.1.1 Potential share capital and instruments providing a right to subscribe for new ENGIE SA shares

Since 2017, the Group no longer has any stock purchase or subscription option plans.

Shares to be allocated under the performance share award plans described in Note 19 "Share-based payments" are covered by existing ENGIE SA shares.

16.1.2 Treasury stock

Accounting standards

Treasury shares are recognized at acquisition cost and deducted from equity. Gains and losses on disposals of treasury shares are recorded directly in equity and do not, therefore, impact income for the period.

The Group has a stock repurchase program as a result of the authorization granted to the Board of Directors by the Ordinary and Extraordinary Shareholders' Meeting of April 26, 2023. This program provides for the repurchase of up to 10% of the shares comprising the share capital of ENGIE SA at the date of the said Shareholders' Meeting. The aggregate amount of acquisitions net of expenses under the program may not exceed €7.3 billion, and the purchase price must be less than €30 per share excluding acquisition costs.

At December 31, 2023, the Group held 13.8 million treasury shares. To date, all the shares have been allocated to cover the Group's share commitments to employees and corporate officers.

The liquidity agreement signed with an investment service provider assigns to the latter the role of operating on the market on a daily basis, to buy or sell ENGIE SA shares, in order to ensure liquidity and an active market for the shares on the Paris and Brussels stock exchanges. To date, the resources allocated to the implementation of this agreement amount to €55 million.

16.2 Other disclosures concerning additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (Group share)

Total additional paid-in capital, consolidated reserves and issuance of deeply subordinated perpetual notes (including net income for the year), amounted to €32,507 million at December 31, 2023, including €23,916 million in additional paid-in capital. Additional paid-in capital includes a portion of the cash dividend payment for 2022 in an amount of €1,752 million.

Consolidated reserves include the cumulative income of the Group, the legal and statutory reserves of ENGIE SA, cumulative actuarial gains and losses, net of tax and the change in fair value of equity instruments at fair value through OCI.

Under French law, 5% of the net income of French companies must be allocated to the legal reserve until the latter reaches 10% of share capital. This reserve can only be distributed to shareholders in the event of liquidation. The ENGIE SA legal reserve amounts to €244 million.

16.2.1 Issuance of deeply subordinated perpetual notes

In accordance with IAS 32 (*Financial Instruments: Presentation*), and given their characteristics, these instruments are recognized in equity in the Group's consolidated financial statements.

At December 31, 2023, the outstanding nominal value of deeply subordinated perpetual notes amounted to €3,393 million. No movements have been recorded since December 31, 2022.

In 2023, the Group paid €80 million to the holders of these notes. This amount is accounted for as a deduction from equity in the Group's consolidated financial statements; the related tax saving is accounted for in the income statement.

16.2.2 Distributable capacity of ENGIE SA

ENGIE SA's distributable capacity totaled €24,537 million at December 31, 2023 (compared with €27,365 million at December 31, 2022), including €23,916 million of additional paid-in capital.

16.2.3 Dividends

The Shareholders' Meeting of 26 April 2023 approved the payment of a unit dividend of €1.40 per share in respect of the 2022 financial year. In accordance with Article 26.2 of the Articles of Association, a bonus dividend of 10%, i.e. €0.14 per share, has been allocated to shares which have been held for at least two years at December 31, 2022, and which have remained continuously registered in this form in the name of the same shareholder until the dividend payment date. This bonus dividend may not apply to a number of shares representing more than 0.5% of the share capital for any one shareholder. On May 3, 2023, the Group paid a cash dividend of €3,391 million, including the dividend of €1.40 per share for shares eligible for the ordinary dividend, and a loyalty bonus of €36 million.

Proposed dividend in respect of 2023

At the Shareholders' Meeting convened to approve the ENGIE Group financial statements for the year ended December 31, 2023, the shareholders will be asked to approve a dividend of €1.43 per share, representing a total payout of €3,482 million based on the number of shares outstanding at December 31, 2023. It will be increased by 10% for all shares held for at least two years at December 31, 2023 and up to the 2023 dividend payment date. Based on the number of outstanding shares at December 31, 2023, this increase is valued at €38 million.

Subject to approval by the Shareholders' Meeting of Tuesday April 30, 2024, this dividend will be detached on Thursday May 2, 2024 and paid on Monday May 6, 2024. It is not recognized as a liability in the financial statements at December 31, 2023, since the financial statements at the end of 2023 were presented before the appropriation of earnings.

16.3 Recyclable gains and losses recognized in equity (Group share)

All items shown in the table below correspond to cumulative gains and losses (Group share) at December 31, 2023 and December 31, 2022, which are recyclable to income in subsequent periods.

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Debt instruments	(44)	(369)
Net investment hedges ⁽¹⁾	(238)	(386)
Cash flow hedges (excl. commodity instruments) ⁽¹⁾	145	218
Commodity cash flow hedges ⁽¹⁾	(3,998)	(318)
Deferred taxes on the items above	786	(112)
Share of equity method entities accounted in recyclable items, net of tax ⁽²⁾	334	300
Recyclable items relating to discontinued operations, net of tax	-	-
TOTAL RECYCLABLE ITEMS BEFORE TRANSLATION ADJUSTMENTS	(3,015)	(668)
Translation adjustments	(1,693)	(1,422)
TOTAL RECYCLABLE ITEMS	(4,708)	(2,090)

(1) See Note 15 "Risks arising from financial instruments".

(2) See Note 3 "Investments in equity method entities".

16.4 Capital management

ENGIE SA seeks to optimize its financial structure at all times by pursuing an optimal balance between its economic net debt and its EBITDA. The Group's key objective in managing its financial structure is to maximize value for shareholders and reduce the cost of capital, while ensuring that the Group has the financial flexibility required to continue its expansion. The Group manages its financial structure and makes any necessary adjustments in light of prevailing economic conditions. In this context, it may choose to adjust the amount of dividends paid to shareholders, reimburse a portion of capital, carry out share buybacks (see Note 16.1.2 "Treasury stock"), issue new shares, launch share-based payment plans, recalibrate its investment budget, or sell assets in order to scale back its net debt.

The Group's policy is to maintain an "strong investment grade" rating from the rating agencies. To achieve this, it manages its financial structure in line with the indicators usually monitored by these agencies, namely the Group's operating profile, financial policy and a series of financial ratios. One of the most commonly used ratios is the ratio where the numerator includes operating cash flows less cost of debt and taxes paid, and the denominator includes adjusted net financial debt. Net financial debt is mainly adjusted for nuclear provisions and provisions for pensions, as well as for 50% of hybrid debt (deeply-subordinated notes). In addition, the Group has issued a guidance targeting an "economic net debt to EBITDA" ratio less than or equal 4x.

The Group's objectives and processes for managing capital have remained unchanged over the past few years.

ENGIE SA is not obliged to comply with any external minimum capital requirements except those provided for by law.

NOTE 17 PROVISIONS

Accounting standards

General principles related to the recognition of a provision

The Group recognizes a provision where it has a present obligation (legal or constructive) towards a third party arising from past events and where it is probable that an outflow of resources will be necessary to settle the obligation with no expected consideration in return.

A provision for restructuring costs is recognized when the general criteria for setting up a provision are met, i.e., when the Group has a detailed formal plan relating to the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

Provisions with a maturity of over 12 months are discounted when the effect of discounting is material. The Group's main long-term provisions are provisions for the back-end of the nuclear fuel cycle, provisions for dismantling facilities, provisions for site restoration costs, and provisions for post-employment and other long-term benefits. The discount rates used reflect current market assessments of the time value of money and the risks specific to the liability concerned. Expenses with respect to unwinding the discount on the provision are recognized as other financial income and expenses.

Estimates of provisions

Factors having a significant influence on the amount of provisions, and particularly, but not solely, those relating to the back-end of the nuclear fuel cycle, to the dismantling of nuclear facilities and of gas infrastructures in France, include:

- cost estimates (see *Note 17.2*);
- the timing of expenditure (notably the timetable for the end of gas operations regarding the main gas infrastructure businesses in France) (see *Notes 17.2 and 17.3*); and
- the discount rate applied to cash flows.

These factors are based on information and estimates deemed by the Group to be the most appropriate as of today.

Modifications to certain factors could lead to a significant adjustment in these provisions.

NOTE 17 PROVISIONS

<i>In millions of euros</i>	Post-employment and other long-term benefits	Back-end of the nuclear fuel cycle and dismantling of nuclear facilities	Dismantling of non-nuclear facilities	Other contingencies	Total
AT DECEMBER 31, 2022	4,471	19,017	1,330	2,209	27,027
Additions	264	5,271	107	557	6,198
Utilizations	(315)	(327)	(75)	(671)	(1,388)
Reversals	-	-	-	(36)	(35)
Changes in scope of consolidation	(6)	-	15	-	8
Impact of unwinding discount adjustments	161	581	47	14	803
Translation adjustments	1	-	(21)	(3)	(22)
Other	631	(655)	(18)	44	2
AT DECEMBER 31, 2023	5,208	23,887	1,384	2,114	32,593
Non-current	5,126	11,948	1,384	334	18,792
Current ⁽¹⁾	82	11,939	-	1,780	13,801

(1) The classification of liabilities as current or non-current reflects the effects of the agreement signed with the Belgian State on June 29, 2023 (which became binding on July 21, 2023), the implementation of which was specified in the transaction documents of December 13, 2023 (see Note 17.2). The Group will settle a large portion of this liability (€11.5 billion₂₀₂₂) when the laws transposing this agreement come into force, and will settle the remaining balance (€3.5 billion₂₀₂₂) when the extended units are restarted at the end of 2025.

The impact of unwinding discount adjustments in respect of post-employment and other long-term benefits relates to the interest expense on the benefit obligation, net of interest income on plan assets.

The “Other” line mainly comprises actuarial gains and losses arising on post-employment benefit obligations in 2023, which are recorded in “Other comprehensive income” as well as reversals of provisions recorded against a dismantling or site rehabilitation asset, notably due to the effect induced by the CNP’s final opinion of July 7, 2023 (see Note 17.2).

Additions, utilizations, reversals and the impact of unwinding discount adjustments are presented as follows in the consolidated income statement:

<i>In millions of euros</i>	Dec. 31, 2023
Income/(loss) from operating activities	(4,774)
Other financial income and expenses	(824)
TOTAL	(5,598)

The different types of provisions and the calculation principles applied are described below.

17.1 Post-employment benefits and other long-term benefits

See Note 18 “Post-employment benefits and other long-term benefits”.

17.2 Obligations relating to nuclear power generation activities

17.2.1 Current legal context and expected developments following the agreement signed with the Belgian State on June 29, 2023 which became binding on July 21, 2023, the implementation of which was specified in the transaction documents of December 13, 2023

The Belgian law of April 11, 2003, partially repealed and amended by the law of July 12, 2022, granted Group subsidiary Synatom responsibility for managing provisions set aside to cover the costs of dismantling nuclear power plants and managing spent fuel.

The tasks of the Commission for Nuclear Provisions (CNP), set up pursuant to the above-mentioned law, are to oversee the process of computing and managing these provisions. In accordance with the law, every three years the CNP conducts an audit of the application and adequacy of the calculation methods used to compute nuclear provisions.

In this context, the CNP issued a final opinion on July 7, 2023 on the proposals submitted by Synatom in September 2022. The provisions recorded by Synatom as of December 31, 2023 take full account of the comments and assumptions made by the CNP. In 2023, this opinion mainly resulted in a €0.6 billion reduction in the provision for dismantling, offset by an adjustment in the book value of dismantling assets, part of which was the subject of an impairment loss reversal (€0.4 billion). The provisions therefore include, in their assumptions, all existing or planned environmental regulatory requirements on a European, national and regional level.

On June 29, 2023, the Group signed an agreement with the Belgian government which became binding on July 21, 2023, the implementation of which was specified in the transaction documents of December 13, 2023. This agreement provides for:

- the 10-year extension of the Doel 4 and Tihange 3 nuclear reactors as part of a 50/50 partnership between the Belgian State and the Group, contingent upon the implementation of a contract for difference protecting ENGIE against market risks; and
- the transfer of financial responsibility to the Belgian State for managing nuclear waste and spent fuel in return for the payment of a lump sum discharge amount of €15 billion₂₀₂₂, within the limit of a volumetric credit covering all nuclear waste produced by the Belgian power plants during their legal operating life, from commissioning to dismantling.

This agreement is binding on both parties. Although it assumes the enactment and entry into force of draft laws included in the agreement, and the European Commission's assent to state aid, its closing (following the release from or fulfillment of conditions precedent) is considered highly probable. The transfer of financial responsibility for the management of nuclear waste and spent fuel meeting the transfer criteria will be concluded at closing, unless the units are not restarted before November 1, 2027 due to serious negligence on the part of ENGIE. In this highly unlikely event, the Belgian State may cancel the agreement on the lump sum discharge and revert to the current system in which the nuclear operator bears the financial responsibility. The amounts already paid by the Group would accordingly be held in escrow for the benefit of the transferred nuclear provisions until the end of the dismantling program, including nuclear waste and back-end nuclear fuel cycle management.

The Group will settle its liability of €15 billion₂₀₂₂ by means of a payment of €11.5 billion₂₀₂₂ for category B and C waste (highly radioactive wastes, that are intended for geological storage) at the time of closing, after which it will settle the balance for category A waste (low-level radioactive wastes, that are intended for surface storage), i.e., €3.5 billion₂₀₂₂, when the extended units are restarted at the end of 2025. These amounts at December 31, 2022 are subject to a 3% indexation effective from January 1, 2023 until the date of payment.

As a result, the Group has increased its provisions by an amount corresponding to the balance between the liabilities already set aside for future nuclear waste treatment costs and the lump sum amount of €15 billion₂₀₂₂, i.e., an amount of €5.1 billion₂₀₂₂ (including Electrabel's partners' share in certain power plants for €0.4 billion). As a result, the Group recognized a net expense of €4.8 billion in "Other items of income/(loss) from operating activities" (see Note 9).

At the end of this agreement, the Group will essentially retain responsibility for the on-site storage of spent fuel waste until the end of the dismantling operations and until 2050 at the latest, as well as for the conditioning of all waste in accordance with the contractual agreement (see Note 17.2). The Group will also remain responsible for the final shutdown of the reactors, their dismantling and the clean-up of the site at the end of their operating life. The process of setting up and managing all these provisions, for which the Group is responsible, will continue to be reviewed by the CNP every 3 years.

17.2.2 Provisions for the back-end of the nuclear fuel cycle

When spent nuclear fuel is removed from a reactor and temporarily stored on-site, it requires conditioning, before being consigned to long-term storage.

As part of the implementation of a final payment for the transfer of financial responsibility for managing the storage and disposal of nuclear waste and spent fuel, as provided for in the agreement, the risks associated with this liability, as described in the consolidated financial statements at December 31, 2022 (see Note 17.2 "Obligations relating to nuclear power generation activities"), have been considerably reduced. The agreement stipulates that the State will bear financial responsibility for managing all spent fuel after its transfer to ONDRAF (National agency for radioactive waste and enriched

fissile materials). The Group will settle a large portion of this liability (classified as current in the accounts) plus a risk premium for a total of €10.5 billion²⁰²².

With regard to waste management, the Group's responsibility will be essentially limited to on-site storage of fuel elements until the end of dismantling operations, and until 2050 at the latest, as well as compliance with the contractual criteria for transferring waste to ONDRAF, whose liability is estimated at €1.7 billion²⁰²² in the draft law implementing the agreement.

Provisions not covered in the agreement are calculated based on the following principles and inputs:

- storage costs primarily comprise the costs of building and operating additional dry storage facilities and operating existing facilities, along with the costs of purchasing containers;
- radioactive spent fuel that has not been reprocessed is to be conditioned, which requires conditioning facilities to be built according to ONDRAF's approved criteria. ONDRAF's recommendations as regards the cost of these facilities have been fully taken into account;
- the discount rate used by the CNP (for the part not covered by the agreement with the Belgian government) is 3.0% (including inflation of 2.0%).

The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment. Certain ONDRAF recommendations from the 2022 triennial revision of nuclear provisions that could not yet be quantified will be specifically examined under the oversight of the CNP within the context of the next triennial review.

Sensitivity

Following the assumption by the Belgian State of all obligations relating to nuclear waste after its transfer to ONDRAF, the Group will only remain exposed to changes in future storage and conditioning costs and the corresponding discounting inputs prior to the transfer.

- The costs of building dry storage facilities and purchasing fuel element containers at the Group's sites could differ from those covered by the provisions. A 10% change in these costs, still to incur would represent a €60 million change in provisions.
- A 10% change in the annual operating costs of the storage facilities would result in a €30 million change in the provision.
- A 25 basis point change in the discount rate would result in a €40 million adjustment to non-transferred provisions. A fall in the discount rate would lead to an increase in outstanding provisions, while a rise in the discount rate would reduce the provisions' amount.

It should be noted that the risk of exceeding volumetric credits is considered, at this stage, to be highly unlikely, as the volumetric credits established in the agreement have incorporated the volumetric contingencies estimated as part of the provision review in 2022.

17.2.3 Provisions for dismantling nuclear facilities

Accounting standards

A provision is recognized when the Group has a present legal or constructive obligation to dismantle facilities or to restore a site. The present value of the obligation at the time of commissioning represents the initial amount of the provision for dismantling with, as the counterpart, an asset for the same amount, which is included in the carrying amount of the facilities concerned. This asset is depreciated over the operating life of the facilities and is included in the scope of assets subject to impairment tests. Adjustments to the provision due to subsequent changes in (i) the expected outflow of resources, (ii) the timing of dismantling expenses or (iii) the discount rate, are deducted from or subject to specific conditions, added to the cost of the corresponding asset. The impacts of unwinding the discount each year are recognized in expenses for the period.

A provision is also recorded for nuclear units for which the Group holds a capacity right up to its share of the expected dismantling costs to be borne by the Group.

At the end of their operating life, the nuclear power plants must be shut down for the period during which spent fuel is unloaded from the plant, and until the site is decommissioned and cleaned up.

The dismantling strategy is based on the facilities being dismantled (i) immediately after the reactor is shut down, (ii) on a mass basis rather than on a unit-by-unit basis, and (iii) completely, the land being subsequently returned to greenfield status.

Until December 31, 2022, the amount of these dismantling provisions included costs related to handling Class A – low or medium activity and short-lived – and B – low or medium activity and long-lived – dismantling waste, that were determined using the fee rate set by ONDRAF and approved by its Board of Directors in May 2022. As a result of the agreement, financial responsibility for all Category A and B waste management operations conditioned in accordance with the contractual transfer criteria will henceforth lie with the State, in return for payment of the lump sum discharge amount described in section 17.2.2 above. The Group will transfer this liability when the laws transposing this agreement come into force, for a total of €1 billion²⁰²² for category B waste, and when the extended units are restarted at the end of 2025, for a total of €3.5 billion²⁰²² for category A waste.

The Group only remains responsible for the final shutdown and dismantling, including the conditioning of Category A and B waste from these operations in accordance with the contractual transfer criteria. At December 31, 2023, provisions for dismantling nuclear facilities are calculated based on the following inputs:

- the start of the technical shutdown procedures depends on the unit concerned and on the timing of operations for the whole nuclear reactor. The shutdown procedures are immediately followed by dismantling operations;
- the scenario adopted is based on a dismantling program and on timetables that must be approved by the nuclear safety authorities. The safety conditions for the shutdown phases have been defined with the Belgian Federal Agency for Nuclear Control (AFCN) for the Doel 3 and Tihange 2 units that have already been shut down. The safety conditions for the dismantling phase have not yet been determined. The costs may change depending on the outcome of these discussions and the detailed schedule for the implementation of these phases which is currently being defined;
- costs payable over the long term are calculated by reference to the estimated costs for each nuclear facility, based on a study conducted by independent experts under the assumption that the facilities will be dismantled on a mass basis. The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment;
- fees for handling category A – low or medium activity and short-lived – and B – low or medium activity and long-lived – dismantling waste are determined using the fee rate set by ONDRAF and approved by its Board of Directors in May 2022;
- for the various phases, margins for contingencies, reviewed by ONDRAF and the Commission for Nuclear Provisions, are included;
- an inflation rate of 2.0% is applied until the dismantling obligations expire in order to determine the value of the future obligation;
- the discount rate used by the CNP is 2.5% (including inflation of 2.0%)

The 10-year extension of the Doel 4 and Tihange 3 units provided for in the agreement "deoptimizes" the systematic dismantling of the various units. The State is expected to cover the related additional provisions that are currently estimated at between €500 and €600 million. Pending an agreement on the exact amount under the oversight of the CNP, this additional liability paid in the form of a lump sum by the Belgian State at the time of closing has not been included in the financial statements. If the additional costs are not fully covered by the State, the Group may have to bear a portion of this additional liability.

Lastly, the Group sets aside provisions to cover the costs relating to the final shutdown phase of its drawing rights in Tricastin and Chooz B, as well as for the dismantling period leading to the decommissioning and clean-up of the Chooz B site, in accordance with the respective agreements with EDF. These are based on provisions for Belgian assets that most closely resemble these power plants, and are updated in line with revisions by the CNP.

Sensitivity

In light of the agreement, the Group will only be responsible for shutdown and dismantling, including conditioning of the nuclear waste arising from these operations, in accordance with the contractual transfer criteria. The Group's remaining liability is estimated at €6.7 billion₂₀₂₂ in the draft law implementing the agreement.

- a 10% change in shutdown costs of the units would lead to a change in the provisions of around €200 million;
- a 10% change in unit dismantling costs would lead to a change of around €400 million in nuclear provisions;
- a 25 basis point change in the discount rate would lead to an adjustment of approximately €170 million in the provisions. A fall in the discount rate would lead to an increase in outstanding provisions, while a rise in the discount rate would reduce the provisions' amount.

17.2.4 Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material

As indicated above, the Belgian law of July 12, 2022, partially repealing and amending the law of April 11, 2003, granted the Group's wholly-owned subsidiary Synatom responsibility for managing and investing funds received from operators of nuclear power plants in Belgium and intended to cover the costs of dismantling nuclear power plants and managing spent fuel. Pursuant to the law of April 11, 2003, Synatom could lend up to 75% of these funds to nuclear power plant operators provided that certain credit quality criteria are met.

The amount of outstanding loans between Synatom and nuclear operators, representing the countervalue of provisions for spent fuel management, will be repaid to Synatom by December 31, 2025, and the amount of outstanding loans between Synatom and Electrabel, representing the countervalue of provisions for dismantling, will be repaid by September 30, 2031.

The percentage of the provisions not subject to loans to nuclear operators is invested by Synatom either in external financial assets or in loans to legal entities meeting the "credit quality" criteria imposed by law.

Synatom invested just over €3 billion in such assets in 2023.

Synatom's objective for its investment in these assets has been adapted in light of the agreement. The objective is:

- for the portion to be liquidated at closing, to maintain the value of the underlying assets by investing in predominantly money-market instruments providing a return at least equivalent to the indexation of the fee amounts fixed at 3%;
- for the investments aimed at covering the Group's remaining liabilities, to ensure a sufficient return with an acceptable level of risk in order to cover dismantling costs and the costs of storing radioactive fissile material, under the constraints of diversification, risk minimization and availability as defined by the law of July 12, 2022.

The Synatom Board of Directors and its Investment Committee are responsible for defining Synatom's investment policy after consultation with the CNP, in accordance with the law of July 12, 2022. Based on a rigorous risk control policy, the Investment Committee oversees investment decisions, which are managed by a team headed by an investment director.

The value of financial assets dedicated to covering nuclear provisions amounted to €9,984 million at December 31, 2023, and their return was 5.01% for the year. The year 2023 was marked by the gradual re-exposure of the portfolio to recovering markets, following a year marked by the downward volatility of global equity and bond markets. However, this re-exposure had to be put on hold following the government's request, as part of the agreement, to be paid the fixed fees linked to the cost of nuclear waste treatment in cash rather than in dedicated assets.

17.2.4.1 Valuation of financial assets in 2023

Loans to entities outside the Group and other cash investments are shown in the table below:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Loans to third parties	3	5
Loan to Sibelga	3	5
Other loans and receivables at amortized cost	3 777	2 270
Debt instruments - restricted cash UCITS	3 777	2 270
Total loans and receivables at amortized cost	3 780	2 276
Equity and debt instruments at fair value	1,640	863
Equity instruments at fair value through other comprehensive income	25	24
Equity instruments at fair value through income	1,665	887
Debt instruments at fair value through other comprehensive income	1,873	2,418
Debt instruments at fair value through income	2,663	933
Debt instruments at fair value	4,536	3,350
Total equity and debt instruments at fair value	6,201	4,237
Derivative instruments	3	113
TOTAL ⁽¹⁾	9,984	6,626

(1) Not including €307 million in uranium inventories at December 31, 2023 (€308 million at December 31, 2022).

Loans to legal entities outside the Group and the cash held by the Undertaking for Collective Investment in Transferable Securities (UCITS) are presented in the statement of financial position under "Loans and receivables at amortized cost". Bonds and associated hedging instruments held by Synatom through the UCITS are presented under equity or debt instruments (see Note 14.1 "Financial assets").

The breakdown in the change in the cumulative fair value of Synatom's assets is presented as follows:

<i>In millions of euros</i>	Cumulative change in the fair value of dedicated financial assets	
	Dec. 31, 2023	Dec. 31, 2022
Equity instruments at fair value through other comprehensive income	88	(157)
Debt instruments at fair value through other comprehensive income	(101)	(282)
Debt instruments at fair value through income	122	(52)
TOTAL	108	(491)

The net loss for the period generated by these assets amounted to €184 million in 2023 (loss of €217 million in 2022).

<i>In millions of euros</i>	Effects on the result of the return on dedicated financial assets	
	Dec. 31, 2023	Dec. 31, 2022
Disposal proceeds	(312)	14
Return on assets	71	66
Change in fair value of derivatives not designated as hedges	(108)	(15)
Change in fair value of dedicated assets through income	167	(282)
TOTAL	(184)	(217)

17.3 Dismantling of non-nuclear plant and equipment and site rehabilitation

17.3.1 Dismantling obligations arising on non-nuclear plant and equipment

Certain items of plant and equipment, including conventional power stations, transmission and distribution pipelines, storage facilities and LNG terminals, have to be dismantled at the end of their operational lives or at least safely shut down. These obligations are the result of prevailing environmental regulations in the countries concerned, contractual agreements, or an implicit Group commitment. The most important issue for the Group concerns gas infrastructures in France.

France's political and societal guidelines for the energy transition aim to achieve carbon neutrality by 2050, by reducing greenhouse gas emissions and promoting renewable or so-called "green" energies, particularly biomethane and hydrogen. The various scenarios that make it possible to achieve carbon neutrality, in particular the National Low Carbon Strategy in France, the French Environment and Energy Management Agency (ADEME) scenarios, and the "Energy Futures" prospective study by the electricity transmission system operator, RTE, all lead to a significant decrease in the quantities of gas consumed, while maintaining a high number of gas connection points to manage peak electricity demand. The Group is closely analyzing this prospect, particularly for the purpose of defining its strategy and assessing the useful life of assets and evaluating provisions for their possible dismantling.

The future French Strategy for Energy and Climate (SFEC) will set out France's updated roadmap to achieve carbon neutrality by 2050 and ensure that France can adapt to the impacts of climate change. It will encompass the first five-year programming law on energy and the climate (LPEC), which must be adopted in 2024 and set out in the National Low-Carbon Strategy (SNBC, 3rd issue), the National Climate Change and Adaptation Plan (PNACC, 3rd issue) and the Long Term Energy Schedule (PPE 2024-2033), which are all to be adopted in the first half of 2024. Consequently, the next five-year review of the PPE and the SNBC will be preceded for the first time by the adoption of a programming law on energy and the climate, which will set the French policy for energy and climate's priorities for action.

In line with the objective of carbon neutrality by 2050, the long-term scenario adopted by the Group, which governs the implementation of its strategy, is one that combines reasonable electrification, i.e. just under 50% of final demand in 2050, with the development of a diversified range of green gases (biomethane, synthesized e-CH₄, natural gas with the Carbon-Capture and Storage process, pure hydrogen). The scenario used by the Group is close to the ADEME's S3 scenario.

Due to the importance of green gases in the French energy mix scheduled for 2050 and beyond, gas infrastructures will remain largely necessary and will be essential to provide flexibility to the energy system. The adaptation and conversion of these infrastructures to green gas mean that they can be used in the very distant future, which means that the present value of dismantling provisions is almost zero, except in the specific cases of LNG terminals and reduced operation and non-regulated storage sites mainly in France and Germany, for which provisions for dismantling amounted to €326 million at December 31, 2023 and €359 million at December 31, 2022.

Given its time horizon and developments in French and European public policies, the Group will continue to assess the long-term scenario that will enable it to achieve carbon neutrality by 2050 on a regular basis. These assessments will be accompanied by a review of the valuation of dismantling provisions.

17.3.2 Hazelwood Power Station & Mine (Australia)

The Group and its partner Mitsui announced in November 2016 their decision to close the coal-fired Hazelwood Power Station, and cease coal extraction operations from the adjoining mine from late March 2017. The Group holds a 72% interest in the former 1,600 MW power station and adjoining coal mine, which has been consolidated as a joint operation.

At December 31, 2023, the Group's share (72%) of the provision covering the obligation to dismantle and rehabilitate the mine amounted to €280 million, versus €220 million at December 31, 2022. The updating of certain provision inputs has resulted in an increase of around €90 million.

Dismantling and site rehabilitation work commenced in 2017 and focused on: managing site contamination; planning site wide environmental clean-up; the demolition and dismantling of all of the site's industrial facilities, including the former power station; and ongoing aquifer pumping and designated earthworks within the mine to ensure mine floor and batter stability with a view to long-term rehabilitation into a pit lake.

The ultimate regulatory obligations are likely to be revised during the life of the project and could therefore have an impact on provisions.

The amount of the provision recognized is based on the Group's best current estimate of the demolition and rehabilitation costs that Hazelwood is expected to incur. However, the amount of this provision may be adjusted in the future to take into account any changes in the key inputs.

17.4 Other contingencies

This caption essentially includes provisions for commercial litigation, tax claims and disputes (except income tax, pursuant to IFRIC 23) as well as provisions for onerous contracts relating to storage and transport capacity reservation contracts

NOTE 18 POST-EMPLOYMENT BENEFITS AND OTHER LONG-TERM BENEFITS

Accounting standards

Depending on the laws and practices in force in the countries where the Group operates, Group companies have obligations in terms of pensions, early retirement payments, retirement bonuses and other benefit plans. Such obligations generally apply to all employees within the companies concerned.

The Group's obligations in relation to pensions and other employee benefits are recognized and measured in compliance with IAS 19. Accordingly:

- the cost of defined contribution plans is expensed based on the amount of contributions payable in the period;
- the Group's obligations concerning pensions and other employee benefits payable under defined benefit plans are assessed on an actuarial basis using the projected unit credit method. These calculations are based on assumptions relating to mortality, staff turnover and estimated future salary increases, as well as the economic conditions specific to each country or entity of the Group. Discount rates are determined by reference to the yield, at the measurement date, on investment grade corporate bonds in the related geographical area (or on government bonds in countries where no representative market for such corporate bonds exists).

Pension commitments are measured on the basis of actuarial assumptions. The Group considers that the assumptions used to measure its obligations are relevant and documented. However, any change in these assumptions could have a significant impact on the resulting calculations.

Provisions are recorded when commitments under these plans exceed the fair value of plan assets. Where the value of plan assets (capped where appropriate) is greater than the related commitments, the surplus is recorded as an asset under "Other assets" (current or non-current).

As regards post-employment benefit obligations, actuarial gains and losses are recognized in other comprehensive income. Where appropriate, adjustments resulting from applying the asset ceiling to net assets relating to overfunded plans are treated in a similar way. However, actuarial gains and losses on other long-term benefits such as long-service awards, are recognized immediately in profit or loss.

Net interest on the net defined benefit liability (asset) is presented in net financial income/(loss).

18.1 Description of the main pension plans

18.1.1 Companies belonging to the Electricity and Gas Industries sector in France

Since January 1, 2005, the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*) has operated the pension, disability, death, occupational accident and occupational illness benefit plans for electricity and gas industry (hereinafter "EGI") companies in France. The CNIEG is a social security legal entity under private law placed under the joint responsibility of the ministries in charge of social security and the budget.

Employees and retirees of EGI sector companies have been fully affiliated to the CNIEG since January 1, 2005. The main affiliated Group entities are ENGIE SA, GRDF, GRTgaz, Elengy, Storengy, ENGIE Thermique France, CPCU, CNR and SHEM.

Following the funding reform of the special EGI pension plan introduced by Law No. 2004-803 of August 9, 2004 and its implementing decrees, specific benefits (pension benefits on top of the standard benefits payable under ordinary law) already vested at December 31, 2004 ("past specific benefits") were allocated between the various EGI entities. Past

specific benefits (benefits vested at December 31, 2004) relating to regulated transmission and distribution businesses ("regulated past specific benefits") are funded by the levy on gas and electricity transmission and distribution services (*Contribution Tarifaire d'Acheminement*) and therefore no longer represent an obligation for the ENGIE Group. Unregulated past specific benefits (benefits vested at December 31, 2004) are funded by EGI sector companies to the extent defined by Decree No. 2005-322 of April 5, 2005.

The specific benefits vested under the plan since January 1, 2005 are wholly financed by EGI sector companies in proportion to their respective weight in terms of payroll costs within the EGI sector.

As this plan is a defined benefit plan, the Group has set aside a pension provision in respect of specific benefits payable to employees of unregulated businesses and specific benefits vested by employees of regulated businesses since January 1, 2005. This provision also covers the Group's early retirement obligations. The provision amount may be subject to fluctuations based on the weight of the Group's companies within the EGI sector.

The special EGI pension plan has been closed to new entrants since September 1st, 2023.

Pension benefit obligations and other "mutualized" obligations are assessed by the CNIEG.

At December 31, 2023, the projected benefit obligation in respect of the special pension plan for EGI sector companies amounted to €2.73 billion.

The duration of the pension benefit obligation of the EGI pension plan is 19 years.

18.1.2 Companies belonging to the electricity and gas sector in Belgium

In Belgium, the rights of employees in electricity and gas sector companies, principally Electrabel, Laborelec and some ENGIE Energy Management Trading and ENGIE CC employee categories, are governed by collective bargaining agreements.

These agreements, applicable to "wage-rated" employees recruited prior to June 1, 2002 and managerial staff recruited prior to May 1, 1999, specify the benefits entitling employees to a supplementary pension equivalent to 75% of their most recent annual income, for a full career and in addition to the statutory pension. These top-up pension payments provided under defined benefit plans are partly reversionary. In practice, the benefits are paid in the form of a lump sum for the majority of plan participants. Most of the obligations resulting from these pension plans are financed through pension funds set up for the electricity and gas sector and by certain insurance companies. Pre-funded pension plans are financed by employer and employee contributions. Employer contributions are calculated annually based on actuarial assessments.

The actuarial "pension" liability relating to these plans amounted to €1.22 billion at December 31, 2023. The average duration of these plans is 9 years.

"Wage-rated" employees recruited after June 1, 2002 and managerial staff (i) recruited after May 1, 1999 or (ii) having opted for the transfer through defined contribution plans, are covered under defined contribution plans. Prior to January 1, 2017, the law specified a minimum average annual return (3.75% on wage contributions and 3.25% on employer contributions) when savings are liquidated.

The law on supplementary pensions, approved on December 18, 2016 and enforced on January 1, 2017 henceforth specifies a minimum rate of return, depending on the actual rate of return of Belgian government bonds, within a range of 1.75%-3.25% (the rates are now identical for employee and employer contributions). In 2023, the minimum rate of return stood at 1.75%.

An expense of €42 million was recognized in 2023, and €38 million in 2022 in respect of these defined contribution plans.

18.1.3 Other pension plans

Most other Group companies also grant their employees retirement benefits. In terms of financing, pension plans within the Group are almost equally split between defined benefit and defined contribution plans.

The Group's main pension plans outside France and Belgium concern:

- the United Kingdom: the large majority of defined benefit pension plans are now closed to new entrants and future benefits no longer vest under these plans. All entities run a defined contribution scheme. The pension obligations of International Power's subsidiaries in the United Kingdom are covered by the special Electricity Supply Pension Scheme (ESPS). The assets of this defined benefit scheme are invested in separate funds. Since June 1, 2008, the scheme has been closed and a defined contribution plan has been set up for new entrants;
- Germany: the Group's German subsidiaries have closed their defined benefit plans to new entrants and now offer defined contribution plans;
- Brazil: ENGIE Brasil Energia operates its own pension scheme. This scheme has been split into two parts, one for the (closed) defined benefit plan, and the other for the defined contribution plan that has been available to new entrants since the beginning of 2005.

18.2 Description of other post-employment benefit obligations and other long-term benefits

18.2.1 Other benefits granted to current and former EGI sector employees

Other benefits granted to EGI sector employees are:

- Post-employment benefits:
 - reduced energy prices;
 - end-of-career indemnities;
 - bonus leave;
 - death capital benefits.
- Long-term benefits:
 - allowances for occupational accidents and illnesses;
 - temporary and permanent disability allowances;
 - length-of-service awards.

The Group's main obligations are described below.

18.2.1.1 Reduced energy prices

Under Article 28 of the national statute for electricity and gas industry personnel, all employees (current and former employees, provided they meet certain length-of-service conditions) are entitled to benefits in kind, which take the form of reduced energy prices known as "employee rates".

This benefit entitles employees to electricity and gas supplies at a reduced price. For retired employees, this provision represents a post-employment defined benefit. Retired employees are only entitled to the reduced rate if they have completed at least 15 years' service within EGI sector companies.

In accordance with the agreements signed with EDF in 1951, ENGIE provides gas to all current and former employees of ENGIE and EDF, while EDF supplies electricity to these same beneficiaries. ENGIE pays (or benefits from) the balancing contribution payable in respect of its employees as a result of energy exchanges between the two utilities.

The obligation to provide energy at a reduced price to current and former employees during their retirement is measured as the difference between the energy sale price and the preferential rate granted to employees.

The provision set aside in respect of reduced energy prices stood at €2.97 billion at December 31, 2023. The duration of the obligation is 19 years.

18.2.1.2 End-of-career indemnities

Retiring employees (or their dependents in the event of death during active service) are entitled to end-of-career indemnities, which increase in line with the length of service within the EGI sector.

18.2.1.3 Compensation for occupational accidents and illnesses

EGI sector employees are entitled to compensation for accidents at work and occupational illnesses. These benefits cover all employees or the dependents of employees who die as a result of occupational accidents or illnesses, or injuries undergone on the way to work.

The amount of the obligation corresponds to the likely present value of the benefits to be paid to current beneficiaries, taking into account any reversionary annuities.

18.2.2 Other benefits granted to employees of the gas and electricity sector in Belgium

Electricity and gas sector companies also grant other post-employee benefits such as the reimbursement of medical expenses, electricity and gas price reductions, as well as length-of-service awards and early retirement schemes. These benefits are not prefunded, with the exception of the special "*allocation transitoire*" termination indemnity, considered as an end-of-career indemnity.

18.2.3 Other collective agreements

Most other Group companies also grant their staff post-employment benefits (early retirement plans, medical coverage, benefits in kind, etc.) and other long-term benefits such as jubilee and length-of-service awards.

18.3 Defined benefit plans

18.3.1 Amounts presented in the statement of financial position and statement of comprehensive income

In accordance with IAS 19, the information presented in the statement of financial position relating to post-employment benefit obligations and other long-term benefits results from the difference between the gross projected benefit obligation and the fair value of plan assets. A provision is recognized if this difference is positive (net obligation), while a prepaid benefit cost is recorded in the statement of financial position when the difference is negative, provided that the conditions for recognizing the prepaid benefit cost are met.

Changes in provisions for pension plans, post-employment benefits and other long-term benefits, plan assets and reimbursement rights recognized in the statement of financial position are as follows:

<i>In millions of euros</i>	Provisions	Plan assets	Reimbursement rights
AT DECEMBER 31, 2022	(4,471)	316	208
Exchange rate differences	6	1	-
Changes in scope of consolidation and other	(3)	3	25
Actuarial gains and losses	(645)	44	-
Periodic pension cost	(403)	(89)	9
Contributions/benefits paid	308	14	1
AT DECEMBER 31, 2023	(5,208)	289	244

Plan assets and reimbursement rights are presented in the statement of financial position under “Other non-current assets” or “Other current assets”.

The cost recognized for the period amounted to €492 million in 2023 (€354 million in 2022). The components of this defined benefit cost in the period are set out in Note 18.3.3 “Components of the net periodic pension cost”.

The Eurozone represented 97% of the Group’s net obligation at December 31, 2023, (98% at December 31, 2022).

Cumulative actuarial gains and losses recognized in equity amounted to €1 979 million at December 31, 2023, compared to €1,400 million at December 31, 2022.

Net actuarial differences arising in the period and presented on a separate line in the statement of comprehensive income represented a net actuarial loss of €601 million in 2023 and a gain of €2,774 million in 2022.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 18 POST-EMPLOYMENT BENEFITS AND OTHER
LONG-TERM BENEFITS

18.3.2 Change in benefit obligations and plan assets

The table below shows the amount of the Group's projected benefit obligations and plan assets, changes in these items during the periods presented, and their reconciliation with the amounts reported in the statement of financial position:

	Dec. 31, 2023				Dec. 31, 2022			
	Pension benefit obligations (1)	Other post-employment benefit obligations (2)	Long-term benefit obligations (3)	Total	Pension benefit obligations (1)	Other post-employment benefit obligations (2)	Long-term benefit obligations (3)	Total
<i>In millions of euros</i>								
A - CHANGE IN PROJECTED BENEFIT OBLIGATION								
Projected benefit obligation at January 1	(5,565)	(3,308)	(395)	(9,268)	(7,566)	(4,649)	(499)	(12,715)

(1) Pensions and retirement bonuses.

(2) Reduced energy prices, healthcare, gratuities and other post-employment benefits.

(3) Length-of-service awards and other long-term benefits.

18.3.3 Components of the net periodic pension cost

The net periodic cost recognized in respect of defined benefit obligations for the years ended December 31, 2023 and 2022 breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Current service cost	248	372
Actuarial gains and losses ⁽¹⁾	32	(116)
Gains or losses on pension plan curtailments, terminations and settlements ⁽²⁾	42	6
Total accounted for under current operating income including operating MtM and share in net income of equity method entities	322	261
Net interest expense	170	93
Total accounted for under net financial income/(loss)	170	93
TOTAL	492	354

(1) On the long-term benefit obligation.

(2) Including the €56 million impact of the pension reform in 2023 on the IEG plan.

18.3.4 Funding policy and strategy

When defined benefit plans are funded, the related plan assets are invested in pension funds and/or with insurance companies, depending on the investment practices specific to the country concerned. The investment strategies underlying these defined benefit plans are aimed at striking the right balance between return on investment and acceptable levels of risk.

The objectives of these strategies can be summarized as follows: to maintain sufficient liquidity to cover pension and other benefit payments; and as part of risk management, to achieve a long-term rate of return higher than the discount rate or, where appropriate, at least equal to future required returns.

When plan assets are invested in pension funds, investment decisions are the responsibility of the fund management concerned. For French companies, where plan assets are invested with an insurance company, the latter manages the investment portfolio for unit-linked policies or euro-denominated policies, in a manner adapted to the risk and long-term profile of the liabilities.

The funding of these obligations for each of the periods presented can be analyzed as follows:

<i>In millions of euros</i>	Projected benefit obligation	Fair value of plan assets	Asset ceiling	Total net obligation
Underfunded plans	(4,063)	3,382	(56)	(737)
Overfunded plans	(1,365)	1,686	(2)	319
Unfunded plans	(4,501)	-	-	(4,501)
AT DECEMBER 31, 2023	(9,929)	5,068	(58)	(4,919)
Underfunded plans	(3,886)	3,391	(63)	(558)
Overfunded plans	(1,360)	1,788	(4)	424
Unfunded plans	(4,021)	-	-	(4,021)
AT DECEMBER 31, 2022	(9,267)	5,180	(68)	(4,156)

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 18 POST-EMPLOYMENT BENEFITS AND OTHER LONG-TERM BENEFITS

The allocation of plan assets by principal asset category can be analyzed as follows:

In %	Dec. 31, 2023	Dec. 31, 2022
Equity investments	26	27
Sovereign bond investments	26	25
Corporate bond investments	33	35
Money market securities	4	4
Real estate	3	2
Other assets	8	8
TOTAL	100	100

All plan assets were quoted on an active market at December 31, 2023.

The actual return on assets of EGI sector companies stood at a positive 7.7% in 2023.

In 2023, the actual return on plan assets of Belgian entities amounted to approximately a positive 6.9% in Group insurance and a positive 9.3% in pension funds.

The allocation of plan asset categories by geographic area of investment can be analyzed as follows:

In %	Europe	North America	Latin America	Asia - Oceania	Rest of the World	Total
Equity investments	45	34	7	12	2	100
Sovereign bond investments	74	3	19	1	3	100
Corporate bond investments	64	27	1	5	4	100
Money market securities	29	-	3	-	68	100
Real estate	68	3	5	-	24	100
Other assets	10	-	-	-	89	100

18.3.5 Actuarial assumptions

Actuarial assumptions are determined individually by country and company in conjunction with independent actuaries. Weighted discount rates for the main actuarial assumptions are presented below:

		Pension benefit obligations		Other post-employment benefit obligations		Long-term benefit obligations		Total benefit obligations	
		2023	2022	2023	2022	2023	2022	2023	2022
Discount rate	Eurozone	3.5%	3.8%	3.5%	3.8%	3.5%	3.8%	3.5%	3.8%
	UK Zone	5.2%	4.1%	-	-	-	-	-	-
Inflation rate	Eurozone	2.0%	2.1%	2.0%	2.1%	2.0%	2.1%	2.0%	2.1%
	UK Zone	3.5%	3.9%	-	-	-	-	-	-

18.3.5.1 Discount and inflation rates

The discount rate applied is determined based on the yield, at the date of the calculation, of investment grade corporate bonds with maturities mirroring the term of the plan.

The rates were determined for each monetary area based on data for AA corporate bond yields. For the Eurozone, data (from Bloomberg) are extrapolated on the basis of government bond yields for long maturities.

According to the Group's estimates, a 100-basis-point increase (decrease) in the discount rate would result in a decrease (increase) of approximately 13% in the projected benefit obligation.

The inflation rates were determined for each monetary area. A 100-basis-point increase (decrease) in the inflation rate (with an unchanged discount rate) would result in an increase (decrease) of approximately 13% in the projected benefit obligation.

18.3.6 Estimated employer contributions payable in 2024 under defined benefit plans

The Group expects to pay around €207 million in contributions into its defined benefit plans in 2024, including €103 million for EGI sector companies. Annual contributions in respect of EGI sector companies will be made by reference to rights vested during the year, taking into account the funding level for each entity in order to even out contributions over the medium term.

18.4 Defined contribution plans

In 2023, the Group recorded a €92 million expense in respect of amounts paid into Group defined contribution plans of which €8 million concerning multi-employer plans in Netherlands (compared with €91 million in 2022, of which €9 million concerned multi-employer plans in the Netherlands). These contributions are recorded under "Personnel costs" in the consolidated income statement.

NOTE 19 SHARE-BASED PAYMENTS

Accounting standards

Under IFRS 2, share-based payments made in consideration for services provided are recognized as personnel costs. These services are measured at the fair value of the instruments awarded.

The fair value of bonus share plans is estimated by reference to the share price at the grant date, taking into account the fact that no dividend is payable over the vesting period, and based on the estimated turnover rate for the employees concerned and the probability that the Group will meet its performance targets. The fair value measurement also takes into account the non-transferability period associated with these instruments. The cost of shares granted to employees is expensed over the vesting period of the rights and offset against equity.

A Monte Carlo pricing model is used for performance shares granted on a discretionary basis and subject to external performance criteria.

Expenses recognized in respect of share-based payments break down as follows:

In millions of euros	Expense for the year	
	Dec. 31, 2023	Dec. 31, 2022
Employee share issues ⁽¹⁾	1	(49)
Bonus/performance share plans ^{(2) (3)}	(46)	(40)
Other Group companies' plans	-	(3)
TOTAL	(45)	(92)

(1) Including Share Appreciation Rights set up within the scope of employee share issues in certain countries.

(2) Following the review of performance conditions, the expense has not been adjusted in 2023 (an additional expense of €4.2 million was recognized in 2022).

(3) Following the review of continuing employment, the expense was not adjusted in 2023 (a reversal of €9,8 million was recognized in 2022).

19.1 Performance shares

19.1.1 New awards in 2023

No award of performance shares to members of the Group's executive or senior management has been made in 2023.

19.1.2 Review of internal performance conditions applicable to the plans

In addition to the condition of continuing employment within the Group, eligibility for certain bonus share and performance share plans is subject to an internal performance condition. When this condition is not fully met, the number of bonus shares granted to employees is reduced in accordance with the plans' regulations, leading to a decrease in the total expense recognized in relation to the plans in accordance with IFRS 2. Performance conditions are reviewed at each reporting date.

NOTE 20 RELATED PARTY TRANSACTIONS

This note describes material transactions between the Group and its related parties.

Compensation payable to key management personnel is disclosed in Note 21 "Executive compensation".

Transactions with joint ventures and associates are described in Note 3 "Investments in equity method entities".

Only material transactions are described below.

20.1 Relations with the French State and with entities owned or partly owned by the French State

20.1.1 Relations with the French State

The French State's interest in the Group at December 31, 2023 remained unchanged at 23.64% compared with the previous year. This entitles it to three of the fourteen seats on the Board of Directors (one director representing the State appointed by decree, and two directors appointed by the Shareholders' Meeting at the proposal of the State).

The French State holds 33.80% of the theoretical voting rights (33.95% of exercisable voting rights) compared with 33.56% at end-2022.

On May 22, 2019, the PACTE Law ("Action plan for business growth and transformation") was enacted, enabling the French State to dispose of its ENGIE shares without restriction.

In addition, the French State holds a golden share aimed at protecting France's critical interests and ensuring the continuity and safeguarding of supplies in the energy sector. The golden share is granted to the French State indefinitely and entitles it to veto decisions taken by ENGIE if it considers they could harm France's interests.

Public service engagements in the energy sector are defined by the law of January 3, 2003.

Transmission rates on the GRTgaz transportation network and the gas distribution network in France, as well as rates for accessing the French LNG terminals and revenues from storage capacities, are all regulated.

The Law on Energy and Climate enacted on November 8, 2019 provided for the phase out of regulated gas tariffs and the restriction of regulated electricity tariffs to residential consumers and small businesses. Regulated gas tariffs were phased out on July 1, 2023.

20.1.2 Relations with EDF

Following the creation on July 1, 2004 of the French gas and electricity distribution network operator (EDF Gaz de France Distribution), Gaz de France SA and EDF entered into an agreement on April 18, 2005 setting out their relationship as regards the distribution business. The December 7, 2006 law on the energy sector reorganized the natural gas and electricity distribution networks. Enedis SA, a subsidiary of EDF SA, and GRDF SA, a subsidiary of ENGIE SA, were created on January 1, 2007 and December 31, 2007, respectively, and act in accordance with the agreement previously signed by the two incumbent operators. With the deployment of smart meters for both electricity and gas, the "common" activities operated by the two distributors evolved significantly. The remaining mixed activities are mainly in the areas of inventory management, human resources, the medical field, local IT and accountancy.

20.2 Relations with the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*)

The Group's relations with the CNIEG, which manages all old-age, death and disability benefits for active and retired employees of the Group who belong to the special EGI pension plan, employees of EDF and Non-Nationalized Companies (*Entreprises Non Nationalisées* – ENN), are described in Note 18 "Post-employment benefits and other long-term benefits".

NOTE 21 EXECUTIVE COMPENSATION

The executive compensation presented below includes the compensation of the members of the Group's Executive Committee and Board of Directors.

The Executive Committee had 10 members at December 31, 2023 and at December 31, 2022.

Their compensation breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Short-term benefits	23	34
Post-employment benefits	-	-
Share-based payments	4	4
Termination benefits	-	-
TOTAL	27	37

NOTE 22 WORKING CAPITAL REQUIREMENTS, INVENTORIES, OTHER ASSETS AND OTHER LIABILITIES

Accounting standards

In accordance with IAS 1, the Group's current and non-current assets and liabilities are shown separately in the consolidated statement of financial position. For most of the Group's activities, the breakdown into current and non-current items is based on when assets are expected to be realized, or liabilities extinguished. Assets expected to be realized or liabilities extinguished within 12 months of the reporting date are classified as current, while all other items are classified as non-current.

Inventories

Inventories are measured at the lower of cost and net realizable value. Net realizable value corresponds to the estimated selling price in the ordinary course of business, less the estimated costs of completion and the estimated costs necessary to make the sale.

The cost of inventories is determined based on the first-in, first-out method or the weighted average cost formula.

Nuclear fuel purchased is consumed in the process of producing electricity over a number of years. The consumption of this nuclear fuel inventory is recorded based on estimates of the quantity of electricity produced per unit of fuel.

Gas inventories

Gas injected into underground storage facilities includes working gas, which can be extracted without adversely affecting the subsequent operation of the reservoirs, and cushion gas, which is inseparable from the reservoirs and essential for their operation (see Note 13.3 "Property, plant and equipment").

Working gas is classified in inventories and measured at weighted average purchase cost upon entering the transportation network regardless of its source, including any regasification costs.

Group inventory outflows are valued using the weighted average unit cost method.

Certain inventories are used for trading purposes and are recognized at fair value less selling costs, in accordance with IAS 2. Any changes in said fair value are recognized in the consolidated income statement for the year in which they occur.

Greenhouse gas emission rights, energy saving certificates and green certificates

In the absence of specific IFRS standards or IFRIC interpretations on accounting for greenhouse gas emission allowances, energy saving certificates and green certificates, the Group has decided to recognize certificates in inventories at their acquisition or production cost. At the reporting date, a liability is recognized if the certificates held by the Group are insufficient to meet the obligation to return certificates to the French government. When not covered by the certificates held in inventories, the liability is measured at the market value or based on the price of any future contracts that have been entered into, when applicable.

Tax equity

The ENGIE Group finances its renewables projects in the United States through tax equity structures, in which part of the necessary funds is provided by a tax partner. The tax partner obtains, up to a pre-determined level, a preferential right essentially to the project's tax credits, which it can deduct from its own tax base.

The tax partner's investments meet the definition of a liability under IFRS. Since the tax equity liability corresponding to these tax benefits does not give rise to any cash outflow for the project entity, it does not represent a financial debt and is accounted for in "Other liabilities".

Besides the unwinding effect, the liability changes mainly in line with the tax credits allocated to the tax partner and recognized in profit or loss.

22.1 Composition of change in working capital requirements

<i>In millions of euros</i>	Change in working capital requirements at Dec. 31, 2023	Change in working capital requirements at Dec. 31, 2022
Inventories	3,003	(2,115)
Trade and other receivables, net	12,507	(11,614)
Trade and other payables, net	(13,554)	8,521
Tax and employee-related receivables/payables	(325)	1,545
Margin calls and derivative instruments hedging commodities relating to trading activities	(1,113)	199
Other	(120)	1,040
TOTAL	397	(2,424)

22.2 Inventories

<i>In millions of euros</i>	Dec. 31, 2023	Dec. 31, 2022
Inventories of natural gas, net	2,218	4,628
Inventories of uranium ⁽¹⁾	307	308
CO ₂ emissions allowances, green certificates and energy saving certificates, net	1,535	1,788
Inventories of commodities other than gas and other inventories, net	1,283	1,420
TOTAL	5,343	8,145

(1) Financial hedging instruments are backed by these uranium inventories and represented a negative amount of €1 million at December 31, 2023.

22.3 Other assets and other liabilities

<i>In millions of euros</i>	Dec. 31, 2023				Dec. 31, 2022			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Other assets and liabilities	990	13,424	(3,614)	(18,118)	766	18,294	(3,646)	(23,583)
Tax receivables/payables	-	9,420	-	(10,415)	-	14,647	-	(16,863)
Employee receivables/payables	531	16	(2)	(2,503)	523	22	(2)	(2,479)
Dividend receivables/payables	-	127	-	(20)	-	12	-	(23)
Other	459	3,845	(3,613)	(5,178)	243	3,614	(3,644)	(4,218)

At December 31, 2023, other non-current assets included a receivable towards EDF in respect of nuclear provisions amounting to €654 million (€162 million at December 31, 2022).

Other liabilities include €2,140 million in investments made by tax partners as part of the financing of renewable projects in the United States by tax equity (€1,981 million at December 31, 2022).

NOTE 23 LEGAL AND ANTI-TRUST PROCEEDINGS

The Group is party to a number of legal and anti-trust proceedings with third parties or with legal and/or administrative authorities (including tax authorities) in the normal course of its business.

The main disputes and investigations presented hereafter are recognized as liabilities or give rise to contingent assets or liabilities.

In the ordinary course of its business, the Group is involved in a number of disputes and investigations before state courts, arbitral tribunals or regulatory authorities. The disputes and investigations that could have a material impact on the Group are presented below.

23.1 Renewables

23.1.1 Mexico – Renewable energy

In 2021, the Mexican government and public authorities took positions and legislative and regulatory measures that directly affect private players in the energy sector (in particular renewable energy producers) and go against the letter and spirit of the latest energy sector reforms introduced in 2013 and 2014. The constitutionality and legality of some of these measures have been contested in legal proceedings launched by non-government bodies and private investors, in particular by ENGIE subsidiaries that develop or implement renewable energy projects in the country. These proceedings are currently ongoing. The Mexican President has also submitted a draft revision of the Constitution that would substantially change the regulatory framework applicable to the electricity sector. However, Congress rejected the constitutional amendments proposed by the government, so the current law remains in force.

23.2 Energy Solutions

23.2.1 Spain – Púnica

In the Púnica case (procedure concerning the awarding of contracts), 15 Cofely España employees, as well as the company itself, were placed under investigation by the examining judge in charge of the case. The criminal investigation was closed on July 19, 2021 with the referral of Cofely España and eight (former) employees before the criminal court. Cofely España lodged an appeal against this decision on September 30, 2021. On March 9, 2022, the appeal was dismissed and the referral decision upheld. The hearings are expected to begin in 2024.

23.2.2 Italy – Competition procedure

On May 9, 2019, a fine of €38 million was jointly and severally imposed on ENGIE Servizi SpA and ENGIE Energy Services International S.A. ("ENGIE ESI") by the Italian Competition Authority (the "Authority") for certain alleged anti-competitive practices relating to the award of the Consip FM4 2014 contract. An appeal was lodged with the Lazio Regional Administrative Court (Lazio RAC). On July 18, 2019, the Lazio RAC suspended the payment of the fine, and on July 27, 2020, it overturned the Authority's decision as regards both ENGIE Servizi SpA and ENGIE ESI. On November 17, 2020, the Authority appealed the Lazio RAC's decision before Italy's highest administrative court. On May 9, 2022, the Italian administrative court rejected the Authority's appeal and upheld the Lazio RAC's reversal of the Authority's decision. Two companies (including Consorzio Innova whose appeals concern ENGIE Servizi SpA and ENGIE ESI) filed a special appeal against the administrative court's decision before the administrative court itself on June 13, 2022. This appeal does not have suspensive effect. Another appeal challenging the administrative court's rejection was also filed by the same companies before the Supreme Court on July 11, 2022. Following Consorzio Innova's withdrawal of its appeal to the Supreme Court, it closed the proceedings on April 4, 2023. On July 21, 2023, the Italian administrative court rejected Consorzio Innova's appeal. The Italian administrative court thereby confirmed its previous decision and upheld the Lazio RAC's reversal of the Authority's decision concerning ENGIE Servizi SpA and ENGIE ESI.

23.2.3 Italy – Manitalidea

In 2012, ENGIE Servizi formed a temporary association (“associazione temporanea di imprese” or “ATI”) with Manitalidea with the aim of submitting a bid for a public contract launched by CONSIP. ENGIE Servizi had an 85% stake in the ATI, with Manitalidea holding the remaining 15%. The purpose of the contract was to provide energy and maintenance services to hospitals.

In September 2012, three lots of the contract were awarded to the ATI.

On March 11, 2022, Manitalidea filed for damages against ENGIE Servizi in the Rome Civil Court, claiming that (i) ENGIE Servizi had not complied with the provisions of the temporary association agreement relating to the distribution of contracts between the partners, and (ii) as a result, Manitalidea had missed an opportunity to increase its revenue. After Manitalidea filed for bankruptcy, the claim was extended to include the alleged responsibility of ENGIE Servizi for Manitalidea’s financial difficulties and bankruptcy.

The proceedings are still ongoing.

23.3 Retail

23.3.1 Peru – Antamina

In 2012, following a tender for the annual purchase of 170 MW until 2032, ENGIE Energía Perú S.A. entered into a long-term gas purchase agreement with the Peruvian mining company Antamina (the “Agreement”).

In 2021, however, Antamina launched another tender for the same annual volume and entered into three purchase agreements with three new suppliers for a six-month period renewable twice. This called into question the exclusivity and “take or pay” clause that ENGIE Energía Perú S.A. believed it had been granted until 2032 under the Agreement. Following the signing of these new agreements, Antamina refused, as of January 2022, to accept delivery of the agreed upon quantity of gas under the Agreement and, consequently, to pay the corresponding penalty.

On April 26, 2022, ENGIE Energía Perú S.A. filed an arbitration procedure against Antamina, seeking recognition of the exclusive nature of the Agreement and Antamina’s obligation to only procure gas supplies from ENGIE. The suit also seeks the payment of invoices that have been outstanding since January 2022. The arbitration procedure is governed by the rules of the Arbitration Center of the Lima Chamber of Commerce. On January 4, 2023, ENGIE Energía Perú S.A. filed its statement of claim. The procedure is underway, and the verdict is expected in early 2024.

23.3.2 GEMS

At the beginning of the fourth quarter of 2022, ENGIE initiated an arbitration procedure against Gazprom Export LLC seeking, in particular to obtain (i) recognition of Gazprom Export LLC’s non-performance of its gas delivery obligations towards ENGIE under long-term gas delivery agreements and (ii) payment of contractual penalties as well as compensation for damage resulting from this non-performance from Gazprom Export LLC.

This arbitration procedure is due to the significant delivery shortages by Gazprom Export LLC to ENGIE as of mid-June 2022, followed by Gazprom Export LLC’s unilateral decision at the end of summer 2022 to reduce its deliveries to ENGIE due to a disagreement between the parties on the application of the agreements.

23.3.3 Chile – TotalEnergies

On January 3, 2023, ENGIE Energía Chile S.A. initiated international arbitration proceedings against TotalEnergies Gas & Power Limited for breaching its contractual obligations under an LNG supply contract entered into in August 2011. The proceedings are currently ongoing.

23.4 FlexGen

23.4.1 Italy – Vado Ligure

On March 11, 2014, the Court of Savona seized and closed down the VL3 and VL4 coal-fired production units at the Vado Ligure thermal power plant belonging to Tirreno Power S.p.A. (TP), a company which is 50%-owned by the ENGIE Group. This decision was taken as part of a criminal investigation against the present and former executive managers of TP into environmental infringements and public health risks. The investigation was closed on July 20, 2016. The case was referred to the Court of Savona to be tried on the merits. The proceedings before the Court of First Instance began on December 11, 2018 and carried on into 2023, seeking the liability of the former members of the Board of Directors and management. Third parties, including the Italian Ministry of the Environment and Ministry of Health, joined the proceedings to claim damages. On October 3, 2023, the Court of Savona acquitted all 26 directors and managers of all charges. The subsidiary Tirreno Power SpA, in which ENGIE has a 50% stake, was also acquitted. The decision was notified in January 2024. The public prosecutor has decided to appeal the decision in February 2024.

23.4.2 Brazil – Claim against sales tax adjustments

ENGIE Brasil Energia S.A. was subject to a tax reassessment covering fiscal years 2014, 2015, 2016 and 2018 in respect of federal value-added taxes (PIS and COFINS) for refunds relating to fuels used in the production of energy by thermopower plants. The total amount at stake is 693.6 million Brazilian real, including a principal amount of 258.9 million.

The company is contesting these reassessments and has lodged administrative appeals. The administrative appeals for fiscal years 2014, 2015 and 2016 were rejected and the company initiated the discussion at the judicial court. The administrative appeal for 2018 is being examined. If this administrative appeal is unsuccessful, the case could also be brought before the ordinary courts and tribunals.

In 2023, Diamante Geração de Energia (controlled by ENGIE Brasil Energia SA at the time and owner of the thermopower plants) was also subject to reassessments for the tax treatment of comparable fuel reimbursements. The reassessments concerned both PIS and COFINS taxes (fiscal years 2019 and 2020) and corporate income tax (fiscal year 2018). The total amount at stake is 542 million Brazilian real, including a principal amount of 260.5 million. Although ENGIE Brasil Energia SA sold this company in 2021, it remains financially responsible under the vendor's warranty regarding the years prior to the sale. The company is challenging these reassessments and has lodged an administrative appeal, which is currently under review, with the potential for escalation to ordinary courts and tribunals.

23.4.3 Italy – exceptional tax on the energy sector

In December 2022, ENGIE filed an action against the tax authorities to obtain the reimbursement of the tax it had paid in July and November 2022 for a total amount of more than €308 million, pursuant to two legislative decrees (no. 21 and no. 50/2022) that introduced an exceptional solidarity contribution to be paid by operators in the energy sector. ENGIE contests the validity of the basis of the tax in relation to the decree's objective, its compatibility with the Italian Constitution as well as its compatibility with Italy's European commitments (EU law). In December 2023, the Milan Court of First Instance asked the Italian Constitutional Court to rule on the constitutionality of the tax as part of the proceedings launched by ENGIE.

23.4.4 Flémalle – EPC

In November 2021, Electrabel SA entered into an EPC (Engineering, Procurement, Construction) agreement with SEPCO III for the construction of a gas-fired power plant in Flémalle (Belgium), in the context of the CRM (Capacity Remuneration Mechanism).

In August 2022, Electrabel SA terminated the EPC agreement with SEPCO III for non-performance of its contractual obligations and initiated arbitration proceedings in November 2022, to obtain compensation for the damage sustained.

SEPCO III filed a counterclaim against Electrabel seeking damages to cover the alleged loss it had sustained due to the termination of the contract.

23.5 Nuclear

23.5.1 Extension of operations at the nuclear power plants 2015-2025

Various associations have brought actions before the Constitutional Court, the *Conseil d'État* and the ordinary courts against the laws and administrative decisions authorizing the extension of operations at the Doel 1 and Doel 2 plants. On June 22, 2017 the Constitutional Court referred the case to the Court of Justice of the European Union (CJEU) for a preliminary ruling. In its judgment of July 29, 2019, the CJEU ruled that the Belgian law extending the operating lives of the Doel 1 and Doel 2 reactors (law extending Doel 1 and Doel 2) was adopted without the required environmental assessments being carried out first, but that the effects of the law on extension could provisionally be maintained where there was a genuine and serious threat of an interruption to the electricity supply, and then only for the length of time strictly necessary to eliminate this threat. In its decision of March 5, 2020, the Constitutional Court overturned the law extending Doel 1 and Doel 2, while maintaining its effects until the legislator adopts a new law after having carried out the required environmental assessment, including a cross-border public consultation process, by December 31, 2022 at the latest.

The environmental assessment and the cross-border public consultation were carried out by the Belgian State in 2021. The draft law incorporating the conclusion of the assessment and the consultation was passed by the Belgian Federal Parliament on October 11, 2022 and published on November 3, 2022.

The appeal before the *Conseil d'État* against the administrative decisions that allowed the extension of operations at the Doel 1 and Doel 2 plants is still pending.

23.5.2 Shutdown of the Doel 3 and Tihange 2 power plants

Various associations have lodged appeals before the Brussels Court of First Instance against Electrabel, the Belgian State, the Nuclear Safety Authority and/or the Elia electricity transmission network to contest the decisions and actions to shut down the Doel 3 (on September 23, 2022) and/or Tihange 2 (on January 31, 2023) power plants. In a first judgment dated November 16, 2022, the Brussels Court of First Instance, ruling in summary proceedings in one of the cases, confirmed the decisions and actions taken in relation to the shutdown. The applicants in this case withdrew their action on the merits. In the second case on the merits, a judgment was handed down on June 30, 2023, rejecting the interim measures requested, including the request to prohibit Electrabel from taking any irreversible action in connection with the shutdown of Doel 3 and Tihange 2. The case is continuing on the merits, with no precise timetable at this stage.

23.5.3 Appeal against the Belgian energy regulator's decision implementing the law of December 16, 2022 introducing a cap on electricity producers' market revenues

Electrabel lodged an appeal with the Belgian Market Court (*Cour des Marchés*) on March 29, 2023 against the decision of the Belgian energy regulator (CREG) to implement the December 16, 2022 law introducing a cap on electricity producers' market revenues for 2022. Electrabel lodged a second action for annulment with the same court against the same regulator's decision for 2023 revenues.

Electrabel contests the validity of this revenue cap, arguing that it is contrary to the European Regulation that introduced it, notably because it falsely determines market revenues using presumptions and not on the basis of revenues actually received, as provided for by the Regulation, and because it is implemented retroactively from August 1, 2022, outside the period covered by the Regulation. The Market Court handed down its ruling in the first case on October 18, 2023, finding that the action was admissible and *prima facie* founded, and referred three questions to the Court of Justice of the European Union for a preliminary ruling. The second case was heard on January 10, 2024, and the ruling handed down on January 31 suspends delivery until the Court of Justice of the European Union has ruled on the first case.

An appeal was also lodged with the Constitutional Court in June 2023.

In addition to the above-mentioned appeals, a claim for restitution of the 2022 tax has been lodged, as well as an appeal to the Court of First Instance for the annulment of the tax.

23.5.4 Arbitration procedure in application of the Tihange 1 and Doel 1 and 2 agreements following the adoption of the law of December 16, 2022 introducing a cap on electricity producers' market revenues

On October 17, 2023, Electrabel gave notice of the launch of arbitration proceedings before an arbitral tribunal for the breach of the agreements signed for the extension of Tihange 1 on March 12, 2014 and the extension of Doel 1 and Doel 2 on November 30, 2015. These agreements excluded, by virtue of the royalties paid in particular, any other charges in favor of the State (with the exception of general application taxes) linked to the ownership or operation of Tihange 1 or Doel 1 and Doel 2, the revenues, production or production capacity of these plants, or their use of nuclear fuel. Under the terms of the agreements, Electrabel is claiming the reimbursement of the tax paid for 2022 and the levy for 2023 on these plants.

23.6 Other

23.6.1 Withholding tax

In their tax deficiency notice dated December 22, 2008, the French tax authorities questioned the tax treatment of the non-recourse Dailly sale by SUEZ (now ENGIE) of a disputed withholding tax (*précompte*) receivable in 2005 for an amount of €995 million (receivable relating to the *précompte* paid in respect of the 1999-2003 fiscal years). The Montreuil Administrative Court handed down a judgment in ENGIE's favor in 2019, which led the French tax authorities to appeal the decision before the Versailles Court of Appeal, which overturned the prior Court's decision in 2021. On April 14, 2023, the *Conseil d'État* overturned the Court's ruling on the grounds that the assigned claim should be classified as an advance repayment of non-deductible tax, irrespective of the fact that the State had not authorized its repayment by the bank assigning the claim, and that the repayment was only partial. The *Conseil d'État* referred the case back to the Versailles Administrative Court of Appeal to decide on the basis of a procedure that made the tax treatment of the disputed assignment of receivables in 2005 dependent on the outcome of the *précompte* litigation itself. The Court of Appeal's decision is expected in 2024.

Regarding the dispute over the *précompte* itself, on February 1, 2016, the *Conseil d'État* dismissed the appeal before the Court of Cassation seeking the repayment of the *précompte* in respect of the 1999, 2000 and 2001 fiscal years. On June 23, 2020, the Versailles Administrative Court of Appeal found in favor of ENGIE as regards the cases seeking repayment of the *précompte* in respect of the 2002 and 2003 fiscal years but rejected the case in respect of the 2004 fiscal year. As the *précompte* receivables for 2002/2003 have been assigned, the relevant amounts have been repaid to the assignee banks. The case has been referred to the *Conseil d'État* by the two parties. On March 27, 2023, the *Conseil d'État* dismissed ENGIE's appeal in light of the *Conseil Constitutionnel*'s decision of October 2022. On June 30, 2023, the *Conseil d'État* upheld the Court's ruling and dismissed the Minister's appeal in respect of the 2002 claim. It accordingly referred the matter back to the Versailles Administrative Court of Appeal, which was tasked with quantifying the amount of the 2003 *précompte* claim to be refunded in the light of the rules it had laid down, taking into account the prior decisions of the Court of Justice of the European Union and the *Conseil constitutionnel*. On January 9, 2024, the Court validated the calculation of the refundable *précompte* proposed by the tax authorities, without responding to ENGIE's arguments. The latter intends to appeal the decision before the *Conseil d'État*.

Furthermore, after ENGIE and several French groups lodged a complaint, on April 28, 2016, the European Commission issued a reasoned opinion to the French State as part of infringement proceedings, setting out its view that the *Conseil d'État* did not comply with European Union law when handing down decisions in disputes regarding the *précompte*, such as those involving ENGIE. On July 10, 2017, the European Commission referred the matter to the Court of Justice of the European Union on the grounds of France's failure to comply. On October 4, 2018, the Court of Justice of the European Union ruled partially in favor of the European Commission. Following this decision, France must revisit its methodology in order to determine the *précompte* repayment amounts in closed and pending court cases. No action has been initiated to date due to parallel litigation proceedings on the basis of Directive 90/435/EC.

23.6.2 Luxembourg – State aid investigation

On September 19, 2016, the European Commission announced its decision to open an investigation into whether or not two private rulings granted by the Luxembourg State in 2008 and 2010 covering two similar transactions between several of the Group's Luxembourg subsidiaries constituted State aid. On June 20, 2018, the European Commission adopted a final, unfavorable decision deeming that Luxembourg had provided ENGIE with State aid. On September 4, 2018, ENGIE requested the annulment of the decision before the European Courts, thereby challenging the existence of a selective advantage. As these proceedings did not have a suspensive effect, ENGIE paid a sum of €123 million into an escrow account on October 22, 2018 in respect of one of the two transactions in question, since no aid was actually received for the other. Following the proceedings before the European Courts, this sum will be returned to ENGIE or paid to the Luxembourg State depending on whether or not the Commission's decision is annulled. On May 12, 2021, the Court rejected the appeals of the Luxembourg State and of ENGIE, thereby confirming the European Commission's position on the existence of State aid granted to the Group's Luxembourg subsidiaries. On July 22, 2021, ENGIE referred the matter to the Court of Justice of the European Union seeking the annulment of the Court's decision. On December 5, 2023, the Court ruled in favor of the Luxembourg State and ENGIE, annulling both the judgment of the Court of First Instance and the Commission's decision on the grounds of errors in the reference framework. ENGIE recovered the 123 million in escrow in January 2024, thus concluding the dispute.

23.6.3 Poland – Competition procedure

On November 7, 2019, a fine of 172 million Polish zloty (€40 million) was imposed on ENGIE Energy Management Holding Switzerland AG (EEMHS) for failing to respond to a request for disclosure of documents from the Polish Competition Authority (UOKiK) in proceedings initiated by the UOKiK which suspected a potential failure to notify by EEMHS and other financial investors involved in the financing of the Nord Stream 2 pipeline (main proceeding). EEMHS filed an appeal with the Competition Protection Court. On November 7, 2023, the Court reduced the penalty to around €100,000. The UOKiK has appealed this decision to the Warsaw Court of Appeal (2nd degree). The proceedings are pending.

In the context of the main proceedings, on October 6, 2020, the UOKiK ordered EEMHS to pay a fine of 55.5 million Polish zlotys (approximately €12.3 million). The UOKiK also ordered the termination of the financing agreements for the Nord Stream 2 project. On November 5, 2020, EEMHS appealed this decision with the Competition Protection Court (the "Court"). The appeal automatically suspends the execution of all of the penalties ordered by the UOKiK. On November 21, 2022, the Court overturned the UOKiK's decision in its entirety. The UOKiK has appealed this decision. On October 16, 2023, the Warsaw Court of Appeal (2nd degree) upheld the lower court's decisions, which overturned the UOKiK's decision in its entirety. The UOKiK may file an appeal in cassation.

23.6.4 Claim by the Dutch tax authorities related to interest deductibility

Based on a disputable interpretation of a statutory modification that came into force in 2007, the Dutch tax authorities refused the deductibility of a portion (€1.1 billion) of the interest paid on financing contracted for the acquisition of investments made in the Netherlands since 2000. Following the Dutch tax authorities' rejection of the administrative claim against the 2007 tax assessment, action was brought before the Arnhem Court of First Instance in June 2016. On October 4, 2018, the court ruled in favor of the tax authorities. On October 26, 2020, the ruling was confirmed by the Arnhem Court of Appeal. ENGIE Energie Nederland Holding BV considers that the Court committed errors in law and that its decision was not well-founded, under either Dutch or European law. It has therefore appealed the decision before the Court of Cassation. In July 2022, the Court of Cassation decided to refer questions on the compatibility of the Dutch legislation on interest with three of the European fundamental freedoms to the Court of Justice of the European Union for a preliminary ruling. The hearing was held before the Court of Justice of the European Union in November 2023. Its decision is expected in the first half of 2024.

23.6.5 Transfer price of gas

The Belgian tax authorities' Special Tax Inspectorate has issued two tax deficiency notices in respect of taxable income for fiscal years 2012 and 2013 for an aggregate amount of €706 million, considering that the price applied for the supply

of gas by ENGIE (then GDF SUEZ) to Electrabel S.A. was excessive. ENGIE and Electrabel S.A. are challenging this adjustment and have submitted a request for conciliation proceedings, which was accepted by France and Belgium in May 2018. The proceedings are ongoing between the two States, who put forward their respective positions late 2022/early 2023, although the issue was still not resolved by the end of December 2023.

NOTE 24 SUBSEQUENT EVENTS

No significant subsequent events have occurred since the closing of the accounts at December 31, 2023.

NOTE 25 FEES PAID TO THE STATUTORY AUDITORS AND TO MEMBERS OF THEIR NETWORKS

Pursuant to Article 222-8 of the General Regulations of the French Financial Markets Authority (AMF), the following table presents information on the fees paid by ENGIE SA, its fully consolidated subsidiaries and joint operations to each of the auditors in charge of auditing the annual and consolidated financial statements of the ENGIE Group.

The Shareholders' Meeting of ENGIE SA of May 14, 2020 decided to renew the terms of office of Deloitte and EY as Statutory Auditors for a six-year period from 2020 to 2025.

In millions of euros	Deloitte			EY			Total

NOTE 26 INFORMATION REGARDING LUXEMBOURG AND DUTCH COMPANIES EXEMPTED FROM THE REQUIREMENTS TO PUBLISH ANNUAL FINANCIAL STATEMENTS

Some companies do not publish annual financial statements pursuant to domestic provisions under Luxembourg law (Article 70 of the Law of December 19, 2002) and Dutch law (Article 403 of the Civil Code) relating to the exemption from the requirement to publish audited annual financial statements.

The companies exempted are notably: ENGIE Energie Nederland NV, ENGIE Energie Nederland Holding BV, ENGIE Nederland Retail BV, ENGIE United Consumers Energie BV, Electrabel Invest Luxembourg, ENGIE Treasury Management SARL and ENGIE Invest International SA.

1 ENGIE 2022 RESULTS

ENGIE FY 2022 Financial results

Significant progress on execution of strategic plan
Strong financial and operational performance
Proposal to pay a dividend of €1.40 per share for 2022

Business Highlights

- Leading role played by ENGIE to support security of supply in Europe
- Continued contribution to public policy measures through Working Capital support, extraordinary taxes and dedicated customer actions
- Major progress on simplification with €11.0 billion disposals signed or closed
- €5.5 billion growth Capex, primarily in Renewables, Networks and Energy Solutions
- Acceleration in Renewables with +3.9 GW of capacity added in 2022, taking total installed capacity to c. 38 GW
- Further progress on coal exit, coal represents 2.6% of centralised generation capacity

Financial Performance

- 2022 guidance achieved with continuing NRIs of €5.2 billion
- EBIT of €9.0 billion, up 43% organically, with growth across most activities. Key contribution from GEMS and Thermal in unprecedented market conditions as well as from new capacity additions for Renewables
- Impact of windfall profit taxes of €0.9 billion in 2022, mainly in Belgium and Italy, in addition to existing Government profit sharing mechanisms in Belgium and France (nuclear and hydro) of €1.1 billion
- Strong balance sheet and high liquidity with improvement in credit ratios
- Improved Cash Flow From Operations ⁽¹⁾, despite Working Capital headwinds due to energy prices
- Net financial debt at €24.1 billion, down €1.3 billion.
- 2022 proposed dividend of €1.40 per share

1.1 Key financial figures at December 31, 2022

In billions of euros	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis) ⁽¹⁾
Revenues	93.9	57.9	+62.2%	+60.4%
EBITDA	13.7	10.6	+29.8%	+27.0%
EBIT	9.0	6.1	+47.2%	+42.7%
Net recurring income of continuing activities, Group share	5.2	2.9	+78.4%	+76.2%
Net income, Group share	0.2	3.7	-94.1%	-
CAPEX ⁽¹⁾	7.9	6.7	+17.4%	-
Cash Flow From Operations (CFFO) ⁽²⁾	8.0	6.5	+24.0%	-
Net financial debt	24.1	-€1,3 billion versus Dec.31, 2021		
Economic net debt	38.8	+€0.5 billion versus Dec.31, 2021		
Net financial debt	2.8x	-0.8X versus Dec.31, 2021		

(1) Net of DBSO (Develop, Build, Share & Operate) and tax equity proceeds.

(2) Cash Flow From Operations: Free Cash Flow before maintenance Capex and nuclear phase-out expenses.

(1) Cash Flow From Operations: Free Cash Flow before maintenance Capex and nuclear phase-out expenses.

1.2 2023-2025 outlook and guidance

The forecasts set forth below are based on data, assumptions and estimates considered to be reasonable by the Group at the date of issuance of this document.

These data and assumptions may evolve or be amended due to uncertainties related to the economic, financial, accounting, competitive, regulatory and tax environment or other factors that the Group may not be aware of at the date of registration of the management report. In addition, the fulfilment of forecasts requires the success of the Group's strategy. The Group therefore makes no commitment or warranty regarding the fulfilment of the forecasts set out in this section.

The forecasts presented below and the underlying assumptions, also been prepared in accordance with the provisions of Delegated Regulation (EU) No 2019/980 supplementing Regulation (EU) No 2017/1129 and the ESMA recommendations on forecasts.

The forecast presented below result from the budget and medium-term plan process as described in Note 14 to the consolidated financial statements for the year ended December 31, 2021; they have been prepared on a comparable basis with historical financial information and in accordance with the accounting methods applied to the Group's consolidated financial statements.

1.2.1. Assumptions

- Strategy: reinforcing the ENGIE Group's ambition to be a leader in the energy and climate transition. With its refocusing and simplification now complete, ENGIE is now embarking on the second stage of its strategic plan and accelerating its growth in the energy transition. The completion of the divestment plan will allow for a significant increase in growth investments in renewable energies, both electricity and gas, and decarbonization solutions: €22 to 25 billion over the period 2023-2025, i.e. a 50% increase compared to 2021-2023;
- No change in accounting policies;
- No major regulatory or macro-economic changes;
- Average temperature in France;
- Average hydro, wind and solar productions;
- Average forex
 - €/USD: 1.08 for 2023, 1.09 for 2024 and 1.10 for 2025,
 - €/BRL: 5,56 over 2023-25;
- Belgian nuclear availability: c. 90% in 2023, 92% in 2024 and 94% in 2025 – based on availabilities as published on REMIT as of 01/01/2023;
- Contingencies on Belgian operations of €0.5 billion in 2023, €0.5 billion in 2024 and €0.2 billion in 2025;
- Market commodity prices at December 30, 2022;
- Hedged positions and captured prices at December 31, 2022, Belgium and France:
 - 100% to 90 €/MWh for 2022,
 - 74% to 93 €/MWh for 2023,
 - 52% to 120 €/MWh for 2024,
 - 15% to 165 €/MWh for 2025,
 - Captured prices are shown
 - before specific Belgian nuclear and French CNR hydro tax contributions
 - before inframarginal rent cap in Belgium and France
 - excluding the mark-to-market impact of the proxy hedging used for part of Belgian nuclear volumes over 2023-2025, which is volatile and historically unwinds to close to zero at delivery,
- Recurring net financial costs of €(2.2)-(2.6) billion per year over 2023-25;
- Recurring effective tax rate: 23-26% over 2023-25;
- Discount rate for post-employment benefit provisions: based on market conditions at December 31, 2022, as described in Note 18 to the consolidated financial statements;
- Regulatory review on French networks in 2024-25;

- Inframarginal rent caps based on current legal texts and additional contingencies;
- Full pass through of supply costs in French BtoC retail tariffs.

The progress on the execution of the strategic plan solidifies the foundation for ENGIE towards delivering long-term growth while achieving its purpose of carbon neutrality.

The Group anticipates delivering growth in the medium-term primarily fueled by investment in Renewables and improved results from Energy Solutions, alongside a stable contribution from Networks. GEMS is projected to further enhance the integrated business model securing energy supply, optimising and managing risks for ENGIE and third parties. Nuclear contribution, due to the ongoing phase-out capacity plan in Belgium, has been excluded from the EBIT indication.

European commodity price assumption in the guidance for residual merchant exposure: the price assumption used in the guidance for 2023-2025 provided today is based on the European forward prices as at 31 December 2022.

ENGIE outlook for 2023 to 2025:

<i>In €billion</i>	2023 Results	2024 Results	2025 Results
EBIT excluding Nuclear	6.6 - 7.6	7.2 - 8.2	7.5 - 8.5
RNRpg guidance	3.4 - 4.0	3.8 - 4.4	4.1 - 4.7

ENGIE remains committed to a “strong investment grade” rating and continues to target a leverage ratio of below or equal to 4.0x economic net debt to EBITDA.

1.2.2. Overview of key financial targets

The group has set itself the goal of accelerating its growth by focusing on the second stage of its strategic plan:

Accelerating growth in Renewables

Ramp-up in Renewables underpinned by a growing and well-balanced pipeline. The Group commissioned 7 GW of renewable capacity over the last two years, leading to 38 GW total installed capacity. Despite the supply chain challenges, ENGIE continues to accelerate its average annual renewable capacity additions to 4 GW until 2025, stepping-up to 6 GW from 2026 to 2030. This will bring total the installed capacity to 50 GW by 2025 and 80 GW by 2030.

This ambition is fuelled by a growing pipeline of 80 GW at end-2022 (vs. 56 GW at end-2020), which enjoys a good balance across onshore wind, offshore wind and solar. More than half of this pipeline includes projects already under construction, secured or at an advanced stage of development.

The geographic priorities remain Europe, North America, and Latin America, with offshore wind across a wider geographic footprint.

In total, ENGIE will invest between €13 billion and €14 billion over 2023-2025 in Renewables in a balanced portfolio with limited exposure to merchant risk.

The alliance between the molecule and the electron at the heart of ENGIE model to ensure flexibility and security of supply

As gas infrastructure owner, operator, and supplier, ENGIE has a critical role to play in Europe. Gas infrastructure (networks, storage capacities, LNG terminals) played a major role in the energy crisis and will continue to do so in the energy transition, ensuring security of supply and overall system resilience. Gas networks are also facilitators of the development of renewable gases and thus contribute to decarbonisation.

ENGIE's gas networks business is largely regulated bringing stability and visibility. ENGIE's networks have consistently demonstrated strong operational performance and respect the highest safety standards. They generate strong cash-flow, enabling the Group to maintain safety and reliability, and finance growth Capex such renewable gases expansion.

Overall our regulated asset base (RAB), in France and international, is expected to reach €39bn in 2025, compared to €36bn in 2022.

A balanced portfolio is key to ensuring the energy system's flexibility and efficiency. In a context of strong growth in Renewables, ENGIE benefits from its large portfolio of flexible generation assets and energy storage, including CCGTs (51 GW) and pumped storage plants (c. 4 GW), which are absolutely key to absorbing the intermittency associated with these Renewables.

ENGIE will continue to adapt its fleet to bring more flexibility and optionality to the grid and to its own generation portfolio, make it leaner, nimbler, more efficient and less CO2 intensive. The business model of CCGTs will increasingly be shifting to capacity remuneration mechanism and ancillary services.

The Group intends to strongly accelerate in battery storage to complement its gas-fired generation and pumped storage fleet and has an ambitious target of c.10 GW of battery capacity by 2030, mainly in Europe and the US.

Ramping up in renewable gases

The development of renewable gases will capitalize on existing infrastructure, contributing to security of supply. The Group will leverage on its existing networks to develop renewable gases and will invest €3.5 billion in decarbonized gases by 2030.

The renewable and low-carbon gas market is set to grow rapidly in the coming decade, driven by the decarbonization commitments of governments and corporate offtakers.

ENGIE has a target of c.10 TWh of biomethane production per year by 2030.

ENGIE will focus on ramping up in low carbon hydrogen, which is key for hard-to-abate sectors for which electricity is an unrealistic option for decarbonization.

ENGIE is in a strong position to benefit from the buoyant growth in green hydrogen by leveraging on its world-leading capabilities in renewable power generation and its expertise in managing complex industrial processes. ENGIE has also global energy management capabilities to trade hydrogen and e-molecules.

ENGIE has set an ambitious target by 2030 to:

- develop green hydrogen production capacity of 4 GW,
- have 700 km dedicated hydrogen networks and 1 TWh of storage capacity,
- operate more than 100 refuelling stations

Total Capex for hydrogen is earmarked at c.€4 billion over 2023-2030.

Playing a major role in the decarbonization of ENGIE's customers through distributed infrastructure

Energy Solutions is ideally positioned to capture the growth of the market driven by strong demand from clients for decarbonized solutions and energy independence as well as increasingly support from public authorities.

Energy Solutions has streamlined its organization through three activities: local energy networks, on-site energy production, and energy performance services.

In the first two platforms, which benefit from long-term infrastructure-like contracts with stable and recurring revenues as well as long-term contracted cash flows, ENGIE invests in infrastructure and operates them as part as an asset-based business model. Capturing the long-term growth opportunities, using greater selectivity in targeting contracts, and with a more efficient base, EBIT annual growth from distributed energy infrastructure should be high-single digit on average over 2022-2025.

In energy management services, the EBIT margin is expected to increase more than 200bps over 2022-2025 to reach 5%.

ENGIE remains committed to adding 8 GW of distributed energy infrastructure by 2025 (vs 2020), translating into around €3 billion Capex growth over 2023-2025.

Leveraging ENGIE extensive market knowledge through GEMS

GEMS is at the heart of ENGIE's integrated business model. On the upstream side, GEMS' mandate is to add value from technical differences, complementarity, flexibility and optionality within ENGIE's and partners' portfolio of assets. On the downstream side, GEMS provides ENGIE clients with risk management services and tailor-made energy supply contracts.

GEMS EBIT is likely to be lower over 2023-2025 compared to the exceptional level of 2022, but it should remain above the historical level of 2020-2021 due mainly to commercial growth and continuing challenging energy markets, bringing optionality and volatility as well as increased customers demand for risk management.

Capital allocation and medium-term financial outlook

ENGIE targets growth Capex of €22-25 billion between 2023 and 25, an increase of 50% versus the previous 2021-23 plan, with 40% being already committed. These will be split 55-65% for Renewables, 10-15% for Networks, and 10-15% for Energy Solutions. Around 10% will be dedicated to ramping up in renewable gas and batteries. Capital allocation is based on a strict discipline of financial and ESG-related criteria. The contribution to 2023-25 EBIT of new capacities commissioned should amount to €1.5bn.

Return On Average Capital Employed excluding nuclear should benefit from this rigorous process to drive value creation: Group ROACE excluding nuclear is expected to increase to between 7% and 9% in a sustainable way from 6% in 2021.

Maintenance Capex should amount to €7 to 8 billion between 2023 and 2025, of which around 50% in French regulated infrastructure activities.

Around €9bn will go towards the funding of Belgian nuclear provisions over 2023-2025.

ENGIE will continue to drive efficiency by strong control of general and administrative costs, increasing support functions efficiency, and turning around underperforming businesses. The Group is aiming for a positive net impact on EBIT of €0.6 billion in 2023-25.

Main drivers for 2022-2025 EBIT evolution by activity

2022	Activity	Expectations for main EBIT evolution drivers vs 2022	2025
EBIT excluding Nuclear €8.0 billion	Renewables	Investments contribution, higher prices	++
	Networks	Inflation, temperature normalization, investments and portfolio management, regulatory reviews in France	= -
	Energy Solutions	Investments contribution, EVBox contribution improvement and continued improvement of performance	= +
	FLEXGEN (ex Thermal)	Dilution, normalization of spreads, higher fleet availability	=
	Retail (ex Supply)	Temperature normalization, margin increase, growth in B2C services and power customer portfolio	= +
	GEMS	Decrease of prices and volatility but still high	- - -
	Nuclear	Higher prices, lower volumes	= +

Convention: each "+" sign amounts to c. €+500m, each "-" sign amounts to c. €-500m, "=+" sign amounts to a variation between 0 and +250, "=-" sign amounts to a variation between -250 to 0.

1.3 Dividend policy reaffirmed and €1.40 per share proposal for 2022

ENGIE is focused on delivering a progressively growing and sustainable dividend for shareholders.

The Board has reaffirmed the Group's dividend policy with a payout ratio of 65-75% of net recurring income Group share, and a floor of €0.65 per share for the 2023 to 2025 period.

For 2022, the Board has proposed a payout ratio of 65%. This translates to a dividend of €1.40 per share, which will be proposed for shareholder approval at the Annual General Meeting on 26 April 2023.

1.4 ENGIE playing a leading role in security of supply and contributing to support energy affordability

As gas infrastructure owner, operator, and gas supplier, ENGIE has played a crucial role in Europe.

In France, ENGIE's networks activities have operated at record high utilisation rates, with LNG terminals working at nearly full capacity, two-fold increase in transit at GRTgaz including reversed flows from France to Germany, and gas storage levels filled at 82% as at December 31, 2022 compared to c. 53% at December 31, 2021.

ENGIE has contributed €1.1 billion in 2022 to existing Government profit-sharing mechanisms for Belgian Nuclear (specific tax framework) and French hydro (CNR).

ENGIE has pledged to support its French customers with €90 million in measures for vulnerable customers and a €60 million fund for industrial/tertiary customers affected by rising energy prices. ENGIE has also launched platforms for retail and SME customers to monitor and save energy.

ENGIE is contributing to public policy measures to address high energy prices. In France, ENGIE has increased working capital support for the tariff shield mechanism, now including small and medium-sized enterprises as well as customers under market prices (by linking their contracts to the regulated tariff). Most of ENGIE's B2C gas and power contracts in France benefit from protection against price increases through this tariff shield mechanism or fixed prices over the lifetime of the contract.

The Group is supporting the implementation of social tariffs in Belgium and a price cap mechanism in Romania and Chile. In addition, the Group has engaged with various local authorities to provide support through payment facilities. The overall impact of delayed payment plans worldwide is close to €1.0 billion. The Group is more focused than ever to work collaboratively with clients on energy efficiency to reduce their energy bill and achieve their decarbonisation goals.

ENGIE has also recognised the engagement of its employees around the world with an exceptional bonus of €1,500 awarded to each employee in an unprecedented energy situation to support in a high inflation environment.

1.5 ENGIE is contributing to public policy measures to address high energy prices

In France, ENGIE has increased working capital support for the tariff shield mechanism, now including small and medium-sized enterprises as well as customers under market prices (by linking their contracts to the regulated tariff). Most of ENGIE's B2C gas and power contracts in France benefit from protection against price increases through this tariff shield mechanism or fixed prices over the lifetime of the contract.

The Group is supporting the implementation of social tariffs in Belgium and a price cap mechanism in Romania and Chile. In addition, the Group has engaged with various local authorities to provide support through payment facilities. The overall impact of delayed payment plans worldwide is close to €1.0 billion. The Group is more focused than ever to work collaboratively with clients on energy efficiency to reduce their energy bill and achieve their decarbonisation goals.

ENGIE has also recognised the engagement of its employees around the world with an exceptional bonus of €1,500 awarded to each employee in an unprecedented energy situation to support in a high inflation environment.

1.6 Update on European proposals for windfall taxes

In December 2022, the Governments of Belgium and France, ENGIE's two most significant power generation countries in the EU, have passed new measures into Law to address inframarginal rent in relation to power prices.

In Belgium, an inframarginal rent cap was implemented retroactively, from 1 August 2022 to 30 June 2023, at a level depending on the power production's technology. A possible extension of this period will be evaluated next April. ENGIE's nuclear assets, owned and operated via its subsidiary Electrabel, fall into the scope of this measure: normative revenues exceeding €130/MWh are subject to the new levy but with a mechanism limiting potential double taxation with existing nuclear taxes.

In France, the Finance Bill for 2023 provides for a rent cap applicable over a period of eighteen months, (from 1 July 2022 until 31 December 2023). The cap ranges from €40/MWh to €175/MWh depending on the power production technology. The excess revenue is subject to a tax rate of 90%. ENGIE is mainly impacted through its drawing rights on two EDF nuclear power plants (Chooz B and Tricastin, 1.2 GW, 9 TWh of annual output at an availability rate of 85%) subject to a €90/MWh cap and its gas power plants (1.4 GW capacity) subject to a €40/MWh cap on the clean spark spread.

In Italy, the Government has already enacted an "extraordinary solidarity contribution" on energy companies calculated on a variation of VAT-taxable basis between October 2021 and April 2022 versus the same duration a year earlier, at a rate of 25%. ENGIE has been significantly and adversely impacted due to an ill-designed methodology, not representative of the excess revenues over the period.

The overall impact of extraordinary taxes in Europe is close to €0.9 billion in 2022, 85% in EBIT and 15% in corporate income tax.

1.7 Significant progress on the execution of strategic plan

Acceleration in Renewables, infrastructures and renewable gases

ENGIE added 3.9 GW of renewable capacity in 2022, including 1.8 GW of onshore wind, 1.2 GW of solar and

1.0 GW of offshore wind, taking total renewable installed capacity at 100% to c. 38 GW at the end of 2022. Geographically, the 3.9 GW additions include 2.6 GW in Europe (mainly in UK, Spain and France), 0.8 GW in US and 0.4 GW in Latin America. The Group is therefore on track with its target to add 4 GW on average per year of renewable capacity until 2025. This ambition is fuelled by a growing pipeline that totalled 80 GW at end of December 2022, up 14 GW compared to December 2021.

Ocean Winds, ENGIE's joint venture with EDPR dedicated to offshore wind continues to grow strongly. In December, Ocean Winds was awarded a lease area for a floating offshore wind site of 2 GW capacity in California.

In 2022, the Group continued supporting its customers in their decarbonisation efforts by signing a total amount of 2.0 GW of green Power Purchase Agreements (PPAs).

Energy Solutions has achieved major wins in District Heating and Cooling (DHC) and sustainable mobility in the 2022, including 12,000 electric vehicle charging points mainly in Belgium and Singapore. In 2022, c. 1 GW net installed capacity has been added in distributed energy infrastructures.

In Brazil, the internalization of TAG O&M activities has been successfully completed and the two power transmission lines, Gralha Azul and Novo Estado, are now close to full completion.

ENGIE continues to unlock the potential of renewable gases: 492 biomethane production units, with a yearly production capacity of up to 8.3 TWh are connected to ENGIE's networks in France. On hydrogen, the European Commission has approved up to €5 billion in public support. ENGIE has submitted five projects across Belgium, France, the Netherlands and Spain, and all of them have been selected.

Simplifying and refocusing

The disposal plan financial target of at least €11 billion by the end of 2023 has been achieved with €11.0 billion already closed or signed, with EQUANS being the main contributor.

On geographic rationalization, the Group will be operating in 31 countries, down from 70 in 2018, once closing of the signed deals is effective. ENGIE exited seven countries as part of the EQUANS disposal and targets to be in less than 30 countries by the end of 2023.

Disciplined capital allocation

In 2022, total Capex amounted to €7.9 billion. Growth Capex reached €5.5 billion, of which 58% dedicated to Renewables, 20% to Networks and 13% to Energy Solutions, thus fully aligned with ENGIE's strategic roadmap.

Performance plan delivering

In a context of rising inflation, ENGIE maintained its momentum on cost efficiency and is on track to achieve its 3-year target, with a net EBIT contribution in 2022 of €0.4 billion.

1.8 Update on Belgian nuclear assets

In line with the planned nuclear phase-out in Belgium, the Doel 3 reactor was shut down in September 2022 and the Tihange 2 reactor in February 2023.

In January 2023, ENGIE and the Belgian federal government set a framework for the extension of the nuclear reactors Doel 4 and Tihange 3, signing the Heads of Terms and Commencement of LTO Studies Agreement which builds on the Letter of Intent signed on 21 July 2022, with the objective to extend the operational lifetime of both reactors for ten years, for a total production capacity of 2 GW.

This agreement in principle comprises three conditions, including the establishment of a legal structure dedicated to the two extended nuclear units equally owned by the Belgian State and ENGIE, the framework for a cap on future nuclear waste management costs, and a set of guarantees to ensure the proper execution of the nuclear operator's commitments. With this agreement, both parties confirm their objective to make reasonable endeavours to restart the Doel 4 and Tihange 3 nuclear units in November 2026.

In December 2022, ENGIE was informed on the new parameters considered by the Commission for Nuclear Provisions (CPN) for the calculation of the nuclear provision for the dismantling and spent fuel management of Belgian nuclear power plants following the triennial revision. Based on these parameters, nuclear provisions have increased by €3.3 billion, of which €2.9 billion borne by Synatom, compared to ENGIE's initial proposal of an increase of €0.9 billion. ENGIE considers the increase by €2.9 billion unjustified and has submitted an adapted proposal to the CPN.

1.9 ESG

Key ESG targets

In 2022, greenhouse gas emissions from energy production were reduced to 60 million tons, a decrease of 44% compared to 2017, and in line with the target of 43 million tons by 2030. 2022 results were positively impacted by the weather and a lower utilization rate of our CCGTs.

ENGIE increased the share of renewables in its portfolio to 38% at the end of 2022 from 34% at the end of 2021 with the addition of 3.9 GW of renewables.

ENGIE continues to progress on coal exit with the signing in September of the disposal of Pampa Sul in Brazil and the closure of Tocopilla in Chile which comprises a total of 0.6 GW installed capacity. ENGIE is committed to exiting all coal assets in continental Europe by 2025 and globally by 2027, including coal generation for district heating and cooling networks. At the end of 2022, coal represented 2.6% of ENGIE's centralized power generation portfolio.

On gender diversity, ENGIE had 30% women in management at the end of 2022 and is implementing action plans towards its ambition of managerial parity of 40% to 60% between men and women.

1.10 Health & Safety

In 2022, ENGIE and its subcontractors experienced severe work-related accidents including 4 fatalities, notably at construction sites. A major company-wide response and comprehensive action plan are being deployed by the ENGIE leadership, to re-assess all safety standards and procedures in every activity and geography to ensure the application of the highest safety standards across the Group and its subcontractors.

1.11 FY 2022 financial review

1.11.3. Revenues

Revenue at €93.9 billion was up 62.2% on a gross basis and 60.4% on an organic basis.

Contributive revenues, after elimination of intercompany transactions

<i>In millions of euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis)
Renewables	6,216	3,653	+70.1%	+58.3%
Networks	6,961	6,700	3.9%	+2.9%
Energy Solutions	11,552	9,926	16.4%	+21.1%
Thermal	7,129	4,089	74.3%	+62.6%
Supply	16,810	10,396	61.7%	+61.3%
Nuclear	35	56	-37.7%	-37.7%
Others	45,163	23,046	96.0%	+92.6%
<i>of which GEMS</i>	45,137	22,870	97.4%	+92.7%
TOTAL	93,865	57,866	+62.2%	+60.4%

Revenue for **Renewables** amounted to €6,216 million, up 70.1% on a gross basis and up 58.3% organically. The gross increase was due to favourable foreign exchange effects mainly from the appreciation of the Brazilian real against the euro. On an organic basis, revenue growth was mainly driven by capacity additions and higher hydro prices in France.

Revenue for **Networks** amounted to €6,961 million, up 3.9% on a gross basis and up 2.9% organically. The gross increase was due to favourable foreign exchange effects mainly in Latin America and the scope out effect related to the Turkey and Argentina disposals. French infrastructures revenue rose driven by significantly higher volumes transported, notably with exceptional West-East reverse flows, terminals as well as storage activities reflecting own account operations (in the UK) which offset lower volumes in distribution and expected tariff evolution. Outside France, revenues increased organically notably in Latin America with higher volumes in distribution. Lower revenues in Brazil reflect the decrease in construction revenues following progressive commissioning of transmission lines.

Revenue for **Energy Solutions** amounted to €11,552 million, up 16.4% on a gross basis and 21.1% organically. The gross increase was driven by favourable foreign exchange effects mainly related to US dollar and scope out effects. Organically, revenue in France increased significantly on all activities: energy performance management, local energy networks and on-site energy production. International activities increased significantly driven by commodity prices in all geographies.

Revenue for **Thermal** amounted to €7,129 million, up 74.3% on a gross basis and up 62.6% organically. The gross increase benefited from positive foreign exchange effects mainly in Chile, Peru and Pakistan. The organic performance is mainly driven with exceptional level of spreads and increased ancillaries in Europe. Americas shows a positive growth thanks to the indexation of PPA contracts in a context of rising commodity prices and inflation.

Revenue for **Supply** amounted to €16,810 million, up 61.7% on a gross basis and 61.3% organically. The gross variation was due to favourable foreign exchange effects. Organically, the increase was mainly driven by increasing commodity prices, offset by negative volume effect mainly due to warmer temperature.

Nuclear reported almost no external revenue post-elimination of intercompany operations, as its production was sold internally to other ENGIE businesses.

Revenue for **Others** amounted to €45,163 million. The increase compared to last year is mainly driven by GEMS (€+45,137 million) essentially impacted by increase in commodity prices combined with higher volumes.

1.11.4. EBITDA

EBITDA at €13.7 billion, was up 29.8% on a gross basis and up 27.0% on an organic basis.

Activity/geography matrix

<i>In millions of euros</i>	France	Rest of Europe	Latin America	USA & Canada	Middle East, Asia & Africa	Others	December 31, 2022
Renewables	535	370	1,003	313	17	(35)	2,202
Networks	3,396	96	731	(3)	-	(8)	4,212

Nuclear	-	1,403	-	-	-	-	1,403
Others	-	2	1	10	-	412	426
Of which GEMS						679	679
TOTAL EBITDA	4,928	2,770	1,908	199	568	190	10,563

1.11.5. EBIT

EBIT at €9.0 billion was up 47.2% on a gross basis and up 42.7% on an organic basis.

- **Foreign exchange:** a total positive effect of €325 million at EBIT mainly driven by the appreciation of the Brazilian real and the US dollar.
- **Scope:** a net negative scope effect of €115 million at EBIT mainly due to 2021 events including partial sale of GTT's shares that led to a change in consolidation method, asset sales to achieve the Group's geographical refocus and coal exit targets. These effects were only partly offset by the acquisition of Eolia in Spain in May 2022.
- **French temperature:** compared to average, the temperature effect stood at negative €190 million, generating a negative year-on-year variation of €308 million compared to 2021 across Networks, Supply and Others in France.

EBIT growth mainly driven by GEMS, Thermal and Renewables.

MANAGEMENT REPORT

1 ENGIE 2022 RESULTS

Activity/geography matrix

<i>In millions of euros</i>	France	Rest of Europe	Latin America	USA & Canada	Middle East, Asia & Africa	Others	December 31, 2022

of which GEMS	2,618	507			(24)
TOTAL	9,045	6,145	+47.2%	+42.7%	(308)
TOTAL excluding Nuclear	8,019	5,185	+54.7%	+49.1%	(308)

1.11.5.1. Renewables: contribution of newly commissioned assets and productivity improvements

<i>In millions of euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis)
EBIT	1,627	1,191	+36.6%	+19.1%
Total CAPEX	3,333	1,881	+77.2%	-
CNR achieved prices (€/MWh)	60	56	+7.0%	-
DBSO ⁽¹⁾ Margins (EBIT level)	102	31		-
Operational KPIs				
Commissioning (GW at 100%)	3.9	3.0	+30.0%	-
Hydro volumes France (TWh at 100%)	12.8	15.2	-2.4	-

(1) Develop, Build, Share and Operate.

Renewables reported a 19.1% organic EBIT growth, benefiting from the contribution of new capacity across Group's key geographies and technologies (+€268 million), performance plan (+€87 million), positive volume effects (+€69 million, resulting mainly from the reversal of the -€90 million Texas extreme weather event in Q1 2021) and positive price effects (+€55 million, mainly due to higher prices for French hydro, partly offset by hydro buybacks in France and Portugal in the context of low hydrology in Europe). Overall growth more than offset the 2021 one-off linked to GFOM ruling effect in Brazil (-€300 million).

Profit sharing mechanism on CNR hydro production in France has evolved after the adoption in February 2022 of the "Aménagement du Rhône" law under which the tax rate varies according to captured power prices, varying from 10% for volumes below €26.5/MWh up to 80% for volumes above €80/MWh. The Group EBIT impact in 2022 amounted to -€176 million.

1.11.5.2. Networks: strong performance in Latin America, partly offset by warmer temperatures in Europe

In millions of euros	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis)
EBITDA	4,212	4,121	+2.2%	+1.0%
EBIT	2,371	2,314	+2.5%	+0.5%
Total CAPEX	2,321	2,524	-8.0%	
Operational KPIs				
Temperature effect – France (EBIT in €m)	(122)	75.0	(197)	-
Smart meters (m)	10.9	9.2	1.7	-

EBIT amounted to €2,371 million, up 0.5% on an organic basis.

French infrastructures EBIT was down €148 million due to lower distributed volumes following warmer temperatures versus last year and lower tariffs revenues reflecting regulatory reviews (smoothed out over the 4-year regulatory period). These effects were partly offset by significant growth in short term revenues in transport, including reversed flows from France to Germany, as well as in terminals and storage.

The Group performed strongly outside France with EBIT organically up €160 million mainly due to higher contribution from Latin America, driven by intrinsic growth and inflation indexations.

1.11.5.3. Energy Solutions: higher energy prices and strong commercial performance despite warmer temperature.

In millions of euros	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis)
Revenues	11,552	9,926	+16.4%	+21.1%
EBIT	412	350	+17.7%	+16.6%
Total CAPEX	886	903	-1.8%	-
Operational KPIs				
Distrib. Infra installed cap. (GW)	24.9	24.1 ⁽¹⁾	+3.8%	-
EBIT margin (excluding Evbox)	4.6%	5.0%	-47 bps	-
Backlog - French concessions (bn€)	18.4	16.8	+1.6	-

(1) Restated data to exclude countries ENGIE exited or stopped developments following geographical rationalization presented in May 2021.

EBIT amounted to €412 million, up 16.6% on an organic basis.

Organic growth was driven by the positive impact of energy prices, positive effect of performance plan in energy efficiency services, commercial market dynamics notably in cogeneration and DHC as well as production ramp up and process enhancements ongoing on EVBox, despite slowdown of EV market growth pace. These elements were partly offset by warmer temperature and positive 2021 one-offs on on-site energy production.

1.11.5.4. Thermal: higher spreads and ancillaries captured by flexible assets in Europe.

<i>In millions of euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis)
EBITDA	2,235	1,628	+37.3%	+33.7%
EBIT	1,768	1,183	+49.4%	+46.6%
Operational KPIs				
Average captured CSS Europe (€/MWh)	28.0	19.0	+50%	
Installed capacity (GW at 100%)	59.5	59.9	(0.4)	-

Thermal EBIT amounted to €1,768 million, up 47% on an organic basis.

Organic growth was mainly driven by price effects (+€922 million, mainly from higher spread from European assets partly offset by negative impact from higher sourcing spot prices in Chile and adverse gas merchant position in Australia) as well as ancillaries and capacity remuneration mechanisms (+€175 million). These effects were partly offset by lower volumes (-€440 million) mainly in Europe, due to outages and strikes, and Italy windfall profit tax which ENGIE is contesting.

1.11.5.5. Supply: timing effects, warmer temperatures in Europe, price caps and support measures.

<i>In millions of euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis)
EBITDA	258	498	-48.2%	-47.3%
EBIT	(7)	232	-	-
French temperature effect (EBIT in m€)	(53)	34	(87)	-

EBIT amounted to -€7 million. Organically, the decrease (-€230 million) was driven by lower energy volumes mainly in France and Belgium, negative price effects in France and support measures to customers, partially offset by improved performance and higher results in most of the other European countries. EBIT decreased by €626 million over the last quarter of the year mainly due to expected reversal of timing effects mostly linked to the existing ARENH mechanism as well as negative climate effects.

1.11.5.6. Nuclear: higher prices triggered higher profit sharing through specific Belgian nuclear tax and inframarginal rent cap.

<i>En millions d'euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported basis)	% change (organic basis)
EBITDA	1,510	1,403	+7.6%	+7.6%
EBIT	1,026	959	+6.9%	+6.9%
Total Capex	229	201	+14.2%	
Operational KPIs				
Output (BE + FR, @ share, TWh)	42.1	47.4	-5.4 TWh	-
Availability (Belgium at 100%)	83.6%	91.8%	- 820 bps	-

EBIT for Nuclear amounted to €1,026 million, up 6.9% on organic basis.

Organic increase was driven by higher achieved prices (+€1,694 million, at €97/MWh in 2022 vs €60/MWh in 2021) resulting in higher nuclear tax contribution on second generation units (-€759 million) and inframarginal rent cap. Also, a negative volume effect (-€494 million) due to higher outages in Belgium (availability rate at 83.6%, -820 bps vs 2021) and France.

1.11.5.7. Others: unprecedented contribution from GEMS in a context of extreme market conditions

GEMS EBIT amounted to €2,618 million, representing an organic increase of €2,087 million compared to 2021.

ENGIE, as an integrated player, operates in the energy markets through GEMS. It sources energy, sells its own production and hedges upstream and downstream positions to meet customers' needs for risk management and decarbonisation, as well as secure supply in Europe. GEMS saw a record level of activity in all activities in an exceptionally volatile price environment and optimized long-term contracts by leveraging the optionality in ENGIE's commercial contract-base.

1.11.6. Comparable basis organic growth analysis

<i>In millions of euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported/organic basis)
Revenues	93,865	57,866	+62.2%

Exchange rate effect	-	1,462	-
Comparable data	93,844	58,523	+60.4%

<i>In millions of euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported/organic basis)
EBITDA	13,713	10,563	+29.8%
Scope effect	(48)	(219)	-
Exchange rate effect	-	418	-
Comparable data	13,665	10,762	+27.0%

<i>In millions of euros</i>	Dec 31, 2022	Dec 31, 2021	% change (reported/organic basis)
EBIT	9,045	6,145	+47.2%
Scope effect	(47)	(163)	-
Exchange rate effect	-	325	-
Comparable data	8,998	6,307	+42.7%

The calculation of organic growth aims to present comparable data both in terms of the exchange rates used to convert the financial statements of foreign companies and in terms of contributing entities (consolidation method and contribution in terms of comparable number of months). Organic growth in percentage terms represents the ratio between the data for the current year (N) and the previous year (N-1) restated as follows:

- The N-1 data is corrected by removing the contributions of entities transferred during the N-1 period or prorata temporis for the number of months after the transfer in N;
- The N-1 data is converted at the exchange rate for the period N;
- The N data is corrected with the N acquisition data or prorata temporis for the number of months prior to the N-1 acquisition.

2 OTHER INCOME STATEMENT ITEMS

The reconciliation between EBIT and Net income/(loss) is presented below:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021	% change (reported basis)
EBIT	9,045	6,145	+47.2%
(+) Mark-to-Market on commodity contracts other than trading instruments	(3,661)	721	
(+) Non-recurring share in net income of equity method entities	(17)	50	
Current operating income including operating MtM and share in net income of equity method entities	5,367	6,916	-22.4%
Impairment losses	(2,774)	(1,028)	
Restructuring costs	(230)	(204)	
Changes in scope of consolidation	91	1,107	
Other non-recurring items	(1,328)	(69)	
Income/(loss) from operating activities	1,127	6,722	-83.2%
Net financial income/(loss)	(3,003)	(1,350)	
Income tax benefit/(expense)	83	(1,695)	
NET INCOME/(LOSS)	390	3,758	-89.6%
Net recurring income/(loss) relating to continued operations, Group share	5,223	2,927	
Net recurring income/(loss) Group share per share	2.24	1.26	
Net income/(loss) Group share	216	3,661	
Non-controlling interests	173	97	

The reconciliation between Net recurring income/(loss) Group share and Net income/(loss) Group share is presented below:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Net recurring income/(loss) relating to continued operations, Group share	5,223	2,927
Impairment & Others	(1,494)	(970)
Restructuring costs	(230)	(204)
Changes in scope of consolidation	91	1,107
Mark-to-Market on commodity contracts other than trading instruments	(3,661)	721
Net recurring income/(loss) relating to discontinued operations, Group share	287	231
Net income/(loss) Group share	216	3,582

Income from operating activities amounted to €1,127 million, representing a decrease compared with December 31, 2021, mainly due to unrealized losses on commodity hedges driven by price increases, in particular on certain economic hedges on gas and electricity not designated as cash flow hedges, higher impairment losses, lower gains on asset disposals, the recognition of additional costs related to the triennial review of nuclear provisions in Belgium, partly offset by EBIT growth.

Income from operating activities was affected by:

- net impairment losses of €2,774 million (compared with €1,028 million in 2021) (see Note 9.1);
- restructuring costs of €230 million (compared with €204 million in 2021) (see Note 9.2);
- positive scope effects of €91 million (compared with a positive €1,107 million in 2021). This amount included in particular the gain on the disposal of the Group's interest in Gaztransport et Technigaz (GTT) representing approximately 24.6% of its share capital (a positive €280 million), renewable geothermal assets in Indonesia (a positive €111 million), Energy Solutions activities in Africa and in France (a negative €127 million), and the purchase of shares in renewable assets in India with refinancing obligations scheduled for 2023 (a negative €110 million) (see Note 9.3);
- other non-recurring items for a negative €1,328 million (compared with a negative €69 million in 2021), mainly including the €979 million net expense related to additions to provisions for the back-end of the nuclear fuel cycle as part of the triennial review of nuclear provisions in Belgium (see Note 9.4).

The **net financial loss** amounted to €3,003 million in 2022, compared with €1,350 million in 2021 (see Note 10). This change is mainly due to the impairment loss recognized on the Nord Stream 2 loan (€987 million) and the negative impact of the changes in the fair value of money market funds held by Synatom (€280 million). Adjusted for non-recurring items, the financial loss amounted to €1,819 million in 2022, compared with €1,494 million in 2021. This deterioration is due to the increase in other financial expenses, as well as to the increase in the cost of net debt, in particular due to the increase in lease liabilities related to the extension of the Compagnie Nationale du Rhône concession. The increase in the average cost of gross debt, mainly as a result of higher interest rates, was offset by the increase in interest on cash and cash equivalents and liquid debt instruments.

The **income tax** for 2022 amounted to a benefit of €83 million (compared with a tax expense of €1,695 million in 2021). It includes a €1,474 million tax benefit relating to non-recurring taxable items (compared with a tax expense of €552 million in 2021), mainly MtM losses recognized by ENGIE SA.

Adjusted for these non-recurring items, the recurring effective tax rate was 22.6% at December 31, 2022 compared with 29.3% at December 31, 2021, mainly due to:

- the favorable change in the tax situation in certain countries that only partially recognize their deferred tax assets, notably in Europe, the United States and Australia - approximately -7.6 points ;
- the effect on deferred tax liabilities of the increase in the future income tax rate voted in the United Kingdom in 2021 - approximately -2.1 points;
- the unfavorable impact of the non-deductibility of the one-off tax contribution voted in 2022 in Italy and recognized as an operating expense by the Group - approximately +1.2 points;
- the one-off solidarity contribution voted in 2022 in Italy, which increases the income tax charge - by about +2.1 points.

Net recurring income, Group share relating to continuing operations amounted to €5,223 million compared with €2,927 million in 2021. This increase was mainly driven by the strong growth in EBIT, the recurring effective tax rate decrease from 29.3% to 22.6%, partly offset by the increase in the recurring financial expense.

Net income, Group share amounted to €216 million, €3,445 million lower compared with 2021, mainly due to impairment losses, the recognition of additional costs related to the triennial revision of nuclear provisions in Belgium, the negative effect of mark-to-market on commodity contracts other than trading instruments, and the recognition of the credit loss on Nord Stream 2, partially offset by the capital gain realized on the sale of EQUANS.

Net income attributable to non-controlling interests amounted to €173 million, compared with €97 million in 2021, due to the relatively good performance of companies with minority shareholders, notably in Renewables in the United States and Networks in France.

Return on Capital Employed (ROCE) improved during 2022 from approximately 9.1% in 2021 to 12.6% in 2022, mainly due to improved EBIT and a lower effective tax rate.

3 CHANGES IN NET FINANCIAL DEBT

Net financial debt stood at €24.1 billion down by €1.3 billion compared to December 31, 2021. This decrease was mainly driven by:

- Cash Flow From Operations of €8.0 billion;
- disposals of €9.0 billion, mainly related to the disposal of EQUANS.

These positive elements were partly offset by:

- capital expenditure over the period of €7.9 billion;
- dividends paid to ENGIE SA shareholders and to non-controlling interests of €2.7 billion;
- Belgian nuclear phase-out funding and expenses ⁽¹⁾ of €2.0 billion;
- new rights of use of €1.2 billion, mainly following the extension of the CNR hydro concession;
- other elements of €1.9 billion, mainly related to foreign exchange rates.

Changes in net financial debt break down as follows:

In millions of euros

(1) Capital expenditure net of DBSO proceeds, and changes in the scope of net financial debt of acquired companies.

(2) Mainly related to the renewal of the CNR concession.

(3) Excluding DBSO proceeds.

(4) Mainly derivatives, and MtM.

(1) Financing flows relating to Synatom were previously recorded in gross Capex and waste management/dismantling expenses in CFFO.

3 CHANGES IN NET FINANCIAL DEBT

Economic net debt stood at €38.8 billion, up €0.5 billion compared to December 31, 2021, mainly due to the increase in asset retirement obligation provisions (€+3.9 billion, mainly including the increase in nuclear provisions of €+3.3 billion following the triennial review) and other variation (€+1.1 billion, including fair value variation of dedicated assets relating to nuclear provisions and related derivative financial instruments), partly offset by funding from Synatom and waste/dismantling expenses (€-2.0 billion), lower financial net debt (€-1.3 billion) and employment benefits provisions (€-1.2 billion).

Changes in economic net debt break down as follows:

In millions of euros

(1) Change in fair value of dedicated assets relating to nuclear provisions and related derivative financial instruments.

The **net financial debt to EBITDA ratio** stood at 1.7x, down 0.6x compared to December 31, 2021. The average cost of gross debt was 2.73%, up 8 bps compared with December 31, 2021.

<i>In millions of euros</i>	Dec 31, 2022	Dec. 31, 2021
Net financial debt	24,054	25,350
EBITDA	13,713	10,563
NET DEBT/EBITDA RATIO	1.75	2.40

The **economic net debt to EBITDA ratio** stood at 2.8x, down 0.8x compared to December 31, 2021, and in line with the target ratio of below or equal to 4.0x.

<i>In millions of euros</i>	Dec 31, 2022	Dec. 31, 2021
Economic net debt	38,808	38,300
EBITDA	13,713	10,563
ECONOMIC NET DEBT/EBITDA RATIO	2.83	3.63

3.1 Cash flow from operations (CFFO)

Cash Flow From Operations amounted to €8.0 billion, up €1.6 billion compared to 2021. This increase was mainly due to higher operating cash-flows (+€2.6 billion) driven by higher EBITDA (+€3.1 billion).

Working Capital Requirements were negative €2.4 billion, identical to previous year, with flat variation due to net negative price effects (-€4.8 billion), mainly due to higher valuation of gas stocks (-€1.8 billion), net receivables (-€2.3 billion) and unbilled volumes (-€0.5 billion linked to energy in the meter) and European supply tariff shields (-€1.0 billion), due to French gas and electricity tariff freeze (-€1.7 billion), Romania tariff shield and Belgium social tariff (-€0.6 billion), partly offset by the French gas tariff freeze monetization (+€1.4 billion). These effects were offset by positive effects of margin calls (+€4.0 billion) and nuclear activities (+€1.5 billion, mainly G2 tax, inframarginal rent cap and ONDRAF tariff revision).

3.2 Liquidity

Liquidity stood at €20.9 billion, including €15.7 billion of cash ⁽¹⁾. The Group maintained a strong level of liquidity, by implementing dedicated management actions to address pressure on liquidity, mainly caused by unprecedented levels of commodity prices.

3.3 Net investments

Total Capex amounted to €7.9 billion, including growth CAPEX of €5.5 billion.

Capital expenditure (CAPEX) by activity

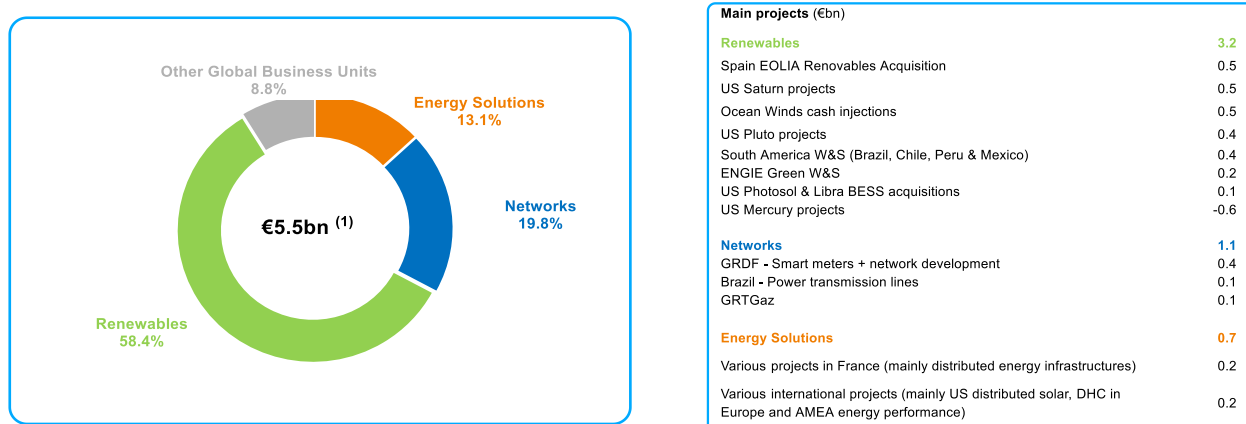

In millions of euros

⁽¹⁾ Cash and cash equivalents plus liquid debt instruments held for cash investment purposes minus bank overdrafts.

3 CHANGES IN NET FINANCIAL DEBT

Growth capital expenditure amounted to €5.5 billion, breaking down as follows by activity:

(1) Net of disposals under DBSO operations, excluding Corporate.

The **geography/activity matrix** for growth capital expenditure is presented below:

In millions of euros	France	Rest of Europe	Latin America	USA & Canada	Middle East, Asia & Africa	Others	Dec. 31, 2022
Renewables	361	1,094	876	648	214	10	3,202

Nuclear	-	-	-	-	-	-	-
Others	-	4	-	(1)	-	218	221
of which GEMS	-	-	-	-	-	(31)	(31)
TOTAL CAPEX	1,338	468	942	1,071	171	285	4,275

(1) Growth capital expenditure (CAPEX) now include changes in the scope of net financial debt of acquired companies. Data at December 31, 2021 have been restated accordingly.

(2) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

Net investments for the period amounted to €0.2 billion and include:

- growth capital expenditure for €5.5 billion (see above);
- gross maintenance capital expenditure amounting to €2.4 billion;

- new right-of-use assets recognized over the period for €1.2 billion;
- the effects of the reduction in net financial debt recognized in accordance with IFRS 5 as Non-current assets held for sale and discontinued operations for a negative €0.9 billion;
- proceeds from disposals representing an inflow of €-7.9 billion.

3.4 Dividends and movements in treasury stock

Dividends and movements in treasury stock during the period amounted to €3.1 billion and include ENGIE's dividend payment in May 2022 for the 2021 fiscal year for €2.1 billion, and dividends paid by various subsidiaries to their non-controlling interests in an amount of €0.5 billion, the hybrid debt repurchase and payment of interest for €0.5 billion, and capital movements relating to the global employee share ownership plan Link 2022 for €0.1 billion.

3.5 Net financial debt at December 31, 2022

Excluding amortized cost but including the impact of foreign currency derivatives, at December 31, 2022 a total of 83% of net financial debt was denominated in euros, 11% in US dollars and 10% in Brazilian real.

Including the impact of financial instruments, 90% of net debt is at fixed rates.

The average maturity of the Group's net debt is 12.5 years.

At December 31, 2022, the Group had total undrawn confirmed credit lines of €12.5 billion.

3.6 Rating

On August 17, 2022, S&P reaffirmed its BBB+ long-term issuer rating and short-term issuer rating at A-2, with a stable outlook.

On September 1, 2022, Moody's reaffirmed its Baa1/P-2 senior unsecured rating, with a stable outlook.

On October 19, 2022 Fitch confirmed its long-term issuer rating at A-, and its short-term rating at F1, with a stable outlook.

4 OTHER ITEMS IN THE STATEMENT OF FINANCIAL POSITION

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021	Net change
Non-current assets	131,521	117,418	14,102
<i>Of which goodwill</i>	<i>12,854</i>	<i>12,799</i>	<i>55</i>
<i>Of which property, plant and equipment and intangible assets, net</i>	<i>62,853</i>	<i>57,863</i>	<i>4,990</i>
<i>Of which derivative instruments</i>	<i>33,134</i>	<i>25,616</i>	<i>7,517</i>
<i>Of which investments in equity method entities</i>	<i>9,279</i>	<i>8,498</i>	<i>780</i>
Current assets	103,969	107,915	(3,946)
<i>Of which trade and other payables</i>	<i>31,310</i>	<i>32,556</i>	<i>(1,245)</i>
<i>Of which derivative instruments</i>	<i>15,252</i>	<i>19,373</i>	<i>(4,120)</i>
<i>Of which assets classified as held for sale</i>	<i>428</i>	<i>11,881</i>	<i>(11,452)</i>
Total equity	39,285	41,980	(2,695)
Provisions	27,027	25,459	1,568
Borrowings	40,591	41,048	(457)
Financial instruments derivatives	51,276	46,931	4,346
Other liabilities	77,311	69,916	7,395
<i>Of which liabilities directly associated with assets classified as held for sale</i>	<i>371</i>	<i>7,415</i>	<i>(7,045)</i>

The carrying amount of **property, plant and equipment and intangible assets** was €62.9 billion, up €5.0 billion compared with December 31, 2021. This increase was primarily the result of investments carried out over the period (positive €8.7 billion impact) and translation adjustments (positive €1.0 billion impact, mainly due to the appreciation of the US dollar and the Brazilian real), partially offset by depreciation and amortization (negative €4.6 billion impact) and impairment losses (negative €2.3 billion impact).

Goodwill amounted to €12.9 billion, stable compared with December 31, 2021.

Investments in equity method entities increased by €0.8 billion, primarily due to the acquisition of Eolia Renovables (see Note 4.3).

Total equity amounted to €39.3 billion, a decrease of €2.7 billion compared with December 31, 2021, essentially reflecting the payment of dividends (negative €2.6 billion impact), operations on deeply-subordinated perpetual notes (negative €0.5 billion impact), and other comprehensive income (€0.2 billion negative impact, including a negative €4.7 billion of cash flow hedges on commodities, a positive €2.7 billion of actuarial gains and losses, a positive €0.9 billion of share in equity method entities, and a positive €0.8 billion of translation adjustments) offset by net income for the period (positive €0.4 billion impact).

Provisions increased by €1.6 billion to €27.0 billion compared with December 31, 2021. This increase stemmed mainly from the increase in provisions for the decommissioning of nuclear production facilities and for the management of the back-end of the nuclear fuel cycle by Synatom (see Note 17), partially offset by actuarial gains on provisions for post-employment benefits and other long-term benefits (which deducted €2.8 billion from the provision amount) owing to the sharp rise in discount rates over the period (see Note 18).

The increase in **derivative instruments** is mainly due to the extreme volatility in commodity prices over the year.

“**Assets classified as held for sale**” and “**Liabilities directly associated with assets classified as held for sale**” correspond solely to a thermal power plant in Brazil, following the disposal of EQUANS in October 2022.

5 PARENT COMPANY FINANCIAL STATEMENTS

The figures provided below relate to the financial statements of ENGIE SA, prepared in accordance with French GAAP and applicable regulations.

Revenues for ENGIE SA in 2022 totaled €68,500 million, an increase compared to 2021 (€36,224 million), both on the gas and electricity markets.

Net operating income amounted to €1,051 million in 2022, an improvement of €1,897 million compared with a loss of €846 million in 2021. The energy margin deteriorated by €152 million.

Net financial income amounted to €1,786 million, an increase of €1,405 million compared to 2021 due to higher dividends received.

Non-recurring items represented a loss of €1,461 million, mainly comprising changes in the value of equity interests (including Electrabel) and capital gains on the disposal of shares (including GazTransport et Technigaz).

The income tax benefit amounted to €321 million, versus an income tax benefit of €474 million in 2021, including a tax consolidation benefit of €253 million.

Net income for the year came in at €1,697 million.

Shareholders' equity amounted to €31,117 million at end-2022 compared with €31,211 million at end-2021. The €94 million decrease was mainly due to the 2022 net income of €1,697 million, and to the 2021 dividend payment for an amount of €2,093 million.

At December 31, 2022, borrowings and debt stood at €40,885 million, and cash and cash equivalents totaled €16,809 million (of which €10,105 million relating to subsidiaries' current accounts).

Information relating to payment terms

Pursuant to Articles L.441-14 and D.441-6 of the French Commercial Code, companies whose annual financial statements are subject to a statutory audit must publish information regarding supplier and customer payment terms. The purpose is to demonstrate that there is no significant failure to comply with such terms.

ENGIE SA, the parent company of the Group, is a French société anonyme with a Board of Directors that is subject to the provisions of Book II of the French Commercial Code (Code du commerce), as well as to all other provisions of French law applicable to French commercial companies. It was incorporated on November 20, 2004 for a period of 99 years.

It is governed by current and future laws and by regulations applicable to sociétés anonymes and its bylaws.

The Group is headquartered at 1 place Samuel de Champlain, 92400 Courbevoie (France).

ENGIE shares are listed on the Paris, Brussels and Luxembourg stock exchanges.

On February 20, 2023, the Group's Board of Directors approved and authorized for issue the consolidated financial statements of the Group for the year ended December 31, 2022.

NOTE 1 ACCOUNTING FRAMEWORK AND BASIS FOR PREPARING THE CONSOLIDATED FINANCIAL STATEMENTS

1.1 Accounting standards

Pursuant to European Regulation (EU) 2019/980 dated March 14, 2019, financial information concerning the assets, liabilities, financial position, and profit and loss of ENGIE has been provided for the last two reporting periods (ended December 31, 2021 and 2022). This information was prepared in accordance with European Regulation (EC) 1606/2002 "on the application of international accounting standards" dated July 19, 2002. The Group's consolidated financial statements for the year ended December 31, 2022 have been prepared in accordance with IFRS Standards as published by the International Accounting Standards Board and endorsed by the European Union ⁽¹⁾.

The accounting standards applied in the consolidated financial statements for the year ended December 31, 2022 are consistent with the policies used to prepare the consolidated financial statements for the year ended December 31, 2021, except for those described below.

1.1.1 IFRS Standards, amendments or IFRIC Interpretations applicable in 2022

- Amendments to IAS 37 – *Provisions, Contingent Liabilities and Contingent Assets: Onerous Contracts* - Cost of Fulfilling a Contract.
- Annual improvements to IFRSs – 2018-2020 cycle.

These amendments and improvements have no material impact on the Group's consolidated financial statements.

- Amendments to IAS 16 – *Property, Plant and Equipment: Proceeds before Intended Use*.

The Group elected to early adopt these amendments, as indicated in Note 1.1.3 to the consolidated financial statements for the year ended December 31, 2021. These amendments have no material impact on the Group's consolidated financial statements.

(1) Available on the European Commission's website:

<http://eur-lex.europa.eu/legal-content/FR/TXT/?uri=CELEX:02002R1606-20080410>

1.1.2 Other text

- In its March 2021 agenda decision, the IFRS Interpretations Committee (IFRIC) clarified the accounting treatment of configuration and customization costs for software in a SaaS (Software as a Service) arrangement. According to the IFRIC, some of these costs should be recognized as an expense (and not as an intangible asset). This decision does not have a material impact on the Group's consolidated financial statements.

1.1.3 IFRS Standards, amendments or IFRIC Interpretations effective as from 2023 and that the Group has elected not to early adopt

- Amendments to IAS 1 - *Presentation of Financial Statements*: Classification of Liabilities as Current or Non-Current ⁽¹⁾.
- IFRS 17 - *Insurance Contracts* (including amendments).
- Amendments to IAS 1 – *Presentation of Financial Statements* and the Materiality Practice Statement: Disclosure of Accounting Policies.
- Amendments to IAS 8 – *Accounting Policies, Changes in Accounting Estimates and Errors*: Definition of Accounting Estimates.
- Amendments to IAS 12 – *Income Taxes*: Deferred Tax related to Assets and Liabilities arising from a Single Transaction.
- Amendments to IFRS 16 - *Leases*: Lease Liability in a Sale and Leaseback ⁽¹⁾.

The impact of these standards and amendments is currently being assessed.

1.2 Measurement and presentation basis

1.2.1 Historical cost convention

The Group's consolidated financial statements are presented in euros and have been prepared using the historical cost convention, except for financial instruments, which are accounted for under the financial instrument categories defined by IFRS 9.

1.2.2 Chosen options

1.2.2.1 Reminder of IFRS 1 transition options

The Group used some of the options available under IFRS 1 for its transition to IFRS in 2005. The options that continue to have an impact on the consolidated financial statements are:

- translation adjustments: the Group elected to reclassify cumulative translation adjustments within consolidated equity at January 1, 2004;
- business combinations: the Group elected not to restate business combinations that took place prior to January 1, 2004 in accordance with IFRS 3.

1.2.2.2 Business combinations

Business combinations carried out prior to January 1, 2010 were accounted for in accordance with IFRS 3 prior to the revision. In accordance with IFRS 3 revised, these business combinations have not been restated.

(1) These standards and amendments have not yet been adopted by the European Union.

Since January 1, 2010, the Group applies the purchase method as defined in IFRS 3 revised, which consists in recognizing the identifiable assets acquired and liabilities assumed at their fair values at the acquisition date, as well as any non-controlling interests in the acquiree. Non-controlling interests are measured either at fair value or at the entity's proportionate interest in the net identifiable assets of the acquiree. The Group determines on a case-by-case basis which measurement option to be used to recognize non-controlling interests.

1.2.2.3 Consolidated statement of cash flows

The consolidated statement of cash flows is prepared using the indirect method starting from net income.

"Interest received on non-current financial assets" is classified within investing activities because it represents a return on investments. "Interest received on cash and cash equivalents" is shown as a component of financing activities because the interest can be used to reduce borrowing costs. This classification is consistent with the Group's internal organization, where debt and cash are managed centrally by the Group treasury department.

As impairment losses on current assets are considered to be definitive losses, changes in current assets are presented net of impairment.

Cash flows relating to the payment of income tax are presented on a separate line.

1.2.3 Foreign currency transactions

1.2.3.1 Translation of foreign currency transactions

Foreign currency transactions are recorded in the functional currency at the exchange rate prevailing on the date of the transaction.

Functional currency is the currency of the primary economic environment in which an entity operates, which in most cases corresponds to local currency. However, certain entities may have a functional currency different from the local currency when that other currency is used for an entity's main transactions and better reflects its economic environment.

At each reporting date:

- monetary assets and liabilities denominated in foreign currencies are translated at year-end exchange rates. The resulting translation gains and losses are recorded in the consolidated income statement for the year to which they relate;
- non-monetary assets and liabilities denominated in foreign currencies are recognized at the historical cost applicable at the date of the transaction.

1.2.3.2 Translation of the financial statements of subsidiaries with a functional currency other than the euro (the presentation currency)

The statements of financial position of these subsidiaries are translated into euros at the official year-end exchange rates. Income statement and cash flow statement items are translated using the average exchange rate for the year. Any differences arising from the translation of the financial statements of these subsidiaries are recorded under "Translation adjustments" as other comprehensive income.

Goodwill and fair value adjustments arising on the acquisition of foreign entities are classified as assets and liabilities of those foreign entities and are therefore denominated in the functional currencies of the entities and translated at the year-end exchange rate.

1.3 Use of estimates and judgment

1.3.1 Estimates

The preparation of consolidated financial statements requires the use of estimates and assumptions to determine the value of assets and liabilities and contingent assets and liabilities at the reporting date, as well as income and expenses reported during the period.

Developments in the economic and financial environment, particularly relating to highly volatile commodities markets and the war in Ukraine, have prompted the Group to step up its risk oversight procedures, mainly in measuring financial instruments, assessing contingencies related to interruptions in the natural gas supply, as well as counterparty and liquidity risks. The estimates used by the Group, among other things, to test for impairment and to measure provisions, also take into account this environment and the sharp market volatility.

Accounting estimates are made in a context that remains sensitive to energy market developments, therefore making it difficult to apprehend medium- and short-term economic prospects. Particular attention has been paid to the consequences of sharp fluctuations in the price of gas and electricity.

Due to uncertainties inherent in the estimation process, the Group regularly revises its estimates in light of currently available information. Final outcomes could differ from those estimates.

The key estimates used in preparing the Group's consolidated financial statements relate mainly to:

- measurement of the recoverable amount of goodwill (see *Note 13.1*), other intangible assets (see *Note 13.2*) and property, plant and equipment (see *Note 13.3*);
- measurement of the fair value of financial assets and liabilities, and, in the current context, factoring in the uncertainty surrounding the key assumptions used, in particular the contingencies related to interruptions in the natural gas supply as well as the effects on the minority interest held by the Group in Nord Stream AG and on the loan related to the financing of the Nord Stream 2 pipeline project (see *Note 14*). The Group has also updated the main valuation inputs of its commodity derivatives, in particular the "bid ask" reserve, to reflect the increased volatility of commodity prices and the reduced liquidity observed in the European gas and electricity markets in the second half of 2022 (see *notes 14 and 15*);
- assessment of expected credit losses, particularly in order to update probabilities of default and other inputs, mainly for calculating the CVA (Credit Valuation Adjustment) in an uncertain context with high market price volatility (see *Note 15*);
- measurement of provisions, particularly for the back-end of the nuclear fuel cycle, dismantling obligations, disputes, and pensions and other employee benefits (see *Notes 17 and 18*);
- measurement of the fair value of assets acquired and liabilities assumed in a business combination (see *Note 4*);
- measurement of un-metered revenues (energy in the meter), for which the valuation techniques have been impacted by changes in certain customers' consumption habits in a context of sharp fluctuations in commodity prices (see *Note 7*);
- measurement of recognized tax loss carry-forwards, taking into account, where applicable, taxable income revisions and projections (see *Note 11*).

1.3.2 Judgment

As well as relying on estimates, Group management also makes judgments to define the appropriate accounting policies to apply to certain activities and transactions, particularly when the IFRS Standards and IFRIC Interpretations in force do not specifically deal with the related accounting issues.

In particular, the Group exercised its judgment in:

- assessing the type of control (see *Notes 2 and 3*);
- identifying the performance obligations of sales contracts (see *Note 7*);

- determining how revenues are recognized for distribution or transmission services invoiced to customers (see Note 7);
- recognizing support measures granted by certain governments, particularly in France and Romania (“tariff shield”), aimed at protecting both consumers and suppliers of gas and electricity against sharp fluctuations in commodity prices (see Note 7);
- identifying “own use contracts” as defined by IFRS 9 within non-financial purchase and sale contracts (electricity, gas, etc.) (see Note 14);
- identifying offsetting arrangements that meet the criteria set out in IAS 32 *Financial Instruments: Presentation* (see Note 14);
- determining whether arrangements are or contain a lease (see Note 13.3);
- recognizing new contributions in the energy sector in Europe (see Note 8).

Entities for which judgment on the nature of control has been exercised are listed in Note 2 “Main subsidiaries at December 31, 2022” and Note 3 “Investments in equity method entities”.

1.3.3 Consideration of climate issues in the preparation of the Group's financial statements

In addition to the operational and financial issues and risks taken into account in determining future cash flows, the discount rate net of inflation and projected growth, the Group has also exercised its judgment to use assumptions reflecting climate change issues, in order to determine the potential impact on the consolidated financial statements, particularly if there were indications that non-financial assets might be impaired:

- The commitments made by France, Europe and various countries at international level, in particular with regard to long-term carbon neutrality, are taken into account (i) in assessing the value of the Group's assets, in particular through the long-term price scenarios used in impairment tests (see Note 13.4), and (ii) in assessing dismantling provisions, in particular by assessing the useful life of the gas infrastructures in France based on the expected change in the energy mix (see Note 17).
- The commitments specifically made by ENGIE are also reflected in the assessment of the value of the Group's assets (see Note 13.1), in particular (i) the complete withdrawal from coal by 2027, which primarily concerns South America, depending on each asset's specific prospects (closure, conversion or disposal), and (ii) the gradual decarbonization of the Group's power generation activities to net zero by 2045 and, more broadly, the Group's investment strategy in favor of the energy transition by expanding its renewable energy fleet, substituting natural gas with renewable gas, thereby confirming a mixed gas/electricity scenario in the Group's long-term projections under the present regulation/remuneration methods for regulated assets (in France in particular), and developing low-carbon services offerings.

As a reminder, the management of climate and environmental risks and their challenges for the Group are presented in Chapter 2 “Risk factors” and Chapter 3 “Non-Financial Statement and CSR Information” of the Universal Registration Document.

NOTE 2 MAIN SUBSIDIARIES AT DECEMBER 31, 2022

Accounting standards

Controlled entities (subsidiaries) are fully consolidated in accordance with IFRS 10 – *Consolidated Financial Statements*. An investor (the Group) controls an entity and therefore must consolidate it if all of the following three criteria are met:

- it has the ability to direct the relevant activities of the entity;
- it has the rights and is exposed to variable returns from its involvement with the entity;
- it has the ability to use its power over the entity to affect the investor's return.

2.1 List of main subsidiaries at December 31, 2022

The following lists are made available by the Group to third parties, pursuant to Regulation No. 2016-09 of the French accounting standards authority (ANC) issued on December 2, 2016:

- list of companies included in consolidation;
- list of companies excluded from consolidation because their individual and cumulative incidence on the Group's consolidated financial statements is not material. They correspond to entities deemed not significant as regards the Group's main key figures (revenues, total equity, etc) or entities that have ceased all activities and are undergoing liquidation/closure proceedings;
- list of main non-consolidated interests.

This information is available on the Group's website (www.engie.com, Investors/Regulated information section). Non-consolidated companies are classified under non-current financial assets (see Note 14.1.1.1) under "Equity instruments at fair value".

The list of the main subsidiaries consolidated under the full consolidation method presented below was determined, as regards operating entities, based on their contribution to Group revenues, EBITDA, net income and net debt. The main equity-accounted investments (associates and joint ventures) are presented in Note 3 "Investments in equity method entities".

Some entities such as ENGIE SA, ENGIE Énergie Services SA or Electrabel SA comprise both operating activities and headquarters functions which report to management teams of different reportable segments. In the following tables, these operating activities and headquarters functions are shown within their respective reportable segments under their initial company name followed by a (*) sign.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 2 MAIN SUBSIDIARIES AT DECEMBER 31, 2022

Renewables

Company name	Activity	Country	% interest	
			Dec. 31, 2022	Dec. 31, 2021
Compagnie Nationale du Rhône	Electricity distribution and generation	France	50.0	50.0
ENGIE Energía Perú *	Electricity distribution and generation	Peru	61.8	61.8
ENGIE Green	Electricity distribution and generation	France	100.0	100.0

(1) Activities held for sale and classified as "Discontinued operations" at December 31, 2021 (see Note 4 "Main changes in Group structure").

2.2 Significant judgments exercised when assessing control

The Group primarily considers the following information and criteria when determining whether it has control over an entity:

- governance arrangements: voting rights and whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities;
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity.

The Group exercised its judgment regarding the entities and sub-groups described below.

Entities in which the Group has the majority of the voting rights

GRTgaz (France Infrastructures): 60.8%

The analysis of the shareholders' agreement concluded with Société d'Infrastructures Gazières, a subsidiary of *Caisse des Dépôts et Consignations* (CDC), which holds 38.6% of the share capital of GRTgaz, was completed by an assessment of the rights granted to the French Energy Regulatory Commission (*Commission de Régulation de l'Énergie* – CRE). As a regulated activity, GRTgaz has a dominant position on the gas transportation market in France. Accordingly, since the transposition of the Third European Directive of July 13, 2009 into French law (*Code de l'énergie* – Energy Code) on May 9, 2011, GRTgaz has been subject to independence rules as regards its directors and senior management team. The French Energy Code confers certain powers on the CRE in the context of its duties to control the proper functioning of the gas markets in France, including verifying the independence of the members of the Board of Directors and senior management and assessing the choice of investments. The Group considers that it exercises control over GRTgaz and its subsidiaries (including Elengy) based on the Group's ability to appoint the majority of the members of the Board of Directors and take decisions about the relevant activities, especially in terms of the level of investment and planned financing.

Entities in which the Group does not have the majority of the voting rights

In the entities in which the Group does not have the majority of the voting rights, judgment is exercised with regard to the following items, in order to assess whether there is a situation of *de facto* control:

- dispersion of the shareholding structure: number of voting rights held by the Group relative to the number of rights held respectively by the other vote holders and their dispersion;
- voting patterns at shareholders' meetings: the percentages of voting rights exercised by the Group at shareholders' meetings in recent years;
- governance arrangements: representation in the governing body with strategic and operational decision-making power over the relevant activities;
- rules for appointing key management personnel;

- contractual relationships and material transactions.

The main fully consolidated entity in which the Group does not have the majority of the voting rights at December 31, 2022 is Compagnie Nationale du Rhône (49.98%).

Compagnie Nationale du Rhône ("CNR" – Renewables France): 49.98%

The Group holds 49.98% of the share capital of CNR, with CDC holding 33.2%, and the balance of 16.82% being dispersed among around 200 local authorities. In view of the current provisions of the French "Murcef" law, under which a majority of CNR's share capital must remain under public ownership, the Group is unable to hold more than 50% of the share capital. However, the Group considers that it exercises *de facto* control as it holds the majority of the voting rights exercised at shareholders' meetings due to the widely dispersed shareholding structure and the absence of evidence of the minority shareholders acting in concert.

2.3 Main subsidiaries with non-controlling interests

The following table shows the subsidiaries with non-controlling interests that are deemed to be material, the respective contributions to equity and to net income at December 31, 2022 and December 31, 2021, as well as the dividends paid to non-controlling interests:

Company name	Activity	Percentage interest of non-controlling interests		Net income/(loss) of non-controlling interests		Equity of non-controlling interests		Dividends paid to non-controlling interests	
		Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021
In millions of euros

NOTE 3 INVESTMENTS IN EQUITY METHOD ENTITIES

Accounting standards

The Group accounts for its investments in associates (entities over which the Group has significant influence) and joint ventures using the equity method. Under IFRS 11 – *Joint Arrangements*, a joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.

The respective contributions of associates and joint ventures in the statement of financial position, the income statement and the statement of comprehensive income at December 31, 2022 and December 31, 2021 are as follows:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Statement of financial position		
Investments in associates	4,187	4,007
Investments in joint ventures	5,092	4,492
INVESTMENTS IN EQUITY METHOD ENTITIES	9,279	8,498
Income statement		
Share in net income/(loss) of associates	400	306
Share in net income/(loss) of joint ventures	659	495
SHARE IN NET INCOME/(LOSS) OF EQUITY METHOD ENTITIES	1,059	800
Statement of comprehensive income		
Share of associates in "Other comprehensive income/(loss)"	510	208
Share of joint ventures in "Other comprehensive income/(loss)"	366	62
SHARE OF EQUITY METHOD ENTITIES IN "OTHER COMPREHENSIVE INCOME/(LOSS)"	876	270

Significant judgments

The Group primarily considers the following information and criteria in determining whether it has joint control or significant influence over an entity:

- governance arrangements: whether the Group is represented in the governing bodies, majority rules and veto rights;
- the nature of substantive or protective rights granted to shareholders, relating to the entity's relevant activities. This can be difficult to determine in the case of "project management" or "one-asset" entities, as certain decisions concerning the relevant activities are made upon the creation of the joint arrangement and remain valid throughout the project. Accordingly, the analysis of rights relates to the relevant residual activities of the entity (those that significantly affect the variable returns of the entity);
- deadlock resolution mechanisms;
- whether the Group is exposed, or has rights, to variable returns from its involvement with the entity. This can also involve analyzing the Group's contractual relations with the entity, in particular the conditions in which these contracts are entered into, their duration as well as the management of conflicts of interest that may arise when the entity's governing body casts votes.

The Group exercised its judgment regarding the following entities and sub-groups:

Project management entities in the Middle East and in Africa

The significant judgments made in determining the consolidation method to be applied to these project management entities related to the risks and rewards relating to contracts between ENGIE and the entity concerned, as well as an analysis of the residual relevant activities over which the entity retains control after its creation. The Group considers that it exercises significant influence or joint control over these entities, since the decisions taken throughout the term of the project about the relevant activities such as refinancing, or the renewal or amendment of significant contracts (sales, purchases, operating and maintenance services) require, depending on the case, the unanimous consent of two or more parties sharing control.

Joint ventures in which the Group holds an interest of more than 50%

Tihama (60%)

ENGIE holds a 60% stake in the Tihama cogeneration plant in Saudi Arabia and its partner Saudi Oger holds 40%. The Group considers that it has joint control over Tihama since the decisions about its relevant activities, including for example the preparation of the budget and amendments to major contracts, etc., require the unanimous consent of the parties sharing control.

Transportadora Asociada de Gas S.A. ("TAG" - Latin America): 65.0% holding interest (directly and indirectly) representing a net interest in TAG of 54.8%

The Group exercises joint control over TAG since the decisions about its relevant activities, including, for example, the preparation of the budget and medium-term plan, investments, operations and maintenance, etc., are taken according to a majority vote requiring the agreement of ENGIE and *Caisse de dépôt et placement du Québec* (CDPQ). The Group holds potential voting rights but they are not yet exercisable. Consequently, this investment is accounted for using the equity method.

Joint control – difference between joint ventures and joint operations

Classifying a joint arrangement requires the Group to use its judgment to determine whether the entity in question is a joint venture or a joint operation. IFRS 11 requires an analysis of "other facts and circumstances" when determining the classification of jointly controlled entities.

The IFRS Interpretations Committee (IFRS IC) (November 2014) decided that for an entity to be classified as a joint operation, other facts and circumstances must give rise to direct enforceable rights to the assets, and obligations for the liabilities, of the joint arrangement.

In view of this position and its application to our analyses, the Group has no material joint operations at December 31, 2022.

3.1 Investments in associates

3.1.1 Contribution of material associates and of associates that do not have material impact on the Group's financial statements taken individually

The table hereafter shows the contribution of each material associate along with the aggregate contribution of associates deemed not material taken individually, in the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from equity method entities" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material associates. These criteria include the contribution to the consolidated line items "Share in net income/(loss) of associates" and "Investments in associates", the total assets of associates in Group share, and associates carrying major projects in the study or construction phase for which the related investment commitments are material.

INVESTMENTS IN ASSOCIATES					4,187	4,007	400	306	510	208	271	234

(1) Investments in associates operating gas-fired power plants and seawater desalination facilities in the Arabian Peninsula have been grouped together under "Project management entities in the Middle East". This mainly includes around 40 associates operating thermal power plants with a total installed capacity of 26,974 MW (at 100%).

These associates have fairly similar business models and joint arrangements: the project management entities selected as a result of a competitive bidding process develop, build and operate power generation plants and seawater desalination facilities. The entire output of these facilities is sold to government-owned companies under power and water purchase agreements, over periods generally spanning 20 to 30 years.

In accordance with their contractual arrangements, the corresponding plants are recognized in accordance with IFRIC 12, IFRS 16 or IAS 16 as property, plant and equipment or as financial receivables. The shareholding structure of these entities systematically includes a government-owned company based in the same country as the project management entity. The Group's percentage interest and percentage voting rights in each of these entities varies between 20% and 50%.

(2) See Note 4.1.4 "Disposal of a portion of ENGIE's interest in French company Gaztransport & Technigaz SA ("GTT")".

The share in net income/(loss) of associates includes a net non-recurring loss of €18 million in 2022 (compared to net non-recurring income of €6 million in 2021), mainly including changes in the fair value of derivative instruments, impairment losses and disposal gains and losses, net of tax (see Note 5.3 "Net recurring income Group share (NriGs)").

3.1.2 Financial information regarding material associates

The tables below provide condensed financial information for the Group's main associates. The amounts shown have been determined in accordance with IFRS, before the elimination of intragroup transactions and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the associate performed at the acquisition date at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE".

- (1) Contassur is a life insurance company accounted for using the equity method. Contassur offers insurance contracts, chiefly with pension funds that cover post-employment benefit obligations for Group employees and also employees of other companies mainly engaged in regulated activities in the electricity and gas sector in Belgium. Insurance contracts entered into by Contassur represent reimbursement rights recorded within "Other assets" in the statement of financial position. These reimbursement rights totaled €208 million at December 31, 2022 (€229 million at December 31, 2021).

3.2 Investments in joint ventures

3.2.1 Contribution of joint ventures to the Group

The table below shows the contribution of each material joint venture along with the aggregate contribution of joint ventures deemed not material taken individually to the consolidated statement of financial position, income statement, statement of comprehensive income, and the "Dividends received from equity method entities" line of the statement of cash flows.

The Group used qualitative and quantitative criteria to determine material joint ventures. These criteria include the contribution to the line items "Share in net income/(loss) of joint ventures" and "Investments in joint ventures", the Group's share in the total assets of joint ventures, and joint ventures conducting major projects in the study or construction phase for which the related investment commitments are material.

Company name	Activity	Capacity	Consolidation percentage of investments in joint ventures		Carrying amount of investments in joint ventures		Share in net income/(loss) of joint ventures		Other comprehensive income/(loss) of joint ventures		Dividends received from joint ventures	
			Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021

INVESTMENTS IN JOINT VENTURES					5,092	4,492	659	495	366	62	442	428

(1) The Group's interest in Transportadora Asociada de Gás S.A. (TAG) is 54.83%.

(2) The Group's interest in Transmisora Eléctrica del Norte is 30%.

The share in net income/(loss) of joint ventures includes non-recurring gain of €1 million in 2022 (non-recurring gain of €44 million in 2021), resulting chiefly from changes in the fair value of derivatives, impairment losses and disposal gains and losses, net of tax (see Note 5.3 "Net recurring income Group share (NriGs)").

3.2.2 Financial information regarding material joint ventures

The amounts shown have been determined in accordance with IFRS before the elimination of intragroup items and after (i) adjustments made in line with Group accounting policies and (ii) fair value measurements of the assets and liabilities of the joint venture performed at the date of acquisition at the level of ENGIE, as required by IAS 28. All amounts are presented based on a 100% interest with the exception of "Total equity attributable to ENGIE" in the statement of financial position.

3.2.2.1 Information on the income statement and statement of comprehensive income

AT DECEMBER 31, 2022	196	191	53	64	942	22	105

3.3 Other information on investments accounted for using the equity method

3.3.1 Unrecognized share of losses of associates and joint ventures

Cumulative unrecognized losses of associates (corresponding to the cumulative amount of losses exceeding the carrying amount of investments in the associates concerned) including other comprehensive income/(loss), amounted to €6 million in 2022 (versus €49 million in 2021).

These unrecognized losses correspond to the negative fair value of derivative instruments designated as interest rate and commodity hedges ("Other comprehensive income/(loss)") contracted by associates in the Middle-East, Africa and Asia in connection with the financing of construction projects for power generation plants.

3.3.2 Commitments and guarantees given by the Group in respect of equity method entities

At December 31, 2022, the main commitments and guarantees given by the Group in respect of equity method entities concern:

- Energia Sustentável do Brasil ("Jirau"), for an aggregate amount of BRL 4,204 million (€755 million).
At December 31, 2022, the amount of loans granted by Banco Nacional de Desenvolvimento Econômico e Social, the Brazilian Development Bank, to Energia Sustentável do Brasil amounted to BRL 10,511 million (€1,889 million). Each partner stands as guarantor for this debt to the extent of its ownership interest in the consortium;
- TAG for bank guarantees for an amount of €140 million;
- The project management entities in the Middle East and Africa, for an aggregate amount of €694 million.
Commitments and guarantees given by the Group in respect of these project management entities chiefly correspond to:
 - letters of credit to guarantee debt service reserve accounts for an aggregate amount of €179 million.
The project financing set up in certain entities can require those entities to maintain a certain level of cash within the company (usually enough to service its debt for six months). This is particularly the case when the financing is without recourse. However, this level of cash may be replaced by letters of credit,
 - collateral given to lenders in the form of pledged shares in the project management entities, for an aggregate amount of €280 million,
 - performance bonds and other guarantees for an amount of €235 million.

NOTE 4 MAIN CHANGES IN GROUP STRUCTURE

Accounting standards

In accordance with IFRS 5 – *Non-Current Assets Held for Sale and Discontinued Operations*, assets or groups of assets held for sale are presented separately on the face of the statement of financial position and are measured and accounted for at the lower of their carrying amount and fair value less costs to sell.

An asset is classified as “held for sale” when its sale is highly probable within twelve months from the date of classification, when it is available for immediate sale under its present condition and when management is committed to a plan to sell the asset and an active program to locate a buyer and complete the plan has been initiated. To assess whether a sale is highly probable, the Group takes into consideration among other things indications of interest and offers received from potential buyers as well as specific execution risks attached to certain transactions.

If an asset classified as “held for sale” no longer meets the above conditions it will be reclassified in accordance with the standard.

Furthermore, assets or groups of assets are presented as discontinued operations in the Group’s consolidated financial statements when they are classified as “held for sale” and represent a separate major line of business under IFRS 5.

4.1 Disposals carried out in 2022

4.1.1 Impact of the main disposals and sale agreements during the period

As part of the presentation of its new strategy, on May 18, 2021, the Group confirmed a significant €11 billion increase in its asset portfolio rotation program, the majority of which was carried out end of 2022.

The table below shows the impact of the main disposals and sale agreements of 2022 on the Group’s net financial debt, excluding partial disposals with respect to DBSO ⁽¹⁾ activities:

<i>In millions of euros</i>	Disposal price	Reduction in net debt
Disposal of EQUANS ⁽¹⁾	6,146	6,975
Earn out related to the disposal of a share of ENGIE’s interest in SUEZ - France	347	347
Disposal of ENGIE’s residual interest in SUEZ - France	227	227
Disposal of a share of ENGIE’s interest in GTT - France	835	835
Disposals of ENGIE’s interests in geothermal assets - Indonesia	263	342
Other disposals that are not material taken individually	177	(29)
Effects of classification as “assets held for sale”	-	297
TOTAL	7,995	8,994

(1) Does not include the reduction in external net financial debt recognized as held for sale in accordance with IFRS 5 at December 31, 2021.

The €8,994 million reduction in net financial debt at December 31, 2022 is in addition to the €2,025 million decrease previously recognized at December 31, 2021 as part of the asset disposal program, representing a total of €11,018 million to date. Disposals in the process of completion at December 31, 2022 are described in Note 4.2 “Assets held for sale”.

4.1.2 Disposal of EQUANS

On October 4, 2022, the Group completed the sale of its interest in EQUANS to Bouygues.

(1) Develop, Build, Share and Operate, a model used in renewable energies based on continuous rotation of capital employed.

The combined effects of the transaction and of the cash generated by these activities since January 1, 2022 have reduced the Group's net debt by €6,975 million (€7,134 million with the reduction of external net financial debt recognized under IFRS 5 – Non-current assets held for sale and discontinued operations, as of December 31, 2021).

The disposal gain recognized in "Net income/(loss) relating to discontinued operations" (see *Note 4.2.1*), amounted to €2,086 million in 2022.

4.1.3 Earn-out from the disposal of a portion of ENGIE's interest in French company SUEZ SA in 2021 and the disposal of its remaining stake in 2022

On October 6, 2020, the Group sold 29.9% of its stake in SUEZ SA to the VEOLIA Group. This sale was subject to an earn-out mechanism if the VEOLIA Group carried out other capital transactions on SUEZ at a price higher than that of the 29.9% block sold by ENGIE.

In 2021, the VEOLIA Group launched a takeover bid for SUEZ at a price of €20.50 per share (cum dividend) which closed successfully on January 7, 2022. At the end of 2021, the ENGIE Group considered that all the conditions had been met to recognize the €347 million in profit or loss related to the earn-out mechanism negotiated with the VEOLIA Group.

ENGIE cashed in this earn-out on January 19, 2022, once the takeover bid had been closed

On January 18, 2022, the Group also contributed its remaining 1.8% stake in SUEZ as part of the public offer initiated by the VEOLIA Group. This transaction had no impact on the Group's 2022 results, as the interest was measured at fair value at December 31, 2021. The effects of the transaction have reduced the Group's net financial debt by €227 million.

4.1.4 Disposal of a portion of ENGIE's interest in French company Gaztransport & Technigaz SA ("GTT")

On March 24, 2022, ENGIE announced the sale of a stake in GTT representing approximately 9% of the share capital at a price of €90 per share.

On September 16, 2022, ENGIE sold an additional stake in GTT representing approximately 6% of the share capital at a price of €115.50 per share.

At December 31, 2022, 96% of the bond redeemable for GTT shares had been converted. The balance was either converted or redeemed at par in January 2023.

At December 31, 2022, these transactions did not change ENGIE's representation on GTT's Board of Directors. Consequently, following these disposals and conversions, ENGIE has maintained its significant influence and therefore continues to account for its residual 5.76% interest in GTT using the equity method.

These transactions, which are part of the targeted plan to withdraw from non-strategic businesses and non-controlling interests, have reduced the Group's net financial debt by €835 million. The disposal gain before tax, including the effects of the embedded derivative on the bond redeemable for GTT shares, amounted to €280 million in 2022.

4.1.5 Disposal of ENGIE's interests in geothermal assets in Indonesia

On September 16, 2022, ENGIE finalized the sale of its entire stake in PT Supreme Energy Muara Laboh to Sumitomo Corporation and INPEX Geothermal Ltd.

On October 14 and October 24, 2022, ENGIE finalized the sale of its entire stake in PT Supreme Energy Rantau Dedap to Merit Power Holding bv and INPEX Geothermal Ltd.

These transactions have reduced the Group's net financial debt by €342 million. The disposal gain before tax amounted to €111 million in 2022.

4.2 Assets held for sale

Total “Assets classified as held for sale” and total “Liabilities directly associated with assets classified as held for sale” amounted to €428 million and €371 million, respectively, at December 31, 2022.

<i>En millions d'euros</i>	31 déc. 2022	31 déc. 2021
Immobilisations corporelles et incorporelles nettes	336	4,235
Autres actifs	92	7,645
TOTAL ACTIFS CLASSÉS COMME DÉTENUS EN VUE DE LA VENTE	428	11,881
<i>dont Actifs des activités non poursuivies</i>		11,186
Dettes financières	290	368
Autres passifs	80	7,047
TOTAL PASSIFS DIRECTEMENT LIÉS À DES ACTIFS CLASSÉS COMME DÉTENUS EN VUE DE LA VENTE	371	7,415
<i>dont Passifs directement liés à des actifs des activités non poursuivies</i>		6,952

The assets related to the EQUANS entities, as well as Endel and its main subsidiaries recorded as “Assets held for sale” at December 31, 2021 were sold in 2022. Due to unfavorable developments in the planned sale of certain renewable assets in Mexico, they were no longer classified as “Assets held for sale” at December 31, 2022.

At December 31, 2022, “Assets held for sale” relate solely to a thermal power plant in Brazil. Given the expected sale price, a non-material value adjustment was recognized for the year. This transaction is expected to be completed in first half 2023.

4.2.1 Financial information on discontinued operations

Net income/(loss) from discontinued operations

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021

Transactions with ENGIE ⁽²⁾	3,138	2,700
CASH FLOW FROM (USED IN) FINANCING ACTIVITIES	3,018	2,519
Effects of changes in exchange rates and other ⁽³⁾	(422)	(1)
TOTAL CASH FLOW FOR THE PERIOD	(429)	1
CASH AND CASH EQUIVALENTS AT BEGINNING OF PERIOD	429	428
CASH AND CASH EQUIVALENTS AT END OF PERIOD	-	429

(1) The line "Change in loans and receivables originated by the Group and other" includes the acquisition by EQUANS of shares in the "Asset-Light Client Solutions business" held by ENGIE for a negative €3,555 million and disposals, by EQUANS, of shares not constituting the "Asset-Light Client Solutions business" to ENGIE for a positive €7 million.

(2) The line "Transactions with ENGIE" includes the capital increases of EQUANS, for an amount of €2,774 million subscribed by ENGIE.

(3) The line "Effects of changes in exchange rates and other" corresponds to EQUANS' cash and cash equivalents at December 31, 2021 for €429 million.

4.3 Acquisitions carried out in 2022

In total, acquisitions carried out in 2022 had an impact of €1,951 million on net financial debt.

On May 4, 2022, ENGIE and Crédit Agricole Assurances completed the acquisition of a 97.33% stake in Eolia Renovables, a renewable energy producer in Spain, from Canadian institutional investment manager Alberta Investment Management Corporation. The transaction covers the ownership and operation of 899 MW of operating assets (821 MW of onshore wind and 78 MW photovoltaic) and a 1.2 GW pipeline of renewable energy projects.

The operating assets are 40% owned by ENGIE and 60% by Crédit Agricole Assurances while ENGIE is developing and building the pipeline of projects. The Group will provide a complete range of services (O&M, Asset Management, Energy Management and Development services) for the full asset scope.

The acquired assets benefit from a regulated scheme ensuring predictability of returns for the next ten years. This transaction has an impact of €0.5 billion on the Group's net financial debt. The interest in the company holding the operating assets is accounted for using the equity method. The company responsible for developing and building the pipeline of projects is fully consolidated by ENGIE. The Group will finalize the purchase price allocation during the first half of 2023.

Other acquisitions during the year relate mainly to the financing of the development of the Group's offshore wind energy activities (Ocean Winds joint venture) for €0.4 billion, concession contracts in Brazil for €0.2 billion, the effect of acquiring a controlling interest in renewable activities in France and India for €0.2 billion each and the acquisition of renewable energy assets in Chile for €0.1 billion.

NOTE 5 FINANCIAL INDICATORS USED IN FINANCIAL COMMUNICATION

The purpose of this note is to present the main non-GAAP financial indicators used by the Group as well as their reconciliation with the indicators of the IFRS consolidated financial statements.

5.1 EBITDA

The reconciliation between EBITDA and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Current operating income including operating MtM and share in net income of equity method entities	5,367	6,916
Mark-to-market on commodity contracts other than trading instruments	3,661	(721)
Net depreciation and amortization/Other	4,576	4,370
Share-based payments (IFRS 2)	92	48
Non-recurring share in net income of equity method entities	17	(50)
EBITDA	13,713	10,563

5.2 EBIT

The reconciliation between EBIT and current operating income including operating MtM and share in net income of equity method entities is as follows:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Current operating income including operating MtM and share in net income of equity method entities	5,367	6,916
Mark-to-market on commodity contracts other than trading instruments	3,661	(721)
Non-recurring share in net income of equity method entities	17	(50)
EBIT	9,045	6,145

5.3 Net recurring income Group share (NriGs)

Net recurring income Group share is a financial indicator used by the Group in its financial reporting to present net income Group share adjusted for unusual, inhabitual or non-recurring items.

The reconciliation of net income/(loss) with net recurring income Group share is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2022	Dec. 31, 2021
NET INCOME/(LOSS) GROUP SHARE		216	3,661
NET INCOME/(LOSS) RELATING TO DISCONTINUED OPERATIONS, GROUP SHARE		2,182	79
NET INCOME/(LOSS) RELATING TO CONTINUING OPERATIONS, GROUP SHARE		(1,965)	3,582
Net income attributable to non-controlling interests relating to continuing operations		172	96
NET INCOME/(LOSS) RELATING TO CONTINUING OPERATIONS		(1,793)	3,678
Reconciliation items between "Current operating income including operating MtM and share in net income of equity method entities" and "Net income/(loss) from operating activities"		4,241	194
<i>Impairment losses</i>	9.1	2,774	1,028
<i>Restructuring costs</i>	9.2	230	204
<i>Changes in scope of consolidation</i>	9.3	(91)	(1,107)
<i>Other non-recurring items</i>		1,328	69
Other adjusted items		3,389	(363)
<i>Mark-to-market on commodity contracts other than trading instruments</i>	8	3,661	(721)
<i>Ineffective portion of derivatives qualified as fair value hedges</i>	10	(7)	2
<i>Gains/(losses) on debt restructuring and early unwinding of derivative financial instruments</i>	10	(46)	-
<i>Change in fair value of derivatives not qualified as hedges and ineffective portion of derivatives qualified as cash flow hedges</i>	10	(16)	153
<i>Non-recurring income/(loss) from debt instruments and equity instruments</i>	10	1,254	(298)
<i>Other adjusted tax impacts</i>		(1,474)	552
<i>Non-recurring income/(loss) included in share in net income of equity method entities</i>		17	(50)
NET RECURRING INCOME/(LOSS) RELATING TO CONTINUING OPERATIONS		5,836	3,509
Net recurring income/(loss) attributable to non-controlling interests		614	581
NET RECURRING INCOME/(LOSS) RELATING TO CONTINUING OPERATIONS, GROUP		5,223	2,927
Net recurring income/(loss) relating to discontinued operations, Group share		287	231
NET RECURRING INCOME/(LOSS) GROUP SHARE		5,510	3,158

5.4 Industrial capital employed

The reconciliation of industrial capital employed with items in the statement of financial position is as follows:

In millions of euros	Dec. 31, 2022	Dec. 31, 2021
(+) Property, plant and equipment and intangible assets, net	62,853	57,863
(+) Goodwill	12,854	12,799
(-) Goodwill Gaz de France – SUEZ and International Power ⁽¹⁾	(7,241)	(7,213)
(+) IFRIC 4, IFRS 16 and IFRIC 12 receivables	2,521	2,456
(+) Investments in equity method entities	9,279	8,498
(-) Goodwill arising on the International Power combination ⁽¹⁾	(40)	(38)
(+) Trade and other receivables, net	31,310	32,556
(-) Margin calls ^{(1) (2)}	(5,405)	(13,856)
(+) Inventories	8,145	6,175
(+) Assets from contracts with customers	12,584	8,377
(+) Other current and non-current assets	19,060	13,681
(+) Deferred tax	(4,379)	(6,557)
(+) Cancellation of deferred tax on other recyclable items ^{(1) (2)}	(14)	841
(-) Provisions	(27,027)	(25,459)
(+) Actuarial gains and losses in shareholders' equity (net of deferred tax) ⁽¹⁾	1,058	3,162
(-) Trade and other payables	(39,801)	(32,822)
(+) Margin calls ^{(1) (2)}	6,351	7,835
(-) Liabilities from contracts with customers	(3,412)	(2,739)
(-) Other current and non-current liabilities	(27,279)	(19,175)
INDUSTRIAL CAPITAL EMPLOYED	51,416	46,382

(1) For the purpose of calculating industrial capital employed, the amounts recorded in respect of these items have been adjusted from those appearing in the statement of financial position.

(2) Margin calls included in "Trade and other receivables, net" and "Trade and other payables" correspond to advances received or paid as part of collateralization agreements set up by the Group to manage counterparty risk on commodity transactions.

From January 1, 2023, the Group will expand its definition of industrial capital employed to include financial assets covering nuclear provisions, as well as the initial margins required by certain market activities. The following table shows the impact of these changes on industrial capital employed:

In millions of euros	Dec. 31, 2022	Dec. 31, 2021
INDUSTRIAL CAPITAL EMPLOYED	51,416	46,382
(+) Financial assets covering nuclear provisions	6,626	5,505
(+) Initials Margins	1,740	4,722
INDUSTRIAL CAPITAL EMPLOYED (new definition for 2023)	59,782	56,609

5.5 Cash flow from operations (CFFO)

The reconciliation of cash flow from operations (CFFO) with items in the statement of cash flows is as follows:

In millions of euros	Dec. 31, 2022	Dec. 31, 2021 ⁽¹⁾
Cash generated from operations before income tax and working capital requirements	12,415	9,806
Tax paid	(1,504)	(603)
Change in working capital requirements	(2,424)	(2,377)
Interest received on financial assets	(37)	32
Dividends received on equity investments	18	57
Interest paid	(822)	(719)
Interest received on cash and cash equivalents	194	52
Nuclear – expenditure on power plant dismantling and reprocessing, fuel storage	163	202
Change in financial assets held for investment or financing purposes	188	464
(+) Change in financial assets held for investment or financing purposes recorded in the statement of financial position and other and other	(176)	(448)
CASH FLOW FROM OPERATIONS (CFFO)	8,016	6,466

(1) In view of the start of work related to the nuclear exit in Belgium, the definition of cash flow from operations (CFFO) has been adjusted to exclude expenditure on the dismantling of nuclear power plants and the management of radioactive materials and waste. These expenses are now presented together with investments to cover nuclear provisions, under a dedicated heading. The data at December 31, 2021 have been restated accordingly.

5.6 Capital expenditure (CAPEX) and growth CAPEX

The reconciliation of capital expenditure (CAPEX) with items in the statement of cash flows is as follows:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021 ^{(1) (2)}
Acquisitions of property, plant and equipment and intangible assets	6,379	5,990
Acquisitions of controlling interests in entities, net of cash and cash equivalents acquired	289	392
(+) <i>Cash and cash equivalents acquired</i>	14	6
Acquisitions of investments in equity method entities and joint operations	407	369
Acquisitions of equity and debt instruments	(175)	1,548
Change in loans and receivables originated by the Group and other	2,877	(121)
(+) <i>Other</i>	(10)	3
Change in ownership interests in controlled entities	-	35
(-) Disposal impacts relating to DBSO ⁽³⁾ activities	(472)	(270)
(-) Synatom Financial investments / Disposal of Synatom financial assets ⁽¹⁾	(1,822)	(1,261)
(+) Change in scope - Acquisitions ⁽²⁾	371	-
TOTAL CAPITAL EXPENDITURE (CAPEX)	7,858	6,693
(-) Maintenance CAPEX	(2,373)	(2,418)
TOTAL GROWTH CAPEX	5,485	4,275

- (1) *In view of the start of work related to the nuclear exit in Belgium, the definition of capital expenditure (CAPEX) has been adjusted to exclude hedging of nuclear provisions carried out by Synatom. These expenses are now presented together with investments to cover expenditure for the dismantling of nuclear power plants and the management of radioactive materials and waste, under a dedicated heading. The data at December 31, 2021 have been restated accordingly.*
- (2) *Capital expenditure (CAPEX) now includes changes in the scope of net financial debt of acquired entities. The impact at December 31, 2021 is not material.*
- (3) *Develop, Build, Share & Operate; including Tax equity financing received (See Note 22 "Working capital requirements, inventories, other assets and other liabilities").*

5.7 Net financial debt

The reconciliation of net financial debt with items in the statement of financial position is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2022	Dec. 31, 2021
(+) Long-term borrowings	14.2 & 14.3	28,083	30,458
(+) Short-term borrowings	14.2 & 14.3	12,508	10,590
(+) Financial instruments – carried in liabilities	14.4	51,276	46,931
(-) <i>Derivative instruments hedging commodities and other items</i>		(50,542)	(46,617)
(-) Other financial assets	14.1	(12,992)	(13,444)
(+) <i>Loans and receivables at amortized cost not included in net financial debt</i>		6,720	5,143
(+) <i>Equity instruments at fair value</i>		1,495	2,827
(+) <i>Debt instruments at fair value not included in net financial debt</i>		3,394	3,853
(-) Cash and cash equivalents	14.1	(15,570)	(13,890)
(-) Financial instruments – carried in assets	14.4	(48,386)	(44,989)
(+) <i>Derivative instruments hedging commodities and other items</i>		48,067	44,489
NET FINANCIAL DEBT		24,054	25,350

5.8 Economic net debt

Economic net debt is as follows:

<i>In millions of euros</i>	Notes	Dec. 31, 2022	Dec. 31, 2021
NET FINANCIAL DEBT	14.3	24,054	25,350
Provisions for back-end of the nuclear fuel cycle	17	9,088	8,030
Provisions for dismantling of plant and equipment	17	11,015	8,015
Provisions for site rehabilitation	17	244	246
Post-employment benefits – Pensions	18	452	1,779
<i>(-) Infrastructures regulated companies</i>		272	(16)
Post-employment benefits – Reimbursement rights	18	(208)	(228)
Post-employment benefits – Other benefits	18	3,704	5,149
<i>(-) Infrastructures regulated companies</i>		(2,392)	(3,289)
Deferred tax assets for pensions and related obligations	11	(812)	(1,501)
<i>(-) Infrastructures regulated companies</i>		490	780
Plan assets relating to nuclear provisions, inventories of uranium, related derivative financial instruments and a receivable of Electrabel towards EDF Belgium	17 & 22	(7,098)	(6,014)
ECONOMIC NET DEBT		38,808	38,300

NOTE 6 SEGMENT INFORMATION

6.1 Operating segment and reportable segment

ENGIE is organized around:

- four Global Business Units (GBUs) representing the Group's four strategic activities: Renewables GBU, Energy Solutions GBU, Networks GBU and Thermal & Supply GBU;
- two operating entities: Nuclear and Global Energy Management & Sales ("GEMS");
- an Other group mainly comprising the Corporate functions and certain Holdings.

From 2022 onwards and given the significant volatility of the commodity markets, the Group Executive Committee, which represents the chief operating decision maker as defined by IFRS 8 – *Operating Segments*, monitors the activities of GEMS, which has become an operating segment.

The reportable segments are identical to the operating segments and correspond to the activities underlying the organization of the GBUs.

- **Renewables:** comprises all centralized renewable energy generation activities, including financing, construction, operation and maintenance of renewable energy facilities, using various energy sources such as hydroelectric, onshore wind, photovoltaic solar, biomass, offshore wind, and geothermal. The energy produced is fed into the grid and sold either on the open or regulated market or to third parties through electricity sale agreements.
- **Networks:** comprises the Group's electricity and gas infrastructure activities and projects. These activities include the management and development of (i) gas and electricity transportation networks and natural gas distribution networks in and outside of Europe, (ii) natural gas underground storage in Europe, and (iii) regasification infrastructure in France and Chile. Apart from the historical infrastructure management activities, its asset portfolio also contributes to the challenges of energy decarbonization and network greening (gradual integration of green gas, hydrogen-based projects, etc.).
- **Energy Solutions:** encompasses the construction and management of decentralized energy networks to produce low-carbon energy (heating and cooling networks, distributed power generation plants, distributed solar power parks, low-carbon mobility, low-carbon cities and public lighting, etc.) and related services (energy efficiency, technical maintenance, sustainable development consulting).
- **Thermal:** encompasses all the Group's centralized power generation activities using thermal assets, whether contracted or not. It includes the operation of power plants fueled mainly by gas or coal, as well as pump-operated storage plants. The energy produced is fed into the grid and sold either on the open or regulated market or to third parties through electricity sale agreements. It also includes the financing, construction and operation of desalination plants, whether or not connected to power plants as well as the development of hydrogen production capacities.
- **Supply:** encompasses all the Group's activities relating to the sale of gas and electricity to end customers, whether professional or individual. It also includes all the Group's activities in services for residential clients.
- **Nuclear:** encompasses all of the Group's nuclear power generation activities, with seven reactors in Belgium (four in Doel and three in Tihange) and drawing rights in France.
- **Others:** encompasses the activities of GEMS and GTT, as well as Corporate and holdings. The GEMS operating entity is responsible, at the global level, for the supply of energy and the management of risk and optimization of assets on the markets. It sells energy to companies and offers energy management services and solutions to support the decarbonization of the Group and its customers.

6.2 Key indicators by reportable segment

REVENUES

In millions of euros	Dec. 31, 2022			Dec. 31, 2021 ⁽²⁾		
	External revenues	Intra-Group revenues	Total	External revenues	Intra-Group revenues	Total
Renewables	6,216	136	6,352	3,653	61	3,714
Networks	6,961	961	7,922	6,700	878	7,578
Energy Solutions	11,552	262	11,814	9,926	230	10,155
Thermal	7,129	1,144	8,274	4,089	827	4,916
Supply	16,810	534	17,344	10,396	117	10,513
Nuclear	35	2,653	2,688	56	1,705	1,762
Others	45,163	2,007	47,169	23,046	16,102	39,148
Of which GEMS ⁽¹⁾	45,137	1,979	47,115	22,870	16,077	38,947
Elimination of internal transactions	-	(7,697)	(7,697)	-	(19,920)	(19,920)
TOTAL REVENUES	93,865	-	93,865	57,866	-	57,866

(1) Of which a c. €20 billion price effect compared to 2021.

(2) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

EBITDA

In millions of euros	Dec. 31, 2022	Dec. 31, 2021 ⁽¹⁾
Renewables	2,202	1,702
Networks	4,212	4,121
Energy Solutions	879	786
Thermal	2,235	1,628
Supply	258	498
Nuclear	1,510	1,403
Others	2,417	426
Of which GEMS	2,837	679
TOTAL EBITDA	13,713	10,563

(1) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

EBIT

In millions of euros	Dec. 31, 2022 ⁽¹⁾	Dec. 31, 2021 ⁽²⁾
Renewables	1,627	1,191
Networks	2,371	2,314
Energy Solutions	412	350
Thermal	1,768	1,183
Supply	(7)	232
Nuclear	1,026	959
Others	1,848	(85)
Of which GEMS	2,618	507
TOTAL EBIT	9,045	6,145

(1) Including €739 million in taxes on "excess profits" and €917 million relating to the tax on nuclear energy production.

(2) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

SHARE IN NET INCOME/(LOSS) OF EQUITY METHOD ENTITIES

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021 ⁽¹⁾
Renewables	217	95
Networks	323	233
Energy Solutions	118	148
Thermal	397	301
Supply	-	-
Nuclear	-	(11)
Others	4	34
<i>Of which GEMS</i>	(1)	2
TOTAL SHARE IN NET INCOME/(LOSS) OF EQUITY METHOD ENTITIES	1,059	800

(1) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

Associates and joint ventures accounted for €400 million and €659 million respectively of share in net income of equity method entities at December 31, 2022 (compared to €306 million and €494 million at December 31, 2021).

INDUSTRIAL CAPITAL EMPLOYED

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021 ⁽¹⁾
Renewables	16,588	12,508
Networks	25,221	24,167
Energy Solutions	7,575	6,687
Thermal	8,091	7,846
Supply	1,023	1,322
Nuclear ⁽²⁾	(16,481)	(12,666)
Others	9,399	6,517
<i>Of which GEMS ⁽³⁾</i>	7,320	2,915
TOTAL INDUSTRIAL CAPITAL EMPLOYED	51,416	46,382

(1) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

(2) Including €19,017 million of nuclear provisions at December 31, 2022 (€15,119 million as of December 31, 2021). Capital employed does not include assets dedicated to covering provisions for €6,626 million as of December 31, 2022 (€5,505 million at December 31, 2021).

(3) Industrial Capital employed does not include the initial margin required by certain market activities for €1,740 million at December 31, 2022 (€4,722 million at December 31, 2021).

As indicated in Note 5.4, from January 1, 2023, the Group will expand its definition of industrial capital employed to include financial assets covering nuclear provisions (with an impact on the Nuclear operating segment) as well as the initial margins required by certain market activities (with an impact on the GEMS operating segment). The following table shows the impact of these changes to industrial capital employed of the reportable segments:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Renewables	16,588	12,508
Networks	25,221	24,167
Energy Solutions	7,575	6,687
Thermal	8,091	7,846
Supply	1,023	1,322
Nuclear	(9,855)	(7,161)
Others	11,139	11,239
<i>Of which GEMS</i>	9,060	7,637
TOTAL INDUSTRIAL CAPITAL EMPLOYED (new definition for 2023)	59,782	56,609

CAPITAL EXPENDITURE

<i>In millions of euros</i>	Dec. 31, 2022 ⁽¹⁾	Dec. 31, 2021 ⁽¹⁾⁽²⁾⁽³⁾
Renewables	3,333	2,000
Networks	2,322	2,524
Energy Solutions	886	903
Thermal	481	268
Supply	270	300
Nuclear	229	201
Others	338	496
<i>Of which GEMS</i>	149	76
TOTAL CAPITAL EXPENDITURE (CAPEX)	7,858	6,693

- (1) Capital expenditure (CAPEX) now include changes in the scope of net financial debt of acquired entities. The impact at December 31, 2021 is not material.
- (2) In the context of the start of work related to the end of life of the nuclear power plant in Belgium, the definition of capital expenditures (CAPEX) has been modified to exclude investments made by Synatom to cover nuclear provisions. These expenses are now presented together with investments to cover expenditure for the dismantling of nuclear power plants and the management of radioactive materials and waste, under a dedicated heading. Data at December 31, 2021 have been restated accordingly.
- (3) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

GROWTH CAPEX

<i>In millions of euros</i>	Dec. 31, 2022 ⁽¹⁾	Dec. 31, 2021 ⁽¹⁾⁽²⁾
Renewables	3,202	1,881
Networks	1,087	1,320
Energy Solutions	716	715
Thermal	220	(17)
Supply	174	154
Nuclear	1	-
Others	85	221
<i>Of which GEMS</i>	63	(31)
TOTAL GROWTH CAPEX	5,485	4,275

- (1) Growth Capex now includes changes in the scope of net financial debt of acquired companies. The impact at December 31, 2021 is not material.
- (2) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

6.3 Key indicators by geographic area

The amounts set out below are analyzed by:

- destination of products and services sold for revenues;
- geographic location of consolidated companies for industrial capital employed.

<i>In millions of euros</i>	Revenues		Industrial capital employed	
	Dec. 31, 2022	Dec. 31, 2021	Dec. 31, 2022	Dec. 31, 2021
France	34,248	24,341	32,495	30,241
Belgium	12,705	4,372	(14,201)	(10,775)
Other EU countries	22,687	12,501	9,261	6,938

Asia, Middle East & Oceania	8,875	4,441	3,507	2,709
South America	4,778	4,053	11,095	9,521
Africa	237	297	548	960
TOTAL	93,865	57,866	51,417	46,382

Due to the variety of its businesses and their geographical location, the Group serves a very diverse range of situations and customer types (industry, local authorities and individual customers). Accordingly, no external customer represents individually 10% or more of the Group's consolidated revenues.

NOTE 7 REVENUES

7.1 Revenues

Accounting standards

Revenues from contracts with customers concern revenues from contracts that fall within the scope of IFRS 15. Revenues are recognized when the customer obtains control of goods or services promised in the contract, for the amount of consideration to which an entity expects to be entitled in exchange for said promised goods or services.

A contractual analysis of the Group's sale contracts has led to the application of the following revenue recognition principles:

- **Gas, electricity and other energies**
Revenues from sales of gas, electricity and other energies are recognized upon delivery of the power to the retail, business or industrial customer.
Power deliveries are monitored in real time or on a deferred basis for those customers whose energy consumption is metered during the accounting period, in which case the portion of not yet metered revenues "in the meter" is estimated on the closing date.
- **Gas, electrical and other energy infrastructures**
Revenues derived by gas and electricity infrastructure operators upon providing transportation or distribution or storage capacities, are recognized on a straight-line basis over the contract term.
In the countries where the Group acts as an energy provider (supplier) without being in charge of its distribution or transportation, mainly in France and Belgium, an analysis of the energy sales contracts and of the related regulatory framework is carried out to determine whether the distribution or transportation services invoiced to the customers have to be excluded from the revenues recognized under IFRS 15.
Judgment may be exercised by the Group for this analysis in order to determine whether the energy provider acts as an agent or a principal for the gas or electricity distribution or transportation services re-invoiced to the customers. The main criteria used by the Group to exercise its judgment and conclude, in certain countries, that the energy provider acts as an agent of the infrastructure operator are as follows: who is primarily responsible for fulfillment of the distribution or transportation services? Does the energy provider have the ability to commit to capacity reservation contracts towards the infrastructure operator? To what extent does the energy provider have discretion in establishing the price for the distribution or transportation services?
- **Constructions, installations, Operations and Maintenance (O&M)**
Construction and installation contracts mainly concern assets built on the premises of customers such as cogeneration units, heaters or other energy-efficiency assets. The related revenues are usually recognized according to the percentage of completion on the basis of the costs incurred where the contracts fall within the scope of IFRS 15.
O&M contracts generally require the Group to perform services ensuring the availability of power generating facilities. These services are performed over time and the related revenues are recognized according to the percentage of completion on the basis of the costs incurred.

If it is not possible to conclude from the contractual analysis that the contract falls within the scope of IFRS 15, the revenues are accounted for as non-IFRS 15 revenues.

Revenues from other contracts, corresponding to revenues from operations that do not fall within the scope of IFRS 15, presented in the "Others" column include trading, lease and concession income, as well as any financial component of operating services, and the effects of the tariff shield mechanisms

NOTE 7 REVENUES

NOTE 7 REVENUES

The table below shows a breakdown of revenues by type:

<i>In millions of euros</i>	Sales of gas	Sales of electricity and other energies	Sales of services linked to infrastructures	Constructions, installations, and O&M	Others	Dec. 31, 2022
Renewables	-	5,797	88	242	89	6,216
Networks	232	1	6,021	478	230	6,961
Energy Solutions	246	4,713	96	6,424	73	11,552
Thermal	22	4,522	1,601	396	588	7,129
Supply	7,793	5,372	153	958	2,534	16,810
Nuclear	-	5	8	24	(3)	35
Others	21,405	19,595	170	70	3,923	45,163
<i>Of which GEMS</i>	21,405	19,595	170	45	3,923	45,137
TOTAL REVENUES	29,697	40,004	8,135	8,593	7,435	93,865

The significant change in natural gas and electricity prices has led some governments to introduce a “tariff shield” for natural gas and electricity, particularly in France and Romania.

The measure with the most significant impact on the Group's consolidated financial statements is the one introduced by the French government for natural gas. Under the Finance Law for 2022 (No. 2021-1900 of December 30, 2021), as amended by the first Amending Finance Law for 2022 (No. 2022-1157 of August 16, 2022), the regulated natural gas sales tariffs applied by ENGIE were capped at the level of October 31, 2021, including all taxes, until December 31, 2022. The loss of revenue borne by ENGIE constitutes an expense attributable to public service obligations and is subject to guaranteed compensation by the State. The subsidy recognized in 2022 amounts to approximately €1,591 million (€248 million in 2021) and is recorded under “Supply” business in the “Others” column (“Non-IFRS 15 revenues”). During 2022, the Group signed three non-recourse assignment agreements with Natixis, under the so-called “Daily” law, in order to sell part of the receivable relating to the subsidy, amounting to approximately €1,395 million.

<i>In millions of euros</i>	Sales of gas	Sales of electricity and other energies	Sales of services linked to infrastructures	Constructions, installations, and O&M	Others	Dec. 31, 2021 ⁽¹⁾
Renewables	-	3,335	85	142	91	3,653
Networks	205	1	5,715	606	173	6,700
Energy Solutions	157	3,368	102	6,247	51	9,926
Thermal	66	3,165	345	451	62	4,089
Supply	5,532	3,539	74	985	265	10,396
Nuclear	-	4	11	22	19	56
Others	10,019	11,448	231	353	994	23,046
<i>Of which GEMS</i>	10,019	11,448	231	177	994	22,870
TOTAL REVENUES	15,978	24,861	6,565	8,806	1,656	57,866

(1) Certain internal reclassifications, which have no impact on the total, have been made between the business lines at December 31, 2021. The main internal reclassifications concern the transfer of international Energy Supply activities to Others, of the North American Renewable Energies activities to Energy Solutions, and the reallocation of Corporate costs between business lines.

7.2 Trade and other receivables, assets and liabilities from contracts with customers

Accounting standards

On initial recognition, trade and other receivables are recorded at their transaction price as defined in IFRS 15.

A contract asset is an entity's right to consideration in exchange for goods or services that have been transferred to a customer but for which payment is not yet due or is contingent on the satisfaction of a specific condition stipulated in the contract. When an amount becomes due, it is transferred to receivables.

A receivable is recorded when the entity has an unconditional right to consideration. A right to consideration is unconditional if only the passage of time is required before payment of that consideration.

A contract liability is an entity's obligation to transfer goods or services to a customer for which the entity has already received consideration from the customer. The liability is derecognized upon recognition of the corresponding revenue.

Trade and other receivables and assets from contracts with customers are tested for impairment in accordance with the provisions of IFRS 9 on expected credit losses.

The impairment model for financial assets is based on the expected credit loss model. To calculate expected losses, the Group uses a matrix approach for trade receivables and assets from contracts with customers, for which the change in credit risk is monitored on a portfolio basis. An individual approach is used for large customers and other large counterparties, for which the change in credit risk is monitored on an individual basis.

See Note 15 "Risks arising from financial instruments" for the Group's assessment of counterparty risk.

7.2.1 Trade and other receivables and assets from contracts with customers

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Trade and other receivables, net	31,310	32,555
Of which IFRS 15	7,587	6,453
Of which non-IFRS15	23,723	26,103
Assets from contracts with customers	12,584	8,377
Accrued income and unbilled revenues	9,513	6,817
Energy in the meter ⁽¹⁾	3,071	1,560

(1) Net of advance payments.

In 2022, the most significant assets from contracts mainly concerned GEMS (€5,023 million), Energy Solutions (€2,758 million) and Supply (€3,097 million).

<i>In millions of euros</i>	Dec. 31, 2022			Dec. 31, 2021		
	Gross	Allowances and expected credit losses	Net	Gross	Allowances and expected credit losses	Net
Trade and other receivables, net	33,282	(1,973)	31,310	33,920	(1,365)	32,555
Assets from contracts with customers	12,632	(48)	12,584	8,393	(16)	8,377
TOTAL	45,914	(2,020)	43,894	42,313	(1,381)	40,932

Gas and electricity in the meter

For customers whose energy consumption is metered during the accounting period, the gas supplied but not yet metered at the reporting date is estimated based on historical data, consumption statistics and estimated selling prices.

For sales on networks used by a large number of grid operators, the Group is allocated a certain volume of energy transiting through the networks by the grid managers. As the final allocations are sometimes only known several months down the line, revenue figures cannot be determined with absolute certainty. However, the Group has developed measuring and modeling tools allowing it to estimate revenues with a reasonable degree of accuracy and subsequently ensure that risks of error associated with estimating quantities sold and the related revenues can be considered as immaterial.

In France and Belgium, un-metered revenues ("gas in the meter") are calculated using a direct method taking into account customers' estimated consumption based on the last invoice or metering not yet billed. These estimates are in line with the volume of energy allocated by the grid managers over the same period. The average price is used to measure "gas in the meter" and takes account of the category of customer and the age of the delivered unbilled "gas in the meter". The portion of unbilled revenues at the reporting date varies according to the assumptions about volume and average price.

"Electricity in the meter" is also determined using a direct allocation method similar to that used for gas, but taking into account specific factors related to electricity consumption. It is also measured on a customer-by-customer basis or by customer type.

Realized but not yet metered revenues ("un-metered revenues") mainly related to France and Belgium for an amount of €5,883 million at December 31, 2022 (€4,638 million at December 31, 2021).

7.2.2 Liabilities from contracts with customers

In millions of euros	Dec. 31, 2022			Dec. 31, 2021		
	Non-current	Current	Total	Non-current	Current	Total
Liabilities from contracts with customers	121	3,292	3,412	68	2,671	2,739
Advances and downpayments received	53	2,201	2,253	-	1,955	1,955
Deferred revenues	68	1,091	1,159	68	716	784

In 2022, the Global Business Units reporting the greatest amounts of liabilities from contracts with customers were Supply (€1,717 million) and Energy Solutions (€1,467 million).

7.3 Revenues relating to performance obligations not yet satisfied

Revenues relating to performance obligations only partially satisfied at December 31, 2022 amounted to €1,131 million. They mainly concern Energy Solutions (€1,013 million) and Renewables (€117 million) which handle a large number of construction, installation, and maintenance contracts under which revenues are recognized over time.

NOTE 8 OPERATING EXPENSES

Accounting standards

Operating expenses include:

- purchases and operating derivatives including:
 - the purchase of commodities and associated costs (infrastructure, transport, storage, etc.),
 - the realized impact, as well as the change in fair value (MtM), of commodity transactions, with or without physical delivery, that fall within the scope of IFRS 9 – *Financial Instruments* and that do not qualify as trading or hedging. These contracts are set up as part of economic hedges of operating transactions in the energy sector;
- purchases of services and other items such as subcontracting and interim expenses, lease expenses (short-term lease contracts, leases with a low underlying asset value or leases with variable expenses), concession expenses, etc.;
- personnel costs;
- depreciation, amortization, and provisions; and
- taxes.

8.1 Purchases and operating derivatives

In millions of euros	Dec. 31, 2022	Dec. 31, 2021
Purchases and other income and expenses on operating derivatives other than trading ⁽¹⁾	(67,676)	(32,135)
Service and other purchases ⁽²⁾	(6,860)	(6,726)
PURCHASES AND OPERATING DERIVATIVES	(74,535)	(38,861)

(1) Of which net expense of €3,661 million in 2022 relating to MtM on commodity contracts other than trading (compared to a net income of €721 million in 2021), notably on certain economic gas and electricity hedging positions not documented as cash flow hedges.

(2) Of which €56 million in lease expenses not included in the IFRS 16 lease liability (compared to €51 million in lease expenses in 2021).

The increase in purchases and operating derivatives is mainly due to changes in commodity prices over the period.

8.2 Personnel costs

In millions of euros	Notes	Dec. 31, 2022	Dec. 31, 2021
Short-term benefits		(7,712)	(7,373)
Share-based payments	19	(104)	(48)
Costs related to defined benefit plans	18.3.4	(172)	(178)
Costs related to defined contribution plans	18.4	(91)	(93)
PERSONNEL COSTS		(8,078)	(7,692)

8.3 Depreciation, amortization and provisions

<i>In millions of euros</i>	Notes	Dec. 31, 2022	Dec. 31, 2021
Depreciation and amortization	13.2 & 13.3	(4,576)	(4,370)
Net change in write-downs of inventories, trade receivables and other assets		(768)	(310)
Net change in provisions	17	157	(159)
DEPRECIATION, AMORTIZATION AND PROVISIONS		(5,187)	(4,840)

At December 31, 2022, depreciation and amortization mainly break down as €1,041 million for intangible assets and €3,534 million for property, plant and equipment.

8.4 Taxes

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
TAXES	(3,380)	(1,479)

Taxes at December 31, 2022 include taxes on "excess profits", mainly the tax on infra-marginal income in Belgium and the temporary solidarity contribution in Italy, amounting to €739 million, as well as the tax on nuclear power generation for €917 million. The Italian temporary solidarity contribution of €132 million is recognized in income tax.

NOTE 9 OTHER ITEMS OF NET INCOME/(LOSS) FROM OPERATING ACTIVITIES

Accounting standards

Other items of Net income/(loss) from operating activities include:

- “Impairment losses”: this line include impairment losses on goodwill, other intangible assets, property, plant and equipment and investments in entities consolidated using the equity method;
- “Restructuring costs”: this line concern costs corresponding to a restructuring program planned and controlled by management that materially changes either the scope of a business undertaken by the entity, or the manner in which that business is conducted, based on the criteria set out in IAS 37;
- “Changes in the scope of consolidation”. This line includes:
 - direct costs related to acquisitions of controlling interests,
 - in a business combination achieved in stages, remeasurement at fair value at the acquisition date of the previously held interest,
 - subsequent changes in the fair value of contingent consideration,
 - gains or losses from disposals of investments which result in a change of consolidation method, as well as any impact from the remeasurement of retained interests with the exception of gains and losses arising from transactions realized in the framework of “Develop, Build, Share & Operate” (DBSO) or “Develop, Share, Build & Operate” (DSBO) business models. These transactions on renewable activities are recognized in current operating income as they are part of the recurring rotation of the Group’s capital employed;
- “Other non-recurring items”: this line includes other elements of an unusual, abnormal or infrequent nature.

9.1 Impairment losses

<i>In millions of euros</i>	Notes	Dec. 31, 2022	Dec. 31, 2021
Impairment losses:			
Goodwill	13.1	-	(107)
Property, plant and equipment and other intangible assets	13.2 & 13.3	(2,306)	(969)
Investments in equity method entities and related provisions		(536)	(17)
TOTAL IMPAIRMENT LOSSES		(2,841)	(1,093)
Reversal of impairment losses:			
Property, plant and equipment and other intangible assets		67	64
TOTAL REVERSALS OF IMPAIRMENT LOSSES		67	64
TOTAL		(2,774)	(1,028)

9.1.1 Impairment losses recognized in 2022

Net impairment losses recognized at December 31, 2022 amounted to €2,774 million. They mainly fall into three categories (see Note 13.4):

- the effects of the three-yearly revision of nuclear provisions on assets to be recognized against nuclear power plant dismantling provisions;
- the effects of the ongoing program to exit coal activities;
- the consequences of negotiations initiated or finalized during the year in connection with the renegotiation of PPA contracts or the disposal of non-strategic assets.

These impairment losses mainly concern property, plant and equipment and intangible assets. Considering the effects of deferred taxes and the portion of impairment losses attributable to non-controlling interests, the impact of the impairment losses on net income Group share amounted to €2,275 million.

With the exception of the induced effects of decisions to dispose of non-strategic assets, no impairment losses were recognized on non-financial assets as a result of measures to prevent or mitigate climate risks or to achieve the 2045 net zero-carbon objective.

Impairment tests are carried out in accordance with the procedures described in Note 13.4.

9.1.2 Impairment losses recognized in 2021

Net impairment losses recognized at December 31, 2021 amounted to €1,028 million and related mainly to:

- assets affected by the Group's announced exit from coal, in 2021, for thermal power generation assets, particularly in Brazil (€228 million);
- assets affected by the strategic review of Client Solutions, announced by the Group in 2020, in France (€90 million), Africa (€73 million) and Asia (€33 million);
- assets that have been subject to revisions to their medium- and long-term prospects, or that have encountered operational difficulties, in particular renewable energy production assets in Latin America (€221 million) and thermal power generation assets in Asia (€90 million);
- other production or support assets for less significant amounts taken individually.

9.2 Restructuring costs

In 2022, restructuring costs totaled € 230 million (versus €204 million in 2021). Restructuring costs in both years mainly included costs related to staff reduction plans and measures to adapt to economic situations in 2022 and 2021, as well as the shutdown or sale of operations, the closure or restructuring of certain facilities as well as other miscellaneous restructuring costs.

9.3 Changes in scope of consolidation

At December 31, 2022, the impact of changes in the scope of consolidation was a positive €91 million and mainly comprised:

- a positive impact of €280 million relating to the disposals of shares held in Gaztransport et Technigaz (GTT) for a total representing approximatively 24.6% of its share capital. This result includes the effects of the almost full conversion of the exchangeable bond issued by the Group in June 2021;
- a positive impact of €111 million relating to the disposal of geothermal assets in Indonesia;
- a negative impact of €127 million relating to the disposal of the Energy Solutions activities in Africa and France;
- a negative impact of €110 million relating to the purchase of shares in renewable assets in India with refinancing obligations due in 2023;
- a negative impact of €63 million relating to miscellaneous disposals that are not individually significant.

At December 31, 2021, the impact of changes in the scope of consolidation was a positive €1,107 million and mainly comprised:

- a positive €628 million impact related to the disposal of 10% of the shares held in GTT for €151 million and the revaluation of the remaining 30% for €478 million;
- the positive impact of the earn-out to be received on the disposal of the 29.9% stake in SUEZ for €347 million;

- a positive €113 million change in the fair value of the earn-out from the disposal of LNG activities to TOTAL in 2018;
- a positive €56 million impact relating to various disposals including EPS for €83 million, the Group's interests in Georgetown Energy Partners Holding LLC in the United States for €44 million, and in a thermal power generation asset in Greece for a negative €28 million, and
- a negative €48 million impact related to the change in the fair value of the embedded derivative of the GTT shares exchangeable bond.

9.4 Other non-recurring items

Other non-recurring items at December 31, 2022 totaled a negative €1,328 million and mainly comprised:

- a negative impact of €979 million related to the three-yearly review of provisions for the management of the back-end nuclear cycle;
- a negative impact of €205 million related to provisions set up to cover clean-up obligations in France;
- a negative impact of €161 million related to the write-off of intangible assets and property, plant and equipment, mainly in France.

Other non-recurring items at December 31, 2021 totaled a negative €69 million and comprised asset scrapping, and disposals of property, plant and equipment.

NOTE 10 NET FINANCIAL INCOME/(LOSS)

<i>In millions of euros</i>	Expense	Income	Dec. 31, 2022	Expense	Income	Dec. 31, 2021
<i>Interest expense on gross debt and hedges</i>	(1,104)	-	(1,104)	(943)	-	(943)
<i>Cost of lease liabilities</i>	(73)	-	(73)	(35)	-	(35)
<i>Foreign exchange gains/losses on borrowings and hedges</i>	(28)	-	(28)	(6)	-	(6)
<i>Ineffective portion of derivatives qualified as fair value hedges</i>	-	7	7	(2)	-	(2)
<i>Gains and losses on cash and cash equivalents and liquid debt instruments held for cash investment purposes</i>	-	197	197	-	63	63
<i>Capitalized borrowing costs</i>	109	-	109	70	-	70
Cost of net debt	(1,097)	205	(893)	(916)	63	(852)
<i>Cash payments made on the unwinding of swaps</i>	(9)	-	(9)	(73)	-	(73)
<i>Reversal of the negative fair value of these early unwound derivative financial instruments</i>	-	-	-	-	73	73
<i>Gains/(losses) on debt restructuring transactions</i>	-	55	55	-	-	-
Gains/(losses) on debt restructuring and early unwinding of derivative financial instruments	(9)	55	46	(73)	73	-
<i>Net interest expense on post-employment benefits and other long-term benefits</i>	(92)	-	(92)	(63)	-	(63)
<i>Unwinding of discounting adjustments to other long-term provisions</i>	(617)	-	(617)	(630)	-	(630)
<i>Change in fair value of derivatives not qualified as hedges and ineffective portion of derivatives qualified as cash flow hedges</i>	(5)	-	(5)	(152)	-	(152)
<i>Income/(loss) from debt instruments and equity instruments</i>	(1,295)	36	(1,258)	(16)	329	313
<i>Interest income on loans and receivables at amortized cost</i>	-	69	69	-	125	125
<i>Other</i>	(585)	332	(253)	(213)	121	(92)
Other financial income and expenses	(2,594)	438	(2,156)	(1,073)	575	(498)
NET FINANCIAL INCOME/(LOSS)	(3,700)	697	(3,003)	(2,061)	711	(1,350)

The cost of net debt is higher compared to December 31, 2021 notably due to the increase in lease liabilities relating to the extension of the Compagnie Nationale du Rhône concession. The higher average cost of gross debt, mainly due to the rise in interest rates, is partly offset by the increase in interest received on cash and cash equivalents and liquid debt instruments.

Losses from debt and equity instruments amounted to €1.258 million. This amount mainly includes the impairment of the loan granted to Nord Stream 2 for €987 million and the negative change in fair value of money market funds held by Synatom for €280 million (see Note 17.2.4 "Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material").

At December 31, 2022, the average cost of debt after hedging came out at 2.73% compared with 2.65% at December 31, 2021.

NOTE 11 INCOME TAX EXPENSE

Accounting standards

The Group calculates taxes in accordance with prevailing tax legislation in the countries where income is taxable.

In accordance with IAS 12, deferred taxes are recognized according to the liability method on temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their tax bases, using tax rates that have been enacted or substantively enacted by the reporting date. However, under the provisions of IAS 12, no deferred tax is recognized for temporary differences arising from goodwill for which impairment losses are not deductible for tax purposes, or from the initial recognition of an asset or liability in a transaction which (i) is not a business combination and (ii) at the time of the transaction, affects neither accounting income nor taxable income. In addition, deferred tax assets are only recognized to the extent that it is probable that taxable income will be available against which the deductible temporary differences can be utilized.

A deferred tax liability is recognized for all taxable temporary differences associated with investments in subsidiaries, associates, joint ventures and branches, except if the Group is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future.

Net balances of deferred taxes are calculated based on the tax position of each company or on the total income of companies included within the relevant consolidated tax group, and are presented in assets or liabilities for their net amount per tax entity.

Deferred taxes are reviewed at each reporting date to take into account factors including the impact of changes in tax laws and the prospects of recovering deferred tax assets arising from deductible temporary differences.

Deferred tax assets and liabilities are not discounted.

Tax effects relating to coupon payments on deeply-subordinated perpetual notes are recognized in profit or loss.

11.1 Actual income tax expense recognized in the income statement

11.1.1 Breakdown of actual income tax expense recognized in the income statement

The tax income recognized in the income statement for 2022 amounted to €83 million (€1,695 million income tax expense in 2021). It breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Current income taxes	(1,762)	(740)
Deferred taxes	1,845	(955)
TOTAL INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	83	(1,695)

11.1.2 Reconciliation of theoretical income tax expense with actual income tax expense

A reconciliation of theoretical income tax expense with the Group's actual income tax expense is presented below:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Net income/(loss)	390	3,758
Share in net income of equity method entities	523	784
Net income/(loss) from discontinued operations	2,183	80
Income tax expense	83	(1,695)
Income/(loss) before income tax of consolidated companies (A)	(2,400)	4,588
Of which French companies	(2,130)	5,604
Of which companies outside France	(270)	(1,016)
Statutory income tax rate of the parent company (B)	25.8%	28.4%
THEORETICAL INCOME TAX EXPENSE (C) = (A) X (B)	620	(1,303)
Reconciling items between theoretical and actual income tax expense		
Difference between statutory tax rate applicable to the parent and statutory tax rate in force in jurisdictions in France and abroad	(8)	38
Permanent differences ⁽¹⁾	(313)	(30)
Income taxed at a reduced rate or tax-exempt ⁽²⁾	427	300
Additional tax expense ⁽³⁾	(327)	(230)
Effect of unrecognized deferred tax assets on tax loss carry-forwards and other tax-deductible temporary differences ⁽⁴⁾	(940)	(958)
Recognition or utilization of tax income on previously unrecognized tax loss carry-forwards and other tax-deductible temporary differences ⁽⁵⁾	643	510

INCOME TAX BENEFIT/(EXPENSE) RECOGNIZED IN INCOME	83	(1,695)

- (1) Mainly includes disallowable impairment losses on goodwill, disallowed operating expenses and the deduction of interest expenses arising from hybrid debt.
- (2) Mainly includes capital gains on disposals of securities exempt from tax or taxed at a reduced rate in some tax jurisdictions, the impact of the specific tax regimes used by some entities, disallowable impairment losses and capital losses on securities, and the impact of untaxed income from remeasuring previously-held (or retained) equity interests in connection with acquisitions and changes in consolidation methods.
- (3) Mainly includes tax on dividends resulting from the parent company tax regime, withholding tax on dividends and interest levied in several tax jurisdictions, allocations to provisions for income tax, and regional and flat-rate corporate taxes. In 2022, this line also includes the temporary Italian solidarity contribution, which amounts to €132 million.
- (4) Includes (i) the cancellation of the net deferred tax asset position for some tax entities in the absence of sufficient profit being forecast and (ii) the impact of disallowable impairment losses on fixed assets.
- (5) Includes the impact of the recognition of net deferred tax asset positions for some tax entities.
- (6) Mainly includes the impact of tax rate changes on deferred tax balances in the United Kingdom for 2022 and in the United Kingdom, France and Argentina for 2021.
- (7) Mainly includes reversals of provisions for tax litigation, tax credits in France and other tax reductions.
- (8) Mainly includes the correction of previous tax charges.

11.1.3 Analysis of the deferred tax income/(expense) recognized in the income statement, by type of temporary difference

In millions of euros	Impact in the income statement	
	Dec. 31, 2022	Dec. 31, 2021
Deferred tax assets:		
Tax loss carry-forwards and tax credits	1,051	(178)
Pension and related obligations	(1)	(218)
Non-deductible provisions	55	(56)
Difference between the carrying amount of PP&E and intangible assets and their tax bases	454	174
Measurement of financial instruments at fair value (IAS 32/IFRS 9)	(1,260)	6,542
Other	(135)	222
TOTAL	164	6,485
Deferred tax liabilities:		
Difference between the carrying amount of PP&E and intangible assets and their tax bases	(545)	(498)
Measurement of assets and liabilities at fair value (IAS 32/IFRS 9)	1,781	(7,148)

Impact of translation adjustments	101	(146)	(45)
Transfers to assets and liabilities classified as held for sale	(54)	51	(3)
Other	440	(344)	95
Impact of netting by tax entity	638	(638)	-
AT DECEMBER 31, 2022	2,029	(6,408)	(4,379)

11.3.2 Analysis of the net deferred tax position recognized in the statement of financial position (before netting deferred tax assets and liabilities by tax entity), by type of temporary difference

Accounting standards

Measurement of recognized tax loss carry-forwards

Deferred tax assets are recognized on tax loss carry-forwards when it is probable that taxable profit will be available against which the tax loss carry-forwards can be utilized. The probability that taxable profit will be available against which the unused tax losses can be utilized, is based on taxable temporary differences relating to the same taxation authority and the same taxable entity and estimates of future taxable profits. These estimates and utilizations of tax loss carry-forwards were prepared on the basis of profit and loss forecasts over a six-year tax projection period as included in the medium-term business plan validated by Management, subject to exceptions justified by a particular context and, if necessary, on the basis of additional forecasts.

<i>In millions of euros</i>	Statement of financial position at	
	Dec. 31, 2022	Dec. 31, 2021
Deferred tax assets:		
Tax loss carry-forwards and tax credits	2,202	1,299
Pension obligations	812	1,501
Non-deductible provisions	518	388
Difference between the carrying amount of PP&E and intangible assets and their tax bases	1,830	1,440

Other	(693)	(687)
TOTAL	(18,707)	(20,675)
NET DEFERRED TAX ASSETS/(LIABILITIES)	(4,378)	(6,557)

11.4 Unrecognized deferred taxes

At December 31, 2022, the tax effect of tax losses and tax credits eligible for carry-forward but not utilized and not recognized in the statement of financial position amounted to €4,165 million (€4,642 million at December 31, 2021). Most of these unrecognized tax losses relate to companies based in countries which allow losses to be carried forward indefinitely (mainly Belgium, Australia, Luxembourg and the Netherlands). These tax loss carry-forwards did not give rise to the full or partial recognition of a deferred tax asset due to the absence of sufficient profit forecasts in the medium term.

The tax effect of other tax-deductible temporary differences not recorded in the statement of financial position was €1,590 million at end-December 2022 versus €1,097 million at end-December 2021.

NOTE 12 EARNINGS PER SHARE

Accounting standards

Basic earnings per share is calculated by dividing net income Group share for the year by the weighted average number of ordinary shares outstanding during the year. The average number of ordinary shares outstanding during the year is the number of ordinary shares outstanding at the beginning of the year, adjusted by the number of ordinary shares bought back or issued during the year.

For the diluted earnings per share calculation, the weighted average number of shares and basic earnings per share are adjusted to take into account the impact of the conversion or exercise of any dilutive potential ordinary shares (options, warrants and convertible bonds, etc.).

In compliance with IAS 33 – *Earnings per Share*, earnings per share and diluted earnings per share are based on net income/(loss) Group share after deduction of payments to bearers of deeply-subordinated perpetual notes (see Note 16.2.1 “Issuance of deeply-subordinated perpetual notes”).

The Group’s dilutive instruments included in the calculation of diluted earnings per share include bonus shares and performance shares granted in the form of ENGIE securities.

	Dec. 31, 2022	Dec. 31, 2021
Numerator (in millions of euros)		
Net income/(loss) Group share	216	3,661
Of which Net income/(loss) relating to continuing operations, Group share	(1,965)	3,582
Interest from deeply-subordinated perpetual notes	(77)	(121)
Net income/(loss) used to calculate earnings per share	140	3,540
Of which Net income/(loss) relating to continuing operations, Group share, used to calculate earnings per share	(2,042)	3,461
Diluted net income/(loss) Group share	140	3,540
Net recurring income/(loss) Group share		
Of which Net recurring income/(loss) relating to continuing operations, Group share	5,223	2,927
Interest from deeply-subordinated perpetual notes	(77)	(121)
Net recurring income/(loss) used to calculate earnings per share	5,433	3,037
Of which Net recurring income/(loss) relating to continuing operations, Group share, used to calculate earnings per share	5,146	2,806
Diluted net recurring income/(loss) Group share	5,433	3,037
Denominator (in millions of shares)		
Average number of outstanding shares	2,420	2,419
Impact of dilutive instruments:		
Bonus share plans reserved for employees	-	12
Diluted average number of outstanding shares	2,420	2,431
Earnings per share (in euros)		
Basic earnings/(loss) per share	0.06	1.46
Of which Basic earnings/(loss) Group share relating to continuing operations per share	(0.84)	1.43
Diluted earnings/(loss) per share	0.06	1.46
Of which Diluted earnings/(loss) Group share relating to continuing operations per share	(0.84)	1.42
Basic recurring earnings/(loss) per share	2.24	1.26
Of which Basic recurring earnings/(loss) Group share relating to continuing operations per share	2.13	1.16
Diluted recurring earnings/(loss) per share ⁽¹⁾	2.23	1.25
Of which Diluted recurring earnings/(loss) Group share relating to continuing operations per share ⁽¹⁾	2.12	1.15

(1) In 2022, the calculation of the denominator includes 12 million potential ENGIE shares which would have a dilutive effect on the NRIGs and NRIGs relating to continuing operations per share but have not been taken into account in the calculation of the NIIGs and the NIIGs relating to continuing operations per share due to the antidilutive effect on the latter.

NOTE 13 FIXED ASSETS

13.1 Goodwill

Accounting standards

Upon a business combination, goodwill is measured as the difference between:

- on the one hand the sum of:
 - the consideration transferred;
 - the amount of non-controlling interests in the acquiree, and
 - in a business combination achieved in stages, the acquisition-date fair value of the previously held equity interest in the acquiree;
- on the other hand the net fair value of the identifiable assets acquired and liabilities assumed. The key assumptions and estimates used to determine the fair value of assets acquired and liabilities assumed include the market outlook for the measurement of future cash flows as well as applicable discount rates. These assumptions reflect management's best estimates at the acquisition date.

The amount of goodwill recognized at the acquisition date cannot be adjusted after the end of the 12-month measurement period.

Goodwill relating to interests in associates is recorded under "Investments in equity method entities".

13.1.1 Movements in the carrying amount of goodwill

<i>In millions of euros</i>	Net amount
AT DECEMBER 31, 2021	12,799
Changes in scope of consolidation and Other	(27)
Translation adjustments	82
AT DECEMBER 31, 2022	12,854

13.1.2 Information on goodwill

For the purposes of impairment testing, goodwill is allocated to operating segments, which represent the lowest level at which it is monitored for internal management purposes.

The table below shows the amount of goodwill at December 31, 2022:

<i>In millions of euros</i>	Dec. 31, 2022
Networks	5,302
Renewables	2,110
Supply	1,830
Energy Solutions	1,316
Thermal	1,152
Nuclear	797
Other	350
TOTAL	12,855

13.2 Intangible assets

Accounting standards

Initial measurement

Intangible assets are carried at cost less any accumulated amortization and any accumulated impairment losses.

Amortization

Intangible assets are amortized on the basis of the expected pattern of consumption of the estimated future economic benefits embodied in the asset. Amortization is calculated mainly on a straight-line basis over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Concession rights	10	30
Customer portfolio	3	20
Other intangible assets	1	50

Intangible assets with an indefinite useful life are not amortized but are tested for impairment annually.

Intangible rights arising on concession contracts

IFRIC 12 – *Service Concession Arrangements* deals with the treatment to be applied by the concession operator in respect of certain concession arrangements.

For a concession arrangement to fall within the scope of IFRIC 12, usage of the infrastructure must be controlled by the concession grantor. This requirement is satisfied when the following two conditions are met:

- the grantor controls or regulates what services the operator must provide with the infrastructure, to whom it must provide them, and at what price; and
- the grantor controls any residual interest in the infrastructure at the end of the term of the arrangement, for example it retains the right to take back the infrastructure at the end of the concession.

The intangible asset model according to paragraph 17 of IFRIC 12 applies if the operator receives a right (a license) to charge the users, or the grantor, depending on the use made of the public service. There is no unconditional right to receive cash, as the amounts depend on the extent to which the public uses the service.

Concession infrastructures that do not meet the requirements of IFRIC 12 are presented as property, plant and equipment. This is the case of gas distribution infrastructures in France. The related assets are recognized in accordance with IAS 16, given that GRDF operates its network under long-term concession arrangements, most of which are mandatorily renewed upon expiration pursuant to French law No. 46-628 of April 8, 1946.

Research and development costs

Research costs are expensed as incurred.

Development costs are capitalized when the asset recognition criteria set out in IAS 38 are met. Capitalized development costs are amortized over the useful life of the intangible asset.

13.2.1 Movements in intangible assets

<i>In millions of euros</i>	Intangible rights arising on concession contracts	Capacity entitlements	Others	Total
GROSS AMOUNT				
AT DECEMBER 31, 2021	3,917	2,845	12,936	19,697

Disposals	(485)	(15)	(622)	(1,122)
Translation adjustments	11	-	150	162
Changes in scope of consolidation	(37)	-	15	(22)
Transfer to "Assets classified as held for sale and discontinued operations"	-	-	6	6
Other	156	453	(351)	257
AT DECEMBER 31, 2022	3,630	3,282	13,498	20,410
ACCUMULATED AMORTIZATION AND IMPAIRMENT				
AT DECEMBER 31, 2021	(1,921)	(2,133)	(8,860)	(12,913)
Amortization	(139)	(90)	(812)	(1,041)
Impairment	(13)	-	(41)	(54)
Disposals	477	15	519	1,011
Translation adjustments	1	-	(45)	(44)
Changes in scope of consolidation	9	-	37	46
Other	(121)	-	71	(50)
AT DECEMBER 31, 2022	(1,706)	(2,208)	(9,131)	(13,046)
CARRYING AMOUNT				
AT DECEMBER 31, 2021	1,996	712	4,076	6,784
AT DECEMBER 31, 2022	1,924	1,074	4,366	7,364

In 2022, the net increase in "Intangible assets" was mainly attributable to:

- the investments during the period (positive €1,432 million) relating mainly to information technology projects in progress (positive €898 million) in the business of Energy Solutions in France, Networks in France and in the Renewables businesses in Brazil and in the United States;
- a positive foreign exchange impact of €118 million primarily due to the appreciation against the euro of the Brazilian real (positive €86 million) and of the US dollar (positive €37 million);
- changes in scope of consolidation (positive €24 million) relating mainly to the acquisition of Eolia Renovables in Spain (positive €22 million) and to the acquisition of Renewables activities in the United States (positive €14 million);

partially offset by:

- amortizations (negative €1,041 million);
- the impact of the first-time application of the decision of the IFRS IC of March 2021, related to the accounting treatment of configuration and customization costs for software in a SaaS arrangement (Software as a Service) for a negative €140 million (*Note 1.1 "Accounting standards"*);
- impairment losses (negative €54 million).

13.2.2 Capacity entitlements

The Group has acquired capacity entitlements from power stations operated by third parties. These power station capacity rights were acquired in connection with transactions or within the scope of the Group's involvement in financing the construction of certain power stations. In consideration, the Group received the right to purchase a share of the production over the useful life of the underlying assets. These rights are amortized over the useful life of the underlying assets, not exceeding 50 years. The Group currently holds entitlements in the Chooz B and Tricastin power plants in France and in the virtual power plant (VPP) in Italy.

13.2.3 Other

At December 31, 2022, this caption mainly relates to software and licenses for €1,393 million, as well as intangible assets in progress €767 million and intangible assets (client portfolio) acquired as a result of business combinations and capitalized acquisition costs for customer contracts for €1,925 million.

13.2.4 Information regarding research and development costs

Research and development activities primarily relate to various studies regarding technological innovation, improvements in plant efficiency, safety, environmental protection, service quality, and the use of energy resources. Research and development priorities are focused on climate change adaptation and mitigation, including renewable energy systems (solar photovoltaic, onshore and offshore wind), the production and use of green gases (hydrogen, biomethane) or the development of decentralized energy infrastructure (district heating and cooling, decentralized solar energy, low carbon cities and mobility).

The capitalized development costs, related to projects in the development phase that meet the criteria for recognition as an intangible asset as defined in IAS 38, totaled €44 million in 2022 and are mainly related to EV Box (€22 million) which is active in the Energy Solutions business and to the Renewables businesses of Engie Energia Chile (€20 million).

13.3 Property, plant and equipment

Accounting standards

Initial recognition and subsequent measurement

Items of property, plant and equipment are recognized at historical cost less any accumulated depreciation and any accumulated impairment losses.

The carrying amount of these items is not revalued as the Group has elected not to apply the allowed alternative method, which consists of regularly revaluing one or more categories of property, plant and equipment.

Investment subsidies are deducted from the gross value of the assets concerned.

In accordance with IAS 16, the initial cost of the item of property, plant and equipment includes an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, when the entity has a present, legal or constructive obligation to dismantle the item or restore the site. A corresponding provision for this obligation is recorded for the amount of the asset component.

Borrowing costs that are directly attributable to the construction of the qualifying asset are capitalized as part of the cost of that asset.

Leases

In accordance with IFRS 16, the Group recognizes a right-of-use asset and a corresponding lease liability with respect to contracts considered as a lease in which the Group acts as lessee, except for leases with a term of 12 months or less ("short-term leases"), and leases for which the underlying asset is of a low value ("low-value asset"). Payments associated with these leases are recognized on a straight-line basis as expenses in profit and loss. The lease contracts in the Group mainly concern real estate, vehicles and other equipment.

The right-of-use asset is initially measured at cost, which comprises the initial amount of the lease liability adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred and an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received.

The lease liability is initially measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate. This rate is calculated based on the Group's incremental borrowing rate adjusted in accordance with IFRS 16, taking into account (i) the economic environment of the subsidiaries, and in particular their credit risk, (ii) the currency in which the contract is concluded and (iii) the duration of the contract at inception (or the remaining duration for contracts existing upon the initial application of IFRS 16). The methodology applied to determine the incremental borrowing rate reflects the profile of the lease payments (duration method).

The lease term is assessed, including whether a renewal option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised, on a case-by-case basis. The lease term is reassessed if a significant event or a significant change in circumstances that is within the control of the lessee occurs and may affect the assessment made. In determining the enforceable period of a lease, the Group applies a broad interpretation of the term penalty and takes into consideration not only contractual penalties arising from termination, but also ancillary costs that could arise in case of an early termination of the lease.

Cushion gas

"Cushion" gas injected into underground storage facilities is essential for ensuring that reservoirs can be operated effectively, and is therefore inseparable from these reservoirs. Unlike "working" gas which is included in inventories (see Note 22.2 "Inventories"), cushion gas is reported in other property, plant and equipment.

Depreciation

In accordance with the components approach, each significant component of an item of property, plant and equipment with a different useful life from that of the main asset to which it relates is depreciated separately over its own useful life.

Property, plant and equipment is depreciated mainly using the straight-line method over the following useful lives:

Main depreciation periods (years)	Useful life	
	Minimum	Maximum
Plant and equipment		
• Storage - Production - Transport - Distribution	5	60 ^(*)
• Installation – Maintenance	3	10
• Hydraulic plant and equipment	20	65
Solar and wind farms	25	30
Other property, plant and equipment	2	33

(*) Excluding cushion gas.

The range of useful lives is due to the diversity of the assets in each category. The minimum periods relate to smaller equipment and furniture, while the maximum periods concern network infrastructures and storage facilities. In accordance with the law of January 31, 2003 adopted by the Belgian Chamber of Representatives with respect to the gradual phase-out of nuclear energy for the industrial production of electricity, the useful lives of nuclear power stations were reviewed and adjusted prospectively to 40 years as from 2003, except for Tihange 1, Doel 1 and Doel 2 for which the operating lives have been extended by 10 years.

Fixtures and fittings relating to hydro plants operated by the Group are depreciated over the shorter of the contract term and the useful life of the assets, taking into account the renewal of the concession period if such renewal is considered to be reasonably certain.

The right-of-use asset related to leases is depreciated using the straight-line method from the commencement date to the end of the lease term, unless the lease transfers ownership of the underlying asset to the Group by the end of the lease term. In that case the right-of-use asset is depreciated over the useful life of the underlying asset, which is determined on the same basis as that used for property, plant and equipment mentioned above.

13.3.1 Movements in property, plant and equipment

<i>In millions of euros</i>	Land	Buildings	Plant and equipment	Vehicles	Dismantling costs	Assets in progress	Right of use	Other	Total

AT DECEMBER 31, 2022	(153)	(1,772)	(52,709)	(226)	(4,155)	(724)	(1,710)	(895)	(62,343)
CARRYING AMOUNT									
AT DECEMBER 31, 2021	503	1,463	41,105	85	554	4,328	2,583	458	51,079
AT DECEMBER 31, 2022	497	991	43,307	78	1,883	4,925	3,384	424	55,488

In 2022, the net increase in "Property, plant and equipment" essentially takes into account :

- the recognition of decommissioning assets in respect of the revision of decommissioning provisions for which the main part related to nuclear installations (€2,238 million);
- maintenance and development investments for a total amount of €5,948 million mainly related to the construction and the development of wind and solar farms primarily in France, the United States and in Latin America (€2,870 million), as well as to the extension of the transportation and distribution networks in France and Romania (€1,806 million), to Energy Solutions activities (€461 million) and to Thermal operating segments assets (€516 million);
- the recognition of the right of use related to the extension of the concession of the *Compagnie Nationale du Rhône* (CNR) for a positive €848 million; and
- positive foreign exchange effects of €870 million, mainly resulting from the appreciation against the euro of the US dollar (positive impact of €601 million) and fluctuations in the Brazilian real (positive impact of €324 million);

largely offset by :

- depreciation for a total amount of €3,534 million;
- the classification under "Assets held for sale" for a negative €107 million, relating mainly to the classification of a thermal power plant in Brazil (negative €353 million) partially offset by the reversal of the classification as held for sale of certain renewables assets in Mexico due to the unfavorable evolution of the disposal project (positive €229 million);
- impairment losses on property, plant and equipment amounting to €2,259 million mainly relating to the nuclear assets in Belgium (negative €1,219 million).

13.3.2 Pledged and mortgaged assets

Items of property, plant and equipment pledged by the Group to guarantee borrowings and debt amounted to €1,120 million at December 31, 2022 compared to €1,373 million at December 31, 2021.

The net decrease mainly relates to the Thermal assets in Brazil for a negative €484 million due to the recognition of a thermal plant as an asset held for sale.

13.3.3 Contractual commitments to purchase property, plant and equipment

In the ordinary course of their operations, some Group companies have entered into commitments to purchase, and the related third parties to deliver plant and equipment. These commitments relate mainly to orders for equipment and material related to the construction of energy production units and to service agreements.

Investment commitments made by the Group to purchase property, plant and equipment totaled €3,548 million at December 31, 2022 compared to €1,926 million at December 31, 2021 ⁽¹⁾.

The net increase primarily relates to the construction of renewable assets in Brazil for €680 million and in the United States for €392 million and to contractual commitments related to the Zuidwending and JemGum gas storages sites in the Netherlands for €286 million.

13.3.4 Other information

Borrowing costs for 2021 included in the cost of property, plant and equipment amounted to €109 million at December 31, 2022 compared to €70 million at December 31, 2021.

13.4 Impairment testing of goodwill, intangible assets and property, plant and equipment

Accounting standards

Risk of impairment

Goodwill

Goodwill is not amortized but is tested for impairment each year in accordance with IAS 36, or more frequently where an indication of impairment is identified. All goodwill are tested for impairment based on data at the end of June, supplemented by a review of events in the second half.

Impairment tests are carried out at the level of cash-generating units (CGUs) or groups of CGUs, which constitute groups of assets which generate cash flows that are largely independent from cash flows generated by other CGUs.

Goodwill is impaired if the net carrying amount of the CGU (or group of CGUs) to which the goodwill is allocated is greater than the recoverable amount of that CGU.

Impairment losses in relation to goodwill cannot be reversed and are shown as "Impairment losses" in the income statement.

Intangible assets and property, plant and equipment

In accordance with IAS 36, impairment tests are carried out on items of property, plant and equipment and intangible assets where there is an indication that the assets may be impaired. Such indications may be based on events or

(1) Investment commitments made by the Group to purchase property, plant and equipment as of December 31, 2021, have been adjusted for double counting.

changes in the market environment, or on internal sources of information. Intangible assets that are not amortized are tested for impairment annually.

Property, plant and equipment and intangible assets with finite useful lives are only tested for impairment when there is an indication that they may be impaired. This is generally the result of significant changes in the environment in which the assets are operated or when economic performance is lower than expected.

Items of property, plant and equipment and intangible assets are tested for impairment at the level of the cash-generating unit (CGU), as appropriate and determined in accordance with IAS 36. If the recoverable amount of an asset is lower than its carrying amount, the carrying amount is written down to the recoverable amount by recording an impairment loss. Upon recognition of an impairment loss, the depreciable amount and possibly the useful life of the asset concerned is revised.

Impairment losses recorded in relation to property, plant and equipment or intangible assets may be subsequently reversed if the recoverable amount of the asset increases to exceed the carrying amount. The increased carrying amount of an item of property, plant or equipment following the reversal of an impairment loss may not exceed the carrying amount that would have been determined (net of depreciation/amortization) had no impairment loss been recognized in prior periods.

Indicators of impairment

The main indicators of impairment used by the Group are:

- using external sources of information
 - a decline in an asset's value over the period that is significantly more than would be expected from the passage of time or normal use;
 - significant adverse changes that have taken place over the period, or will take place in the near future, in the technological market, economic or legal environment in which the entity operates or in the market to which an asset is dedicated;
 - an increase over the period in market interest rates or other market rates of return on investments if such increase is likely to affect the discount rate used in calculating an asset's value in use and decrease its recoverable amount materially;
 - the carrying amount of the net assets of the entity exceeds its market capitalization;
- using internal sources of information
 - evidence of obsolescence or physical damage to an asset;
 - significant changes in the extent to which, or manner in which, an asset is used or is expected to be used, that have taken place in the period or soon thereafter and that will adversely affect it. These changes include the asset becoming idle, plans to dispose of an asset sooner than expected, reassessing its useful life as finite rather than indefinite or plans to restructure the operations to which the asset belongs;
 - internal reports that indicate that the economic performance of an asset is, or will be, worse than expected.

Measurement of recoverable amount

For operating entities which the Group intends to hold on a long-term and going concern basis, the recoverable amount of a CGU corresponds to the higher of its fair value less costs to sell and its value in use. Value in use is primarily determined based on the present value of future operating cash flows including a terminal value. Standard valuation techniques are used based on the following main economic assumptions:

- market perspectives and developments in the regulatory framework;
- discount rates based on the specific characteristics of the operating entities concerned;
- terminal values in line with available market data specific to the operating segments concerned and growth rates associated with these terminal values, not exceeding the inflation rate.

Discount rates are determined on a post-tax basis and applied to post-tax cash flows. The recoverable amounts calculated on the basis of these discount rates are the same as the amounts obtained by applying the pre-tax discount rates to cash flows estimated on a pre-tax basis, as required by IAS 36.

For operating entities which the Group has decided to sell, the related recoverable amount of the assets concerned is based on market value less disposal costs. Where negotiations are ongoing, this value is determined based on the best estimate of their outcome as of the reporting date.

13.4.1 General assumptions

The impairment tests were performed in the context of a highly volatile economic environment, as described in Note 1.3 "Use of estimates and judgments".

In most cases, the recoverable amounts are determined by reference to a value in use that is calculated using cash flow projections drawn up on the basis of the 2023 budget and the 2024-2025 medium term business plan, as approved by the Executive Committee and the Board of Directors, and on the basis of extrapolated cash flows beyond that time frame.

Cash flow projections are determined on the basis of macroeconomic assumptions (inflation, exchange rates and growth rates), and price forecasts resulting from the Group's reference scenario for 2026-2050 as revised and validated by the Executive Committee in October 2022. The forecasts and projections included in the reference scenario were determined on the basis of the following inputs:

- forward market prices over the liquidity period for fuel (coal, oil and gas), CO₂ and electricity on each market against a backdrop of highly volatile energy prices;
- beyond this period, medium- and long-term energy prices were determined by the Group based on macroeconomic assumptions and fundamental supply and demand equilibrium models, the results of which are regularly compared against forecasts prepared by external energy sector specialists. Long-term projections for CO₂ prices are in line with the 2030 emissions reduction target of 55% and the 2050 climate neutrality objectives set by the European Commission as part of the "European Green Deal" presented in December 2019 and July 2021. Among the external scenarios, the Group's scenario is similar to that of the International Energy Agency, with its APS (Announced Pledges Scenario) model, and that of ADEME ("green technology");
- more specifically, medium- and long-term electricity prices were determined by the Group using electricity demand forecasting models, medium- and long-term forecasts of fuel and CO₂ prices, and expected trends in installed capacity and in the technology mix of the production assets within each power generation system. ENGIE has opted for a balanced mix, integrating renewable gas and carbon dioxide capture and storage in order to guarantee an energy system with the best levels of efficiency and resilience. This trajectory has been included in the Group's report as part of the "Task Force on Climate Related Financial Disclosures" (TCFD) initiative. The risk factors arising from climate and environmental issues are also detailed in the Group's Universal Registration Document.

13.4.2 Renewables

At December 31, 2022, goodwill amounted to €2,110 million, intangible assets to €1,305 million and property, plant and equipment to €14,679 million. Renewables comprises all centralized renewable energy generation activities, including financing, construction, operation and maintenance of renewable energy facilities, using various energy sources such as hydroelectric, onshore wind, photovoltaic solar, biomass, offshore wind, and geothermal. The energy produced is fed into the grid and sold either on the open or regulated market or to third parties through electricity sale agreements.

The main assumptions and key estimates relate primarily to discount rates, assumptions as to the renewal of the hydropower concession agreements and changes in electricity prices beyond the liquidity period.

Value in use of the Compagnie Nationale du Rhône and SHEM was calculated based on assumptions including the extension or renewal of a tender process for the concession agreements, as well as on the conditions of a potential extension.

The cash flows for the periods covered by the renewal of the concession agreements are based on a number of assumptions relating to the economic and regulatory conditions for operating these assets (royalty rates, required level of investment, etc.) during this period.

In 2022, the discount rates applied to these activities ranged between 4.5% and 10.2%. In 2021, these rates ranged between 4.5% and 10%.

Results of the impairment tests

At December 31, 2022, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €232 million were recognized during the year on property, plant and equipment, notably in Latin America for €135 million and in North America for €82 million.

Sensitivity analyses

A decrease of €10/MWh in electricity prices for hydropower generation would have a negative €0.4 billion impact on the recoverable amount. However, the recoverable amount of goodwill would remain above the carrying amount. Conversely, an increase of €10/MWh in electricity prices would have a positive €0.3 billion impact on the recoverable amount.

An increase of 50 basis points in the discount rates used for hydropower generation activities in France would have a negative €0.3 billion impact on the recoverable amount. However, the recoverable amount of goodwill would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive €0.3 billion impact on the recoverable amount.

13.4.3 Networks

Networks comprises the Group's electricity and gas infrastructure activities and projects. These activities include the management and development of (i) gas and electricity transportation networks and natural gas distribution networks in and outside of Europe, (ii) underground natural gas storage in Europe, and (iii) regasification infrastructure in France and Chile.

Apart from the historical infrastructure management activities, its asset portfolio also contributes to the challenges of the energy transition and network greening (biomethane, hydrogen, etc.).

At December 31, 2022, goodwill amounted to €5,302 million, intangible assets to €1,093 million and property, plant and equipment to €29,942 million. Regulated infrastructure assets in France amounted to €940 million for intangible assets and €26,369 million for property, plant and equipment.

The valuation of activities in France is mainly based on cash flow projections determined on the basis of tariffs negotiated with the French energy regulator (CRE) and terminal values corresponding to the expected value of the Regulated Asset Base (RAB). The RAB is the value assigned by the CRE to the assets operated by distributors. It is the sum of the future pre-tax cash flows, discounted at the pre-tax rate of return guaranteed by the regulator.

In respect of the valuation of activities in France, the energy mix scenario for 2050, adopted by the Group and detailed in Note 17.3.1 "Dismantling obligations arising on non-nuclear plant and equipment", will not lead to any significant change in RAB. Given the vital role of gas, a reliable energy source able to supplement renewable energy sources that are intermittent by nature, non-controllable and difficult to store, the Group is planning to maintain or convert its gas network infrastructures to allow for the transport of green gases (biomethane, hydrogen, etc.), which will progressively replace natural gas.

To achieve this, the Group plans to maintain its current level of investment. This approach is largely supported by a rapidly developing legal framework supporting the rise in the use of hydrogen (and to a certain extent, biomethane) in the European Union, which will result in concrete European targets, for hydrogen at least. This legal framework should be in place within the next two years.

France's political and social strategy concerning the energy transition aims to achieve carbon neutrality by 2050. The priorities of the French climate and energy policy are being updated with France's future roadmap *Stratégie Française sur l'Énergie et le Climat* (SFEC) (see Note 17.3.1 "Dismantling obligations arising on non-nuclear plant and equipment"). This future policy could have an impact on the role and scope of gas infrastructures in France.

In 2022, the discount rates applied to all these activities ranged between 4.7% and 8.5%. In 2021, they ranged between 4.5% and 8.5%.

Results of the impairment tests

At December 31, 2022, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €65 million were recognized during the year on property, plant and equipment, notably in Germany.

Sensitivity analysis

Given the regulated nature of the Networks business in France, as well as the progressive transition from natural gas to green gas, a reasonable change in any of the valuation inputs (discount rate, inflation rate and rate of return on assets) would not result in any impairment losses. A very substantial change in the regulatory framework could have a significant impact on the valuation of gas infrastructure assets in France. In this respect, the 2022 RAB of Networks assets in France, as well as the related depreciation and amortization charges, are as follows:

<i>In millions of euros</i>	2022 RAB	Depreciation and amortization
GRDF	16,137	(990)
GRTgaz	9,047	(540)
Storengy	3,958	(147)
Elengy	900	(56)

13.4.4 Energy Solutions

At December 31, 2022, goodwill amounted to €1,316 million, intangible assets to €2,302 million and property, plant and equipment to €2,496 million.

Energy Solutions encompasses the construction and management of decentralized energy networks to produce low-carbon energy (heating and cooling networks, distributed power generation plants, distributed solar power parks, low-carbon mobility, low-carbon cities and public lighting, etc.) and related services (energy efficiency, technical maintenance, sustainable development consulting).

The terminal value used to calculate the value in use of the services and energy sales businesses in France was determined by extrapolating the cash flows beyond the medium-term business plan period using a long-term growth rate of 2% per year.

The main assumptions and key estimates relate primarily to discount rates and changes in price beyond the liquidity period.

In 2022, the discount rates applied to these activities ranged between 4.9% and 8.9%. In 2021, they ranged between 4.5% and 8.6%.

Results of the impairment tests

At December 31, 2022, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €132 million were recognized during the year on property, plant and equipment, mainly in connection with renegotiations of contracts due to expire shortly in France.

Sensitivity analyses

Given the essentially contractual nature of Energy Solutions activities, a reasonable change in any of the valuation inputs would not result in impairment losses on goodwill.

13.4.5 Thermal

At December 31, 2022, goodwill amounted to €1,152 million, intangible assets to €237 million and property, plant and equipment to €5,525 million.

Thermal encompasses all the Group's centralized power generation activities using thermal assets, whether contracted or not. It includes the operation of power plants fueled mainly by gas or coal, as well as pump-operated storage plants. The energy produced is fed into the grid and sold either on the open or regulated market or to third parties through electricity sale agreements. It also includes the financing, construction and operation of desalination plants, whether or not connected to power plants.

The value in use of these activities was calculated using the cash flow projections drawn up on the basis of the 2023 budget and the 2024-2025 medium-term business plan. Beyond this three-year period, cash flows were projected over the useful lives of the assets based on the reference scenario adopted by the Group.

The main assumptions and key estimates relate primarily to discount rates, estimated demand for electricity and changes in the price of CO₂, fuel and electricity beyond the liquidity period. These assumptions also concern the duration of tax measures involving inframarginal rent caps in France and Italy.

In 2022, the discount rates applied to these activities ranged between 6% and 10.3%. In 2021, they ranged between 6% and 10%.

Results of the impairment tests

At December 31, 2022, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €744 million were recognized during the year on property, plant and equipment, mainly in connection with the ongoing coal exit program which is scheduled to be completed by 2027 at the latest.

Sensitivity analyses

An increase of 50 basis points in the discount rates used would have a negative 1% impact on the excess of the recoverable amount of thermal power plants in France, Belgium, the Netherlands and Spain over their carrying amount. However, the recoverable amount of goodwill would remain above the carrying amount. A reduction of 50 basis points in the discount rates used would have a positive 1% impact on the calculation.

A 10% decrease in the margin captured by thermal power plants in France, Belgium, the Netherlands and Spain would have a negative impact of 5% on the excess of the recoverable amount of goodwill over the carrying amount. An increase of 10% in the margin captured would have a positive 5% impact on this calculation.

13.4.6 Supply

At December 31, 2022, goodwill amounted to €1,830 million, intangible assets to €682 million and property, plant and equipment to €119 million.

Supply encompasses all the Group's activities relating to the sale of gas and electricity to end customers. It also includes all the Group's activities in services for residential clients.

The terminal value used to calculate the value in use of the main services and energy sales businesses in Europe was determined by extrapolating cash flows beyond the medium-term business plan period using a long-term growth rate of approximately 2% per year.

In 2022, the discount rates applied to these activities ranged between 7.8% and 10%. In 2021, they ranged between 7% and 9%.

Results of the impairment tests

At December 31, 2022, no impairment losses were recognized on goodwill in consideration of the recoverable amount of the cash generating unit to which it belongs.

However, impairment losses totaling €53 million were recognized during the year on property, plant and equipment in connection with the geographic refocusing decided by the Group.

Sensitivity analyses

Given the capital-light nature of Supply activities, a reasonable change in any of the valuation inputs would not result in impairment losses on goodwill.

13.4.7 Nuclear

At December 31, 2022, goodwill amounted to €797 million, intangible assets to €1,075 million and property, plant and equipment to €1,719 million.

Nuclear encompasses the power generation activities from the Group's nuclear power plants in Belgium and drawing rights on the Chooz B and Tricastin power plants in France.

Key assumptions used for the impairment test

The cash flow projections for these activities are based on a large number of key assumptions, such as prices of fuel and CO₂, expected trends in electricity demand and prices, availability of power plants, the market outlook, and changes in the regulatory environment (especially concerning nuclear capacities in Belgium, the extension of drawing rights agreements for French nuclear plants and the tax measures involving inframarginal rent caps). Lastly, the key assumptions also include the discount rate used to calculate the value in use of these activities, which amounted to 7% for 2022, unchanged from 2021.

Cash flow projections for the period beyond the medium-term business plan were determined as described below:

Activities	Assumptions applied beyond the term of the business plan
Drawing rights on Chooz B and Tricastin power plants	Cash flow projection over the remaining term of existing contract plus the assumption that drawing rights will be extended for a further 10 years.

As regards second-generation reactors, the principle of a gradual phase-out of nuclear power and the schedule for this phase-out, with the shutdown of Doel 3 in 2022, Tihange 2 in 2023 and Tihange 3 and Doel 4 in 2025, after 40 years of operation, were first set out in the law of January 31, 2003 on the gradual phase-out of nuclear power for industrial electrical generation, and were reaffirmed in the Belgian government's general policy memorandum of November 4, 2020. However, this principle remained subject to analysis mechanisms enabling this decision to be reassessed based on its impacts on the security of supply, the climate, energy prices and the security of power plants subject to a monitoring process.

In March 2022, the Belgian government announced that it was considering extending the operation of certain nuclear plants beyond 2025. On July 21, 2022, the Group signed a non-binding letter of intent to assess the feasibility and conditions regarding an extension of the operating lives of the Doel 4 and Tihange 3 reactors.

Under the terms of the non-binding agreement signed on January 9, 2023, the Belgian government and ENGIE have committed to making best efforts to extend the operating life of the second-generation nuclear reactors Doel 4 and Tihange 3, and to restart these units in November 2026 with a total production capacity of 2 GW.

Given the stage of negotiations and the lack of precise information on the economic conditions of this extension to date, the period of extension beyond 2025 was not considered in the impairment tests performed at December 31, 2022.

In France, the Nuclear Safety Authority authorized the start-up of Tricastin 1 on December 20, 2019 after its shutdown for its fourth 10-yearly inspection and, on December 3, 2020, published a draft decision setting out the conditions for the 900 MW reactors to continue operating beyond 40 years. Confirmation of a 10-year extension of the operating life of the 900 MW series reactors is therefore expected to be formalized in the next few years, once the conditions for continued operation have been determined by the Nuclear Safety Authority and a public inquiry has been held. The Group has therefore considered the 10-year extension of the nuclear units, and the corresponding drawing rights, beyond their fourth 10-yearly outage. The last ten-yearly outage at Tricastin (VD4) has taken place in 2021, and in 2019 for Chooz B (VD3). The assumption of an extension was already considered in previous years.

Results of the impairment test

Taking into account the effects of the triennial review of nuclear provisions on assets to be recognized against decommissioning provisions of nuclear power plants, the Group recognized an impairment loss of €1,219 million relating to decommissioning assets for the year.

The recoverable amount of the Nuclear assets remains above the value of goodwill, particularly due to the excess value attached to the plants in France.

Sensitivity analyses

A decrease of €10/MWh in electricity prices for nuclear power generation beyond the forward period would lead to a decrease of €0.4 billion in the recoverable amount, but without any impairment of goodwill.

An increase of 50 basis points in the discount rates would lead to a decrease of €0.1 billion in the recoverable amount with non-material impairment losses on the Belgian plants.

A 5% decrease in availability of all Belgian nuclear power plants would lead to an impairment loss of around €0.3 billion on the Belgian plants. A similar decrease for the French plants would lead to a decrease of €0.2 billion in the recoverable amount, but without any impairment.

13.4.8 Other

The goodwill allocated to the Other segment amounted to €350 million at December 31, 2022. The Other segment encompasses energy management and optimization activities, the BtoB supply activities in France of *Entreprises & Collectivités* (E&C), and the Corporate and holding activities.

For the Other segment, a significant headroom exists between the recoverable amount and the carrying amount for operating activities to which goodwill is allocated at December 31, 2022.

NOTE 14 FINANCIAL INSTRUMENTS

14.1 Financial assets

Accounting standards

In accordance with the principles of IFRS 9 – *Financial Instruments*, financial assets are recognized and measured either at amortized cost, at fair value through equity or at fair value through profit or loss based on the following two criteria:

- a first criterion relating to the contractual cash flow characteristics of the financial asset. The analysis of contractual cash flow characteristics makes it possible to determine whether these cash flows are “only payments of principal and interest on the outstanding amounts” (known as the “SPPI” test or Solely Payments of Principal and Interest);
- a second criterion relating to the business model used by the Group to manage its financial assets. IFRS 9 defines three different business models: a first business model whose objective is to hold assets in order to collect contractual cash flows (hold to collect), a second model whose objective is achieved by both collecting contractual cash flows and selling financial assets (hold to collect and sell), and other business models.

The identification of the business model and the analysis of the contractual cash flow characteristics require judgment to ensure that the financial assets are classified in the appropriate category.

Where the financial asset is an investment in an equity instrument and is not held for trading, the Group may irrevocably elect to present the gains and losses on that investment in other comprehensive income.

Except for trade receivables, which are measured at their transaction price in accordance with IFRS 15, financial assets are measured, on initial recognition, at fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs that are directly attributable to their acquisition.

At the end of each reporting period, financial assets measured using the amortized cost method or at fair value through other comprehensive income (with a recycling mechanism) are subject to an impairment test based on the expected credit losses method.

Financial assets also include derivatives that are measured at fair value in accordance with IFRS 9.

In accordance with IAS 1, the Group presents current and non-current assets and current and non-current liabilities separately in the statement of financial position. In view of the majority of the Group's activities, it was considered that the criterion to be used to classify assets is the expected time to realize the asset or settle the liability: the asset is classified as current if this period is less than 12 months and as non-current if it is more than 12 months after the reporting period.

The following table presents the Group's different categories of financial assets, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2022			Dec. 31, 2021		
		Non-current	Current	Total	Non-current	Current	Total
Other financial assets	14.1	10,599	2,394	12,992	10,949	2,495	13,444
Equity instruments at fair value through other comprehensive income		1,217	-	1,217	2,344	-	2,344
Equity instruments at fair value through income		278	-	278	483	-	483
Debt instruments at fair value through other comprehensive income		2,128	290	2,418	2,157	104	2,261
Debt instruments at fair value through income		1,178	568	1,745	1,794	395	2,189
Loans and receivables at amortized cost		5,798	1,537	7,334	4,171	1,996	6,167
Trade and other receivables	7.2	-	31,310	31,310	-	32,555	32,555
Assets from contracts with customers	7.2	9	12,575	12,584	34	8,344	8,377
Cash and cash equivalents		-	15,570	15,570	-	13,890	13,890
Derivative instruments	14.4	33,134	15,252	48,386	25,616	19,373	44,989
TOTAL		43,741	77,102	120,843	36,599	76,657	113,256

14.1.1 Other financial assets

14.1.1.1 Equity instruments at fair value

Accounting standards

Equity instruments at fair value through other comprehensive income (OCI)

Under IFRS 9 an irrevocable election can be made to present subsequent changes in the fair value of an investment in an equity instrument that is not held for trading in other comprehensive income. This choice is made on an instrument by instrument basis. Amounts presented in other comprehensive income should not be transferred to profit or loss including proceeds of disposals. However, IFRS 9 authorizes the transfer of the accumulated profits and losses to another component of equity. Dividends from such investments are recognized in profit or loss unless the dividend clearly represents the recovery of a portion of the cost of the investment.

The equity instruments recognized under this line item mainly concern investments in companies that are not controlled by the Group and for which OCI measurement has been selected given their strategic and long-term nature.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost, plus transaction costs.

At each reporting date, for listed securities, fair value is determined based on the quoted market price at the reporting date. For unlisted securities, fair value is measured using valuation models based primarily on the latest market transactions, the discounting of dividends or cash flows and the net asset value.

Equity instruments at fair value through profit or loss

Equity instruments that are held for trading or for which the Group has not elected for measurement at fair value through other comprehensive income are measured at fair value through profit or loss.

This category mainly includes investments in companies not controlled by the Group.

Upon initial recognition, these equity instruments are recognized at fair value, which is generally their acquisition cost.

At each reporting date, for listed and unlisted securities, the same measurement method as described above should be applied.

<i>In millions of euros</i>	Equity instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Total
AT DECEMBER 31, 2021	2,344	483	2,827
Increase	213	93	306
Decrease	(647)	(263)	(910)
Changes in fair value	(686)	(15)	(701)
Changes in scope of consolidation, translation adjustments and other	(7)	(20)	(27)
AT DECEMBER 31, 2022	1,217	278	1,495
Dividends	12	3	15

Equity instruments break down as €875 million of listed equity instruments (€1,750 million at December 31, 2021) and €620 million of unlisted equity instruments (€1,077 million at December 31, 2021). This amount includes in particular the minority interest held by the Group in Nord Stream AG, now valued at €90 million, down €474 million compared to December 31, 2021. This decrease is a result of damage to the pipeline and due to the heightened risk profile of Nord Stream's single customer, Gazprom. This change in fair value does not affect the income statement, as it is recorded as a reduction in other items of the statement of comprehensive income. The decrease notably includes the disposal of the remaining 1.8% interest in SUEZ for a negative €227 million.

14.1.1.2 Debt instruments at fair value

Accounting standards

Debt instruments at fair value through other comprehensive income

Financial assets that are held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets and for which the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the outstanding amount (SPPI), are measured at fair value through OCI (with a recycling mechanism). This involves a measurement through profit or loss for interest (at amortized cost using the effective interest method), impairment and foreign exchange gains and losses, and through OCI (with a recycling mechanism) for other gains or losses.

This category mainly includes bonds.

Fair value gains and losses on these instruments are recognized in other comprehensive income, except for the following items which are recognized in profit or loss:

- expected credit losses and reversals;
- foreign exchange gains and losses.

When the financial asset is derecognized, the cumulative gain or loss that was previously recognized in other comprehensive income is reclassified from equity to profit or loss.

Debt instruments at fair value through profit or loss

Financial assets whose contractual cash flows do not consist solely of payments of principal and interest on the amount outstanding (SPPI) or that are held in view of an "other" business model are measured at fair value through profit or loss.

The Group's investments in UCITS are accounted for in this caption. They are considered as debt instruments, according to IAS 32 – *Financial Instruments: Presentation*, given the existence of an obligation for the issuer to redeem units, at the request of the holder. They are measured at fair value through profit or loss because the contractual cash flow characteristics do not meet the SPPI test.

NOTE 14 FINANCIAL INSTRUMENTS

<i>In millions of euros</i>	Debt instruments at fair value through other comprehensive income	Liquid debt instruments held for cash investment purposes at fair value through other comprehensive income	Debt instruments at fair value through income	Liquid debt instruments held for cash investment purposes at fair value through income	Total
AT DECEMBER 31, 2021	2,260	1	1,593	595	4,449
Increase	1,751	22	1,704	200	3,677
Decrease	(1,207)	(1)	(2,040)	(20)	(3,269)
Changes in fair value	(386)	-	(280)	(7)	(673)
Changes in scope of consolidation, translation adjustments and other	-	(22)	-	-	(22)
AT DECEMBER 31, 2022	2,418	-	977	769	4,163

Debt instruments at fair value at December 31, 2022 primarily included bonds and money market funds held by Synatom for €3,350 million (see Note 17.2.4 “Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material”) and liquid instruments deducted from net financial debt for €769 million (respectively €3,806 million and €596 million at December 31, 2021).

14.1.1.3 Loans and receivables at amortized cost

Accounting standards

Loans and receivables held by the Group under a business model consisting in holding the instrument in order to collect the contractual cash flows, and whose contractual cash flows consist solely of payments of principal and interest on the principal amount outstanding (SPPI test) are measured at amortized cost. Interest is calculated using the effective interest method.

The following items are recognized in profit or loss:

- interest income using the effective interest method;
- expected credit losses and reversals;
- foreign exchange gains and losses.

The Group has entered into concession agreements with certain public authorities under which the construction, extension or improvement of infrastructure is carried out in return for an unconditional right to receive payment from the concession holder in cash or other financial assets. In this case, the Group recognizes a financial receivable from the concession holders.

The Group has entered into services or take-or-pay contracts that are, or contain, a lease and under which the Group acts as lessor and its customers as lessees. Leases are analyzed in accordance with IFRS 16 in order to determine whether they constitute an operating lease or a finance lease. Whenever the terms of the lease transfer substantially all the risk and rewards of ownership of the related asset, the contract is classified as a finance lease and a finance receivable is recognized to reflect the financing deemed to be granted by the Group to the customer.

Leasing security deposits are presented in this caption and recognized at their nominal value.

Please refer to Note 15 “Risks arising from financial instruments” regarding the assessment of counterparty risk.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 14 FINANCIAL INSTRUMENTS

In millions of euros	Dec. 31, 2022			Dec. 31, 2021		
	Non-current	Current	Total	Non-current	Current	Total
Loans granted to affiliated companies and other debt instruments at amortized cost	3,583	427	4,010	2,267	195	2,462
Other receivables at amortized cost	261	734	995	240	1,537	1,777
Amounts receivable under concession contracts	1,564	187	1,751	1,200	123	1,324
Amounts receivable under finance leases	390	189	579	463	141	604
TOTAL	5,798	1,537	7,334	4,171	1,996	6,167

Loans granted to affiliated companies and other debt instruments at amortized cost include the cash of the debt instruments held by Synatom to be invested for €2,270 million (€167 million at December 31, 2021) (see Note 17.2.4. “Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material”).

Amounts receivable under concession contracts amounted to €1,751 million at December 31, 2022. They are related to the Novo Estado and Gralha Azul electric power transmission networks in Brazil.

Impairment and expected credit losses against loans and receivables at amortized cost stood at €1,294 million at December 31, 2022 (versus €228 million at December 31, 2021), and include the impairment of the loan relating to the financing of the Nord Stream 2 pipeline project for €987 million (see Note 15.2.2.1 “Loans and receivables at amortized cost” and Note 10 “Net financial income/(loss)”).

Other net gains and losses recognized in the income statement relating to loans and receivables at amortized cost break down as follows:

In millions of euros	Interest income	Post-acquisition measurement	
		Foreign currency translation	Expected credit loss
At December 31, 2022	211	(64)	(6)
At December 31, 2021	223	(15)	(7)

Amounts receivable under finance leases

These contracts refer to lease contracts in which ENGIE acts as lessor, classified as finance leases in accordance with IFRS 16. They relate to energy purchase and sale contracts where the contract conveys an exclusive right to use a production asset, and certain contracts with industrial customers relating to assets held by the Group.

The Group has recognized finance lease receivables, notably for cogeneration plants for Wapda and NTDC (Uch - Pakistan).

In millions of euros	Dec. 31, 2022	Dec. 31, 2021
Undiscounted future minimum lease payments	758	713

NET INVESTMENT IN THE LEASE (STATEMENT OF FINANCIAL POSITION)	723	668
Of which present value of future minimum lease payments	718	660
Of which present value of unguaranteed residual value	5	9

Undiscounted minimum lease payments receivable under finance leases can be analyzed as follows:

In millions of euros	Dec. 31, 2022	Dec. 31, 2021
Year 1	137	122
Years 2 to 5 inclusive	376	351
Beyond year 5	245	240
TOTAL	758	713

14.1.2 Trade and other receivables, assets from contracts with customers

Information on trade and other receivables and assets from contracts with customers are provided in Note 7.2. "Trade and other receivables, assets and liabilities from contracts with customers".

14.1.3 Cash and cash equivalents

Accounting standards

This item includes cash equivalents as well as short-term investments that are considered to be readily convertible into a known amount of cash and where the risk of a change in their value is deemed to be negligible based on the criteria set out in IAS 7.

Bank overdrafts are not included in the calculation of cash and cash equivalents and are recorded under "Short-term borrowings".

Cash and cash equivalent items are subject to impairment tests in accordance with the expected credit losses model of IFRS 9.

"Cash and cash equivalents" totaled €15,570 million at December 31, 2022 (€13,890 million at December 31, 2021). This item comprises standard money market funds with daily liquidity (50%), term deposits with a maturity of less than one month (36%), and deposits with a maturity of less than three months and other products (14%).

This amount included funds related to the green bond issues, which remain unallocated to the funding of eligible projects (see section 5 of the Universal Registration Document).

At December 31, 2022, this amount also included €12 million in cash and cash equivalents subject to restrictions (€172 million at December 31, 2021).

Gains recognized in respect of "Cash and cash equivalents" amounted to €196 million in 2022 compared to €54 million in 2021.

14.1.4 Transfer of financial assets

The Group carried out disposals without recourse to financial assets as part of transactions leading to full derecognition, for an outstanding amount of €3,733 million at December 31, 2022.

14.1.5 Financial assets and equity instruments pledged as collateral for borrowings and debt

In millions of euros	Dec. 31, 2022	Dec. 31, 2021
Financial assets and equity instruments pledged as collateral	3,532	3,915

This item mainly includes the carrying amount of equity instruments pledged as collateral for borrowings and debt.

14.2 Financial liabilities

Accounting standards

Borrowings and other financial liabilities are measured at amortized cost using the effective interest rate method.

On initial recognition, any issue or redemption premiums and discounts and issuing costs are added to/deducted from the nominal value of the borrowings concerned. These items are taken into account when calculating the effective interest rate and are therefore recorded in the consolidated income statement over the life of the borrowings using the amortized cost method.

As regards structured debt instruments that do not have an equity component, the Group may be required to separate an “embedded” derivative instrument from its host contract. When an embedded derivative is separated from its host contract, the initial carrying amount of the structured instrument is broken down into an embedded derivative component, corresponding to the fair value of the embedded derivative, and a financial liability component, corresponding to the difference between the amount of the issue and the fair value of the embedded derivative. The separation of components upon initial recognition does not give rise to any gains or losses.

The debt is subsequently recorded at amortized cost using the effective interest method while the derivative is measured at fair value, with changes in fair value recognized in profit or loss.

Financial liabilities are recognized either:

- as “Amortized cost liabilities” for borrowings, trade payables and other creditors, and other financial liabilities;
- as “Liabilities measured at fair value through profit or loss” for derivative financial instruments and for financial liabilities designated as such.

The following table presents the Group’s different financial liabilities at December 31, 2022, broken down into current and non-current items:

In millions of euros	Notes	Dec. 31, 2022			Dec. 31, 2021		
		Non-current	Current	Total	Non-current	Current	Total
Borrowings and debt	14.3	28,083	12,508	40,591	30,458	10,590	41,048
Trade and other payables	14.2	-	39,801	39,801	-	32,822	32,822
Liabilities from contracts with	7.2	121	3,292	3,412	68	2,671	2,739
Derivative instruments	14.4	39,417	11,859	51,276	24,228	22,702	46,931
Other financial liabilities		90	-	90	108	-	108
TOTAL		67,711	67,460	135,171	54,863	68,785	123,648

14.2.1 Trade and other payables

In millions of euros	Dec. 31, 2022	Dec. 31, 2021
Trade payables	39,165	32,197
Payable on fixed assets	636	625
TOTAL	39,801	32,822

The carrying amount of these financial liabilities represents a reasonable estimate of their fair value.

The increase in trade payables is mainly due to the rise in commodity prices.

14.2.2 Liabilities from contracts with customers

Information on liabilities from contracts with customers are provided in Note 7.2. "Trade and other receivables, assets and liabilities from contracts with customers".

14.3 Net financial debt

14.3.1 Net financial debt by type

NET FINANCIAL DEBT		28,228	(4,174)	24,054	30,060	(4,710)	25,350

(1) This item corresponds to the revaluation of the interest rate component of debt in a qualified fair value hedging relationship for a negative €200 million, margin calls on debt hedging derivatives carried in liabilities for €364 million and the impact of amortized cost for €144 million (compared to, respectively, €227 million, €269 million and €99 million at December 31, 2021).

(2) This item notably corresponds to assets related to financing for €67 million, liquid debt instruments held for cash investment purposes for €769 million and margin calls on derivatives hedging borrowings carried in assets for €547 million (compared to, respectively, €47 million, €596 million and €977 million at December 31, 2021).

(3) This item represents the interest rate component of the fair value of derivatives hedging borrowings in a designated fair value hedging relationship. It also represents the exchange rate and outstanding accrued interest rate components of the fair value of all debt-related derivatives irrespective of whether or not they qualify as hedges.

The fair value of gross borrowings and debt (excluding lease liabilities) amounted to €35,179 million at December 31, 2022, compared with a carrying amount of €37,690 million.

Financial income and expenses related to borrowings and debt are presented in Note 10 "Net financial income/(loss)".

14.3.2 Reconciliation between net financial debt and cash flow from (used in) financing activities

		Dec. 31, 2021	Cash flow from financing activities	Cash flow from operating and investing activities and change in cash and cash equivalents	Change in fair value	Translation adjustments	Change in scope of consolidation and others	Dec. 31, 2022

NET FINANCIAL		25,350	(1,859)	(945)	449	556	503	24,054

(1) Lease liabilities: the negative amount of a negative €501 million included in the "Cash flow from financing activities" column corresponds to lease payments, excluding interest (total cash outflow for leases amounted to €552 million, of which €51 million relating to interest).

14.3.3 Main events of the period

14.3.3.1 Impact of changes in the scope of consolidation and in exchange rates on net financial debt

In 2022, changes in exchange rates resulted in a €556 million increase in net financial debt, including a €271 million increase in relation to the US dollar and a €307 million increase in relation to the Brazilian real.

The extension of the Compagnie Nationale du Rhône's concession until 2041 resulted in an increase in lease liabilities of €850 million at December 31, 2022.

Changes in the scope of consolidation (including the cash impact of acquisitions and disposals) led to a €7,043 million decrease in net financial debt. This change mainly reflects:

- asset disposals during the period, resulting in a €8,697 million decrease in net financial debt (see Note 4.1 "Disposals carried out in 2022"). They mainly include:
 - the disposal to Bouygues of the Group's interest in EQUANS;
 - the additional price related to the sale of part of the stake in SUEZ and the disposal of the 1.8% remaining interest in SUEZ to VEOLIA;
 - the two successive disposals of nearly 9% and then 6% of the Group's interest in Gaztransport & Technigaz SA (GTT) and the conversion of 96% of the bond redeemable for GTT shares (representing nearly 10% of the company's capital);
 - the disposal of the Group's interest in geothermal assets PT SUPREME ENERGY MUARA LABOH and RANTAU DEDAP in Indonesia;
- the change in the classification of entities under "Assets held for sale", resulting in a €297 million decrease in net financial debt. They include the ongoing disposal of a thermal power plant in Brazil and the unfavorable evolution of the planned disposal of some renewable assets in Mexico (see Note 4.2 "Assets held for sale");

- acquisitions carried out in 2022 which increased net financial debt by €1,951 million (see Note 4.3 “Acquisitions carried out in 2022”).

14.3.3.2 Financing and refinancing transactions

The Group carried out the following main transactions in 2022:

ENGIE SA

- on March 9, 10 and 11, 2022 ENGIE SA drew on bilateral lines for a total amount of €1,485 million, for a one month period. The redemption took place on April 11, 2022;
- on July 6, 2022 ENGIE SA redeemed at maturity JPY 10 billion (€71 million) worth of bonds (private placement) with a 1.26% coupon;
- on July 20, 2022 ENGIE SA redeemed at maturity €410 million worth of bonds, with a 2.625% coupon;
- on September 27, 2022 ENGIE SA issued €650 million worth of green bonds, maturing in September, 2029, bearing a 3.5% coupon;
- on October 10, 2022 ENGIE SA redeemed at maturity USD 750 million (€773 million) worth of bonds, with a 2.875% coupon;
- on October 18, 2022 ENGIE SA redeemed at maturity €693 million worth of bonds, with a 3.5% coupon;
- on October 24, 2022 ENGIE SA redeemed partially in advance several bonds for an aggregate nominal amount of €1,125 million, including:
 - a €220 million tranche of green bonds, maturing in March 2024, with a 0.875% coupon,
 - a €396 million tranche, maturing in March 2025, with a 1.375% coupon,
 - a €157 million tranche, maturing in September 2025, with a 0.875% coupon,
 - a €54 million tranche, maturing in May 2026, with a 2.375% coupon,
 - a €123 million tranche, maturing in March 2027, with a 0% coupon,
 - a €175 million tranche, maturing in June 2027, with a 0.375% coupon;
- in November and December 2022, 96% of the bond redeemable for GTT shares was converted for €278 million.

Other Group entities

- in June 2022, Compagnie Nationale du Rhône redeemed at maturity a bank loan of €300 million, with a 0.55% coupon;
- in May 2022, ENGIE Brasil Energia redeemed at maturity three bank loans for a total amount of €238 million;
- throughout 2022, ENGIE Energia Chile took out several bank loans for a total amount of USD 797 millions (€748 million);
- in July 2022, ENGIE Energia Perú SA redeemed at maturity two bank loans for a total amount of €142 million, with 1.01% and 1.06% coupons;
- in August 2022, ENGIE Energia Perú SA took out a USD 264 million (€251 million) bank loan, maturing in August 2033;

- in October 2022, Compagnie Nationale du Rhône redeemed at maturity a bank loan of €300 million, with an EURIBOR 6 months plus a 0.9% spread coupon;
- throughout 2022, Compagnie Nationale du Rhône redeemed several bilateral lines for a total amount of €525 million;

in November 2022, ENGIE Brasil Energia redeemed at maturity a bank loan of USD 200 million (€205 million), with a 3.37% coupon.

14.4 Derivative instruments

Accounting standards

Derivative financial instruments are measured at fair value. This fair value is determined on the basis of market data, available from external contributors. In the absence of an external benchmark, a valuation based on internal models recognized by market participants and favoring data directly derived from observable data such as OTC quotations is used.

The change in fair value of derivative financial instruments is recorded in the income statement except when they are designated as hedging instruments in a cash flow hedge or net investment hedge. In this case, changes in the value of the hedging instruments are recognized directly in equity, excluding the ineffective portion of the hedges.

The Group uses derivative financial instruments to manage and reduce its exposure to market risks arising from fluctuations in interest rates, foreign currency exchange rates and commodity prices, mainly for gas and electricity. The use of derivative instruments is governed by a Group policy for managing interest rate, currency and commodity risks (see Note 15 – *Risks arising from financial instruments*).

Derivative financial instruments are contracts (i) whose value changes in response to the change in one or more observable variables, (ii) that do not require any material initial net investment, and (iii) that are settled at a future date.

Derivative instruments include swaps, options, futures and swaptions, as well as forward commitments to purchase or sell listed and unlisted securities, and firm commitments or options to purchase or sell non-financial assets that involve physical delivery of the underlying.

For purchases and sales of electricity and natural gas, the Group systematically analyzes whether the contract was entered into in the “normal” course of operations and therefore falls outside the scope of IFRS 9. This analysis consists firstly in demonstrating that the contract is entered into and continues to be held for the purpose of physical delivery or receipt of the commodity in accordance with the Group’s expected purchase, sale or usage requirements for volumes intended to be used or sold by the Group within a reasonable time frame, as part of its operations.

The second step is to demonstrate that the Group has no practice of settling similar contracts on a net basis and that these contracts are not equivalent to written options. In particular, in the case of electricity and gas sales allowing the buyer a certain degree of flexibility concerning the volumes delivered, the Group distinguishes between contracts that are equivalent to capacity sales considered as transactions falling within the scope of ordinary operations and those that are equivalent to written financial options, which are accounted for as derivative financial instruments.

Only contracts that meet all of the above conditions are considered as falling outside the scope of IFRS 9. Adequate specific documentation is compiled to support this analysis.

Embedded derivatives

The main Group contracts that may contain embedded derivatives are contracts with clauses or options potentially affecting the contract price, volume or maturity. This is the case primarily with contracts for the purchase or sale of non-financial assets, whose price is revised based on an index, the exchange rate of a foreign currency or the price of an asset other than the contract’s underlying.

An embedded derivative is a component of a hybrid (combined) instrument that also includes a non-derivative host contract – with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

If a hybrid contract contains a host that is an asset within the scope of IFRS 9, the Group applies the presentation and measurements requirements described in Note 18.1 to the entire hybrid contract.

Conversely, when a hybrid contract contains a host that is not an asset within the scope of IFRS 9, an embedded derivative shall be separated from the host and accounted for as a derivative if, and only if:

- the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host;
- a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and
- the hybrid contract is not measured at fair value with changes in fair value recognized in profit or loss (i.e., a derivative that is embedded in a financial liability at fair value through profit or loss is not separated).

Where an embedded derivative is separate from the host contract, it is measured at fair value and fair value changes are recognized in profit or loss (except if the embedded derivative is documented in a hedge relationship).

Hedging instruments: recognition and presentation

Derivative instruments qualifying as hedging instruments are recognized in the consolidated statement of financial position and measured at fair value. However, their accounting treatment varies according to whether they are classified as (i) a fair value hedge of an asset or liability; (ii) a cash flow hedge, or (iii) a hedge of a net investment in a foreign operation.

Fair value hedges

A fair value hedge is defined as a hedge of the exposure to changes in fair value of a recognized asset or liability such as a fixed-rate loan or borrowing, or of assets, liabilities or an unrecognized firm commitment denominated in a foreign currency.

The gain or loss from remeasuring the hedging instrument at fair value is recognized in profit or loss. The gain or loss on the hedged item attributable to the hedged risk adjusts the carrying amount of the hedged item and is also recognized in profit or loss even if the hedged item is in a category in respect of which changes in fair value are recognized through other comprehensive income. These two adjustments are presented net in the consolidated income statement, with the net effect corresponding to the ineffective portion of the hedge.

Cash flow hedges

A cash flow hedge is a hedge of the exposure to variability in cash flows that could affect the Group's income. The hedged cash flows may be attributable to a particular risk associated with a recognized financial or non-financial asset or a highly probable forecast transaction.

The portion of the gain or loss on the hedging instrument that is determined to be an effective hedge is recognized directly in other comprehensive income, net of tax, while the ineffective portion is recognized in profit or loss. The gains or losses accumulated in equity are reclassified to the consolidated income statement under the same caption as the loss or gain on the hedged item – i.e., current operating income for operating cash flows and financial income or expenses for other cash flows – in the same periods in which the hedged cash flows affect income.

If the hedging relationship is discontinued, in particular because the hedge is no longer considered effective, the cumulative gain or loss on the hedging instrument remains recognized in equity until the forecast transaction occurs. However, if a forecast transaction is no longer expected to occur, the cumulative gain or loss on the hedging instrument is immediately recognized in profit or loss.

Hedge of a net investment in a foreign operation

In the same way as for a cash flow hedge, the portion of the gain or loss on the hedging instrument that is determined to be an effective hedge of the currency risk is recognized directly in other comprehensive income, net of tax, while the

ineffective portion is recognized in profit or loss. The gains or losses accumulated in other comprehensive income are transferred to the consolidated income statement when the investment is liquidated or sold.

Hedging instruments: identification and documentation of hedging relationships

The hedging instruments and hedged items are designated at the inception of the hedging relationship. The hedging relationship is formally documented in each case, specifying the hedging strategy, the hedged risk and the method used to assess hedge effectiveness. Only derivative contracts entered into with external counterparties are considered as being eligible for hedge accounting

Hedge effectiveness is assessed and documented at the inception of the hedging relationship and on an ongoing basis throughout the periods for which the hedge was designated.

Hedge effectiveness is demonstrated both prospectively and retrospectively using various methods, based mainly on a comparison between changes in fair value or cash flows between the hedging instrument and the hedged item. Methods based on an analysis of statistical correlations between historical price data are also used.

Derivative instruments not qualifying for hedge accounting: recognition and presentation

These items mainly concern derivative financial instruments used in economic hedges that have not been – or are no longer – documented as hedging relationships for accounting purposes.

When a derivative financial instrument does not qualify or no longer qualifies for hedge accounting, changes in fair value are recognized directly in profit or loss under (i) current operating income for derivative instruments with non-financial assets as the underlying, and (ii) financial income or expenses for currency, interest rate and equity derivatives.

Derivative instruments not qualifying for hedge accounting used by the Group in connection with proprietary commodity trading activities and other derivatives expiring in less than 12 months are recognized in the consolidated statement of financial position in current assets and liabilities, while derivatives expiring after this period are classified as non-current items.

Fair value measurement

The fair value of instruments listed on an active market is determined by reference to the market price. In this case, these instruments are presented in level 1 of the fair value hierarchy.

The fair value of unlisted financial instruments for which there is no active market and for which observable market data exist is determined based on valuation techniques such as option pricing models or the discounted cash flow method.

The models used to evaluate these instruments take into account assumptions based on market inputs:

- the fair value of interest rate swaps is calculated based on the present value of future cash flows;
- the fair value of forward foreign exchange contracts and currency swaps is calculated by reference to current prices for contracts with similar maturities by discounting the future cash flow spread (difference between the forward exchange rate under the contract and the forward exchange rate recalculated in line with the new market conditions applicable to the nominal amount);
- the fair value of currency and interest rate options is calculated using option pricing models;
- commodity derivatives are valued by reference to listed market prices based on the present value of future cash flows (commodity swaps or commodity forwards) and option pricing models (options), for which market price volatility may be a factor. Contracts with maturities exceeding the depth of transactions for which prices are observable, or which are particularly complex, may be valued based on internal assumptions;
- exceptionally, for complex contracts negotiated with independent financial institutions, the Group uses the values established by its counterparties.

These instruments are presented in level 2 of the fair value hierarchy except when the evaluation is based mainly on data that are not observable, in which case they are presented in level 3 of the fair value hierarchy. Most often, this is

the case for derivatives with a maturity that falls outside the observability period for market data relating to the underlying or when certain inputs such as the volatility of the underlying are not observable.

Except in case of enforceable master netting arrangements or similar agreements, counterparty risk is included in the fair value of financial derivative instrument assets and liabilities. It is calculated according to the "expected loss" method and takes into account the exposure at default, the probability of default and the loss given default. The probability of default is determined on the basis of credit ratings assigned to each counterparty ("historical probability of default" approach).

Offsetting of financial assets and liabilities in the statement of financial position

Financial assets and liabilities are presented net in the statement of financial position when the offsetting criteria of IAS 32 are met. Offsetting relates to instruments entered into with counterparties for which the contractual terms provide for a net settlement of transactions and a collateralization agreement (margin calls). In particular, commodity derivative assets and liabilities are offset for transactions with the same counterparty, in the same currency, by type of commodity and delivery point and with identical maturities.

Derivative instruments recognized in assets and liabilities are measured at fair value and broken down as follows:

In millions of euros	Dec. 31, 2022						Dec. 31, 2021					
	Assets			Liabilities			Assets			Liabilities		
	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total	Non-current	Current	Total
Derivatives hedging borrowings	226	92	319	620	114	735	370	130	501	224	89	313
Derivatives hedging commodities	30,932	15,076	46,008	37,210	11,698	48,907	24,474	19,190	43,664	22,335	22,507	44,842
Derivatives hedging other items ⁽¹⁾	1,975	84	2,059	1,587	47	1,634	772	52	824	1,670	106	1,775
TOTAL	33,134	15,252	48,386	39,417	11,859	51,276	25,616	19,373	44,989	24,228	22,702	46,931

(1) Derivatives hedging other items mainly include the interest rate component of interest rate derivatives (not qualifying as hedges or qualifying as cash flow hedges) that are excluded from net financial debt, as well as net investment hedge derivatives.

The increase in the balance of derivatives hedging commodities is due to the extreme volatility of commodity prices in 2022. Most of these derivatives mature in 2023 and 2024. This fair value also incorporates market parameters at December 31, 2022, in particular the "bid ask" reserve, which have been updated to reflect the higher volatility of commodity prices and the reduced liquidity in the European natural gas and electricity markets in the second half of 2022. In the main markets where the Group operates (Europe, United States, Singapore) a 10% increase or decrease in these market parameters (including the "bid ask" spread) would impact the fair value of the derivatives concerned by a negative €143 million (increase) and a positive €143 million (decrease).

14.4.1 Offsetting of derivative instrument assets and liabilities

The net amount of derivative instruments after taking into account enforceable master netting arrangements or similar agreements, whether or not they are offset in accordance with paragraph 42 of IAS 32, are presented in the table below:

		Dec. 31, 2022				Dec. 31, 2021			
		Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount	Gross amount	Net amount recognized in the statement of financial position ⁽¹⁾	Other offsetting agreements ⁽²⁾	Total net amount
<i>In millions of euros</i>									
Assets	Derivatives hedging commodities	72,322	46,008	(8,866)	37,142	75,043	43,664	(9,281)	34,383
	Derivatives hedging borrowings and other items	2,378	2,378	(364)	2,014	1,325	1,325	(269)	1,056
Liabilities	Derivatives hedging commodities	(75,221)	(48,907)	5,094	(43,813)	(76,220)	(44,842)	4,987	(39,855)
	Derivatives hedging borrowings and other items	(2,369)	(2,369)	547	(1,822)	(2,089)	(2,089)	977	(1,111)

(1) Net amount recognized in the statement of financial position after taking into account offsetting agreements that meet the criteria set out in paragraph 42 of IAS 32. Due to the extreme volatility of commodity prices, this offsetting had a significant impact on the statement of financial position at December 31, 2022 and mainly concerns OTC derivatives concluded with counterparties for which the contractual terms provide for a net settlement of the transactions as well as a collateralization agreement (margin calls).

(2) Other offsetting agreements include collateral and other guarantee instruments, as well as offsetting agreements that do not meet the criteria set out in paragraph 42 of IAS 32.

14.5 Fair value of financial instruments by level in the fair value hierarchy

14.5.1 Financial assets

The table below shows the allocation of financial instruments carried in assets to the different levels in the fair value hierarchy:

In millions of euros	Dec. 31, 2022				Dec. 31, 2021			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Other financial assets (excluding loans and receivables at	5,658	4,225	-	1,433	7,276	5,556	-	1,720
Equity instruments at fair value through other comprehensive	1,217	875	-	342	2,344	1,524	-	820
Equity instruments at fair value through income	278	-	-	278	483	227	-	256
Debt instruments at fair value through other comprehensive	2,418	2,418	-	-	2,261	2,254	-	7
Debt instruments at fair value through income	1,745	933	-	813	2,189	1,552	-	637
Derivative instruments	48,386	138	44,730	3,518	44,989	177	41,606	3,206
Derivatives hedging borrowings	319	-	319	-	501	-	501	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	40,992	-	40,825	168	35,381	-	35,306	75
Derivatives hedging commodities - relating to trading	5,016	138	1,528	3,350	8,284	177	4,975	3,131
Derivatives hedging other items	2,059	-	2,059	-	824	-	824	-
TOTAL	54,044	4,363	44,730	4,951	52,266	5,734	41,606	4,926

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and electricity contracts measured at fair value through profit or loss. Due to geopolitical uncertainties, the fair value of contracts with Russian suppliers takes into account contingencies related to natural gas supply cuts.

A definition of these three levels is presented in Note 14.4 "Derivative instruments".

Other financial assets (excluding loans and receivables at amortized cost)

Changes in level 3 equity and debt instruments at fair value can be analyzed as follows:

In millions of euros	Equity instruments at fair value through other comprehensive income	Debt instruments at fair value through other comprehensive income	Equity instruments at fair value through income	Debt instruments at fair value through income	Other financial assets (excluding loans and receivables)
AT DECEMBER 31, 2021	821	7	256	637	1,721
Acquisitions	30	16	93	205	344
Disposals	(2)	(1)	(36)	(21)	(60)
Changes in fair value ⁽¹⁾	(499)	-	(15)	(8)	(521)
Changes in scope of consolidation, foreign currency translation	(8)	(23)	(20)	-	(51)
AT DECEMBER 31, 2022	342	-	278	813	1,433
Gains/(losses) recorded in income relating to instruments held at the end of the period					(4)

(1) Changes in fair value comprises the €474 million decrease in the value of the Group's minority interest in Nord Stream AG (see note 14.1.1.1 "Equity instruments at fair value").

Derivative instruments

Changes in level 3 commodity derivatives can be analyzed as follows:

In millions of euros	Net Asset/(Liability)
AT DECEMBER 31, 2021	(210)
Changes in fair value recorded in income	3,271
Settlements	(1,336)
Transfer from level 3 to levels 1 and 2	34
Net fair value recorded in income	1,759
Deferred Day-One gains/(losses)	78
AT DECEMBER 31, 2022	1,837

14.5.2 Financial liabilities

The table below shows the allocation of financial instruments carried in liabilities to the different levels in the fair value hierarchy:

In millions of euros	Dec. 31, 2022				Dec. 31, 2021			
	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3
Borrowings used in designated fair value hedges	3,679	-	3,679	-	4,255	-	4,255	-
Borrowings not used in designated fair value hedges	31,500	17,093	14,407	-	36,875	24,262	12,613	-
Derivative instruments	51,276	-	49,595	1,681	46,931	-	43,515	3,415
Derivatives hedging borrowings	735	-	735	-	313	-	313	-
Derivatives hedging commodities - relating to portfolio management activities ⁽¹⁾	48,907	-	47,227	1,681	35,458	-	34,374	1,084
Derivatives hedging commodities - relating to trading activities ⁽¹⁾	-	-	-	-	9,384	-	7,053	2,331
Derivatives hedging other items	1,634	-	1,634	-	1,775	-	1,775	-
TOTAL	86,455	17,093	67,682	1,681	88,061	24,262	60,383	3,415

(1) Derivative financial instruments relating to commodities classified in level 3 mainly include long-term gas supply contracts and electricity contracts measured at fair value through profit and loss. Due to geopolitical uncertainties, the fair value of contracts with Russian suppliers takes into account a risk of supply cuts.

A definition of these three levels is presented in Note 14.4 "Derivative instruments".

Borrowings used in designated fair value hedges

This caption includes bonds in a designated fair value hedging relationship, which are presented in level 2 in the above table. Only the interest rate component of the bonds is remeasured, with fair value determined by reference to observable inputs.

Borrowings not used in designated fair value hedges

Listed bond issues are included in level 1.

Other borrowings not used in a designated hedging relationship, are presented in level 2 in the above table. The fair value of these borrowings is determined on the basis of future discounted cash flows and relies on directly or indirectly observable data.

NOTE 15 RISKS ARISING FROM FINANCIAL INSTRUMENTS

The Group mainly uses derivative instruments to manage its exposure to market risks. Financial risk management procedures are set out in Chapter 2 “Risk factors” of the Universal Registration Document.

15.1 Market risks

15.1.1 Commodity risk

Commodity risk arises primarily from the following activities:

- portfolio management; and
- trading.

The Group has primarily identified two types of commodity risks: price risk resulting from fluctuations in market prices, and volume risk inherent to the business.

In the ordinary course of its operations, the Group is exposed to commodity risks on natural gas, electricity, coal, oil and oil products, other fuels, CO₂ and other “green” products. The Group is active on these energy markets either for supply purposes, or to optimize and secure its energy production chain and its energy sales. The Group also uses derivatives to offer hedging instruments to its clients and to hedge its own positions.

15.1.1.1 Portfolio management activities

Portfolio management seeks to optimize the market value of assets (power plants, gas and coal supply contracts, energy sales and gas storage and transportation) over various timeframes (short-, medium- and long-term). Market value is optimized by:

- guaranteeing supply and ensuring the balance between physical needs and resources;
- managing market risks (price, volume) to unlock optimum value from portfolios within a specific risk framework.

The risk framework aims to safeguard the Group’s financial resources over the budget period and smooth out medium-term earnings (over three or five years, depending on the maturity of each market). It encourages portfolio managers to take out economic hedges on their portfolio.

Sensitivities of the commodity-related derivatives portfolio used as part of the portfolio management activities at December 31, 2022 are detailed in the table below. Due to the significant increase and volatility of commodity prices on the markets, particularly over the past several months in the European zone, the price assumptions for natural gas and electricity in Europe have been revised upwards for 2022. These sensitivities have been established in the current uncertain context.

These new assumptions do not constitute an estimate of future market prices and are not representative of future changes in consolidated earnings and equity, insofar as they do not include the sensitivities relating to the purchase and sale contracts for the underlying commodities, which are not recognized at fair value.

Sensitivity analysis ⁽¹⁾

In millions of euros	Changes in price	Dec. 31, 2022		Dec. 31, 2021	
		Pre-tax impact on income	Pre-tax impact on equity	Pre-tax impact on income	Pre-tax impact on equity
Oil-based products	+USD 10/bbl	-	81	19	159
Natural gas - Europe ⁽²⁾	-€10/MWh	(700)	(1,237)	N/A	N/A
Natural gas - Europe ⁽²⁾	+€10/MWh	700	1,237	246	588
Natural gas - Rest of the world ⁽²⁾	+€3/MWh	29	206	52	35
Electricity - Europe ⁽²⁾	-€20/MWh	(51)	245	N/A	N/A
Electricity - Europe ⁽²⁾	+€20/MWh	51	(245)	(73)	(49)
Electricity - Rest of the world ⁽²⁾	+€5/MWh	(122)	-	(37)	-
Greenhouse gas emission rights	+€2/ton	24	1	(134)	-
EUR/USD	+10%	36	(186)	16	83
EUR/GBP	+10%	(17)	(34)	(49)	(6)

(1) The sensitivities shown above apply solely to financial commodity derivatives used for hedging purposes as part of the portfolio management activities.

(2) In 2021, the impact corresponded to a sensitivity of +€3/MWh for gas and +€5/MWh for electricity. For December 2022 and in relation to the sensitivities shown, more drastic upward and downward price changes, although difficult to quantify, could occur depending how the economic or political situation evolves. For example, an increase (decrease) of €50/MWh for natural gas and €100/MWh for electricity would impact sensitivities by a positive €9.7 billion (a negative €9.7 billion) and a negative €1 billion (a positive €0.9 billion), respectively for natural gas and electricity.

The significant increase in commodity prices in 2022 contributed to substantial changes in the fair value of financial instruments, impacting the income statement (see Note 8 "Operating expenses") as well as the other comprehensive income for the Group (see "Statement of comprehensive income").

15.1.1.2 Trading activities

Revenues from trading activities totaled €4,499 million in 2022 (€1,011 million in 2021).

The Group's trading activities are primarily conducted within:

- ENGIE Global Markets and ENGIE Energy Management. The purpose of these wholly-owned companies is to (i) assist Group entities in optimizing their asset portfolios; and (ii) create and implement energy price risk management solutions for internal and external customers;
- ENGIE SA for the optimization of part of its long-term gas supply contracts, of a power exchange contract and of part of its gas sales contracts with retail entities in France and Benelux and with power generation facilities in France and Belgium.

These entities operate on organized or OTC markets in derivative instruments such as futures, forwards, swaps, or options. Exposure to trading activities is strictly controlled by daily monitoring of compliance with Value at Risk (VaR) limits.

The use of VaR to quantify market risk arising from trading activities provides a transversal measure of risk, taking all markets and products into account. VaR represents the maximum potential loss on a portfolio over a specified holding period based on a given confidence interval. It is not an indication of expected results but is back-tested on a regular basis.

The Group uses a one-day holding period and a 99% confidence interval to calculate VaR, as well as stress tests, in accordance with banking regulatory requirements.

The VaR shown below corresponds to the global VaR of the Group's entities with trading activities. The increase in VaR reflects the exceptional increase and significant volatility in commodity market prices in 2022.

Value at Risk

In millions of euros	Dec. 31, 2022	2022 average ⁽¹⁾	2022 maximum ⁽²⁾	2022 minimum ⁽²⁾	2021 average ⁽¹⁾
Trading activities	28	33	143	6	10

(1) Average daily VaR.

(2) Maximum and minimum daily VaR observed in 2022.

VaR limits are set within the framework of Group governance, which was strengthened during the year to take account of the extremely volatile market environment. These limits have been revised upwards and any excesses have been reported in accordance with the market risk control process, which may have led to the closure or reduction of certain positions, the limitation of new positions or the revision of the portfolio allocation.

The continuous monitoring of market risks and the strict application of these measures have enabled the Group to perform its trading activities in a supervised environment during the year. At December 31, 2022, VaR had fallen below its limit. The increasing average VaR in 2022 reflects extreme market conditions applied to lower positions than in 2021.

15.1.2 Hedges of commodity risks

Hedging instruments and sources of hedge ineffectiveness

The Group enters into cash flow hedges, using derivative instruments (firm or option contracts) contracted over the counter or on organized markets, to reduce its commodity risks, which relate mainly to future cash flows from contracted or expected sales and purchases of commodities. These instruments may be settled net or involve physical delivery of the underlying.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and potential mismatches in settlement dates, in a context of highly volatile commodity market prices; and indices between the derivative instruments and the associated underlying exposures.

The fair values of commodity derivatives are indicated in the table below:

In millions of euros	Dec. 31, 2022				Dec. 31, 2021			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Derivative instruments relating to portfolio management activities	30,932	10,060	(37,210)	(11,698)	24,474	10,906	(22,335)	(13,123)
Cash flow hedges	3,538	4,400	(2,483)	(4,140)	2,643	5,141	(1,533)	(3,796)
Other derivative instruments	27,394	5,660	(34,726)	(7,558)	21,831	5,765	(20,802)	(9,327)
Derivative instruments relating to trading activities	-	5,016	-	-	-	8,284	-	(9,384)
TOTAL	30,932	15,076	(37,210)	(11,698)	24,474	19,190	(22,335)	(22,507)

The fair values shown in the table above reflect the amounts for which assets could be exchanged, or liabilities settled, at the end of the reporting period. They are not representative of expected future cash flows insofar as positions (i) are sensitive to changes in prices; (ii) can be modified by subsequent transactions; and (iii) can be offset by future cash flows arising on the underlying transactions.

15.1.2.1 Cash flow hedges

The fair values of cash flow hedges by type of commodity are as follows:

In millions of euros	Dec. 31, 2022				Dec. 31, 2021			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Natural gas	3,204	3,825	(1,825)	(3,149)	2,194	4,792	(1,044)	(2,971)
Electricity	114	324	(208)	(521)	195	171	(215)	(439)
Oil	219	248	(449)	(470)	246	176	(274)	(386)
Other ⁽¹⁾	1	3	(1)	1	9	2	-	-
TOTAL	3,538	4,400	(2,483)	(4,140)	2,643	5,141	(1,533)	(3,796)

(1) Mainly includes foreign currency hedges on commodities.

Notional amounts (net) ⁽¹⁾

Notional amounts and maturities of cash flow hedges are as follows:

	Unit	2023	2024	2025	2026	2027	Beyond 5 years	Total at Dec. 31, 2022
Natural gas	GWh	158,983	68,913	19,053	(412)	6,002	-	252,539
Electricity	GWh	(7,447)	(3,226)	(835)	(465)	(457)	(649)	(13,079)
Oil-based products	Thousands of barrels	(11,913)	(11,768)	-	-	-	-	(23,681)
Forex	Millions of euros	2	-	-	-	-	-	2
Greenhouse gas emission rights	Thousands of tons	105	80	86	20	-	-	291

(1) Long/(short) position.

Effects of hedge accounting on the Group's financial position and performance

	Dec. 31, 2022			Dec. 31, 2021		
	Fair Value			Nominal	Fair value	Nominal
In millions of euros	Assets	Liabilities	Total	Total	Total	Total
Cash flow hedges	7,939	(6,623)	1,315	39,983	2,455	15,590
TOTAL	7,939	(6,623)	1,315	39,983	2,455	15,590

The fair values represented above are positive for assets and negative for liabilities.

In millions of euros	Nominal amount	Fair Value	Change in fair value used for calculating hedge effectiveness	Change in the value of the hedging instrument recognized in equity ⁽¹⁾	Ineffective portion recognized in profit or loss ⁽¹⁾	Amount reclassified from the hedge reserve to profit or loss ⁽¹⁾	Line item of profit or loss
Cash flow hedges							Current operating income
Hedging instruments	39,983	1,315		(1,747)	189	(3,003)	
Hedged items			(4,067)				

(1) Gains/(losses).

Hedge inefficiency, the amount of which in 2022 is affected by the extreme volatility of commodity prices during the year and the partial decorrelation of the various markets particularly in Europe, is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedge. The fair value of the hedging instruments at December 31, 2022 reflects the cumulative change in the fair value of the hedging instruments since inception of the hedges.

Maturity of commodity derivatives designated as cash flow hedges

In millions of euros	2023	2024	2025	2026	2027	Beyond 5 years	Dec. 31, 2022	Dec. 31, 2021
Fair Value of derivatives by maturity	503	645	224	(37)	(11)	(9)	1,315	2,455

Amounts presented in the statement of changes in equity and the statement of comprehensive income

The following table provides a reconciliation of each component of equity and an analysis of other comprehensive income:

In millions of euros	Cash flow hedge	Derivatives hedging commodities
AT DECEMBER 31, 2021		4,094
Effective portion recognized in equity		(1,770)
Amount reclassified from hedge reserve to profit or loss		(3,023)
Translation differences		-
Changes in scope of consolidation and other		-
AT DECEMBER 31, 2022		(699)

15.1.2.2 Other commodity derivatives

Other commodity derivatives include:

- commodity purchase and sale contracts that were not entered into or are no longer held for the purpose of the receipt or delivery of commodities in accordance with the Group's expected purchase, sale or usage requirements;
- embedded derivatives; and
- derivative financial instruments that are not eligible for hedge accounting in accordance with IFRS 9 or for which the Group has elected not to apply hedge accounting.

15.1.3 Currency risk

The Group is exposed to currency risk, defined as the impact on its statement of financial position and income statement of fluctuations in exchange rates affecting its operating and financing activities. Currency risk comprises (i) transaction risk arising in the ordinary course of business, (ii) specific transaction risk related to investments, mergers and acquisitions or disposal projects, and (iii) translation risk arising from the conversion into euros of income statement and statement of financial position items from subsidiaries with a functional currency other than the euro. The main translation risk exposures correspond, to assets in US dollars, Brazilian real and pounds sterling.

15.1.3.1 Financial instruments by currency

The following tables present a breakdown by currency of outstanding borrowings and debt and net financial debt, before and after hedging:

15.1.3.2 Currency risk sensitivity analysis

A sensitivity analysis to currency risk on financial income/(loss) – excluding the income statement translation impact of foreign subsidiaries – was performed based on all financial instruments managed by the treasury department and representing a currency risk (including derivative financial instruments).

A sensitivity analysis to currency risk on equity was performed based on all financial instruments qualified as net investment hedges at the reporting date.

For currency risk, sensitivity corresponds to a 10% rise or fall in exchange rates of foreign currencies against the euro compared to closing rates.

In millions of euros	Dec. 31, 2022			
	Impact on income		Impact on equity	
	+10% ⁽¹⁾	-10% ⁽¹⁾	+10% ⁽¹⁾	-10% ⁽¹⁾
Exposures denominated in a currency other than the functional currency of companies carrying the liabilities on their statements of financial position ⁽²⁾	(19)	19	NA	NA
Financial instruments (debt and derivatives) qualified as net investment hedges ⁽³⁾	NA	NA	426	(426)

(1) +(-)10%: depreciation (appreciation) of 10% of all foreign currencies against the euro.

(2) Excluding derivatives qualified as net investment hedges.

(3) This impact is countered by the offsetting change in the net investment hedged.

15.1.4 Interest rate risk

The Group seeks to manage its borrowing costs by limiting the impact of interest rate fluctuations on its income statement. The Group's policy is therefore to arbitrate between fixed rates, floating rates and capped floating rates for its net debt. The interest rate mix may shift within a range defined by Group Management in line with market trends.

In order to manage the interest rate structure for its net debt, the Group uses hedging instruments, particularly interest rate swaps and options.

The Group has a forward interest rate pre-hedges portfolio on 2027 and 2028, with a 20-year maturity on each of the volumes initiated, to protect the refinancing interest rate on a portion of its debt.

15.1.4.1 Analysis of financial instruments by type of interest rate

The following tables present a breakdown by type of interest rate of outstanding borrowings and debt and net financial debt before and after hedging:

15.1.4.2 Interest rate risk sensitivity analysis

Sensitivity was analyzed based on the Group's net debt position (including the impact of interest rate and foreign currency derivatives relating to net debt) at the reporting date.

For interest rate risk, sensitivity corresponds to a 100-basis-point rise or fall in the yield curve compared to year-end interest rates.

In millions of euros	Dec. 31, 2022			
	Impact on income		Impact on equity	
	+100 basis points	-100 basis points	+100 basis points	-100 basis points
Net interest expense on floating-rate net debt (nominal amount) and on floating-rate leg of derivatives	(16)	16	NA	NA
Change in fair value of derivatives not qualifying as	(123)	135	NA	NA
Change in fair value of derivatives qualifying as cash flow hedges	NA	NA	198	(323)

15.1.5 Currency and interest rate hedges

15.1.5.1 Currency risk management

Foreign currency exchange risk (or “FX” risk) is reported and managed based on a Group-wide approach, reflected in a policy approved by Group Management. The policy distinguishes between the three following main sources of currency risk:

- **Regular transaction risk**

Regular transaction risk corresponds to the potential negative financial impact of currency fluctuations on business and financial operations denominated in a currency other than the functional currency.

The management of regular transaction risk is fully delegated to the subsidiaries for their scope of activities, while the risks related to central activities are managed at corporate level.

FX risks related to operational activities are systematically hedged when the related cash flows are certain, with a hedging horizon that corresponds at least to the medium-term plan horizon. For cash flows that are not certain, in their entirety, the hedge is initially based on a “no regret” volume. Exposures are monitored and managed based on the sum of nominal cash flows in FX, including highly probable amounts and related hedges.

For FX risks related to financial activities, all significant exposures related to cash, financial debt, etc. are systematically hedged. Exposures are monitored based on the net sum of balance sheet items in FX.

- **Project transaction risk**

Specific project transaction risk corresponds to the potential negative financial impact of FX fluctuations on specific major operations such as investment projects, acquisitions, disposals and restructuring projects, involving multiple currencies.

The management of these FX risks includes the definition and implementation of hedging transactions, taking into account the likelihood of the risk (including probability of project completion) and its evolution, the availability of hedging instruments and their associated cost. Management’s aim is to ensure the viability and the profitability of the transactions.

- **Translation risk**

Translation risk corresponds to the potential negative financial impact of FX fluctuations concerning consolidated entities with a functional currency other than the euro. It relates to the translation of their income and expenses and their net assets.

Translation risk is managed centrally, with a focus on securing the net asset value.

The pertinence of hedging this translation risk is assessed regularly for each currency (as a minimum) or set of assets in the same currency, taking into account notably the value of the assets and the hedging costs.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating currency risk:

- derivative instruments: these mostly correspond to over-the-counter contracts and include FX forward transactions, FX swaps, currency swaps, cross currency swaps, plain vanilla FX options or combinations (calls, puts or collars);
- monetary items such as debt, cash and loans.

Sources of hedge ineffectiveness are mainly related to uncertainty regarding the timing and in some cases the amount of the future cash flows in foreign currency that are being hedged.

15.1.5.2 Interest rate risk management

The Group is exposed to interest rate risk through its financing and investing activities. Interest rate risk is defined as a financial risk resulting from fluctuations in base interest rates that may increase the cost of debt and affect the viability of investments. Base interest rates are market interest rates, such as EURIBOR, US LIBOR, etc., that do not include the borrower's credit spread.

Reform of interbank benchmark rates

As part of the interest rate benchmark reform, the Group benchmarked all USD denominated new financing contracts to the SOFR index. ENGIE also plans to align its derivative contracts with the same index. However, the transition of existing financing and derivative contracts indexed on US Libor towards SOFR will be completed by June 2023, when the publication of US Libor is expected to end.

The Group does not expect the transition to have any impact.

The two main sources of interest rate risk are as follows:

- **Interest rate risk relating to Group net debt**

Interest rate risk relating to Group net debt designates the financial impact of base rate movements on the debt and cash portfolio from recurring financing activities. This risk is mainly managed centrally.

Risk management objectives are, by order of importance:

- to protect the long-term viability of assets;
- to optimize financing costs and ensure competitiveness; and
- to minimize uncertainty on the cost of debt.

Interest rate risk is actively managed by monitoring changes in market rates and their impact on the Group's gross and net debt.

- **Project interest rate risk**

Specific project interest rate risk corresponds to the potential negative financial impact of base rate movements on specific major operations such as investment projects, acquisitions, disposals and restructuring projects. Interest rate risk after the closing of an operation is considered as regular (see "Interest rate risk" above).

Interest rate risk is managed for specific project transactions in order to protect the economic viability of projects, acquisitions, disposals and restructuring initiatives against adverse changes in interest rates. It may include the implementation of hedging transactions, depending on a number of factors including the likelihood of completion, the availability of hedging instruments and their associated cost.

Hedging instruments and sources of hedge ineffectiveness

The Group principally uses the following risk management levers for mitigating interest rate risk:

- derivative instruments: these mostly correspond to over-the-counter contracts that are used to manage base interest rates. Such instruments include:
 - swaps, to change the nature of interest payments on debts, typically from fixed to floating rates or vice versa,
 - plain vanilla interest rate options;

- caps, floors and collars that allow the impact of interest rate fluctuations to be limited by setting minimum and/or maximum limits on floating interest rates.

Sources of hedge ineffectiveness are mainly related to changes in the credit quality of the counterparties and related charges, as well as potential gaps in settlement dates and in indices between the derivative instruments and the related underlying exposures.

15.1.5.3 Currency and interest rate hedges

The Group has elected to apply hedge accounting whenever possible and suitable for currency risk and interest rate risk management purposes and also manages a portfolio of undesignated derivative instruments, corresponding to economic hedges relating to net debt and foreign currency exposures.

The Group uses the three hedge accounting methods: cash flow hedging, fair value hedging and net investment hedging.

In general, the Group does not frequently reset hedging relationships, designate specific risk components as a hedged item or designate credit exposures as measured at fair value through income.

The Group qualifies interest rate or cross currency swaps transforming fixed-rate debt into floating-rate debt as fair value hedges.

Cash flow hedges are mainly used to hedge future cash flows in foreign currency, floating-rate debt as well as future refinancing requirements.

Net investment hedging instruments are mainly FX swaps and forwards.

The fair values of derivatives (excluding commodity instruments) are indicated in the table below:

	Dec. 31, 2022				Dec. 31, 2021			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
<i>In millions of euros</i>								
Derivatives hedging borrowings	226	92	(620)	(114)	370	130	(224)	(89)
<i>Fair value hedges</i>	167	4	(394)	(38)	261	97	(24)	(35)
<i>Cash flow hedges</i>	30	5	(195)	(11)	36	1	(121)	(4)
<i>Derivative instruments not qualifying for hedge accounting</i>	30	84	(32)	(65)	73	33	(79)	(51)
Derivatives hedging other items	1,975	84	(1,587)	(47)	772	52	(1,670)	(50)
<i>Cash flow hedges</i>	509	41	(222)	(7)	110	9	(264)	-
<i>Net investment hedges</i>	156	-	(1)	-	6	-	(20)	-
<i>Derivative instruments not qualifying for hedge accounting</i>	1,310	43	(1,364)	(40)	656	44	(1,385)	(51)
TOTAL	2,201	176	(2,208)	(161)	1,142	183	(1,894)	(140)

The fair values shown in the table above reflect the amounts relating to the price that would be received for the sale of an asset or paid for the transfer of a liability between market participants in the normal course of business. They are not representative of expected future cash flows insofar as the positions (i) are sensitive to changes in prices or to changes in credit ratings, (ii) can be modified by subsequent transactions, and (iii) can be offset by future cash flows arising on the underlying transactions.

Amount, timing and uncertainty of future cash flows

The following tables provide a profile of the timing at December 31, 2022 of the nominal amount of hedging instruments:

In millions of euros

Buy/Sell	Interest rate type	Derivative instrument type	Currency	Total	2023	2024	2025	2026	2027	Beyond 5 years
Buy	Fixed	CCS	USD	(443)	(94)	(117)	(89)	(96)	-	(47)
			GBP	(1,804)	-	-	-	-	-	(1,804)

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 15 RISKS ARISING FROM FINANCIAL INSTRUMENTS

The fair values presented in the above table are positive for an assets and negative for a liabilities.

In millions of euros		Nominal and outstanding amount	Fair value ⁽¹⁾	Change in fair value used for calculating hedge ineffectiveness	Change in the value of the hedging instrument recognized in equity ⁽²⁾	Ineffective portion recognized in profit or loss ⁽²⁾	Amount reclassified from the hedge reserve to profit or loss ⁽²⁾	Line item of the income statement
Fair value hedges	Hedging instruments	5,148	(261)	(261)	(21)	7	NA	Cost of net debt
	Hedged items ^{(3) (4)}	3,821	(200)	(576)	NA		NA	
Cash flow hedges	Hedging instruments	8,399	147	259	(446)	9	(507)	Other financial income and expenses / Current operating income including operating MtM
	Hedged items			(253)				
Net investment hedges	Hedging instruments	5,939	155	194	82	NA	(25)	Other financial income and expenses / Current operating income including operating MtM
	Hedged items			(194)				

(1) The adjustment of the fair value of hedged items is presented as long term and short-term borrowings and debt for a negative amount of €200 million.

(2) Gains/(losses).

(3) The difference between the fair value used to determine the ineffective portion relating to hedging instruments and that relating to the hedged items corresponds to the amortized cost of borrowings and debt that are part of a fair value hedge relationship.

(4) Of which €57 million relating to hedging items that are no longer adjusted as a result of disqualification as a fair value hedge.

Hedge inefficiency is calculated based on the change in the fair value of the hedging instrument compared to the change in the fair value of the hedged items since inception of the hedge. The fair value of the hedging instruments at December 31, 2022 reflects the cumulative change in the fair value of the hedging instruments since inception of the hedges. For fair value hedges, the same principle applies to the hedged items.

No significant impact in terms of ineffectiveness or disqualification of certain hedges was recognized at December 31, 2022.

Foreign currency and interest rate derivatives designated as cash flow hedges can be analyzed as follows by maturity

In millions of euros	2023	2024	2025	2026	2027	Beyond 5 years	Total at Dec. 31, 2022	Total at Dec. 31, 2021
Fair value of derivatives by maturity	43	13	18	12	42	19	147	(235)

Amounts presented in the statement of changes in equity and the statement of comprehensive income

The following table provides a reconciliation of each component of equity and an analysis of other comprehensive income:

	Cash flow hedge			Net investment hedge
	Derivatives hedging borrowings - currency risk hedging ^{(1) (3)}	Derivatives hedging other items - interest rate risk hedging ^{(1) (3)}	Derivatives hedging other items - currency risk hedging ^{(2) (3)}	Derivatives hedging other items - currency risk hedging ^{(2) (4)}
<i>In millions of euros</i>

(1) Cash flow hedges for given periods.

(2) Cash flow hedges for given transactions.

(3) Of which a negative €86 million of cash flow hedge reserves for which hedge accounting is no longer applied.

(4) All of the reserves relate to continuing hedging relationships.

15.2 Counterparty risk

Due to its financial and operational activities, the Group is exposed to the risk of default of its counterparties (customers, suppliers, EPC contractors, partners, intermediaries, and banks). Default could affect payments, delivery of goods and/or asset performance.

The principles of counterparty risk management are set out in the Group counterparty risk policy, which:

- assigns roles and responsibilities for managing and controlling counterparty risk at different levels (Corporate, BU or entity), and ensures operational procedures are in place and consistent across the Group;
- characterizes counterparty risk and the mechanisms by which it impacts the economic performance and financial statements of the Group;
- defines indicators, reporting and control mechanisms to ensure visibility and to provide tools for financial performance management; and
- provides guidelines on the use of mitigating mechanisms such as collateral and guarantees, which are widely used by some businesses.

Depending on the nature of the business, the Group is exposed to different types of counterparty risk. As a result some businesses use collateral instruments – particularly the Energy Management business, where the use of margin calls and other types of financial collateral (standardized legal framework) is a market standard. In addition, other businesses may request guarantees from their counterparties in certain cases (parent company guarantees, bank guarantees, etc.).

Under the new IFRS 9 standard, the Group has defined and applied a Group-wide methodology, which includes two different approaches:

- a portfolio approach, whereby the Group determines that:
 - coherent customer portfolios and sub-portfolios have to be considered (i.e., portfolios that have comparable credit risk and/or comparable payment behavior), taking into account the following aspects:
 - public or private counterparties,
 - residential or BtoB counterparties,
 - geography,
 - type of activity,
 - size of the counterparty, and
 - any other aspects the Group may consider relevant,
 - impairment rates must be determined based on historical aging balances and, when correlation is proven and documentation possible, historical data must be adjusted by forward-looking elements; and

- an individualized approach for significant counterparties, for which the Group has set rules for defining the stage of the concerned asset for Expected Credit Loss (ECL) calculations:
 - stage 1 covers financial assets that have not deteriorated significantly since initial recognition. The ECL for stage 1 is calculated on a 12-month basis,
 - stage 2 covers financial assets for which the credit risk has significantly increased. The ECL for stage 2 is calculated on a lifetime basis. The decision to move an asset from stage 1 to stage 2 is based on certain criteria such as:
 - a significant downgrade in the creditworthiness of a counterparty and/or its parent company and/or its guarantor (if any),
 - significant adverse change in the regulatory environment,
 - changes in political or country-related risk, and
 - any other aspect the Group may consider relevant.

Regarding financial assets that are more than 30 days past due, the move to stage 2 is not systematically applied as long as the Group has reasonable and verifiable information that demonstrates that, even if payments become more than 30 days past due, this does not represent a significant increase in the credit risk since initial recognition.

- stage 3 covers assets for which default has already been observed, such as:
 - when there is evidence of significant and ongoing financial difficulty of the counterparty,
 - when there is evidence of failure in credit support from a parent company to its subsidiary (in this case the subsidiary is the Group's at risk counterparty),
 - when a Group entity has initiated legal proceedings against the counterparty for non-payment.

Regarding financial assets that are more than 90 days past due, the presumption can be rebutted if the Group has reasonable and supportable information that demonstrates that even if payments become more than 90 days past due, this does not indicate counterparty default.

The ECL formula applicable in stages 1 and 2 is $ECL = EAD \times PD \times LGD$, where:

- for 12-month ECL, Exposure At Default (EAD) equals the carrying amount of the financial asset, to which the relevant Probability of Default (PD) and the Loss Given Default (LGD) are applied;
- for lifetime ECL, the calculation method consists in identifying changes in exposure for each year, especially the expected timing and amount of the contractual repayments, and then applying to each repayment the relevant PD and the LGD, and discounting the figures obtained. ECL is then the sum of the discounted figures; and
- probability of default is the likelihood of default over a particular time horizon (in stage 1, this time horizon is 12 months after the reporting period; in stage 2 this time horizon is the entire lifetime of the financial asset). This information is based on external data from a well-known rating agency. The PD depends on the time horizon and of the rating of the counterparty. The Group uses external ratings if they are available; ENGIE's credit risk experts determine an internal rating for major counterparties with no external rating.

LGD levels are notably based on Basel standards:

- 75% for subordinated assets; and
- 45% for standard assets.

For assets considered to be of strategic importance for the counterparty, such as essential public services or goods, LGD is set at 30%.

The Group has decided that write-offs apply in the following situations:

- assets for which a legal recovery procedure is pending: these should not be written off as long as the procedure is ongoing; and

- assets for which no legal recovery procedure is pending: should be written off once the trade receivable is 3 years overdue (5 years overdue for public counterparties).

Against the backdrop of a deteriorating global economic environment, historically high energy prices and the ongoing war in Ukraine, the Group continued to monitor cash receipts throughout the year and strengthened its monitoring of default risk in its BtoB, BtoC and Energy Management activities.

In the context of its market activities (mainly on BtoB clients), the Group has taken into account, in the assessment of its expected credit losses, prospective information that best reflects the situation of a series of economic sectors considered to be the most critical. In particular, a specific adjustment of the provisioning rate for expected credit losses was made as at December 31, 2022 on certain customers in business sectors with high energy consumption, and therefore particularly exposed to a significant increase in commodity prices.

In addition, the risk of default on the Group's BtoC energy supply activities has so far been relatively limited, given the introduction of government measures in some countries to limit price increases (tariff shields, energy vouchers, payment deferral plans, etc.), as well as the existence in the Group's portfolio of customers who still have a contract with a fixed price that was signed before the crisis.

15.2.1 Counterparty risk arising on operating activities

Counterparty risk arising on operating activities is managed via standard mechanisms such as third-party guarantees, netting agreements and margin calls, using dedicated hedging instruments or special prepayment and debt recovery procedures, particularly for retail customers.

Under the Group's policy, each global business unit is responsible for managing counterparty risk, although the Group continues to manage the biggest counterparty exposures centrally.

The credit rating of large- and mid-sized counterparties with which the Group has exposures above a certain threshold is measured based on a specific rating process, while a simplified credit scoring process is used for commercial customers with which the Group has fairly low exposures. These processes are based on formally documented, consistent methods across the Group. Consolidated exposures are monitored by counterparty and by segment (credit rating, sector, etc.) using standard indicators (payment risk, mark-to-market exposure).

GEMS' large exposures to trading counterparties and large commercial clients are regularly monitored by the Group's governance committees.

15.2.1.1 Trade and other receivables, assets from contracts with customers

Total outstanding exposures presented in the tables below do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €6,084 million at December 31, 2022 (compared to €14,438 million at December 31, 2021).

15.2.1.2 Commodity derivatives

In the case of commodity derivatives, counterparty risk arises from positive fair value. Counterparty risk (CVA), which is taken into account when calculating the fair value of these derivative instruments, is based on default probabilities whose parameters have been updated, in a context of uncertainty, to take account of an increased risk of default.

The extreme volatility of commodity prices has not significantly changed the Group's exposure thanks to the credit quality of its counterparties.

		Dec. 31, 2022		Dec. 31, 2021	
		Investment Grade ⁽¹⁾	Total	Investment Grade ⁽¹⁾	Total
<i>In millions of euros</i>					
Gross exposure ⁽²⁾		36,371	46,012	35,386	43,660
Net exposure ⁽³⁾		12,434	16,124	15,796	19,089
% of credit exposure to "Investment Grade" counterparties		77.1%		82.7%	

(1) Investment Grade corresponds to transactions with counterparties that are rated at least BBB- by Standard & Poor's, Baa3 by Moody's, or equivalent by Dun & Bradstreet. "Investment Grade" is also determined based on an internal rating tool that has been rolled out within the Group, and covers its main counterparties.

(2) Corresponds to the maximum exposure, i.e., the value of the derivatives shown under assets (positive fair value).

(3) After taking into account the liability positions with the same counterparties (negative fair value), collateral, netting agreements and other credit enhancement techniques.

15.2.2 Counterparty risk arising on financing activities

For its financing activities, the Group has put in place procedures for managing and monitoring risk based on (i) the accreditation of counterparties according to external credit ratings, objective market data (credit default swaps, market capitalization) and financial structure, and (ii) counterparty risk exposure limits.

To reduce its counterparty risk exposure, the Group has drawn increasingly on a structured legal framework based on master agreements (including netting clauses) and collateralization contracts (margin calls).

The oversight procedure for managing counterparty risk arising from financing activities is managed by a Middle Office that operates independently of the Group's Treasury department and reports to the Finance division.

15.2.2.1 Loans and receivables at amortized cost

The total outstanding exposures presented in the tables below do not include impacts relating to VAT or to any other item not subject to credit risk, which amounted to €547 million at December 31, 2022 (compared to €977 million at December 31, 2021).

Dec. 31, 2022							
In millions of euros	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Other	Total by counterparty type
Gross	6,596	274	720	7,591	3,490	4,101	7,591
Expected credit losses	(99)	(38)	(1,154)	(1,291)	(158)	(1,133)	(1,291)
TOTAL	6,497	236	(434)	6,300	3,332	2,967	6,300

Dec. 31, 2021							
In millions of euros	Level 1: low credit risk	Level 2: increased credit risk	Level 3: impaired assets	Total by risk level	Investment Grade ⁽¹⁾	Other	Total by counterparty type
Gross	4,643	302	26	4,971	1,906	3,065	4,971
Expected credit losses	(76)	(36)	(113)	(226)	(147)	(79)	(226)
TOTAL	4,567	265	(87)	4,745	1,759	2,986	4,745

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's.

In 2022, the Group impaired the loan related to the financing of the Nord Stream 2 pipeline project for a total amount of €987 million (including capitalized interest).

15.2.2.2 Counterparty risk arising on investing activities and the use of derivative financial instruments

The Group is exposed to counterparty risk arising on investments of surplus cash and from the use of derivative financial instruments. In the case of financial instruments at fair value through income, counterparty risk arises on instruments with a positive fair value. Counterparty risk is taken into account when calculating the fair value of these derivative instruments.

Dec. 31, 2022					Dec. 31, 2021			
In millions of euros	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non Investment-Grade ⁽²⁾	Total	Investment Grade ⁽¹⁾	Unrated ⁽²⁾	Non-Investment Grade ⁽²⁾
Exposure	15,738	92.3%	4.5%	3.2%	14,194	85.9%	8.2%	5.9%

(1) Investment Grade corresponds to counterparties that are rated at least BBB- by Standard & Poor's or Baa3 by Moody's.

(2) Most of these two exposures is carried by consolidated companies that include non-controlling interests, or by Group companies that operate in emerging countries, where cash cannot be pooled and is therefore invested locally.

Furthermore, at December 31, 2022, Crédit Agricole Corporate and Investment Bank (CACIB) is the main Group counterparty and represents 30% of cash surpluses. This relates mainly to a depositary risk.

15.3 Liquidity risk

In the context of its operating activities, the Group is exposed to a risk of having insufficient liquidity to meet its contractual obligations. As well as the risks inherent in managing working capital requirements (WCR), margin calls are required in certain market activities, which are a way of mitigating counterparty risk on hedging instruments through the use of collateral.

The Group has set up a committee that meets weekly and is tasked with managing and monitoring liquidity risk throughout the Group, by maintaining a broad range of investments and sources of financing, preparing forecasts of cash investments and divestments. ENGIE has set up a comprehensive framework to monitor and streamline cash movements related to OTC margin calls and margin calls via clearing houses, based on the use of liquidity swaps with its key counterparties, as well as the issuing of letters of credit. Given the current high volatility of the markets, these margin calls may have a significant timing impact on the Group's cash position, and the use of the two abovementioned levers has therefore been reinforced in order to monitor the impact on its cash position. Quartely stress-tests are also performed on the margin calls put in place when commodity, interest rate and currency derivatives are negotiated to assess the Group's resilience in terms of liquidity.

The Group centralizes virtually all the financing needs and cash flow surpluses of the companies it controls, as well as most of their medium- and long-term external financing requirements. Centralization is provided by financing vehicles (long-term and short-term) and by dedicated Group cash pooling vehicles based in France, Belgium and Luxembourg.

Surpluses held by these structures are managed in accordance with a uniform policy. In accordance with this policy, unpooled cash surpluses are invested in instruments selected on a case-by-case basis in light of local financial market imperatives and the financial strength of the counterparties concerned.

The succession of financial crises since 2008 and the ensuing rise in counterparty risk prompted the Group to tighten its investment policy with the aim of keeping an extremely high level of liquidity and protecting invested capital and a daily monitoring of performance and counterparty, allowing the Group to take immediate action where required in response to market developments. Consequently, 81% of the cash pooled at December 31, 2022 was invested in overnight bank deposits and standard money market funds with daily liquidity.

The Group's financing policy is based on:

- centralizing external financing;
- diversifying sources of financing between credit institutions and capital markets;
- achieving a balanced debt repayment profile.

The Group seeks to diversify its sources of financing by carrying out public or private bond issues within the scope of its Euro Medium Term Notes program. It also issues negotiable commercial paper in France (Negotiable European Commercial Paper) and in the United States (U.S. Commercial Paper) as well as the issuance of deeply-subordinated perpetual notes. As negotiable commercial paper is relatively inexpensive and highly liquid, it is used by the Group in a cyclical or structural manner to finance its short-term cash requirements. However, the refinancing of all outstanding negotiable commercial paper remains secured by confirmed bank lines of credit – mainly centralized – allowing the Group to continue to finance its activities if access to this financing source were to dry up. These facilities are appropriate for the scale of its operations and for the timing of contractual debt repayments.

The various actions carried out by the Group ensure a high and reinforced level of liquidity.

Diversifying sources of financing and liquidity ⁽¹⁾*In millions of euros*

- (1) These sources of financing and liquidity do not include the deeply-subordinated perpetual notes recognized in equity (see Note 16.2.1 "Issuance of deeply-subordinated perpetual notes").
- (2) Net amount of negotiable commercial paper.
- (3) Cash corresponds to cash and cash equivalents for €15,570 million, other financial assets deducted from net financial debt for €769 million, net of bank overdrafts and current accounts for €615 million, of which 78% was invested in the Eurozone.

At December 31, 2022, all Group entities whose debt is consolidated complied with the covenants and declarations included in their financial documentation, except for some non-significant entities for which compliance actions are being implemented. None of the available centralized credit lines contain a default clause linked to financial ratios or rating level.

15.3.1 Undiscounted contractual payments relating to financial activities**Undiscounted contractual payments on outstanding borrowings and debt by maturity**

<i>In millions of euros</i>	2023	2024	2025	2026	2027	Beyond 5 years	Total at Dec. 31, 2022	Total at Dec. 31, 2021
Bond issues	2,550	930	1,518	2,316	2,493	13,751	23,557	26,240
Bank borrowings	797	381	447	247	464	3,141	5,476	5,806
Negotiable commercial paper	7,386	-	-	-	-	-	7,386	4,962
Lease liabilities	403	398	304	275	251	1,624	2,875	2,043
Other borrowings	140	4	2	1	2	225	374	903
Bank overdrafts and current accounts	615	-	-	-	-	-	615	499

Other financial assets and cash and cash equivalents deducted from net financial debt have a liquidity of less than one year.

Undiscounted contractual interest payments on outstanding borrowings and debt by maturity

<i>In millions of euros</i>	2023	2024	2025	2026	2027	Beyond 5 years	Total at Dec. 31, 2022	Total at Dec. 31, 2021
Undiscounted contractual interest flows on outstanding borrowings and debt	916	796	757	701	602	7,358	11,131	10,676

Undiscounted contractual payments on outstanding derivatives (excluding commodity instruments) by maturity

<i>In millions of euros</i>	2023	2024	2025	2026	2027	Beyond 5 years	Total at Dec. 31, 2022	Total at Dec. 31, 2021
Derivatives (excluding commodity instruments)	(15)	(127)	(20)	(12)	(10)	423	239	126

To better reflect the economic substance of these transactions, the cash flows linked to the derivatives recognized in assets and liabilities shown in the table above relate to net positions.

Undiscounted contractual payments related to leases

At December 31, 2022, the Group, as lessee, was potentially exposed to future cash outflows not reflected in the measurement of lease liabilities for €1,407 million (of which approximately 72% relate to potential cash outflows beyond 2027). Those potential future cash outflows relate to leases not yet commenced to which the Group is committed (real estate and LNG vessels).

In addition, the Group is also exposed to future cash outflows in the form of variable lease payments in connection with the extension of the Rhone concession. These variable lease payments are dependent on revenue from electricity sales.

Undrawn credit facility programs

<i>In millions of euros</i>	2023	2024	2025	2026	2027	Beyond 5 years	Total at Dec. 31, 2022	Total at Dec. 31, 2021
Confirmed undrawn credit facility programs	1,339	854	5,670	-	4,004	644	12,511	11,961

Of these undrawn programs, an amount of €7,386 million is allocated to covering commercial paper issues.

At December 31, 2022, no single counterparty represented more than 10% of the Group's confirmed undrawn credit lines.

15.3.2 Undiscounted contractual payments relating to operating activities

The table below provides an analysis of undiscounted fair values due and receivable in respect of commodity derivatives recorded in assets and liabilities at the reporting date.

The Group provides an analysis of residual contractual maturities for commodity derivative instruments included in its portfolio management activities. Derivative instruments relating to trading activities are considered to be liquid in less than one year, and are presented under current items in the statement of financial position.

<i>In millions of euros</i>	2023	2024	2025	2026	2027	Beyond 5 years	Total at Dec. 31, 2022	Total at Dec. 31, 2021

relating to trading activities	-	-	-	-	-	-	-	(9,365)
Derivative instruments carried in assets								
relating to portfolio management	10,035	18,122	7,860	4,323	432	202	40,975	35,368
relating to trading activities	5,098	-	-	-	-	-	5,098	8,304
TOTAL	3,441	(6,538)	589	1,866	(644)	(1,900)	(3,187)	(1,234)

15.3.3 Commitments relating to commodity purchase and sale contracts entered into in the ordinary course of business

Some Group operating companies have entered into long-term contracts, some of which include "take-or-pay" clauses. These consist of firm commitments to purchase or sell specified quantities of gas, electricity or steam as well as related services, in exchange for a firm commitment from the other party to deliver or purchase said quantities and services. These contracts were documented as falling outside the scope of IFRS 9. The table below shows the main future commitments arising from contracts entered into by GBU Renewables and GEMS (expressed in TWh).

<i>In TWh</i>	2023	2024-2027	Beyond 5 years	Total at Dec. 31, 2022	Total at Dec. 31, 2021
Firm purchases	(423)	(762)	(700)	(1,884)	(1,922)
Firm sales	435	552	256	1,243	1,421

NOTE 16 EQUITY

16.1 Share capital

AT DECEMBER 31, 2022	2,435,285,011	(14,530,427)	2,420,754,584	2,435	25,667	(189)

Changes in the number of shares during 2022 resulted from:

- employee share issues as part of the “Link 2022” worldwide employee share plan. All in all, 16.2 million shares were subscribed. At December 22, 2022 the transaction resulted in the sale to employees of 13.1 million shares purchased on the market in the fourth quarter of 2022 for €171 million and a capital increase of €32.4 million. The latter amount is divided into a capital increase of €3.1 million and additional paid-in capital of €29.3 million;
- a capital decrease of €40.4 million by the cancellation of 3.1 million shares in the form of a capital decrease, €10.7 million charged to consolidated reserves and €26.6 million charged to additional paid-in capital;
- the delivery of 3.4 million treasury shares as part of bonus share plans; and
- the purchase of 2.9 million of treasury shares on the market.

16.1.1 Potential share capital and instruments providing a right to subscribe for new ENGIE SA shares

Since 2017, the Group no longer has any stock purchase or subscription option plans.

Shares to be allocated under the performance share award plans described in Note 19 “Share-based payments” are covered by existing ENGIE SA shares.

16.1.2 Treasury stock

Accounting standards

Treasury shares are recognized at acquisition cost and deducted from equity. Gains and losses on disposals of treasury shares are recorded directly in equity and do not, therefore, impact income for the period.

The Group has a stock repurchase program as a result of the authorization granted to the Board of Directors by the Ordinary and Extraordinary Shareholders’ Meeting of April 21, 2022. This program provides for the repurchase of up to 10% of the shares comprising the share capital of ENGIE SA at the date of the said Shareholders’ Meeting. The aggregate amount of acquisitions net of expenses under the program may not exceed €7.3 billion, and the purchase price must be less than €30 per share excluding acquisition costs.

At December 31, 2022, the Group held 14.5 million treasury shares. To date, all the shares have been allocated to cover the Group's share commitments to employees and corporate officers.

The liquidity agreement signed with an investment service provider assigns to the latter the role of operating on the market on a daily basis, to buy or sell ENGIE SA shares, in order to ensure liquidity and an active market for the shares on the Paris and Brussels stock exchanges. To date, the resources allocated to the implementation of this agreement amount to €50 million.

16.2 Other disclosures concerning additional paid-in capital, consolidated reserves and issuance of deeply-subordinated perpetual notes (Group share)

Total additional paid-in capital, consolidated reserves and issuance of deeply subordinated perpetual notes (including net income for the year), amounted to €34,097 million at December 31, 2022, including €25,667 million in additional paid-in capital. Additional paid-in capital includes a portion of the cash dividend payment for 2021 in an amount of €394 million.

Consolidated reserves include the cumulative income of the Group, the legal and statutory reserves of ENGIE SA, cumulative actuarial gains and losses, net of tax and the change in fair value of equity instruments at fair value through OCI.

Under French law, 5% of the net income of French companies must be allocated to the legal reserve until the latter reaches 10% of share capital. This reserve can only be distributed to shareholders in the event of liquidation. The ENGIE SA legal reserve amounts to €244 million.

16.2.1 Issuance of deeply-subordinated perpetual notes

In October 2022, ENGIE SA carried out an early redemption of deeply subordinated perpetual notes for a total amount of €374 million, resulting in:

- A €244 million early redemption of green deeply subordinated perpetual notes (PERP NC 04/2023, a 1.375% coupon, ISIN code: FR0013310505), out of a residual nominal amount of €274 million. Following the redemption, the Group, having redeemed more than 80% of this deeply subordinated perpetual debt, carried out a squeeze-out for the remaining €30 million, paid on December 5, 2022;
- The partial early redemption of two other tranches of deeply-subordinated perpetual notes for a total amount of €100 million, i.e. :
 - €55 million (PERP NC 06/2024, a 3.875% coupon, ISIN code: FR0011942283), out of a residual nominal amount of green deeply subordinated perpetual notes of €393 million;
 - €45 million (PERP NC 07/2031, a 1.875% coupon, ISIN code: FR00140046Y4), out of a nominal amount of €750 million.

In accordance with IAS 32 - Financial Instruments - Presentation, and given their characteristics, these instruments are recognized in equity in the Group's consolidated financial statements.

At December 31, 2022, the outstanding nominal value of deeply subordinated perpetual notes amounted to €3,393 million (against €3,767 million at December 31, 2021).

In 2022, the Group paid €77 million to the holders of these notes, i.e., €90 million coupons, net of €13 million early redemption allowances received. This amount is accounted for as a deduction from equity in the Group's consolidated financial statements; the related tax saving is accounted for in the income statement.

16.2.2 Distributable capacity of ENGIE SA

ENGIE SA's distributable capacity totaled €27,365 million at December 31, 2022 (compared with €27,758 million at December 31, 2021), including €25,667 million of additional paid-in capital.

16.2.3 Dividends

It was proposed, at the Shareholders' Meeting convened to approve the ENGIE Group financial statements for the year ended December 31, 2021, to pay a dividend of €0.85 per share, representing a total payout of €2,060 million based on the number of shares outstanding at December 31, 2021. It was increased by 10% for all shares held for at least two years on December 31, 2021 and up to the 2021 dividend payment date. Based on the number of outstanding shares on December 31, 2021, this increase is valued at €22 million.

Proposed dividend in respect of 2022

At the Shareholders' Meeting convened to approve the ENGIE Group financial statements for the year ended December 31, 2022, the shareholders will be asked to approve a dividend of €1.40 per share, representing a total payout of €3 389 million based on the number of shares outstanding at December 31, 2022. It will be increased by 10% for all shares held for at least two years at December 31, 2022 and up to the 2022 dividend payment date. Based on the number of outstanding shares at December 31, 2022, this increase is valued at €40 million.

Subject to approval by the Shareholders' Meeting of Wednesday April 26, 2023, this dividend will be detached on Friday 28 April, 2023 and paid on Wednesday May 3, 2023. It is not recognized as a liability in the financial statements at December 31, 2022, since the financial statements at the end of 2022 were presented before the appropriation of earnings.

16.2.4 Other transactions

On March 31, 2022, the Group signed an agreement to sell a 49% interest, without loss of control, in a portfolio of two wind and one solar projects for 665 MW of renewable energy in the United States to the American group InfraRed Capital Partners. ENGIE continues to fully consolidate these assets and to operate and maintain them. This transaction resulted in an inflow of €224 million and a similar increase in equity.

16.3 Recyclable gains and losses recognized in equity (Group share)

All items shown in the table below correspond to cumulative gains and losses (Group share) at December 31, 2022 and December 31, 2021, which are recyclable to income in subsequent periods.

In millions of euros	Dec. 31, 2022	Dec. 31, 2021

Translation adjustments	(1,422)	(2,136)
TOTAL RECYCLABLE ITEMS	(2,090)	(306)

(1) See Note 15 "Risks arising from financial instruments".

(2) See Note 3 "Investments in equity method entities".

16.4 Capital management

ENGIE SA seeks to optimize its financial structure at all times by pursuing an optimal balance between its economic net debt and its EBITDA. The Group's key objective in managing its financial structure is to maximize value for shareholders

and reduce the cost of capital, while ensuring that the Group has the financial flexibility required to continue its expansion. The Group manages its financial structure and makes any necessary adjustments in light of prevailing economic conditions. In this context, it may choose to adjust the amount of dividends paid to shareholders, reimburse a portion of capital, carry out share buybacks (see Note 16.1.2 “Treasury stock”), issue new shares, launch share-based payment plans, recalibrate its investment budget, or sell assets in order to scale back its net debt.

The Group's policy is to maintain an “strong investment grade” rating from the rating agencies. To achieve this, it manages its financial structure in line with the indicators usually monitored by these agencies, namely the Group's operating profile, financial policy and a series of financial ratios. One of the most commonly used ratios is the ratio where the numerator includes operating cash flows less cost of debt and taxes paid, and the denominator includes adjusted net financial debt. Net financial debt is mainly adjusted for nuclear provisions and provisions for pensions, as well as for 50% of hybrid debt (deeply-subordinated notes). In addition, the Group has issued a guidance targeting an “economic net debt to EBITDA” ratio less than or equal 4x.

The Group's objectives and processes for managing capital have remained unchanged over the past few years.

ENGIE SA is not obliged to comply with any external minimum capital requirements except those provided for by law.

NOTE 17 PROVISIONS

Accounting standards

General principles related to the recognition of a provision

The Group recognizes a provision where it has a present obligation (legal or constructive) towards a third party arising from past events and where it is probable that an outflow of resources will be necessary to settle the obligation with no expected consideration in return.

A provision for restructuring costs is recognized when the general criteria for setting up a provision are met, i.e., when the Group has a detailed formal plan relating to the restructuring and has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

Provisions with a maturity of over 12 months are discounted when the effect of discounting is material. The Group's main long-term provisions are provisions for the back-end of the nuclear fuel cycle, provisions for dismantling facilities, provisions for site restoration costs, and provisions for post-employment and other long-term benefits. The discount rates used reflect current market assessments of the time value of money and the risks specific to the liability concerned. Expenses with respect to unwinding the discount on the provision are recognized as other financial income and expenses.

Estimates of provisions

Factors having a significant influence on the amount of provisions, and particularly, but not solely, those relating to the back-end of the nuclear fuel cycle, to the dismantling of nuclear facilities and of gas infrastructures in France, include:

- cost estimates (notably the retained scenario for managing radioactive nuclear fuel consumed) (see *Note 17.2*);
- the timing of expenditure (notably, for nuclear power generation activities, the timetable for reprocessing radioactive nuclear fuel consumed and for dismantling facilities as well as the timetable for the end of gas operations regarding the main gas infrastructure businesses in France) (see *Notes 17.2 and 17.3*); and
- the discount rate applied to cash flows.

These factors are based on information and estimates deemed by the Group to be the most appropriate as of today.

Modifications to certain factors could lead to a significant adjustment in these provisions.

<i>In millions of euros</i>	Post-employment and other long-term benefits	Back-end of the nuclear fuel cycle and dismantling of nuclear facilities	Dismantling of non-nuclear facilities	Other contingencies	Total
AT DECEMBER 31, 2021	7,000	15,119	1,172	2,169	25,459
Additions	279	1,028	6	669	1,981
Utilizations	(379)	(163)	(62)	(630)	(1,235)
Reversals	(1)	-	-	(41)	(42)
Changes in scope of consolidation	29	-	(3)	46	72
Impact of unwinding discount adjustments	89	454	28	5	576
Translation adjustments	13	-	14	4	32
Other	(2,558)	2,579	175	(13)	184
AT DECEMBER 31, 2022	4,471	19,017	1,330	2,209	27,027
Non-current	4,393	18,594	1,329	346	24,663
Current	78	423	1	1,863	2,365

The impact of unwinding discount adjustments in respect of post-employment and other long-term benefits relates to the interest expense on the benefit obligation, net of interest income on plan assets.

The “Other” line mainly comprises actuarial gains and losses arising on post-employment benefit obligations in 2022, which are recorded in “Other comprehensive income” as well as provisions recorded against a dismantling or site rehabilitation asset.

Additions, utilizations, reversals and the impact of unwinding discount adjustments are presented as follows in the consolidated income statement:

<i>In millions of euros</i>	Dec. 31, 2022
Income/(loss) from operating activities	(738)
Other financial income and expenses	(577)
TOTAL	(1,315)

The different types of provisions and the calculation principles applied are described below.

17.1 Post-employment benefits and other long-term benefits

See Note 18 “Post-employment benefits and other long-term benefits”.

17.2 Obligations relating to nuclear power generation activities

In the context of its nuclear power generation activities, the Group assumes obligations related to the management of the back-end of the nuclear fuel cycle and the dismantling of nuclear facilities.

17.2.1 Legal framework

The Belgian law of April 11, 2003, partially repealed and amended by the law of July 12, 2022, granted Group subsidiary Synatom responsibility for managing provisions set aside to cover the costs of dismantling nuclear power plants and managing spent fuel. The tasks of the Commission for Nuclear Provisions (CNP) set up pursuant to the above-mentioned law is to oversee the process of computing and managing these provisions.

In accordance with the law, every three years the CNP conducts an audit of the application and adequacy of the calculation methods used to compute nuclear provisions.

To this end, Synatom submitted its triennial report on the revaluation of nuclear provisions to the CNP on September 2, 2022, which issued a set of remarks on December 16, 2022, confirming the reference scenarios, adding additional costs and adjusting the discount rates. The provisions recorded as of December 31, 2022 take full account of the comments and assumptions made by the CNP.

However, contesting some of the CNP's remarks as being overly conservative or technically unsuitable, the Group submitted a new adapted proposal on February 14, 2023, in accordance with the law, explaining the reasons why it considered that these remarks could not be implemented. The CNP will then give its final opinion, if necessary, under the jurisdiction of the Belgian Market Court in Brussels.

In addition, with a view to a possible extension of the Doel 4 and Tihange 3 nuclear reactors, the ENGIE Group has entered into discussions with the Belgian government on the capping of nuclear waste processing costs for ENGIE, which represent approximately 58% of the total provisions recorded at December 31, 2022. A letter of intent between the parties was signed on July 22, 2022, then reiterated and supplemented by a non-binding agreement in principle dated January 9, 2023. These documents provide for broad agreements in principle by March 15 and a binding agreement by June 2023. Assuming that the parties reach an agreement, the difference between the amount of the cap and the amount of the provisions recognized at December 31, 2022 would constitute a liability to be recognized.

In the absence of an overarching agreement to date, the provisions recognized at December 31, 2022 do not take into account any additional commitments or adjustments to the Group's liabilities that may result from these discussions and remain based on the current contractual and legal framework, which sets the operating life of the nuclear units at 50 years for Tihange 1 and Doel 1 and 2, and at 40 years for the other units.

The provisions include in their assumptions all existing or planned environmental regulatory requirements on a European, national and regional level. If new legislation were to be introduced in the future, the cost estimates used as a basis for the calculations could vary.

The estimated provision amounts include margins for contingencies and other risks that may arise in connection with dismantling and radioactive spent fuel management procedures. Contingency margins relating to the disposal of waste are determined by the Belgian Agency for Radioactive Waste and Enriched Fissile Material (ONDRAF) and built into its fees. The Group also estimates appropriate margins for each cost category.

The CNP's remarks and the obligations related to projects to dispose of nuclear waste have resulted in a €3.3 billion increase in the ENGIE Group's nuclear liabilities, in addition to the net recurring annual expense for the year due mainly to a decrease in the discount rate used for the provision for managing spent fuel and an increase in certain costs used to estimate the provision for dismantling nuclear power plants.

Lastly, the amount recorded for these provisions may also be revised in the event of an agreement yet to be signed with the Belgian government.

The breakdown of dismantling provisions between Synatom and Electrabel is shown below:

<i>In millions of euros</i>	Current	Non-current	Dec. 31, 2022
Provisions for dismantling nuclear facilities – Synatom	305	8,464	8,769
Provisions for the back-end of the nuclear fuel cycle – Synatom	118	8,970	9,088
Provisions for dismantling nuclear facilities – Electrabel	-	1,160	1,160
TOTAL	423	18,594	19,017

17.2.2 Provisions for the back-end of the nuclear fuel cycle

Accounting standards

Allocations to provisions for the management of spent fuel are computed based on the average unit cost of the quantities expected to be used up to the end of the operating life of the plants, applied to quantities used at the closing date. An annual allocation is also recognized with respect to unwinding the discount on the provisions.

When spent fuel is removed from a reactor and temporarily stored on-site, it requires conditioning, before being consigned to long-term storage.

The long-term disposal assumption in the scenario adopted by the CNP is based on the assumption that the waste will be buried in a deep geological repository at a site yet to be identified and classified in Belgium. This scenario has not yet been confirmed, as Belgium has not yet adopted a national program that complies with Article 12 of Directive 2011/70/EURATOM. On November 27, 2019, the European Commission sent a reasoned opinion to Belgium under the breach procedure provided for in Article 258 of the Treaty on the Functioning of the European Union. A Royal Decree issued on October 28, 2022 has since introduced "the first part of the National Policy for the Long-Term Management of High-Level and/or Long-Lived Radioactive Waste and specifying the process for the introduction in phases of the other parts of this National Policy". This Royal Decree confirms that "the disposal deep underground of this waste on Belgian territory on one or more sites" is "the preliminary draft concept for the long-term management of the radioactive waste referred to in Article 3, pending the outcome of the decision-making process (...)". It also sets out "the reversibility of the National Policy, which implies that, following reconsideration, one or more parts of this Policy may be reversed". It is therefore not possible to guarantee that Belgium will retain the disposal deep underground of category B waste – i.e., low- or medium-activity long-lived waste from dismantling - and category C waste – i.e., high-activity and/or long-lived waste – as its technical solution of choice.

If this assumption were to be challenged, the costs of downstream management may need to be adjusted. The ENGIE Group has also sent a formal notice to the Belgian State requesting that it put an end to the uncertainty created by this state of affairs and to the damage caused by having postponed the various projects necessary for the management of nuclear waste in Belgium, and reserves its right to seek compensation if necessary.

In view of a series of developments in the nuclear fuel market, Synatom has proposed, and the CNP has confirmed, that the scenario of reprocessing a portion of fuel in order to allow for the processing of MOX fuel historically used in Belgian power plants, in particular, could no longer be the reference scenario. Contrary to previous assessments, the reference scenario no longer includes the cost of a reprocessing contract or the associated margins for contingencies, but includes an assumption that MOX will be directly disposed of deep underground. Should circumstances change, the costing may be revised.

The provisions booked by the Group for managing spent fuel cover all of the costs linked to this scenario, including on-site storage, transportation, conditioning, storage and geological disposal. They are calculated based on the following principles and inputs:

- storage costs primarily comprise the costs of building and operating additional dry storage facilities and operating existing facilities, along with the costs of purchasing containers;
- radioactive spent fuel that has not been reprocessed is to be conditioned, which requires conditioning facilities to be built according to ONDRAF's approved criteria. ONDRAF's recommendations as regards the cost of these facilities have been fully taken into account;
- the cost of burying fuel in deep geological repositories is estimated using the fee rate established by ONDRAF based on a total disposal facility cost of €12 billion;
- the long-term obligation is calculated using estimated internal costs and external costs assessed based on offers received from third parties;
- the baseline scenario includes ONDRAF's latest scenario, with geological storage starting in around 2070 and ending in around 2135;
- the discount rate used by the CNP is 3.0% (including inflation of 2.0%).

The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment. Certain ONDRAF recommendations that have not yet been quantified will be discussed by the CNP, which will issue an additional opinion in 2023 if necessary.

Sensitivity

Provisions for the back-end of the nuclear fuel cycle remain sensitive to assumptions regarding costs, the timing of operations and expenditure, as well as to discount rates:

- on the basis of an analysis carried out by ENGIE Group experts, certain remarks made by the CNP as part of the triennial review procedure described above are considered as unjustified and have been the subject of a reasoned

opinion sent to the CNP. The impact of taking this opinion into account (at a discount rate of 3.0% as recommended by the CNP) would represent a decrease in provisions of €0.5 billion.

- ENGIE is also contesting the 25 basis points reduction from the previous rate and the 50 basis points reduction from Synatom's initial proposal. Maintaining the 3.25% rate used since 2019 would represent a decrease in provisions of €0.7 billion.
- These various elements were the subject of a reasoned opinion sent by the ENGIE Group to the CNP on February 14, 2023, as provided for by the law of July 12, 2022.
- A 10% increase in ONDRAF's fees above the fee for the removal of category C waste would lead to an increase in provisions of approximately €0.3 billion based on unchanged contingency margins

17.2.3 Provisions for dismantling nuclear facilities

Accounting standards

A provision is recognized when the Group has a present legal or constructive obligation to dismantle facilities or to restore a site. The present value of the obligation at the time of commissioning represents the initial amount of the provision for dismantling with, as the counterpart, an asset for the same amount, which is included in the carrying amount of the facilities concerned. This asset is depreciated over the operating life of the facilities and is included in the scope of assets subject to impairment tests. Adjustments to the provision due to subsequent changes in (i) the expected outflow of resources, (ii) the timing of dismantling expenses or (iii) the discount rate, are deducted from or subject to specific conditions, added to the cost of the corresponding asset. The impacts of unwinding the discount are recognized in expenses for the period.

A provision is also recorded for nuclear units for which the Group holds a capacity right up to its share of the expected dismantling costs to be borne by the Group.

Nuclear power plants have to be dismantled at the end of their operating life. Provisions are set aside in the Group's financial statements to cover all costs relating to (i) the shutdown phase, which involves removing radioactive spent fuel from the site and (ii) the dismantling phase, which consists of decommissioning and cleaning up the site.

The dismantling strategy is based on the facilities being dismantled (i) immediately after the reactor is shut down, (ii) on a mass basis rather than on a site-by-site basis, and (iii) completely, the land being subsequently returned to greenfield status.

Provisions for dismantling nuclear facilities are calculated based on the following principles and inputs:

- the start of the technical shutdown procedures depends on the facility concerned and on the timing of operations for the nuclear reactor as a whole. The shutdown procedures are immediately followed by dismantling operations;
- the scenario adopted is based on a dismantling program and on timetables that have to be approved by the nuclear safety authorities. A dialogue on the safety conditions for the shutdown and dismantling phases of the power plants has been initiated with the Belgian Federal Agency for Nuclear Control (AFCN). The costs may change depending on the outcome of these discussions and the detailed schedule for the implementation of these phases which is currently being defined;
- costs payable over the long term are calculated by reference to the estimated costs for each nuclear facility, based on a study conducted by independent experts under the assumption that the facilities will be dismantled on a mass basis. The costs effectively incurred in the future may differ from the estimates in terms of their nature and timing of payment.
- fees for handling Class A - low or medium activity and short-lived - and B - low or medium activity and long-lived dismantling waste are determined using the fee rate established by ONDRAF and include the margins recommended by ONDRAF for waste reclassification risk given the uncertainty over the definition of the criteria for classification in those classes; the difficulty in obtaining operating permits for class A waste storage led ONDRAF to redefine a technical solution for storage and set a new assessment in 2022;

- for the various phases, margins for contingencies, reviewed by ONDRAF and the Commission for Nuclear Provisions, are included;
- an inflation rate of 2.0% is applied until the dismantling obligations expire in order to determine the value of the future obligation;
- the discount rate used by the CNP is 2.5% (including inflation of 2.0%).

In addition, the liabilities for the disposal of operational waste at Electrabel include the tariff update approved by the Board of Directors of ONDRAF in May 2022.

Lastly, the Group has also set aside provisions, based on provisions for the Belgian assets most closely related to these plants, to cover the costs relating to the final shutdown phase of its drawing rights in Tricastin and Chooz B, as well as for the dismantling period leading to the decommissioning and clean-up of the Chooz B site, in accordance with the respective agreements with EDF.

Sensitivity

- On the basis of an analysis carried out by ENGIE Group experts, certain remarks made by the CNP as part of the triennial review procedure described above are considered as unjustified and have been the subject of a reasoned opinion sent to the CNP. The impact of taking this opinion into account (at a discount rate of 2.50% as recommended by the CNP) would represent a decrease in provisions of €0.6 billion.
- Based on currently applied inputs for estimating costs and the timing of payments, a change of 10 basis points in the discount rate used could lead to an adjustment of approximately €85 million in dismantling provisions. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

17.2.4 Financial assets set aside to cover the future costs of dismantling nuclear facilities and managing radioactive fissile material

17.2.4.1 Principles, objectives and governance

As indicated above, the Belgian law of July 12, 2022, partially repealing and amending the law of April 11, 2003, granted the Group's wholly-owned subsidiary Synatom responsibility for managing and investing funds received from operators of nuclear power plants in Belgium and intended to cover the costs of dismantling nuclear power plants and managing spent fuel. Pursuant to the law of April 11, 2003, Synatom could lend up to 75% of these funds to nuclear power plant operators provided that certain credit quality criteria are met.

In accordance with the law of July 12, 2022, the amount of the outstanding loans between Synatom and the nuclear operators representing the countervalue of the provisions for managing spent fuel will be repaid by December 31, 2025 to Synatom according to a schedule provided for in the law. The amount of the outstanding loans between Synatom and Electrabel representing the countervalue of the dismantling provisions will be repaid to Synatom by December 31, 2030 according to a schedule provided for in the law.

The percentage of the provisions not subject to loans to nuclear operators is invested by Synatom either in external financial assets or in loans to legal entities meeting the "credit quality" criteria imposed by law.

Accordingly, in 2022, Synatom invested nearly €1.9 billion in such assets.

Synatom's objective in terms of investment in these assets is to offer, in the long term and for an acceptable level of risk, a sufficient return, in order to cover dismantling costs and the management of radioactive fissile material, under the constraints of diversification, risk minimization and availability as defined by the law of July 12, 2022.

The Synatom Board of Directors and its Investment Committee are responsible for defining Synatom's investment policy after consultation with the CNP, in accordance with the law of July 12, 2022. Based on a rigorous risk control policy, the Investment Committee oversees investment decisions, which are managed by a team headed by an investment director.

17.2.4.2 Strategic allocation and composition of financial assets

The strategic allocation of financial assets is determined on the basis of a periodic asset-liability analysis, which consists of determining the asset categories and their respective weighting in order to meet the return objective while respecting the risk framework identified for each type of liability.

This allocation varies according to the type of liability and the different investment horizons and discount rates. Separate risk profiles are considered for:

- assets in relation to provisions for dismantling nuclear power plants,
- assets in relation to provisions for managing spent fuel.

The target allocation of plan assets based on the two aforementioned risk profiles is as follows:

In %	Management of radioactive fissile material	Dismantling
Shares	40%	35%
Bonds	40%	55%
Unlisted assets	20%	10%
TOTAL	100%	100%

Listed equities consist of international securities. Listed bonds consist of international sovereign bonds and international corporate bonds. Unlisted assets consist of securities representing funds or real estate, private equity, infrastructure or private debt investment vehicles. Investments are managed by specialized asset management companies.

Synatom believes that the inclusion of Environmental, Social and Governance (ESG) principles in investment decisions allows for better management of non-financial risks in order to generate long-term sustainable returns. The integration of ESG principles implies a broader consideration of the risks and opportunities that can influence financial performance. The selection process for external managers also incorporates ESG principles.

To implement this investment policy, Synatom has an investment company with variable share capital (SICAV) under Luxembourg law, the Nuclear Investment Fund ("NIF"), and an investment company with variable share capital under Belgian law, the Belgian Nuclear Liabilities Fund ("BNLF").

17.2.4.3 Changes in financial assets in 2022

The value of financial assets dedicated to covering nuclear provisions amounted to €6,626 million at December 31, 2022, and their return was -13.56% for the year. 2022 was marked by unprecedented events that greatly increased the volatility of global equity and bond markets. The inflationary pressures that followed the Covid crisis prompted the various central banks to carry out a series of interest rate hikes. Mixed published macroeconomic data and the war in Ukraine have particularly impacted the equity markets, especially in Europe. All asset classes, except monetary assets, had negative returns in 2022.

17.2.4.4 Valuation of financial assets in 2022

Loans to entities outside the Group and other cash investments are shown in the table below:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Loans to third parties	5	8
Loan to Sibelga	5	8
Other loans and receivables at amortized cost	2,270	167
Debt instruments - restricted cash UCITS	2,270	167
Total loans and receivables at amortized cost	2,276	175
Equity and debt instruments at fair value	863	1,509
Equity instruments at fair value through other comprehensive income	24	11
Equity instruments at fair value through income	887	1,520
Debt instruments at fair value through other comprehensive income	2,418	2,254
Debt instruments at fair value through income	933	1,552
Debt instruments at fair value	3,350	3,806
Total equity and debt instruments at fair value	4,237	5,326
Derivative instruments	113	4
TOTAL ⁽¹⁾	6,626	5,505

(1) Not including €308 million in uranium inventories at December 31, 2022 (€414 million at December 31, 2021).

Loans to legal entities outside the Group and the cash held by the Undertaking for Collective Investment in Transferable Securities (UCITS) are presented in the statement of financial position under "Loans and receivables at amortized cost". Bonds and associated hedging instruments held by Synatom through the UCITS are presented under equity or debt instruments (see Note 14.1 "Financial assets").

The breakdown in the change in the cumulative fair value of Synatom's assets is presented as follows:

<i>In millions of euros</i>	Cumulative change in the fair value of dedicated financial assets	
	Dec. 31, 2022	Dec. 31, 2021
Equity instruments at fair value through other comprehensive income	(157)	116
Debt instruments at fair value through other comprehensive income	(282)	51
Debt instruments at fair value through income	(52)	154
TOTAL	(491)	321

Net loss for the period generated by these assets amounted to €210 million in 2022 (gain of €228 million in 2021).

<i>In millions of euros</i>	Effects on the result of the return on dedicated financial assets	
	Dec. 31, 2022	Dec. 31, 2021
Disposal proceeds	14	50
Dividends received	66	45
Interest received	7	7
Change in fair value of derivatives not designated as hedges	(15)	(115)
Change in fair value of dedicated assets through income	(282)	241
TOTAL	(210)	228

17.3 Dismantling of non-nuclear plant and equipment and site rehabilitation

17.3.1 Dismantling obligations arising on non-nuclear plant and equipment

Certain items of plant and equipment, including conventional power stations, transmission and distribution pipelines, storage facilities and LNG terminals, have to be dismantled at the end of their operational lives or at least safely shut down. These obligations are the result of prevailing environmental regulations in the countries concerned, contractual

agreements, or an implicit Group commitment. The most important issue for the Group concerns gas infrastructures in France.

France's political and societal guidelines for the energy transition aim to achieve carbon neutrality by 2050, by reducing greenhouse gas emissions and promoting renewable or so-called "green" energies, particularly biomethane and hydrogen. The various scenarios that make it possible to achieve carbon neutrality, in particular the National Low Carbon Strategy in France, the French Environment and Energy Management Agency (ADEME) scenarios, and the "Energy Futures" study by the electricity transmission system operator, RTE, all lead to a significant decrease in the quantities of gas consumed, while maintaining a high number of gas connection points to manage peak electricity demand. The Group is closely analyzing this prospect, particularly for the purpose of defining its strategy and assessing the useful life of assets and evaluating provisions for their possible dismantling.

The future French Strategy for Energy and Climate (SFEC) will set out France's updated roadmap to achieve carbon neutrality by 2050 and ensure that France can adapt to the impacts of climate change. It will encompass the first five-year programming law on energy and the climate (LPEC), which must be adopted before the end of first-half 2023 and set out in the *National Low-Carbon Strategy* (SNBC, 3rd issue), the *National Climate Change and Adaptation Plan* (PNACC, 3rd issue) and the *Long Term Energy Schedule* (PPE 2024-2033), which must be adopted in the first half of 2024. Consequently, the next five-year review of the PPE and the SNBC will be preceded for the first time by the adoption of a programming law on energy and the climate, which will set the French policy for energy and climate's priorities for action.

In line with the objective of carbon neutrality by 2050, the long-term scenario adopted by the Group, which governs the implementation of its strategy, is one that combines reasonable electrification, i.e. just under 50% of final demand in 2050, with the development of a diversified range of green gases (biomethane, synthesized e-CH₄, natural gas with the Carbon-Capture and Storage process, pure hydrogen). The scenario used by the Group is close to the ADEME's S3 scenario.

Due to the importance of green gases in the French energy mix scheduled for 2050 and beyond, gas infrastructures will remain largely necessary and will be essential to provide flexibility to the energy system. The adaptation and conversion of these infrastructures to green gas mean that they can be used in the very distant future, which means that the present value of provisions for their dismantling is almost zero, except in the specific cases of LNG terminals and reduced operation and non-regulated storage sites, for which provisions for dismantling amounted to €382 million at December 31, 2022 and €402 million at December 31, 2021.

Given its time horizon and the many underlying inputs (in particular, better knowledge of the compatibility of gas infrastructures with hydrogen, and changes in French and European public policies), the Group will continue to assess the long-term scenario that will enable it to achieve carbon neutrality by 2050 on a regular basis. These assessments will be accompanied by a review of the valuation of dismantling provisions.

17.3.2 Hazelwood Power Station & Mine (Australia)

The Group and its partner Mitsui announced in November 2016 their decision to close the coal-fired Hazelwood Power Station, and cease coal extraction operations from the adjoining mine from late March 2017. The Group holds a 72% interest in the former 1,600 MW power station and adjoining coal mine, which has been consolidated as a joint operation.

At December 31, 2022, the Group's share (72%) of the provision covering the obligation to dismantle and rehabilitate the mine amounted to €220 million, versus €251 million at December 31, 2021.

Dismantling and site rehabilitation work commenced in 2017 and focused on: managing site contamination; planning site wide environmental clean-up; the demolition and dismantling of all of the site's industrial facilities, including the former power station; and ongoing aquifer pumping and designated earthworks within the mine to ensure mine floor and batter stability with a view to long-term rehabilitation into a pit lake.

Several policies and laws that have a direct or indirect impact on mine rehabilitation and on the agencies that administer them have recently been reformed. Consequently, the ultimate regulatory obligations are likely to be revised during the life of the project and could therefore have an impact on provisions.

The average discount rate used to determine the amount of the provisions is 4%.

The amount of the provision recognized is based on the Group's best current estimate of the demolition and rehabilitation costs that Hazelwood is expected to incur. However, the amount of this provision may be adjusted in the future to take into account any changes in the key inputs.

17.4 Other contingencies

This caption essentially includes provisions for commercial litigation, tax claims and disputes (except income tax, pursuant to IFRIC 23) as well as provisions for onerous contracts relating to storage and transport capacity reservation contracts.

NOTE 18 POST-EMPLOYMENT BENEFITS AND OTHER LONG-TERM BENEFITS

Accounting standards

Depending on the laws and practices in force in the countries where the Group operates, Group companies have obligations in terms of pensions, early retirement payments, retirement bonuses and other benefit plans. Such obligations generally apply to all employees within the companies concerned.

The Group's obligations in relation to pensions and other employee benefits are recognized and measured in compliance with IAS 19. Accordingly:

- the cost of defined contribution plans is expensed based on the amount of contributions payable in the period;
- the Group's obligations concerning pensions and other employee benefits payable under defined benefit plans are assessed on an actuarial basis using the projected unit credit method. These calculations are based on assumptions relating to mortality, staff turnover and estimated future salary increases, as well as the economic conditions specific to each country or entity of the Group. Discount rates are determined by reference to the yield, at the measurement date, on investment grade corporate bonds in the related geographical area (or on government bonds in countries where no representative market for such corporate bonds exists).

Pension commitments are measured on the basis of actuarial assumptions. The Group considers that the assumptions used to measure its obligations are relevant and documented. However, any change in these assumptions could have a significant impact on the resulting calculations.

Provisions are recorded when commitments under these plans exceed the fair value of plan assets. Where the value of plan assets (capped where appropriate) is greater than the related commitments, the surplus is recorded as an asset under "Other assets" (current or non-current).

As regards post-employment benefit obligations, actuarial gains and losses are recognized in other comprehensive income. Where appropriate, adjustments resulting from applying the asset ceiling to net assets relating to overfunded plans are treated in a similar way. However, actuarial gains and losses on other long-term benefits such as long-service awards, are recognized immediately in profit or loss.

Net interest on the net defined benefit liability (asset) is presented in net financial income/(loss).

18.1 Description of the main pension plans

18.1.1 Companies belonging to the Electricity and Gas Industries sector in France

Since January 1, 2005, the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*) has operated the pension, disability, death, occupational accident and occupational illness benefit plans for electricity and gas industry (hereinafter "EGI") companies in France. The CNIEG is a social security legal entity under private law placed under the joint responsibility of the ministries in charge of social security and the budget.

Employees and retirees of EGI sector companies have been fully affiliated to the CNIEG since January 1, 2005. The main affiliated Group entities are ENGIE SA, GRDF, GRTgaz, Elengy, Storengy, ENGIE Thermique France, CPCU, CNR and SHEM.

Following the funding reform of the special EGI pension plan introduced by Law No. 2004-803 of August 9, 2004 and its implementing decrees, specific benefits (pension benefits on top of the standard benefits payable under ordinary law) already vested at December 31, 2004 ("past specific benefits") were allocated between the various EGI entities. Past

specific benefits (benefits vested at December 31, 2004) relating to regulated transmission and distribution businesses ("regulated past specific benefits") are funded by the levy on gas and electricity transmission and distribution services (*Contribution Tarifaire d'Acheminement*) and therefore no longer represent an obligation for the ENGIE Group. Unregulated past specific benefits (benefits vested at December 31, 2004) are funded by EGI sector companies to the extent defined by Decree No. 2005-322 of April 5, 2005.

The special EGI pension plan is a legal pension plan available to new entrants.

The specific benefits vested under the plan since January 1, 2005 are wholly financed by EGI sector companies in proportion to their respective weight in terms of payroll costs within the EGI sector.

As this plan is a defined benefit plan, the Group has set aside a pension provision in respect of specific benefits payable to employees of unregulated activities and specific benefits vested by employees of regulated activities since January 1, 2005. This provision also covers the Group's early retirement obligations. The provision amount may be subject to fluctuations based on the weight of the Group's companies within the EGI sector.

Pension benefit obligations and other "mutualized" obligations are assessed by the CNIEG.

At December 31, 2022, the projected benefit obligation in respect of the special pension plan for EGI sector companies amounted to €2.6 billion.

The duration of the pension benefit obligation of the EGI pension plan is 20 years.

18.1.2 Companies belonging to the electricity and gas sector in Belgium

In Belgium, the rights of employees in electricity and gas sector companies, principally Electrabel, Laborelec and some ENGIE Energy Management Trading and ENGIE CC employee categories, are governed by collective bargaining agreements.

These agreements, applicable to "wage-rated" employees recruited prior to June 1, 2002 and managerial staff recruited prior to May 1, 1999, specify the benefits entitling employees to a supplementary pension equivalent to 75% of their most recent annual income, for a full career and in addition to the statutory pension. These top-up pension payments provided under defined benefit plans are partly reversionary. In practice, the benefits are paid in the form of a lump sum for the majority of plan participants. Most of the obligations resulting from these pension plans are financed through pension funds set up for the electricity and gas sector and by certain insurance companies. Pre-funded pension plans are financed by employer and employee contributions. Employer contributions are calculated annually based on actuarial assessments.

The projected benefit obligation relating to these plans represented around 23% of total pension obligations and related liabilities at December 31, 2022. The average duration is nine years.

"Wage-rated" employees recruited after June 1, 2002 and managerial staff (i) recruited after May 1, 1999 or (ii) having opted for the transfer through defined contribution plans, are covered under defined contribution plans. Prior to January 1, 2017, the law specified a minimum average annual return (3.75% on wage contributions and 3.25% on employer contributions) when savings are liquidated.

The law on supplementary pensions, approved on December 18, 2016 and enforced on January 1, 2017 henceforth specifies a minimum rate of return, depending on the actual rate of return of Belgian government bonds, within a range of 1.75%-3.25% (the rates are now identical for employee and employer contributions). In 2022, the minimum rate of return stood at 1.75%.

An expense of €38 million was recognized in 2021 and 2022 in respect of these defined contribution plans.

18.1.3 Other pension plans

Most other Group companies also grant their employees retirement benefits. In terms of financing, pension plans within the Group are almost equally split between defined benefit and defined contribution plans.

The Group's main pension plans outside France, Belgium and the Netherlands concern:

- the United Kingdom: the large majority of defined benefit pension plans is now closed to new entrants and future benefits no longer vest under these plans. All entities run a defined contribution scheme. The pension obligations of International Power's subsidiaries in the United Kingdom are covered by the special Electricity Supply Pension Scheme (ESPS). The assets of this defined benefit scheme are invested in separate funds. Since June 1, 2008, the scheme has been closed and a defined contribution plan has been set up for new entrants;
- Germany: the Group's German subsidiaries have closed their defined benefit plans to new entrants and now offer defined contribution plans;
- Brazil: ENGIE Brasil Energia operates its own pension scheme. This scheme has been split into two parts, one for the (closed) defined benefit plan, and the other for the defined contribution plan that has been available to new entrants since the beginning of 2005.

18.2 Description of other post-employment benefit obligations and other long-term benefits

18.2.1 Other benefits granted to current and former EGI sector employees

Other benefits granted to EGI sector employees are:

- Post-employment benefits:
 - reduced energy prices;
 - end-of-career indemnities;
 - bonus leave;
 - death capital benefits.
- Long-term benefits:
 - allowances for occupational accidents and illnesses;
 - temporary and permanent disability allowances;
 - long-service awards.

The Group's main obligations are described below.

18.2.1.1 Reduced energy prices

Under Article 28 of the national statute for electricity and gas industry personnel, all employees (current and former employees, provided they meet certain length-of-service conditions) are entitled to benefits in kind, which take the form of reduced energy prices known as "employee rates".

This benefit entitles employees to electricity and gas supplies at a reduced price. For retired employees, this provision represents a post-employment defined benefit. Retired employees are only entitled to the reduced rate if they have completed at least 15 years' service within EGI sector companies.

In accordance with the agreements signed with EDF in 1951, ENGIE provides gas to all current and former employees of ENGIE and EDF, while EDF supplies electricity to these same beneficiaries. ENGIE pays (or benefits from) the balancing contribution payable in respect of its employees as a result of energy exchanges between the two utilities.

The obligation to provide energy at a reduced price to current and former employees during their retirement is measured as the difference between the energy sale price and the preferential rate granted (including, in 2022, the impacts of the tariff shield for electricity) and the preferential rate granted.

The provision set aside in respect of reduced energy prices stood at €2.8 billion at December 31, 2022. The duration of the obligation is 20 years.

18.2.1.2 End-of-career indemnities

Retiring employees (or their dependents in the event of death during active service) are entitled to end-of-career indemnities, which increase in line with the length of service within the EGI sector.

18.2.1.3 Compensation for occupational accidents and illnesses

EGI sector employees are entitled to compensation for accidents at work and occupational illnesses. These benefits cover all employees or the dependents of employees who die as a result of occupational accidents or illnesses, or injuries undergone on the way to work.

The amount of the obligation corresponds to the likely present value of the benefits to be paid to current beneficiaries, taking into account any reversionary annuities.

18.2.2 Other benefits granted to employees of the gas and electricity sector in Belgium

Electricity and gas sector companies also grant other post-employee benefits such as the reimbursement of medical expenses, electricity and gas price reductions, as well as length-of-service awards and early retirement schemes. These benefits are not prefunded, with the exception of the special "*allocation transitoire*" termination indemnity, considered as an end-of-career indemnity.

18.2.3 Other collective agreements

Most other Group companies also grant their staff post-employment benefits (early retirement plans, medical coverage, benefits in kind, etc.) and other long-term benefits such as jubilee and length-of-service awards.

18.3 Defined benefit plans

18.3.1 Amounts presented in the statement of financial position and statement of comprehensive income

In accordance with IAS 19, the information presented in the statement of financial position relating to post-employment benefit obligations and other long-term benefits results from the difference between the gross projected benefit obligation and the fair value of plan assets. A provision is recognized if this difference is positive (net obligation), while a prepaid benefit cost is recorded in the statement of financial position when the difference is negative, provided that the conditions for recognizing the prepaid benefit cost are met.

Changes in provisions for pension plans, post-employment benefits and other long-term benefits, plan assets and reimbursement rights recognized in the statement of financial position are as follows:

<i>In millions of euros</i>	Provisions	Plan assets	Reimbursement rights
AT DECEMBER 31, 2021	(6,999)	72	229
Exchange rate differences	(22)	(2)	-
Changes in scope of consolidation and other	109	(94)	(29)
Actuarial gains and losses	2,466	308	-
Periodic pension cost	(331)	(23)	2
Contributions/benefits paid	306	55	6
AT DECEMBER 31, 2022	(4,471)	316	208

Plan assets and reimbursement rights are presented in the statement of financial position under “Other non-current assets” or “Other current assets”.

The cost recognized for the period amounted to €354 million in 2022 (€547 million in 2021). The components of this defined benefit cost in the period are set out in Note 18.3.3 “Components of the net periodic pension cost”.

The Eurozone represented 98% of the Group’s net obligation at December 31, 2022, (98% at December 31, 2021).

Cumulative actuarial gains and losses recognized in equity amounted to €1,400 million at December 31, 2022, compared to €4,232 million at December 31, 2021.

Net actuarial differences arising in the period and presented on a separate line in the statement of comprehensive income represented a net actuarial gain of €2,774 million in 2022 and a gain of €1,803 million in 2021.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

(1) Pensions and retirement bonuses.

(2) Reduced energy prices, healthcare, gratuities and other post-employment benefits.

(3) Length-of-service awards and other long-term benefits.

18.3.3 Components of the net periodic pension cost

The net periodic cost recognized in respect of defined benefit obligations for the years ended December 31, 2022 and 2021 breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Current service cost	372	521
Actuarial gains and losses ⁽¹⁾	(116)	(43)
Gains or losses on pension plan curtailments, terminations and settlements	6	-
Total accounted for under current operating income including operating MtM and share in net income of equity method entities	261	479
Net interest expense	93	68
Total accounted for under net financial income/(loss)	93	68
TOTAL	354	547

(1) On the long-term benefit obligation.

18.3.4 Funding policy and strategy

When defined benefit plans are funded, the related plan assets are invested in pension funds and/or with insurance companies, depending on the investment practices specific to the country concerned. The investment strategies underlying these defined benefit plans are aimed at striking the right balance between return on investment and acceptable levels of risk.

The objectives of these strategies can be summarized as follows: to maintain sufficient liquidity to cover pension and other benefit payments; and as part of risk management, to achieve a long-term rate of return higher than the discount rate or, where appropriate, at least equal to future required returns.

When plan assets are invested in pension funds, investment decisions are the responsibility of the fund management concerned. For French companies, where plan assets are invested with an insurance company, the latter manages the investment portfolio for unit-linked policies or euro-denominated policies, in a manner adapted to the risk and long-term profile of the liabilities.

The funding of these obligations for each of the periods presented can be analyzed as follows:

<i>In millions of euros</i>	Projected benefit obligation	Fair value of plan assets	Asset ceiling	Total net obligation
Underfunded plans	(3,886)	3,391	(63)	(558)
Overfunded plans	(1,360)	1,788	(4)	424
Unfunded plans	(4,021)	-	-	(4,021)
AT DECEMBER 31, 2022	(9,267)	5,180	(68)	(4,156)
Underfunded plans	(5,891)	4,671	(50)	(1,271)
Overfunded plans	(1,116)	1,172	(5)	51
Unfunded plans	(5,708)	-	-	(5,708)
AT DECEMBER 31, 2021	(12,715)	5,843	(55)	(6,927)

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

NOTE 18 POST-EMPLOYMENT BENEFITS AND OTHER LONG-TERM BENEFITS

The allocation of plan assets by principal asset category can be analyzed as follows:

In %	Dec. 31, 2022	Dec. 31, 2021
Equity investments	27	29
Sovereign bond investments	25	21
Corporate bond investments	35	27
Money market securities	4	3
Real estate	2	2
Other assets	8	18
TOTAL	100	100

All plan assets were quoted on an active market at December 31, 2022.

The actual return on assets of EGI sector companies stood at a negative 12.2% in 2022.

In 2022, the actual return on plan assets of Belgian entities amounted to approximately 2.6% in Group insurance and a negative 14.2% in pension funds.

The allocation of plan asset categories by geographic area of investment can be analyzed as follows:

In %	Europe	North America	Latin America	Asia - Oceania	Rest of the World	Total
Equity investments	53	33	-	12	2	100
Sovereign bond investments	76	1	19	-	3	100
Corporate bond investments	61	29	1	6	3	100
Money market securities	85	4	3	1	7	100
Real estate	92	2	6	-	1	100
Other assets	13	-	-	-	87	100

18.3.5 Actuarial assumptions

Actuarial assumptions are determined individually by country and company in conjunction with independent actuaries. Weighted discount rates for the main actuarial assumptions are presented below:

		Pension benefit obligations		Other post-employment benefit obligations		Long-term benefit obligations		Total benefit obligations	
		2022	2021	2022	2021	2022	2021	2022	2021
Discount rate	Eurozone	3.8%	1.2%	3.8%	1.2%	3.8%	1.2%	3.8%	1.2%
	UK Zone	2.1%	1.6%	-	-	-	-	-	-
Inflation rate	Eurozone	4.2%	1.8%	4.2%	1.8%	4.2%	1.8%	4.2%	1.8%
	UK Zone	3.9%	3.6%	-	-	-	-	-	-

18.3.5.1 Discount and inflation rates

The discount rate applied is determined based on the yield, at the date of the calculation, of investment grade corporate bonds with maturities mirroring the term of the plan.

The rates were determined for each monetary area based on data for AA corporate bond yields. For the Eurozone, data (from Bloomberg) are extrapolated on the basis of government bond yields for long maturities.

According to the Group's estimates, a 100-basis-point increase (decrease) in the discount rate would result in a decrease (increase) of approximately 13% in the projected benefit obligation.

The inflation rates were determined for each monetary area. A 100-basis-point increase (decrease) in the inflation rate (with an unchanged discount rate) would result in an increase (decrease) of approximately 12% in the projected benefit obligation.

18.3.6 Estimated employer contributions payable in 2023 under defined benefit plans

The Group expects to pay around €172 million in contributions into its defined benefit plans in 2023, including €122 million for EGI sector companies. Annual contributions in respect of EGI sector companies will be made by reference to rights vested during the year, taking into account the funding level for each entity in order to even out contributions over the medium term.

18.4 Defined contribution plans

In 2022, the Group recorded a €91 million expense in respect of amounts paid into Group defined contribution plans of which €9 million concerning multi-employers plans in Netherlands (€196 million in 2021, of which €74 million concerning multi-employers in Netherlands). These contributions are recorded under “Personnel costs” in the consolidated income statement.

NOTE 19 SHARE-BASED PAYMENTS

Accounting standards

Under IFRS 2, share-based payments made in consideration for services provided are recognized as personnel costs. These services are measured at the fair value of the instruments awarded.

The fair value of bonus share plans is estimated by reference to the share price at the grant date, taking into account the fact that no dividend is payable over the vesting period, and based on the estimated turnover rate for the employees concerned and the probability that the Group will meet its performance targets. The fair value measurement also takes into account the non-transferability period associated with these instruments. The cost of shares granted to employees is expensed over the vesting period of the rights and offset against equity.

A Monte Carlo pricing model is used for performance shares granted on a discretionary basis and subject to external performance criteria.

Expenses recognized in respect of share-based payments break down as follows:

In millions of euros	Expense for the year	
	Dec. 31, 2022	Dec. 31, 2021
Employee share issues ⁽¹⁾	(49)	(1)
Bonus/performance share plans ^{(2) (3)}	(40)	(47)
Other Group companies' plans	(3)	-
TOTAL	(92)	(48)

(1) Including Share Appreciation Rights set up within the scope of employee share issues in certain countries.

(2) Of which an additional expense of €4.2 million in 2022 following the review of the performance conditions (a reversal of €0.3 million in 2021).

(3) Of which a reversal of €9.8 million in 2022 for failure to meet the condition of continuing employment within the Group (€4 million in 2021).

19.1 Link 2022

19.1.1 Description of available ENGIE share plans

In 2022, Group employees and former Group employees were entitled to purchase ENGIE shares as part of the "Link 2022" worldwide employee share ownership plan. The offering mainly involved the sale of treasury shares. Employees could subscribe to either:

- the Link Classique Plan: this plan allows employees to subscribe to shares at a discount, either directly or via an employee mutual fund and with an employer top-up contribution;
- the Link Multiple Plan: under this plan, employees may subscribe to shares at a discount, either directly or via an employee mutual fund, and also benefit from any increase in the share price (leverage effect) in addition to the amounts invested. Through a Swap Agreement with the bank that structures the Plan, employees are guaranteed to recover 100% of the invested amount as well as a minimum capitalized return;
- Share Appreciation Rights (SARs): this leveraged plan entitles beneficiaries who purchase shares to receive a cash bonus equal to the increase in the share price after a period of five years. The resulting employee liability is covered by warrants.

The Link Classique Plan featured an employer contribution under the terms and conditions described below:

- participating French employees were entitled to bonus ENGIE shares depending on the amount of their own contribution to the plan:

- for an employee contribution of €200, the employer contribution corresponded to 200% of this amount; for an additional employee contribution of €100, the employer contribution represented 50% of the amount. The employer contribution was capped at €450.
- for employees in other countries, ENGIE shares were granted through a bonus share award plan, subject to the still being employed with the Group and depending on their own contribution to the plan:
 - for an employee contribution of €200, the employer contribution corresponded to 200% of this amount; for an additional employee contribution of €100, the employer contribution represented 50% of the amount. The employer contribution was capped at €450;
 - the bonus shares will be awarded to employees on December 22, 2027, provided that they are still employed by the ENGIE Group.

19.1.2 Accounting impacts

The subscription price for the 2022 plan represents the average closing price of the ENGIE share on the Euronext Paris over the 20 trading days between October 18, 2022 and November 14, 2022 inclusive. The reference price is set at €13.14 less 20% for the Link Classique and the Link Multiple plans, i.e. €10.51.

The expense recognized in the consolidated financial statements in respect of the Link Classique, and Link Multiple plans corresponds to the difference between the fair value of the shares subscribed and the subscription price. The fair value takes into account the lock-up period of five years, as provided for by French legislation.

The following assumptions were applied:

	5 years
Risk-free interest rate	2.70%
Spread applicable to the retail banking network	1.00%
Employee financing cost	3.70%
Share lending cost	1.00%
Share price at grant date	14.38

The accounting impacts break down as follows:

	Link Classique	Link Multiple	Link Classique France - additional employer's contribution	Total
Amount subscribed (in millions of euros)	27	135	-	162
Number of shares subscribed (in millions of shares)	2.6	12.8	0.8	16.2
Discount (€/share)	3.9	3.9	14.4	-
Non-transferability restriction (€/share)	(1.4)	(1.4)	(1.4)	-
Cost for the Group (in millions of euros)	6	32	10	48

Subscriptions to the Link 2022 worldwide employee share ownership plan totaled €162 million and break down as follows:

- the sale of treasury shares to employees amounted to €130 million;
- a capital increase and additional paid-in capital of €32 million (excluding issuance costs). This amount is broken down into €8 million for Link Classique and €24 million for Link Multiple.

The Group recognized a total expense of €48 million for 2022 in respect of the 15.4 million shares subscribed and the 0.8 million bonus shares awarded under employer contributions.

The accounting impact of cash-settled Share Appreciation Rights consists in recognizing a payable to the employee over the vesting period, with a corresponding adjustment recorded in profit or loss. At December 31, 2022, the fair value of the liability relating to the 2018 and 2022 awards amounted to €0.2 million.

19.2 Performance shares

19.2.1 New awards in 2022

ENGIE Performance Share plan of December 8, 2022

On December 8, 2022, the Board of Directors approved the award of 4.7 million performance shares to members of the Group's executive and senior management, breaking down into three tranches:

- performance shares vesting on March 14, 2026, subject to a one-year lock-up period;
- performance shares vesting on March 14, 2026, without a lock-up period; and
- performance shares vesting on March 14, 2027, without a lock-up period.

In addition to a condition requiring employees to be employed with the Group at the vesting date, each tranche is made up of instruments subject to four different conditions, excluding the first 500 performance shares granted to beneficiaries (excluding top management), which are exempt from performance conditions. The performance conditions are as follows:

- a market performance condition relating to ENGIE's Total Shareholder Return compared to that of a reference panel of six companies, as assessed between December 2022 and February 2026, which accounts for 25% of the total award;
- an internal performance condition relating to net recurring income Group share compared to that of a reference panel of six companies, as assessed between the second half of 2022 and the first half of 2025, which accounts for 25% of the total award;
- an internal performance condition relating to Return On Capital Employed (ROCE) in 2025 which accounts for 30% of the total award;
- an internal performance condition relating to non-financial criteria in terms of targets for greenhouse gas emissions from energy productions, increasing the share of renewable capacities and increasing the percentage of women in management, as assessed between December 2022 and December 2025, which accounts for 20% of the total award.

Under this plan, performance shares without conditions were also awarded to the winners of the Innovation and Incubation programs (6,450 shares awarded).

ENGIE Bonus Share plan of November 18, 2022

As part of the Link 2022 employee share plan, bonus shares were awarded to subscribers of the Link Classique plan (outside France). A total of 247,163 bonus shares were awarded under this plan (*see Note 19.1.1 Description of available ENGIE share plans*).

19.2.2 Fair value of bonus share plans with or without performance conditions

The following assumptions were used to calculate the unitary fair value of the new plans awarded by ENGIE in 2022:

Award date	Vesting date	End of the lock-up period	Price at the award date	Expected dividend	Market-related performance condition	Unitary fair value
November 18, 2022	December 22, 2027	December 22, 2027	14.4	1,15	no	9.20
Weighted average fair value of the December 22, 2022 plan						9.20
December 8, 2022	March 14, 2026	March 14, 2027	14.3	1,15	yes	9.91
December 8, 2022	March 14, 2026	March 14, 2026	14.3	1,15	yes	9.91
December 8, 2022	March 14, 2026	March 14, 2026	14.3	1,15	no	11.05
December 8, 2022	March 14, 2027	March 14, 2027	14.3	1,15	yes	8.93
Weighted average fair value of the December 8, 2022 plan						10.24

19.2.3 Review of internal performance conditions applicable to the plans

In addition to the condition of continuing employment within the Group, eligibility for certain bonus share and performance share plans is subject to an internal performance condition. When this condition is not fully met, the number of bonus shares granted to employees is reduced in accordance with the plans' regulations, leading to a decrease in the total expense recognized in relation to the plans in accordance with IFRS 2. Performance conditions are reviewed at each reporting date.

NOTE 20 RELATED PARTY TRANSACTIONS

This note describes material transactions between the Group and its related parties.

Compensation payable to key management personnel is disclosed in Note 21 "Executive compensation".

Transactions with joint ventures and associates are described in Note 3 "Investments in equity method entities".

Only material transactions are described below.

20.1 Relations with the French State and with entities owned or partly owned by the French State

20.1.1 Relations with the French State

The French State's interest in the Group at December 31, 2022 remained unchanged at 23.64% compared with the previous year. This entitles it to three of the 15 seats on the Board of Directors (one director representing the State appointed by decree, and two directors appointed by the Shareholders' Meeting at the proposal of the State).

The French State holds 33.56% of the theoretical voting rights (33.71% of exercisable voting rights) compared with 33.20% at end-2021.

On May 22, 2019, the PACTE Law ("Action plan for business growth and transformation") was enacted, enabling the French State to dispose of its ENGIE shares without restriction.

In addition, the French State holds a golden share aimed at protecting France's critical interests and ensuring the continuity and safeguarding of supplies in the energy sector. The golden share is granted to the French State indefinitely and entitles it to veto decisions taken by ENGIE if it considers they could harm France's interests.

Public service engagements in the energy sector are defined by the law of January 3, 2003.

Transmission rates on the GRTgaz transportation network and the gas distribution network in France, as well as rates for accessing the French LNG terminals and revenues from storage capacities, are all regulated.

The Law on Energy and Climate enacted on November 8, 2019 will put an end to regulated gas tariffs and will restrict regulated electricity tariffs for consumers and small businesses. The final date for the discontinuation of regulated gas tariffs is July 1, 2023.

20.1.2 Relations with EDF

Following the creation on July 1, 2004 of the French gas and electricity distribution network operator (EDF Gaz de France Distribution), Gaz de France SA and EDF entered into an agreement on April 18, 2005 setting out their relationship as regards the distribution business. The December 7, 2006 law on the energy sector reorganized the natural gas and electricity distribution networks. Enedis SA, a subsidiary of EDF SA, and GRDF SA, a subsidiary of ENGIE SA, were created on January 1, 2007 and December 31, 2007, respectively, and act in accordance with the agreement previously signed by the two incumbent operators. With the deployment of smart meters for both electricity and gas, the "common" activities operated by the two distributors evolved significantly. The remaining mixed activities are mainly in the areas of inventory management, human resources, medical field, local IT and accountancy. This scope will be further reduced in 2023 to be limited to areas relating to medical field and social activities.

20.2 Relations with the CNIEG (*Caisse Nationale des Industries Électriques et Gazières*)

The Group's relations with the CNIEG, which manages all old-age, death and disability benefits for active and retired employees of the Group who belong to the special EGI pension plan, employees of EDF and Non-Nationalized Companies (*Entreprises Non Nationalisées – ENN*), are described in Note 18 "Post-employment benefits and other long-term benefits".

NOTE 21 EXECUTIVE COMPENSATION

The executive compensation presented below includes the compensation of the members of the Group's Executive Committee and Board of Directors.

The Executive Committee had 10 members at December 31, 2022 (compared to 11 members at December 31, 2021).

Their compensation breaks down as follows:

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Short-term benefits	34	22
Post-employment benefits	-	1
Share-based payments	4	3
Termination benefits	-	7
TOTAL	37	33

NOTE 22 WORKING CAPITAL REQUIREMENTS, INVENTORIES, OTHER ASSETS AND OTHER LIABILITIES

Accounting standards

In accordance with IAS 1, the Group's current and non-current assets and liabilities are shown separately in the consolidated statement of financial position. For most of the Group's activities, the breakdown into current and non-current items is based on when assets are expected to be realized, or liabilities extinguished. Assets expected to be realized or liabilities extinguished within 12 months of the reporting date are classified as current, while all other items are classified as non-current.

Inventories

Inventories are measured at the lower of cost and net realizable value. Net realizable value corresponds to the estimated selling price in the ordinary course of business, less the estimated costs of completion and the estimated costs necessary to make the sale.

The cost of inventories is determined based on the first-in, first-out method or the weighted average cost formula.

Nuclear fuel purchased is consumed in the process of producing electricity over a number of years. The consumption of this nuclear fuel inventory is recorded based on estimates of the quantity of electricity produced per unit of fuel.

Gas inventories

Gas injected into underground storage facilities includes working gas, which can be extracted without adversely affecting the subsequent operation of the reservoirs, and cushion gas, which is inseparable from the reservoirs and essential for their operation (see Note 13.3 "Property, plant and equipment").

Working gas is classified in inventories and measured at weighted average purchase cost upon entering the transportation network regardless of its source, including any regasification costs.

Group inventory outflows are valued using the weighted average unit cost method.

Certain inventories are used for trading purposes and are recognized at fair value less selling costs, in accordance with IAS 2. Any changes in said fair value are recognized in the consolidated income statement for the year in which they occur.

Greenhouse gas emission rights, energy saving certificates and green certificates

In the absence of specific IFRS standards or IFRIC interpretations on accounting for greenhouse gas emission allowances, energy saving certificates and green certificates, the Group has decided to recognize certificates in inventories at their acquisition or production cost. At the reporting date, a liability is recognized if the certificates held by the Group are insufficient to meet the obligation to return certificates to the French government. When not covered by the certificates held in inventories, the liability is measured at the market value or based on the price of any future contracts that have been entered into, when applicable.

Tax equity

The ENGIE Group finances its renewables projects in the United States through tax equity structures, in which part of the necessary funds is provided by a tax partner. The tax partner obtains, up to a pre-determined level, a preferential right essentially to the project's tax credits, which it can deduct from its own tax base.

The tax partner's investments meet the definition of a liability under IFRS. Since the tax equity liability corresponding to these tax benefits does not give rise to any cash outflow for the project entity, it does not represent a financial debt and is accounted for in "Other liabilities".

Besides the unwinding effect, the liability changes mainly in line with the tax credits allocated to the tax partner and recognized in profit or loss.

22.1 Composition of change in working capital requirements

<i>In millions of euros</i>	Change in working capital requirements at Dec. 31, 2022	Change in working capital requirements at Dec. 31, 2021
Inventories	(2,115)	(2,349)
Trade and other receivables, net	(11,614)	(11,043)
Trade and other payables, net	8,521	10,676
Tax and employee-related receivables/payables	1,545	364
Margin calls and derivative instruments hedging commodities relating to trading activities	199	(706)
Other	1,040	680
TOTAL	(2,424)	(2,377)

22.2 Inventories

<i>In millions of euros</i>	Dec. 31, 2022	Dec. 31, 2021
Inventories of natural gas, net	4,628	3,079
Inventories of uranium ⁽¹⁾	308	408
CO ₂ emissions allowances, green certificates and energy saving certificates, net	1,788	1,526
Inventories of commodities other than gas and other inventories, net	1,420	1,161
TOTAL	8,145	6,175

(1) Financial hedging instruments are backed by these uranium inventories and represented a negative amount of €229 million at December 31, 2022.

22.3 Other assets and other liabilities

<i>In millions of euros</i>	Dec. 31, 2022				Dec. 31, 2021			
	Assets		Liabilities		Assets		Liabilities	
	Non-current	Current	Non-current	Current	Non-current	Current	Non-current	Current
Other assets and liabilities	766	18,294	(3,646)	(23,583)	478	13,202	(2,341)	(16,752)

Other	243	3,614	(3,644)	(4,218)	178	2,541	(2,339)	(3,395)

At December 31, 2022, other non-current assets included a receivable towards EDF Belgium in respect of nuclear provisions amounting to €162 million (€96 million at December 31, 2021).

Other liabilities include €1,981 million in investments made by tax partners as part of the financing of renewable projects in the United States by tax equity (€1,229 million at December 31, 2021).

NOTE 23 LEGAL AND ANTI-TRUST PROCEEDINGS

The Group is party to a number of legal and anti-trust proceedings with third parties or with legal and/or administrative authorities (including tax authorities) in the normal course of its business.

The main disputes and investigations presented hereafter are recognized as liabilities or give rise to contingent assets or liabilities.

In the normal course of its business, the Group is involved in a number of disputes and investigations before state courts, arbitral tribunals or regulatory authorities. The disputes and investigations that could have a material impact on the Group are presented below.

23.1 Renewables

23.1.1 Mexico – Renewable energy

In 2021, the Mexican government and public authorities took positions and legislative and regulatory measures that directly affect private players in the energy sector (in particular renewable energy producers) and go against the letter and spirit of the latest energy sector reforms introduced in 2013 and 2014. The constitutionality and legality of some of these measures have been contested in legal proceedings launched by non-government bodies and private investors, in particular by ENGIE subsidiaries that develop or implement renewable energy projects in the country. These proceedings are currently ongoing. The Mexican President has also submitted a draft revision of the Constitution that would substantially change the regulatory framework applicable to the electricity sector. The case was put on hold in the first half of 2022.

23.2 Networks

23.2.1 Investigation into the regulatory framework for natural gas storage in France

On February 29, 2020, the European Commission announced that it had launched an in-depth investigation into the regulatory framework for natural gas storage introduced on January 1, 2018 to secure France's natural gas supply. Storengy and Géométhane provided the Commission with all the necessary information to substantiate their analyses. The European Commission closed its investigation and published a press release on June 28, 2021 announcing that it had concluded that the regulatory framework for natural gas storage complies with EU rules on State aid. Nevertheless, the Commission considered that the scheme constituted illegal State aid for the period during which it was implemented without having been approved in advance. This decision was published in the Official Journal on March 18, 2022, marking the start of the two-month period for filing an appeal. To our knowledge, no appeal has been filed.

23.3 Energy Solutions

23.3.1 Spain - Púnica

In the Púnica case (procedure concerning the awarding of contracts), 15 Cofely España employees, as well as the company itself, were placed under investigation by the examining judge in charge of the case. The criminal investigation was closed on July 19, 2021 with the referral of Cofely España and eight (former) employees before the criminal court. Cofely España lodged an appeal against this decision on September 30, 2021. On March 9, 2022, the appeal was dismissed and the referral decision upheld. The hearings are expected to begin in 2023.

23.3.2 Italy - Competition procedure

On May 9, 2019, a fine of €38 million was jointly and severally imposed on ENGIE Servizi SpA and ENGIE Energy Services International S.A. (“ENGIE ESI”) by the Italian Competition Authority (the “Authority”) for certain alleged anti-competitive practices relating to the award of the Consip FM4 2014 contract. An appeal was lodged with the Lazio Regional Administrative Court (Lazio RAC). On July 18, 2019, the Lazio RAC suspended the payment of the fine, and on July 27, 2020, it overturned the Authority’s decision as regards both ENGIE Servizi SpA and ENGIE ESI. On November 17, 2020, the Authority appealed the Lazio RAC’s decision before Italy’s highest administrative court. On May 9, 2022, the Italian administrative court rejected the Authority’s appeal and upheld the Lazio RAC’s reversal of the Authority’s decision. Two companies filed a special appeal against the administrative court’s decision before the administrative court itself on June 13, 2022, and an appeal challenging the administrative court’s rejection of the appeal before the Supreme Court on July 11, 2022. These appeals do not have a suspensive effect. Both proceedings are still pending.

23.3.3 Italy – Manitalidea

In 2012, ENGIE Servizi formed a temporary association (“*associazione temporanea di imprese*” or “ATI”) with Manitalidea with the aim of submitting a bid for a public contract launched by CONSIP. ENGIE Servizi had an 85% stake in the ATI, with Manitalidea holding the remaining 15%. The purpose of the contract was to provide energy and maintenance services to hospitals.

In September 2012, three lots of the contract were awarded to the ATI.

On March 11, 2022, Manitalidea filed for damages against ENGIE Servizi with the Rome Civil Court, claiming that (i) ENGIE Servizi had not complied with the provisions of the temporary association agreement relating to the distribution of contracts between the partners, and (ii) as a result, Manitalidea had missed an opportunity to increase its revenue. After Manitalidea filed for bankruptcy, the claim was extended to include the alleged responsibility of ENGIE Servizi for Manitalidea’s financial difficulties and bankruptcy.

A hearing is scheduled for the first half of 2023.

23.4 Supply

23.4.1 Canvassing

EDF brought an action against ENGIE before the Nanterre Commercial Court on July 20, 2017, seeking €13.5 million in damages for alleged losses due to unfair competitive practices pursued by ENGIE mainly in its door-to-door canvassing campaigns. In its judgment of December 14, 2017, the court ordered ENGIE to pay EDF the sum of €150,000, concluding that ENGIE was guilty of unfair competition but acknowledging that there had been no disparagement of EDF and that ENGIE had set up training and control arrangements for its partners.

ENGIE appealed the judgment and EDF brought a cross-appeal seeking €94.7 million in damages for its alleged loss. The Versailles Court of Appeal delivered its judgment on March 12, 2019, ordering ENGIE to pay EDF €1 million. It also ordered ENGIE to cease and desist from all parasitic business practices and disparagement to the detriment of EDF, subject to a penalty of €10,000 per infringement for a period of one year.

On July 6, 2020, EDF asked the enforcement judge at the Nanterre Court to assess the penalty ordered by the Versailles Court of Appeal, seeking payment from ENGIE of the sum of €106.89 million and a final penalty of €50,000 per infringement for a period of one year. On December 11, 2020, the enforcement judge ordered ENGIE to pay EDF the sum of €230,000 and ordered a new provisional penalty of €15,000 per new infringement reported by EDF for a period of one year as of notification of the judgment.

On December 22, 2020, EDF appealed the enforcement judge’s decision before the Versailles Court of Appeal. The Versailles Court of Appeal handed down its decision on July 1, 2021. It reduced ENGIE’s fine to €190,000 and, considering

that ENGIE had demonstrably implemented measures that were likely to be efficient and that the difficulties encountered stemmed for the most part from the behavior of service providers/partners and door-to-door salespeople, annulled the new provisional penalty and rejected EDF's request to impose a definitive penalty. EDF appealed this decision before the French Court of Cassation on July 29, 2021. The Court of Cassation rejected EDF's appeal in its ruling of October 6, 2022. The case is therefore closed.

23.4.2 Peru – Antamina

In 2012, following a tender for the annual purchase of 170 MW until 2032, ENGIE Energía Perú S.A. entered into a long-term gas purchase agreement with the Peruvian mining company Antamina (the "Agreement").

In 2021, however, Antamina launched another tender for the same annual volume and entered into three purchase agreements with three new suppliers for a six-month period renewable twice. This called into question the exclusivity and "take or pay" clause that ENGIE Energía Perú S.A. believed it had been granted until 2032 under the Agreement. Following the signing of these new agreements, Antamina refused, as of January 2022, to accept delivery of the agreed upon quantity of gas under the Agreement and, consequently, to pay the corresponding penalty.

On April 26, 2022, ENGIE Energía Perú S.A. filed an arbitration procedure against Antamina, seeking recognition of the exclusive nature of the Agreement and Antamina's obligation to only procure gas supplies from ENGIE. The suit also seeks the payment of invoices that have been outstanding since January 2022. The arbitration procedure is governed by the rules of the Arbitration Center of the Lima Chamber of Commerce. On January 4, 2023, ENGIE Energía Perú S.A. filed its pleading. Antamina will have to file its pleading by the end of March at the latest.

23.4.3 GEM – GPE

At the beginning of the fourth quarter of 2022, ENGIE initiated an arbitration procedure against Gazprom Export LLC seeking, in particular to obtain (i) recognition of Gazprom Export LLC's non-performance of its gas delivery obligations towards ENGIE under long-term gas delivery agreements and (ii) payment of contractual penalties as well as compensation for damages resulting from this non-performance from Gazprom Export LLC.

This arbitration procedure is due to the significant delivery shortages by Gazprom Export LLC to ENGIE as of mid-June 2022, followed by Gazprom Export LLC's unilateral decision at the end of summer 2022 to reduce its deliveries to ENGIE due to a disagreement between the parties on the application of the agreements.

23.4.4 Commissioning

Regarding the customer management services carried out on behalf of the grid manager in the electricity sector (in this case ERDF, now ENEDIS), following proceedings brought by ENGIE, in a decision of July 13, 2016, the *Conseil d'État* ruled that the principle whereby the grid manager pays compensation to the supplier should apply. In the same decision, the *Conseil d'État* denied the CRE the right to set a customer threshold beyond which the compensation would not be payable, which hitherto prevented ENGIE from receiving any compensation. In light of this decision, ENGIE brought an action against ENEDIS seeking payment for these customer management services. The legislature has adopted a decision that retroactively validates the agreements entered into with ENEDIS and precludes any request for compensation for unpaid customer management services. In a decision handed down on April 19, 2019, the Constitutional Court ruled that this provision was constitutional. On April 11, 2022, the Paris Commercial Court recorded the termination of the proceedings. The case against ENEDIS is therefore closed.

23.4.5 Chile – TOTAL

On January 3, 2023, ENGIE Energía Chile S.A. initiated international arbitration proceedings against TotalEnergies Gas & Power Limited for breaching its contractual obligations under an LNG supply contract entered into in August 2011.

23.5 Thermal

23.5.1 Italy - Vado Ligure

On March 11, 2014, the Court of Savona seized and closed down the VL3 and VL4 coal-fired production units at the Vado Ligure thermal power plant belonging to Tirreno Power S.p.A. (TP), a company which is 50%-owned by the ENGIE Group. This decision was taken as part of a criminal investigation against the present and former executive managers of TP into environmental infringements and public health risks. The investigation was closed on July 20, 2016. The case was referred to the Savone Court to be tried on the merits. The proceedings before the Court of First Instance began on December 11, 2018 and will continue through 2022 and 2023.

23.5.2 Brazil – Claim against sales tax adjustments

On December 14, 2018, the Brazilian tax authorities sent ENGIE Brasil Energia S.A. tax deficiency notices for the 2014, 2015 and 2016 fiscal years considering that the company was liable for the PIS and COFINS taxes (federal value added taxes) on the reimbursement of certain fuels used in the production of energy by thermoelectric plants. The adjustments amounted to a total of 581 million Brazilian real, including 229 million Brazilian real in taxes plus fines and interest.

ENGIE Brasil Energia disputes these tax deficiency notices and introduced tax claims in 2019, which the tax authorities have rejected, however.

On November 22, 2022, ENGIE Brasil Energia filed a special administrative appeal, which was not recognized by the Administrative Court. On January 9, 2023, the company filed another administrative appeal seeking recognition of the special administrative appeal and an analysis of the merits of the case. If these proceedings are unsuccessful, the case will have to be brought before the ordinary courts and tribunals.

23.5.3 Italy – Tax on excess profits

In December 2022, ENGIE filed an action to obtain the reimbursement of the tax it paid in July and November 2022 for a total amount of more than €308 million, pursuant to two legislative decrees (no. 21 and 50/2022) that introduced an exceptional solidarity contribution to be paid by operators in the energy sector. ENGIE contests the validity of the basis of the tax in relation to the decree's objective, its compatibility with the Italian Constitution as well as its compatibility with Italy's European commitments (European law).

23.5.4 Flémalle – EPC

In November 2021, Electrabel SA entered into an EPC (Engineering, Procurement, Construction) agreement with SEPCO III for the construction of a gas-fired power plant in Flémalle (Belgium), in the context of the CRM (Capacity Remuneration Mechanism).

In August 2022, Electrabel SA terminated the EPC agreement with SEPCO III for non-performance of its contractual obligations and initiated arbitration proceedings in November 2022, to obtain compensation for its damages.

23.6 Nuclear

23.6.1 Extension of operations at the nuclear power plants 2015-2025

Various associations have brought actions before the Constitutional Court, the *Conseil d'État* and the ordinary courts against the laws and administrative decisions authorizing the extension of operations at the Doel 1 and 2 reactors. On June 22, 2017 the Constitutional Court referred the case to the Court of Justice of the European Union (CJEU) for a preliminary ruling. In its judgment of July 29, 2019, the CJEU ruled that the Belgian law extending the operating lives of the Doel 1 and Doel 2 reactors (law extending Doel 1 and Doel 2) was adopted without the required environmental

assessments being carried out first, but that the effects of the law on extension may provisionally be maintained where there is a genuine and serious threat of an interruption to electricity supply, and then only for the length of time that is strictly necessary to eliminate this threat. In its decision of March 5, 2020, the Constitutional Court overturned the law extending Doel 1 and Doel 2, while maintaining its effects until the legislator adopts a new law after having carried out the required environmental assessment, including a cross-border public consultation process, by December 31, 2022 at the latest.

The environmental assessment and the cross-border public consultation were carried out by the Belgian State in 2021. The draft law incorporating the conclusion of the assessment and the consultation was passed by the Belgian Federal Parliament on October 11, 2022 and published on November 3, 2022.

The appeal before the *Conseil d'État* against the administrative decisions that allowed the extension of operations at the Doel 1 and Doel 2 plants is still pending.

23.6.2 Shutdown of the Doel 3 and Tihange 2 power plants

Various associations have lodged appeals before the Brussels Court of First Instance against Electrabel, the Belgian State, the Nuclear Safety Authority and/or the Elia electricity transmission network to contest the decisions and actions to shut down the Doel 3 (on September 23, 2022) and/or Tihange 2 (on January 31, 2023) power plants. In a first judgment dated November 16, 2022, the Brussels Court of First Instance, ruling in summary proceedings in one of the cases, confirmed the decisions and actions taken in relation to the shutdown. The cases are ongoing with a timetable extending into 2023.

23.7 Other

23.7.1 Withholding tax

In their tax deficiency notice dated December 22, 2008, the French tax authorities questioned the tax treatment of the non recourse sale by SUEZ (now ENGIE) of a withholding tax (*précompte*) receivable in 2005 for an amount of €995 million (receivable relating to the *précompte* paid in respect of the 1999-2003 fiscal years). The Montreuil Administrative Court handed down a judgment in ENGIE's favor in April 2019, which led the French tax authorities to appeal the decision before the Versailles Court of Appeal, which overturned the prior Court's decision on December 22, 2021. While recognizing the fiscal nature of the receivable sold, the Court did not validate the exemption of the sale price because there was no text or principle to that effect, and because the sale was not authorized by the State.

Regarding the dispute over the *précompte* itself, on February 1, 2016, the *Conseil d'État* dismissed the appeal before the Court of Cassation seeking the repayment of the *précompte* in respect of the 1999, 2000 and 2001 fiscal years. On June 23, 2020, the Versailles Administrative Court of Appeal found in favor of ENGIE as regards the cases seeking repayment of the *précompte* in respect of the 2002 and 2003 fiscal years but rejected the case in respect of the 2004 fiscal year. As the *précompte* receivables for 2002/2003 have been assigned, the relevant amounts have been repaid to the assignee banks. The case has been referred to the *Conseil d'État* by the two parties. In parallel, following the decision of the Court of Justice of the European Union of May 12, 2022, interpreting the deduction of the *précompte* on the redistribution by a parent company of dividends received from subsidiaries established in the European Union as incompatible with Directive 90/435/EC of 1990, in June 2022, several groups, including ENGIE, invited the *Conseil d'État* to submit a request for a priority ruling on an issue of constitutionality to the Constitutional Court to rule on the unconstitutionality of the *précompte* legislation. The *Conseil d'État* granted this request. In October 2022, the Constitutional Court rejected the request of ENGIE and the other groups. This decision will have no impact on ENGIE's financial statements and little impact on the other ongoing proceedings.

Furthermore, after ENGIE and several French groups lodged a complaint, on April 28, 2016, the European Commission issued a reasoned opinion to the French State as part of infringement proceedings, setting out its view that the *Conseil d'État* did not comply with European Union law when handing down decisions in disputes regarding the *précompte*, such as those involving ENGIE. On July 10, 2017, the European Commission referred the matter to the Court of Justice of the European Union on the grounds of France's failure to comply. On October 4, 2018, the Court of Justice of the European Union ruled partially in favor of the European Commission. Following this decision, France must revisit its methodology in

order to determine the *précompte* repayment amounts in closed and pending court cases. No action has been initiated to date due to parallel litigation proceedings on the basis of Directive 90/435/EC.

23.7.2 Luxembourg – State aid investigation

On September 19, 2016, the European Commission announced its decision to open an investigation into whether or not two private rulings granted by the Luxembourg State in 2008 and 2010 covering two similar transactions between several of the Group's Luxembourg subsidiaries constituted State aid. On June 20, 2018, the European Commission adopted a final, unfavorable decision deeming that Luxembourg had provided ENGIE with State aid. On September 4, 2018, ENGIE requested the annulment of the decision before the European Courts, thereby challenging the existence of a selective advantage. As these proceedings did not have a suspensive effect, ENGIE paid a sum of €123 million into an escrow account on October 22, 2018 in respect of one of the two transactions in question, since no aid was actually received for the other. Following the proceedings before the European Courts, this sum will be returned to ENGIE or paid to the Luxembourg State depending on whether or not the Commission's decision is annulled. On May 12, 2021, the Court rejected the appeals of the Luxembourg State and of ENGIE, thereby confirming the European Commission's position on the existence of State aid granted to the Group's Luxembourg subsidiaries. On July 22, 2021, ENGIE referred the matter to the Court of Justice of the European Union seeking the annulment of the Court's decision. The proceedings are currently ongoing. After the parties exchanged their pleadings with the Commission, ENGIE filed an application for a hearing and joinder of appeals on March 21, 2022. The hearing was held in late January 2023.

23.7.3 Poland – Competition procedure

On November 7, 2019, a fine of 172 million Polish zloty (€40 million) was imposed on ENGIE Energy Management Holding Switzerland AG (EEMHS) for failing to respond to a request for disclosure of documents from the Polish Competition Authority (UOKiK) in proceedings initiated by the UOKiK which suspected a potential failure to notify by EEMHS and other financial investors involved in the financing of the Nord Stream 2 pipeline (main proceeding). EEMHS filed an appeal with the Competition Protection Court. The appeal proceedings are pending.

In the context of the main proceedings, on October 6, 2020, the UOKiK ordered EEMHS to pay a fine of 55.5 million Polish zlotys (approximately €12.3 million). The UOKiK also ordered the termination of the financing agreements for the Nord Stream 2 project. On November 5, 2020, EEMHS appealed this decision with the Competition Protection Court (the "Court"). The appeal automatically suspends the execution of all of the penalties ordered by the UOKiK. On November 21, 2022, the Court overturned the UOKiK's decision in its entirety. The UOKiK has appealed this decision.

23.7.4 Claim by the Dutch tax authorities related to interest deductibility

Based on a disputable interpretation of a statutory modification that came into force in 2007, the Dutch tax authorities refused the deductibility of a portion (€1.1 billion) of the interest paid on financing contracted for the acquisition of investments made in the Netherlands since 2000. Following the Dutch tax authorities' rejection of the administrative claim against the 2007 tax assessment, action was brought before the Arnhem Court of First Instance in June 2016. On October 4, 2018, the court ruled in favor of the tax authorities. On October 26, 2020, the ruling was confirmed by the Arnhem Court of Appeal. ENGIE Energie Nederland Holding BV considers that the Court committed errors in law and that its decision was not well-founded, either under Dutch or European law. It has therefore appealed the decision before the Court of Cassation. In July 2022, the Court of Cassation decided to refer questions on the compatibility of the Dutch legislation on interest with three of the European fundamental freedoms to the Court of Justice of the European Union for a preliminary ruling.

23.7.5 Transfer price of gas

The Belgian tax authorities' Special Tax Inspectorate has issued two tax deficiency notices in respect of taxable income for fiscal years 2012 and 2013 for an aggregate amount of €706 million, considering that the price applied for the supply of gas by ENGIE (then GDF SUEZ) to Electrabel S.A. was excessive. ENGIE and Electrabel S.A. are challenging this adjustment and have submitted a request for conciliation proceedings, which was accepted by France and Belgium in

May 2018. The proceedings are ongoing between the two States, who have rediscussed their respective positions, with no major progress having made in 2022. No major problems were identified.

NOTE 24 SUBSEQUENT EVENTS

No significant subsequent events have occurred since the closing of the accounts at December 31, 2022.

NOTE 25 FEES PAID TO THE STATUTORY AUDITORS AND TO MEMBERS OF THEIR NETWORKS

Pursuant to Article 222-8 of the General Regulations of the French Financial Markets Authority (AMF), the following table presents information on the fees paid by ENGIE SA, its fully consolidated subsidiaries and joint operations to each of the auditors in charge of auditing the annual and consolidated financial statements of the ENGIE Group.

The Shareholders' Meeting of ENGIE SA of May 14, 2020 decided to renew the terms of office of Deloitte and EY as Statutory Auditors for a six-year period from 2020 to 2025.

NOTE 26 INFORMATION REGARDING LUXEMBOURG AND DUTCH COMPANIES EXEMPTED FROM THE REQUIREMENTS TO PUBLISH ANNUAL FINANCIAL STATEMENTS

Some companies do not publish annual financial statements pursuant to domestic provisions under Luxembourg law (Article 70 of the Law of December 19, 2002) and Dutch law (Article 403 of the Civil Code) relating to the exemption from the requirement to publish audited annual financial statements.

The companies exempted are notably: ENGIE Energie Nederland NV, ENGIE Energie Nederland Holding BV, ENGIE Nederland Retail BV, ENGIE United Consumers Energie BV, Electrabel Invest Luxembourg, ENGIE Treasury Management SARL and ENGIE Invest International SA.

A public limited company with a share capital of 2,435,285,011 euros

RENEWABLES

EBIT FY 2021 vs FY 2022
(€m)

- **Scope & FX:** positive FX (mainly BRL) and scope (Eolia acquisition closed early May 2022)
- **Prices:** mainly higher prices in Europe esp. for French hydro, partly offset by hydro buybacks (Portugal and France) and lower prices in Brazil
- **Volumes:** mainly reversal of the ~€-90m impact of Texas extreme weather event in Q1 2021, partially offset by lower hydro in France and Portugal
- **Commissioning:** for all key geographies (Europe, Latin America and US) and technologies (wind on- and offshore, solar PV)
- **Performance:** ramp-up of vertical excellence initiatives and contract optimization
- **Others:** including 2021 GFOM ruling in Brazil (c. €-300m)

KFIs (€m)	FY 2021	FY 2022	Δ 22/21	Δ org

EBIT FY 2021 vs FY 2022

(€m)

- **Scope & FX:** Positive FX (mainly BRL), negative scope (Turkey disposal)
- **EBIT organic drivers:**
 - GRTgaz: reversed gas flows mainly to Germany
 - Higher contribution from Latin America, driven by intrinsic growth and inflation indexations
 - Higher margins for UK storage in a volatile price context
 - ~€-0.23bn from warmer temperatures in Europe (mainly GRDF in France)
 - Lower regulated revenues in French gas networks due to RAB remuneration decrease (smoothed out over the regulatory period)

KFIs (€m)	FY 2021	FY 2022	Δ 22/21	Δ org

ENERGY SOLUTIONS

EBIT FY 2021 vs FY 2022

- **Local energy networks:** positive price effect and commercial market dynamic (growth coming from cogeneration and DHC), partly offset by warmer temperatures
- **On-site energy production:** higher contribution from capacity commissioned and energy prices, more than offset by an exceptional performance in 2021 in Northern America mainly due to non-repeatable items
- **Energy efficiency services:** positive effect of performance plan and higher energy prices
- **EVBox:** production ramp up and process enhancements ongoing despite slowdown of EV market. 2022 underperformance also reflects balance sheet adjustments

KFIs (€m)	FY 2021	FY 2022	Δ 22/21	Δ org

THERMAL

EBIT FY 2021 vs FY 2022
(€m)

- **Scope & FX:** positive FX (mainly USD), negative scope (coal and country exits)
- **Prices:** higher spreads for European gas plants and pumped storage, reduced PPA margins due to higher sourcing spot prices in Chile and adverse gas merchant position in Australia
- **Volumes:** higher cost of unavailability in Europe
- **Ancillaries / CRM:** higher ancillaries / CRM for European gas plants
- **Performance:** ramp up of operational performance plan and corporate costs optimization
- **Others:** mainly Italian extraordinary tax (contested by ENGIE)

NUCLEAR

EBIT FY 2021 vs FY 2022 (€m)

- **Price:** higher power prices captured
- **Volume:** lower availability in Belgium, mainly due to planned maintenance, and EDF drawing rights in France
- **Belgian nuclear tax:** higher profit sharing due to floor exceeded for second-generation units and implementation of inframarginal rent cap

KFIs (€m)	FY 2021 ¹	FY 2022	Δ 22/21	Δ org

³ Tricastin: 468 MW* local availability of Tricastin units

BELGIAN NUCLEAR PROVISIONS

As at 31 December 2022

Synatom provisions¹

c. €17.9bn in total:

- c. €9.1bn for waste management
- c. €8.8bn for dismantling

Financial dedicated asset

c. €6.6 bn

Discount rates

3.0% for waste management
2.5% for dismantling

Review pattern

Triennial review
Following CPN's remarks received on 16 Dec. 2022, reasoned opinion sent by ENGIE on 14 Feb. 2023

Funding

Funding of c. €9bn expected over 2023-2025
including phase-out costs

Funding commitments:

- 100% for dismantling by 2030
- 100% for waste management by 2025

Sensitivities

Sensitivity of the provisions for the back-end of the nuclear fuel cycle

- On the basis of an analysis carried out by ENGIE Group experts, certain remarks made by the CPN as part of the triennial review procedure are considered as unjustified and have been the subject of a reasoned opinion sent to the CPN
 - The impact of taking ENGIE's opinion into account (at a discount rate of 3.0% as recommended by the CPN) would represent a decrease in provisions of **€0.5 billion**
 - ENGIE is also contesting the 25 basis points reduction from the previous rate and the 50 basis points reduction from Synatom's initial proposal. Maintaining the 3.25% rate used since 2019 would represent a decrease in provisions of **€0.7 billion**
- A **10% increase** in ONDRAF's fees above the fee for the removal of category C waste would lead to an increase in provisions of approximately **€0.3 billion** based on unchanged contingency margins

Sensitivity of the provisions for dismantling

- On the basis of an analysis carried out by ENGIE Group experts, certain remarks made by the CPN as part of the triennial review procedure are considered as unjustified and have been the subject of a reasoned opinion sent to the CPN. The impact of taking ENGIE's opinion into account, at a discount rate of 2.50% as recommended by the CPN, would represent a reduction in provisions of **€0.6 billion**
- Based on currently applied inputs for estimating costs and the timing of payments, **a change of 10 basis points** in the discount rate used could lead to an adjustment of approximately **€85 million** in dismantling provisions. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount

¹ Excluding €1.2bn nuclear provisions booked at the level of Electrabel for dismantling related to French drawing rights and low radioactive waste from plants operations to be transferred to ONDRAF

BELGIAN NUCLEAR TAX

Nuclear reactor	Conditions	Applicable law
Tihange 2	38% on Y nuclear margin ¹ , paid in Y+1	2015 convention and 2016 law
Tihange 3	• Current floor at c. €70m p.a. (at ENGIE share) for 2019-21 (floor revised every 3 years)	
Doel 3		
Doel 4	• For 2022-24, floor to be set June 2023	
Doel 1	Royalties: €20m p.a. (fixed)	
Doel 2		
Tihange 1	Profit Sharing 70% (State) / 30% (ENGIE) for profits above a certain level (with loss carry forward)	2013 law

¹ EBIT-like margin

OTHERS (GEMS¹, GTT AND OTHERS)

EBIT FY 2021 vs FY 2022

(€m)

- **Scope & FX:** mainly partial disposal of GTT in May 2021 triggering a change of consolidation method as from June 2021 (from full consolidation to equity method)
- **GEMS:**
 - strong performance in all activities (asset management, optimization and client risk management) in a context of exceptional market conditions
 - costs of hedging actions to remove Gazprom exposure
 - Italian extraordinary tax (contested by ENGIE)
- **Others:** mainly employees' exceptional bonus of €1,500 each

ENGIE's contribution to the Sustainable Development Goals:

Key contribution

PUBLIC

Relevant contribution via Tier 2 objectives

DECARBONATION AT THE CORE OF GROUP'S PURPOSE AND LEVERAGED BY STRONG CLIMATE COMMITMENTS

Net Zero by 2045,

across all scopes, and following a “well below 2°C” trajectory certified by SBTi

A 2030 trajectory clearly defined supporting long term decarbonation commitment

- ✓ **Reduce GHG emissions linked to energy production** to a maximum of **43 Mt CO₂ eq.** in 2030 (compared to 107 Mt CO₂ eq. in 2017)
- ✓ **Reduce GHG emissions linked to sold products** to a maximum of **52 Mt CO₂ eq.** in 2030 (compared to 79 Mt CO₂ eq. in 2017)
- ✓ **Reduce carbon intensity of energy production** (scope 1) and energy consumption (scope 2) by **66%** between 2017 and 2030 to reach **110gCO₂/KWh** in 2030
- ✓ **Reduce carbon intensity related to energy sales** by **56%** between 2017 and 2030

Decarbonation objectives embarking employees, clients, suppliers

- ✓ **Reach Net-zero carbon by 2030** on the emissions related to the ways of working
- ✓ Have **100% of the TOP 250 preferred suppliers** (excluding energy purchase) certified or aligned SBT by 2030
- ✓ Support customers in avoiding **45 mt of CO₂ eq.** emissions by 2030

4 countries
Net zero by 2030

A GOVERNANCE ADAPTED TO DELIVER CLIMATE COMMITMENTS

- ✓ CO₂ Medium term Plan (MTP) aligned with financial MTP
- ✓ CO₂ Budget allocated to all activities
- ✓ A dedicated governance process for climate assessment of new investments :
 - Analysis of carbon prices impact on new investment and long-term energy prices forecasts
 - Bi-monthly reporting to ExCom on GHG emissions budget for new investments

COMMITMENT TO PHASE OUT COAL BY 2025 IN CONTINENTAL EUROPE AND 2027 GLOBALLY

Merit order for a **‘just transition’**
that benefits all stakeholders

1. Closing
2. Conversion
3. Disposal

Coal power generation
(GW@100%)

2022 achievements

3 coal power plant units closed

- **Chile - Tocopilla unit 14**
0.1 GW – closed
- **Chile - Tocopilla unit 15**
0.1 GW – closed
- **Peru- ILO 21**
0.1 GW – closed

1 coal power plant exited

- **Brazil – Pampa Sul**
0.3 GW sold (process to be completed in 2023)

Sale of the asset conducive to ensuring the gradual transition of the regional economy, reducing potential local socioeconomic impacts when compared to a process of operational decommissioning

-25% OF TOTAL GHG EMISSIONS SINCE 2017

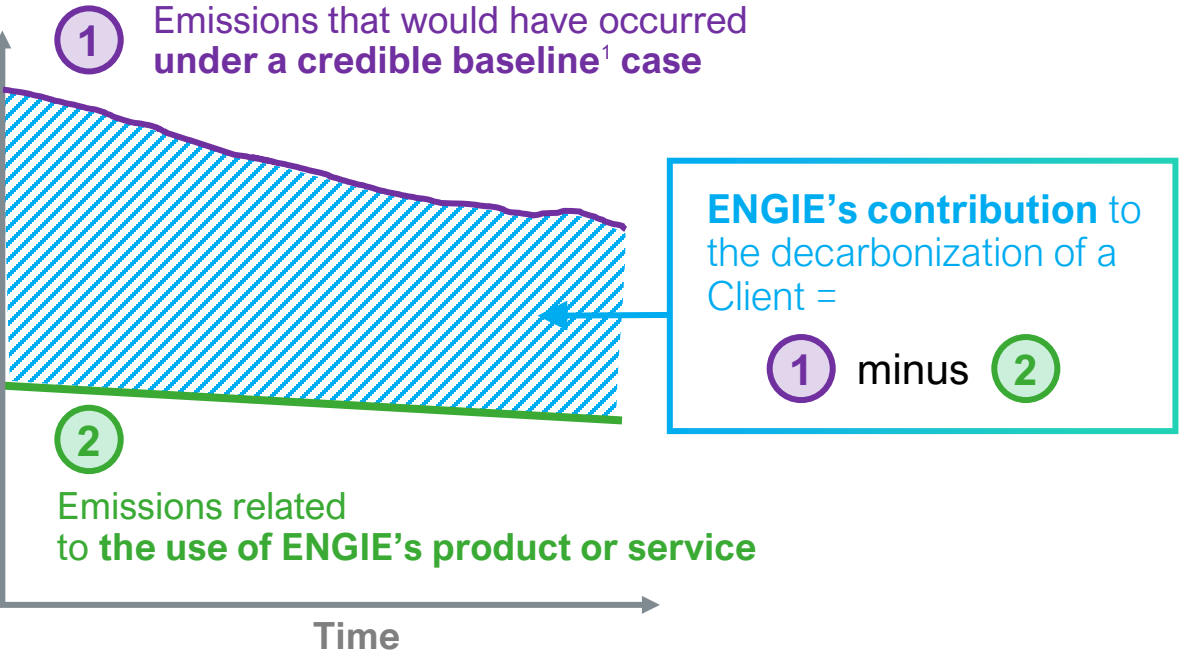

DECARBONISATION OF CLIENTS EMISSIONS THROUGH ENGIE PRODUCTS AND SERVICES

Helping clients incrementally reduce their carbon emissions with a robust methodology

GHG emissions

(ton CO_{2e})

~28 Mt CO_{2e}
avoided for clients in 2022
(26.5 Mt CO_{2e} in 2021 – *equans excluded*)

- Production of green energy
- Commercialization of energy savings & carbon certificate
- Purchase & resell of green energy
- Decentralized energy infrastructures & associated services

~45 Mt CO_{2e}
avoided / year by 2030

1. The baseline is the most likely alternative in the absence of the product or service provided by ENGIE

ADAPTING TO CLIMATE CHANGE

Scenario Analysis

Partnership with IPSL (Institut Pierre Simon Laplace) to modelize 2030 and 2050 climatic events

Analysis performed on medium and high global warming trajectories (RCP4.5 and RCP8.5)

Study based on our main production technologies and mapping of the evolution of their performance due to climate change

Impact assessment

Assessment of the impact of climate change on production of energy, demand of energy as well as the integrity of assets and employees due to extreme climate events.

3 new risks to be studied in 2023 in addition to the 4 initial ones studied in 2022 :

Heatwave

Water stress

Flood

Extreme wind event

New

Landslides

Wildfires

River Temperatures

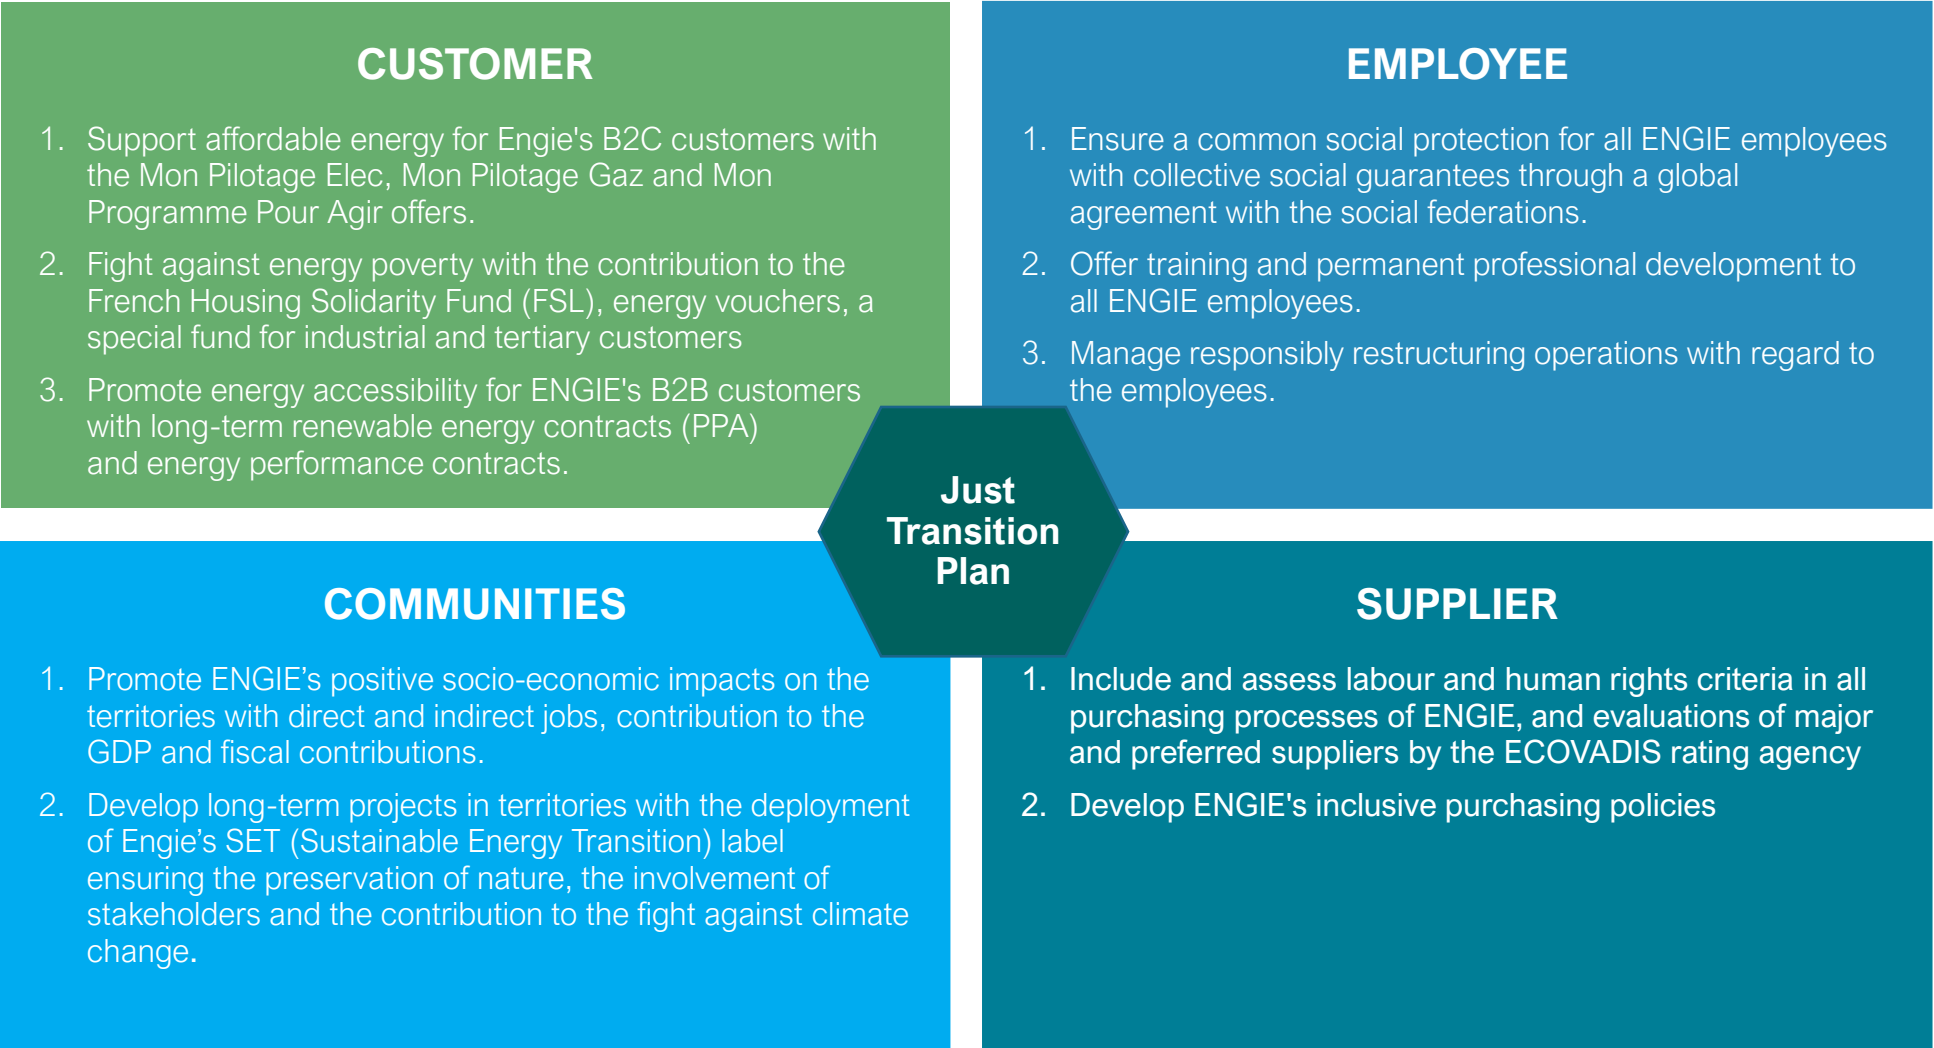

Operational Preparedness

Identification of ENGIE sites with high vulnerability to climate change

Current build up of Group adaptation plans to reduce vulnerability to climate change

ENGIE'S COMMITMENT FOR A JUST TRANSITION

PUBLIC

STRONG COMMITMENT AND CONCRETE ACTIONS IN FAVOR OF SOCIAL IMPROVEMENT

Diversity

Maintain vigilance on gender pay equity

- Groupe ENGIE : 1,7 %
- Target 2030: < 2 %

Strong commitment on gender Diversity

- 30%¹ of women in management (vs 29% in 2021)
- 31% women managers recruited
- Target 2030: between 40 and 60% of women in management

Engie is recognized among the largest companies in France, Europe and the world in terms of efforts on gender diversity, as shown by the results below :

- 10th in the list of Women in Leadership Led by the Ministry Responsible for Equality between Women and Men (out of 120 SBF companies).
- Nominated at the 2023 Bloomberg Gender Equality index for the second consecutive year among 484 internationally recognized companies.
- 47th in the European Gender Diversity Index Report 2021 issued by European Women on Boards- EWOB (out of 668 European companies evaluated) and 7th among French companies

Afnor diversity label

Hiring, Training, Engagement

Apprenticeship

- ~ 7,7% of apprentices in France
- Target 2030: 10% of apprentices in workforce in France
- ENGIE's "Apprenticeship training center" dedicated to energy transition and climate businesses, count more than 200 young trainees since its creation.

Training

- ~84%¹ of employees trained
- Target 2030: 100%

Employee commitment²

- 86%¹ would recommend ENGIE as a good place to work (+3pts vs. 2021)
- 86% fully committed (+1pt vs.2021)

1. 2022 figures

2. ENGIE INTERNAL SURVEY

ENGIE COMMITTED TO HEALTH & SAFETY

Health & Safety

Safety

- **Our ambition: 0 serious or fatal injuries**
- **Assessment** by an external expert company of the Group Health & Safety management and culture in particular for prevention of serious and fatal accidents
- Definition of « **ENGIE One Safety** » **holistic transformation plan** based on its recommendations and return of experience
- **Lost Time Injury Frequency Rate = 2.0** compared to 2.5 in 2021 (2030 target: 2.3)

Well-being at work

- “No mind at risk” program
- Deployment of 9 commitments for wellbeing at work

ENGIE One Safety

Domains covered by the new transformation plan

- Strengthening the **culture** of all people working for ENGIE
- Adaptation of Health & Safety **governance** and organization
- Revision of **ENGIE rules**
- Reorganization of internal **Health & Safety audits**
- Strengthening of the **Health & Safety functional line**
- Strengthening the management of **subcontractors** and the management of **construction or dismantling projects**
- Launching of a **communication** and **change management** plan

Some major Achievements

- Adaptation of Health & Safety **governance**, up to Group Executive Committee
- Definition of a **new set of indicators** to monitor more closely the prevention of serious and fatal accidents
- Testing at 7 pilot sites of a **new training and coaching program** for all operational managers (deployment to other Group entities in 2023)
- **Strengthening of ENGIE rules** on management of serious and potentially serious accidents, on compliance with Life Saving Rules, on promotion of a just and fair culture
- Revision of the **internal Health & Safety audit system**, now focused on the prevention of serious and fatal accidents
- Deployment of a **new communication campaign** "Never compromise on safety"

ENGIE INDEXES AND CSR RATINGS

The Group is listed on the Paris and Brussels stock exchanges (ENGI) and is represented in the main financial indices (CAC 40, Euronext 100, FTSE Euro 100, MSCI Europe) and non-financial indices (DJSI World, Euronext Vigeo Eiris - Europe 120/ France 20, MSCI EMU ESG screened, MSCI EUROPE ESG Universal Select, Stoxx Europe 600 ESG-X)

ENGIE'S COMMITMENT TO THE GREEN BOND MARKET (2/2)

ENGIE is one of the world's top issuers in green bonds with close to €17.65bn issued since 2014, of which €0.65bn in 2022 and € 2.75 bn in January 2023

Historical issuance and allocation
€bn as at Feb 2023

A green bond (GB) is a bond that is specifically earmarked to raise financing for climate and environmental projects. Allocations to green projects are verified and reported annually (in the URD). These bonds carry the same credit rating as the issuers' other debt obligations.

MAIN CHANGES IN CONSOLIDATION SCOPE

Disposals / Partial disposals

Indian solar assets – India (RENEWABLES)

Held for sale from 17/01/2020

Equity consolidated since 22/03/2021 and 05/05/2021

LITORAL GAS – Argentina (NETWORKS)

Sold since 14/10/2022

ENDEL – France (ENERGY SOLUTIONS)

Sold since 04/04/2022

Client Solutions in Africa – (ENERGY SOLUTIONS)

Sold since 31/03/2022

Retop – China (ENERGY SOLUTIONS)

Sold since 10/05/2022

Izgaz – Turkey (NETWORKS)

Sold since 09/03/2021

GRTgaz – France (NETWORKS)

Partial disposal on 22/12/2021

Jorge Lacerda – Brazil (THERMAL)

Sold since 18/10/2021

PT SUPREME ENERGY MUARA LABOH – Indonesia - (RENEWABLES)

Sold since 16/09/2022

PT SUPREME ENERGY RANTAU DEDAP – Indonesia - (RENEWABLES)

Sold since 24/10/2022

ENGIE EPS – France/Italy (OTHERS)

Full consolidation until 30/06/21

Held for sale since 30/06/21

Sold since 20/07/2021

GTT – France (OTHERS)

Full consolidation until 26/05/2021

Partial disposal and equity consolidated since 26/05/2021

SUEZ – France (OTHERS)

Success of OPA 07/01/2022 and recognition of the earn-out FY 2021

EQUANS (ENERGY SOLUTIONS)

Discontinued operations since 05/11/2021

Sold since 04/10/2022

Georgetown Energy Partners Holding, LLC - US (ENERGY SOLUTIONS)

Acquisition on 07/01/2021

Partial disposal and equity consolidated since 07/01/2021

Acquisitions

Eolia Renovables – Espagne (RENEWABLES)

Equity method since 29/04/2022

Pawan BV – India (RENEWABLES)

Equity method until 31/12/2022

Full consolidation at 31/12/2022

CBMON – France (NETWORKS)

Equity method until 15/12/2022

Full consolidation at 15/12/2022

Le Mouruen , Pioneer 1 et 2 (RENEWABLES)

Equity method until 20/12/2022

Full consolidation at 20/12/2022

Chiloté – Chili (RENEWABLES)

Full consolidation at 15/12/2022

Discontinued operations

Pampa Sul - Brazilian thermal asset (THERMAL)

Discontinued operations since 05/11/2022

HYBRIDS

Issuer	Currency	Coupon	Issue date	First Reset date / First Call date	Non-Call period (years)	Outstanding amount (€m) ²	Annual coupon payment (€m)
GDF SUEZ	EUR	3.875%	02/06/2014	02/06/2024	10	338	13
ENGIE ¹	EUR	3.250%	28/01/2019	28/02/2025	6.1	1,000	33
ENGIE	EUR	1.625%	08/07/2019	08/07/2025	6	500	8
ENGIE ¹	EUR	1.500%	30/11/2020	30/11/2028	8	850	13
ENGIE ¹	EUR	1.875%	02/07/2021	02/07/2031	10	705	13
TOTAL						3,393	80

Highlights:

- Most of ENGIE's outstanding hybrids are green bonds
- Lower cost of funding of ENGIE in the debt capital market in recent years has resulted in significantly lower coupons
- Hybrids are accounted as equity under IFRS 9, explaining why the costs of the hybrids are not included in ENGIE's NRIs, hence not impacting ENGIE's dividend policy

¹ Green bonds

² Outstanding hybrids as at 31 December 2022

EBIT FY 2020 vs FY 2021

- **Scope & FX:** limited negative FX effect (mainly BRL) partly offset by TAG scope-in
- **EBIT organic drivers:**
 - ~€+0.25bn from colder temperature in Europe (mainly GRDF in France)
 - Lower regulated revenues in French gas networks due to RAB remuneration decrease (smoothed)
 - Reversal of 2020 Covid impacts
 - Higher contribution from Latin America, esp. gas transmission in Brazil (indexation)

KFIs (€m)	FY 2020	FY 2021	Δ 21/20	Δ org
Revenue	6,718	6,700	-0.3%	+1.8%

3. Return since 1 January 2020

4. New return of 6.25% since 1 April 2021

5. International affiliates (mainly Storengy in Germany and UK, MEGAL) of French networks companies are reported under France

01 ANALYSIS BY ACTIVITY

Energy Solutions

EBIT FY 2020 vs FY 2021

(€m)

- **Scope & FX:** positive scope (mainly 29.9% SUEZ disposal, loss making in 2020), broadly neutral FX
- **Distributed energy infrastructures:** good operating performance, colder temperature for District Heating in France
- **Energy efficiency services:** progressive recovery from the significant Covid impact in 2020 allowing to deliver improved operating performance
- **EVBox:** higher development costs and impact of electronic component shortage

KFIs (€m)	FY 2020	FY 2021	Δ 21/20	Δ org
Revenue	8,840	9,940	+12.4%	+13.0%
EBITDA	738	799	+8.3%	+0.0%

Energy Solutions

Selection of key assets / contracts

	Type	Description	Contract type	
District Heating & Cooling				
 Climespace	France - Paris	Cooling	The largest District Cooling in Europe	20-years concession
 CPCU	France - Paris	Heating	4,000 MW / 4.5 TWh /450 km of networks	95-year concession started in 1927
 Tabreed	UAE	Cooling	86 plants in 5 countries 1,400 M Refrigeration Tons	40% ENGIE participation
+ Emaar	UAE	Cooling	World's largest cooling system / 200 GWh 29 km of networks	80% acquired by Tabreed in Apr. 2020
 Longwood	USA - Boston	Heating / Cooling Trigeneration / Microgrid	370 MW heating / 148 MW Cooling / 60 MW Power gen. / 4 km of networks	35-year concession started in 2016
 Megajana	Malaysia	Cooling	74 MW Cooling / 2 district plants 97,500 RTh Thermal storage / 12 km of networks	49% ENGIE participation in J.V. with Cyberview Sdn Bhd
Energy performance				
 Ohio State University	USA	Heating / Cooling / Geothermal Electrical & gas networks / Buildings	Power 676 GWh / Gas 3,172,036 MMBTU 485 buildings	50-year PPP, 50/50 ENGIE Axium started in 2017
 Sassari City	Italy	Public lighting / Public buildings	12,000 lighting points / 114 public buildings	15-year EP Contract started in 2021
 Uberlandia City	Brazil	Public lighting	87,000 lighting points of which 20% Smart Lighting	20-year PPP started in 2020
On-site generation: CHP - Solar PV				
 DRT (Firmenich)	France	CHP Biomass	50 MW	51% ENGIE participation 20 years since 2015
 ITT	Italy - Barge	Trigeneration	Engine 7 MW 45 GWh /year	10-year decentralized infra contract started in 2021
 PSA	France - Sochaux	Carports Solar P.V.	29 MW / 32 GWh /year 22 ha / 63,000 panels	30 years Grid Injection through Feed-in-Tariff
EV Charging concession				
 Strasbourg Eurométropole	France	Public EV charging network	150 slow and fast EV charging points on-street to increase into 1000+ over the contract duration	15-year concession started in 2020

01 ANALYSIS BY ACTIVITY

Belgian nuclear provisions

As at 31 December 2021

Synatom provisions¹

c. €14.4bn in total:

- c. €8.0bn for waste management
- c. €6.3bn for dismantling

Dedicated asset

c. €5.5bn

Discount rates

3.25% for waste management
2.50% for dismantling

Review pattern

Triennial review
Next review expected
in H2 2022

Funding

Funding of c. €6bn expected over 2022-2024

Funding commitments:

- 100% for dismantling by 2030 (from 25% in 2021)²
- 100% for waste management by 2025 (from 25% in 2019)

Sensitivities

Sensitivity of the provisions for waste management of the nuclear fuel cycle

- a change of **10 basis points in the discount rate** used could lead to an **adjustment** of approximately **€260 million** in provisions for the back-end of the nuclear fuel cycle. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.
- **10% increase in fees above the royalty rate** for the waste management would lead to an **increase** in provisions of approximately **€175 million**;
- **a five-year advance in expenditure** on temporary storage, conditioning and long-term storage for high-level and/or long-lived radioactive waste would lead to an **increase** in provisions of approximately **€170 million**. A five-year delay in the payment schedule for these various expenses would lead to a decrease of less than that amount;

Sensitivity of the provisions for dismantling nuclear facilities

- a change of **10 basis points in the discount rate** used could lead to an **adjustment** of approximately **€62 million** in dismantling provisions. A fall in discount rates would lead to an increase in outstanding provisions, while a rise in discount rates would reduce the provision amount.

1. Excluding €0.7bn nuclear provisions booked at the level of Electrabel for dismantling related to French drawing rights and low radioactive waste related to ONDRAF
2. Assuming Draft Law is voted through in Belgium

Belgian nuclear tax

Nuclear reactor	Conditions	Applicable law
Tihange 2	38% on Y nuclear margin ¹ , paid in Y+1	2015 convention and 2016 law
Tihange 3	<ul style="list-style-type: none">Current floor at c. €70m p.a. (at ENGIE share) for 2019-21 (floor revised every 3 years)Previous floor at c. €150m p.a. (at ENGIE share) for 2016-18	
Doel 3		
Doel 4		
Doel 1	Royalties: €20m p.a. (fixed)	
Doel 2		
Tihange 1	Profit Sharing 70% (State) / 30% (ENGIE) for profits above a certain level (with loss carry forward)	2013 law

1. EBIT-like margin

01 ANALYSIS BY ACTIVITY

Others (GEMS¹, GTT and Others)EBIT FY 2020 vs FY 2021
(€m)

- **Scope & FX:** mainly 10% partial disposal of GTT in May 2021 triggering a change of consolidation method as from June 2021 (from full consolidation to equity method)
- **GEMS¹:**
 - strong commercial and trading performance in a context of exceptional market conditions
 - Covid recovery
 - colder temperature
- **GTT:** contribution's normalization after strong 2020
- **Others:** mainly lower Corporate costs

Operationalising decarbonisation

Our ambition:
NET ZERO
BY 2045
across all scopes

A clear climate strategy

- A trajectory aligned with Paris Agreement and SBT certified
- A dedicated governance, incentivized on Group climate ambition success
- A Group Strategy focused on development of renewables & green gases in addition to full coal exit by 2027

A strong GHG emissions steering

- GHG annual forecasts until 2030 fully aligned with Group mid-term financial plan
- GHG management targets for 2022, 2025, 2030 and 2045 at Group and GBU levels
- Analysis of GHG emissions alignment with above targets for all new investments
- Integration of GHG emissions in all GBU Quarterly Business Reviews (QBRs)

A dedicated governance process for new investments

- Analysis of carbon prices impact on new investment and long-term energy prices forecasts
- Bi-monthly reporting to Excom on GHG emissions budget for new investments

Commitment to phase out coal by 2025 in Europe and 2027 globally

Merit order for a 'just transition' that benefits all stakeholders

1. Closing
2. Conversion
3. Disposal

Coal power generation
(GW@100%¹)

2021 achievements

2 coal power plants exited

Brazil – Jorge Lacerda

0.7 GW sold

Sale of the asset conducive to ensuring the gradual transition of the regional economy, reducing potential local socio-economic impacts when compared to a process of operational decommissioning.

Portugal – Tejo

0.6 GW - closed

-30% of total GHG emissions since 2017

Scope 1 (direct emissions)
(MtCO₂ eq.)

- Energy production (controlled assets)
- Gas networks
- Other Scope 1 categories

Scope 2 (indirect emissions)
(MtCO₂ eq.)

- Consumption of electricity, steam, heating or cooling

Scope 3 (indirect emissions)
(MtCO₂ eq.)

- Energy production (non controlled assets)
- Use of sold products
- Other Scope 3 categories

GHG emissions from energy production
(MtCO₂ eq.)

- Emissions Scope 3
- Emissions Scope 1

GHG emissions from use of sold products
(MtCO₂ eq.)

- Use of products sold

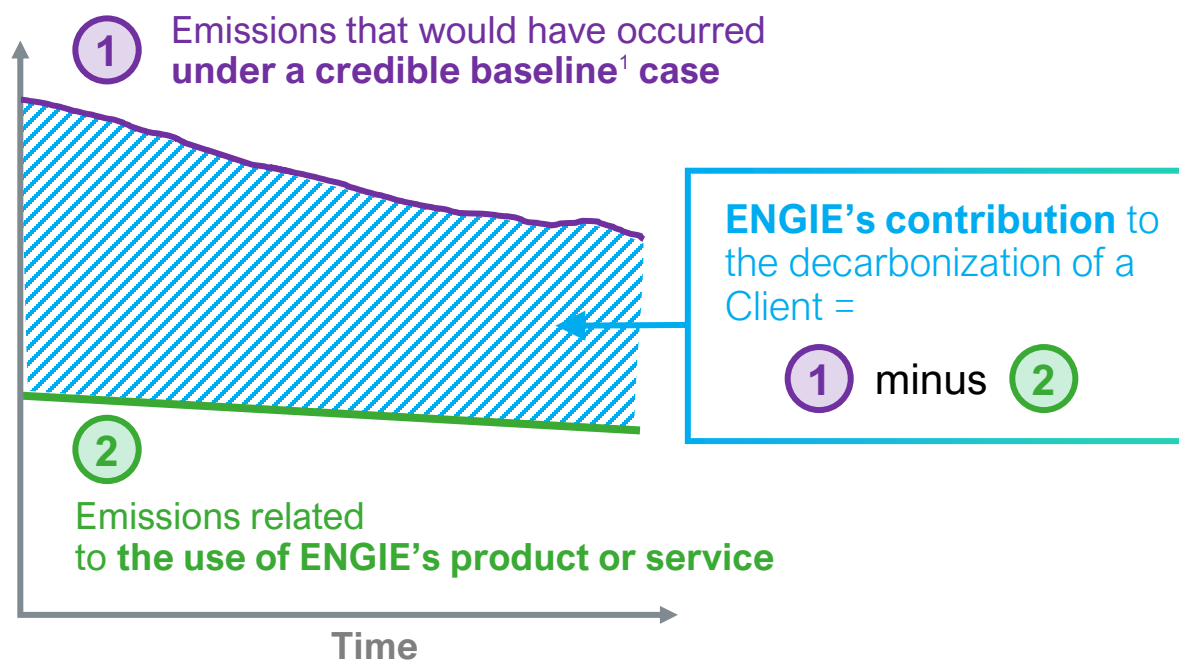

Decarbonisation of Clients emissions through ENGIE products and services

Helping clients incrementally reduce their carbon emissions with a robust methodology

GHG emissions

(ton CO_{2e})

~28 Mt CO_{2e}
avoided for clients in 2021
(21 Mt CO_{2e} in 2020)

- Production of green energy
- Commercialization of energy savings & carbon certificate
- Purchase & resell of green energy
- Decentralized energy infrastructures & associated services (of which 1Mt EQUANS)

~45 Mt CO_{2e}
avoided / year by 2030

1. The baseline is the most likely alternative in the absence of the product or service provided by ENGIE

Developing a culture to reduce CO₂ for ENGIE as a workplace

CO₂ emissions related to the ways of working
(ktCO₂ eq.)

CO₂ emissions related to ways of working need 100% of ENGIE employees' commitment

Target: Net-zero carbon by 2030 related to business travel, corporate fleet, commuting, buildings, digital uses and devices.

2021 emissions are 15% below 2019 emissions (2020 data is not considered relevant due to the pandemic).

Employees have endorsed ENGIE's CO₂ reduction target and walk the talk notably strongly limiting their business travel compared to 2019 beyond travel restrictions due to Covid crisis.

ENGIE's Sustainability Academy to support employees' engagement to be active players of ENGIE's strategy through:

- Regular events connecting people and experts to exchange on strategic choices and their impact on business
- Annual Sustainability Learning Days gathering people from all GBUs and Regions
- Learning programs to master sustainability challenges at ENGIE and be able to accompany our business partners' ambitions.

Adapting to climate change

Scenario Analysis

Partnership with IPSL (Institut Pierre Simon Laplace) to better understand 2030 and 2050 climatic events

Study based on our main production technologies and mapping of the evolution of their performance due to climate change

4 main extreme climate events studied

Heatwave

Water Stress

Flood

Extreme wind event

Impacts on Group's strategy

Assessment of the impact of climate change on ENGIE's strategy with review of all our countries / regions

3 key issues:

- Country vulnerability to climate change
- Value of current assets with regards to climate change
- Resilience of 2030 strategic objectives

Operational Preparedness

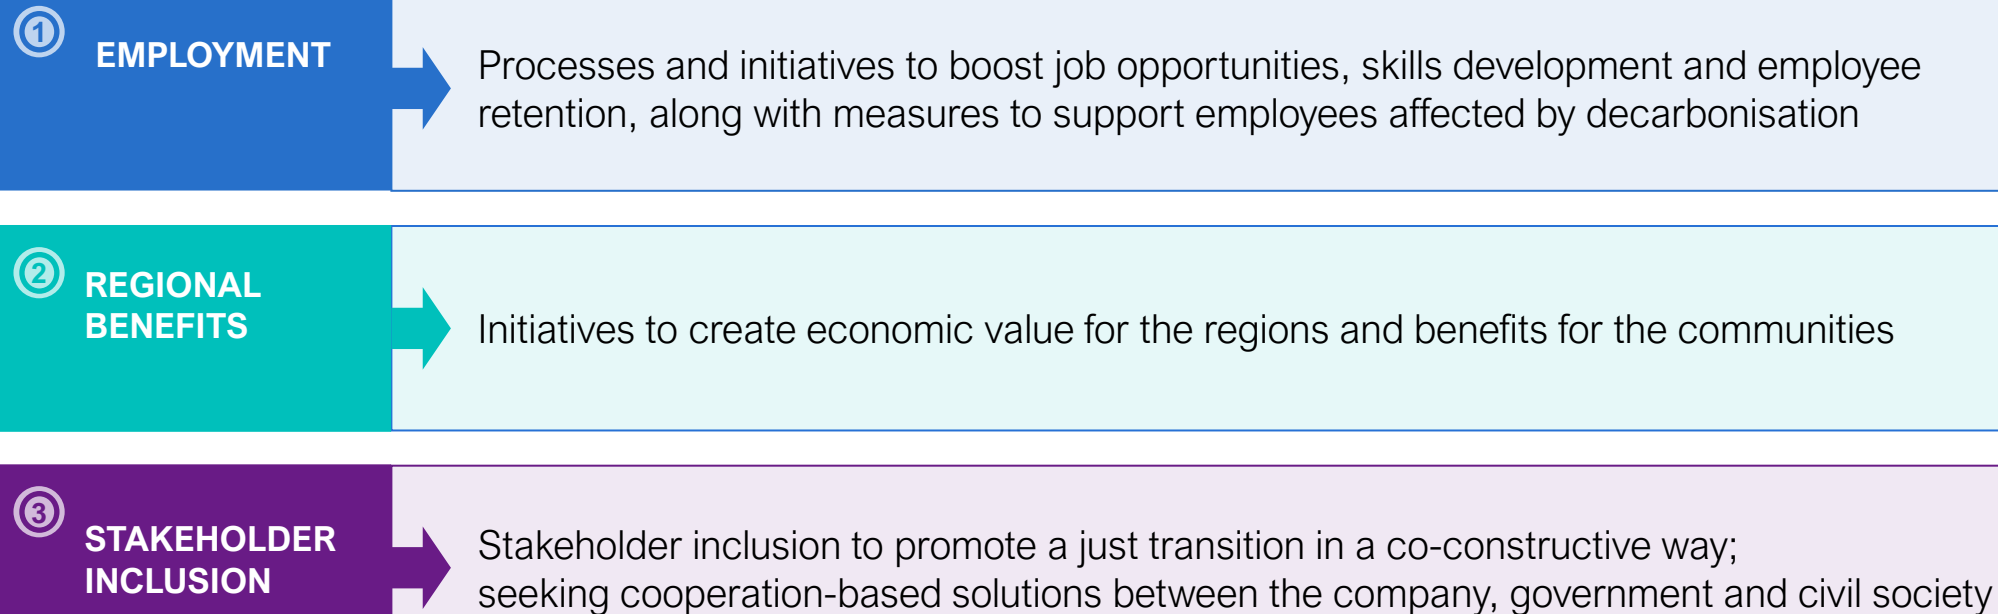

Identification of ENGIE sites with high vulnerability to climate change

Current build up of Group adaptation plans to reduce vulnerability to climate change

ENGIE's commitment for a just transition

For ENGIE, transitioning to net zero by 2045 means taking into account the social impacts of the energy transition. Therefore, the just transition principles must be embedded in all our projects at local level and must be developed in partnership with workers, unions, communities and suppliers.

In line with the Paris Agreement on Climate Change, ENGIE commits to decarbonise while ensuring a just transition of the workforce and the creation of decent work and quality jobs in accordance with nationally defined development priorities.

Committed to Just Transition for workers, communities, customers & citizens: examples

Coal phase-out in Chile

- Workplan to reconvert 5 units of coal (800 MW) in 1000 MW of renewable projects (work in progress until 2024)
- **Challenge:** solution to include all stakeholders (communities, unions, local authorities, workers, contractors)
- Closing of the 2 first units without social conflicts, 100% of direct workers (33) relocated
- **Workplan taken for example** for other decarbonization projects by the Chilean Ministry of Energy

COP 26

- ENGIE signatory of the Pledge on energy crisis and just transition coordinated by **C40 Cities Climate Leadership Group, ITUC (International Trade Union Confederation) & BTeam** calling for government leadership in climate crisis and spiraling energy prices

Organic backyards in Mexico

- Construction of a 306 km natural gas transmission pipeline which runs through 3 states
- Workshops with the 89 impacted communities to develop a common social investment program
- For 5 consecutive years training and transfer of knowledge to 100 women & their families to develop backyard gardens in their homes and in community areas.
- **Generation of additional income to the family economy.** With a total investment of \$262,000, women have installed 750 m² of greenhouses, develop 4,500 m² of productive land, and generate revenues in the order of \$6,200 in 2021

Commercial offers in supply in France

- **“Mon programme pour agir”** gives customers access to a loyalty program: the more their control their consumption, the more points (called KiloActs) they earn. Once enough KiloActs accumulated, customers can invest them in projects that promote energy transition or exchange them for eco-responsible objects that help them consume better

Crowdfunding and shared governance at ENGIE Green

- **Banyuls wind park** (provisional commissioning in 2026) / 6 wind turbines / 13 MW
40% of the project owned by a citizen cooperative
- **Marcoussis PV park** (commissioned in September 2021) / 20 MW (largest PV park in the Region IDF)
€18.8m - 20% community / 60% ENGIE / 20% citizens
- **La Tieule PV park , Drôme** (commissioned in mars 2021) / 15 MW on 18 ha
Inclusive development of PV park with positive social & economic impacts on the territory. Co-activities (apiaries, honey plants), work with persons with disabilities for the production of organic honey and aromatic hedge cultivated by a local company, eco-grazing
€100,000 raised as part of a crowdfunding campaign

ENGIE renews its commitment on biodiversity in 2021

Avoid Reduce Compensate

100% of the files submitted to the Group's CDE in 2022

Application of the "avoid-reduce-compensate" sequence on development projects presented to the Committee on Commitments (CDE), throughout the world, in concertation with stakeholders.

To act simultaneously on the challenges of climate change and biodiversity, contribution to the implementation of nature-based solutions (NbS) in territories

Nature-based solutions

10 projects identified that meet the IUCN NbS standard by 2022

Ecological site management

2025: 50% sites

Implementation of an ecological site management for all of the Group's industrial activities, with a minimum of 0 phytosanitary products and maintenance of green spaces that respects nature.

Continued development of action plans for sites located in or near a biodiversity hotspot by applying the new definition of priority sites, throughout the world.

Priority sites for biodiversity

2025: 50% priority sites with an action plan established with relevant stakeholders

Supply chain

Analysis at least 2 activities per year by 2025

Integrating biodiversity criteria into life cycle assessments to carry out an in-depth analysis of the impacts and dependencies with regard to biodiversity for the Group's activities throughout the value chain, in order to identify the challenges and the appropriate solutions to meet them.

- Delivery of biodiversity awareness modules for all employees
- Creation of a platform for sharing good practices

Awareness-raising and sharing good practices

2 modules minimum per year by 2025 - 2022 - 2023: 3000 employees/year

ENGIE CSR ratings and indexes

ENGIE listed in main indexes: DJSI World, DJSI Europe, Euronext Vigeo World 120, Euronext Vigeo Europe 120, Euronext Vigeo Eurozone 120, Euronext Vigeo France 20, STOXX® Europe 600 ESG-X, STOXX® Europe 600 ESG Broad Market, STOXX® Global 1800 ESG Broad Market, STOXX® Global 1800 ESG-X, MSCI EUROPE ESG Universal Select, MSCI EUROPE Climate Change CTB, MSCI EMU ESG, MSCI World ESG Universal Select, MSCI World Climate Change CTB, CAC 40 ESG, Bloomberg Gender-Equality Index

Eligibility of activities for the European taxonomy

Turnover Taxonomy 2021

Low eligible turnover (20%) due to the weight of trading activities in a high commodity price environment (€20 billion not covered by the taxonomy) and energy supply (12 out of €13 billion not covered)

- Eligible for taxonomy
- Not covered by taxonomy

Capex Taxonomy 2021

Capex (maintenance & growth) eligible at 47% thanks to the Renewables (€2.4 billion) and Energy Solutions (€0.8 billion) GBUs offset by the not covered Capex of the Networks GBU (€2.3 billion).

Growth Capex 2021

PUBLIC

Opex¹ Taxonomy 2021

Low eligible Opex (15%) due to energy purchases in a high commodity price environment included in Others and, to a lesser extent, uncovered expenses of the Networks and Thermal & Supply GBUs

1. Opex includes expenses related to day-to-day servicing & operating of assets

Committed to increase Group financing through sustainable finance instruments

**A pioneer & leader
on the Green Bond market**

with **€14.25bn**

of green bonds issued since 2014

ESG related bonds' share of outstanding bond financing expected to climb further **over the next 10 years to reach more than 60%**

€9bn

*of Sustainability-linked Revolving Credit Facility.
Margin indexed on two climate change KPIs*

€2.5bn

*of Green Project Finance
(not financed by the Group's Green bonds)*

21,500

employees invested in solidarity fund

ENGIE committed to social improvements

Diversity

Gender Equality Index

- France: 89¹ ; International: 82¹
- Target 2030: 100 globally

Gender Diversity

- 24.6%¹ of women in management
- Target 2030: 50% of women in management

Afnor diversity label extended to October 2022 in France

ENGIE is starting to be recognized among the largest companies in France, Europe and the world in terms of efforts on gender diversity, as shown by the results below:

- 7th in the List of Women in Leadership Led by the Ministry Responsible for Equality between Women and Men (out of 120 SBF companies);
- 47th in the European Gender Diversity Index Report 2021 issued by European Women on Boards - EWOB (out of 668 European companies evaluated) and 7th among French companies
- Nominated at the 2022 Bloomberg Gender Equality Index among 418 internationally recognized companies

Hiring, Training, Engagement

Apprenticeship³

- ~ 6,000 apprentices¹
- Target 2030: $\geq 10\%$ of workforce in Europe
- ENGIE's "Apprenticeship training center" dedicated to energy transition and climate businesses, count over 100 young trainees in just one year since its creation.

Training

- ~82%¹ of employees trained
- Target 2030: 100%

Employee commitment²

- 80%¹ would recommend ENGIE as a good place to work
- > 83% fully committed

Health & Safety

Safety

- Prevent serious and fatal accidents: "No life at risk" program
- Injury frequency rate = 2.9¹
- Target: ≤ 2.3 by 2030

Well-being at work

- "No mind at risk" program
- 9 commitments for workplace wellbeing

ENGIE Care

- Social protection for all Group employees worldwide by 2023

1. 2021 figures

2. ENGIE internal survey

3. In Europe

ENGIE Rassembleurs d'Energies

Post-employment provisions (minus deferred tax assets) w/o regulated subsidiaries	3,652	2,674
(-) Nuke dedicated assets	-4,479	-6,014
ECONOMIC NET DEBT	37,420	38,300
ECONOMIC NET DEBT / EBITDA	4.20	3.62

Net financial debt of €25.3bn is calculated as financial debt of €41.0bn - cash & equivalents of €13.9bn - other financial assets of €1.6bn (incl. in non-current assets) - derivative instruments hedging items included in the debt of (€0.2bn)

Economic net debt incorporates additional commitments monitored by the Group, in line with rating agencies adjustments – although differences in definitions exist

Split of gross debt¹ & debt maturity profile²

Split of gross debt¹ (€bn, excluding leases⁵)

Average cost
of gross debt
2.63%
as at 31 December 2021
VS
2.38%
as at 31 December 2020

- **€26.2bn** Bonds
- **€5.8bn** Bank borrowings
- **€5.0bn** NEU CP³ / US CP
- **€0.7bn** Drawn credit lines
- **€0.2bn** Other borrowings

Debt maturity profile² (€bn)

1. Without IFRS 9 (+€0.9bn) without bank overdraft (+€0.5bn)

2. Excluding/net of €5.0bn of NEU CP/US CP

3. Negotiable European Commercial Paper

4. Cash & cash equivalents (€13.9bn), plus financial assets qualifying or designated at fair value through income (€0.6bn), net of bank overdraft (€0.5bn)

5. Financial and operational leases (+2.0bn€)

Net debt¹ breakdown by rate and currency

1. After hedging and without leases
2. Cash positive position for other currencies

Hybrids

Issuer	Currency	Coupon	Issue date	First Reset date / First Call date	Non-Call period (years)	Outstanding amount (€m) ²	Annual coupon payment (€m)
GDF SUEZ	EUR	3.875%	02/06/2014	02/06/2024	10	393	15
ENGIE ¹	EUR	1.375%	16/01/2018	16/04/2023	5.25	274	4
ENGIE ¹	EUR	3.250%	28/01/2019	28/02/2025	6.1	1,000	33
ENGIE	EUR	1.625%	08/07/2019	08/07/2025	6	500	8
ENGIE ¹	EUR	1.500%	30/11/2020	30/11/2028	8	850	13
ENGIE ¹	EUR	1.875%	02/07/2021	02/07/2031	10	750	14
TOTAL						3,767	86

Highlights:

- Most of ENGIE's outstanding hybrids are green bonds
- Lower cost of funding of ENGIE in the debt capital market in recent years has resulted in significantly lower coupons
- Hybrids are accounted as equity under IFRS 9, explaining why the costs of the hybrids are not included in ENGIE's NRIs, hence not impacting ENGIE's dividend policy

1. Green bonds

2. Outstanding hybrids as at 31 December 2021

ENVIRONMENTAL, SOCIAL and GOVERNANCE

ENGIE's purpose to accelerate the transition towards a carbon-neutral economy

A clear decarbonization pathway in line with Group's 2 SBT targets

- Full coal phase out with a just transition approach
- Improving energy efficiency and decline in demand in accordance with the SDS scenario from IEA
- Development of renewable gases (biomethane and hydrogen) in gas sales and in power generation
- Biomass sourcing systematically Sustainable Biomass Program certified

¹ Lower to 165 gCO₂/kWh from 180 gCO₂/kWh due to 2017 figure proforma excluding emissions linked to blast furnace gases

ENGIE's purpose aligning financial and non financial performance

Planet

Respecting planetary limits by acting in particular for the Paris Agreement

Tier 1 objectives

	2020 results	Objective 2030
GHG emissions related to energy production (Scope 1 and 3) in line with the SBT commitments (MtCO ₂ eq)	68	43
GHG emissions from the use of products sold, in line with the SBT commitments (MtCO ₂ eq)	62	52
Share of renewable electricity capacities, in line with the SBT commitments (%)	31%	58%
Offer an alternative to customers that contributes to decarbonization (%)	51%	100%
Share of preferred suppliers (excluding energy purchase) certified or aligned SBT (%)	15%	100%

People

Building a new and more inclusive world of energy together

Tier 1 objectives

	2020 results	Objective 2030
Lost time injury frequency rate for Group employees and subcontractor employees on closed sites	2.7	≤2.9
Percentage of women in Group management (%)	24%	50%
Gender Equality Index	France	87
	International	80

Profit

Ensuring responsible performance shared between employees, shareholders and stakeholders

Economic net debt to EBITDA ratio below or equal 4.0x over the long term

Dividend policy of a 65 - 75% based on Net Recurring income Group share pay out ratio

2021 guidance NRIs € 2.3 – 2.5 bn

2021 expected Growth¹ Capex € 5.5 – 6.0 bn

Planet				
Renewables	Share of renewable energy installed capacity in the electricity generation mix (at 100%)	31%	≥25%	✓
GHG emissions	Reduction rate of specific GHG emissions rate for the energy production versus 2012	-52%	-20%	✓
People				
Stakeholders dialogue	% of industrial activities covered by a suitable dialogue and consultation mechanism	100%	100%	✓
Gender diversity	% of women in the Group's workforce	21.5%	≥25%	✗
Health & safety	Internal lost-time injury frequency rate	3.0	≤3.4	✓
Customer satisfaction	Satisfaction rate among B2C customers	76%	≥85%	✗

% of women in the Group's workforce

Lower than planned women recruitments to technical positions, changes in scope, Covid-19 crisis impacts on recruitments process

Satisfaction rate among B2C customers

Change in survey methodology since 2019: customers are questioned by e-mail and no longer by phone, which mechanically led to a 12-point drop in the indicator in 2020

Covid-19 crisis – ENGIE social involvement

At Group level

Social security coverage for all Group employees throughout the world (*ENGIE Care*):

- Hospital expenses – in full for Covid-19 and at least 75% for other conditions
- Life insurance equivalent to 12 months of gross salary
- This scheme will also cover, until the end of the year, employees who have been furloughed due to the crisis

Examples of local initiatives (not exclusive)

United Kingdom:

key workers free access to over 900 electric vehicle charging points

Earmarking of €250 million to speed up payment of suppliers - small and very small companies – in order to help their cash flow situation in **France and Belgium**

Romania: natural gas-powered trucks provided to the Romanian Red Cross

Singapore: about 450 staff on deployment with 6 major hospitals providing integrated facilities management services to support the critical essential services

Latin America: USD 2 million to fight against Covid-19 out of which:

Chile: delivery of 'rapid tests'

Peru: 5,000 personal hygiene kits were delivered to protect girls and boys against Covid-19

France, 2,000 vehicles made available to healthcare professionals

ENGIE Foundation created a dedicated fund of €500,000 for hospitals and projects carried out by the Foundation of Hospitals of Paris

Leading position in CSR ratings and indexes

ENGIE listed in the main indexes

DJSI World, DJSI Europe

MSCI EMU ESG, MSCI Europe ESG

Euro Stoxx 50 ESG

Euronext Vigeo Eris Europe 120 / Eurozone 120 / France 20

Stoxx Europe 600 ESG, Stoxx Global 1800 ESG

1 Ranked 21 on 55 within the multi-utilities sector
2 Median of the multi-utilities sector

Committed to increase Group financing through sustainable finance tools

A pioneer & leader on the Green Bond market

with **€12bn**

of green bonds issued since 2014
Green's share of outstanding bond
financing expected to climb further
**over the next 10 years to reach
more than 50%**

≈ **20,000**

employees invested in solidarity
fund *Rassembleurs d'énergies*

Adherence to the B Team principles

THE B TEAM

Responsible taxation recognized by
the World Benchmarking Alliance

€5bn

of Sustainable Revolving Credit
Facility. Margin index (+/- 1.5 bp) on
two climate change KPIs

>70%

of assets funding pension liability
invested with asset managers
signatories of UN PRI

€2.5bn

of assets funding Group's
French pension liabilities with
integrated ESG criteria

€30m of investments in
gender equality funds for
French pension liabilities

ENGIE's commitment to the green bond market

The Group has been a pioneer in green bond issuance since 2014

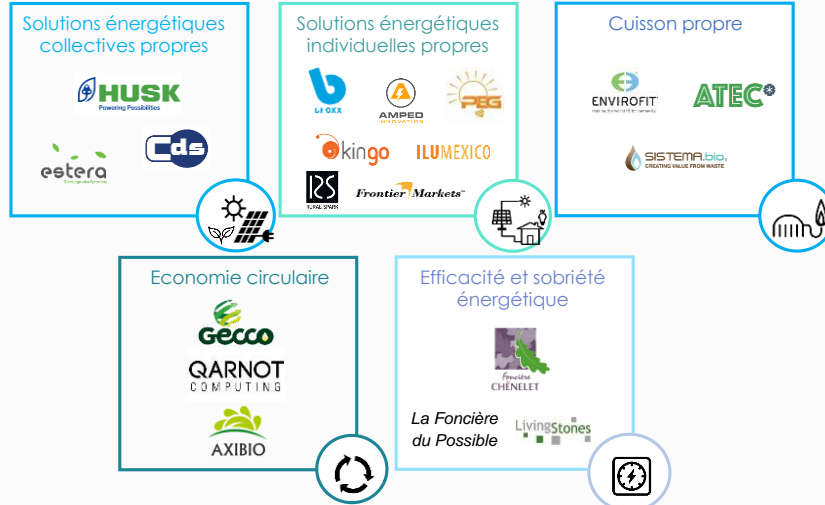

ENGIE Rassembleurs d'Énergies

A robust track record

A GLOBAL & DIVERSIFIED PORTFOLIO

- 19 active investments
- €35m invested as of end of 2020

EMPLOYEE ENGAGEMENT

≈20,000 employees
invested in Rassembleurs d'énergies solidarity fund

SOCIAL LEADERSHIP

B.Corp certification

French
'Société à Mission'
status

HIGH SOCIAL & ENVIRONMENTAL IMPACT

- 5.5 million beneficiaries for energy access
- 20,000 jobs created
- 4 women CEOs, a gender equality focus
- 2 MtCO₂eq avoided per year
- 3.9 Mt of waste processed per year

● 14%	€239m	LNG Terminals

Rest of Europe (Benelux, Generation, NECST & UK)

Mainly negative Covid-19 effects on Client Solutions and Supply activities, negative temperature effects on Supply activities, partly offset by better performance in Thermal and Nuclear

- **Client Solutions:** negative Covid-19 impacts in projects and recurring services
- **Networks:** warm temperatures and Covid-19 impacts on volumes and lower distribution tariff in Romania
- **Thermal:** higher contribution from Italian assets thanks to ancillaries, and higher spreads throughout Europe
- **Nuclear:** higher achieved prices and lower Opex partly offset by a lower availability due to LTO planned outages, and higher depreciation
- **Supply:** negative climate effects and Covid-19 impacts on volumes (B2B and B2C), partly offset by a better performance in Romania

Lean 2021
